But we must not attempt to follow Mr. Dewar in his wanderings all over this delightful south country, though we have read all his book with great pleasure, and admired his illustrations. It is a book of reference for the angler looking out for fresh fishing quarters, and its information about waters, quarters, fish, and flies is most pleasantly interspersed with natural descriptions and apt quotations from previous travellers over the same district and writers on the same subject. There is no book covering the same ground in the same way, and we most confidently recommend it to all who love a charming book about angling, but especially to lovers of our south country streams.

THE "ARCHER" CAST CASE WITH TRANSPARENT POCKETS.

PROVISIONALLY PROTECTED.

THIS new cast case is intended to put gut casts and made-up casts in, as the pockets are of embossed transparency, and the contents of each can be seen at a glance.

The wholesale manufacturers of this new registered cast case are Messrs. W. Bartleet and Sons, of Redditch; it can be obtained through any retail fishing tackle maker, and there can be little doubt about its becoming one of the most popular cases for holding gut casts in the market.

The beauty of the case is that you slip your gut casts of different kinds, fine, medium, and stout, and your made-up cast of three flies—if you use them so—and your hank of fine gut for renewing the important last link next the hook; you slip these things, and your fishing ticket if you like, into a transparent pocket made of xylonite. This material is stiffer than parchment, very tough, and although you can see your casts, yet they are perfectly protected from damp, and also from light when the case is closed. Every angler knows the truth of the old saying "out of sight, out of mind." You put some special collars, etc., away carefully in the pockets of your fly book, and forget all about it; in the Archer case everything it contains is seen at a glance as you turn over the leaves. Messrs. Bartleet are applying the sheets of transparent xylonite in making fly books, etc.

We are so pleased with the sample they have sent us that we have ordered half a dozen to be made slightly larger, and intend to try one for holding trout and grayling flies on eyed hooks; with a pair of flat nippers it will be quite easy to pick out any fly you want, and while you can see them all, they are safe from damp and moth. With a few modifications the idea can be adapted to suit the dry-fly or wet-fly angler admirably—we mean for holding flies, as well as casts. This inexpensive novelty has certainly a big sale before it.

MR. R. RAMSBOTTOM'S CATALOGUE.

ONE HUNDRED strands of gut for threepence! A three yard gut line for twopence! Everyone naturally turns to the pricelist of gut in the nicely got up and fully illustrated catalogue of Mr. R. Ramsbottom, of Gt. Market-street, Manchester, and the above named items at once "catch the

eye," no doubt they will catch fish too, though naturally in no way equal to the higher qualities of the "Refina" gut ranging from 1s. to 4s. 6d. per hank, or the drawn gut ranging from 3s. to 10s. per hank of 100 strands. Mr. Ramsbottom's salmon casts range from 2s. to 10s. 6d. each, and his trout casts from 2d. to 1s. per 3yds.

But Mr. Ramsbottom's catalogue covers every branch of angling, and he is himself an angler and practical fly-maker of over forty years' experience. The following note introduces the long list of general and special patterns of which his catalogue makes mention:

"In presenting my list of trout flies I beg to offer to anglers a few remarks upon a subject on which I claim to speak with some authority, having sat for twelve years at the fly bench, and, in addition, used flies from the subjoined list for over forty years.

"In the first place kindly take a word of warning and eschew all cheap flies. Their use is fraught with infinite annoyance and provocative of profanity. To find a particular fly taking well, and every second or third fish either breaking off the point of the hook, pulling away the feathers, or snapping the gut, is by no means conducive to a rapid growth of the Christian graces, and yet such results not only invariably follow the purchase of cheap (?) flies, but, in the nature of things, must do so. In flies, above all things, you require the best materials and the finest workmanship, coupled with a nice judgment of shade and colour. To obtain these advantages the angler will find a few pence extra on a dozen of flies well spent; I therefore make a charge of 1s. 6d. per dozen, holding these to be cheaper than any made at a lower price, when the full difference in workmanship and material is taken into account.

"My ordinary stock comprises fully 250 varieties, but about 100 are selected therefrom, which will, I believe, be found equal to every requirement of the angler."

Among the salmon flies we notice Ramsbottom's Parson and Ramsbottom's President, both favourites with many of Mr. R.'s customers. The list has a good index, and more than 250 illustrations.

ROWLAND AND HARRISON'S ADDRESS LABELS.

ANGLERS who are in the happy position of being able to send to their friends dishes of trout, or other fish of their own catching, are invited to look at the new advertisement appearing in our columns this week (on page 298). It shows a black and white representation of the nicely coloured and well-drawn trout, which is the distinctive feature in the new address labels invented by Messrs. Rowland and Harrison. The labels are cut out to the shape of the fish, and even a man who could not read could see that the parcel that had this label on contained fish, and must be delivered quickly. It is a good idea well carried out, and every angler who expects to have good sport should keep a supply of these nice trout labels handy. Messrs. S. Allcock and Co. are the wholesale agents.

FISHINGS AND SHOOTINGS TO LET IN IRELAND.

MESSRS. JOSEPH BRADDELL AND SON, whose catalogue of high-class fishing rods and tackle we noticed recently, send us their 1899 list of "Fishings and Shootings to be Let," with the large coloured map of Ireland by John Bartholomew which we have so often praised in these columns. In addition to a long list of fishings and shootings to let the "list" contains particulars respecting salmon and trout fishing quarters, sea fishing, yacht clubs, game licences, fence months, hunting, &c.

Messrs. Braddell are the makers of the patent "Flexible Grip" Castleconnell greenheart rods, which have long had a great reputation among lovers of the fascinating Castleconnell style of rod.

SOME A1 GUT CASTS.

MR. GEORGE HOLLAND, 29, The Square, Winchester, has prepared for this season a supply of gut casts made from specially picked gut, nice and soft to the feel, three yards tapered, and each strand fastened with a very neat buffer knot, as suggested originally by Mr. Cholmondeley Pennell many years ago, only not made quite in the same way and a very short buffer. The casts are 1s. 6d. each, and well worth it.

GRESHAM ANGLING SOCIETY.

THE annual dinner of the Gresham Angling Society, held on Tuesday night, April 25, at headquarters, the Masons' Hall Tavern, Coleman-street, E.C., passed off most successfully. Mr. C. H. Cook ("John Bickerdyke") presided, and in the vice-chairs were Messrs. W. Marshall and G. Girling. There was a large company present. Letters of regret at absence were received from, among others, Messrs. E. H. Bramley, F. Abraham, E. J. Chambers, G. Hoyle, A. J. Bonsall, A. Gee, G. Rose, L. B. Wrightson, G. Ohlson, F. R. Ohlson, J. H. Ranger, Cartland, &c.

In giving the toast of "The Queen," the CHAIRMAN mentioned the interesting fact that Her Majesty was a subscriber to the Windsor and Eton Preservation Association.

The CHAIRMAN next rose to propose the toast of the evening, "Success to the Gresham Angling

fraternal intercourse had increased; they did not have any gross weight, but a good standard of specimen fish, which they stuck to, and they gave prizes as a reward, as an acknowledgment of the excellence of their skill. Gross-weight fishing, in his opinion, was likely to create jealousy and bad feeling. His (Mr. Cook's) idea of angling was the angling of Izaak Walton—the pursuit of the sport by wandering streams, to get away from the smoky town, to listen to the song of birds and the hum of insects, and perhaps there might be a pretty milkmaid in the question. The charm of angling did not only consist in catching fish for the pot or for the weighing-in scales. The chairman went on to refer to the various points connected with the club, and one of those points, he said, was the activity displayed by their committee. The members of the society now numbered 130. There was a balance in hand, their fishery leases had been renewed, and their weeds cut at Kel-

secure new waters for the club. Words of praise were also due to their entertainment committee. Another point was the splendid example set by their treasurer in re-stocking their water at Chesham. Last but by no means least he desired to draw their attention particularly to the able manner in which Mr. Wright, their hon. secretary, carried out his duties.

MR. J. P. CONNELLAN, in responding, said he was glad to hear that they had succeeded in carrying out the business of the society to their satisfaction. It was a very joyful occasion for them that evening. It was their pay day, and their payment was the club's thanks. They had paid them very liberally that evening, and on behalf of the officers he thanked them for that payment.

MR. J. B. CLOSE also acknowledged the toast, remarking that they had only done what the members of the club had asked them to do—it was their fault if they had not done more. They hoped the club would find them more work. They were quite ready and willing to carry it out, and they called for it. They could not help working well when they looked round and saw the class of members they were so strongly supported by.

The CHAIRMAN, rising again, said he had no idea that he would have to perform anything more than the ordinary duties of a chairman, but he was delighted to that night have an extra turn placed upon him. He understood that, after fourteen years' service as their hon. treasurer, Mr. Parker had retired. He had always worked well in the club's interests. The members of the club had decided—and very properly decided—to give Mr. Parker some small mark of their esteem and respect, and it had taken the form of a clock. If that clock was furnished with a pendulum, and the gong had a good sounding boom, they could not have presented Mr. Parker with anything more appropriate or better. Not only had Mr. Parker been hon. treasurer of the society for many years, but also had held a similar position on the London Anglers' Association, and had been engaged in almost every movement for the benefit of angling in that part of England. He (Mr. Cook) hoped he had expressed the members' feelings, and now he had only to present Mr. Parker with the clock.

MR. A. W. PARKER, on rising to reply, was received with loud and prolonged cheers. He thanked them most heartily for the very kind and handsome present. He was sure the work he had done for the society had been carried out without any thought of fee or reward. It was a pleasure to do the work. Since he had been a member of that club he had learned a very great deal, beginning with a paper read by Mr. Bentley. The chairman (Mr. Cook) had helped him a very great deal with his (Mr. Cook's) first book on sea fishing, which was worth far more than the price asked. Before they could instruct every man must learn, and he had reaped a very great reward by listening to papers at the Gresham. He begged to thank all very much.

The CHAIRMAN said he had a little tale to relate about his sea-fishing book. Once, while fishing at Filey, on the Yorkshire coast, he met a young fellow at his hotel who said he would be glad to go out and give him a wrinkle or so. They went out in a coble, and Mr. Cook was very humble and willing to learn. The young fellow told him a lot of things, and Mr. Cook answered nearly every time, "Yes, I should do the same." Happening to look in the angler's bag, what did he see but his own little book, and he had been actually teaching him sea fishing from what he had written himself.

The CHAIRMAN also presented the prizes, and heartily congratulated the various winners. These were:

DR. BRUNTON'S CUP.

Mr. W. R. Reeves, for perch of 2lb. 2oz., and grayling, 2lb. 1oz.

DR. LADELL'S SHIELD.

Mr. J. T. Emery, for trout of 3lb. 10oz., and bream of 5lb.

DEAL CHALLENGE CUP.

Mr. E. C. Clements.

SILVER MEDALS.

Messrs. J. T. Emery, for trout of 2lb. 10oz. (Chesham); W. R. Reeves, for perch of 2lb. 2oz. J. H. Walker, for grayling of 2lb. 4oz.; Wright-

PATERNOSTERING—"A GENTLE PULL AT THE ROD-TOP."

(From John Bickerdyke's "Angling for Pike")

Society." It was, he said, a deservedly honoured toast, because there was no angling society in England, in the world, which was so flourishing, so prosperous, so excellent, and so energetic as the Gresham Angling Club. The membership of the society was always increasing, and he did not wonder at it when he looked at their rules. One of their objects, as set forth in those rules, was "to promote the advancement of the art of angling," and what society had done more to advance it than that club? He did not know of any, although, perhaps, there were members of a certain club who might cross swords with him over that statement. But let them refer, for instance, to sea fishing. Why, their society was the pioneer of the sport, and their good friend, Mr. Parker, and many other members, had always been to the front in turning sea fishing into a delightful art, as against the commercial system of hauling fish into the boat. Their

vedon, where their private water was thoroughly well stocked with coarse fish. Lastly, there was the library and the museum, both of which were steadily increasing. He had only to add his best wishes for the success of the Gresham Angling Society—might it go on increasing, flourishing, and prospering, which he was sure it would while it had such an admirable committee to support it.

Proposing the toast of "The Committee and Officers," Mr. F. E. ELDERED remarked on the admirable way in which the business of the club had been conducted. A very noteworthy feature was the large amount of time and attention given to angling matters and to the society in particular, and the ready manner in which any suggestions emanating from the ordinary meetings had been acted upon. In many cases they had even anticipated their wishes in the direction and carried them out. Another point which struck him was the alertness shown by the committee to

son, for pike of 15lb. 8oz.; J. B. Close, for trout of 3lb. 9oz.; E. C. Clements, for whiting of 2lb. 14oz.; J. Dryden, for cod of 14lb. 2oz.; and Dr. C. S. Patterson, for conger of 18lb.

Mr. W. R. REEVES, in replying for the prize winners, made kindly reference to the late Dr. Brunton, and said that it was, he believed, with one of that well-known angler's favourite flies that he took the specimen grayling. It was later on intimated that Mr. Reeves would put some trout in the Chess, a river in which the late Dr. Brunton (whose cup he had won) took much interest.

Mr. J. B. CLOSE next submitted the toast of "Preservation and Angling Societies," remarking that an enormous amount of money had been expended upon the preservation and protection of the Thames, the national river. He was very pleased to find that at the present moment the various preservation and re-stocking societies, although they carried on their own business separately, worked jointly together on behalf of one great and grand movement. These associations were doing a very big work. Mr. Close referred to the T.A.P.S. (founded in 1838), to the upper river societies, and said that within the last two or three years a new society had been founded up the Thames—the Thames Re-Stocking Association—of which their chairman of that evening was the working head. He hoped it would develop, increase, and receive the support of the angling societies; and he trusted that its object would be attained. The Re-Stocking Association had brought forward one of the biggest schemes ever placed before the angling public—to go in for the British workman system of re-stocking the river Thames; and, so far as he could glean, they were going to introduce fish to that river indigenous to it. The fish would not be confined to trout, but would include all the coarse fish that were generally found in the Thames. As for the Thames, he believed that it was better protected and preserved, and yielded better fish than ever. They also had the Lea, which was watched, preserved, and re-stocked by the London Anglers' Association. They had re-stocked that river with quantities—he might say tons—of fish at a time, all, too, large, mature fish. In conclusion, Mr. Close referred to the good work the Anglers' Benevolent Society was carrying on, remarking that it had been able to relieve many club anglers who had fallen upon evil days.

Mr. A. R. MATTHEWS acknowledged the toast, as a member of the Thames Angling Preservation Society and the London Anglers' Association. He thanked Mr. Close for the kind way he had spoken of the Thames Associations, and expressed the opinion that the Thames was the best preserved and the best stocked angling river in England. He had fished in many parts, but after all, from an angling point of view, no water, in his opinion, could excel the Thames. It was the finest all-round angling river in England; but, at the same time, he asserted that but for the formation of the T.A.P.S. it would have been a very poor fishing river indeed. He always came back to his Thames with delight, because he knew the fish were there. Speaking with reference to the club anglers of London, he claimed that they were the most sportsmanlike big body of anglers to be met with—anglers who had called for a fish measurement up the Thames, and who, although they did not support preservation and re-stocking as he should like to see them do, yet, nevertheless, had done much to improve the sport for themselves and the public. In conclusion, he said he could assure them that the associations to which he had the honour to belong would do in the future what they had done in the past, and perhaps a little more.

Mr. T. B. FOURMY next gave the health of "The Visitors," observing that the Gresham's motto was not to fish for the bag, but for specimen fish. Applying it to the visitors, they had broken the rule somewhat—they had numerous visitors there that night—but in coupling the toast with the name of Mr. Chatterton he felt sure they would agree with him that they had carried out the latter part of their motto, and captured a specimen fish. He extended a hearty welcome to the visitors, and hoped they would retain pleasant recollections of the Gresham angling dinner of 1899.

Mr. G. J. CHATTERTON, who met with a very cordial reception, remarked that whoever com-

piled the programme was a man of business. He had a desire to minister to the weaknesses of the speakers, and had very kindly provided them with ideas. He could, he said, quite appreciate their pleasure in offering hospitality to himself and his friends that evening, because it had been his privilege on several occasions to act as host at an angling club. He belonged to a society of which their chairman that evening was the president—the Fly Fishers' Club—and that he would call the Carlton Club of the piscatorial world. He also belonged to the True Waltonians, who looked so far back into history that it might be almost said that the mantle of the prophet was upon their shoulders—that was, Izaak Walton's mantle—and he called that the Athenæum; while he was further a member of the Piscatorial Society, which could be very well described as the Constitutional. He had at once, he thought, showed that he had offered hospitality to guests, and now he was the guest at the hands of the Gresham Society, and he thought that the Gresham might be best described as a happy union between the National Liberal and the Reform. It was admitted on all hands that it was the most progressive angling society in the world. It was a very great privilege to be their guest, and he expressed the sentiments of all present in the capacity of guests that they hoped the club might continue to flourish, and that the mark they had already made in the angling world might be continued. They were told that brevity was eloquence, therefore he would conclude by heartily thanking them for all the good things they had placed before them that evening.

Mr. JAMES TAYLER ("Red Palmer") proposed "The Press," and Messrs. A. R. MATTHEWS and G. H. HOWARD acknowledged the toast.

Mr. GIRLING submitted the health of "The Chairman" (which was received with musical honours), remarking that Mr. Cook was one of the most accomplished men of his day. It was charming to read his books; he was a most expert fisherman; was a most unselfish angler; and, he thought they would agree with him, made one of the finest chairmen that they could possibly conceive.

Mr. COOK, in replying, thanked the company for their kind reception, and referred to a most influential association which had been formed to preserve the Thames as a national place of recreation. It was called the Thames League, and the sport of angling was not to be overlooked.

Mr. BENTLEY proposed "The Vice-Chairman," remarking that they had had a captain and two vice-captains, and under their command the evening had been brought to a brilliant conclusion.

Mr. W. MARSHALL and Mr. G. GIRLING suitably acknowledged the toast, and after "The Angler's Song" had been given by Mr. Bentley, the proceedings terminated with "God Save the Queen."

During the evening the various toasts were interspersed with some excellent music, contributed by Messrs. Pelham Wilkes, W. Wheeler, Wallis Arthur, H. S. Starnes, L. Oakley Parrott, F. G. Gray, &c.

We are indebted to Mr. Upcott Gill for kind permission to reproduce the illustration of "John Bickerdyke" which appeared in his latest edition of "The Book of the Pike."

THE RESTORATION OF SALMON RIVERS.

"THE Thames as a Salmon River," the article by Mr. R. B. Marston, in the *Nineteenth Century* Magazine for April, lets a flood of light on to the present state of affairs on that noble river. Many of the successful attempts to deal with salmonless rivers in past years may be unknown to the generality of the readers of the *Fishing Gazette* of the present day, therefore a recapitulation of some of them, and the circumstances attending each case, may be both interesting and instructive.

A notable case was the introduction of salmon into the rivers emptying into Loch Shin, the description of which, in the "Book of the Salmon," by "Ephemera," p. 172, was written by Mr. Andrew Young, of Invershin, at that time manager of the Duke of Sutherland's fishings.

Loch Shin, a piece of water about twenty-one miles by a half to four miles broad, situate in the heart of the Sutherland mountains, is the immediate feeder of the river Shin, noted for its salmon fecundity. The loch itself has four feeders—middling-sized rivers—viz., the Terry, Fiack, Garvie, and Garry, in which, previously to the year 1836, not a salmon was ever seen, though many were in the habit of entering the loch or lake.* In the year mentioned, at the request of His Grace of Sutherland and Mr. Loch, M.P., salmon were caught in the river Shin shortly before the spawning season, and conveyed to the four rivers above named, amongst which they were distributed in due proportions. Mr. Young was the managing director on the occasion. In the wonted season all the fish spawned, each in its respective river. Now, mark one of the consequences. Salmon at present, and ever since, come regularly to spawn, traversing the lake to do so, in all these heretofore salmonless rivers. Nay, more, the fish hatched in the Terry—at least, those that survive long enough—return to the Terry; and the young of the other three rivers return from the sea to them, each grilse or salmon entering never-faillingly the stream that gave it birth! What wonderful and unerring instinct! One might think that they would remain in the river Shin, and spawn where their ancestors had spawned. But no; they leave their own natal shallows, pass down the lake, through the river Shin, along the Kyle of Sutherland, to the sea, and there having become adolescent, they retrace their route, and, after necessary rests on their long voyage, very frequently on the spots of their parents' nativity, they revisit, for the first time, the scenes of their birth and infancy. Revisit them—for what? Being adult, to breed, which they do where their forefathers begot them, and so they go on increasing and multiplying in colonies heretofore tenantless of salmon, ever since volcanic action called from the "vast deep" the mountains and rivers of Northern Caledonia.

This has proved true to some extent. Although Loch Shin does produce a nice few salmon every year to the rod, they are yet not so numerous as one might expect. The inference from the above is that salmon, although they enter a lake, will not go further into the streams beyond unless they have been reared there, but drop back to spawn in the main river. Has all been done in the feeders of Loch Shin that could be? Would not 30,000 or 50,000 fry put down annually for a few years on the gravels of the four feeders, taken from such breeds as Thurso, Inverness-shire, Garry, Aberdeenshire Dee, upper end, all good free rising and early running breeds, mightily improve the angling on this fine loch? It might pay well. We have often thought that a like planting of fry, from any of those or similar early rivers, in the Dochart, Lyon, and other tributaries of Loch Tay might produce a breed of fish that would rise to fly in Loch Tay, and so improve and lengthen the season there. Another thing the before-mentioned operations brings to mind is the way in which fish get what is called potted, fixed at one spot, and don't seem to move on again, no matter what tempting freshets and lifts in the water come; no matter how many runs of fish come up and go on past, there they are, and mean to remain. We remember scores of such fish stuck at one place from August till the last day of the rod season, Nov. 1. The fact is they were fish that had been bred on the gravel above or the one below. They had got home, and knew it much better than we did. Some of these fish seemed to be the same fish for two or three years running, but, of course, that would be difficult to prove. In the way of improving a river, a very notable case lately is he buying up by the Tees Fishery Board of the Dinsdale dam for purposes of removal and the general benefit of the river. This dam, which had for long been a great bar to the prosperity of the river, was acquired by compulsory powers

* Although salmon were frequently seen going into Loch Shin in great numbers and leaping in its waters, not one had been caught either by fly fishing or trolling in the loch until last year (1849). His Grace the Duke of Argyll, trolling in the loch last season for the *salmo ferox*, hooked and killed a salmon, and therefore was the first to break the charm that had from time immemorial protected the *salmo salar* sojourners in this large lake. It may be reasonably inferred from the above fact that as spawning salmon increase in the four rivers that feed the loch salmon and salmon angling will increase in it also.

granted to boards under certain circumstances by the Lands Clauses Consolidation Act. The river ought now to double its yield. Doubtless there are many other obstructive dams in the country which could be and ought to be removed by the same means, as water power in many cases has ceased to be of the value it once was, and to a large extent has been supplanted by steam.

J. W. W.

(To be continued.)

ILLEGAL SALE OF GRAYLING IN LEEDS.

ON Wednesday, at the Leeds City Police Court, Mr. James Brown, president of the Leeds Fish Game and Poultry Association, and proprietor of the Albion Hotel, Leeds, Mr. Charles Brown, and Mr. Albert Brown, trading as Messrs. Brown and Son, fish and game dealers, with shops in various parts of the city, were summoned under the Freshwater Fisheries Act. The prosecution was instituted by Mr. Farrar Stead, the chief officer of the Yorkshire Fisheries Board, who were represented by Mr. T. Piercy, whilst Mr. A. Willey represented the defendants, against each of whom four summonses had been taken out. The allegation was that they had exhibited for sale grayling after the commencement of the close season; and the summonses referred to the repetition of the offence on March 16, 17, 18, and 20. Before the case was proceeded with, Mr. Willey intimated that he was prepared to plead on behalf of the defendant Albert Brown, but Mr. Piercy was not content to withdraw the summonses against the other defendants at that stage. Some discussion took place as to the responsibility of the defendants James and Charles Brown, in the course of which Mr. Willey said that the defendant Albert Brown was alone responsible, being the tenant of the shop, 57, Otley-road, Headingley, where the offence was alleged to have been committed. The stipendiary magistrate suggested that the case against Albert Brown should be proceeded with, and said that he could then be called as a witness for the prosecution to prove the connection of the other defendants with the matter. A statement of the facts was then made by Mr. Piercy, and supported by the evidence of a chemist's assistant named Geo. William Jubb, of Albert-grove, Headingley, who said that on March 16 he saw some grayling exposed for sale at the defendants', who traded under the name of Brown and Son, at Otley-road, Headingley. He warned the defendant, Albert Brown, that grayling was out of season, and that he was liable to penalties, but saw similar fish still exposed for sale on April 17, 18, and 20. It was agreed that the summonses against James and Charles Brown should be withdrawn, Mr. Willey pointing out that they were in favour of protecting the fish; as a matter of fact, they were the partners in the firm of Brown and Sons, and the other defendant was a paid servant. His worship said that in his opinion the case against Albert Brown was a most flagrant one, because he continued to expose the fish for sale after he had been warned. He must pay a fine of 40s. or go to prison for seven days on the first summons, and pay costs or go to prison for three days on each of the other three summonses. The fines were paid.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

THAMES RE-STOCKING ASSOCIATION. THE HATCHERY SCHEME.

THE third annual meeting of the Thames Re-Stocking Association was held on Monday evening at Carr's Restaurant, 265, Strand, W.C. Mr. C. H. Cook ("John Bickerdyke") presided over a fair attendance of members.

The annual report presented to the meeting stated that during the past year the committee had devoted most of its attention to the scheme for bringing into existence a Thames fish cultural establishment to stock all parts of the river on a really large and sufficient scale, and efforts were now being made to raise the necessary funds for this purpose. The experience gained by the committee had led them to the conclusion that if the stock of fish in the Thames was to be satisfactorily maintained the best, and probably the only way, to do so was by breeding both trout and coarse fish in great numbers on or near its banks. It had been found that the expense of purchasing fish from private breeders was, owing to the cost of carriage, too great to allow the association to obtain those large quantities required to appreciably benefit anglers in such an extensive river as the Thames. With regard to netting ponds and streams, the outlay and trouble involved was almost invariably in excess of the value of the fish so obtained. During recent years the number of private fish breeding establishments had largely increased, and as they all appeared to be profitably carried on, there was no reason why one on the Thames should not be successful, if in skilled and experienced hands. The president (Mr. C. H. Cook) had been at great trouble in laying the scheme before a number of gentlemen likely to support it, and he had received encouraging letters from various sources promising assistance. To erect and properly equip a hatchery with a sufficient number of ponds would cost at the lowest estimate £500, and an income of not less than £200 a year would be needed to maintain and carry on the work of the establishment. With regard to the capital outlay, the committee proposed to make an endeavour to enlist the sympathy of the Corporation of London, the Fishmongers, and other City companies. Once the hatchery and ponds were established, the committee believed that there would be no difficulty in raising the necessary annual income from anglers and those who sympathised with them.

In November last the association turned in a number of

very fine perch at Windsor and Hampton, which had been obtained from Mr. T. Ford, of Caistor.

The president stated that, in addition to the support already given to the scheme by the Hon. W. F. D. Smith, M.P., Mr. Justice Bucknill, Mr. T. Skewes-Cox, M.P., and Mr. Hermon Hodge, M.P., he had received letters from many other influential gentlemen promising assistance.

Mr. F. H. Amphlett mentioned that the Kingston Piscatorial Society had unanimously passed a resolution in favour of financially supporting the hatchery, and expressing the hope that their example would be followed by other angling societies.

Mr. Cecil Howlett also stated that the Windsor and Eton Preservation Association would be willing to assist if it were found the hatchery could be successfully established.

Mr. C. H. Cook was then re-elected president of the association, and Mr. H. Osborne O'Hagan vice-president. Mr. F. G. Littlewood was again elected to serve as hon. treasurer, and Messrs. D. Denniford and G. A. Cooper will continue to act as hon. auditors. The hon. secretary (Mr. H. G. Hankins) was also re-elected. The following gentlemen compose the committee for the current year: Dr. C. S. Patterson (Piscatorial Society), Messrs. W. H. Cate (Caxtonian Angling Society), J. Cole (St. John's Wood Piscatorial Society), F. H. Amphlett, A. Drinkwater, T. J. Barnes, F. G. Littlewood, C. W. Littlewood, and T. Lyne (of the Kingston Piscatorial Society), A. E. Hohs (Henley Preservation Association), G. R. Clark, H. A. Rolt (Wimbledon Piscatorial Society), G. Greg (Drayton Park Piscatorial), Cecil Howlett (Windsor and Eton Preservation Association), C. E. Walker (Piscatorial Society), F. W. Gomm (Earlsfield Angling Society), and G. H. Howard (*Fishing Gazette*).

A long and interesting discussion ensued on the hatchery scheme, and eventually the meeting was adjourned to Thursday, May 4, when the balance-sheet of the association, which had not been audited, will be laid before the meeting.

The committee will be pleased to hear from any angler who desires to attend the first annual dinner of the association, which is to be held at Carr's Restaurant, 265, Strand, W.C., on May 9. Tickets (4s. 6d. each) may be obtained from the hon. secretary, Mr. H. G. Hankins, Hampden House, Phoenix-street, N.W.

HON. REPORTER.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The ornamental water in the grounds of Lyon House, Isleworth, which has a connection with the Lower Thames, has always been known to hold some large pike, but there was the difficulty of getting permission to fish in it, and I can remember my predecessor as secretary of the T.A.P.S., who occasionally fished there, told me it contained a monster fish. In the year 1889 I took the liberty of writing to the late Duke of Northumberland, who was one of the vice-presidents of the society, to allow me with a friend to go there, and on Oct. 23 I received a favourable reply, which was thus expressed: "Your services in the preservation of the Thames afford a sufficient reason for breaking through the usual rule in your favour on this occasion." In company with my friend the late Mr. John Graham, I paid a visit to the private water, and we got some fine pike. I have been reminded of this circumstance by a report in the local press of this last week of the swan, a fine male bird, which had been there for years, was quietly disposing itself, when, having submerged its head, it was seized by a voracious fish. The swan fought for all it was worth to avoid suffocation by drowning, and made a great clatter with its wings and feet. The finny denizen of the water was, however, too much for the occupant of the upper air, and, retaining a tight hold on the appetising bait, the fish succeeded in drowning the swan. It is conjectured the fish guilty of this savage attack is an old one which has been known to exist in these waters for many years, and when last seen was estimated to weigh some 50lb. or 60lb., and must have increased since then. It is expected its capture could only be made by the water being thoroughly cleaned out, which would be found to contain any amount of mud. It appears from the Hampton Court report the roach are getting up to the weir. It was the custom in days gone by to net the ditch above the hack weir, where the fish used to get to prevent them being illegally taken, and one year it was officially reported no less than 11,000 roach were restored to the Thames. On one of these occasions I got possession of a fine gudgeon which I had set up by Mr. John Cooper in a case with some other Thames fish.—B.

—(**Eton**).—The cold winds still continue, and fish will not move, the water is very much coloured for this period of the season. Mr. C. Harris, of Eton, ran a nice fish last evening close to Windsor Bridge, but was not fortunate enough to bring the spotted beauty to the net, but Charles is a stickler, and will no doubt give me the pleasure of placing the beauty in the scale at no distant date.—CECIL HOWLETT.

—(**Lechlade, &c.**).—There is a splendid head of water on in this district, especially at St. John's Bridge. Trout fishers are few and far between, and but little doing. Must wait for warmer weather. Two or three small ones are reported from the neighbourhood of Cricklade. Steam launch has been through Thames and Severn Canal.—RAMBLER.

—(**Hampton Court**).—In the report of William Milhorne, received yesterday (Tuesday), he says: "Owing to the bad weather there has not been anything

done in the lower district. The water is rising and has become very thick, and will stop the trout fishing for a few days. The roach are still heading up to the weir, and they are getting up in great quantities."—B.

—(**Hampton Wick**).—Head river keeper William Douglas officially reports: "I have not heard of any trout being taken, and the water is rising. I am busy, with some help, covering the spawn of perch. There is a lot in the hackwater at Walton. Mr. H. O'Hagan, of Hampton, has kindly enclosed all his ducks in with wire netting on the application of the T.A.P.S., and it is hoped others will follow his noble example. I have got an assistant to help me during the spawning season." All the reports received this (Wednesday) morning are a complete blank as regards the trout.—B.

Ancholme District.—Not much trout fishing has taken place as yet. There is quite a dearth of aquatic flies. The one fly most in evidence is the Cowdng, which takes well on breezy days. Five hundred very fine tench, of 5in. to 10in. long, go into the Ancholme this week from the Manor Fishery, Caistor. Some rainbow eggs were taken there yesterday. This is the latest date yet known, for the earliest are now hatched out. The spawning is three months later than trout, but these fish catch and pass both Leven and *fario*, and run up to 9in. or 10in. as yearlings next season. From a cultural point of view they are the best and easiest to raise.—THOMAS FORD.

Coln, Leach, &c., East Gloucestershire.—The continuous daily rain we have had has put a good head of water on these trout streams, but for a time it sadly discoloured the water, which, combined with strong winds, has not improved sport. Several rods have been out both on hotel and private waters. Col. Porter has been fishing the Fairford Park waters, with sport, and rods have been out on the Hatherop Castle, Bihury Court, Ahlington Manor, and Winsor Waters. Dr. Marsh has also been out on the lower Coln. The trout rise freely in the forenoon, and again between three and four o'clock. Saw a very good rise in the Bibury district on Friday as late as 6.30 p.m. Plenty of fly on the water on warm days—March Browns, Olive Duns, Brown Spinners, Blue Duns, and Grey Gnats, all of which will kill. A number of swans have been seen on the Coln from off the Thames—Weather dull and overcast, and looks like more rain. Dr. Lockwood has been out at Little Faringdon, and Messrs. Falkner, Battershy, and Chambers at Whelford.—PAN.

Cornish Streams.—The heavy rain of the end of last week and the beginning of this have brought about a grand improvement in the rivers, all of which are to-day (Wednesday) in improving condition for fly fishing. During the freshet the worm accounted for some good baskets of trout in the main streams as well as the tributaries. From St. Breward, on the Camel, there was capital sport on the moorland streams, which very rarely, despite heavy rains, get coloured with road water. As a rule, six hours after rain all the streams are fishable with fly. In the Launceston and Lydford districts some capital baskets of trout have been taken.—BODMIN.

Dareth (Shoreham, Farningham, &c.).—Unless the weather improves very much before Saturday, fly fishing will be of little use. If the river has gone down and cleared a little, the Soldier Palmer, fished wet, will give the best chance. Very little has been done since last week. It must be remembered that all this wet must improve the state of the springs, and benefit us in the end.—J. P. T.

Dart (Totnes and District).—Trout fishing has been attended with fair success lately, although takes do not run above a couple of dozen. Last week Mr. E. Distin killed nineteen at Staverton, and after the flood on Friday he tried the Harbourne. The same day Mr. T. Brown was on the Hempton Leat, and got almost the first lot for the season. On Monday there was another flood down, and fish rose pretty freely afterwards. Mr. A. Townsend secured a dish of exceptionally fine trout, and in the Dartington water Messrs. H. T. and E. Distin creeled several brace between them. Dr. Walters, of Reigate, who is staying at Northbrook, Buckfastleigh, has had some fair sport, principally on the Kilbury water; and creels up to two dozen have been made by Messrs. Eelbrook, H. Wright, and J. Millman, of Buckfastleigh.—DEVONIAN.

Devonshire Streams.—All the rivers are now running in excellent volume, and salmon have run up to the higher waters. Sport generally is improving, and some very fair takes of trout have been made on the Southern and Border streams. Baskets on the Meavy have run up to three dozen, and among those who have had good sport in the Upper Tamar district is Mr. C. Woody, who has creeled several nice lots in the preserved portions, whilst Mr. C. Stainton has had some good lots. Capt. Nixon, Capt. Walker, and Mr. C. P. Tanner have killed some fine fish on the Mid-Taw and Little Dart. Baskets running up to nine brace. On the Dart, Avon, &c., takes average from six to twelve brace, and many of the fish are of good size. The North Devon streams are in order for the fly, and sport has improved.—DEVONIAN.

East and West Cleddau (Pembrokeshire).—We had a very heavy fall of rain on Thursday night, April 20. The rivers have since fished down, and trout are sporting freely.—H.

Esk (Whitby).—This river has been running in good condition for angling during the past week, and a fair number of anglers have been out, though there have been no heavy catches. The returns up to the time of writing are as follows: Dr. English, twelve brace; Mr. J. W. Nicholson, seven brace; Mr. T. Wright, six brace; Mr. G. Falkinbridge, four brace; and Mr. W. Rhodes, six brace; whilst several others have had fair sport. Most of the fish landed have been caught with Blue Dun and March Brown fly.—J. JACKSON.

Exe and Canal (Exeter).—Weather still cold and stormy. The recent rains have served to materially

improve the river, and a large number of salmon have been observed running up during the last flood. A few fish of good size have been taken from the lower Exe, also at Thorverton and Bickleigh, and one or two anglers have done well among the trout; but the cold and cheerless season has sadly retarded general sport. Best flies at present are Stone Fly, Blue Dun, Blue Upright, and Hare's Flex.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The weather is improving and prospects are in the direction of better sport among the trout. As yet flies are very scarce, and scarcely worth a trial. On the other hand, however, we hear from the waters above Bourne and the nplands in that direction of the capture of a few brace of trout with the dock grub. Dock grub may be depended upon as a reliable bait just now.—LIMPET.

Idle District (North Notts.).—As yet the Idle in the neighborhood of Retford has received but very scant attention. As soon as the weather becomes favourable the swims about Bollam Mill are sure to have attention. These swims are known to contain fine specimens. A local angler is reported to have taken the other morning by means of the ordinary garden worm a fish of the Loch Leven species scaling 3lb. While the cold water lasts, worms, dock grubs, and gentles for the deep holes will be successful, whilst swimming brandling worm in eddies and tails of strong streams should produce good results.—L.

Lake Vyrnwy (North Wales).—Since my last report there has not been much improvement in the weather, in fact, one or two days have been so cold and stormy that fishing on the lake was not even attempted. Still, some very nice baskets have been made whenever fishing was possible. On the 20th thirty-eight fish were taken, scaling 23lb. 1oz. Rev. Gregorie made the best basket with sixteen fish, 8lb. 5oz.; Messrs. Hart and Caley were next with ten fish, 6lb. 4oz.; Messrs. Murly, Henty, and Chittenden took four fish each. On the 21st twenty-six fish were taken, 16lb. 3oz. Mr. Murly had the best basket with ten fish, weighing 6lb. 10oz.; Messrs. Hart and Caley had five fish, 3lb. 1oz.; Mr. Henty, four, 2lb. 6oz. The other baskets contained less than four fish each. On the 22nd, thirty-seven fish, 20lb. 1oz., were weighed. Mr. Murly killed nine, 5lb. 5oz.; Rev. Gregorie, eight, 4lb. 4oz.; Messrs. Hart and Caley, eight, 4lb. 1oz.; Mr. Henty, five, 3lb. 1oz. On the 24th, thirty-seven fish, weighing 19lb. 12oz., were taken. Rev. Gregorie killed fifteen, 7lb. 10oz.; Mr. Henty, eleven, 5lb. 12oz.; Mr. Densham, five, 2lb. 9oz. The remaining baskets contained three or under.—LONGDRIFT.

Lark (Lackford and Icklingham).—Trout fishing in this stream has not been over brisk during the past week. The cold easterly winds have kept the fish down. At the time of writing it is just lovely, with light warm showers from the west. Messrs. Skinner Bros. have certainly thinned the river of pike, taken six one day and eight on last Tuesday, best fish 5lb. Messrs. R. Major and Hancock, on the 22nd, killed a nice little trout, 1lb. 14oz., and six pike; Mr. Leggott, one pike; Mr. Bowers and friend, eight pike. The water is getting rather low and clear, and a push of water is wanted to improve sport.—A. E. KEMP.

Lea.—On Monday the trout-fishing season opens on this river, and there are very fair prospects of sport. Fish have been seen on the move in various directions, and the water is in good order after the rainfall. Live baiting with a minnow, bleak, or gudgeon should prove killing. A spinning bait is very attractive, while a big lob is also extremely tempting. In fact, early in the season, especially in the Hertford district, more trout are secured with the Lobelia than with any other bait, ledgering proving most deadly. The fly should also be tried, and I wish my readers tight lines. Good districts to fish will be Hertford, Ware, St. Margaret's, Rye House, Broxbourne, and Hoddesdon (Dobbs's Weir). The Beane trout stream also opens for fishing on Monday.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams continue to run clear and a nice level, and are in good order for fishing, but sport has been very quiet, owing to the most changeable weather. Heavy falls of rain have been had, accompanied with strong north-west winds, and anglers have not been inclined to go out. During the warm parts of the day the fish have rose a little at the fly, and warmer weather is wanted to make sport good. The best flies to use will be the Blue Dun, March Brown, Stone Fly, Red Spinner, Yellow Dun, and Brown Spinner. The Pinsky is in good order, and sport should be good in it with fly.—GWYNNE.

Lugg, Arrow, and Pinsky (Kingsland).—Rivers are running in fair order, but the weather continues unsettled and unseasonable, occasional sharp, cold showers, with wind for the most part from northerly or easterly points. Still very few flies to be seen, and sport is decidedly slack. Flies as last week. Till a favourable change in the atmosphere takes place fishing will not be of much account.—R. T. WILLIAMS.

Otter (Budleigh Salterton, Devon).—For a week back from present date of reporting (April 26), fly fishers on this river have had a chequered career. The water has been generally heavy from the spates, but fish have shown an inclination to rise. On Saturday (22nd) a good rise of Olives and Iron Blues took place in the afternoon, but for some reason or other the trout were hard to take. On Monday (24th), although the water was "heery," fish took well in parts of the stream. The large Iron Blues came on at 2.30 p.m. One rod got six grand fish; your reporter took thirteen, but not such good specimens; and other anglers did more or less fairly. Yesterday (25th) the river was almost unfishable from heavy spate, and, judging from the barometer, there is a likelihood of further floods soon.—HERON.

Plowden Waters and Onny.—April 25.—The weather has been generally unfavourable. River high and discoloured. In the Plowden club water, on Wednesday,

Dr. Gore had five trout. On Saturday, Mr. J. M. Etches had eight brace. On Monday, Dr. George, two. On the hotel water no fishermen have been down during the past week. This place is within walking distance of four rivers, the Onny, the Corve, the Clun, and the Teme, in all of which fishing may be obtained by request.—TRUTH.

Plymouth.—There is plenty of water now in all the rivers. I have just returned from a visit to the Meavy, Walkham, and Tavy, and all are in good flood, in fact, a little too much for fly fishing. I saw one rod using the minnow, but it was very windy. A good basket was taken on the Meavy on Monday, about three dozen, some over 4lb.—WILLIAM HEARDER.

Slapton, South Devon (Royal Sands Hotel).—The fishing on the Slapton Ley has been very good this season. W. Bastard, Esq., caught a very fine pike, good shape, 15lb. G. E. Owen and three others caught over 400 perch, commencing at 11 a.m. and finishing at 4 p.m., on Monday. Two gentlemen caught forty-four pike. Water in good condition.—J. T. CABLEY. [Surely pike and perch are out of season?—ED.]

Sussex Rivers and Chichester Harbour.—Rivers and streams are running high and discoloured. A few coarse fish have been taken from the cluh water of the Ouse, Mr. Worcester having a grand roach of 2lb. 2oz., and others up to 1½lb. have been caught by other members. On May, dace fishing (fly only) commences, and from the number of fish seen good sport is anticipated. A few trout have been taken in the brooks—principally by worming. Mr. Burstow has had several brace from the upper waters of the Cuckmere. Tributaries of the Adur have yielded a few trout, one, a malformed fish of 1½lb., was caught with minnow; and from the Rother, fish up to 1½lb. are notified. Roach and perch are spawning in Chichester Canal, and now that the moorhens' nests are protected, the reeds are not disturbed in the search by the egg-hunting fraternity. Smelt fishing was not so prolific last week, as tides were low, but at present the small fish are up in great numbers, and affording good sport. A few small bass have been caught, but with the advent of the bigger bass smelt take their departure. Live smelt is a killing bait for bass.—GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—The river is in good order for trout fishing, and to-day, April 24, some good baskets have been taken. The March Brown, dressed tackle fashion, without wings, blue body, and ribbed with silver tinsel, is a killing fly.—H.

Taw (North Devon).—This river has not been fishable since Friday last. Some of the smaller streams have been in fair order for a few hours daily. In the Bray, Thursday, I heard of two catches of over twenty. In the Molland water, a few takes; one or two with the worm. In the Mole, up high, two good takes, the Yeo, Barnstaple, that portion open Saturday, Monday, and Tuesday, fair sport. The Lynn after this flood will be the anglers' paradise; although the fish are small, numbers will be captured.—RUSTY GAME.

Teifi (Lampeter, Cardiganshire).—River in good condition. Plenty of water, and good catches of trout made daily.—H.

Teme (Ludlow).—The Teme in this part is still running clear and a nice level, and has been refreshed by some good falls of rain, and is in good order for either fly or bottom fishing. The weather has been anything but suitable for anglers to get out, with storms and a very strong north-west wind blowing, and this week sport has been rather slow. A few rods have been out, but no good baskets have been landed, and there is little prospect of them being taken until the weather takes up and gets warmer. The flies used have been the Blue Dun, Cowdung, Red Spinner, Iron Blue, Yellow Dun, and March Brown. Bottom fishing has been fairly successful with the worm, and minnow fishing will soon be in good go. In the water near the Castle some nice trout, 2lb. each, were landed with the worm. On Monday, six trout were landed with the worm. On Tuesday, with fly, a nice dish of fish were landed near Ludford. The other houses were at Leintwardine on Saturday, and killed a bitch otter, after four hours' hunt, 14lb. The Onny, Corve, Clun, and Ledwyche are all in good order, and sport may be expected when the weather gets warmer.—S. LUDLOW.

Teme (Tenbury).—The Teme in this district has been visited with some heavy falls of rain of late, accompanied by cold, strong north-west winds, which have made it unpleasant for anglers. The water has not been altered, and it is now in good condition for fishing, but owing to the weather there has been very little fishing done this week. The fish during the bright parts of the day have been rising well, and if the weather would only get warmer there is every prospect of some good sport being had in this part, as there are plenty of fine trout in the river.—WORCESTER.

Torcross Ley.—During the past week, in spite of the stormy weather, splendid sport has been obtained with the rudd. Mr. John J. Lane has landed some every day, from 1½lb. to 2lb. each, and one of 2½lb.; on the 21st, he fished three hours, and landed fourteen rudd, from 1½lb. to 2½lb. each.—W. V.

Torridge (Torrington).—River steadily clearing after a high flood, and as the weather looks a little more promising, will probably be fit for minnow on Friday. Salmon are on the move upward. Mr. T. V. Beresford, of Wear Gifford, and son got three fish last week, weighing respectively 10½lb., 12½lb., and 22lb., all of them just up from the sea in prime condition, taken with Devon minnow. The constant showers having kept river coloured, it has not been fishable with the fly.—E. S.

Upper Yore.—This river is in good order for fly. Gentlemen staying at the Crown have had good sport, one basket weighing 7lb. Thompson's Fancy is considered the best fly.—FAWCETT.

Witham, &c. (Mid-Lincolnshire).—Fishing matters are only very quiet in this district. Very little is

done in the district round about Market Rasen, and the same may be said of the waters towards Grantham. From the district around Sleaford some nice trout are being secured with both worm and fly. Fair results have been obtained not only from the Slea, but from the hecks in the same locality. The best captures have been obtained by whipping the water with the Black Gnat. This is generally a taking bait. Other artificials, such as Bumbles and Cockwing Duns, are recommended. Naturals are very scarce.—LUCY.

Wye and Derwent (Derbyshire).—These rivers are in order for fly fishing, and a good average number of anglers have been out on both streams. There has also been a little improvement in the catches. Gentlemen that have fished the Wye have taken several nice fish, but there is yet room for better sport. The Chatsworth, Hathersage, and upper reaches of the Derwent have yielded some nice fish; baskets ranging from two to five brace have been obtained. Mr. Brown, on the Darley Dale Club's water, on Thursday and Friday in last week landed two and two and a half brace respectively. I hear of a few trout being taken about Matlock Bridge; also the Matlock and Cromford Angling Association's water in Matlock Dale, a few nice trout. A gentleman visitor, fishing on the Lovers' Walk side of the Derwent, took a trout weighing 1lb. 2oz. The greater portion of the fish have been taken with worms and dock grubs. The prospect is fairly good for the next few days, weather being showery, which is favourable for angling. Useful flies: Cooper's Fancy, Ash Dun, Grannom, February Red, and Claret Bumble.—DOTTRELL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—We had a snowstorm on Saturday, and all the higher hills were covered with the wintry element, but it quickly ran into the rivers, and the weather is certainly more genial now, although the wind to-day has "hold of the north." The swallow, cuckoo, sand martin, and other summer migrants have arrived, the grass wears a more emerald tint, the shrubs and trees are commencing to burst their buds, in fact, the whole face of the country is beginning to put on its spring garb. For all that the season is distinctly backward, and the angler still keeps to his early flies, and nothing better, if as good, can still be used as the Little Brown, Spanish Needle, Waterhen Bloa, Snipe and Purple, Snipe and Yellow, Spring Black, Woodcock and Orange, and Thompson's Fancy. The latter is a capital killer all the season through, and is well worth a trial on dull, damp days, or in a brown water on any river containing trout. The trout often take it when "midging," when no other fly will. Sport in the Yore has been good, but the best dishes of fish are still caught with the worm or minnow; but now the swallow and sand martin are with us, insect life will become more plentiful, and the fish rise more freely to the fly. Sport in the Yore itself has been far from bad; indeed, several experts have had extra good sport in the upper waters, and in the tributaries a lot of trout have been caught. One angler, on the Cover on Monday, filled a pannier with thirty-four trout with the worm. I have half that number of larger fish, taken with the natural minnow. I found the fish to take the latter bait well in the Yore, above Middleham, yesterday and again to-day, when the wind veered round from the south-west to nearly due north, and the only flies I saw on were a few "Spanish Needles." Why it is called Spanish Needle I know not! From Hawes, J. Blades writes: "Sport has been good with both minnow and fly here, and I hear some good baskets have been made in the Ashrigg water. I had a day there yesterday, and made a good pannier. I caught all my fish with the Snipe and Purple, Woodcock and Orange, and Spring Black." On the same water Messrs. E. and T. Topham did well. Fishing commenced on Tuesday in streams preserved by the Driffield Anglers' Club. The water was rather low, but fish were plentiful and in good condition. The largest catch was by Mr. Claude Renard, four and a half brace. The members afterwards dined together at the Bell Hotel. Sport up Swaledale has been very fair, a remark that applies to the tributaries of that river, particularly the Bedale Beck, the Codbeck, and the Wiske.—J. E. MILLER (Northern Anglers' Depot, 10, New Station-street, Leeds).

By TELEGRAM.—There is a welcome promise of spring this morning, the weather being brilliantly fine and genial, and, as the barometer is rising steadily, there is every indication it will continue. All our rivers are in fine order, particularly for fly fishing, therefore prospects for sport are good. Best flies: March Brown (male and female), Blue Dun, Snipe and Yellow, and Thompson's Fancy.—J. E. MILLER (Northern Anglers' Depot, 10, New Station-street, Leeds).

SCOTCH REPORTS.

Border Esk and Liddle.—The sun has appeared at last in the Esk and Liddledale districts of Dumfriesshire, and the snow has slid from the tops of the hills. Summer is looming in the near future, and anglers are getting their tackle ready for action. Few fish have been taken in the Border Esk worth noticing, but yellow trout in the Liddle have shown a vast improvement, and are getting into prime condition. Fishing between Kershopefoot and Newcastle-town, Mr. Boa, Edinburgh, had a basket of fifty-eight trout, and Mr. Dawson, Edinburgh, in the same water, had a catch of four dozen trout. Messrs. Wm. Elliott, T. Dickie, and J. Hobkirk, Newcastle-town, had good baskets, and Mr. J. Armstrong, Edinburgh, had a grand kill below Kershopefoot.—GILKOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—Last week very unfavourable, and sport felt off considerably. On 15th, Mr. R. T. Conpland, of Grinnards, landed a salmon of 8lb. on Grinnards water. On 18th, Mr. George Buge, Herne, had a trout of 2½lb. with salmon fly. On 19th, which was very stormy, Mr. F. T. Gervers, of Amat, caught an 8-pounder. On 20th, Mr. Marcns, Balnagown

Arms Hotel, had a 9lb. salmon on Braelangwell water; and on 21st a beauty of 13lb. On Monday this week Admiral Markham, R.N., Amat House, just on the eve of his departure for the south, landed a nice salmon on Amat water. On Tuesday, Mr. Marcus landed two salmon, of 9lb. and 11lb. On Wednesday the weather changed for the better, and the river is in excellent ply.—B.

Deveron (Banffshire).—For the past week there has been a marked improvement in the weather, which is now more seasonable, and almost quite free from frost. The water in the Deveron is in good condition for angling and net fishing. Fair sport is being enjoyed at trout fishing, but no fresh run salmon have, we understand, of late been killed on the lower sections of the river, and grilse have not as yet made their appearance either in the river or on the coast. In fact, it was well on to the middle of May before they entered the river last year. On the Corniehaugh section, on the Marnock water, and on the Auchintoul water, some capital baskets of trout have been got. Kelts are still to be met with in the water, and smolts are proving troublesome to the angler on their way to the sea. Few salmon and trout have been got by the nets for the past week. On the coast the fishing is improving. In the beginning of the week, on one day, the total number of salmon from the various stations was twelve, the yield from the nets being from two to six fish; the heaviest weighed close on 30lb. On Tuesday, a box of 2cwt. was sent from the Deveron district to the market, and one of 1cwt. from the coast fishing at Gardenstown. In the end of last week several boxes were sent to the markets. With a continuance of favourable weather, no doubt the fishings will improve.—H. W.

Dochart.—Mr. James Kinnear, of Edinburgh, out from Luib Hotel, on the river on Saturday, had eight trout, weight, 5½lb.—D. McNAUGHTON.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, on April 22, Mr. H. W. H. Dunsmore and Major Pearson, fishing on Loch Chon, had a fine basket of twenty-nine trout.—H. M.

Lochleven (Kinross).—A great improvement has taken place in the weather. The cold snap has disappeared, and the atmosphere is now mild, with daily rainfalls, cloudy weather, and moderate breezes from the south-west and east. Trout have been taking the fly readily, and anglers have had invariably heavy creels. The good fishing is bringing in anglers in increased numbers, and the applications for boats for the next few days will keep all the boats engaged. The following anglers were out: Mr. Ure, Bonnyhridge, twenty-seven trout, 24lb. 8oz.; Mr. J. J. Harris, Kinross, thirty, 22lb.; Mr. Dunlop, Bridge of Allen, and Mr. Steel, Perth, twenty-one, 17lb.; Mrs. W. J. Stevenson and Miss Stevenson, Stirling, twenty-five, 18lb.; Mr. R. T. Annan and Mr. Sberiff, Helensburgh, seventeen, 14lb.; Sir David Baird, ten, 6lb.; Mr. Robertson, Stirling, thirteen, 7lb. 8oz.; Mr. S. Taylor, Edinburgh, sixteen, 12lb.; Mr. Rutherford, Edinburgh, eighteen, 10lb.; Mr. Ogilvy, Ardenae, twenty-two, 13lb. 8oz.; Major Dobie, of Dollarbeg, in four hours had nineteen, 11lb.; Mr. Lewis Spence and Mr. Bowhill, Edinburgh, thirty-five, 22lb. 8oz.; Mr. Inglis, Dunfermline, twenty-eight, 24lb. 8oz.; Mr. W. S. Vaughan, Newcastle, twenty-five, 19lb. 8oz.; Mr. W. S. Vaughan and Master Wedgewood Vaughan, twenty, 13lb.; Mr. Bramwell, Newcastle, twenty-one, 11lb. 8oz.; Mr. Bramwell and Master Ronald Vaughan, eighteen, 14lb.; Masters Wedgewood and Ronald Vaughan, sixteen, 11lb.; Principal Williams and Mr. J. Gordon Mason, Edinburgh, twenty, 12lb.; Mr. and Mrs. Westview, twelve, 10lb.; Rev. W. A. Macleod, Godalming, and Mr. D. M. MacLay, Glasgow, twenty-five, 17lb. Two cluhs competed during the week, viz., Pollokshields (seven rods), and captured fifty-one, 38lb. 7oz. First prize, Mr. J. Malcolm, eleven, 8lb. Mr. D. Kater, one of the competitors, killed the heaviest during the week. Its weight was 2lb. 6½oz. Seven members of the Stirling Club landed seventy-three, 49lb. 10oz. Mr. R. T. Annan gained the first prize with a catch of twenty, 11lb. 7oz.—ROBERT LAING.

Lochmaddy.—Fishing from Lochmaddy, on Loch Skealtair, Mr. A. W. Craig, one salmon, 9lb., on 14th inst. On Lochandune, Dr. B. and C. Fry, three fish, 2½lb. (heaviest, 1½lb.), on 15th inst. On Strumore, Mr. A. W. Craig, seven fish, 3½lb. (heaviest fish, 3½lb.). On same date, on Strumore, Dr. and Messrs. C. and B. Fry, fourteen fish, 11½lb. (heaviest, 1½lb.), on 17th. On Strumore, Messrs. Charlie and Basil Fry, five fish, 3½lb. (heaviest, 3½lb.), on 20th. On Loch Fada, Dr. F. C. and Mr. B. Fry, thirty fish, 18lb. (heaviest, 1lb.), on 21st. On Loch Tormosat, Dr. F. C. and Mr. B. Fry, nineteen fish, 7lb. (heaviest, 1lb.), on 22nd.

Loch Tay (Killin, N.B.).—On April 19, Miss M. M. Berger killed a nice salmon of 17lb.; Mr. Stenhouse, one, 16lb. 20th, Mr. S. Berger, three, 23lb., 18lb., and 16lb. 21st, Mr. Smith, one, 21lb.; Miss Berger, one, 17lb.; Mr. Wymond, one, 14lb.; Mr. S. Berger, one, 17lb. 22nd, Mr. S. Berger, one, 16lb. 24th, Mr. Wymond, one, 19lb.; Mr. Haynes, one, 24lb.; Miss M. M. Berger, one, 24lb.; Master H. Berger, one, 18lb. 25th, Mr. Haynes, one, 18lb.—H. J. MAISEY.

Naver (Bettyhill, via Thurso, N.B.).—Owing to N.E. winds, snow, frosts, &c., angling, as well as pastoral and agricultural interests have suffered. The sport in the river has been as follows: On 17th, Col. Fryer, Dalvina Lodge, caught two salmon on Beat No. 1; and Col. Curtis, Syre Lodge, one, on No. 2. On 18th, Mr. Blood, Skelpick Lodge, had a salmon of 12½lb. on No. 5; Col. Curtis, three salmon (one of which weighed 13lb.) on No. 3; and Col. Fryer, two, on No. 2. On 19th, Mr. Blood landed a 12-pounder on No. 6; and Col. Curtis, one of 10lb. on No. 4. On 20th, Mr. Blood caught one salmon on No. 1; Mr. Marston, Skelpick Lodge, one, on No. 2; and Col. Fryer, two, on No. 3. On 21st, Col. Curtis, Syre Lodge, had two salmon on No. 1; and Mr. Blood, one, on No. 2. The sad death of a well-known angler in the

north—Mr. George D. Stibbard, lessee of angling and shooting at Syre, Strathnaver, and of 22, Stanhope-gardens, Queen's Gate, and 21, Leadenhall-street, London—took place at Syre Lodge on Sunday last. For his all-round kindness and generosity to the people in the district the deceased gentleman will be much missed. For many years Mr. and Mrs. Stibbard have been liberally contributing to local, charitable, and philanthropic objects.—B.

North-East of Scotland.—The first signs of really acceptable spring weather were experienced on Tuesday, when rain fell copiously, with the wind from the south-west. The rivers are in spate, but the prospects have been made all the brighter, though in the meantime somewhat dull. On the Braemar section of the Dee Major Shute had three salmon, weighing 6lb., 6lb., and 7lb.; while Col. Morland had one of 6lb. on the Invercauld water; Mr. Harris one of 6lb. on the same beat; and Major Shute one of 9lb. on the Crathie waters near Balmoral. On the Ballater waters a good few fish are being got daily. On the Glentana section Sir William Brooks' keepers are doing much better than at any former period of the season on the home pools; while Mr. Barclay had one of 7lb. and one of 6½lb.; Mr. Laming, two, of 15lb. and 15lb., two, of 5½lb. and 9½lb., two, of 7½lb. and 11lb., and two, of 8lb. and 12½lb.; Mr. Farrer, one of 8lb., two, of 4lb. and 6lb., and one of 21lb.; Miss Hihbert, one of 9½lb.; and Mr. Smith, one of 19lb. On the Aboyne reaches sport has also revived somewhat. On the Huntly Arms water, Mr. Crawshaw had two fish, of 11lb. and 10lb., while Capt. Scott creeled four, of 18lb., 15lb., 6lb., and 8lb.; and Mr. Gaithing one of 15½lb. On the Kincardine O'Neil section, Mr. Henry Lawrence creeled one of 8lb., on the Commonly water, on the 18th, and another of 9lb. on the 19th. On the Borrowstone water, Lord Lisburn had one of 8lb., and Lord Garrioch, one of 23lb. On Dess water, Major Davidson had one of 9lb., and Capt. Brook, three, of 6lb., 7lb., and 8lb. On the Ballogie water, Mr. H. L. Craik had two, of 6lb. and 12½lb., and Willie Dunn, one of 7lb., on the Carlogie water. On Tuesday, Col. Morland had a nice fish of 9lb. on Upper Inver waters. Sir John Gladstone has had a fairly good season on the Blackhall and Woodend reaches, his record being about the best on the middle reaches of the Dee. Good baskets of yellow trout are now being got daily on the Don, Ythan, and Ugie. The Aberdeen rock fishers have made a start. WEDNESDAY NIGHT.—The prospects have not been so bright for months past; weather settled, genial, and water in good condition, and steadily getting better. On the Glentana water, Mr. Laming had five on Monday of 4lb., 7lb., 5½lb., 7½lb., and 17½lb., and several on Tuesday of similar weights; while Mr. Barclay, on another section of the river, creeled one of 8lb., and two 18½lb. and 6lb.; Mr. Farrer, one of 8lb.; and Mr. Smith, one of 6lb. On the Braemar waters, Mr. Harris caught one of 8lb.; Mr. Lubbock, three of 6lb., 8lb., and 9lb.; and Col. Morland, two of similar weights. Mr. G. W. Orr, Aberdeen, has taken Mrs. Pickering's Kincardine section for the month of May. The yellow trout are coming freely, and grand baskets were made on Wednesday on the Don, Ythan, and Ugie.—G. M.

Shin (Inveran, N.B.).—Notwithstanding the abnormally adverse weather, the following sport has been got by anglers from Suberland Arms Hotel. On 13th, Mr. Farrar had one salmon weighing 18lb. On 18th, Mr. Evans one of 22lb. On 19th, Mrs. Farrer caught one of 21lb., and Mr. Johnson one weighing 27lb. On 20th, Mrs. Farrer caught a 22-pounder, and Mr. Evans one of 9lb. On 21st, Mr. Johnson grassed one weighing 20lb., and Mr. Evans one of 10lb. On 22nd, Mr. Johnson one salmon, 21lb., and Mrs. Farrer one, 24lb. The average weight of salmon landed during the week was 19½lb.—B.

South of Scotland.—The Border rivers were in flood on Tuesday, and most of the lower waters were too muddy for minnow. Only a few rods were out bait fishing, and the catches were of little or no account. Since Monday the temperature has been much milder than anything experienced this spring. Trout have not been rising freely to the fly this week notwithstanding the favourable conditions. A few sea trout are making their way up the rivers, and two or three have been caught by the rods. The salmon fishing has been a huge failure this season. Since the nets in the Solway opened their season, very few spring salmon have been caught. The Lockerbie Commissioners are now taking steps to have the sewage purified. Some fair yellow trout fishing has been obtained on the higher waters of the Annan with the fly. Sea trout are now running up the river, but they do not generally take the fly at all well until the end of May. In the lower reaches of the river, on Tuesday, Mr. D. C. London killed one with the Devon minnow. Mr. Thomson had several yellow trout on different days with fly and worm. Mr. W. Wright caught half a dozen with the fly. In Kinmount Loch, Mr. E. J. Brook, the proprietor, had some nice yellow trout. Not much has been done on the lower portion of the Nith during the past week. In the Mid Nithdale, at Thornhill, a number of fair-sized yellow trout have been caught with fly. In the upper waters at Sanguhar a few trout have been caught by the local rods. Several rods have been out in the lower portion of the Kirtle, and local rods did very well, especially with fly. The angling is improving now with the milder weather in the Ayrshire lochs. The weather was cold last week and not so favourable for angling in the Galloway Ken. A number of visitors were out, and had fair baskets. On the Ken, above Allangibbon Bridge, Messrs. Frazer and Johnstone had fine baskets with the fly. Two local rods, on Wednesday, killed three dozen good fish on the Dench. The Lochinvar Hotel loch gives some good yellow trout fishing in May. In the Cocker-mouth Derwent, Mr. J. F. Fleming caught five burn trout, and at another outing, nine; Mr. J. Grave took

thirteen, in Cocker; Mr. Matty Thompson, Mr. Howard, and others had fair sport; Mr. Hewitt had one of nearly 1½lb., one of 3½lb., and one of 7½lb., all caught with the running worm; Mr. J. Allison landed a dozen; Mr. Joseph Grave took thirteen. In the Solway the nets are taking more sea trout now, but spring salmon are exceedingly scarce. The rivers are in the pink of order for trout fishing now.—HEATHERELL.

Tay.—The Tay is still in good ply, and sport is considerably improved since last report. The weather is now much milder, and better takes are anticipated. Out from Fisher's Hotel (Pitlochry) water, on the 20th, Mr. Wm. Maxwell, of Donavoured, killed three nice salmon, of 10lb., 17lb., and 25lb. Mr. M. A. Mackenzie, London, on the 21st, killed a newly-run fish of 19lb. A great improvement has taken place in the salmon fishings of Mustly Castle water. Mr. Herbert Millington, of Worcester, on Monday had two salmon, of 18lb. and 22lb.; on Tuesday, one of 13lb.; and on Thursday he killed other two, of 20lb. and 22lb.; and on Friday, one of 14lb. The Delvine waters have also fished well. On Tuesday, Mrs. Gordon L. Bland had a nice fish of 10lb.; and on Wednesday, Mr. P. L. Leaf had one of 14lb. On the same water Mr. Shaw caught a salmon of 17lb.; while Mrs. Leaf, on Friday, got a salmon of 16lb. Out from Stanley Hotel, on Monday, Mr. Fred Kelly, Sheffield, had a salmon of 24lb.—A. A.

Tweed, Teviot, and other Border Streams.—The rivers in the Border district during the past week have been all in good trim for fly fishing, although the weather has not been such as could have been wished. Despite the drawbacks, several good baskets of trout have been got on both Tweed and Teviot. On the former river, Mr. T. Marris has had baskets ranging from 10lb. to 15lb., and a small fish of 5lb. Mr. Arch. Steel, jun., on the Teviot, had 6lb.; on the Tweed, 9lb.; and on the Eden he had 8½lb. in four hours' fishing. On the same streams Mr. T. Mercer had 12lb.; Mr. Jas. Thompson, 4lb.; and on the Teviot, Mr. Charles Farquharson had 8lb.; and on the Tweed he had 6lb. Mr. Wm. Shiells, on Tweed, 6½lb.; Mr. James Simpson, 4½lb.; and Mr. R. Ferguson, on the Teviot, 4½lb. Mr. R. Robertson, on the same stream, has had 5½lb., 6½lb., and 4½lb., on three occasions. Mr. Jas. Affleck, Heaton, has had 6½lb. and 8lb.; and Mr. Robt. Affleck, 4lb. of trout, and one pike of 5lb. All the above takes of trout were killed with fly during genial weather. Mr. Thomas Pringle has also had some nice baskets of trout on the Hendersyde water, some of his fish being from ½lb. to 1lb. in weight. On the Floors Castle upper water, Lord Savordale has had some capital dishes of trout, many of them being of excellent weight and superior quality. Pike fishing in the main streams seems to have abated somewhat, but in both rivers a good many large-sized grayling are still being killed. Salmon fishing as a rule, is just about nil, although I am informed that a few fish have been killed on one or two of the lower waters. On the Floors water, Lord Savordale has had three or four clean-run spring fish, and landed any amount of kelts. On the Tellmouth water (Tweed), Capt. French had an 8lb. salmon, and Stoddart, the keeper, had one of 8lb. also. On the Teviot, Mr. A. Elliot-Caverton has had the first fish of the season, which weighed 14½lb., and on a previous day he had a kipper grilse and a sea trout, both weighing about 4lb. each.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Water, and Gortnorahbey Hotel, Loch Conn).—The fishing on the river has somewhat improved since my last report, and a great number of fish are showing themselves. The fishing on the lake is good, but would be much better if the water was lower. Mr. and Mrs. King have made some good baskets of trout; on the 20th Mr. King killed a nice salmon weighing 9lb. There were also nice baskets of trout made by Messrs. Garvey, Booth, and Little; the latter killed the largest, weighing 6lb.—G. W. F.

Belfast.—The dams are in good trim, and trouting fair. Mr. A. M'D. Caldwell, Mr. Hunter, Mr. Murray, Mr. Langhead, Capt. Lndlow, and other local gentlemen were out killing from six to twelve fish per day.—J. A. B.

Blackwater (co. Cork).—River has been in high flood for past week. The Duke of York's visit to the Earl of Warwick to fish the Careysville water did not prove a success, the river being quite unfishable, except for a few hours after his arrival; however, during that time the Duke hooked and landed a very fine salmon.—W. HAYNES AND SON.

Boyle.—Fishing for the past few days was very good, and some splendid baskets made. Mr. Fenwick is still holding his own as to number and weight. For the last five days he averaged six trout each day, several being over 4½lb. each. These were all got on Lough Gara. Mr. J. Callaghan, fishing Moyburg, in six days, killed fifty-two trout, weighing 41lb., his best day, last Friday week, seventeen. Col. Carr, fishing Gara, on April 24, got six very good trout and several pike and perch. Messrs. Wills and Thornboro, fishing Gara for the last few days, had very good sport. Yesterday (April 25), Mr. Fenwick, on Gara, killed six very good trout, two largest 3lb. each. Some English gentlemen arrived yesterday, and prospects for a real good May Fly season never were so good. P.S.—Since writing above, Mr. Fenwick has brought in a first-class specimen of the Green Drake. It is now sporting about in one of my glass cases, and leads me to believe the general rise of fly will be earlier than anticipated.—GEORGE TAYLOR.

Boyne (Navan Section).—Continued low water and inclement weather has ruled since my last report. The Duke of York fished for a few hours on the Beauparc streams on Monday in last week, and landed a 14lb. fish,

losing another. On Ardmulchan, two fish were taken by Mr. Foster, and one of 32lb. by the fisherman; one of 25lb. on the Blackwater, by Mr. Boylan, jun.; and six, of 12lb. to 24lb., on Upper Black Castle, by Mr. Ley and his fisherman. At time of writing we have a little freshet, which should bring up a good stock of fish.—CLARET FLY.

Clonbur (Mount Gable Hotel, co. Galway).—The weather last week was very rough; but a pleasant change has set in. Capt. O'Hara caught (on Corrib) a fine spring salmon of 12lb., and some nice trout on April 22. Mr. and Mrs. Ledger and party had some good fishing on Mask.—J. A. JOYCE.

Cork Rivers.—Salmon have given better sport on all the principal rivers, and the fish taken were generally of a good size, and in fine condition. The chances are that some really fine sport will be had during the coming week, as all waters have had a thorough refreshing, and are now in good angling trim. Trout fishers have done well on all waters open for angling.—T. J. D.

Corrib (Galway).—The river has cleared away considerably, for it was thick and heavy last week, and with it an improvement in salmon fishing. Amongst those out were Mr. W. Townsend, Mr. G. Hallett, and the two Lyons.—J. A. B.

East Tyrone Rivers.—The Blackwater and Ballinderry are in fair order. On the latter stream, on Monday, two Belfast anglers killed each a dozen trout.—J. A. B.

Erne (Ballyshannon and Belleek).—Some fine sport was had amongst the trout on the Erne during the past week, and the river is now in splendid order. The prospects for the salmon fishing season on the Erne, which opens on 17th prox., promises to be very good, as several fine salmon have already been captured in the nets and boxes.—M. ROGAN AND SONS.

Forford (The Anglers' Hotel, Pontoon, co. Mayo).—Trout fishing is now very good on Loughs Conne and Cullin this year. Gentlemen staying here are getting splendid fishing, getting from seven to ten trout each day, all large, some 5lb. Anglers intending to fish this season can rely on good sport.—P. HEALY.

Kerry Rivers.—Sport has shown much improvement on all the Kerry rivers open for angling since last report, though salmon have not yielded good sport on any water so far. Trout fishers have had good baskets on the Fartha, Reenroe, Flesk, Main, Sneem, Currin (Waterville), Caragh, Laune and Ahalubrid. On the Caragh, Flesk, and Laune salmon anglers had fair sport on odd days, and the prospects for all the above waters are good.—T. J. D.

Killarney.—Sport has improved at salmon, though it yet cannot be considered good or even fair in this department. Trout fishing, on the other hand, has yielded generally good sport on lake and river.—T. J. D.

Killarney District.—Both trout and salmon fishing is improved on the lakes of this locality. Roberts and Glessane had two salmon each up to 10lb. In two days, on the lower lake, Major Irvine and Mr. J. G. Sharkey killed twenty-nine trout; Mr. J. T. Brooke had a similar take; whilst several officers of the Norfolk Regiment, including Capt. Marriott and Lieut. Donne, had nice takes. On Lough Gintane, Messrs. J. A. J. and G. T. Brookes killed forty-four trout in two days (heaviest, 1½lb.).—J. A. B.

Lee (co. Cork).—The river has been in rather an unsettled state for the past week, but is now getting into good order. On Ashton, Mr. O. L. Evans, 10lb. On Lee Mount, Mr. W. T. Crawshaw, 10lb.; Mrs. Crawshaw, 9lb.; and Miss Stansfield, 9lb. On Ballineadig, Mr. S. Haynes, 9lb. On Fargus, Mr. Allgood, 10lb., 9lb. On Cronody, Capt. de Montmorency, Hants Regt., 10lb.; Capt. Bowker, Hants Regt., 9lb.—W. HAYNES AND SON.

Lough Currane and other waters (Waterville, co. Kerry).—Sport is still very poor on Lough Currane as far as salmon are concerned, only three fish being had since last report, viz., one of 10lb., by Mr. Mason; one of 9lb., by Major Cresswell; and one of 11½lb., by Ned Dennehy, a local professional. Much rain has fallen during the past three days, and the lake is now in good order, and salmon have been coming up pretty freely. The trout fishing on the lake has yielded fine sport. On the upper lakes sport has not been quite so good as usual, but on the mountain lakes brown trout anglers had generally very good sport.—T. J. D.

Lough Melvin.—The weather since last report continued unsettled and very rainy. Still, some of the anglers who were out had some good sport. Mr. J. Johnston landed a salmon of 10lb. on 20th inst.; Mr. Mahon, one, of 9lb.; Mr. P. G., one, of 8½lb.; Mr. Whitehead took two, of 11lb. and 8lb. On 25th inst., Mr. Pulley, one, of 8lb.; and Capt. C. R. Barton, two, of 11lb. and 9lb. Trout fishing was first-class during the past week, quite a number of fine baskets of gillaroo trout and brown trout being taken, some of the baskets containing as many as forty trout, and weighing up to 19lb. Amongst the most successful anglers were the following: Mr. Slater and two friends, Mr. Lewis Lipsett, Mr. Wm. Neely, Dr. R. Creighton, Mr. Morgan, Mr. J. Kelly, Mr. E. Mulhern, &c.—M. ROGAN AND SONS.

Mourne (Newtonstewart, co. Tyrone).—The river was in grand order in the past week, and the weather was favourable to trout. Amongst those out (stopping in the Abercorn Arms) were Capt. Costobadie, Mr. Costobadie, Capt. Ansley, Messrs. Warren, Wood, Evans, Allnutt, Low, and Arson, all of whom had fair sport. Capt. Ansley killed a fine 4lb. trout.—J. A. B.

Moy Hotel Private Waters (Ballina).—Water clear, with south winds, and the nets are doing fairly well since last report, showing a fair run of fish. There was some salmon got on the lake, spinning; and some good baskets of trout got at Rinagong Lodge last week; and on Monday, Mr. W. C. Wilson hooked a large fish and

lost him on the private waters of the Moy Hotel.—JOHN DEVERS.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River in order, but north wind has prevented fish from taking. Major Saunders one salmon, 10lb.; Mr. Pitwick, one salmon, 13lb.; Mr. C. Winton, two salmon, 11lb., 14lb. Mr. A. King had a salmon 9lb. on the Lough, and some nice trout. Mr. Brown and friend had some trout; also Mr. Poach had a trout 8lb., trawling.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—Two more days of terrific thunder and rain storms. Only two fish taken this week, one a majestic fellow of 36lb., by Mr. R. H. Wilson, of London, and the other, a 32-pounder, by Mr. W. A. H. Martin, of Ledbury, England. Latest arrivals from England include Miss Hope-Johnstone, Mr. W. A. H. Martin, and Major J. R. Motts, Mayfair, London.—S. J. HURLEY.

Shannon (Castleconnell).—The weather during the past week has been stormy, with a very heavy rainfall. On Doonass, Mr. G. C. Williams killed one salmon 30½lb. on 21st. On Prospect, Major Allenby killed one salmon 19lbs. on 21st; on the same water Mr. H. Chapman killed one salmon 24lb. on 24th. On Newgarden, Mr. F. Cooper killed one salmon 15lb. on 19th. On the Castle fishery, Mr. G. W. Greenhill killed one salmon 24½lb. on 21st, and one salmon 13lb. on 24th.—JOHN ENRIGHT AND SON.

Angling Fixtures.

April 30.

Izaak Walton: Outing to Southend.
Stockwell: Outing to Southend.

May 1.

Central Association: Delegate meeting.
Original Alexandra: A.B.S. concert.

NEWS comes from New York that at the sale of Mr. H. E. Cox's library, Messrs. Scribner and Sons paid \$2870 for a copy of Walton's "Compleat Angler."

£10,000 A YEAR.—How one might play the part of Prince Bountiful on such an income! What comfort and relief one could bring to the poor and to the suffering. And yet, even without money one can do good if one has the will. If I see a fellow-creature suffering from ague, fevers, or disorders of the stomach; or from gout, rheumatism, neuralgia, and the like, I don't need to be a man of wealth in order to show him the way to health. If I point out to him the wonderful efficacy of Holloway's Pills and Ointment, I have, perchance, done more good by that one thoughtful action than I could have achieved with all the wealth of all the Rothschilds.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The renting and preservation committee will meet on Monday evening next, May 1, at 8.30.—R. GHURNEY.

Anglers' Association (No. 2 DISTRICT) Visiting List.—My next visit on No. 2 district takes place Monday next, May 1, at the Original Clerkenwell Piscatorials, opposite Foresters' Hall (A.A. headquarters). Name of house, Sutton Arms, Great Sutton-street. I hope to see a crowd.—BEN ABRAHAMS.

Anglers' Association Visiting List.—The Blackfriars A.S. take a combined visit with S.C.W.V.L. on May 16.—E. ROWLES.

Albion Brothers' Angling Society, The Frampton Arms, Hackney.—We hold a concert on May 8, in aid of the A.B.S. (not 22nd as reported last week). The prize list will be ready for Wednesday next, also special business, when it is hoped all will attend.—C. J. KING.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The usual weekly meeting took place on April 26, when invites to our dinner were sent to the gentlemen by our members' wish. The dinner takes place on May 10. Dinner on table at 8 p.m. sharp. Will all members please settle up by May 3, and get dinner tickets? Also please let me have prizes promised? Messrs. Derry and Stanniford, of the Prince Albert A.S., were the recipients of a vote of thanks for their energy in doing what they are for our western societies *re* L.N.W.R. Messrs. Wells, Wheeler, Prouten, and Ben had some flounders on April 23 from Southend.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—At our last meeting some important business was carried through. Messrs. Drew and Chambers were elected chairman and secretary respectively for the ensuing season. The annual supper and distribution of prizes will take place on May 16. Prize donors are requested to kindly send in their prizes as soon as possible.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The forty-third annual distribution of prizes took place on Wednesday, 26th, when a most pleasant evening was spent, and over forty prizes, given by members and friends, were handed over to the successful competitors, and a long prize list arranged for the coming season, over forty prizes being promised. On the 29th a smoking concert will be held on behalf of our old friend H. Nunn, who, after twenty-two weeks' illness, was knocked down by a cab and killed. We hope to see some of our angling friends present. On May 8 we hold our annual Bohemian concert on behalf of the Anglers' Benevolent Society. Mr. Frank Newton, Hoxton Brothers, will take the chair; Mr. Bert Ingram, pianist. Mr. Fred Thorling, of the St. John's, will give a short address during the evening on the Anglers' Benevolent Society, and will open the A.B.S. Box. Several of the most prominent of the angling world have promised to be present. This also being a ladies' night, I hope to see a good muster of the fair sex. This concert having been announced for so long a time in the angling press, I sincerely hope to see a big muster of angling friends. Mr. Will Musgrave and his company having control of the concert department, I can promise a good entertainment.—GEORGE MERRY.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Will gentlemen who intend taking part in our annual dinner on May 16 kindly let me have their names as soon as possible? Several of our members were out sea fishing at Sontbend on April 22, but met with poor sport.—A. JENKINS.

Battersea Piscatorials, Lord Ranelagh, Peronastreet, Battersea.—We hold our dinner on May 10. Any member requiring tickets may have them of secretary or stewards. Will donors of prizes kindly forward same by next week? Will secretaries of clubs please make a note of change of address?—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack Bermondsey-street, S.E.—At a special meeting of the members, on the 26th, a hearty vote of condolence was passed to the widow of our late respected member, Mr. H. Patman. Most of the members notified their intention of attending the funeral on Saturday, the 29th, at St. Pancras Cemetery, Finchley; the 3.30 service. All to meet at the Bald Faced Stag, Finchley, at three o'clock.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—I wish to remind members and secretaries that we take a visit on the South London List and Anglers' Association on Tuesday, May 16. Will all members turn up next Wednesday to settle club business? Our supper and distribution takes place on Tuesday, May 9; and I think we shall have a grand night. Mr. G. H. Shepherd, Mr. Wade, Mr. Crumpley, and Mr. H. Howard, and many others have signified their intention of being present.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—A special general meeting was held on April 26, when several important matters were decided. The balance-sheet was read and passed as satisfactory. The twenty-seventh annual supper was fixed to take place on Thursday, May 18, on which occasion the chair will be occupied by Mr. R. Lammes, supported by Mr. J. Pailles. An adjourned meeting for

other important business takes place on May 3, at 10 p.m. sharp, when all members are particularly requested to attend.—T. PATERNOSTER.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—It is with deep regret that I have to announce the death of Mr. H. Patman, a much respected member, and well known amongst the angling fraternity. Harry was a good angler and thorough, and his efforts on behalf of the Anglers' Benevolent cause are well known, and need no comment. Will members please attend meeting night next—important business? On April 23 Mr. Rundell had a nice trout. Annual dinner and distribution on June 1.—J. H.

Burlington Piscatorials, Burlington Hotel, Burlington-road, W.—Our annual dinner and distribution of prizes will take place on May 11, at 7.30. All members requiring tickets can have them of the secretary or treasurer. A hearty vote of thanks was unanimously accorded to Messrs. Stroud, of Sunbury, for netting about twelve bushels of fish and replacing them into the Thames, which entailed considerable trouble.—P. LAVINGTON.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—Our return visit on the 24th was a grand success, neighbouring clubs showing up in good numbers. The following answered the roll: Albion Brothers, Brunswick Brothers, Good Intent, Hearts of Oak, Izaak Walton, North-East Brothers, Original Alexandra, Perseverance, Royal Oak, Stepney, Camden, and North London. The chair was occupied during the evening by Mr. H. Everett, Mr. C. J. King (Albion Brothers), and Mr. Hayward (Izaak Walton). Mr. Manning, visiting officer, made a very able speech on the good work of the A.B.S., and opened the box, which contained £20s. 2d. I beg to thank Messrs. T. Blanchard, B. Thwaites, T. Hawkes, A. Thompson, H. Pink, J. Baines, jun., F. Noland, Boxall, Willson, Jagot, Brockett, and Mansfield for their services on that occasion. The fifth annual dinner takes place on May 3, at the above house, when our worthy host (B. Williams) will be universal provider. Prize distribution takes place May 17; shall be pleased to receive prizes promised.—P. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—The concert last Monday, for the benefit of the widow and children of the late Mr. Nicholls, was a great success, thanks to the clubs who supported us. Next Wednesday will be quarterly night, when I hope to see a good muster, as we have a lot of business to transact.—E. BOXALL.

Central Association of London Angling Clubs.—The usual monthly meeting will be held at the Bedford Head Hotel, Maiden-lane, Covent Garden, W.C., on Monday evening next, May 1, at 9 p.m.

Cheltenham Angling Club.—The annual meeting of this club will be held on May 5, at the Royal Hotel, at 8 p.m. Agenda: Report and balance-sheet, election of officers for the ensuing season, alteration of rules, &c., and any other business of which notice may be given. The committee earnestly request you to attend this annual meeting, as the increased prosperity of your club can only be maintained by your taking an active and personal interest in the management of its affairs.—Geo. A. POWELL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Members kindly note that our annual dinner and distribution of prizes of the above society will take place on Monday, May 15, at clubhouse. Tickets, 2s. 6d.—G. T. JAMESON.

Clerkenwell and District United Visiting List.—The concert in aid of the prize fund of the above will take place on Monday, June 5, at the Empress, St. John Street-road (the clubhouse of the St. John's A.S.). The committee meet again on Tuesday to settle details.—F. CASTELL.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On April 25 we elected officers, and fixed date for supper and the distribution of prizes, which will take place on Monday, May 15. Members will greatly oblige by letting me have prizes in as soon as possible, and also to observe rule 10. On Wednesday next the new committee will meet and arrange date for our A.B.S. smoker, as our club-room is now completed. Tickets for supper may be obtained of our worthy host, or of me, on Tuesdays, at 8.30.—T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—I beg to inform members that the annual dinner and distribution of prizes will take place on Thursday, May 18. Will those members and gentlemen who have promised prizes kindly forward the same as early as possible.—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Our annual supper and prize distribution takes place next Tuesday, May 2. The chair will be supported by Mr. Jeffreys ("Straw Hat") and Mr. Burrell (South London Press). A host of talent has been provided, so as to make a very successful evening.—W. H. STAFFORD.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—Our annual dinner will take place on June 4, at the Black Rabbit, Arundel. Members intending to be present must let the secretary know not later than Tuesday, May 15. The distribution of prizes will take place on May 16. Gentlemen who promised prizes will oblige by forwarding same as soon as convenient. Our return visit, No. 1 Eastern Division, will take place on Monday, May 8. Members are requested to attend on Tuesday next.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday meeting dull. Supper tickets to hand, which members and friends can purchase at the clubhouse or of secretary; Monday, May 8, at eight

o'clock sharp. Tickets, 2s. 6d. each: prize distribution to follow.—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Our forty-fourth smoker was a grand success. Select company, good harmony, and a pleasant evening.—GREG.

Eagle Angling Society, Red Lion, Tottenham.—The annual general meeting of this society will be held on May 3, when the officers for the ensuing season will be elected. The annual dinner will take place on May 10, Mr. E. T. Elder (president) in the chair.—W. J. PRICE.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—On Tuesday, May 2, we held our annual supper and distribution of prizes, when I hope all members and friends will attend.—W. LEFEVRE.

Epsom Angling Society, Wellington Hotel, High-street, Epsom.—The eighth annual dinner will be held on Tuesday evening, May 2. Dinner on table at 6.30.—JAMES P. CHUTER.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—Will members clear books, so that we know how many to order supper for on May 9; also send in names for A.B. tickets.—A. N. ELLINS.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—Our annual supper and distribution will take place on June 5, when I hope to see all the members present. There will be a limited number of tickets for friends that would like to come to the supper.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green.—Our annual supper takes place on May 29; distribution of prizes the following Monday.—C. SMITH.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Tuesday evening next (May 2) our member, Mr. J. Huntley, will hold a concert for the benefit of his son, Mr. H. Huntley, who has been laid up now for nine months; chairman, W. Midson.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—We met on Tuesday last, but so few members present that no business was transacted, but I hope members will attend better on Tuesday next to clear books before the outing, as it takes place on May 14, and I should like to know how many members have friends that would join us on that date; also members and friends who have promised prizes would oblige by forwarding them as early as possible. The distribution of prizes takes place on May 30.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—We compete for a series of special prizes on April 30 at Southend; all competitors to fish from the pier. I again beg to remind the members that quarterly night (and the end of our financial year) occurs on Wednesday next, May 3.—H. B.

Junior Piscatorial Society, Rosemary Branch, Lewisham High-road, S.E.—Our annual dinner will take place on May 11, at the clubhouse. A well arranged musical evening will follow, several of our members, who are well-known local singers, having promised to oblige.—C. R. W.

Jubilee Angling Society, Prince Arthur, Golborne road, North Kensington.—Since my last report we have proposed two new working members. Will members please attend next meeting night to make final arrangements for the annual dinner?—G. BENEC.

Limehouse Piscatorial Society, Silver Tavern, Burdett-road, E.—On April 22 six new members were proposed. Members are particularly requested to attend the next general meeting, to be held on Friday, May 5, when all arrangements for the coming season will be made.—R. J. WELLS.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—I beg to inform members that our general clearing night for past season is fixed for May 10, on which night all members must clear their books up. Supper, May 17. Prize donors please note.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—We held a quarterly meeting on the 13th, at which there was a fair attendance. The chairman of the association, Capt. Macnab, presided, and the business on the agenda paper, under his able and genial guidance, was got through in a satisfactory manner, and, though there was two or three controversial items, all passed off in complete harmony. The minutes of previous meetings were duly confirmed, three new members were enrolled, various subscriptions paid in, the hon. treasurer's quarterly account adopted, a resolution carried by a big majority to continue the tenancy of the sole right of fishing in the reservoir at Pen-y-Cae, limit weight of dace reduced to 2½oz.—in my opinion a retrograde step. Outing fixed for the 27th, and the prizes for same apportioned; and prizes were presented to Messrs. R. Wilson, Jagger, Jefferies, Pierce, and J. Pennington. Mr. Whittington made the very interesting and pleasing announcement that the trout had positively bred in the redds prepared for them at the reservoir, as not only had the youngsters began to rise at the fly, but many of them were taken in the minnow trap. The secretary reported having placed fifteen small jack kindly sent by Sir H. B. Robertson in the water at Knowsley. The proceedings, business-like throughout, were brought to a close by a hearty vote of thanks being unanimously passed to the chairman, hon. treasurer, and secretary.

Liverpool Angling Association, Bee Hotel, Queen's-square.—Angling news is scarce this week, but Mr. Whittington has again had some good trout out of the reservoir. Mr. Pennington reports that in four days' fishing in South Wales, Easter week, he creelied 50lb. of trout, with worm, March Brown, and Light Blue Dnn, besides a quantity of fine chub. This member is very successful in

his outings in the particular water he frequents, and generally manages to find his friends with a good feed of trout.—R. WOODFALL.

North-East Brothers' Angling Society, Star and Garter, Green-street.—Our usual meeting took place last Wednesday evening, when members were glad to see our old friend, Mr. Lamb, back in the chair. On May 11 our seventh annual dinner will take place. Shall be pleased if members will call and settle up on next meeting night, Wednesday, May 3.—G. TAYLOR.

North London Angling Society, Tap House, Holloway-road.—On April 19 the secretary brought forward the balance-sheet, the same being passed as read. After the auditors had given their report thereon it showed that the club is in a sound financial condition, with a balance of close on £30 in hand. The annual dinner and distribution of prizes won during last season takes place on May 10. Mr. J. Pailles will take the chair, being supported by several other gentlemen, who have been donors of prizes for the last eight years.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Monday, May 1, the third Bohemian concert will take place at the above, in aid of the A.B.S. The chair will be occupied by Mr. J. Nagle, and we anticipate a grand evening's entertainment.—E. BROCKETT.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—The next return visit on the No. 2 Eastern takes place at the above clubhouse on May 1, when some good talent is promised. On May 7 we have a little spread and distribution of prizes at the White Horse, Bury. Will members please clear the book next meeting night?—A. HILL.

Phoenix Angling Society, The Tavistock, Stibbing-street, N.W.—The annual distribution and supper will take place on Wednesday, May 17, our host catering; the brake outing on the second Sunday of season, so as to give our members a chance of fishing in the Jubilee Nurse competition. The landlord gave us two half-guineas to fish for next season.—R. C.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—Our smoker in aid of the A.B.S. was a success. The chair was taken by Mr. Chapman, faced by Mr. Staniford. We had some excellent talent. The sum of £1 9s. was added to the funds of that society. During the evening the prizes were presented to the successful members, Mr. W. Fayers and Mr. Staniford being the chief prize winners. The following also took prizes: Messrs. H. Frickes, Derry, Hardcastle, Baverstock, and Breedon. Will members attend on May 4, the meeting being special for alteration of rules?—W. B. F.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 18th inst. we made a fresh working member, and on the 25th we made a new working member and another proposed, who will be balloted for on Tuesday next. Any member or friend requiring dinner tickets for May 9 can obtain one at any time at the clubhouse.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—Our concert on the Central Association List on April 20 was very well represented, nineteen clubs responding to the roll-call. Our annual supper and distribution takes place on May 17. Tickets can be obtained of the stewards or the secretary. Donors of prizes will greatly oblige by sending them to the clubhouse at their earliest convenience.—G. GIBBONS.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—The next return visit on the Central Association of London Anglers will go to the above on May 11, when I hope as many brother anglers as can make it convenient to attend will do so. Our annual supper and distribution of prizes takes place May 16.—W. ALDIS.

South Bermondsey Club Piscatorials' Institute, Rotherhithe New-road.—Our annual dinner takes place on Monday, May 8, and should be pleased to see all members present on Friday next to complete arrangements. Also we, the above, deeply regret to hear of the sad death of Mr. H. Patman, one of the most respected members of the Bermondsey Brothers, and we wish to convey our deep sympathy and condolence to the bereaved family.—J. H. DAVIES.

South London United Anglers' Visiting List.—The members of clubs on the above paid a visit to the Waggoners' A.S., at the Lion, Albert Embankment, on Tuesday evening last. Mr. A. Piolane, of the Walworth Waltonians, occupied the chair. The excellent musical programme was greatly enjoyed. Fourteen clubs responded to the roll-call. Next visit going to the Blackfriars A.S., at The Imperial, Southwark-street, Blackfriars, on Tuesday, May 16. Unfortunately, not one of the officers of this important list were in attendance.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—I wish to remind members that Tuesday next, May 9, is quarterly night, when I hope all members will clear the books.—G. F. WEAVER.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—At our meeting on April 25 Mr. Hebblethwaite took the chair. That well-known sportsman, Mr. F. R. A. Parsons, of the Railway Tavern, Twickenham, was elected a member. The first tackle discussion took place, the subject being "Floats." Mr. Ogden Smith exhibited a very large and varied selection. The subject was eventually adjourned until next Tuesday, when will any members who use any unusual sort of float kindly bring a sample with them.—J. M. BROUGHAM.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On May 16 we have our annual dinner, trusting we have the pleasure of visiting clubs at our concert afterwards, to commence at 9.30.—W. H. B.

OGDEN & SCOTFORD,

19, LEICESTER SQUARE, LONDON, W.C.;
And at CHELTENHAM.

Waggoners' Angling Society, White Lion, Albert Embankment.—Our visit took place on Tuesday last on the S.L.U.V.L., and was a grand success. Mr. A. Pioline, of the Walworth Waltonians, ably filled the chair, in the unavoidable absence of Mr. G. H. Shepherd. Fourteen clubs were represented. I wish to tender my sincere thanks to all those gentlemen who favoured us with their company; Mr. Pioline will be remembered by the above for a long time to come. Although the night was a bad one, and other unforeseen circumstances, we had a pleasant evening. Mr. W. Wade was present and did me a favour by calling the roll. Mr. Brown accompanied on the piano.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On Wednesday last we had a good meeting, and by the dinner committee's report we anticipate a very large muster to our dinner on Wednesday next. Dinner will be on the table at 8 sharp, and all tickets not returned by Sunday night must be paid for, as they will be guaranteed. All our friends and members of other clubs please accept our cordial invitation to our concert after the dinner.—TIDDLER.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Our annual dinner will take place at the clubhouse on Thursday, May 18. All members and invites are requested to take note of the alteration. Some excellent talent has been engaged for the occasion, and we hope to have an enjoyable evening.—W. WRAY.

Wellington Angling Society, Prince George, Hillingdon-street, S.E.—Our annual supper takes place on Friday, May 19, it having been postponed owing to the serious illness of our worthy host. Members will kindly attend in force, as I wish to make all necessary arrangements.—F. WESTOBY.

White Hart Angling Society, The White Hart, Tottenham Hale, N.—Will members and donors of prizes please note that our annual dinner and distribution of prizes takes place at the above on Wednesday, May 10, at 8 p.m. sharp, who will oblige by forwarding them on to me at their earliest convenience on or before that date?

Wimbledon Piscatorials, 28, Alexandra-road.—The annual meeting of this society will be held next Tuesday at headquarters at 9 p.m., when the report and accounts for the past year will be presented, officers appointed for the ensuing season, and the rules revised. A full attendance of members is desired.—HON. SEC.

Woolwich Brothers' Angling Society, Railway Tavern, Plumstead-road, Plumstead.—The annual dinner and distribution will take place on May 18, when we hope to see a good muster of our friends and supporters on that occasion. Will all members please attend the meeting, so as to lighten the work?—T. SMITH.

Yarm Angling Association.—The annual meeting of the above was held on the 20th inst., when the balance-sheet was read, and found to be very satisfactory, showing the club to be in a very good position. Officers were then elected for the year. President, Mr. B. C. Atkinson; treasurer, Mr. W. Elgie; secretary, Mr. R. Robson. Mr. George Ramsey won the prize for the heaviest aggregate weight of fish for the six competitions which were held during the season. Several other matters were discussed, which will be brought up again at the adjourned meeting to be held on the 26th inst.—R. ROBSON.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good attendance on April 23, the occasion being a selection of music and some very nice singing by our worthy host, Harry Edwards, accompanied by his two sons; Master Jack at the piano. Our next entertainment will be by Mr. Wade, who has kindly offered to give us a lantern lecture on May 9, which we trust will be a success, the object being in aid of the Thames Angling and Preservation Society.—N. LINDEN.

Doffings by the Day.

It is with the greatest regret that I have to record the death of Mr. Harry Patman, which occurred on Sunday morning last (April 23) after an illness, which has practically extended over three years, leaving a widow and seven children to mourn his loss. The funeral will take place on Saturday, April 29, at four o'clock, at Finchley Cemetery. I have fished with Harry in Norfolk and Suffolk, and at various A.B.S. competitions, and he never tired of answering any questions which were put to him to benefit his brother angler. He was one of the most expert roach fishermen of his day, as his club register will testify.

The following extract is from a letter sent to me by Mr. W. J. Wade, of the Central Association, in answer to inquiries for further particulars: "He was for many years permanently identified with every movement likely to benefit the angling cause, being for many years a member of the A.B.S., a society in which he took a deep and lasting interest. It was owing to his efforts that the convalescent home scheme was adopted, the idea and general details of which he worked out to a practical issue. For many years previous, and up to the time of his death, he was an active and useful member of the Central committee, where his wide experience and straightforward and practical character endeared him to all, and made him of the greatest service to the anglers whom he was always pleased to serve. He was a genuine sportsman and a true friend. The Central Association have ordered a wreath to be sent, and the whole of the officers and committee will attend the funeral."

The May Fly is not yet "up," but the May meetings and feasts are very much in evidence. Mr. Arthur

Morton, M.P., is to occupy the chair on May 4 at the sixteenth annual dinner of the United Brothers' A.S. Mr. W. R. Lawes is down for the vice-chair. I can speak from experience as to the enjoyable nights this well-known and well-conducted club arrange. Tickets may be obtained from Mr. H. Tyler (secretary), at headquarters, Druid's Head Tavern, Broadway, Deptford. I understand that this dinner will be a record one. Sorry I cannot be there, as Thursday night is always a busy one with me. I don't know what to say to Mr. Lawes (the moving spirit of the United Brothers) in answer to a very kind invite: "Now, 'Drag,' no excuse this time, but come. We have not given you a long time to think about it and frame delightful excuses." [That's enough, Mr. Lawes; if I run in upon you it will be about 11.30, and you must provide a carriage to get me home. A pleasant evening to you all.]

ON Tuesday, May 9, the first annual dinner of the Thames Re-stocking Association will be held at Carr's Restaurant, Strand. Mr. C. H. Cook ("John Bickerdyke") will occupy the chair. On the same evening the Blackfriars will dine at their headquarters, the Imperial Hotel, Southwark-street, Blackfriars. The chair and vice-chair will be occupied by Messrs. G. H. Shepherd and W. J. Wade. Secretary J. Wheelhouse means the function to be a success. They have a good host and a splendid room, and visitors will find them the best of good company.

ON Tuesday evening next the Collingwood Anglers dine at the Lord Nelson, Nelson-square, Blackfriars-road, S.E. "Straw Hat" (Mr. J. Jeffery) in the chair, supported by Mr. F. Bursill and a host of angling celebrities. The host of this hospitality will see that justice is done to members and visitors.

OUR F. G. ALBUM OF ANGLERS.

No. 40 (New Series).

MR. E. M. MALLETT.

Has been a keen lover of coarse fishing from early youth. An old City of London School boy, he received his first taste of angling delights under the enthusiastic example of one of the masters with whom he resided. For some years he was the hon. sec. of that well-known angling club, The Larkhall, Larkhall-lane, Clapham. He is a zealous member of the British Sea Anglers. When deep sea fishing last August, in the Channel, a few miles off the Lizard, he had the unique experience of catching five sharks. Two of these undesirable gentry were 5ft. long, and caused no small commotion when hauled aboard. Mr. Mallett has made good bags of fish on the Thames, at Kingston, and is very well known in boating circles. For many years he has been a regular visitor to those happy hunting grounds, the Norfolk rivers and broads, and met with great success, notably large perch at Oulton broad, and heavy roach in the Waveney. He is a true sportsman, and has often expressed his regret that large quantities of fish are so thoughtlessly wasted in those waters annually by so-called anglers, who leave them on the banks to rot. The chief offenders are angling parties on wherries and yachts. Mr. Mallett rejoices in many friends, and is what may be truthfully described as a fair all-round man at rowing, swimming, billiards, cricket, &c.

The Limehouse Piscatorials are, I understand, going well and strong. For a comparatively new club they contain an excellent membership, amongst whom are many influential anglers. This is as it should be, but, from what a little bird whispers, its success is due to their hon. sec. and a good committee.

The Wednesday evening meetings of the B.S.A.S. are now held in the York Room at the Holborn Restaurant.

THE Drayton Park Piscatorials' smoker on the 26th was very successful. The room was crowded. Messrs. Joe Wall, J. Matthews, Fred Bangle, Tom Partridge, F. and W. Menage, &c., supplied the harmony. Mr. A. W. Horsey made a capital chairman, supported by several well-known gentlemen, including Messrs. John Lees and W. Harris.

THE paper read before the members and friends of the B.S.A.S. on Wednesday evening last was entitled "Sea Fishing—by a Landsman." A huge pile of books for reference had been sent on to the York Room at the Holborn, and after the introductory pages had been read (in which sea fishing had been carefully avoided), the audience was invited to listen to some of the extracts. But unfortunately the wrong books had been sent on, with the result that on page blank, of book blank, &c., &c., there was nothing to be done but to give them the following:

"How to stock a trout stream"—pnt plenty in and take none out; "How to make Flies, and the absolute necessity of reducing the varieties in existence, and have six standard patterns only;" "Fly Fishing for Mussels;" "Angling for Sturgeon with a Roach-pole;" "Sea Fishing in the American Lakes;" "Legering for Dolphin;" "Artificial Paste for Congers;" "Whiffing for Bass (bottled);" "Live-baiting for Oysters;" "Trolling for Whales;" "Winkles as Bait—boiled or raw?" "Sea Fishing a Fine Art;" and one or two other subjects which will be briefly treated on a future occasion before such another brilliant audience.

THE annual general meeting of the Scottish Trout Anglers' Association (to which the public are specially invited) will take place in the Masonic Hall, Parliament Close, 71, High-street, Perth, on Friday, April 28, at 8 p.m. The Right Honourable the Earl of Mansfield will occupy the chair, and the president of the association (the Right Honourable Sir Herbert Maxwell, Bart., M.P.) will deliver an address in the interests of trout angling. The half-yearly report and the annual balance-sheet will be submitted, and other business, including a proposal to form a district association in Perthshire, will be discussed. The committee hope that a large number of members will find it convenient to be present, and, with a view to the good of trout angling in the county, they would urge upon the anglers of Perth and the surrounding districts (whether members or not) the desirability of attending. The honorary secretary of this society is Mr. Andrew Smith.

THE Pet Dog Show—one of the most fashionable events of the year at the Royal Aquarium—will be held there, for the eighth year in succession, on Tuesday, Wednesday, and Thursday next. The entries, which number nearly 1400—a record entry—embrace every variety of pet dogs, and the exhibitors include a princess and many ladies of title. The unique Aquarium entertainments will proceed as usual, and the Great Fight at 4 and 9 o'clock, daily.

MR. AKERS-DOUGLAS, M.P., First Commissioner of Works, at Whitstable, on Wednesday, referred to the favourable reports by medical inspectors on the Whitstable oyster beds, and said the promised legislation had not been forgotten. The president of the local government board, with a desire to set at rest the fears regarding the eating of oysters, and to protect a *bona fide* industry, was about to introduce a measure providing for the inspection of oyster layings, prohibiting their removal from insanitary grounds, and regulating the importation of foreign oysters from suspected districts.

THE monthly delegate meeting of the Central Association will take place on Monday evening, May 1, at the Bedford Head, Maiden-lane, Covent Garden.

LONDON, Brighton, and South Coast Railway Superintendent (to Carriage Inspector): "Any of the carriages out of order?" "Yes; No. 412 is unfit for service." "Well, use it only for Pulborough after this."

ACCORDING to the *Weekly Press*, Christchurch, New Zealand, of Feb. 22, "Mr. R. Heaton Rhodes fished in the lower reaches of the Ophi, and landed an 11lb. fresh run female trout. He was using a 10oz. Hardy rod, a xxx drawn gut cast, and Red Spinner Fly tied on a No. 1 hook. This is believed to be a record for such light gear. Mr. Nichols, who accompanied him, succeeded in getting the fish into the landing net at the first attempt."

MR. R. J. WELLS, hon. sec. of the Limehouse Piscatorial Society, when sending on his postal order for 10s. 6d. (one year's subscription, post free) to the *Fishing Gazette*, says that they are adding to their numbers rapidly. Many influential residents are joining, and the Limehouse A.S., although comparatively an infant, is going "strong." Success to them!

AN angler generally has a "cast" in his eye.

IN conversation with Mr. Jardine recently, he said: "I took one of my grandsons—a little six-year-old—'tiddler' fishing. He has a terrier dog named Rip. Returning home by a pathway running alongside Tottenham Cemetery, he saw a tombstone with 'R.I.P.' on it. 'Grandpa,' said he, 'a poor little dog is buried there. I wonder if it was like mine?'" DRAGNET.

PISCATORIAL SOCIETY.

THANKS to the inclement weather of Monday, there was but a small attendance of members at the usual weekly gathering, Mr. W. Edmonds presiding. Angling reports showed that the wind, rain, and cold had kept trout down, so that little sport had been obtained on either the Kennet, Moor stream, or Colne. Mr. J. W. Zehnendorf, who had spent two days at Newbury, stated that the Grannom was fairly well up, and for a short time in one particular spot unapproachable except by wading. There was a grand rise of fish. The wind had blown into the eddies one seething mass of living flies an inch thick. He had never seen so many trout taking the "green-tails" on one particular shallow (an impregnable fishing fortress in his case) in all his experience of the Kennet, but, unfortunately, his waders were carelessly stowed away at the Swan, and beyond catching a quantity of exceptionally fine dace (returned) he did nothing. Mr. W. G. Fletcher, who had likewise been to Newbury, also drew a blank, thanks to the rough weather, and Mr. C. H. Bywaters, thanks to a pitiless downpour of rain throughout the day, could not even venture out to fish. The energetic Mr. Harden, however, took a fish of 2lb., and was unfortunate enough to get smashed by two bangers. The chairman mentioned that he had taken on the Wick a curious looking jack, if, indeed, it was *Esolucius* at all. It was absolutely silvery in colour, without a suspicion of gold about it, the fins being tinged with red instead of yellow. If such a thing were possible, he thought it must have been a cross between a jack and a trout. Had the learned curator (Dr. Chas. S. Patterson) been present he might have been able to have pronounced an authoritative opinion upon the point as to whether the fish was a hybrid or not, especially if it had been brought up for inspection. Mr. Frank Ward gave an interesting account of coarse fishing at Harlingham Ferry, on the Trent, though naturally he had not sampled it. Several members had been to the new water at Uxbridge, and some grand trout had been seen on the move towards evening. Mr. R. Bradford, besides indulging in a modest lunch at the Chequers, and a still less ostentatious tea at the keeper's cottage, took a good trout of 1lb. 12oz. out of deep water. Mr. H. A. Rolt also got a smaller fish of 1lb. 4oz. It was mentioned that the best wind for dry fly work was a sou'-wester, and for wet fly fishing a N.W. blow. Mr. H. H. Brown stated that the "locals" would tell them that they never caught fish when there was a down-stream wind. No information was, however, afforded as to the style of angling the aforesaid natives adopted. It goes without saying that they do not fish in the artistic manner the past masters in the Piscatorial Society affect. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE minutes of the last meeting were read and confirmed. Mr. G. Read Clarke was in the chair. Mr. Parker reported that a pollack was taken at Southsea Pier last week of 3lb. Mr. Preston Gardner, with Mr. Wood, at Newhaven on April 22 and 23 (April 22, five score; April 23, five and a half score), mostly dabs of 9oz., flounders, and plaice; no sport trailing for bass; bait, mussels and lugworm. Mr. Tucker, at Southend, on Monday, four score of small fry, about one score of flounders, weighing up to 1lb., boat fishing. Mr. Hnssey reported catching some dabs at Southend-on-Sea, but they ran small. Mr. G. H. Howard then read a paper entitled "Sea Fishing by a Landsman." M. Henri Viard (of *Le Journal*, Paris), gave some interesting stories of sea fishing. Afterwards an animated discussion took place on trawling and the wholesale destruction by trawlers of immature fish, in which Mr. Tucker, the chairman, Mr. Hnssey, the hon. sec., and others took part, and a remedy was suggested by having a close time for steam trawlers. Will members kindly note that the headquarters of the society are now at the Holborn Restaurant (York Room)? The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

THAMES ANGLING PRESERVATION SOCIETY.

THE executive met at the society's office on Tuesday last, and the hon. sec. (Mr. Higgins) laid before the committee the remainder of the correspondence between himself and the Lord Chamberlain respecting the removal of the barren streams between Staines and Teddington Lock. This has been done. Two are attended to by Harris, of Isleham; ten by E. Rosewell, of Halliford; and thirty-eight by the Messrs. Abnett, at Molesey. The birds will be kept off the river until the perch spawn is hatched out. A special vote of thanks was accorded to H. O. O'Hagan, Esq., for his prompt action in removing and housing his ducks during the coarse fish spawning season, as asked by the committee.

ELGIN ANGLING SOCIETY.

ON Monday a grand concert was given at the Blenheim Arms, Blenheim-crescent, Notting Hill, by the host, Mr. Chas. Chaplais. The large room, which was packed by an appreciative and enthusiastic company, was tastefully decorated, and presented a picturesque appearance. Mr. Louis Chaplais, Ben Jonson, Shoe-lane, Fleet-street, ably presided, the vice being occupied by the hon. secretary of the society. Among those present was Mr. Arthur West, of the Lychnobite Angling Society. The programme commenced with a pianoforte solo by Mr. Stanley Marriott, after which Master Guy Chaplais, a prodigy, gave "Across the bridge," receiving vociferous applause. Mr. Harry Morris received an undeniable encore for "Sons of the sea," responding with a parody on the "Wedding bells."

Mr. Harry Paton was very pleasing in his songs "The King's Own" and "Daddy," and Mr. "Wag" Crook, character comedian, was highly successful in "Doing my duty" and "For old times' sake." "Santa Clans," a coon song, given by Mr. Hart, was encored, and was followed by the host with "Fifteen of 'em on the parlour floor," which was loudly applauded, as was also Mr. Fenn Forge's song, "It's the drink," and was compelled to give "St. Sepulchre's bells" before he left the stage. Mr. Leynton was excellent in "Do-ray-me-fa," and by way of an encore gave a capital recitation. Mr. Alec Thomas (*à la* Eugene Stratton) highly amused with "Little Dolly Daydream" and the "Newly married man," his mimicry being of a high order. Mr. Jones was cordially thanked for his exhibition of the gramophone, and a hearty vote of thanks, with musical honours, being accorded the host, a most enjoyable evening was brought to a close with "Auld Lang Syne." The chairman and host have promised two handsome prizes for the best two roach caught during the season.

ANCHOR AND HOPE ANGLING SOCIETY.

THE twenty-fifth annual dinner of the Anchor and Hope Angling Society was held at the Thomas a' Becket, Old Kent Road, on Thursday, April 20th. Mr. T. Crumplen, president of the society, occupied the chair, supported by Mr. W. H. Elsmore, Mr. R. Lawes, Mr. J. Leven, and Mr. W. J. Wade (Secretary of the Central Association).

The chairman, in proposing "The Anchor and Hope Angling Society," said, as their president, he was proud to again occupy the chair at their annual gathering, and congratulated the society on the manner in which they supported the preservation societies, especially the T.A.P.S., which had done, and is still doing, a vast amount of good for the London anglers. He wished the society every success, and hoped they would increase in numbers in the following season.

Mr. F. W. Martin, responding for the society, said they had not been so successful last season as in others, but mentioned a take of five dabs by one of the members (Mr. C. Booth), all of which were over 1lb. each. They had £20 in hand, and were in hopes of having a very good season.

Mr. W. J. Wade, in proposing "the president," said it needed but very few words from him, as they all knew Mr. T. Crumplen ("Old Izaak" of the *People*), and how he had worked for them all in days gone by on the Central and other associations, where he had been associated with him.

Mr. Crumplen, in responding, said he thanked the members for the manner in which they had received him, and should be pleased at any time to come amongst them whenever they desired him.

The musical part of the programme was contributed to by the following gentlemen: Messrs Chas. Steele, Romney, Bert Hope, F. Bowden, Harry Payne, S. T. Crumplen, A. Dewell, Jackson and Chadwick (banjo and mandoline duet), J. Grant jun., J. Bomer, J. P. Boston, and O'Hagan.

The following prizes were offered for the coming season: Mr. T. Crumplen, pair of oil paintings; Mr. W. H. Elsmore, 10s. 6d.; Mr. H. Mallett, sen., £1 1s.; Mr. B. C. Booth, £1 1s.; Mr. F. W. Martin, £1 1s.; Mr. D. Davis, 10s. 6d.; Mr. J. Jones, 10s. 6d.; Mr. W. J. Wade, 10s. 6d.; Mr. C. Watkins, 10s. 6d.; Mr. T. Bowling, 10s. 6d.; Mr. J. Farmer, 10s. 6d.; Mr. G. Puttock, 10s. 6d.; Mr. C. Cannar, 10s. 6d.; Mr. H. Hamilton, 10s. 6d.; Mr. S. Jackson, 10s. 6d.; Mr. J. Leven, 10s. 6d., and Xmas prize; Mr. G. Duck, £1 1s.; Mr. Taylor, 10s. 6d.; Mr. Marchant, 10s. 6d.; Mr. J. Grant, 10s. 6d.; Mr. A. West, prize; Mr. Egby, 10s. 6d.; Mr. H. Mallett, jun., 10s. 6d.

The chairman, in proposing "our host," said he was sure that Mr. Duck had provided a splendid repast, to which ample justice had been done, and he felt sure the members were very pleased. Mr. G. Duck suitably responded.

HERTFORD ANGLING PRESERVATION SOCIETY.

THE annual meeting of this society was held on Monday last at the Station Hotel, Hertford, Mr. W. G. Garratt, president, in the chair. The report referred to the various causes which had been detrimental to the welfare of the society during the past year; the expenses of a law suit, the excessively dry season, and the death of the hon. sec. having seriously affected its position. In consequence the committee had been reluctantly compelled to terminate their tenancy of the subscription water, and retain only those waters rented from the Corporation of Hertford. The balance sheet showed a small deficit which is covered by subscriptions yet due. The report also noted the loss the society had sustained by the sudden decease of the late Dr. Brunton, who had been a member of the committee for some years past, and whose genial presence and sound advice were highly esteemed by all the members. In moving the adoption of the report, Mr. W. Waller, the vice-president, said he had not a pleasant task in asking the members to receive the first report showing a retrograde movement in the affairs of the society; but, although they had to face these difficulties, it was not the intention of the committee to flinch from doing so, but it was their hope that the present year, when the rivers were in a more favourable condition than for some four or five years past, would enable them to again place the society on a firm footing, and carry on the work of preserving and protecting the waters around the borough. He spoke of the wholesale destruction of fish which had been carried on before the formation of the society, when netting was a common thing every day, and of the improved state of affairs at the present time. In allusion to the balance-sheet, he congratulated the members on the fact that, despite an

adverse season, the society was yet in a perfectly solvent state. The resolution, seconded by Sergt. Barrington, was carried *nem con.* The officers for the ensuing year were elected as follows: President, Mr. Wm. Burgess; vice-president, Mr. Wm. Waller; hon. secretary, Mr. John Fairall, Station Hotel, Hertford. A cordial vote of thanks was passed to Mr. Walter Garratt for his services as president during the past four years, also for presiding at that evening's meeting. W. W.

THE LATE SIR ROSE PRICE.

THERE are anglers in many parts of the world, especially in the United States, who will read with sincere regret that Sir Rose Lambert Price, Bart., died in London recently, at the comparatively early age of sixty-two. His life had been a most stirring one, for from the invaluable pages of "Who's Who," it appears that he served as a lieutenant in the Royal Marine Light Infantry on the East Coast of Africa in the suppression of the slave trade, and in India during the Mutiny; was present at the capture of Canton, and with sundry storming parties, in one of which he was shot through the leg; and he took part in the capture of Pekin. It was only last year that I had the pleasure of reviewing Sir Rose's book, entitled "A Summer in the Rockies." He was a true traveller and sportsman, and one of the very first rank with both rod and gun. He was one of the keenest of anglers, and often talked about writing a volume of his fishing experiences. Had he done so, some of his takes would possibly have been regarded with incredulity by some, though they were true enough. He was a fisherman, as he himself stated, from the age of seven, and there were few streams in the world containing trout which he had not fished. Some thirty years ago he was a frequent contributor to the *Field*, and it was in its columns that he wrote a description of sport in the Island of Anticosti, where the bags of trout he and Lady Price made were counted by hundreds. In the strict sense, however, "bag" was a misnomer, for so numerous were the fish, that they had to be eventually creoled in a barrel.—RED SPINNER, in the *Field*.

[We hope shortly to refer to the late Sir Rose Price as an angler.—Ed. F.G.]

Notes from the North.

"WINTER in the lap of May." It has been winter right on since the advent of March, and no mistake; and it looks very wintry-like still—too much so for good sport. It has been a season of north-easters.

Salmon returns are still at a low ebb. The supplies, after threatening to stop entirely, still keep on the low side for an average season, and the gravest fears are now being entertained that it will be a dead failure, on the East Coast at least.

No grilse have as yet made their appearance. They are late, for the pioneers are usually netted about the middle of April; the Dee and Don districts showing the first fruits long before the thick of the summer migration appears on the coast.

There will be some considerable changing of lessees with the advent of May, as the spring season usually ends with April, when the early spring angler departs and the summer angler takes his place. All over sport has been indifferent, not so much from the lack of fish as the lack of weather.

At this season of the year salmon smolts are very thick in the tidal waters, where they congregate from the reaches above, and move up and down with the tide in shoals for a week or so before taking entirely to the briny for the first time. There is a fine show of smolt on the Dee just now.

Smolt are very greedy on the fly, and, yielding to the temptation, two young anglers were up before the sheriff at Aberdeen last week, and mulcted in a considerable sum for their baskets. They pleaded ignorance of the nature of the fish, and were let down more lightly than would otherwise have been the case.

Salmon smolt are darker than those of the sea trout, neater in the head, with large black spots on the cover of the gill, and a marked (or barred) down the whole length of the body from gill to tail. The tail is a little forked. In the sea trout fry again the marks are not so distinct, the head stumper, and the tail square.

Catfish are quite common, but last week a real pussy, by way of a Fraserburgh joke, came under the hammer of the auctioneer there; but when the box was opened puss made a rapid exit, and, pursued by a hundred market cnrs, cleared out of the ring with a vengeance.

This reminds me of an exciting episode I once had with a friendly spaniel. He was very fond of raw fish, and I used to favour him with an occasional parr when spinning for trout. On this occasion he bolted a parr-tail with a flight of double triangles with which I was fishing, and had just laid on the bank while filling my pipe. Donald's futile efforts to rid himself of the hooks with his paw was the first indication that drew my attention to him. Then, fearing a hiding, or from sheer pain, he made off, and before I could rescue my rod and tackle from destruction and relieve him to boot I had a half hon's chase round a ten acre park. He was cured of parr snatching.

Mr. John Stephen will open the Gordon Arms Hotel at Culter in a few days. This is a fine new house in a

new locality on Middle Deeside, and will be a great boon to the thousand and one anglers and cyclists, especially the latter, passing up and down the royal valley of the Dee. Mr. Stephen is well known as an able caterer and a genial host.

Mr. T. Turner Farley creeled a fine fish of 30lb. last week on the Cairnton water. This is the top weight for the season on the Dee. It was got to the Phantom.

Robert Glass, aged ninety-one, an old resident in the village of Kincardine O'Neil, Deeside, died last week. Robert was almost to the very last engaged in making fishing hags for salmon anglers far and near.

Mr. W. L. Calderwood, Inspector of Salmon Fisheries to the Scotch Fishery Board, was in Aberdeen last week, taking evidence on the application to the Lord Advocate for leave to alter the annual close time on the Ythan and Ugie. The inspector heard evidence *pro* and *con.*, and will submit his report to the Crown Office in the course of the next few days.

Mrs. Basset had a fine fish of 7lb. on the Invercauld private water last week, and Mrs. U. Pickering another of 6½lb. on her own water at Kincardine O'Neil.

Mr. Barclay, who is fishing the Glentana waters, has had a unique, and what might be called an iron tackle cabinet made to his order. It is fitted with assorted moveable trays, in which all kinds of tackle may be stored, from the largest phantom to the tiniest salmon fly. Anything can be got at in a moment, and when simply locked up it may be sent to the other end of the world, and yet nothing can get displaced. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the Birmingham Anglers' Benevolent Society was held at the headquarters on Thursday evening, April 20. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The meeting was very well attended. The minutes of the past monthly meeting were read and adopted, with the exception of those dealing with the annual contest; these minutes were reconsidered. Through important letters received from the railway companies the former minutes passed were rescinded, and it was decided by a narrow majority to fish the contest in the canal at Fenny Compton on Saturday, July 8, next. The secretary was instructed, in conjunction with Mr. C. White, to make the necessary arrangements with the Great Western Railway Company to run a half-day excursion at a fare of 2s. each, with the usual ten per cent. discount off. A guarantee of 300 to be given to the company. Messrs. Coles and McMullen were elected to act as referees. All future arrangements were left over until the next committee meeting. A grant of one guinea was made to a member of the Highgate Park Society who had fallen into distress. The visiting committee's report was of a very favourable nature, as the visits to the clubs had been the means of making a number of new members. It was decided to visit the Belmont Society, at the White Swan, Legge-street; the Balsall Heath Britannia, at the Old Moseley Arms, Tindall-street; and the Junction Society, at the Junction Inn, Highgate-lane, previous to the next meeting. Previous to the close season coming in some good fish were taken from the canal at Fenny Compton, and I have reason to believe that the coming contest will beat all records, as the canal has a reputation of containing a quantity of good fish over the average weight of canal fish. It has been reported to me that the Black Eagle Society was about to be dissolved; in fact, it was passed at an ordinary meeting by the small majority of two, that such should be the case, but I now learn that a general meeting will be summoned, and an effort will be made to keep the club going, and remove it to a more suitable place of meeting. The Aston Park club have

made an application to again remove to another house; this club seems to be very unfortunate in the selection of their club houses, as this will make the fifth removal since their formation. I hope that the new place of meeting will benefit the club, and place it in a better financial position. The Dudley Society, which have been holding their club in an out-of-the-way place, have at last followed my advice, and intend coming into the centre of the town. With this in view, they have arranged to hold their fixture meeting at one of the best and largest houses in Dudley; they will now get the patronage and support of the influential anglers in the town. The proposed new bye-laws, as required by the Severn Fishery Board, are out, and can be obtained for one penny per copy from Mr. J. Stallard, Pierpoint-street, Worcester. The sub-committee appointed by the Provincial Association to review the new bye-laws have taken them up, and, so far as the new coarse fish laws are concerned, they will be strongly opposed, and the Board of Trade will be made acquainted with the nature of the opposition raised before these notes are in print. In the new bye-laws no close time is fixed for the coarse fish; the only reference made is chiefly as to the means of clearing them out of the river. One of the laws says that nets for taking freshwater fish other than trout or grayling shall not exceed 40yds. in length and 3yds. in depth, &c. This is very good, and no doubt calculated to have the desired effect of soon taking all the coarse fish out of the water.

FROM DERBYSHIRE.

Up to the end of the last week the weather continued very unfavourable for all kinds of angling, as cold, strong, winds from the east persistently prevailed. Even on sheltered and comparatively warm parts of streams, sport was, if any, very poor. With the present week, however, there has come a welcome change. The wind has shifted out of the dreaded east, gentle showers of warm rain have fallen, and the atmosphere is milder and more spring-like. On Monday many anglers journeyed to the streams and commenced work in earnest; and as the conditions of both water and weather have been propitious, very fair sport has been had on most of the rivers. The various open lengths of the Dove have had many anglers upon their banks; and on the lower waters, both fly and bottom fishers have taken numerous nice lots of fish, which are now getting into good condition. On the Dovedale, Milledale, and Beresford-dale waters there has been fairly successful fly-fishing, and decent baskets have been made. Indeed, sport on most parts of the Dove has during the last few days been reasonably satisfactory. On the Wye, in the Milledale district, tolerably good sport has been had, chiefly by visitors from Manchester and its neighbourhood; and on the Mensaldale open and private waters fairly large baskets have been made. The Ashford lengths have also yielded some moderate creels of good-sized fish to local anglers principally. On the Bakewell, Haddon, and Rowsley waters there has been, day by day, about the full number of artificial fly rods allowed, and although no very large baskets are reported, yet sport has been fairly good, and several nice lots of fish have been killed. Visitors to Edale and Ashopton have done well, as a rule, on those romantic mountain streams, the Nowe and Ashopton, and several decent creels have been made there. On others of the smaller streams—notably the Amber, Bentley, and Ecclesbourne—bottom fishing with worms has been very successful in places, and a goodly number of fish have been killed. On the Upper Derwent, between Derwent village, Ashopton, Yorkshire Bridge, and Bamford, anglers have been rather numerous, mostly hailing from Sheffield and its vicinity; and some of them have met with fair success, both by fly and bottom fishing. Fly anglers have made tolerably good creels on the Sickleholme, Hathersage, and Grindleford waters, and sport has been generally satisfactory throughout the Derwent valley. There has been a fair share of visitors to the Chatsworth and Baslow reaches, and several good creels of nice sized fish have been taken, the best sport being had on the lengths running through Chatsworth Park, between the Baslow and Beely bridges.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Although the weather is still very cold, there have been warm intervals during the past week, and trout anglers have been able to get an hour or two's fly fishing. The

waters are in capital condition, but there has been a scarcity of flies, and aquatic vegetation is also backward. The fish have shown increased activity, especially during the evenings, and those anglers who have operated with the fly have secured several brace of sizeable fish. The majority of sportsmen, however, have wielded the bottom tackle, and this method has accounted for the best baskets. On some streams trout fishing can scarcely be said to have begun; in fact, some enthusiasts have not, owing to the continued cold weather, yet wetted a line.

FROM HULL AND DISTRICT.

The weather during the past week in this district has not been favourable for successful trout fishing, consequently little has been done; but both the river Hull and tributary streams are in first-class condition either for minnow or fly fishing should milder weather intervene, and several aquatic and other flies are showing themselves on the upper waters, so that the prospects of sport are rather good. Worm fishing for flounders and eels has been practised during the week with a fair amount of success, both in the lower portion of the river and on the Holderness Drains. Several of our local clubs have held their matches on the river. The Red Lion Angling Society fished a match at Grovehill, resulting in Mr. J. Hartley taking the first prize with 1lb. 7½oz.; the next three being taken by Messrs. J. Nicholson, W. Bray, and Rd. Sizer. The Osborne Angling Association also fished their first match of the season at Hull Bridge, Messrs. H. Bulliment, J. Anderson, and H. Quade being the first three prize winners. The George and Dragon Angling Society held their first match on Swinemoor, Messrs. J. P. Sherwood, T. Hales, and T. Watson being the first three amongst the prizes. The members of the River Hull Angling Society have subscribed the nice little sum of £6 12s. 6d. to the widow of a late member of the club (Mrs. H. Ehlers). Mr. Walter Scott, of the Beverley Foresters' Angling Society, held an annual open match on the river at Figham, when seventy-nine competitors entered for the nine prizes offered, which were chiefly won by Hull anglers, Messrs. H. Woolock, G. Armstrong, and R. H. Barlow taking the first three, but the takes of fish were only small. To-day (Saturday) the Victoria A.S. hold their annual match, open to all comers, on the river at Dunswell, and as the river is in fine form in this district for worm fishing, no doubt the competitors will meet with some good sport, especially if the day be fine. There should also be a good muster of anglers, for the prizes are both numerous and well selected. The draw will take place at the Waggon and Horses hostelry at 2.45 p.m. Several nice trout have been taken recently in the havens on the Lincolnshire side of the river Hummer, whilst worm fishing for flounders and eels. Some nice catches of flounders have also been made at both Brough and Hessel Havens during tide time with the black headed worm, using shrimps as ground bait. The Holderness Drains are also providing the match fishers with a fair amount of sport amongst the same kind of fish. The Hull Corporation Employees Angling Society fished their first match at Patrington Haven, resulting in Messrs. C. H. Clarkson, S. Clarkson, and W. Wilkinson taking the first three honours. Messrs. Reckitt's Employees A.S. also fished a match at the same place, Messrs. G. Gledhill, C. Markham, R. Smith, and R. Hun'sman being the first four prize men.

FROM THE LAKE DISTRICT.

Following ten degrees of frost and a fall of snow on April 23, a change for the better took place in the weather early this week, a considerable amount of rain having since fallen. It is yet too early to speak of results as a sequence of this improved state of things, top feed being still conspicuous by its absence on river and lake. There are a considerable number of angling visitors in Cumberland and North Westmorland, and several of these have done better than circumstances would suggest. Some of them speak very favourably of present sport and future prospects, particularly those who have fished Ullswater Lake and the upper waters of the Eamont. Less satisfactory reports come from other quarters of the district, where the fish are said to have deteriorated in condition, owing to the long spell of cold weather. Not much has been done on Windermere, where the trout are still in deep

"ANGLERS NOTE!"

BULCOCK, Fishing Tackle
Maker, Clitheroe,
Lancashire.

water. A number of good char have been taken, however, by both professional and amateur fishermen, with plumb lines, amongst the amateurs who have been most successful being Mr. Thorpe, of Windermere, who, in the very early hours of Friday morning, had ten, and on Saturday three of these beautiful and delicious fish. Given warmer weather and a better hatching out of natural flies, anglers are still hopeful of a successful season.

FROM LANCASHIRE.

The Levenshulme Angling Society last week-end received a consignment of very fine tench and rudd, and turned them adrift in order to cross the existing stock in their waters. To-day (Saturday) the executive council of the Northern Anglers' Association meet at Farnworth to dispose of some very important and interesting business, both routine and extraordinary. The St. Helen's anglers have got on good terms with the corporation, and the terms seem to be satisfactory to both parties; at any rate, the fishing in the waters belonging to the corporation are no longer closed, and a limited number of tickets are issued. This is highly gratifying to the anglers of the town. Liverpool anglers are heard from again this week. The association have successfully arranged for Whit-Monday on the Dee. The West Derby have been enjoying themselves at a "smoker" at the Nelson, and are perfecting arrangements for an open event in June, towards the prize list of which a handsome challenge cup, a gold centre silver medal, and silver mounted carvers are already secured. The writer is continually being asked as to suitable places to go to. Try Huntley or Clonbur. At the latter place the fly fisher is having good times. By this time four gillaroo trout will have arrived at Messrs. Cooper's to be set up. They weigh 16lb., and are beauties. At the former place, since the Cruive Dyke was removed, the fishing has improved. Lancastrian fishermen report favourably of the good sport to be obtained on the Deveron. There is free fishing at both these resorts; although the reports from our rivers, the Ribble, Lune, Wyre, and their tributaries, are not exciting, the tenour of the reports speak with hope of the future of all the lot. The Wyre has just received a further lot of the much discussed rainbow trout, and we shall soon know how they thrive. Some late accounts are to hand of stocking in the Crompton Lodge with a nice lot of fish. Another item speaks of a railway company intending to stock and develop a certain water, with a view to passenger traffic in the future.

FROM MANCHESTER.

Stocking is very much in evidence amongst our local clubs at present. The various executives at last have grasped the importance of this department, and are pushing the question with enthusiasm. The Urmston and Flixton Angling Society have recently received and placed in the Flixton reservoirs two consignments of good fish, principally roach, from Litchfieldshire, and weighing from 1lb. to 1½lb., and there are 500 mature perch yet to arrive when ready. Another society very much alive is the Central Angling Society, Openshaw. They have secured two good reservoirs in the district, and have done a lot of stocking in the same. The fish turned in are mostly large ones, and consist of roach, perch, bream, &c., and there is a consignment of trout yet to arrive. They have arranged for contests on June 25, Aug. 27, and Oct. 15, at places to be arranged. They have elected a strong executive, which, led by Mr. Tom Hackett as secretary, can be relied on for business. Two city fishermen on the Dee, at Llangollen, report the water and weather of the past week-end as good, the sport moderate, but the fish small. Only a few brace of sizeable fish paid penalty, but of small and undersized fish plenty were hooked. A member of the Twelve Club, on the 26th, had rather a good day in Derbyshire, taking twelve brace of nice fish. The Moss Side Social Angling Society held an important meeting on the 24th, and transacted a lot of routine business, discussing dates of matches, &c., for the season. The next meeting of the Welcomb Angling Society will be an interesting one. Several papers on fishing will be read, and many more speeches made, and the diversity of opinion and experiences of the veterans of the club will do the novices a deal of good. The Duke of Cambridge Angling Society, at their meeting on the 24th, arranged an interesting programme for the coming season. Matches are to be fished on June 25 and September 3, both at Althorpe. They are making new members each meeting night, but only sportsmen are admitted to the club.

FROM NOTTINGHAM.

Salmon angling has again been impossible on the favourite reaches of the Trent in our district in consequence of the height of the water. Moreover, unfavourable weather has cast a gloom over everything appertaining to the mysteries of the gentle art. Members of the Wellington Society have been privileged to angle on certain preserved streams in Derbyshire, and one or two of the number succeeded in creeling trout. A few brace have also been killed with the bottom bait—worm—on the Dover Beck. Fly fishing opens on the Greet on Monday, and above Southwell there is said to be a plentiful head of fish. Club news is lacking in interest, and things generally just now are extremely quiet.

FROM SHEFFIELD.

A considerable and welcome improvement in the conditions for angling has been apparent during the past week, and the greater portion of the waters in the Sheffield district are now in very good order for fishing. The upper reaches of the Derwent have come in for a good deal of attention, but although the results have not been up to high-water mark, as it were, the sport obtained has been of a fairly satisfactory description. The members of the Hathersage and Chatsworth Clubs have fared very well, several rodsters having been out every day, whilst the takes have comprised a lot of nice fish. Sport is likely

to improve every day, and there are any amount of fish in the Derwent. Bottom anglers have had little to complain of, but, as fishermen are reported to be always grumbling, it is possible they will say that the fish have run too much on the small side. By using worms, dock grubs, and maggots they have obtained some capital sport. In the Matlock district both the free and the private waters have furnished good sport, and just near Ma'lock Dale several good-sized Loch Leven trout have been captured. Pond anglers in Derbyshire are now getting some good sport, especially in the evenings. Reports from the Amber have not been quite so good lately, and the reason for this is that the fish are said to have had such a large supply of natural food, in consequence of the rains washing worms, &c., into the river, that they won't look at the carefully prepared baits of anglers. With maggots, a few of the members of the Sheffield Trout Anglers' Society have caught a small number of trout in the Amber near Wingfield, and dock grubs have also proved to be very attractive. Closer at home there is very little sport to record, with the exception of the Lord Bradfield Reservoir, which has yielded a few decent trout. Nothing much is being done in the Idle, but Retford anglers will pay greater attention to this stream later on.

FROM WORCESTER AND DISTRICT.

Weather has been stormy all through the week, and on two nights we had very heavy rain, and although we have had such cold winds, the vegetable world is full of active life, the fields luxuriant and green. The rivers are in capital condition, but very few anglers have been out. Severn is all but deserted by club anglers, and will be until June 15, when the close season ends. One or two sportsmen have been spinning for trout under the weirs, but without success; but a fine sea trout (3lb. 6oz.) was taken in one of the salmon nets, and its merits were discussed at the dinner table of the Bull's Head Inn, the headquarters of the Worcester Angling Society. A few brace of nice trout were taken in the Teme with worm and fly, Blue Dun, Red Palmer, and Iron Blue killing best. Some of the clubs have also had sport on their rented waters. Mr. Leach, treasurer of the Greenbacks' Club, states that a few days ago he took five brace in their club water, but only creeled one fish, returning all the others to the water to grow larger. He is too good a sportsman to bring an undersized fish away. Messrs. Martin, Perks, and Thrift also had some nice fish from their club water, but they certainly are not in condition yet. Salmon fishing is still bad, and samlets in this part of the Severn unusually scarce.

ANSWERS TO CORRESPONDENTS.

CAN'T CATCH CARP.—We could not give you in a few words all you want to know. Send 1s. for a copy of "Angling and How to Angle" to Sampson Low and Co., St. Dunstan's House, Fetter-lane, E.C., where you will find the information you require.

MAY FLY.—You will find some account of May Fly fishing in the Windrush and Coln in that most delightful book, "A Cotswold Village; or, Country Life and Pursuits in Gloucestershire," by J. A. Gibbs, recently published by Mr. John Murray. We can strongly recommend it as one of the best books about country life, hunting, shooting, fishing, &c., that we have ever read.

H. H. W. asks where lugworms may be obtained at Burnham-on-Crouch on Sundays. Perhaps Mr. Wright, who has taken up his residence there, will kindly answer?

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

AN OPTICAL ILLUSION.

DEAR SIR,—Will you or any of your readers kindly tell me, through your columns, whether fish, such as trout, pike, perch, salmon, &c., appear to the eye larger or smaller in the water than when out?—Yours truly,

BRADFORD.

[It all depends on the angle at which you look at them. If you look down at them from some place above the water level they look longer and thinner than they are. If you look at them in a glass tank at an aquarium they look their natural size.—ED.]

SILK FISHING LINES.

SIR,—As all good anglers consult the pages of the *Fishing Gazette* for information bearing on their favourite amusement, perhaps it will not be out of place if an ardent lover of the sport gives a timely word of advice to his "brethren of the angle" on the above subject.

Owing to an extraordinary increased demand for all classes of "raw" silk, the price of all silks suitable for making fishing lines has advanced, within a few months, from twenty to thirty per cent., and is still advancing. Indeed, from all I can learn, owing to the vagaries of fashion, manufacturers are putting their best silk to more profitable uses than making lines, especially as this class of trade has been so much cut up in prices during the last year or two as to be hardly worth catering for. It is therefore most probable that, before long, it will be difficult to procure really pure silk lines except at much higher prices than are now possible.

I am informed by those in the trade that the demand for silk at the present time is much greater than the supply, and is likely to continue so for some time to come.

I think I need say no more, only that "a word to the wise," &c., and you know, sir, that most anglers are wise—or otherwise.—Yours truly,

SPRING TROUT.

MID-TAW TROUT FISHERY.—A CORRECTION.

DEAR SIR,—In the account you kindly give of my fishery in your issue of April 22, the Fox and Hoonds Hotel, at Eggesford, by mistake was printed "Eggesdon." Also, the new "Tor" Railway should read "Toy" Railway.—Yours truly,

R. P. MARSHALL.

FISHING AT COLWYN BAY.

DEAR SIR,—Can you, or any of your numerous correspondents, give me particulars of trout fishing in the neighbourhood of Colwyn Bay, North Wales? I propose spending a fortnight there in June, and being quite a novice, should be very glad of any information as to what flies to use, or if waders are necessary, &c. Thanking you in anticipation.—Yours truly,

J. W. NEWBOULD.

"COOPER'S FANCY."

DEAR SIR,—In your issue of the *Fishing Gazette* April 15, 1899, page 260, Reports from Rivers, Lochs, &c., Wye and Derwent (Derbyshire), correspondent "Dytterel" recommends Cooper's Fancy as a good fly for this month. Can he or any of your readers tell me where the fly may be had? Strange to say, the celebrated Derbyshire fly dressers, Messrs. Foster Brothers, of Ashbourne, Derbyshire, do not know it. I shall be very thankful to anyone for the above information.—Yours truly,

A. ROLAND UTCHEP.

BATS AND THE FLY.

DEAR SIR,—When fishing a considerable tributary of the Boyne last June, I noticed nightly, while brown trout fishing in the evening, that "the bats," which I had last seen was fast and furious, usually commenced about 8.15, and lasted so long as the bats (which were rather large and numerous) remained dormant, but the minute they made their appearance, their flight being almost confined to the course of the river, down went the trout like a stone, and the water, which five minutes before was alive with trout, was now without a sign of life so far as they were concerned, and no fly, natural or artificial, would tempt them to rise.

Can any of your readers, or you, explain this, or state whether fish under these circumstances usually resort to bottom feeding, or are to be considered entirely "off" for the night? It is most disappointing to have one's sport, which prior to the advent of the bats was invariably excellent, thus closed down so rudely long before the fading light would of necessity suggest a wind-up for the day. To my mind there is no doubt about the bats being the cause of the fish ceasing to take the fly, as I paid close attention to the matter.—I am, dear sir, yours faithfully,

J. G. G.

[We never heard of bats putting fish down before, and have often caught trout when the bats were about, and on one or two occasions have hooked bats as well as trout.—ED.]

FISHING IN ULLESWATER.

SIR,—I should be obliged if any of your readers could give me any information as to the fishing in Ulleswater and the river Eamont.

I think of staying at Pooley Bridge at Whitsuntide, and shall be glad to know whether the Eamont can be fished from there, and whose permission is required; also, what flies are suitable for the river and lake, and what licence is necessary.—Yours, &c.,

LEX.

FISHING NEAR EASTBOURNE.

DEAR SIR,—Will you or any of your readers kindly tell me where to go for a week's good genuine fishing (late summer or autumn)? Specimen fish only wanted. Within, say, an hour or two by rail of Eastbourne.—Yours, &c.,

CH. L. MATHEWS.

FISHING IN THE KILLARNEY LAKES.

DEAR SIR,—I see by the *Fishing Gazette*, of April 1, that your correspondent, "Mark Bench," states, under the heading "The Killarney Lakes," that the Killarney Fishery Development Association are a little premature in stating that night lines are abolished here; he also states "that the association has not, so far, succeeded in obtaining the abolition of cross-lines." Kindly permit me to say that both cross lines and night lines are totally abolished in the Killarney Lakes, and the only "fixed engines" that remain are some patent eel traps, which are doing very good work.

It is now unlawful to use a cross line in the lakes; the penalty is, I think, £4; and, as to night lines, there were only two families who used them, and these are employed by two of the principal hotels, who have threatened to dismiss them instantly if found to be using night lines. We have also got the owners of the principal estates to agree to stop anyone who uses a night line from landing on any part of their respective estates. Also, it is illegal to use any fixed engine for the capture of trout or salmon, unless a licence be obtained for it from the district conservators, and the latter can impose a licence which will be prohibitive. In short, we have made it so warm for the few men that fished them that the game isn't worth the candle; also the men themselves are beginning to see that it will pay better not to use them in the long run, and I can confidently assert that the use of cross lines and night lines are totally abolished in Killarney now.

I think that the flies mentioned by "Mark Bench" will hardly be found the most killing here. I may mention that some very decent baskets of trout have been taken on the lakes lately. Mr. J. Couran, of Plympton, Devon, took seven dozen and four in two days. Messrs. Hall and Lambkin, of Cork, were out several days, and got from one and a half dozen to four dozen each day. Mr. R.

Roberts, Killarney, took four dozen on Sunday last, and three dozen and five on Saturday.

Any information that I can give regarding fishing in the district, &c., your readers are most welcome to.—Yours truly,
WILLIAM GRAHAM (Hon. Sec. K.F.D.A.).
Graham's Hotel, The Glebe, Killarney.

FISHING NEAR MALVERN.

DEAR SIR,—I would be grateful if you or any reader of the *Fishing Gazette* would kindly inform me whether salmon or trout fishing can be obtained within a reasonable distance of Malvern, and if so, to whom application should be made.—Yours faithfully,
AFRIDI.

THE HUNGERFORD FISHERY.

DEAR SIR,—Many readers will be pleased to hear of the satisfactory state of the fishery at Hungerford. During the past autumn the shallows were well ploughed and cleaned, the banks have been put in good order, accumulations of mud removed, and the appearance of this fine river at the present time leaves nothing to be desired.

Four hundred two-year-old trout were turned into the lower Dunn water in February, and last week 400 yearling trout were placed on the shallows in the same part of the river. All these fish were of good size and very lively.

War has been waged against the pike during the winter months, and a number of these destructive fish have been killed. The rivers Kennet and Dunn are well stocked with fish, and the prospects for the coming season, which opens on May 1 for trout, are unusually good.

Excellent accommodation can be had at the various hotels, which are within five minutes' walk of the river.

Fishermen wishing to spend a pleasant holiday cannot do better than betake themselves to the ancient town of Hungerford, where they may pursue their favourite sport over four miles of water, and enjoy the charming scenery of the famous Kennet Valley.—Yours truly,
R. H. B.

DO SEVERN SALMON TAKE THE FLY?

DEAR SIR,—I was surprised to see that J. E. Evans says in your correspondence columns that Severn salmon take the fly, especially after your remarks the week before, which I think accurately describe it. I may say that I have fished the Severn, from Newtown to its source, for more than twenty years, and, as you say, it is simply waste of time to fish for salmon there, as during the last eight or ten years on the above stretch of the Severn there has not been ten fish (salmon) killed annually, and some years not more than three or four; and when caught (chiefly in the autumn) they are not worth keeping. Also the fly which is generally used is foul hooking, netting, and dynamite. The minnow is the best bait when there are fish. J. E.'s remarks are misleading, as anyone going to his part of the Severn for salmon would be disappointed.—Yours, &c.,
IRON BLUE.

TROUT FISHING, &c., WANTED.

DEAR SIR,—In reply to "Surgeon's" letter in your issue of April 15, the writer can thoroughly recommend good trout fishing in river Dove. He has always put up at Dovedale Hotel, Thorpe, Derbyshire, the proprietress, Mrs. Grindley, having about five miles of good fishing. The accommodation is good; terms strictly moderate; scenery all that can be desired.—Yours truly,
FLY ROD.

LINES FOR SEA FISHING.

In your issue of Sept. 10 last Mr. Alfred Jardine referred to a new pure silk line, very fine and impervious to sea water. I should feel obliged if Mr. Jardine would say whether the line is yet on the market.

In common with most sea anglers, I have felt the want of a fine, yet strong line for bottom fishing in a fast tide-way, and although interested in the correspondence that has appeared on the subject of wire lines, I am not satisfied that a practical wire line has been found. To be of any real use it should be nearly as flexible as flax. If its freedom from kink and consequent fracture is to depend upon a somewhat elaborate system of pulleys or blocks, it may do for Sunday fishing at Deal, but it won't do for every day, and day after day fishing.—Yours faithfully,
JOHN DORY.

FISHING IN WALES.

DEAR SIR,—I daresay that there are many bracing places where good fishing can be had in May; but if "Surgeon" has not yet visited Dovedale, Mr. Ashbourne, surely he cannot do better than spend his holiday at the Isaak Walton Hotel, and fish the Dove and the Manniford from there.

Lovely scenery, grand air, and the historic and perfect trout stream, would give him everything he could desire; the hospitality and comfort that Mr. Prince, of the Isaak Walton, can, and does provide, is an additional attraction.

Would that I could pay another visit to that charming spot which I have just left.—Yours truly,
D. K. K.

MR. J. BAKER'S PATENT DAPPING FLIES.

DEAR SIR,—In accordance with the wish which you were good enough to express in the *Fishing Gazette*, of the 22nd inst., I have much pleasure in sending you a description of my method of using my patent flies in dapping for trout from the bank in clear water.

I use a rather stiff 11ft. greenheart rod, mounted with snake rings, and having a revolving top ring. A longer rod would be cumbersome amongst trees and bushes, and if shorter it would prevent one from keeping back far enough to be out of sight of the fish, which, I need hardly say, is absolutely necessary. The reel should be a free-running one, with only a slight check, sufficient to keep the line from unwinding of itself, and to give warning should you get caught on any obstruction in stooping

about in the cover. The line should be a slender, smoothly-dressed one. I use a fine, but strong, gnt trace, a little over 2ft. in length, inclusive of the strand to which the fly is attached. At the upper end of the trace, immediately below the loop, I place a small bullet, just heavy enough to draw out line when eased off the reel with the hand. If the day be at all windy a No. 5 shot may be put on about the middle of the trace, to steady it. But a windy day is not good for sport, as the least waving of the line will often scare away an approaching fish, while a ripple on the water will prevent your seeing one take the fly, in which case you will, most probably, fail to hook him.

In moving about from place to place the line is reeled in, so as to bring the bullet up against the top ring, which keeps it from dangling about and ravelling the trace. Then, with only the trace depending from the top of the rod, you are able to poke it through small openings in or between bushes, &c., and if more line be required to let the fly reach the water, the weight of the bullet will, as I have already pointed out, draw it down for you.

It is only in the warm summer months that dapping in this fashion can be practised with success, and it has the advantage of being available when fly-fishing in the ordinary way is out of the question—at least in northern streams. As most anglers well know, the larger trout on hot days seek the shade of overhanging trees and bushes in the still deeps, probably to avoid the sun's rays as well as to pick up the stray grubs and insects which drop from the branches above. A trout will inhabit the same spot for a length of time if not disturbed, sailing up and down in the space of a few yards, near the bank, and sucking in the flies which fall on the water as he goes along. And these are the fellows to which you must devote your attention.

It is not a good plan to drop the fly close in front of a fish; it is apt to scare him, and it is better to let him pass by and have the fly on the water ready for him on his return journey, when he will most likely take it—that is, if you have managed things properly. If he should not, and you have not scared him, try other patterns at intervals till you succeed.

If no fish be visible in a likely spot, the fly may be put on the water nevertheless, and very often a good one, whose presence was unsuspected, will move slowly from under the overhanging bank and take it. The fly must always be kept on the surface of the water, and perfectly still, and the fish, for some reason, take it better wet than dry.

It is advisable to wet the gut trace frequently, as it otherwise becomes dry and brittle from the action of the sun and air upon it.

The excitement and consequent attraction of dapping consists chiefly in your being able to observe all that goes on. You see your fish, in proximity often to a dangerous root or stump, come and take the fly, which he does very leisurely, swimming cautiously up to it, and, failing to detect the counterfeit, taking it quietly into his mouth by a gulp which scarcely disturbs the surface of the water. A gentle strike is then necessary, which requires much judgment, and the right way of doing it can only be acquired by practice. If you operate too soon the fly is snatched away before he has closed his jaws upon it, and if you are a moment too long he will quickly find out the deception and blow it out of his mouth, the ultimate result being that if you have not been careful to strike gently you will find your fly hitched into a branch above your head. Sometimes, however, a fish will dash at the fly with a flop, but they are not often hooked, being "short risers" and coming up generally several inches away from the fly.

There is the other form of dapping, or blow-line fishing, practised on lakes, for which the patent flies should be well adapted. For ordinary dry-fly fishing they would perhaps not answer, as the drag of the line would tend to pull them on to their side.

I have a form of the patent fly intended for dry-fly fishing, but it is yet in its experimental stage and not for sale.—Yours faithfully,
J. BAKER.
Grosmont, Yorks.

FISHING AT MONTREAU, SWITZERLAND.

DEAR SIR,—As I am contemplating a visit to Switzerland in the summer or early autumn, I shall take it as a favour if you or any reader of the *Fishing Gazette* can supply me with information as to the quality of the fishing at Montreaux, on the Lake of Geneva, with particulars as to licences and probable cost, and any other details likely to be of use.—Yours, &c.,
ALPHA.

SALMON IN THE THAMES.

DEAR SIR,—Richard Coxen, fisherman at Twickenham-on-the-Thames, told Francis Francis, of the *Field*, and Thomas Ransom Sachs, that he and three others caught a salmon of 72lb. at Twickenham in 1820. They took it to Mr. Groves in New Bond-street, London, who did not want it; then sold it to Watkins, of New Bond-street, for 8s. 6d. per lb. This was related to us in 1860, when R. Coxen was eighty years of age.

At Laleham the river narrows and is shallower. This part of the Thames, old Fisherman Harris told me, was called "the salmon run," as people used to watch them from the shore when running up. The weirs stopped the supply.—Yours very truly,
T. R. S.

INCREASED RAILWAY PRIVILEGES.

SIR,—Some of your readers will have noticed from the report of the recent annual general meeting of the Anglers' Association, appearing in your issue of the 22nd inst., that at the meeting I submitted and obtained the approval of the association to a petition I had prepared soliciting the L. and N.W. Railway Company to extend the issue of the privilege ticket to stations upon their system from

Willesden Junction, and I now propose canvassing those societies in the western district, who, it is anticipated, will approve of the course I am adopting.

It goes without saying that should my efforts in this direction prove successful, a much needed boon will be conferred upon the large number of fishermen resident in and adjacent to this popular locality.

The company was, I understand, approached some years ago upon this matter, the application then proving abortive; but it occurred to me that if a petition representative of the popular opinion which now obtains in the district were forwarded to them they might, upon this occasion, see fit to grant the concession asked.

In order that the necessary publicity may be given to the movement I crave resource to the correspondence columns of your valuable paper by asking if you will kindly insert this letter in your next issue.

This notification in a paper so well circulated and esteemed amongst anglers in the western district will, I doubt not, be the means of introducing the petition to all who are desirous of supporting it.

I may add that I shall be pleased to attend with the petition the meeting of any society upon being requested by letter to the undermentioned address so to do. Apologising for this trespass upon your valuable space, and thanking you in anticipation, I am, sir, yours obediently,
ALBERT DERRY.

Prince Albert A.S.

BILL FOR ESTABLISHING A CLOSE SEASON FOR TROUT IN SCOTLAND.

SIR,—I see the above Bill was read a second time on the 18th inst. As an angler I am desirous it should become law, and I think some effort should be made by anglers in England to assist to this end. I appeal to all associations and clubs, and ask them to urge upon their representatives in the House the benefits it will confer upon all anglers, and, therefore, the necessity of doing all in their power to get this Bill passed.—Yours truly,
W. A.

NETTING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt of 13s. from Stepney Angling Society and 5s. Persuasive Angling Society with thanks. I should be glad if those clubs who have not already done so would kindly forward any amounts collected, as it is desirable to get all lists in as soon as possible.—Yours faithfully,
ALEX. WRIGHT (Hon. Treasurer).

THE CAPTURE OF YOUNG TROUT IN THE ITCHEN.

(To the Editor of the Hampshire Chronicle.)

SIR,—At this season of the year, when so many thousands of young trout are lying in every nook and cranny of the river banks, it would be a generous act on the part of all people interested in the well-being of the river (which is, after all, a great attraction for this our ancient city) to examine the bottles, &c., used by juvenile fishermen to contain what they (knowing no better) consider as minnows and tiddlers. Anyone inspecting such bottles will now find scores of baby trout therein. I and sundry other fishermen have turned back hundreds during the last few days.

But I should also ask anyone before turning the little fish back to show the small poachers the difference between baby trout and minnows, &c., and also explain to them that these tiny trout will not live when taken out of the river more than two or three hours. I think they take the trout principally through ignorance, not knowing what they are.

To prosecute children for taking them seems absurd, but a trout is a trout whether large or small, and we cannot hope to keep a stock in the river unless the young fish are protected as well as those of larger growth. I should personally be pleased to visit the Elementary Schools, bringing the little fish, and showing the children the difference between the varieties, if it could be arranged.—I am, &c.,
W. CHALKLEY.

The Square, Winchester.
April 21, 1899.

FISHING IN WATERWORKS RESERVOIRS.

DEAR SIR,—In answer to G. H. Jones (of April 15), I beg to send the following replies to his queries:

1. Name of locality or town?—Liverpool.
2. Is angling permitted in the waterworks reserves?—Yes; in the reservoirs at Rivington.
3. Is a charge made for tickets, and, if so, how much?—Liverpool ratepayers 1s. 6d. per day, all other persons 3s. per day.
- 3a. See above (3).
- 3b. Are tickets issued by the waterworks authority, the landowner, or by the angling association?—By the Liverpool Corporation officials.
4. Are the reservoirs stocked, and how frequently, and by whom?—By the corporation, from the proceeds of the sale of tickets, as occasion requires and permits.
5. Have the local angling association any rights or privileges in the management of the fishing?—No; but the corporation is open to receive and properly consider suggestions.

I have much sympathy with your correspondent, Mr. G. H. Jones, and think that angling facilities should be freely open, under proper regulations, in all corporation waters (especially to the ratepayers, whose money goes to maintain the same) to all persons willing to comply with the necessary regulations, without distinction of class or favour, except the concession to ratepayers, whom, it will be seen, have already provided the waters.—Faithfully yours,
LIVERPOOL RATEPAYER.

Several letters unavoidably held over.

The chapter on salmon fishing is, perhaps, the least enthusiastic in the book; not that Sir Edward is not a keen salmon fisher enough, but there are certain reservations and exceptions which seem to indicate a lesser love than your out and out salmon enthusiast must have. For instance, comparatively little account of autumn as compared with spring salmon fishing is made by him; he is disappointed with the play of salmon after being hooked, at least it is not, he says, what he imagined it would be. "Some day perhaps I may meet with one of those fish to land which one has to spend hours and travel miles in the struggle after it is hooked." I have never yet had a fish in play on a salmon rod for more than half an hour, or landed one more than 200yds. from the place where it was hooked. Then he notes that the element of luck comes into play more in salmon fishing than in other

styles of angling discussed by him. But the fact that Sir Edward admits he has "never been very successful" in salmon fishing may account for the undercurrent of reserve as regards the esteem in which he holds this branch of sport, which is hinted at rather than asserted, in spite of his conventional tributes to "the greatest of all the sports that can be had in fresh water" I think it is a fair deduction from his own pages to say that, while our author admires and likes salmon fishing, he *loves* trout fishing, especially dry-fly fishing. I say especially dry-fly fishing because in his chapter on wet fly fishing—good as it is—there is not quite that devoted whole-hearted ring about it which one finds in almost every line of the first half of the book, and it is just this first half of the book which, for this reason, is of most value and interest. And it is no small tribute to the attractions of our south-country streams that a north-countryman, whose inborn fishing instincts were first awakened on a Northumbrian burn, who has fished for trout and salmon and sea trout in Scotland and Norway; it is no small tribute, I think, to the fascinating power of the dry-fly country to find that in them chiefly lies the *raison d'être* of this delightful book.

It is the fashion with some of our north-country friends, who do not know any better, to picture the dry fly enthusiast as a kneeling and praying devotee, who often fishes on his belly; it is true that occasionally, like the deer stalker, he has to adopt these undignified attitudes. But let this little anecdote mentioned by Sir E. Grey be remembered, since it is told of one of the best and keenest north-country anglers who ever lived—Stewart, author of "The Practical Angler." Stewart said: "He is not worthy of the name of angler who cannot when worm fishing any day in July, when the water is clear, kill from 15lb. to 20lb. weight of trout in any country in the South of Scotland." "But," says Sir Edward, "we are warned to take into account his ideas and habits as to what a "day" meant—a jealous gamekeeper whom he had always beaten described it as "twenty-four hours of creeping and crawling." Before he died Stewart was obliged to lessen his estimate.

There is one point mentioned in the chapters on dry-fly fishing which the editors call attention to in a foot-note, and that is where the author expresses his conviction that trout at times when they rush into a weed bed after being hooked hang on to the weeds with their teeth. The editors say, "It would surely be hard to over-estimate the importance to the angler, and the interest to the naturalist, of this theory of Sir Edward Grey's." Curiously enough, in an article on "Pike Fishing," in the April number of *Harmsworth's Magazine*, published before this work appeared, I had mentioned that Mr. Alfred Jardine and I had on several occasions noticed what we thought were almost convincing proofs that pike when fighting for life will at times take hold of a bunch of weeds with their teeth, but I confess I had never observed or suspected that trout ever do so. It is theory, of course, in both cases, as the evidence of weeds found in their mouths is not even circumstantial evidence that the fish deliberately caught hold of them to prevent being pulled out. Grayling could not if they would act in this way by reason of their small mouths, and yet in many years' experience on the Itchen and Test and other rivers I can safely say that I have lost more grayling than trout from weeding.

Dry-fly anglers should make a note of a dry fly highly praised by Sir E. Grey as great medicine, and one which "it is always worth while to float over an obstinate trout," one which "on many days at all seasons has taken one or two brace of trout, which I am convinced I should not have succeeded in rising with the winged flies." Even on days when his great favourite, a Red Quill, has failed him, he has had good sport with this fly, which for want of other name I shall call

SIR E. GREY'S BLACK HACKLE.

He merely says it is "a plain Black Hackle tied with soft hackles, and on the same sized hooks as the Duns." I wish Sir Edward would tell us who dresses it for him, and if hackled at the shoulder or all down the body, and material of body. He is not a believer in a large variety of flies, and on this point says: "I should be content (exclusive of the May Fly and Sedge Fly, which are for special waters or exceptional occasions) with four

sorts. In May these would be medium coloured Olive Quill Gnat, neither very light nor very dark, and the Iron Blue. In June or end of May a Red Quill becomes the more successful fly, and the fourth is the Black Hackle already mentioned." This is a scanty bill of fare as compared with the ordinary dry-fly angler's list, and I should not like to be restricted to it, though I think we all err on the side of too great a diversity of flies. But what about fishing in the fishing hut and after dinner? If we are reduced to a rule of three or four our fishing confabs will lose three-parts of their attraction. But Sir E. Grey's book will cause a run on Red Quill Gnats this season, for he puts it before his reader as often and as confidently as he evidently does before the trout. On the lower Itchen I have not found the Red Quill so deadly as other patterns of late years, and in looking over my book generally pick out a largish Dark Olive, tied by Mrs. Richardson, with stained gut body in preference, unless the Iron Blue is on, and then Iron Blue they will have.

"Anglers differ as to how late the evening fishing should be prolonged. Night fishing with a large wet fly should not be allowed on good dry-fly water."

Most anglers will agree with this remark, and also that it is fair to fish as long as you can fish a floating fly over rising fish, even if you cannot quite see your fly. "It needs both skill and judgment to put an artificial fly properly over a fish in these conditions, but during this last half hour a skilful angler may expect to get a brace of good trout with a floating Sedge. This is perfectly fair fishing." It is fair fishing, though, as Sir Edward points out, it is not on a par with killing fish by daylight with small fly.

One excellent suggestion of our author I must not forget, and it ought to be printed and stuck up in all angler's fishing quarters, *i.e.*,

"HAVE DINNER, IF POSSIBLE, BETWEEN FIVE AND SIX."

I think this is a splendid idea; it seems to have been rambling in my brain ever since I first fished, and never came to the surface, such is the result of habit. One's usual habit is to have dinner ordered for 7.30 or eight, and to come in done up half an hour late, and then blame it for spoiling the best chance in the whole summer's day. Certainly, dinner at 5.30 or six, fish till dark, then a light supper, and the smoke, *et cetera*, afterwards will be all the more enjoyable and sleep profounder.

I should much like to quote some of Sir E. Grey's accounts of his victories and defeats—especially the latter, for nothing is so consoling as to find that others also occasionally have those spells of ill-luck, losing fish after fish in the most extraordinary manner. There is solid foundation for Rochefoucauld's maxim that human nature finds a secret pleasure in the misfortunes of its friends, especially if they generally get bigger baskets of trout than you do. Also I should like to tell my readers how Sir Edward, deadly as his fly is, feels his rod tremble as his fly nears the spot where the big trout is rising, and how, when he has hooked him, his next feeling is one of downright fear as to where the first rush of the fish will end. One may appear composed enough to an onlooker, but I for one should be very sorry if I found my *sang froid* was not all boiling on such occasions.

On that great point in dry-fly ethics, which I mentioned last week as to when the dry-fly man should fish, I am very glad to see that Sir Edward Grey advocates fishing for a fish which you think will rise, even if you have not seen it do so. One of the daily papers, in noticing his book, said that he was known, after an exciting debate in the House of Commons, to slip off to Hampshire by an early train and be at his political post again the next evening. This is borne out by the useful note on page 49, which tells us that a train "leaves Waterloo for the Itchen and Test either at or just before six o'clock in the morning" *experientia docet*.

And north-country sceptics may note if they please that "the extraordinary fatness to which Test and Itchen trout attain, and the brilliancy of their colour and condition in May, June, and July, surpass anything it has been my good fortune to see amongst river trout, and anything I could have believed if I had fished only on north-country rivers." It is only fair to add he does not think

that "size for size they fight so strongly as the trout in rocky or swifter water."

Never have the attractions of south-country trout fishing, the charm of southern streamland scenery and life been more truly described than in the early pages of this work; in this notice of it I have only been able to glance here and there at a few of its pleasant pages, and I can only add that I am quite certain all who may read it through my recommendation will thank me for advising them to do so.

R. B. MARSTON.

EATON AND DELLER'S NEW CATALOGUE.

ALTHOUGH the name of Eaton and Deller has been known in the fishing tackle business for over two centuries it must not be supposed that they are at all old fashioned, as is occasionally the case with old firms. The present proprietors are go ahead, with telephone number and telegraphic address, and their new catalogue is printed nicely on the latest "art" paper, which brings up the cuts well and pleases the eye.

For very many years this firm has been celebrated for its split cane rods; the only thing

against them was their price; now they supply at £3. 10s. what we are assured is practically the same rod as was sold for twice the price some years back. We have examined one of these rods, which has lockfast fittings to the joints, two tops in landing handle, and all the latest *et ceteras*, and it seems to us to be extraordinarily good value for 70s.; for an extra 5s. you can have the same rod with steel centre—if you care to carry a lightning conductor around with you when fishing.

As regards action, Messrs. E. and D. make their split canes stiff as a rule, as most of their customers want them stiff, but they also supply other actions of course.

Their folding telescopic landing net and handle with the fall over knuckle joint is very much the kind of thing described by Sir E. Grey in his charming book on fly fishing as what he thinks the most useful kind of landing net, as the joint is near the net ring. It is made with a hook to hook on to shoulder strap of creel, and also to carry in a sling and ring.

Their special dry-fly box is fitted with felt and a parchment surface with strips of parchment sewn on as illustrated. The method of fixing the fly is to pass the point of the hook

just beyond the harb under the strip of parchment in between the divisions. The fly can easily be removed, yet the hacking of felt underneath is sufficiently elastic to prevent the fly dropping out. This method does not blunt the point of the hook like cork, and obviates the difficulty which occurs in removing a fly from felt. The box is fitted with a small compartment to hold tweezers.

Great attention is given by Messrs. E. and D. to their double-tapered lines for dry-fly fishing, dressed as recommended by Mr. Halford in his "Dry-fly Fishing." More beautiful lines we have never seen, and in practice we find that they wear very well indeed, especially if occasionally "fatted." Major Fisher, author of "Rod and River," speaks most highly of these lines.

In their ehonite winches Messrs. E. and D. have introduced what they call an "adjustable drag."

"We now make these winches with adjustable drag to stiffen or lighten the check at will, to enable the angler to alter the action or strength of check, to match the gut cast and style of rod he may be using without being obliged, as hitherto, to unfasten the front plate and alter the spring of check, which is most inconvenient and risky, and generally results in the screws becoming worn, and the winch working loose somewhere in time."

One sometimes hears complaints of ehonite not standing wear, but anglers forget that there are several different qualities of ehonite, and that the cheap sorts will not stand like the good ones. We have an ehonite reel bought some years before Mr. Kewell left the fishing tackle business he had near the Angel, Islington, and that must be a good many years ago, and it is as good as ever.

Among greenheart fly rods at all prices, Messrs. E. and D. make a feature of one at two guineas with lockfast fittings for dry fly work. They also give special attention to their salmon fly department, and we notice that their list contains the names with sizes and prices (very moderate) of nearly two hundred different patterns.

"GUT TIPPETS" OR "POINTS."

What the dry fly angler longs for is a bit of *finest long undrawn gut* for putting on the end of his cast. According to their list, for we have not yet seen them, Messrs Eaton and Deller will supply a dozen of such points at from 1s. 6d. to 2s. the dozen.

All branches of angling are represented in this catalogue, which is certain to be appreciated by Messrs. E. and D.'s numerous customers. Another year we hope to see a good index added.

RE-STOCKING POSSIBILITIES.

IN addition to the inroads made on the margin of brood fish in our troutling streams by the early salmon angler and the poacher, there is the legitimate tribute to sport, *per se*, to be made good, and the illegitimate tribute paid to pollution to be accounted for and redeemed. The sportsman's tribute is a very heavy one, and it is yearly becoming more and more so. The demand for trout angling quarters is steadily on the increase. At one time only salmon and sea-trout were sought after by anglers from a distance, and the brown trout were undisturbed, save on an off occasion, or by the occasional tourist angler on the search more for health and change than pleasure and sport.

But "old times are changed, old manners gone," and regularly in the months of March, April, and May the trout-anglers come north by the round score, and a regular business has sprung up among hotel-keepers and proprietors of troutling waters in catering to the wants of this distinct class of migratory sportsmen. The earlier parts of the Don, Deveron, Ythan, Ugie, Findhorn, Beaul, and such like northern streams, are examples to hand to which they flock. At this season of the year the trout rise freely to the fly—chiefly the March Brown, although the Hare-Lug, Professor, Grey Quill, Lord Saltoun, and similar lures of the larger ordinary trout-sizes take equally well at times—and afford the very best of sport, although, perhaps, their colour and condition might not please the most fastidious.

These qualities, however, are mending daily as the season advances, and it is quite wonderful how soon a yellow trout of, say, a pound or two, can put on fat, when there is a prolific rise of March Browns on the water. But the baskets then

made are heavy, and this is the main consideration of the early trout angler. March is rather too early for general angling, and, as a rule, the sport then obtained is very indifferent compared with what it is in April and May, especially if the weather be at all genial. Of course, we refer to the very early districts—the lower reaches of such rivers as the Don, Deveron, and Findhorn—and not to the higher parts, or hill streams, where the fish are neither so large, nor so early, although still more prolific.

At one time mine host would have blushed to have made a charge for trout angling on the waters attached to his hotel. He would have deemed himself lucky had he been so fortunate as to have secured the patronage of a couple of gentlemen to stay a night or two at his house, for the sake of their chance custom. Even salmon angling *a galore* could have been obtained on such terms, not so very long ago either; and there are some few spots yet where the custom still prevails, although they are few and far between; and, while a few years back we could have named such quarters by the dozen, on the Dee, Don, Deveron, North and South Esks, as easy as a child running over the alphabet, we would be timorous now about singling out any one particular place worth going to where the daily or the monthly ticket is not in vogue.

The brown trout, that once paid tribute to the local anglers only, has now to suffer the inroads of the sporting stranger as well; and, while the stock might have been quite equal at all times to the demands of the resident sportsman, it is not reasonable to expect that it could withstand the combined attacks of both of them without some extraneous assistance. Trout are neither migratory fish nor fast growers. We do not refer to particular and well favoured districts, where they are hardly ever out of condition, and that not for long, from the abundance of bottom feeding, we speak of the average trout. It is a common enough experience that the first rod over the water has *ceteris paribus*, the best chance, and that when an extra heavy fish is got in a particular "lie," it is usually a season or two before another of the same proportions may be found in the same spot.

When the heavier trout are thus killed off by over-fishing, *i.e.*, more rods than the fishery can reasonably carry, it takes some time, probably a season or two, before the same places can be filled up by the rising generation. This is the tribute the stock pays to sport. Unlike salmon and sea trout "lies," which are replenished with every tide and semi-flood with fresh fish, the trout "lies," once depleted, remain so till the younger race have grown to like proportions, and so filled their progenitors' shoes. Till this takes place the fishery will be barren of heavy fish in proportion as they have been whipped out.

There is not a hotel or other fishery where early trout angling is in demand, but has large possibilities in the way of re-stocking. There are miles and miles of water in almost every river and stream not fully stocked. There are pools and pools which have fallen a prey to the poacher; and there are rivers upon rivers which have been simply over-fished in the eager scramble for sport, and in order to meet the demands which have sprung up on every hand for "Easter Quarters," "Summer Quarters," "Autumn Quarters," north of the border. The City magnate takes a month in the spring-time, the professional man at Easter, the literary and the leisured class whenever it suits them to seek for change and rest. All go in for sport at the waterside. They either do not care for salmon angling and its infinite uncertainties and heavier expenses, or cannot get it if they do care for it; and so a very large proportion of them are quite content with a respectable basket of brown trout. If finnock he within reach, then so much the better; but the finnock season is usually over, and the staple product of the river or stream is brown or yellow trout. These anglers are not usually of the pot-hunting order. They are not consumed with the burning desire to make "record baskets," but are content with one good day's sport in two, and with a few fish of average weights, frequently, rather than one day's abundance followed by weeks of famine.

It is in the highest and best interest of those who cater to this class to see that the stock in the fishery is well maintained. It is to their interest to attract the angler by maintaining the good

name of their fishery, and, if possible, increasing it. The field which re-stocking possibilities presents in this respect is unbounded. If he be a benefactor of his kind, who can make two blades of grass grow where only one existed before, he is as much, if not a greater benefactor, who can get two trout of respectable size to the expectant angler where only one was got before, for a trout is of much more intrinsic value than a blade of grass, even from an economical point of view.

This can be done in fully ninety per cent. of our rivers and streams. There are few public or semi-public fisheries but what might be vastly improved, and made to carry three rods with ease where there is a great difficulty just now of even satisfying one. Proprietors not only of our inland fisheries, but all over where there is a bit of angling water, can vastly improve their fisheries if they care to try. Hotel-keepers can greatly increase their custom, and clear a little over and above their angling rents, if they will only open their eyes to the possibilities that lie before them, and anglers themselves even might, in gratitude for the sport they receive, "put their hand to," and assist in the re-stocking possibility.

Where pollution has reigned supreme, where it has existed at all, restocking will be absolutely necessary. Of course if the cause of the evil be not entirely removed, and the pollution not a thing of the past, restocking would be a dead throwing away of time and money, to say nothing of the foolishness of such a proceeding. But where measures have been taken for the suppression of the polluting fiend, then restocking should be set about in a handsome and generous manner. There is no necessity for waiting a whole generation to see the pools again alive with myriads of rising fish when a show of March Browns make their appearance in an early April or May afternoon. It should be undertaken at once, and it will be the best sign of the general purity of a stream for most purposes when there is a healthy head of fish teeming in its pools and rushes.

We do not wish to enter into the question of whether fry, or yearlings, or two-year-olds, or simply eyed-ova is the best system of restocking. Controversy is not our aim in this instance, neither is it our forte. For all practical purposes eyed-ova is found to be the most economical method of re-stocking northern streams, and as economy plays a conspicuous part in the class of rivers we have been alluding to, that system may be heartily recommended here.

The cost of yearlings is very considerable, and the carriages heavy, to say nothing of the risk involved in the change of temperature and food to so frail *fario*. Eyed-ova, on the other hand, may be had (*S. leuvenensis*) at 7s. 6d. per 1000! Ten thousand would only be a matter of £3 5s.—a mere nothing, even were it only for experimental purposes. They may be laid down in any sheltered burn or stream, on a shingly or sandy bed, if possible covered over with a few branches or a bit of wire netting for protection from wild fowl, and with a steady flow of water they will in due time hatch out. If more elaborate arrangements are at command, by all means let them be employed. G. M.

THE LATE DUKE OF BEAUFORT.

It is with sport that the late Duke of Beaufort's name is most intimately associated. He spent many tens of thousands of pounds, it is said, in maintaining the Badminton Hunt. Although long a martyr to gout, his Grace was scarcely ever known to allow this aggravating complaint to keep him out of the field, where the daring he displayed, even when an old man, was often the cause of envy and wonder. He was all his life a straight rider to hounds, a perfect whip, a good shot, and a successful angler. The Badminton Library, the volumes of which have long since attained to standard eminence, was issued under his editorship.

NEW ZEALAND TROUT.

A HANDSOME trout has been on view at Messrs. Hardy Brothers', 61, Pall Mall, London, this week. The fish was captured by Mr. W. P. Turton in the Rangitata river, in February of this year, and sent over (in ice) in excellent condition. The fish weighed 10½ lb., and was 27 in. in length.

THE GREATEST FISHING AND SHOOTING CLUB IN THE WORLD.

THROUGH the courtesy of the President, Mr. Wm. A. Macleod, we are able to give our readers some account of the Megantic Fish and Game Corporation, unquestionably the largest sporting club of the kind in the world.

The following is a copy of a letter accompanying the Year Book of the Club sent to the Editor of the *F.G.* by Mr. Wm. A. Macleod, to whom our best thanks are due for the loan of some of the very attractive illustrations of scenery, &c., on the club's preserves:

"R. B. MARSTON, ESQ.,
"London, Eng.

"DEAR SIR,—Your letter is before me, and I note with pleasure your interest in the Megantic Club Year Book which I sent you.

"Referring to the size of our club, I believe it to be the largest in this country; it certainly has the largest preserve in this country. To increase in size has not, however, been one of the club's objects, but during the dozen years of its existence it has prospered and been, on the whole, successful. For trout fishing and deer hunting I do not believe it can be surpassed.

"Our annual banquet is to be held at Boston on the 4th of next month, and I know it would give us all very much pleasure if we could have the Editor of the *Fishing Gazette* present on that occasion. If this is not possible, we hope we may have the honour and pleasure at some annual banquet in the future.

"I have for some years taken your interesting paper, getting it through a bookseller here, and always look forward to its receipt with much pleasure. It occurred to me that you might be interested in knowing something of an angling club on this side of the water, and it was that that prompted me to write you and send you a copy of our book. I am very much pleased with the prospect of having a notice of the club, in which many of us are very much interested, appear in such a widely read and highly esteemed paper as the *Fishing Gazette*.

"With best wishes for your continued prosperity.—I am, yours very truly,

"WM. A. MACLEOD, President.

"Boston, U.S.A."

ORIGIN AND OBJECTS OF THE CLUB.

Some ten years ago an enthusiastic sportsman, with a few of his friends, who believed that an ideal hunting ground had been discovered, and that with proper care its attractiveness could be preserved for many future years, decided to form a club with the purpose of acquiring control of this territory, giving fellow-sportsmen an opportunity of enjoying its exceptional privileges, and by proper restrictions preserving the forests and natural beauties, and protecting and propagating the fish and game.

As a result, the Megantic Fish and Game Corporation was organised, and on Feb. 15, 1887, it was incorporated under the Maine laws, and March 26, 1887, a charter was obtained by it from the Province of Quebec.

Since that time the history of the club has been one of progress, acquisition, and success, and the fondest hopes of the founders have been more than realised.

At the present time the club has a membership of 300—the stated limit—and owns and leases a territory comprising 250 square miles, containing three lakes, twenty ponds, six rivers, eight streams, and eight bogs.

It has a large and commodious clubhouse, twenty-three public and fourteen private camps, a fish hatchery, a steam launch, and a large supply of boats and canoes, and by ownership and lease controls a vast preserve, one of the largest in the world, an unbroken wilderness 3000ft. above the sea level, situated in the north-western corner of the State of Maine, and extending over the border into Canada.

The sportsman not only finds an abundance, but also a variety of fish and game to reward his skill, and with the numerous stretches of forest, ponds, and streams at his disposal, the sport never becomes monotonous.

It has ever been, and no doubt will continue to be, the desire of the officers of the club to make the preserve a veritable paradise for sportsmen, and we hope that the unparalleled success which has attended their efforts in the past will be with them in the future.

Altogether the club's preserve extends over about 250 square miles of country partly in the United States and partly in Canada, and its affairs are conducted evidently on the most business-like, and, at the same time, sportsmanlike manner by a board of nineteen directors with a president, two vice-presidents, a treasurer, a clerk of corporation, and an assistant clerk of corporation. The bye-laws and regulations of the club have evidently been draughted with the greatest possible care to ensure the absolute freedom and

MEGANTIC CLUB RESULTS.

"THE CLUB HOUSE" OF THE MEGANTIC CLUB.

comfort, as far as possible, of the members, and at the same time afford security against outside or inside interference with good order or with the rights acquired by the club. These rules with, of course, some modifications, would be found an admirable basis on which to draw up regulations for any similar community of sportsmen in any part of the world.

THE CLUBHOUSE.

The southern shore of Macannamac Lake is still in its primeval condition. On this shore, in the midst of a tract of wilderness several miles in extent, owned by the club, stands Macannamac Lodge, more familiarly called "The Clubhouse." The main building is a substantial, roomy structure, standing on a point well above the level of the water, and commanding from its broad piazza one of the most charming views of mountains and water. Near by is a commodious boat-house, well supplied with the best boats and canoes, a building containing sleeping accommodations for guides, a refrigerator house sufficiently large for an ample supply of ice, also a kitchen and laundry connecting with the main building. At the left is a shooting gallery, and at no great distance "Sebattis," one of the numerous private camps to be found on the preserve.

The interior of the house betokens comfort and good cheer: An attractive lounging room, provided with books, piano, and a large fireplace artistically designed; a central hallway with another great fireplace, and a large, pleasant dining room well supplied with every requisite.

Above are two chamber floors, with bath rooms and lavatories, and an attic with lockers for members. The sanitary arrangements, water supply, and other essentials are most carefully guarded.

Good trails lead from the clubhouse, affording pleasant walks, and along these in the season a good chance for partridge may be had. Bass are to be had at the clubhouse landing, and Spider river, within easy rowing or paddling distance, is the home of the trout, and also an ideal place for jacking in the hunting season. Deer are everywhere at all seasons.

BIG ISLAND.

In many respects Big Island is unequalled. Its high altitude (between 3000 and 4000ft.), the character of its soil, water, and atmosphere, give it a value as a sanatorium which has only recently been recognised and appreciated. The club owns a fine group of camps situated on a sloping bank at the southern end of the pond, where only a few minutes' walk is required to reach L Pond, and thus to the angler a choice is always offered between the big trout and land-locked salmon in the two and a half miles of water of Big Island Pond and the 3lb. and pound fish which are often taken two or three at a cast from the myriads which fairly crowd the waters of the smaller pond. For trout fishing pure and simple, L Pond and North-west are absolutely unequalled. At Big Island seven members have private camps which vie in luxury and beauty with anything of the kind. A fine hatchery is also located here, for the club does not intend to take any chance of depleting these ponds, but, on the contrary, the supply of fish and fish food has been steadily increasing, so that to-day more and larger trout are to be caught than ever before.

The dining camp is in charge of a thoroughly competent steward and stewardess, and the presence of a cow here, as at the clubhouse and Chain of Ponds Camps, ensures a supply of good milk.

The club employs about twenty ex-

perienced guides, and the following particulars of the expenses of members at the preserve are interesting. The cost of a return ticket from Boston to the preserve is about £2 16s., and from New York about £3 16s. The distance from Boston is 330 miles to Megantic.

EXPENSES AT THE PRESERVE.

The rate for board on the preserve for members and their families will be, this season, 6s. per day each. By "family" is meant females who are members of his household, and his sons under twenty-one years of age.

Members owning camps may board themselves by paying the club 2s. per day for each person, with the understanding that as far as possible supplies shall be bought from the club.

The fare on the club steamer is 1s. for each person, and the members ordering the steamer shall pay for the same whether used or not.

Transportation from Megantic Lake to Spider Lake will be furnished by Mr. George Flint, who has the sole contract with the club for this service. Price, per trunk, 1s.

The price for guides' services is 8s. per day and their board, which is 4s. per day.

The Megantic club offers such attractions to its members in the way of fishing, hunting, and shooting that it is not surprising to hear that its roll of members is full at the present time, and that to obtain entrance to it is not an easy matter. Candidates have first to be carefully examined as to their qualifications and social standing by the committee, and a unanimous vote of all the directors present at which elections take place is necessary.

The capital stock of the corporation is 25,000 dollars (over £5000), divided into 500 shares of fifty dollars (par value) each. Each member is entitled to one share, and one share only. Each member is liable to an annual assessment not exceeding twenty dollars (£4) to meet the current expenses of the club, from which it would appear that the annual expenses in preservation, buildings, boats, &c., range about £1500 or £2000.

Members have the privilege of introducing a guest, and can take their wives or other ladies of their family, and children under sixteen years of age, when visiting the preserve; this is an excellent rule, and it is evident from the illustrations on the year book that many of the lady visitors both shoot and fish.

LIFE AT THE CLUBHOUSE.

Ladies and children, with the requisite heavy baggage, may easily reach the clubhouse, where every accommodation is afforded them, and where, should they not wish to undertake a tramp or rough it in camp, they may remain in the best of care while the head of the family makes an excursion to some distant pond or bog in quest of fish or game. Life at the clubhouse may be varied by visits to points around the lake, either in stanch rowboats manned by careful guides, or in the club steamer, which may always be chartered for this purpose when not on a regular trip. A circuit of the lake in the trim and speedy little steamer on a pleasant day, or by moonlight, is most enjoyable. An exploration of the upper Spider to the trout pools above the head of navigation, where miles of good stream fishing are to be had, a fishing, duck-hunting, or deer-hunting trip in season down the lower Spider to Rush Pond affords a rare treat to the lover of rod, gun, or camera. A stay at the clubhouse, with the pleasant excitement incident upon the arrival or departure of parties with their guides, has whetted your appetite for a taste of real camp life, and you resolve to make a tour of the preserve. You choose to go first to the Chain of Ponds, and at the appointed time you turn your back on the clubhouse, take the trail to the "Chain," and are soon lost to sight in the forest. Unless you are a veteran at following a trail, when you reach the landing at Horseshoe Stream you will have a supreme contempt for the fellow who insists that it is "only ten miles." The three-mile row will rest and refresh you, and your good nature will have returned by the time the "Chain" camps are reached.

The following extracts from the rules regulating fishing on the club's lakes and streams:

FISHING.

Sect. 1. No member shall kill any trout, land-locked salmon, or bass, or other game fish, unless he has good reasons to believe that it will be used for food.

Sect. 2. No member of this club shall kill more than fifty trout or fifteen black bass upon the club preserves in any one day.

Sect. 3. No member of this club shall send or carry away from the club premises more than 15lb. of trout, land-locked salmon, or black bass upon any one visit.

Sect. 4. Trout of less than 6in. in length, and land-locked salmon less than 12in. in length, and black bass less than 1lb. in weight, caught in waters owned or leased by this club, shall be carefully returned to the water as soon as caught. If such fish die, it shall be scored against the member taking the same, and he may reclaim it.

Sect. 5. When members are camped together at any of the lakes or streams, they shall not kill more trout than needed to supply the camp, and they shall see that no fish is wasted or thrown away; at such times, also, when fish are plentiful, members are expected to return to the water, as soon as caught, all fish under ½lb. until they have sufficient for their immediate use, when they shall stop fishing altogether.

We have great pleasure in being able to place before British sportsmen these particulars of this grand American sporting club, which offers an excellent example of what might be done on the same bold lines but on a smaller scale, say, in Scotland, Ireland, Wales, or other parts of our country.

Long may the Megantic Club flourish!

CUMMINS' PATENT DRY FLY OILER.

MR. W. J. CUMMINS has sent us a neat little brass oil carrier for the use of dry-fly anglers.

Mr. C. claims that his little brass affair is an advance on the glass bottle now so familiar in the dry-fly equipment. Certainly it is stronger, but

if made of stout glass there is very little risk of breakage. One great advantage of glass is that you can see in an instant if you have enough oil in your bottle. In Mr. C.'s you must as it were take soundings by introducing something dry, and noting how deep it goes into the oil. The illustrations show clearly the shape and nature of Mr. Cummins' bottle. He claims for it that it will not leak, and probably it will not if you remember to screw it up well, and that you can carry it in your waistcoat pocket, as it is no larger than a pencil; but we should be sorry to advise an angler to do so, because, although only a trifling matter, still the oil is squeezed out when the lid is screwed down.

If, after actual use for some time, we find that this nice-looking little brass oil holder is a decided improvement on the glass bottle we shall say so, but shall not discard our old and tried glass friend until the brass new one has proved to be superior.

NEARLY LANDED.

DEAR SIR,—I have been very nearly "landed," and am still feeling the effects of the struggle for life and health which lasted in the acute stage nearly three weeks, while the sub-acute stages are still dragging along seven weeks after it! The bait which was nearly fatal cannot be called a fly, was artfully wrapped up, and might have deceived

an older fish. It was of simple contrivance, but of a deadly nature, for it was so arranged that while no self-respecting fish would look long at or wish to put his nose close to it, it might still bring death to any fish incautious enough to linger near it. In short, it gave off a poisonous gas, odourless, tasteless, and colourless, and as it was sure to linger in my favourite haunts, small wonder that it nearly achieved its purpose.

It was all the more a low and unsportsmanlike bait inasmuch as it was most dangerous after sundown, when, the ordinary risks of the day which sporting fish have to run being over, the cool evening draws on, the shadows fall, and sensible fish select their favourite corner in which to rest and meditate before the advent of their dinner, or, as some call it, the evening rise. Day after day and evening after evening my favourite haunts seemed safer and safer during last winter. No nasty men appeared to put in bait of this kind, and although I knew that bait had been put in some two years before, I believed that it was ordinary ground bait, of a wholesome kind, which had been arranged. Of course I had fled while it was being put in, and had only, on my return, noticed signs of men having been disturbing the soil. Alas! for my shortsightedness. Winter was passing, and on occasional mild days a stray gleam of sun would tempt a Dark Olive out—a promise of a glorious time to come. But somehow or other I began to take less interest in such things, and to feel that my condition was not up to what it should be. My colouring began to make a poor show, and once or twice I should not have been surprised had I found strange spots appearing; but they came not, and I put my symptoms down to my needing a little wholesome excitement. On two evenings, therefore, I left my usual haunts, and repaired to a charming place free from weeds and stones, where, on the smoothest part of the bottom of the river, my friends occasionally amused themselves by swimming round each other in perfect time and rhythm, and in cheerful greetings and reminiscences. How such a custom arose I know not, but I have heard that men, too, have a somewhat similar custom, called, I believe, "dancing." I say somewhat similar, for their peculiarly "leggy" movements—though they give them and their opposite sex much pleasure in a heated and dusty and noisy room—cannot be compared to our cool and graceful evolutions. Enough, however, of such an idle contrast, and let me hasten on to describe what befel me. After the first evening at the charming place, to which I have alluded, I felt very queer and out of sorts, and my gills became decidedly painful and somewhat swollen. To counteract this I took a great deal of exercise during the day, and though I felt none the better for it, returned that evening to the assemblage of my friends. The experiment showed me that my diagnosis of my case was incorrect, for still more unfavourable symptoms manifested themselves, and I was forced to leave my usual abode and seek the neighbourhood of another river, the Thames, where many clever healers of my genus are to be found. The cause of my illness was speedily pronounced to be what I had now begun to suspect, and an examination of my home showed how unscrupulously I had been poisoned. As a free and enlightened fish I protest through your columns, Mr. Editor, against the immunity enjoyed by the unscrupulous scoundrels who use this abominable ground bait, and as my protest will, of course, produce no good effect on them, I cling to the hope that your readers will take warning by my sad story, and keep their eyes open day and night lest they fall victims in their turn.

DEAR SIR,—The foregoing extraordinary story came to my hands in a somewhat peculiar way. It was related to me by a very intimate friend, whose looks proclaimed him to be recovering from some serious illness. Can it be that he had assumed the rôle of a talking fish, and that he was telling me of the way in which he had been nearly killed by blood poisoning arising from scandalously bad and scamped drainage work at his own house? Later on he did say something to warrant such a supposition, and hinted at a frightened architect and builder and a dishonest clerk of the works, and an offer to pay anything reasonable. I can't feel quite certain as to how this may be, but have strong suspicions.—Yours faithfully,

BUCKBEAN.

THE COST OF SPORT.*

IN his preface to this volume on "The Cost of Sport," Mr. F. G. Aflalo refers to the extraordinary difficulty which has been experienced in obtaining trustworthy information, and tells us that his aim has been to select a few typical sports, and, with the aid of expert writers, to present some kind of estimate of the average outlays involved in each. The subjects are treated under the following five headings:

1. Shooting and Fishing.
2. Hunting and Racing.
3. Boating and Yachting.
4. Games.
5. Various.

One of the best chapters in the work is that by Mr. G. Teasdale Buckell, editor of *Land and Water*, on "Shooting in the British Islands." In shooting, as in fishing, if you want it cheap, you must be prepared to go a long way for it, and be satisfied with a moderate bag. For instance, Mr. Buckell tells us that the trifling license required to shoot on the Duchy of Cornwall lands enables the holder to shoot at will over the greater part of Dartmoor. Needless to say, that is not a land swarming with game, and the day's bag, consisting on extraordinarily lucky days of a snipe or two, and perhaps a duck or moor part-ridge, can without difficulty be carried by the sportsman himself. But we are not at all sure that wild shooting of this kind is not far more enjoyable than shooting to order over interminable roots. The next class of cheap shooting is that to be had by staying at hotels, but for this to be worth much you ought to be on very friendly terms with the landlord, for, as Mr. Buckell points out, shooting goes by favour in these cases. We had no idea that for £20 you can get a license from the Commissioners of Woods and Forests to shoot over about 50,000 acres of the New Forest. Mr. Buckell also includes fishing, but we fear that is of much less account even than the shooting, which includes woodcock, snipe, and rabbits, and "he who knows his country should not have great difficulty in killing game to a market value equal to the cost of his license."

Mr. Buckell has, of course, much to say on the more expensive classes of shooting, and gives some suggestions on the very important and delicate question of "tips." Although volumes might be written on the immorality of tipping, he would be a very foolish man who expected to enjoy sport of any kind in this country who forgot to "remember the keeper," or others who have an unwritten claim on him for a tip. As to who should be tipped and what should be the amount we do not think, if there is any doubt in the matter, that better advice than that of Mr. Buckell can be given to a stranger in any sporting district, viz., to ascertain what the general practice is.

Chapters on shooting in Scandinavia, India, South Africa, British Columbia, &c., follow, and then one on revolver shooting, by the crack revolver shot, Mr. Walter Winans. From this we learn that the cost of a good revolver varies from £4 10s. to £7 10s., and a weapon costing £85 is nothing but one of £5 or so, "encrusted with ivory and silver," which do not count in the shooting quality. The chief cost, of course, is the ammunition. "A morning's work, practising, say, an hour and a half quick firing (six shots in twelve seconds) at moving targets, will soon get rid of from 200 to 250 cartridges, and those who shoot much in matches may get through from 12,000 to 15,000 cartridges in a year. The cartridges cost about 5s. per 100." It is interesting to note that Mr. Winans' experience with different powders is that whereas nitro, or smokeless powders, wear out a revolver in a year, with black powder a barrel should shoot well for several years.

Coming to the chapters on fishing, it can hardly be said that they are very exhaustive, or likely to be of much use, or that anglers can be advised to give 6s. for this work if they require it only for information about fishing licenses and the cost of fishing, as they can get nearly all that is given here, and a very great deal more, for a shilling or two, in "The Angler's Diary and

Gazetteer," edited by Mr. Irwin E. B. Cox, M.P., in Mr. Watson Lyall's admirable "Guide to Fishing and Shooting in Scotland," and in similar works. Out of twenty-four pages devoted to fishing in the British Islands, seven are devoted to Thames fishing, and seven to Irish loch fishing, both well done by "John Bickerdyke." Salmon fishing has a page, and trout fishing three pages. Norwegian fishing is dealt with at rather more length, and there are a few pages on Indian fishing, tarpon fishing, and a chapter on sea fishing by the editor. If the fishing information had been dealt with in its relative importance, surely we should have had Thames fishing treated in one page, and salmon fishing generally extended to at least seven, instead of one being devoted to salmon, and seven to the Thames.

Since the editor asks for suggestions, we may say that future editions of his, generally speaking, most useful and suggestive work would be improved by giving at the end of each subject a list of the published guides, &c., relating to the subject. We are afraid trout anglers who may be led by Mr. Charles Walker's advice to "look about carefully," as they "may very often get a nice piece of water at an extremely low rent," will wear a good many pairs of boots out before they come across such an extraordinary fishing as he had in 1897 within fifty miles of London, he and a friend killing on it over 300 trout, from ½lb. up to 3lb. They only paid £5 a year for the water, and 10s. a month for a man to look after it.

In the chapter, or rather couple of pages, on tarpon fishing we notice Sir Wm. Hoste and others assure the editor that an ordinary trolling salmon rod, reel, and line answer every purpose, and that being the case it is evidently unnecessary to buy the very expensive outfits indulged in by the Americans. As there are one or two books specially devoted to tarpon fishing they should have been mentioned, and also the proper time of year for this sport, as the season is a short one, and if you go at any other time you might as well stay at home, as the hotels at Jacksonville and Ulyers are closed and no fishing is to be done.

Pages 118 to 134 are occupied with details of cost of sporting licences at home and abroad. Then follow short chapters on hunting and racing, then nearly 100 pages are devoted to boating and yachting—much the most comprehensive and exhaustive section of the work. In the brief notes on cricket it is said that 10,000 cricketers have their names down in the "Candidate's Book," and that most of them will have to wait fifty years for a chance to get into the Middlesex Cricket Club, unless they "wire in and get their names up," as we used to say at school, then they have their election accelerated in proportion to their achievements.

Rule 6 of the famous I. Zingari club is as follows:

"That the entrance fee be nothing, and the annual subscription do not exceed the entrance."

Curling seems to be about the cheapest form of sport dealt with in this book, and we are glad to hear, on the authority of the chaplain of the Royal Caledonian Curling Club, "which regulates the game all over the world," that "the kilt is not indispensable." What a blessed dispensation, seeing that curling is unfashionable when the thermometer shows above freezing point. The cost of a pair of curling stones ranges from 27s. to 57s., while a fancy pair of Crawfordjohn "nuts" may cost £10 or more.

Mr. Garden G. Smith estimates the total outlay on golf in this country as £2,680,000, and this must be a modest estimate, or else golfers are not as other men—at least, not as anglers. It seems the golfer spends on an average only 1s. 6d. a week on "refreshments," which hardly agrees with our limited experience of golf links.

Archery is a delightful sport and splendid exercise, and we often wonder anglers do not use the bow more than they generally do. As that famous archer, Col. Walrond, says: "It is not easy to regard archery as an expensive sport, unless a man has the inclinations of the American gentleman, who, going into a well-known archery store to purchase a sixpenny catalogue, emerged not until he had bought £300 worth of bows and arrows and fishing tackle, and ordered his coat of arms to be put in water colour on his bows, arrows, and pike floats." That touch in water colour

shows archers can draw the long bow almost as well as anglers.

A good index adds greatly to the value of this book as a work of reference, which deserves a place in the sportsman's library. It is very attractively produced, and for a first attempt of the kind it reflects much credit on the editor.

THE SPRING IN NORWAY.

TO-DAY, May 1, salmon angling commences in Norway, but whether upon the very earliest rivers a single fish will be captured is extremely doubtful. The winter has been a long and severe one. Early in October snow began to fall, and it has continued to do so ever since at frequent intervals. At the moment the sun is shining, but for the last two days it has been blowing a gale from the north-east, with heavy snow over the southern and western districts. From the north the accounts are wintry in the extreme. At Tromsø not a speck of bare ground is to be seen. Not for more than thirty years have there been such quantities of snow in Tromsødal, and the farmers dread the results of the tremendous flood, which must come sooner or later. In the great island of Senjen the houses are buried beneath the white masses, which in some places are so deep that they are over the telegraph wires, 15ft. to 20ft. above the ground. In the streets of Hammerfest, and round that evil-smelling little town, there are great drifts, while recent accounts from other districts describe how in many cases people have been obliged to escape through the roofs of their houses in order to avoid starvation, owing to the tremendous fall, and the whale fishers report the polar ice as lying from twelve to fifteen Norwegian miles only off the coast. From the neighbourhood of the Trondhjem Fjord, from Osterdal, and from the west coast cold and inclement weather continues to be reported, together with repeated falls of snow; in many parts there is great want of food for the cattle, and large quantities of hay are being sent north by train and steamer.

The ice on the Bandak Vand has been pretty well broken up, but on the Mjösen the navigation is not yet open, and there are miles of ice upon it still, a couple of feet thick at least. In all probability the angling season will be a good one, as owing to the vast quantities of snow on the fjelds there is sure to be plenty of water, but it is pretty certain to be late, for the spring flood, when it does come, will be very heavy, and the river cannot run into order for some time after its commencement. R.

NEW SERVICE VIA HARWICH AND THE HOOK.

THE Great Eastern Railway Company have introduced yet another improvement into their smart Continental service. By the completion of a short length of new railway around Rotterdam it is no longer necessary for the North German express to touch Amsterdam on its course to the frontier. The change was inaugurated on May Day, and to signalise the event Mr. C. Busk, the Continental traffic manager, took a select party of English gentlemen over for an inspection and a passing sight of Holland, and explained to them the direct advantages which will be conferred upon peoples and towns by the new line which henceforth skirts Rotterdam. The journey to Berlin is shortened by something like twenty-five miles, and a number of Dutch towns between the Hook of Holland and the German frontier will enjoy the facilities of communication which they have long desired.

At Liverpool-street Station there is at the present moment the keenest interest manifested—especially by the morning and evening passengers—in a great electric clock, the largest in the world it is said, suspended from the central transept. The Gothic points of the construction, no less than the commanding size and position, at once arrest attention. The case, with its towers and finials and its columns with carved capitals boldly decorated, weighs between two and three tons; it is entirely of iron and manganese steel, and the clock case is practically an apartment 9ft. square. The four open dials are each 6ft. in diameter, the figures of the hours are about 18in. apart, and of the minutes 3½in. This grand clock is in sympathy with several others working in the same electrical circuit, authoritatively giving them the time of day, and doing the business with absolutely accurate unison. In an office adjoining the main telegraph office is a London Regulation Clock so adjusted that the time-keeping does not vary more than two seconds per week, and for weeks together it has indicated correct Greenwich time to a second. An electrical contact is fixed to the movement of this clock, and every fifteen seconds it transmits an electrical current that moves the hands of all the clocks in unison.

* THE COST OF SPORT. Edited by F. G. Aflalo. London: John Murray.

THE ITCHEN SALMON FISHERY CASE.

THE case of *Montagu v. Gater* recently came before the Court of Appeal, composed of Lords Justices Smith, Collins, and Vaughan-Williams for judgment on the appeal of the plaintiffs, Sir Samuel Montagu and Mr. John E. A. W. Fleming, from a judgment of Mr. Justice Romer in the Chancery Division. The plaintiffs claimed to be the owners of a several fishery for salmon in the River Itchen from Alresford, nine miles from Winchester, down to Itchen Ferry, at Southampton, under a charter of King John in favour of the Bishops of Winchester. The conveyance from the bishop to the plaintiffs' predecessor in title was in 1828. The plaintiff, Sir Samuel Montagu, is the owner of South Stoneham House and Wood Mill, situated at the head of the tidal waters of the Itchen, and also owns the Wood Mill Pool, where for many centuries there has been a valuable salmon catch. About the year 1533 obstructions to the passage of salmon up to Itchen were removed by the Commissioners of Sewers, and salmon became plentiful. Subsequently they decreased, and few seemed to have frequented the non-tidal waters. About the year 1860 there was improved preservation, and in 1863 a salmon pass or ladder was made at Wood Mill, with the result that fish were enabled to ascend into the non-tidal waters. The defendant is the owner of a mill, called West End Mill, and land in South Stoneham, just above Wood Mill, and adjoining the non-tidal part of the river, and claims a right of fishing for salmon as riparian owner. The plaintiffs did not claim to enter the land of the upper riparian owners. The trial before Mr. Justice Romer lasted several days, and in giving judgment his lordship said that though the plaintiff had shown an exclusive right of fishing in the lower reaches of the river, that was to say, in the tidal waters at South Stoneham and Wood Mill Pool, so far as regards the upper and non-tidal reaches of the river adjoining the defendants' land, the plaintiffs had shown nothing more than a paper title to a several fishery for salmon, unsupported by any acts of ownership, and that the defendant had given overwhelming evidence of acts of ownership to defeat the plaintiffs' paper title. He accordingly gave judgment for the defendant, hence the present appeal. Their lordships dismissed the appeal with costs.

FISHING IN THE SEVERN.

ON Monday—before Mr. Justice Darling and Mr. Justice Channell, sitting as a divisional court, in the Queen's Bench Division of the High Court—the case of *Williams v. Humpherson* came on for consideration. Mr. Willis Bund and Mr. A. Graham appeared for the appellant, and Mr. Amplett, Q.C., for the respondent. Mr. Bund said this case raised a question whether the public had a right to fish in a navigable but non-tidal part of the river Severn, and he should submit under the circumstances such a right could not possibly exist in law, and therefore the magistrates had jurisdiction to deal with the case. The respondent was summoned for fishing in a part of the Severn near Shrewsbury, which was a long way above any question of ebb or flow of the tide, but it was navigable. The ownership of the soil under the river was, of course, in the owner of the banks, so the public could not claim any right by prescription. The respondent was found fishing in a part of the Severn which ran through property belonging to Lord Barnard, and the appellant was a member of the Shrewsbury and Shropshire Fishing Association, who leased the rights of fishing and paid a rent. It was contended by the respondent that the river being navigable the fishing rights could not be reserved, and that there was a public right; and, further, that by a local Act of Parliament a right was vested in the public to fish in any part of the river whether tidal or non-tidal, and it was said the public had fished for sixty years in the river there. Further, it was said that as the right claimed by the respondent as one of the public was a *bona-fide* claim, the jurisdiction of the magistrate was ousted. The appellant contended that no such claim was possible, but the magistrates thought it was, and refused to convict, dismissing the information. After argument, Mr. Justice Darling said he thought the appeal must be allowed, and the case go back to the magistrates to convict, because the only point raised by the defendant was that he claimed a right to fish in the Severn, and therefore the magistrates were precluded from dealing with the case. But the claim of right which the respondent made must be a claim that was legally possible, and on the circumstances here he thought it was impossible to set up such a claim. Mr. Justice Channell said the only matter relied on here was the local Act of Parliament, but he thought it was not capable of bearing the construction put forward, that it allowed the public to fish. That being so, there could not possibly be any claim of right, and therefore the appeal must be allowed with costs.

BATH ANGLERS' ASSOCIATION.

THE annual meeting of this flourishing club was held last Tuesday evening, at headquarters, the Full Moon Hotel, Bath, when there was a fairly good attendance of members, among those present being Messrs. L. C. Hare (president), F. C. Fortt (hon. secretary), F. J. Moody (hon. treasurer), F. Pratt, T. G. Brown, M. H. G. Wood ("Spinning Minnow"), F. Goodall, G. Harding, J. Bryant, S. W. Iles, S. Moody, C. Bray, A. G. Cox, G. Dunn, G. Coakley, H. G. Lee, S. Wilkinson, F. Beesley, W. Bryce, Van Gelder, W. Jeff, R. Curtis, A. J. Tanner, &c., &c. The chair was taken by the president, Mr. L. C. Hare, who expressed his pleasure at meeting the members of the association, and congratulated them on the satisfactory condition of the club. The minutes of the

last annual meeting having been read and passed, the hon. sec., Mr. F. C. Fortt, submitted the annual report, which showed that the club was going on most satisfactorily. During the year pumping operations had ceased in the Combe Hay canal, and the committee had deemed it advisable to remove some 4000 fish from the canal, and put them in the society's water at Limpley Stoke. This had entailed considerable expense, such as buying nets, and the wages of the water bailiff and helpers, amounting in the whole to between £7 and £8. Mr. Fortt, during the report, spoke of the poor season they had experienced, from a fisherman's point of view, the first part being so very dry, and during the last the river was almost in continual flood. There had been five angling competitions during the season. He also touched upon the quantity of fish in the Avon that had been poisoned during the very dry weather, and thought it was a matter in which the conservancy board of the Avon, Parrett, and Brue might bestir themselves. Negotiations were also in progress for new water on the Kennet and Avon Canal. The hon. treasurer (Mr. F. J. Moody) then presented the annual statement, which showed that after all ordinary and extraordinary expenses had been paid there was a balance in the bank of £6 0s. 6d. Mr. L. C. Hare was elected president for the ensuing year, Mr. F. C. Fortt re-elected hon. sec., and Mr. F. J. Moody hon. treasurer, and the vice-presidents were re-elected as they stood. The old committee were reappointed en bloc, with the exception of Mr. G. Moody, who did not seek re-election, and whose place was taken by Mr. H. G. Lee. The hon. auditors, Messrs. T. G. Brown and E. W. Wood, were re-elected with thanks for past services. Other matters having been discussed, the meeting closed with a vote of thanks to the chairman, proposed by Mr. T. G. Brown and seconded by Mr. M. H. G. Wood.

SPINNING MINNOW.

NORTHERN ANGLERS' ASSOCIATION.

A MEETING of the executive council was held at Farnworth on Saturday, April 29. Representatives were present from the centres at Manchester, Bolton, Farnworth, Atherton, Wigan, Preston, Blackburn, Oldham, Ashton, Stalybridge, Crewe, and Stockport. Mr. R. Cole, of Crewe, was appointed to the chair in the absence of the president. A report was read of recent storing in the Shropshire Union Canals, and the best thanks of the association were voted to the general manager for his kindly interest in the matter. It was decided that the meetings of the council shall in future be held at the several centres in rotation. It was reported that the Poynton Canal fishing rights had been acquired by the County Palatine Association. A vote of thanks was given to Mr. Furness, the secretary of Stockport Centre, for his trouble in this case. The question of the liability of new members to pay the levy in aid of the coarse fishers' defence fund was raised, and it was agreed upon that every member is this year required to contribute. Gold, gold centre, and silver medals were ordered to be given along with the first three prizes in the grand competition to be held on the Lancaster Canal on June 24. Arrangements for special trains from Manchester, Warrington, and Bolton were confirmed, with facilities from a large number of other towns to join the special trains at the nearest junction. A communication from Warrington Association was read, but deferred to next meeting. The application of Hanley Angling Club was accepted, and the secretary instructed to apply to the railway companies for travelling facilities for the members. The next meeting was fixed to take place at St. Helen's. A vote of thanks was tendered to Farnworth Centre for the substantial lunch provided, and to the chairman for his services.

THOS. W. REDFORD (Hon. Sec.).

NEW CUMNOCK ANGLING ASSOCIATION.

This association held the first competition of the season on April 29, when twenty-four competitors competed for valuable prizes, presented by hon. president (Mr. J. A. Fraser), president (Mr. Wm. Hyslop), Mr. W. R. Downie, and seven prizes given by the association. Reports from the various competitors show that in the early part of the day trout were taking freely, but owing to heavy rain the waters became too muddy and flooded, so that fishing had to be given up. Still some very good baskets were taken, and the winner, Mr. Nisbet, had a beautiful pair of yellow trout, which weighed 4lb. 14½oz.; the best one won special for largest trout. These are the two finest trout that have ever been brought in at any of the association's competitions; both were caught with minnow, and from a pool on the Deuch, near Carsphairn. This competition was for trout only.

The following were the winners in the handicap competition: Messrs. William Nisbet, James Shankland, Archibald Smellie, James Smith, Dugald Gracie, Colin Campbell, William Shankland, Robert Shankland, William Paton, and Richard McSeaphany.

SPECIALS.—Heaviest trout, William Nisbet. Three next best trout, William Nisbet. Six next best trout, James Shankland.

THE sporting estate of Stronelair has been sold by Captain Fraser to Mr. William Ewing Gilmour, Woodbank, Dumbartonshire. The property affords capital sport with grouse and other varieties of Highland game, and several deer are killed every season. There is some loch and stream trout fishing. The shooting lodge, which is situated in a wild and mountainous region, is about twelve miles from Inverfarigaig pier, on the Caledonian Canal. The estate was sold through the agency of Walker, Fraser, and Steele, Land Agents, Glasgow.

AUF WIEDERSEHEN.

AN old song says, "Say *au revoir*, but not good-bye," and an older ballad tells in the most doleful of metres:

"Farewell, farewell, is a lonesome sound
And is oftentimes heard with a sigh;
But give to me that good old word
That comes from the heart, 'good-bye.'"

The time has come for me to say something of this kind, but there is nothing in the French "*au revoir*" or the English "good-bye," which is a corruption of "God he with you," which appeals to me like the German "until we meet again."

There had been a sort of a dream that I should go to take charge of a great trout preserve in Wisconsin. The dream spread out over two years, as dreams always spread, and then somehow it narrowed down to a date. The date was somewhere in the coming June—and things were getting brisk, with some April lectures and a new fish-cultural hook to see through the press; but, when a telegram came with orders to start on April 15, there was no margin. Therefore, all correspondents are hereby notified that my personal address for one year—the contract is for one year only—will be Brule, Douglas County, Wis. This place is in a wilderness, where bears, deer, wild cats, sharp-tailed grouse, and other beasts may polish my bones, but I will go and face the sharp tails of the grouse, and between dropping a line to the trout, may drop a few lines to *Forest and Stream*. So—*auf wiedersehen*. —FRED MATHER, in *Forest and Stream*.

We wish Mr. Mather success in his new home and duties.—ED. F. G.]

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—Amid the gloom of the past week, in regard to the barren results in trout fishing, the beautiful valley of the Thames has been getting into its best form, and it is hoped, with the chance of a mild change in the weather and a better condition of water, the trout anglers in the midst of such lovely scenery will be more successful in the landing of some good fish. In my old working days I used to enjoy a run down the river at this time of the year, the starting point being nine o'clock at Staines Bridge, and it was a grand sight to witness the striking change in Nature, with the new foliage and the melodious notes of the winged minstrels in the air, occasionally relieved by the striking voice of the cuckoo and the warbling of the nightingale. With such splendid surroundings, and the hearty welcome I always received from the anglers I met here and there, my visits were made the most pleasant and profitable, as I frequently added the name of a new subscriber to the funds of the society. I may be allowed to add my frequent visits down the river very often gave evidence of a pecuniary increase to the funds, and if the late head river keeper, Abraham Stroud, was living, he would be ready to testify to these gratifying results, as he was generally my attendant in these practical visits, and was as much gratified as myself in such encouraging proofs, and facts can never be construed into any other meaning. It was on one of these visits I met my good old friend Mr. Alfred Jardine, and landed his first guinea as a member of the society whilst he was fishing with one of the best fishermen, Mr. Alfred Stroud, near the bridge at Chertsey, and the friendship of both angler and fisherman still exists. I may here mention it was entirely through the influence of Mr. Alfred Jardine that the late Mr. Thomas Spreckley became attached to the T.A.P.S., and all anglers know the immense value that introduction gave to the work of Thames preservation. I regret the obituary of last week records the sudden death of an old friend and supporter of the society, Mr. John Elsdon, who, during my secretaryship, was always ready to give me support in all matters connected with the society. In the river trips I could always reckon upon his taking a considerable number of tickets, and also at the annual and other banquets, and where a guarantee was necessary he and his son Charles gave me a free hand. May they both rest in peace.—B.

Thames (Datchet).—Trout fishing here very unsuccessful so far, but I think I know more about where to drop on a fish or two than when I wrote last, but a day out under present conditions is terribly monotonous; a fish is never to be seen moving till it is nearly dark, then there is not much time left to fish. I was out on Tuesday all day; Mr. Gent had a bait taken off by a fish just the last thing; simultaneously we saw fish moving everywhere all over; in five minutes I caught a little fish six inches long, whipping for bleak. Mr. Rubenstein found a large jack when his houseboat dead, I should think it weighed 20lb.—G. LUMSDEN.

(Eton).—Sport with the trout still continues to be very slow. Several anglers have been out every day for the last week, the only one meeting a fish being Mr. Charles Harris, of Eton, on the 30th, weight 5½lb. This fish was in poor condition, and should have turned the scale easily at 7lb. It was exactly 24in. long. I have been out every morning and evening, but have only seen three fish on the move. Jack, as usual at this season, worry you. I took four in twenty minutes, on the 23rd, at Windsor Weir.—CECIL HOWLETT.

(Hampton Court).—William Milbourne, writing on Tuesday morning, says: "Owing to the cold winds there has not been anything done in the way of trout. There has been a few baits taken, whilst fishing for them, which were all returned." It is hoped the really summer weather of Tuesday will continue, and then the

anglers will be tempted to come and try for them, and that is what the fishermen want.—B.

—(**Hampton Wick**).—Head river keeper William Douglas reports from his visits on the river: "I have not heard of any trout having been taken. I have seen several on the move in different portions of the river. There has been and still is a quantity of perch spawn, the principal portion being in the back water at Walton, which has been covered over with wire netting, and pegged down with stakes and laced with wire. The roach are also coming on for spawning. The water is in good condition."—B.

—(**Shepperton**).—It does not appear that last week was altogether a blank as regards the trout, as I received a letter on Monday last from Mr. George Rosewell, of Shepperton, as follows: "Mr. W. H. Blyth, fishing with me on Thursday, caught a beautiful trout, it was a female fish, weighing 7½ lb., which had gone to be put up in a glass case. I was out again on Saturday with a client who missed three good fish. They came so short that they were not properly hooked, so you see if anglers will only come, there are some trout yet left for them. The fish which Mr. Blyth caught last Thursday measured 27 in. in length."—B.

—(**Com. Leach, &c., East Gloucestershire**).—Heavy and continuous rain for some days have put a good head of water on these trout streams and improved the trout fishers' prospects. The trout rise freely on warm days about noon, and again about four and six o'clock. Saw several Brown Alders on the 2nd inst. This is unusually early for these streams, as this fly is not generally up before May 10 or 12. Some trout have already been taken on this deadly fly. Dng some May Fly larvae on Wednesday, and found them in a very forward state, some of the wings being already formed, and I should not be surprised, if the weather keeps fine, that the Green Drake is up by about Whitsuntide in some parts. Several rods have been out on hotel waters, but the weather has been had for the fly fisher, being at times very rough and hoisterous. Mr. John Barton has been fishing the Fifield waters, on the Leach, and Dr. Lockwood and friends have been out at Little Faringdon. Rods have also been on the Lechlade Mill waters with sport.—PAN.

—(**Dareath (Horton Kirby, Farningham, &c.)**).—The river is clear again and quite low, so that it would take a lot of rain to bring another flood, and anglers may safely expect a fishable river on Saturday, and the dry fly will have a chance. The cold north-east wind is against sport at the present time, and but little has been done, though we had genial weather at the beginning of the week. The flies to try are Iron Blue or Olive Dun.—J. P. T.

—(**Dart (Totnes and District)**).—Fishing has produced only fair sport this week. The best take is a couple of dozen by Mr. Pershouse, of Torquay, who is an expert angler. Tuesday was a good day for fishing, but evening angling with the natural minnow has been responsible for a few takes. Mr. A. M. Champenowne, of Hood Manor, has killed some nice trout on his own water at Dartington; and Mr. Stiff, of Dartington Hall, has been doing a little on the moor, where the anglers are very numerous. A few sea trout, locally known as truff, were creelred near Buckfastleigh. Small creels of trout have been made by Messrs. Revell, H. T. Distin, E. Ackrell, E. Distin, H. Full, and others, the best flies being the Small Midget, Blue Upright, Edmonds Palmer, and Red Spinner. The Rev. C. Forster killed a couple of salmon at Holne Chase, the weights being 18 lb. and 14 lb. respectively. A recent haul by the nets at Totnes Weir included a 27-pounder.—DEVONIAN.

—(**Derwent (Malton, Yorks.)**).—The river is in excellent condition for fishing; a good flow of water and a nice colour.—H.

—(**Devonshire Streams**).—The best report of the week is from the Okehampton district, where Mr. George James and two other rods were fortunate enough in creeling over 200 trout in the river below the town. The rivers being in good order after the rains, fishing has been fairly satisfactory, and no doubt peal will soon be running freely. Some have been seen in the Upper Lyd and Tavy, trouting in the former being excellent just now. Fish are plentiful, and a successful season is anticipated. Many streams, however, are troubled with otters, among others being the Lyd and Dart. The Avon (Brent) is not doing well up to the present, and little fishing has been done. A few salmon were creelred in the North Devon streams, Judge Belford getting a 12½-pounder recently, and his son a fine fish of 22 lb. The Blue flies have been killing on the Otter, and also the Olive Dun.—DEVONIAN.

—(**Dove and Tributaries**).—Sport has been pretty fair considering the backward state of the season. Several nice dishes of trout have been taken with the minnow mostly. The Iron Blue has been also taken freely by both trout and grayling. The latter, of course, are out of season, and have to be returned.—D. AND W. H. FOSTER.

—(**Esk (Whitby)**).—Since last report this river has been in poor condition for angling, the adverse weather, together with the small muddy freshes which have swept the river making angling operations practically impossible. Notwithstanding these conditions many anglers have been out, but the only catch reported is that by Dr. Dreaper, of Grosmont, which consisted of six and a half brace. The river at the time of writing is rather better in condition. Much smelt is reported in the tideway.—J. JACKSON.

—(**Exe and Canal (Exeter)**).—Weather is somewhat more springlike, but still far from salubrious. The north-easter is too much with us for perfect spring trouting, and, generally speaking, baskets have been of the light order. Among these anglers who have had the best takes are: Capt. Cooke, Messrs. Baker, Cummings, Hall, Snell, Taylor, &c., some of the trout running exceptionally fine and in good condition. Flies doing well at present are: Blue and Olive Duns, Iron Blue, Blue Upright, and Californian. All that is needful now to put the fish in

pink of condition and ensure good sport is a settled spell of warm weather. River is running in fair volume.—RED PALMER.

—(**Fen District (South Lincs. and Cambs.)**).—The weather generally, for the fly fisher, is improving. Although we have had gleams of sunshine, nights have, as a rule, been cold, and aquatic life is not active. Now May has come in we should quickly have a change. What sport is noticed has been obtained more from bottom fishing than the orthodox method. Dock grubs are still the best.—LIMPET.

—(**Idle District (North Notts.)**).—Many gentlemen who affect trout fishing have, owing to the unsatisfactory weather, failed as yet to wet a line. Now May has arrived surely we shall have an improvement. We hear of a few captures on the forest side, but they are by no means worth recording. The best waters in this district did not as a rule open before Monday. We ought, therefore, soon to be getting news. Woods and hedges are now coming into leaf, and we shall soon have the Hawthorn and other flies out in force. Cowdung flies are about the only lad flies to be seen.—L.

—(**Lake Vyrnwy (N. Wales)**).—The weather has been variable, some days very fair, and bad occasionally. On the whole the baskets made during the week have been very good. On the 26th, thirty-six fish, weighing 20 lb. 7 oz. Capt. Garnett made the best basket with fifteen, 8 lb. 8 oz.; Sir T. Hughes killed nine, 5 lb. 10 oz.; Rev. Cheshire, four, 2 lb. 8 oz.; Mr. Densham, three, 1 lb. 12 oz.; and Messrs. Hart and Caley, five, 2 lb. 10 oz. On the 27th, fifty-seven fish, weighing 33 lb. 11 oz. Messrs. Hart and Caley killed ten, 6 lb.; Mr. R. L. Garnett made the best basket with eleven, 6 lb. 3 oz.; Rev. Cheshire, nine, 5 lb. 10 oz.; Sir T. Hughes, eight, 5 lb. 3 oz.; Mr. Densham, five, 2 lb. 12 oz.; Capt. Webb, 2 lb. 14 oz.; and Capt. Garnett, eight, 5 lb. 8 oz. On the 28th, fifty fish, weighing 26 lb. 8 oz. Rev. Gregorie made the best basket with ten fish, 6 lb.; Capt. Garnett, eight, 5 lb. 8 oz.; Mr. Crowther, six, 3 lb. 10 oz.; Mr. Densham, five, 2 lb. 10 oz.; Mr. R. L. Garnett, four, 2 lb. 12 oz.; and Mr. Jackson, two, 1 lb. 4 oz. The 29th was very wet and stormy, and there were only two boats out. Mr. Crowther killed nine, 4 lb. 10 oz.; and Sir T. Hughes, four, 2 lb. 6 oz. On May 1 forty-eight fish were killed, weighing 28 lb. 13 oz. Capt. Garnett made the best basket with twelve fish, 6 lb. 8 oz.; Rev. Burnside and Miss Watson both killed six each, 3 lb. 4 oz.; Mr. Jackson and Mr. Crowther both had five fish each, 3 lb. 2 oz.; Capt. Webb killed four, 3 lb. 3 oz.; Dr. Rutherford, four, 2 lb. 12 oz.; Rev. Cheshire, three, 1 lb. 10 oz.; Mr. R. L. Garnett, three, 2 lb. 10 oz. On May 2 the fishing was exceptionally good. Ninety-five fish, weighing 53 lb. 12 oz., were killed. Mr. R. L. Garnett made the best basket with sixteen, 9 lb. 5 oz.; Mr. Crowther was second with twelve, 7 lb. 2 oz.; Capt. Garnett, nine, 4 lb. 10 oz.; Mr. Jackson, eight, 4 lb. 6 oz.; Miss Roydon and Mr. Watson, eight, 4 lb. 5 oz.; Mr. O'Hanlon, seven, 3 lb. 10 oz.; Rev. Burnside, seven, 4 lb. 4 oz.; Rev. Cheshire, seven, 4 lb. 4 oz.; Mr. Chamberlin, five, 2 lb. 14 oz.; Mr. Palairat, five, 3 lb. 6 oz.; Mr. Shaw, five, 2 lb. 10 oz.; Mr. Lycett, four, 2 lb. 6 oz.; and Mr. R. B. Chamberlin, two, 1 lb. 4 oz. The river fishing has been exceedingly good, the best baskets being forty fish on April 26; the same angler took twenty-three fish on April 28, and twenty-four fish on May 1.—LONGDRIFT.

—(**Lark (Icklingham and Lackford)**).—During the last week or so it has been too cold for the trout to feed, so anglers have been turning their attention to the pike, there being no close time for them in this stream on account of the trout. Messrs. Major, Hancock, and Skinner Brothers have again been killing down the pike, taking nine one day, largest 4½ lb.—A. E. KEMP.

—(**Lea**).—Once again anglers are enabled to pursue that game-fighting and nicely-shaped fish, the Lea trout. The season re-opened on Monday, and there were many anglers out in the Hertford district. Anglers were also in evidence at Ware, St. Margaret's, Rye House, and other resorts. The water was in splendid condition, and in the Hertford district a number of trout—twelve altogether, it is reported—were secured. The heaviest one, of 3 lb. 14 oz., was landed at Folley Bridge. Mr. Steinhart landed a brace of trout, the best 1 lb. 9 oz. He returned the smaller fish, which was not quite 12 in. A local angler took the 3 lb. 14 oz. fish. On a tributary of the river four brace of trout fell to two rods near Hertford. On the main river, Mr. A. E. Jackson rose a number of trout while spinning, but all appeared to come short at the bait. Between the Ware Town Bridge and the Boom several fine trout—one estimated to scale 7 lb.—have been seen on the move, but down to the time of dispatching this report I had heard of no captures being effected. Below Hardmead Lock several good trout have been noted feeding, and at the mouth of the old Lea, at St. Margaret's, anglers should fish the water carefully. Another nice bit of water is that between Rye House Bridge and the big bend. Both Dohbs (Hoddesdon) and Carthage (Broxbourne) weirs should yield sport among the trout, but since the season opened anglers have had to contend against cold winds, which, as in the case of the Thames trout, have kept the fish down. I would recommend anglers to try a natural minnow or gudgeon on spinning tackle, or, better still, at the home of a big fish, a bleak on line gut live bait tackle. Anglers should get well out, and let the bleak "work" at or just under the surface. From the way some of the trout in the Lea have been scattering the small fry lately they should be attracted by either a live bleak, small dace, gudgeon, or minnow; the tackle should be as fine as possible, and half a beer-bottle cork, pared to shape, will suffice for a float. Pel fishing also opened on Monday.—IZAAB WALTON.

—(**Lugg and Arrow (Leominster)**).—Both these noted trout streams are running clear and a nice level, and in good order for fishing. The weather has been fairly

good, but rain and east winds on Wednesday will be against good sport being had. Before Wednesday there had been a fair number of anglers out, and the fish have been rising well, and have taken Blue Dun, Brown Spinner, Red Spinner, Yellow Dun, Cowdung, and Iron Blue, and some very nice trout landed. Sport will be slow until there is a clearing up of the weather. At present it is more like February than May. The Pinsley is clear and in good fishing order.—GWYNNE.

—(**Lugg, Arrow, and Pinsley (Kingsland)**).—Rivers in good order, but weather so changeable no reliance. Yesterday, May 2, a perfect May day; to-day, or rather this morning, wind N.E.; just fit for February. Changes are sudden and unlooked for. The Yellow Dun is out and the Alder is sure to appear in a few days.—R. T. WILLIAMS.

—(**Nene (Peterborough)**).—At the annual meeting of the Nene Angling Club for the Northampton district, it was decided that the club should become affiliated to the Provincial Angling Association, the object of which is to obtain a reduction of train fares for anglers. With regard to eel fishing, a new rule was made for the months of May and June, so that there is no time limit as before.—E. A. S.

—(**North Staffordshire Rivers**).—Angling conditions are very good throughout this district. The occasional rains tend to keep the streams well supplied with water, and fish are feeding on most days on surface food. Flies which have proved killers are Hare's Ear Dun, Blue Dun, Dark Olive, Cowdung, and Coachman. A very nice hag was made by Mr. Morewood on the Blythe. A few trout fell to my own rod on the same river. Mr. Hitchings took fish up to nearly a pound weight on the Team. Mr. Stonehewer got one of 2½ lb. from the Churnt, and on the upper reaches of the Dove the dark Blue Dun has done some execution.—F. W. DALE.

—(**Onny and Plowda Waters (Craven Arms)**).—Weather fine. Wind north. Water in fine condition. On Saturday Mr. J. M. Etches caught in the club water nine and a half brace of trout. The hotel water is in excellent order and affords some good sport, several trout having been taken during the past week.—TRUTH.

—(**Otter (Budleigh Salterton)**).—At present time of reporting, May 3rd, the river is in perfect condition for fly fishing, but as the barometer is falling, rain may be expected. The best rise is in the forenoon between 10.30 and twelve, when the Blue and Red Quills, Olive Duns, and "Middle Blues" (as they are locally called) are effective flies. If the evening is calm and fine, the trout rise to Midge between 5 and 7 p.m. Yesterday at 5 p.m. a few good fish fell to Flight's Fancy on the water at Ottery St. Mary. A rod on Mr. Rolle's water also took three brace of handsome trout.—HERON.

—(**Ouse (Denver)**).—The close time is being well observed in this locality, and appearances indicate good sport for the coming season. In the meantime several attempts have been made to secure some of the sea trout, which I hear are numerous and pressing up the tidal waters, though I am unable to learn that any have been actually landed. At the end of last week a local man, spinning off the piers of the sluice, had hold of a good fish, but broke away. The sluice-keeper told me on Saturday, that from observation he had kept, the trout are about in abundance, some of them being very fine fish. Water in capital condition, and running freely; weather rather unsettled, bitterly cold but bright and fairly dry.—WATER WAGTAIL.

—(**Plymouth**).—The rivers are all run down to summer level, and some nice baskets of trout have been taken on Walkham and Meavy. I hear there are some fresh run peal up the Tavy. The list of edible fish for month are sturgeon, salmon, peal, trout, dory, sead, mackerel, thorn-back, conger, eel, bass, surmullet, lance, pollack, hake, atherine (smelt), wrasses, turbot, hhill.—WILLIAM HEARDER.

—(**Severn, Vyrnwy, Tanat, and Cain (Llanymynech)**).—Although the weather during the past week has been all that could be desired for angling purposes, yet sport has been very limited in all these rivers, and very few trout have been captured, and these of rather below the average size. One very remarkable thing, and which is very freely commented on by anglers, is the extraordinary scarcity of samlets—the young salmon—which years ago were a positive nuisance to trout fishers at this period of the year, it being nothing unusual to hook two or three of them at every cast. At present they are only conspicuous by their absence in all these rivers, which is another proof—if more proofs were needed—of the scarcity of salmon in this neighbourhood. Pike fishing is the only successful form of angling at present pursued here; and on Tuesday last a gentleman from Oldham, whilst angling in the Vyrnwy, near Pen-is-erllan Ford, a short distance below Llansantffraid Bridge, captured three very fine specimens of these river poachers, one of which weighed over 16 lb., and all were in splendid condition for the time of year. One or two others have also been taken, but they are still much too plentiful in the Severn and Vyrnwy.—VYRNWY.

—(**Sussex Streams and Rivers**).—Angling has not been very successful during the week. A few roach and small chub have been taken from the Ouse, and small trout from the tributaries. Several brace of trout have been caught in the back streams of the Adur, but nothing over 12 oz. A nice fish of 2 lb. 10 oz. was taken from the Rother, on Monday, with spinning minnow; and some smaller fish with worm. Smelt have given sport in Chichester Harbour, from six to fifteen dozen have been taken by a single rod pitemostering with ragworm.—GEORGE F. SALTER.

—(**Teifi (Carmarthen, Cardiganshire)**).—Fishing exceedingly good just now. A great many large baskets of trout caught during the past week, also a couple of fine salmon.—H.

Teme (Ludlow).—The Teme in this district is still running clear and a nice level, and has been refreshed with some very nice showers of rain. The weather has been suitable for anglers to get out, and the fish have been more on the move, and have taken the fly well. There have been a good few rods out, and the best flies are the Blue Dun, Stone Fly, Cowdung, Iron Blue, Red Spinner, Yellow Dun, and Little Brown. To-day (Wednesday) wind got into east, and bad for sport. Worm fishing has been good, the fish being well on the feed. The minnow has been tried by a few anglers, but up to the present sport has been rather quiet. Fishing on Saturday with the Blue Dun and Stone Fly, landed six good trout, averaging 3lb. each. On Monday an angler with the worm took four trout, 3lb. each. With Cowdung and Red Spinner a nice lot of fish were taken near the Castle. In the water below Ludlow there has been some good sport, and some fine trout landed. Warm weather is wanted, and then there would be some good baskets of fish landed. The Onny, Corve, Clun, and Ledwyche are all running clear, and a nice level and in good order. With the worm, in the Corve some good lots of fish have been landed, and sport should be good.—S. LUDLOW.

Teme (Tenbury).—The water in this part is running clear, and a nice level, and in capital order for fishing. The weather has been changeable, with storms of rain, then bright sunshine, and then dull cold east winds have been rather against good sport being had. The fish have been rising well during the warm days, and taking fly well, and a fair number of anglers have been out. Sport has not been good, but some very nice sized trout have been landed, and there is every prospect of some good fish being taken in this part if the weather would only settle fine.—WORCESTER.

Torcross Ley.—This well-known fishing resort is giving some good sport just now. Mr. J. Lane has had some good sport with paste, rudd fishing. He has taken several 2lb. and 2½lb. each. Mr. George Vincent, from Clapham, had a few days from March 30, and had good catches, his largest rudd was 2lb. 2oz. He had several over 1½lb. This week the sport is just as good. You can get to Torcross by coach via Dartmouth, or from Kingsbridge, both of which are on the G.W. railway. Coaches run daily, and there is a first-class hotel with very moderate charges; there is no charge for fishing. Charges inclusive 8s. 6d. per day. Billiards, golf, tennis and quoits. Write W. Vickery for particulars.

Usk (Abergavenny).—River has been in good order, and anglers have been successful. Mr. Pritchard, Angel Hotel, especially so, having taken two fish in one day weighing 13½lb. and 23½lb. Mr. Poulett has caught several salmon and baskets of trout; other gentlemen have also had good sport. It is sad to record the death of a young lad aged fifteen years who went to fish, having only taken his licence that day (Thursday April 27th). It is evident that he has been drowned, as his cap was found in the water far below where he is supposed to have fallen in. The body has not yet been found, although a lot of searches have tried their best in that direction. Great credit is due to Mr. Cashel (water bailiff), also Mr. Edgar Morgan and Mr. P. Barber, who with a boat and poles searched the pools for about two miles or more on Sunday last. Great sympathy is felt for the boy's family. (Mr. T. Williams of Llanfoist is the unhappy father).—E. DELAFIELD.

Witham, &c. (Mid-Lincolnshire).—Anglers will now be stirring themselves in the trout districts. May opened cold and showery, but surely we shall soon have a change. Vegetation and spring blossoms are showing themselves, and a fair quantity of flies are seen in the sunshine when we have it. From the Wold district we hear of a few captures, but these chiefly with grub or worm. Cow Dung flies are out in force, and these, with the early imitations, should prove effective. Water there is in fine trim. Round about Grantham also things are improving, and anglers should be having better luck on the upper waters of the Witham. Becks in that direction are in satisfactory trim.—LUCY.

Wye and Derwent (Derbyshire).—During the past week the weather has been very changeable, and has caused angling to be very uncertain. A number of anglers have been out on the Wye, and on some days have done fairly well; and on another day very poor sport, when a cold north-east wind has prevailed, and rain fallen in torrents at intervals. The Derwent has also had a fair number of rods, both fly fishermen and bottom anglers as well. On the upper reaches of this river, Hathersage and Chatsworth Fisheries, a few nice baskets have been obtained; but there is still room for improvement in fly fishing. The Darley Dale Club's portion of the Derwent has yielded a few brace of nice trout. Mr. Browne on three occasions took one and a half brace each day. The Matlock and Cromford Angling Association's water has yielded the best fish. A member fishing near the weir, Matlock Dale, landed one brace of trout, which turned the scale at 3lb., several others obtaining a few nice fish from this water. On Friday two gentlemen from Nottingham, fishing on the Lovers' Walk side of the Derwent, landed four brace, one of these 2½lb., the lot weighing 8½lb. Mr. King on Monday night, from his balcony, has again taken a very pretty Loch Leven trout. Several nice trout have also been taken with the fly below Cromford. This well-stocked part of the Derwent promises well for this season. The prospect for the next few days is good, as the water is now in order for the fly. Olive Dun, Ash Dun, Cooper's Fancy, Grannom Sand Fly, and Claret Bumbles will be found useful.—DOTTRELL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—The promise of springlike weather we had for a day or two last week was not maintained. April left us with three degrees of frost and a covering of snow on the higher range of hills. This was followed by rain, and May Day was as wretched and unlike the proverbial one on which the maidens were supposed to go out and bathe their faces

in the dew to increase their beauty, and add to their charms; and since then the weather has been on the whole far more like March than May, the winds from the north and north-east, with a thunderstorm now and again, being doubtless the cause of a falling off in sport with the fly. Some good dishes have, however, fallen to the share of several anglers in the Upper Yore, &c. I hear visitors staying at the Crown have done well, principally with the minnow and running worm. Sport has not been good in the river between Bainbridge and Middleham, or in the Cover, few anglers getting anything like a good basket. From Masham, Mr. W. Jackson, nephew of the late J. Jackson, of "Practical Angler" fame, writes me that only moderate dishes have been made, although the water has been in good trim. Little has been done in the upper Swale, the fish there being still backward in point of condition, and not many anglers out in consequence of the ungenial weather. The most killing flies have been the Woodcock, and Orange, and Brown Owl. As far as the tributaries of the river are concerned, fair sport has been had in the Bedale Beck and Ellerbeck, a Northallerton angler getting an exceptionally fine basket of twenty-two trout; Mr. J. Dobbin has also done well with the March Brown and Blue Dun flies. At Newton-le-Willows Sergt. Brown has had fair sport, a remark applying to several members of the Black Ox Club who have fished the Codbeck. Several anglers did well up the Wharfe at the week end, and dishes from twelve to fourteen fish were made at Collingham on Saturday, and again on Monday. William Richardson has done well on the Ilkley Club waters with the minnow, and Mr. Leach with the fly; and on another reach of the river I hear of a big catch with the fly, eight of the trout weighing nearly as many pounds. Capt. Binney, of H.M.S. *Galatea*, has had good sport in the Dove. So has Mr. D. Storr, of Kirby Moorside, he one day getting ten trout, weighing over 5lb., with the natural minnow. Another gentleman caught eight fish with the Phantom minnow. Mr. J. C. Frank, of Kirby Moorside, writes me that the River Dove Angling Association is doing well. They do not intend to overcrowd the fishing, but tickets for the day will be issued in limited numbers at the usual charges during this season at 2s. 6d., and minnow fishing will not be discontinued. Bottom fishing, however, is restricted to the lower beats after Oct. 1. Full particulars of this water will be found in the new edition of "Jackson's Practical Fly Fisher" price 7s. 6d., and intending visitors should put themselves in communication with the hon. secretary, J. C. Frank, Esq., the Bank, Kirby Moorside. As I close this letter all the Yorkshire rivers are in good order for angling, and J. Blades writes some heavy baskets of trout were caught with the minnow on the Upper Yore yesterday, and that the best flies for that district are the Brown Owl, Woodcock, and Orange and Waterhen Bloat.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—All the Yorkshire rivers are now in a fine trim for fly fishing, but the north-east wind is bitterly cold, and the natural flies that should be plentiful at this time of the year are still very scarce. A change in the wind is all that is required for good sport. Some good dishes of trout were caught yesterday with the natural minnow fished on Ariel tackle.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddle.—The weather is still unsettled in Eskdale and Liddlesdale, and rain has been falling at intervals, causing the waters to rise considerably. Bait fishing commenced this week, and a good many rods have been out all along both rivers. The prospects of sport are now fairly good, as sea trout are showing themselves in the lower reaches, and catches in the Solway are improving daily. In the lower reaches several clean new-run sea trout have been caught below Longtown by some anglers from Carlisle, while Mr. Mason, Rockliffe, had a beauty in the Metal Bridge water. A Longtown angler also caught one below the bridge. Two have been got in the Netherby water. Another angler, a visitor, had a run with a salmon at Lynefoot, but lost it, much to his grief. One has been got in the Willow Pool. Not much has been done in the Canonbie water as yet with the exception of a few takes of yellow trout, which now show a great improvement. Several rods have been out in the Langholm water, and have done well with yellow trout, most having been got with fly. Some of the local anglers have done fairly well with brown trout in the Ewes, which is a handy stream for Langholm anglers, and also for visitors to the "Muckle toon." Some small baskets have been got in the Broomholm water below Skipper's Bridge, and an odd yellow trout has been taken from the Tarras. The weather is cold, and sea trout will hardly rise to the fly to any extent ere a fortnight elapses. Fishing in the upper reaches of the Liddle, between Newcastleton and Kershope Foot, Mr. Lawson, Edinburgh, had two and a half dozen yellow trout; Mr. Boaz, Edinburgh, had a basket of three dozen; Mr. Oliver had two dozen below Hermitage; Mr. F. Armstrong had two dozen below Newcastleton. In the lower reaches below Penton, Mr. J. Graham, Canonbie, and Mr. Ballantyne have made good baskets. Several anglers have also done well in the Inch and Damfoot pools. There has been little done either in the Willow or Cauldron pools, the commencement of the Double water. At time of writing both Esk and Liddle are in fairly good angling trim. Mr. Fasson, staying at the Eskdale Temperance Hotel, Langholm, has had good baskets of yellow trout in Esk, Liddle, Tarras, and Ewes. Mr. Thompson had close on 4lb. yellow trout. Mr. McMillan had a nice basket. The following have had fair baskets: Messrs. D. McDougal, T. Aitken, C. Roe, and W. Harkness. Mr. Ross had two dozen at a morning's fishing. On Monday Mr. McKune

had a basket of twenty-six yellow trout in Canonbie water. Water running high; weather still cold.—GILNOCKIE.

Breadalbane Arms Hotel (Aberfeldy).—Mr. Sturrock, of London, fishing the above water, caught, on April 28, six trout, 4½lb.; on May 2, seven trout, 4½lb.

Carron (Easter Ross, Ardgay, N.B.).—The weather has been most unfavourable, and though a great number of rods were out sport has been poor. On 25th ult., Mr. Marcus landed two salmon, of 9lb. and 11lb., on the Balnagown Arms Hotel water. On 29th, Dr. Eley landed an 8-pounder; and on Tuesday this week, Mr. Boosey and party, from Balnagown Arms, caught a nice trout and a salmon of 6½lb. on Invercharron water. The nettings on the Kyle of Sutherland are still rather unproductive.

Deveron (Banffshire).—Although rain fell heavily of late, this river has been in pretty good condition, a fine black water running. Anglers have been enjoying fair trout fishing. On the Cornicaugh section Mr. P. H. Latham and party continue to have good sport. On the Marnock and Auchingoul sections Mr. H. B. Leatham and Mr. C. A. Leatham are also enjoying good sport. A few fish have been got by the nets on the river during the night, but there is comparatively little doing by the fishermen during the day. Owing to the leaders not being out on the sea over Sunday, the previous day being too stormy, there was a fair yield of salmon on Monday; in fact, the best that has been since the opening of the fishings. On Monday a box weighing over 2cwt., and on Tuesday one weighing 1cwt. were consigned to the market. The salmon are of fair size and good quality. No grilse have as yet been reported in this district, but we hear of a couple having been captured in the nets at Portsoy, about seven miles west of the Deveron.—H. W.

Isle.—It is now over a fortnight since the angling season opened on the Isle and the Forfarshire streams, but there have not been any baskets worthy of record got. For the last six weeks the weather has generally been of a wintry character. Snowstorms have been frequent, and winter has literally been carried into the lap of May. The wind, which has generally been cold, dry, and biting, has been persistently either from the north or east; and there has been little of insect life showing. On Wednesday Mr. and Mrs. Tate, Allerton Beeches, Liverpool, fished Auchintaple Pond; but the weather was too cold and clear for good angling.—JAS. GAIR.

Lochleven (Kinross).—The weather of the past week has been of a very wintry nature. On Monday there was quite a snowstorm, and on Saturday it was blowing a gale from the north-east, and very little was then done with the rod. With the exception, however, of Saturday, and despite the very cold weather, anglers have been getting splendid sport, and so far as our knowledge goes, the best on record here at this season. The Perthshire Club, with sixteen rods, creoled one hundred and fifty-four trout, which weighed 103lb. 7oz. The first prize was gained by Mr. W. McNicol, who had twenty-eight trout, 18lb. 8oz. Second, Mr. S. Steel, sixteen trout, 10lb. 1oz. Taird, Mr. A. Steel, fifteen trout, 9lb. 12oz. The other clubs which competed and were less successful were: Edinburgh, Cockburn, Glasgow, Wellshot, Kelvin-side Academicals, and Midlothian. The following were the private anglers and amongst others: Capt. Henderson, Dr. Allum, Messrs. Wells, MacKay, Durward Lely and son, G. G. Donald, G. Ross, Young, Brown, Macdonald, Dodds, Dixon, Fleming, Stewart, D. Macpharlane, Thomson and son, Webster, Marshall, Stenhouse, Heaton, Lister, Lumsden, Carr, Miller, Bennet, D. Stewart, J. McIntosh, W. Morton. During April there were caught with the rod 1534 trout, 1112½lb. This shows a catch of twelve trout per boat compared with nine trout in April last year, though more fish were captured by a considerably larger number of boats. All the fish last month, with a very few exceptions, were killed with fly.—ROBERT LAING.

Loch Tay (Killin, N.B.).—April 26, Miss Berger killed a nice salmon, 17lb. 23th, Mr. Steel, one, 19lb. May 1, Mr. Thompson, one, 23lb. 2nd, Mr. Dymond, one, 17lb.—H. J. MAISSEY.

Lyon (Fortingall Hotel, Glen Lyon, Perthshire).—Gentleman fishing from the hotel (Mr. Stewart) landed a beautiful salmon on May 2, weight 26lb. River in ply.—PAUL MACPHAIL.

Naver (Bettyhill, via Thurso, N.B.).—Owing to the sad death of Mr. George D. Stibbard, Syre Lodge, and of 23, Stanhope-gardens, Queen's Gate, London, whose remains were removed southwards last week, only two or three anglers have been out. On 24th, Major Burnell Milnes, Dalvina Lodge, landed a salmon on No. 2; and on 25th, one on No. 3. On 26th, Mr. Oats caught two salmon on No. 2. On 27th the same angler had two on Nos. 2 and 3, and Mr. Blood, Skilpeck Lodge, one on No. 1. Mr. Oats was out on 28th, and got three salmon on Beat No. 1; and on 29th, two on Nos. 1 and 2.—B.

North-East of Scotland.—Sport has been fairly rife on all sections of the Dee during the past week. With settled weather, salmon angling would now be at its best. A fresh head of fish came away with the recent floods, and these are being got freely on some of the lower beats. Small flies are now the order of the day. On the Braemar section, Major Shut had one of 6lb., on the Crathie water; Mr. Harris, two, of 7lb. and 23lb., on the Invercauld private water; while Mr. Linnbeck had also two, of 6lb. and 5lb. On the Cambus O'May section, Mrs. Johnston had a nice salmon of 19lb.; while Mr. Griffith had two, of 8lb. and 10lb., on the hotel water; and Mr. Wignelan, one of 9lb., on the Monaltrie water. On the Glentworth waters, Mr. Barclay had five fish from 5½lb. up to 17lb.; Mr. Laming, one of 8½lb.; Miss Hibbert, two, 8½lb. and 5½lb.; and Mr. Farrar, three, of 5½lb., 8lb., and 8½lb. Sport has also been good on the Aboyne waters, Capt. Scott creeling

three on Huntly Arms water, of 7½lb., 16lb., and 8lb.; Mr. Crawshaw, five, of 7lb., 9lb., 8lb., 7lb., and 9lb.; and Dr. Murray, two, of 7½lb. and 7lb. On Saturday, Mr. Farrar had two, of 8lb. and 10lb., on the Glen water; and Mr. Laming, two, of 7lb. and 9lb. On the Kincardine O'Neil section sport has been quite rife, and prospects bright. On Dess water, Mr. Davidson, jun., of Inchmarlo, creoled one of 6lb.; John Harper, two, of 8lb. and 19lb.; Capt. Staition, five, of 6lb., 6½lb., 7lb., 7½lb., and 8lb.; and Harper, two, of 8lb. and 9lb. On Carlogie water, Mr. J. C. Haslam had one of 7lb. On Ballergie water, Mr. L. H. Craike had one of 6lb., one of 2½lb., two, of 6½lb. and 7lb., and one of 8½lb. On Borrowstone water, the Earl Lisburn creoled one of 7½lb. On Upper Blackhall water, Mr. Davies landed two, of 7½lb. each, four, scaling 6lb., 6lb., 7½lb., and 19lb., while he had five for previous week, of 6lb., 7lb., 9lb., 15lb., and 19lb. Mr. Lawrence, on Commonly water, creoled three, of 8lb., 8lb., and 21lb., two, of 7lb. and 8lb., and one of 7lb. On Cairnton, Mr. Farley had good sport. On Durris water, Mr. Baird and party creoled two fish daily on an average. On the Crathes waters, Caird (keeper) had one of 17lb. On Park, Mr. Fench had three of average weights, and Capt. McLean, five, of 8lb., 9lb., 12lb., 15lb., and 18lb., being the captain's second best week since the opening. On the Kingansie and Culter sections an occasional fish is being got.—G. M.

South of Scotland.—We have still cold weather over the south of Scotland, which is retarding sport in the rivers of the district. Practically there have been no spring salmon in the Solway nets for a week, and the season has proved about the worst ever known in the frith. The following are the reports from the different waters of the Solway and district: **THE ANNAN.**—A few sea trout are now ascending this river. There was a flood on Tuesday, as also on Saturday. With the water in good order for fish running on Sunday, a few sea trout would get up while the nets were off for the weekly close. The keeper Dalziel had one sea trout in the Hoddum Castle water, and the keeper Macdonald is said to have landed one in the Monnt Annan portion last week. Mr. Hullett killed one in the Wamphray portion with fly. The sea trout are not running in heavy weights yet. Some good baskets of yellow trout have been taken in the higher waters with fly and worm. Mr. W. A. Bell-Irving has had some very fair sport with fly among the yellow trout on his private water of the Milk. In the Four Towns water Mr. McLean killed a spring salmon of 16½lb. with fly. Considerable doubt is being expressed about these spring fish, many anglers being of opinion that mistakes are made between well-mended kelts and real spring fish. **THE NITH.**—Angling has been very quiet on the lower portion. In the Mid-Nithsdale waters a few yellow trout have been caught in the Duke of Buccleuch's stretch below Thornhill Bridge, and also in the Scanr water. In the Clenden and Cairn a number of rods have been out, and some fair sport obtained on favorable days with fly and worm. At the time of writing the waters are in the best of order. **THE GALLOWAY RIVERS.**—Very little has been done in the rivers of this district. A number of rods have been out on the higher portions of the Ken, and small baskets of yellow trout caught. Nothing is reported from the Dee of Kirkcudbrightshire, the Fleet of Gatehouse, and the Urr of Dalbeattie. **AYRSHIRE LOCHS.**—Not much is being done on the lochs of Doon and Finlas. There has been no rise of fly yet, and trout have not been taking at all well. **THE SOLWAY DERWENT.**—Much melted snow is in the waters, and trout have not been rising well on the Cockermouth, Derwent, and the Cocker. Mr. B. Hewitt, on Saturday, had a nice basket of burn trout in the Cocker with the worm; Mr. J. Soulsby also caught a dozen, with the worm, in the same river. Mr. Matty Thompson had several nice fishings of yellow trout, with the fly, on the Derwent and Cocker; Mr. J. Grave killed seventeen nice trout; Mr. W. Jackson was another of the successful anglers. Mr. Tom Moore fished Isle Hall water and had a good basket of fish, one of his trout weighing 2½lb. On Wednesday, Dr. Braithwaite had a capital basket of eighteen; and a friend along with him—a rare hand with the fly rod—killed a basket of thirty. Mr. A. Coleman killed a dozen in the Calder water. Mr. John Quyle, of Eben-side, caught a dozen in the Ehen with worm, one of his trout weighing 1½lb. At the time of writing all the rivers are in excellent order for trout fishing. The Annan Fishery Board have given instructions to the water bailiffs to net the Annan for pike and coarse fish.—HEATHERBELL.

Spey.—Although behind the average for April, angling somewhat improved during the month by comparison with March. One beat yielded five salmon in one day, from 12lb. to 25lb., and another six. The finnock fishing has been only indifferent this year, but sea trout are promising pretty well. Seaward from Craigellachie there has been some good brown trout fishing, but higher up the river it has hardly commenced. Mr. McCornodale has arrived at Tulchan Lodge for the spring fishing. The unsettled weather continues to tell against the net fishing on the coast. In the Findhorn district salmon netting results are still far from satisfactory. Finnerock and sea trout angling have been fair in the lower waters, and the brown trout angling very encouraging. Last week, on the Carron House water of the Spey, Mr. Grant killed two salmon, of 9lb. and 16lb. respectively; and on the Knockando House water Mr. Shand, fisherman, had one of 7lb.; while one of 9lb. was also killed on the Laggan section.—J. M.

Tweed, Teviot, and other Border Rivers.—The conditions generally for ten days back, until Monday and Tuesday of this week, were certainly most unfavourable for both trout and salmon angling, owing to the stormy weather and the disturbed state of the rivers. Last week, on the Tweed in the Kelso district, Mr. T. Marriis, Worksop, fishing with trout fly tackle, hooked and

successfully landed a very nice 7lb. clean run fish. The same gentleman has also had baskets of from 6lb. up to 12lb. and 14lb. of trout on the Tweed alone. The only other captures of salmon recorded since my last notes were two fish killed by Capt. French, Tillmouth Park, on the Tweed, the weights of which were respectively 8lb. and 9½lb. On Monday we had a very heavy downpour of rain, which lasted from early morning till evening, but this did not deter some enthusiasts from trying their hand with fly, and baskets of from 2lb. upwards were got during the day. Towards evening the river came down in a 2ft. flood, but this very quickly subsided, and on Tuesday many anglers were out, and met with good success. On the Tweed, on Monday, Mr. John Thompson had a splendid basket of 15lb., some of his trout being from 1lb. up to about 2lb. each. On Tuesday, Mr. J. Stewart had 12lb. on the same river; while Mr. Charles Farquharson, Kelso, had a basket of four trout, which drew the scale at 4½lb., these being got with minnow. Mr. George Thomson, Kelso, has had takes of from 6lb., 8lb., and 10lb. On the Eden a few nice baskets have also been killed. Mr. A. Steel, jun., on Monday had 8lb., on Tuesday, 10lb., and on Wednesday he had again 8lb. In the Galashiels district of the Tweed some capital sport has also been had with trout. Angling in the Mertoun water last week, one Galashiels angler had twenty-two trout and two grayling, total weight 16lb.; another day he had thirty trout, weighing 18lb.; besides which he has had dishes of 8lb., 12lb., and 14lb. Angling competitions are now going ahead all over the Borderland. On Saturday, the Greenlaw Club (Berwickshire) had its spring competition on the Black Adder and tributaries. Only five baskets were shown. The two heaviest baskets were, by the rules of the club, deterred from taking the highest places in the competition. The same day, the Preston (Berwickshire) Club held their first competition for the season on the Whitadder, when there was a fairly good show of baskets at weighing time, some of the best dishes being got on the upper reaches of the river. The Tweed net salmon fishing, both on the sea coast, at the mouth of the river, and in the Tweed itself, has shown just the slightest improvement during the week. Salmon are rather more plentiful, but trout do not come in such numbers as could be wished for.—MAXWHEEL.

IRISH REPORTS.

Bann.—This river is toning down and trout are disposed to rise better. I understand that when the lease of the three miles stretch of water between Portna and Movagh, held by the Bann Angling Club, expires it is the intention of the Foyle and Bann Fishery Company to open it to licenced anglers. It is one of the best bits of water in the north of Ireland.—J. A. B.

Belfast.—Trouting on the dams was but middling in the past week, owing to the cold, chilly winds. Fishing the Cludy—a small mountain stream near here—on Friday, Sergt. Eagleson, Sergt. Aiken, and Sergt. Livingstone killed a dozen trout each; and Messrs. Thomas Magee, Mr. Barry, and James A. Barlowe had some success. The previous day a local man killed on this stream fifty-four trout, which weighed 20½lb.—one of the best bags made here for years—all on the fly.—J. A. B.

Boyle.—Since last report we had only five days' fishing weather, and any who got out on these days had very good sport, especially on Lough Gara and Moylurg. Mr. J. Callaghan, fishing Moylurg on 26th, got twelve trout; and on 27th he got twenty, which weighed 11lb. Moylurg trout, as a rule, average ½lb. Mr. Fenwick, on Gara, April 27, killed six beautiful trout. Mr. Cosgrove, in four days' fishing on Gara, killed sixteen trout, one 6lb., two 5lb. each, two 4lb. each, six 2lb. each, one 1½lb., and four 1lb. each. On 28th, Mr. Fenwick killed seven trout on Gara; and Mr. Thornboro four good trout, four pike, and one perch. 29th, Mr. Fenwick got six trout on Gara. 30th, Mr. Poole killed five trout on Gara, and Mr. J. Callaghan one good trout on Gara. May 1, Mr. J. Callaghan, on Gara, three trout; and on May 2 he got three, largest 3lb. May 2, Mr. Jones killed two on Gara, largest 4lb. The rise of May Fly, I believe, will be a bit later, on account of the lakes getting up about 6in. Still, we are looking forward to have the dapping about 16th.—GEORGE TAYLOR.

Caragh Lake (Caragh).—Fishing since last report has been very good. Mr. and Mrs. Bagshaw, 27th, some good trout, one over 2lb. weight; 28th, one and a half dozen; 29th, four dozen and two; 30th, one and a half dozen, and Mr. Woodhouse, one dozen and three; 1st May, Mrs. Bagshaw, two dozen. Some other anglers have had some good baskets, trout running to a large size. All these anglers are staying at the Southern Hotel.—G. C.

Cork Rivers.—All the Cork rivers open for angling have yielded better sport since last report, but at time of writing matters are not getting on quite as well, owing to an absence of favourable winds.—T. J. D.

Corrib (co. Galway).—The Corrib was much disturbed lately by wind and rain—so much that angling was interrupted for several days. Since last report, Major-General Dashwood killed three fish; Mr. Lydons, five; Mr. Townsend, two; and some other fish were killed.—J. A. B.

Cummeragh and Inney.—Sport has been very dull at salmon on the Cummeragh, though the fish were present in good numbers in the deeper pools. Only two salmon were had here last week, viz., one of 9lb. and one of 7½lb. Trout fishing has been up to the usual standard on the Cummeragh, and very good on the Inney, both at sea and brown trout.—T. J. D.

Erne (Ballyshannon and Belleek).—This river is now in fine order for both salmon and trout fishing, and a number of anglers are arriving from England to try their luck on it this week.—M. ROGAN AND SONS.

Imperial and Royal Hotels Private Waters (Ballina).—I am glad to say that there is every prospect

of good fishing both on lake and river; the first run of grilse have come into the river, and there has been a number of them taken in the nets. I would recommend anglers to pay a visit to Ballina now. The gentlemen staying at Gortnorabbey have made some good baskets of salmon, trout, and pike. On April 27 Mr. Little made a nice basket of trout, the largest weighing 3½lb. and 2½lb.; on the following day he killed a nice salmon. On the 29th, Mr. Pye killed two pike, one weighing 24lb. and the other 12lb. Mr. Macaulay also made a small basket of trout.—THE MANAGER.

Kerry Rivers.—Sport has improved on the majority of the Kerry rivers open for angling, though it still cannot be considered good on any water, as far as salmon are concerned. Sea trout are arriving in average numbers in the principal rivers, in the Caragh, Cahercween, Sneem, and Waterville districts.—T. J. D.

Kilmarney.—Sport has been generally of a very dull description in the salmon angling department, while in that of trouting matters have been in a satisfactory condition both on lake and river. On the mountain lakes sport has been brisk.—T. J. D.

Lee (co. Cork).—River has been in excellent fishing order for past week. The following have been successful: On Ashton Fishery, O. L. Evans, 10lb. 9½lb., 9½lb., 9lb., 5lb. On Lee Mount, Mr. T. Crawshaw, 7½lb.; Miss Stansfeld, 7½lb., 7½lb.; Mr. S. Haynes, 9½lb., 5½lb. On Fargns, Mr. Troyte, 6lb. On Castlelynn, Mr. J. O'Brien, 8lb. Capt. de Montmorency, 10lb. On Oak Grove, H. E. Stanley, 9lb., 8lb.—W. HAYNES AND SON.

Lough Conn (Cloughans).—Dr. Carpenter, in eleven days, got ten salmon, average 11lb.; also a large trout, 9lb., together with some handsome baskets of trout, smallest 1½lb.; got also a jack of 12lb. Mr. H. J. Browne got some very nice trout from 1½lb. to 3lb. Mr. McNabb got a handsome basket of trout. Mr. Allen, in a few days, got fourteen trout, average 1lb. Good prospects for coming week.—TOM CLARKE.

Lough Currane (Waterville, co. Kerry).—Sport has improved somewhat at salmon, and continues good at brown trout. No sea trout have yet been had by anglers, though many are supposed to have arrived already. Several good salmon have been taken.—T. J. D.

Lough Melvin.—The weather was moderate during the past week, and sport somewhat improved. The following are the particulars: Colonel R. B. Wilson took one salmon of 9½lb. on 29th ult.; General Jackson took one salmon of 9lb. on 28th ult.; Mr. A. L. Pike took one salmon of 8lb. on 26th ult.; Mr. Mahon took one salmon of 11lb. on 30th ult.; Mr. J. Humphrey took one salmon of 8½lb. on 29th ult.; Mr. J. Slavin took one salmon of 7½lb. on 1st inst.; and Mr. J. Henderson took another of 8lb. on same day. The weather is fine at time of writing, and prospects of sport for next week and Whitsuntide is looking very promising. Trouting continued excellent on the lake since last report, and again numerous baskets of gillaroo and brown trout were taken, averaging in weight from 7½lb. to 13½lb., the latter being the heaviest basket of trout taken since last report. A few trout (*Salmo ferax*), weighing 3½lb., 3lb., and 2½lb., were also taken trolling. Amongst the most successful trout anglers were the Rev. Wm. Verner, Messrs. P. Grimes, J. Timoney, Wm. Neely, W. King, Edwards, R. H. Reid, and W. H. Woods.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—Notwithstanding the weighty rainfalls and slightly discoloured waters, fair sport was had in all-round angling departments. On April 25 Mr. H. Grant had a salmon 9½lb., and on the 27th one of 11lb. Mr. Hagan also had one of 10½lb., and on the 29th a brown trout, 4½lb. Amongst the trout Messrs. Gore, Rushey, Johnston, Bracken, and Jones had good baskets daily. Now is the best time for intending anglers to this lake.—P. GALLAGHER.

Moy Hotel Private Waters (Ballina).—Water in splendid order; south winds; a good run of spring fish on the river, the nets and weir doing well. Mr. W. C. Wilson rose a few fish on Monday. There were a few grilse got in the nets during the week. Mr. Schrop got some trout on the lough on Sunday. Trout fishers at Rangary Lodge doing well.—JOHN DEVERS.

Moy (Loughs Conn and Cullen).—Cold north wind here, and fish not taking well. There are now quite a number of fish to be seen in the lower pools. Dr. Bates, one salmon, 11lb., one grilse, 2½lb.; Mr. C. Hamilton, one salmon, 13lb. Some grilse have been got in the salmon nets. The lough is still too high for good sport. Mr. Mantion and friend had thirteen trout in three days; Mr. Gosswell had ten trout in three days; Mr. W. Roberts and friend had eighteen trout in four days. All the trout averaged over 1lb. Few jack have been got, largest 8lb.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—This week, on Parteen reach, below Killaloe, where the broad river sweeps down the rocky pavement, Mr. R. G. Twiss's fisherman, Wm. Barry, killed with rod a magnificent freshly-run salmon, weighing 42½lb. The grand fish was taken on a Killock, and gave over an hour's intensely exciting play. For a great, big, lordly springer commend me to Mr. Twiss's Parteen beat, particularly when the water is high, which it is at present. Salmon fishing on the preserves below the bridge almost nil this week, owing to high water. Mr. W. A. H. Martin landed on Mr. W. Young's fishery, which he has rented for the season, a fish of 11lb. Above the bridge three or four salmon have been taken. With the appearance of the Stone or Cinnamon fly, trout fishing on the streams will improve.—S. J. HURLEY.

Shannon (Castleconnell).—With the arrival of May the weather has become very mild, and now matters piscatorial have assumed a more cheerful aspect. On Doonass, Mr. G. C. Williams killed, 26th, one salmon, 14lb.; May 1, one salmon, 12lb. On Prospect, Mr. H. Chapman killed, 26th, one salmon, 15lb.; May 2, one salmon, 12lb.

On Hermitage, Mr. F. Cooper killed two salmon, 11½lb., 27½lb., on 28th. On Woodlands, Major C. H. Newington killed one salmon, 10lb., May 2. On the Erinagh water the fishermen killed one salmon, 12½lb., on May 1.—J. ENRIGHT AND SON.

Tyrone Rivers.—The Blackwater and Ballinderry are in fair order for fly fishing, though on both trouting was but middling this week. A Newtonstewart correspondent reports favourably as to sport on the Mourne. At the end of next month salmon may be expected in the Mourne.—J. A. B.

Upper Lakes (Waterville, co. Kerry).—Sport continues good on all the above waters at brown trout, but no sea trout have been taken since last report.—T. J. D.

Angling Fixtures.

May 7.
Original Clerkenwell: Distribution.

May 8.
Albion Brothers: A.B.S. concert.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly finance committee will meet on Monday evening next, May 8, at 7.30, and the general committee at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 12s. 6d. Original Clerkenwell, £2 16s. 3d. Original Alexandra Angling Societies donation boxes. At the last committee meeting two applications were entertained, and £16 granted. The next committee meeting will take place on Friday, May 12, at 8.30, at the Foresters' Hall, Clerkenwell-road. Subscriptions are now due.—R. GHURNEY.

Anglers' Association (No. 1 Eastern District) Visiting List.—The next return visit will be to the Dalston A.S., Brownlow Arms, Brownlow-street, Dalston, on Monday next, May 8, when I hope to see a good meeting.—G. MANNING.

Anglers' Association (No. 2 District) Visiting List.—A most successful visit on the above list took place on May 1 to the Original Clerkenwell Piscatorial, when the following seventeen societies were represented: Amicable Waltonians, Brothers Well Met, Convivial, Crown and Buckland, North London, Original Clerkenwell, Wenlock, Hoxton Brothers, West Green, Phoenix, Dalston, Wellington, Forest Piscatorial, North Lambeth, Camden, Globe, and Allason United Brothers A.S. Mr. Bouffler, of the Phoenix, was chairman, and Mr. Hill, secretary of the Original Clerkenwell, vice. At 11 p.m. the roll was called, and their A.B. box contained 12s. 6d. Harmony followed. Next visit and date later.—BEN ABRAHAMS.

Albion Brothers' Angling Society, The Frampton Arms, Well-street, Hackney.—Our concert in aid of the A.B.S. is postponed on account of the Dalston A.S. return visit being on the same date, and I hope brothers will not forget to give them a look in on Monday.—C. KING.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—Tickets for our ninth annual dinner are being issued. The secretary will receive all prize money, &c., up to and including May 10. But cash must be paid before 8 p.m. on May 10. Mr. A. R. Mathews has consented to take the chair, and Mr. Wilson, of Fitzroy-square, is the caterer. The secretary produced list of winners of past season, and was correct. I tender thanks to Mr. Glaisher, bookseller, High-street, Notting Hill, for his prize, a 21s. book of the Thames, which I, your humble, won. We also tender thanks for prizes in to the various donors. Messrs. C. Wells and Otter Wheeler had flat fish on April 30, the latter thirty-six good-sized flounders and some eel pout.—P.S.—The 25lb. pike caught by our member, Mr. Wells, is preserved with great credit to Mr. Anstiss, and is on view at 25, Silver-street, Notting Hill Gate.—BEN ABRAHAMS.

Amicable Brothers' Angling Society, Bald-faced Stag, Worship-street, Finsbury.—We had a good meeting last Wednesday, when some very good business was got through. Our 45th annual supper takes place on Wednesday, May 17, distribution on Wednesday, June 14.—G. HAYNES.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—A well attended meeting of the above took place on May 3, and some important business was transacted, and six more prizes added to the already long list, there now being forty-six prizes already promised for the coming season, and we have a lot more to add to it yet. Mr. Hender was elected a working member. Will members please note that a special meeting is called for May 24. The delegates' report from the central was well received, and a vote of thanks passed for same. I hope brother anglers will not forget our smoker on Monday next, May 8, for the A.B.S. I shall have plenty of talent, and Mr. W. J. Wade, and most of the prominent members of the angling world, will be present. Tickets have been sent round to most of the clubs, but any club not receiving same will please take this as an invite. The members desire to express their deep sympathy with the widow of the late Harry Patman in the sad loss she has sustained in the death of her husband, and express their desire to respond to any appeal that may be made on her behalf.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—Our annual distribution of prizes will take place at the clubhouse on Wednesday, May 17, when a leg of mutton supper will be placed on the table at 8 p.m. sharp. Mr. J. Bomer was elected an honorary member, and Mr. W. Marchant was proposed as a working member.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—I should feel obliged if gentlemen who have promised prizes would kindly forward them by Tuesday next if possible. Will all members please attend next Tuesday? Final arrangements for dinner, &c., on 16th inst. Some capital talent coming; anticipate a grand success. Brother anglers and friends very welcome.—A. JENKINS.

Battersea Piscatorial, Lord Ranelagh, Verona-street, Battersea.—Since my last report we have had much pleasure in nominating two new members. Will members please note that all tickets not returned by May 7 will be considered as sold? Donors of prizes will oblige by letting the secretary have them by same date. Our second annual dinner takes place on May 10 at 8.30 p.m. sharp. Will secretaries please note change of address?—T. TRINGHAM.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Our meeting of members on Wednesday was a record. I am pleased to say we have started making new members for ensuing season, this being our last night of the old season's contributions. Mr. C. Stump was proposed as a working member. We shall be pleased to welcome brother anglers and friends at our supper or concert on Tuesday, May 9, which promises to be a record night for the Blackfriars. I will thank gentlemen for an early attendance. Supper at 8 p.m. Mr. G. H. Shepherd chair; and Mr. W. J. Wade and a host of talent will be present.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—An adjourned special general meeting will be held on May 7, at 8 p.m. sharp, when all members are particularly requested to attend. The twenty-seventh annual supper takes place on Thursday, May 18, on which occasion the chair will be occupied by Mr. R. Lummes, supported by Mr. J. Pailles. Will members and friends who have promised prizes kindly forward the same as soon as possible, and oblige?—T. PATERNOSTER.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—On Wednes-

day, May 17, at 8.30 p.m., Messrs. Taylor, Ward, and Jones will give a lantern entertainment (comic only), the proceeds of which will be for the benefit of the widow of our late esteemed member, Mr. H. Patman. All angling friends are requested to attend. On April 27 Mr. Rundell captured a nice trout of 7lb. 10oz. Our annual dinner and distribution of prizes on Wednesday, June 7.—J. H.

Brompton Angling Society Doileys Arms, Marlborough-road, S.W.—On April 26 (quarterly night) the usual business, viz., election of officers, took place. Our esteemed member, Mr. W. H. Barber, who was absent through illness, was again elected chairman. Members are requested to attend on Wednesday, May 10, when important business will be brought on, one of the items being Mr. Couper's proposed cnp.—C. ASHLEY.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—Our annual dinner and prize distribution will take place at the above on Tuesday, June 6. Will members clear the books as soon as possible, so that we may know how many to provide for? A smoking concert for the benefit of our brother member, G. Foster, better known as "Old Uncle" (who has been in ill-health some time), will be held on Tuesday, June 13, when we trust all friends and members will rally round, and give him a bumper benefit. Members are requested to attend next meeting, viz., Tuesday.—F. RANDALL.

Bungay Chaucer Angling Society.—The annual prize distribution and smoking concert was held at the King's Head Hotel, Bungay, on April 26. The president, Mr. R. C. Clay, presided, and presented the prizes for the past season. Some very good catches of roach have been taken during the year, the largest fish being 2lb. 3oz. The prize offered by the president for the largest pike taken was won by Mr. W. Cubitt. A very enjoyable evening was spent.—F. PRESTON.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—I must remind members last Wednesday, May 3, was half-yearly night. Our supper and distribution of prizes is fixed for June 7. I hope members will turn up next Wednesday, as we have some important business to transact.—E. BOXALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our dinner and distribution of prizes will take place on Monday, May 15, at 8.30; tickets, 2s. 6d. each. All unsold tickets to be returned by May 10, or will be considered sold. Our balance-sheet was accepted as read. I am very pleased to say that this society is in a good sound financial position. I shall esteem it a favour if donors of prizes will kindly forward on same as soon as possible.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Tickets are going well for our dinner and concert on Wednesday, May 10, at 7.45. Mr. E. Loyd will occupy the chair, and amongst others who have consented to contribute towards the harmony of the evening are Messrs. R. Richardson, F. Woods, J. Darney, F. Finch, "Chivers and Martin" A. Cave, F. Alberts, J. McMahon, W. Owers, &c. Mr. Wade has also promised to put in an appearance. Lists of tickets must be handed in on May 7.—S. VIOLET.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—Our supper takes place on May 15, and distribution of prizes. All members are requested to give in prizes by Tuesday next. Tickets for supper to be obtained at clubhouse.—F. FAULKNER.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—On May 3 Mr. Richardson and H. Wright audited the accounts of the society, when everything was found perfectly correct, and the balance sheet duly passed. It will be read to the members at the annual general meeting on May 17. The distribution of prizes will take place on May 31. Mr. A. E. France, the ex-champion long distance swimmer, will occupy the chair on that evening.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On May 2 there was a full attendance, when all arrangements were made for our annual dinner, which will take place on June 4, at the Black Rabbit, Arundel. Members intending to be present must let the secretary know not later than Tuesday, May 9. We also voted 5s. towards the netting fund. Societies please note that our return visit takes place on Monday, May 8; all anglers and friends will meet with a hearty welcome.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday meeting quite chirpy; nothing of any great importance except supper, for which we hope to have Mr. Ball (Conservative Association) in the chair, assisted by our president, Mr. W. Clatworthy. Tickets 2s. 6d. to members and friends.—J. EDWARDS.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Our annual dinner and distribution of prizes takes place on Thursday, May 18. All prize givers please send them soon as possible.—W. JENKINS.

Eagle Angling Society, Red Lion, Tottenham.—The annual dinner of this society will take place on Wednesday next, at the Red Lion, at 8 p.m., Mr. E. T. Elder (president) in the chair, when we hope as many members and friends as possible will attend. The annual general meeting has been adjourned to the 17th inst., when the officers for ensuing season will be elected.—W. J. PRICE.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—On May 9 we hold our annual concert and distribution of prizes. We have some good talent for this occasion, and I hope to see many old friends to support us on this occasion, it being the last time I shall be acting as secretary, as I am resigning the secretaryship.—T. ROSSER.

Forest Gate Piscatorials. Forest Gate Hotel, Godwin-road, Forest Gate, E.—At our annual general meeting on April 26 it was decided to abolish gross weight club prizes, and sizes of all fish were considerably increased, from 2in. to 3in. over Lea standard in some cases. As the balance-sheet shows a decent amount to start the new season I hope members will attend on the 10th inst. to arrange prizes, &c.—H. F. C.

Friendship Angling Society, King's Arms, Mitobel-street, St. Lukes.—On May 8 a smoking concert will be held for the benefit of the Thames preservation fund, on which occasion Mr. W. J. Wade, secretary of the Central Association, will occupy the chair; vice, Mr. C. Watling, Great Northern Brothers. I hope they will be well supported from clubs. Pianist, Mr. F. Morley.—J. LEVINE.

Globe Angling Society, Earl Russel, Isledon-road, N.—We hold our twentieth annual supper and prize distribution on May 8. Supper served at 8.30 sharp. Donors of prizes will greatly aid the distribution by handing them to the secretary on May 7.—W. LAWRENCE.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—Members can clear books and get supper tickets from Mr. King up to May 7. Supper at eight o'clock sharp. I hope to see a good room full of the angling fraternity, who will be made welcome.—A. W. ELLINS.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green.—Our annual supper takes place on May 29. I hope members will attend next Wednesday for special business.—C. SMITH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—A general meeting called for next Monday evening, as a lot of business has to be transacted, also the names to be taken for the supper, which takes place on June 5.—A. E. PAYNE.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—We had a well attended meeting on Wednesday last, and final arrangements were made for our annual dinner, which takes place on Tuesday, May 9, Mr. F. Clay in the chair, and Mr. E. Steinhart in the vice. Mr. J. Johnson has charge of the musical portion, and has arranged a well varied programme. Tickets are going well, and a successful evening is assured. The trout season has not opened too well, one brace only having been hooked, they having fallen to the rod of Mr. Steinhart. One weighed 1lb. 9oz., and the other 1lb.—A. CLAYTON.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—Will members kindly note that next Tuesday will be the last night to settle who is going with us to the outing to Parndon on May 14, as the books must be clear? The prizes are not coming in very fast.—J. H. HERBERT.

Jubilee Angling Society, Prince Arthur, Golborne road, North Kensington.—Since my last report we have had very fair meetings. We have finally arranged, instead of a supper, to have a smoking concert and distribution of prizes on June 5 in aid of the A.B., trusting the various clubs will give us their kind support on that occasion.—G. BENCE.

Limehouse Piscatorial Society, Silver Tavern, Brdett-road, E.—This society is now considering the desirability of renting a private water, and all members are asked to attend the meeting house on Friday next to receive particulars of the same.—R. J. WELLS.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—I hope to see a good muster of members on Wednesday next, that being general clearing night of season. Supper, May 17. Members who have promised prizes will oblige by forwarding same at their earliest convenience.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—In consequence of close time fishing for coarse fish is almost a dead letter, many anglers religiously observing the regulations of the Freshwater Fisheries Act very strictly. Many fishermen may not, however, be aware of the exemptions provided by the Act, the main one being that these fish may legally be taken during the above period providing the permission of the owner of the fish or the boards of conservators has been given. This is the case with the river Vyrnwy, which is simply full of pike, perch, chub, roach, dace, &c., and it is for the protection of trout that this course has been adopted. Grayling are also looked upon as enemies to the prosperity of trout, and so there may also be taken and kept. The principal prize at our last week's outing was won by Mr. T. White with trout, but they were in very bad condition, looking simply like pieces of stick, so emaciated were they.—R. WOOLFALL.

Liverpool East End Angling Association, Court House Hotel, Commutation-row.—A few members of the association during the past week have been doing good work at Bromborough, on the waters rented by the association, in placing close on 200 fish in the ponds. The pavilion also has undergone an overhauling by a practical man, a member who has the best thanks of the members. Mr. J. Parks, whilst fishing in Montgomeryshire, took a grand basket of trout, weighing about 15lb. Members and correspondents please note change of secretary's address from 47 to 19, Melrose-road, Kirkdale, Liverpool.—JAMES REYNOLDS.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Our A.B.S. concert was a great success, the room being filled, and the sum of £2 16s. 3d. found in the box. I beg to thank those who attended and contributed to the harmony, which was kept going till closing time. Our annual dinner will take place next month.—G. BARRS.

Original Clerkenwell Piscatorial Society, Sutton Arms, Great Sutton-street, Goswell-road.—On May 1 seventeen clubs were represented, when some good talent was provided by the following artistes: Messrs.

Broughton, W. Stretch (North London), W. Bavin (Phoenix), Booth, Freeman, and Isaacs (Original Clerkenwell), Canton, Ilamblerton, and a host of others. Mr. B. Abrahams also spoke on behalf of the Anglers' Benevolent.—A. HILL.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham.—A special meeting will be held on May 7. I trust every member will be present, and that members and friends will not forget our annual dinner on May 11. The president, Mr. H. E. Reed, will be in the chair, and Mr. Harold Coleman in the vice-chair.—GEO. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—Members and friends who are coming to our annual dinner and prize distribution on May 17, please let me know by May 13. There is a little business to settle before that, so members are requested to show up next week.—R. C.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—Our annual prize distribution takes place on May 15, thus giving donors of prizes time to forward the same on or before that date. As the programme is rather long, business will be started at 8.30 sharp. Members of the different angling societies will be welcomed on that evening by W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 2nd inst. we had a very good muster of members, when the final arrangements for our annual dinner and distribution of prizes, to take place on Tuesday, the 9th inst., were completed. We made three more new members, in fact the few vacancies are expected to be taken up in the course of the next two weeks; then the club reaches its limit of members.—GEO. KEENE.

Richmond Angling Society, Sun Inn, Park-shot, Kew Foot-road, Richmond-on-Thames.—The third annual supper and distribution of prizes of the above society takes place on Thursday evening, May 11, at eight o'clock.—H. E. GAYNOR.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington.—Our annual dinner will take place on Thursday, May 18. Will members please attend next Wednesday to make final arrangements and settle all prizes.—W. A.

St. Thomas's Angling Society, Spread Eagle, Stangate-street, Lambeth, S.E.—Our annual dinner and outing will take place on June 4 at the White Hart Hotel, Arundel. We meet at the club house next Wednesday to discuss further arrangements. Will members please attend? Will gentlemen who have promised prizes to the club please forward them on for distribution on June 4.—G. G.

South Bermondsey Club Piscatorials Institute, Rotherhithe New-road.—Our annual dinner and concert takes place next Monday at 8 o'clock sharp in the hall of the above institute, and should be pleased to meet all members on Friday night, May 5, 9 o'clock, to settle and make complete arrangements. Any member who is unable to attend on Friday I hope he will be on the spot in good time on Monday without fail. We have a good programme arranged.—J. H. DAVIES.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Tuesday, May 16, at the Blackfriars A.S., The Imperial, Southwark-street.—ALF. PAINTER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On our last meeting Messrs. Dearing and Staniford, of the Prince Albert Angling Society, attended to present a petition for the purpose of trying to get the railway company at Willesden Junction to issue privilege tickets. Members are requested to attend next Wednesday night to sign same.—C. E. LOCK.

Waggoners' Angling Society, White Lion, Albert Embankment.—We had a fair meeting on the 2nd, Mr. H. Walton in the chair. Members please notice the books must be cleared by May 9. The distribution takes place on May 16. All those gentlemen who have promised prizes and not yet forwarded them on, if they will do so by that date I shall be extremely obliged.—H. C.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Our annual dinner, which promises to be a great success, takes place on Thursday, May 18. Mr. G. H. Shepherd, of the Bermondsey Brothers A.S., has promised to take the chair, and with a host of good talent, including Mr. Norton Greenop and troupe, we hope to spend a very enjoyable evening. Members please apply for tickets at once.—W. WRAY.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—We have a supper on May 17, at 7.30 p.m. Tickets to be had of the secretary or of Mr. F. Homer. All applications to be made as early as possible. The club meeting to take place the week following. The annual prizes to be paid on the supper night.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—A large muster of members were present at our last meeting. The prize committee made their final awards for the past season, the following members being winners: Messrs. C. Martin, C. J. Carter, G. Ramsay, W. Cox, sen., W. Cox, jun., J. J. Hunter, E.

A MAN HUNT IN LONDON.—One of the most desperate criminals in London—a notorious housebreaker—has just been captured. He was surprised, breaking into a large house in Bermondsey, but for the moment escaped. The police were, however, in hot pursuit, and when brought to bay the man drew a revolver, but Police Constable Jones pluckily closed with the ruffian, and with assistance effected a capture. The constable risked his life, and we rightly call him a hero, but how many of us, by inattention to our health, needlessly risk our lives every day! Let us be wise in time, and with the aid of Holloway's Pills we can regain our health when we are out of sorts.

Coomes, W. Warrington, A. Peart, and W. Weeden. We have arranged for our annual dinner to take place on Thursday, June 8, at the clubhouse. Our auditors are desirous of making out the balance-sheet, so I must ask members to pay in their subscriptions and donations without further delay, to clear the books for the past season.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—The members of the above society hold their annual concert on Wednesday, May 10, at the above address, when the year's prizes will be distributed. All friends and brother anglers will receive a warm welcome.—S. J. H.

Wimbledon Piscatorials, 28, Alexandra-road.—The annual meeting of this society was held at the Alexandra Hotel, Wimbledon, on Tuesday evening, Mr. H. A. Rolt presiding. The report for the past season, together with the accounts duly audited, were presented and passed. The report gives a *résumé* of an exceedingly satisfactory year's work, special stress being laid upon the fact that thanks to the abolition of gross weight prizes members have aimed at securing quality rather than quantity in their various fishing excursions. Many specimens had been creel-d during the season—pike, chub, perch, tench, dace, roach, and grayling. Nearly £20 was distributed in prizes, besides rods, wickets, &c., given in kind. After allowing for these, and paying for the private water of the club, a small balance is left in hand to be carried forward to next year. The officers for 1899-1900 were elected as under: President, Mr. Walter Dowson, S.C.C.; hon. treasurer, Mr. H. A. Rolt; hon. sec., Mr. S. Peskett; committee, Messrs. J. Furnage, F. J. Rolt, F. J. Bovie, H. W. Lawrence, H. Golding, and S. Thain. Several alterations were made in the rules, the most important being that a member in order to claim a prize must attend four weekly meetings in each quarter. The society now numbers fifty members, honorary and ordinary.—HON. REPORTER.

Yarm Angling Association.—The adjourned general meeting was held at the Crown Hotel on April 26, when a strong committee was elected. It was decided to hold a competition on Whit Monday in the river Leven.—R. ROBSON.

Stokings by the Way.

A COMMITTEE is being formed by brother anglers of the late Harry Patman to consider the best means to benefit his widow and children, his long illness having exhausted all his savings.

ON Wednesday, May 17, at 8.30 p.m., Messrs. Tayler, Ward, and Jones will give a lantern entertainment, the proceeds of which will be for the benefit of the widow and children of the late Harry Patman. The entertainment will be held at the club house of the Bostonians, Dalby Tavern, Dalby-street, Prince of Wales's-road, Kentish Town. Mr. Patman was a member of the Bostonians, and the club earnestly invite the attendance of all who can make it convenient to attend in this good cause.

THE most successful pet dog show which has drawn fashionable London to the Royal Aquarium during the past week is to be followed by the eleventh annual show of fox terriers, organised by the London Fox Terrier Club, next Tuesday, Wednesday, and Thursday. It will be a fine display of both smooth and wire haired terriers, and the dogs will be drawn from the best kennels of the kingdom. The present strong programme at the Aquarium will proceed without interruption.

A CORRESPONDENT writes from Wales as follows: "At the last meeting of the Severn Fishery Board, held on April 20, it was reported that samlets (young salmon) were very plentiful in all the tributaries of the Severn. This is altogether contrary to the experience of all the local trout anglers, who are congratulating themselves on the absence of what they term 'those little pests,' which years ago caused them no end of trouble to unhook and return to the water, and it was not at all unusual to land one on every fly at every cast. This is not very consoling to salmon anglers, but facts are stubborn things."

THE same correspondent continues: "In the neighbourhood of Llanymynech the cuckoo has been seen and heard for some days, and swallows are seen in large numbers near the Vyrnwy. Mr. Buckley's otter hounds had some good sport in the Cain, near Llanantiffraid, on Wednesday last. Rook shooting will commence next week, and promises abundance of that sport, which, when practised with rifles, is grand practice for amateur riflemen, and can be pursued without danger, excepting to the rooks."

MR. MARLOW, the owner of the theatre at Southend, has purchased the Alexandra Hotel—a house at which many fishing visitors stay when in that town—and will be pleased to welcome angling friends.

"Do you have to be examined by a doctor before you join a cyclist's club?" "No; afterwards."

THE fifth annual dinner of the Collingwood Angling Society was held on Tuesday evening, May 2. "Straw Hat" was announced to preside, but Mr. J. F. Bursill (of the *South London Press*) was asked to take the chair—which he did right royally. After a capital dinner, which reflected great credit upon the caterers, the cloth was cleared, "The Queen" toasted, and harmony com-

mened. Amongst those who assisted were Mr. Norris, in an excellent selection on the English concertina; Mr. Botten (1st Life Guards), some selections on the clarinet; Messrs Rosser, Stump, Ashet, and Master Norris a clever and amusing stump speech. During the evening it was announced that through pressure of business Mr. E. Roberts was obliged to resign the presidency of the club, and Mr. J. Jeffery ("Straw Hat") was unanimously elected to that position. The new president then sang them what he termed a "sleepy" song, the rendering of which ought to have sent the audience to sleep, but they could not sleep for laughing.

THE tables were strewn with many handsome and valuable prizes, which were graciously presented by the chairman, the total value of which was £30 7s. Surely a splendid list for so young a club! The chief prize winners were Messrs. Downs, W. Beames, Ball, Jarrett, F. Beames, Turner, Ford, Francis, Aaron, Ash, Sorge, and Boyd. Mr. Greg was heartily thanked for his photograph of the club, and "Dragnet" was elected a life honorary member. The toast of "The Collingwood A.S." was responded to by Mr. Poole (treasurer), who announced that the club was in an exceedingly flourishing condition. The hon. sec. (Mr. W. H. Stafford) also made some excellent allusions to the working of the club. The healths of "The Host and Hostess" were drunk with musical honours, and the singing of the National Anthem closed a very pleasant evening.

MR. GEORGE MERRY, the hard-working secretary of the Amicable Waltonians, announces a smoking concert for Monday evening, May 8, in aid of the A.B.S. He has some first-rate talent, and some of the best known London anglers will be present. May the A.B.S. funds be greatly augmented!

TUESDAY will be a busy day. The Thames Re-stocking Dinner at Carr's Restaurant (Mr. Cook in the chair); the Holloway A.S., annual dinner (Mr. Frank Clay in the chair); the Blackfriars annual dinner at the Imperial Hotel (Mr. G. H. Shepherd in the chair); the Queen's Piscatorialists, dinner; the Golden Barbel, supper; and the Cheltenham, dinner. I am in receipt of pressing invites for the first three enumerated, and wish I could be present at them all—but we shall see!

"A PAINFUL sensation," says the *Western Mail*, "was caused in the vestibule of the Cardiff Town Hall a couple of days ago. Alderman Ebenezer Beavan and Councillor Waring were evidently waiting for somebody, and, getting tired, the teetotal alderman said to the hall porter, 'Look here, Green, if Councillor Chapple comes tell him we have stepped across to the Rising Sun.' Green turned red, a well known solicitor gasped and clutched an iron-monger for support, a hoy from the town clerk's office gave a shout and ran off to tell his chief, a lady guardian turned pale and angrily hurried away to see Mr. Lewis Williams, a cabman laughed loudly and exclaimed, 'Didn't I tell you that all these 'ere teetotal blokes is alike; but Ebenezer cert'nly heats the bloomin' lot to go for a swig in hopen daylight like this ere.' Thns are the reputations of good men hemirched. For Mr. Beavan and Mr. Waring are members of the parks committee, and as they are just now taking very keen interest in the fish hatchery question they were paying a visit to the remarkable trout pond which Mr. Manders has at the Rising Sun."

WRITING from Cardiff, Mr. A. E. Armstrong says: "Dear 'Drag,'—A very pleasant function occurred on Monday, May 1. Miss Mander, Watkin Shirley, Gray, and self spawned some trout from Llsivane reservoir last year, and succeeded in bringing up 7,000 very nice fish at our little hatchery. The water was kindly given us by the Cardiff Corporation. At 1.30, on the above date, carriages were waiting at the Town Hall, and we proceeded to Llsivane with Mr. Alderman David Jones and Mr. Councillor Waring. The fish were sent in large milk cans; a place had previously been made so that they could be easily turned in from the platform. Mr. Alderman David Jones, who, by the bye, is chairman of the Cardiff waterworks, emptied the contents of the cans into the reservoirs amidst cheers from the spectators. After the ceremony he entertained us to a champagne luncheon in the committee-room, overlooking Llamshen reservoir, which is a most magnificent sheet of water, and contains trout up to 6lb. or 7lb.

"MR. COUNCILLOR WARING is fighting very hard indeed to get a hatchery for the corporation at Roath Park. He, indeed, deserves many thanks from the anglers in South Wales. A committee meeting has been specially convened for the purpose, and I have not the slightest doubt he will carry his proposition, i.e., for a hatchery capable of rearing 100,000 ova, and an aquarium. I will let you know how we get on. I should much like to see you here with rod and line. I have no doubt I could find you plenty of sport, with a little *trutta* fishing thrown in. Kind regards and tight lines."

A CURIOUS incident is reported from the Inney (North Cornwall). Some days since Mr. H. Greenwood hooked a fine trout, but the fish succeeded in breaking away with a couple of flies and part of a collar. This week the same rod, fishing within a short distance of the same spot, had, curiously enough, a bite from, and was able to land, the trout that had gone off with his tackle. The fish had a Red Palmer and several feet of gut attached to it, and rose well to the Red Palmer with which it was taken.

MR. HOWES (of Barton Mills) tells me that the cold weather of late has not been favourable for trout fishing. However, a London angler recently had a nice 3-pounder and several small jack; the jack were taken spinning with gudgeon.

THE little fishers in the Regent's Canal have some strange catches. A small hoy, while fishing for minnows with a penny net, recovered the body of an infant, for which he was awarded 5s. at the inquest.

A CORRESPONDENT (who vouches for its authenticity), sends the following: "Walking by the side of the Blackwater, in Ireland, I came up to a man fishing for salmon. As I stood watching, the fisher's line suddenly went swish! At the same time the fisher called out to me 'I'm in him,' and began walking backwards out of the water towards me. It was some distance from me to the fisher, as the shore so very gradually shelved down from shallow to deep water. As the fisher came up to me he said to me, 'If you have never seen a salmon walk out of a river, I will show you how I make them walk out here. I never use a gaff, and I have fished here for years.' Well, he kept walking backwards, and, true enough, the salmon's back became visible in the shallow water. The fisher kept talking: 'You see,' he said, 'as I keep the line taut the fish feels pain, and naturally gives to the pull of the line. Now, you see, the water is so shallow that he can't keep upright, so he is lying on his side, and as he wriggles and flops on his side, he naturally wriggles and flops till now, you see, he is 3ft. out of the water, on the shore. Lend me your walking stick,' and with the stick the fisher gave the fish a smack on the head. 'Now you have seen a salmon walk out of the water.' 'And a grand sight, too,' I said; that was the first word I had spoken. The salmon weighed 18lb.

THE LIFE-SAVERS.

TWO MEN IN THE LIFE-SAVING SERVICE.

When the Lord breathes his wrath above the bosom of the waters,

When the rollers are a-poundin' on the shore,
When the mariner's a-thinkin' of his wife and sons and daughters.

And the little home he'll maybe see no more;
When the bars are white and yeasty, and the shoals are all a-frothin'.

When the wild no'theaster's cuttin' like a knife,
Through the seethin' roar and screech he's patrollin' on the beach—

The Gov'ment's hired man for savin' life.

He's struggling with the gusts that strike and bruise him like a hammer,

He's fightin' and that stings like swarmin' hees,
He's list'nin' through the whirlwind and the thunder and the clamour—

A list'nin' for the signal from the seas.
He's breakin' ribs and muscles launchin' lifeboats in the surges,

He's drippin' wet and chilled in every bone,
He's bringin' men from death back ter flesh and blood and breath,

And he never stops ter think about his own.

He's pullin' at an oar that is freezin' ter his fingers,
He's a-clingin' in the riggin' of a wreck,
He knows destruction's nearer every minute that he lingers,

But it don't appear ter worry him a speck.
He's draggin' dragged corpses from the clutches of the combers—

The kind of job a common chap 'ould shirk—
But he takes 'em from the wave and he fits 'em fer the grave,

And he thinks it's all included in his work.

He is rigger, rower, swimmer, sailor, doctor, undertaker,

And he's good at every one of 'em the same,
And he risks his life fer others in the quicksand and the breaker,

And a thousand wives and mothers bless his name.
He's a angel dressed in oilskins, he's a saint in a 'sou'wester,'

He's as plucky as they make, or ever can,
He's a hero horn and hred, but he hasn't swelled his head.
And he's jett the U.S. Gov'ment's hired man.

JOE LINCOLN, in *American F.G.*

A DISTINGUISHED Scandinavian naturalist, named Dahl, noted for his advocacy of the Darwinian theory of evolution, caught a herring, and resolved to use the fish to prove the truth of the doctrine of evolution. So he shut the herring up in an aquarium, and gradually diminished the supply of water. What did the herring do? Die? No. It simply contradicted the popular notion that a fish out of water is the most disconcerted thing in existence, by becoming metamorphosed into an amphibious animal. Delighted with his success, Professor Dahl next placed the fish on the dry ground, and began to give it food which no fish had ever before eaten. Yet this wonderful herring not only ate the food gladly, but, Oliver like, called for more.

ONE more experiment, argued Mr. Dahl, and the truth of evolution is proved; but while he is preparing to elevate the herring to a still higher plane of animal life, a terrible thing happened. The fish, which was allowed to wander where it pleased, happened to stray over a wooden bridge, the planks of which were not very close together, and in stepping from one plank to another it missed its footing, and fell into the water. All searching was in vain. Gone

for ever was that highly educated herring. The process of evolution had probably unsuited it for its quondam native element. It couldn't withstand the suffocating rush of waters, and—alas, was drowned. A herring in its time plays many parts, but, truly, the most wonderful of all is Dahl's herring. Make no error. Kippers are cheap, and this Scandinavian bloater—I mean "sojer"—will be lamented and praised by a scientific posterity, who—prefer a fresh herring for breakfast.

HE was a great hulking blackguard, charged before the magistrate with assaulting his wife with a poker. The poor woman had been half killed, but, with true feminine perversity, begged hard for him. "Do let him off, your worship, he was not always like this; there was happy times once, when he only used to bit me with his fist!"

MANKIND ARE ALL FISH.

A CORRESPONDENT sends the following lines, copied from "The Angler's Manual," dated 1810, to the *Yorkshire Weekly Post*:

Mankind are all fish, and I'll lay you a bet
I prove that they all will come into the net.
The lawyer's a shark, and they who in shoals
Run into his jaws must be flats or poor soles.
The lobster's a turncoat, the slugard a snail,
The curate a shrimp, and the vicar a whale.
The soldier's a sword-fish; the critic a carp,
That delights in the mud, and, tho' wary, bites sharp.
The heir is a gold fish, but turns to a gull.
True lovers are oysters, both silent and dull.
The poets are spawn, and are scarce worth a drag.
Young misses are mackerel, all caught by red rag.
Their swains, altho' sly fish, do frequently feel
That a fair and fresh mackerel will turn to an eel.
A rake's a dorado, persisting and rude;
A beauty's a flying fish, always pursued.
Thns, by hook or by crook they are all to be caught,
Nay, some wise ones have said they are all to be hought—
Some at high, some at low, some at fair market price,
From a farthing per pound to a guinea a slice.

THE melting of the great Russian rivers, ice-bound during the winter, have resulted in sturgeon making their way into the North Sea, and thence to fishmongers' slabs. One has been landed at Yarmouth by a trawler belonging to Messrs. Hewett and Company, and a very fine specimen at Boston by the *Collingwood*. The latter was 8ft. long and 4ft. in girth, weighing a couple of hundredweight. It was bought for five guineas.

A VERY interesting article from the pen of an old contributor ("Noss Mayo") appeared in the *Western Morning News* of April 24. It is entitled "Cornish Fresh Water Fishings." He has also been selected by the United Devon Association to describe in their forthcoming book the whole of the Devon freshwater fishings.

I HAVE received from Mr. Charles Hussey specimens of his new series of photographs of "Sea Fishing and Sea Fishermen." Perhaps the best of the prints sent is a fine study of a grand old man, "Seventy Years a Fisherman," but "When the Tide is Low," "Boiling Cutch," "On the Look Out," and many others run it very close. The subjects have been carefully chosen, and both in feeling and treatment are most artistic. The printing process employed is a new, or, perhaps more properly speaking, a modification of an old one, and the colour, a warm sepia, suits the subjects admirably. Of course, in Mr. Hussey's experienced hands the photographic technique leaves nothing to be desired, and he is to be congratulated on having found such admirable "food" for his camera. The pictures, I learn, are soon to be published.

THE new "fish cure" for chest on the lungs and other pulmonary complaints is inexpressibly nasty. According to the *Daily Mail* it consists in making a big hole in the body of a whale and thrusting the patient into it. He remains in this for some time. It is called a "fish cure" on the *lucus a non lucendo* principle I suppose, as everybody knows a whale is not a fish. What is to be done when no whales are to hand, or, in the words of the *garçon*, when "whales is horf, sir?"

"A HERTFORDSHIRE farmer who had been much annoyed by the trespassing of his neighbours' cattle, mended the hreaches in his fence, and put up a board, on which was the inscription: *Notice*.—Any man or woman's cow found trespassing on this farm will have his or her tail cut off as the case may be." I think I must get Daisy to parse this for me.

MAN (to angler): "Have you caught anything, guv'nor?" Angler: "Of couis? not! I'm not a fisherman; I'm an angler."

"ARE you going to publish a Sunday edition of the *Fishing Gazette*?" I hope not. Write to the Editor. Last week it was stated that the very large number of flies in existence is very bewildering, especially to those who cannot quite distinguish between Corrixy and Ephemery. I suggested naming six, but have decided to have seven—one for each day in the week. The "Monday" fly down to "Saturday" fly—and for Sunday the "Money" fly. Next week I will give a few extracts from my new book (nearly all sold), and instructions as to how to make the "Money" fly.

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d. by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

PISCATORIAL SOCIETY.

MATTERS promised to be somewhat tame on Monday, when the usual weekly meeting was held. Mr. R. Clay was in the chair, but most of the members were away fishing the Kennet, May 1 being the opening day for certain portions of it. Later on in the evening Dr. P. D. Head (who arrived from the South of England with two salmon, caught in the Avon) gave an interesting account of the stroke of luck he had experienced in getting hold of the fish. Both were fresh run, and weighed respectively on the scales of the society 26lb. 8oz. and 25lb. 8oz. Dr. Head was unprepared for salmon fishing, but procured a whippy grilse rod. He used an exceptionally fine running line, backed by a roach line on a Nottingham winch. It is needless to state that the captor had more than an exciting quarter of an hour with the fish. The bigger one did exactly as it liked, Dr. Head having to follow it 200yds. downstream. Over half an hour elapsed ere it was gaffed by the gillie. Dr. Head, it goes without saying, must have exercised consummate skill, and had a good slice of fortune thrown in in lending the brace of fine fish on the slender tackle employed. Needless to add that he received the warmest congratulations of his fellows upon his "bag." Mr. E. T. D. Chambers, the well-known author of "Quebec, Canada," sent over from Col. Haggard, a member of the society, two specimens of the Onananche, one having been caught by the gallant colonel himself, and the other by the forwarder of the fish. An explanatory letter accompanied the unique specimens, from which it was gathered that the Onananche was the fresh water salmon of Lake St. John, Canada. It was their great game fish, and was ranked by many sportsmen between salmon and trout. Col. Haggard thinks from their external appearance and manner that they are identical with the Scotch sea trout, *Salmo trutta*. Many Americans, and some Canadians, called them land-locked salmon. They certainly were not these, but a fresh water salmon. Mr. Chambers thought they might be the original type of *Salmo salar*, which, unlike the ordinary specimens, had never been to sea, but were content to maintain their fresh water habitat instead of becoming anadromous, and growing large and coarse upon the flesh pots of the briny deep. Structurally they were identical with the *Salmo salar*. Mr. Chambers enclosed a pamphlet on "The Philology of the Onananche," which will be handed over, with the specimens, to the curator, Mr. C. S. Patterson, to report upon. Later on they will be properly cased and hung in the club-room. A vote of thanks was passed to Mr. Chambers and Col. Haggard for their kindness in thinking of the society, and forwarding such rare (in England) fish for the inspection of the members of the society.

M. G. E. DE C.

GRESHAM ANGLING SOCIETY.

At the ordinary meeting Mr. J. P. Connellan occupied the chair. One of the members had succeeded in netting out thirty-four and a half brace of trout from some water at Chesham, and transferring them to our own waters, the heaviest fish going well over 3lb. Another member has kindly consented to present 100 two-year-old trout for this water, and the heartiest thanks of the society were accorded these two gentlemen. Mr. Emery (who was unable to attend the annual dinner) was then presented with the challenge shield and medal for specimen trout, won during 1898. Mr. Wright was nominated to again represent the society at Loch Leven this year, but he will gladly give way to any member who is desirous of going. Mr. Emery reported one brace of trout (returned); Mr. Buckingham, one brace (one returned), with Alder; Mr. Thonger, three brace of trout (all returned); Mr. Close, one trout (returned); Mr. Connellan, two trout (returned), Soldier Palmer; Mr. Hicks, one brace of trout, heaviest 1½lb.; Mr. Gill, one trout. All these fish were taken from our water at Chesham. Five new members were proposed, and a quantity of other business got through. The usual toasts and vote of thanks to the chairman concluded the proceedings. Mr. E. F. Goodwin will read a paper before the society on Tuesday, May 9, entitled "Roach Fishing."

ALEX. WRIGHT, Hon. Sec.

RUBBER RINGS FOR ROD BUTT.

SIR,—I notice in the *Field* of the 22nd inst. that you suggest that a tiny ring should be whipped to the handle of the rod butt for securing the fly. Now, I have often found that, especially on wet days, the reel line twists round the butt and then fouls this little ring. A far better plan is to slip on to the butt, just below the handle and above the reel, a small red rubber ring into which, on shifting quarters, the point of the hook is inserted. These rubber rings are neither expensive nor hard to procure, as they are simply extracted from a soda water bottle with a button hook. This little dodge, which I picked up from a very crafty angler in the north years ago, has been a genuine boon to me, and perhaps it might be the same to others (barring the soda water man).

Flyfishers' Club. H. C. B. (in the *Field*).
[This indiarubber ring also serves another purpose; it prevents rain drops from descending.—Ed. *Field*.]

LECHLADE.—Mr. Wentworth Sturgeon has been fishing the St. John's Bridge and Buscot Weirs for trout, but owing to the cold winds only succeeded in capturing several jack—one scaling 6½lb., a most beautifully marked fish—all of which were duly returned unharmed to their native waters. Mr. Sturgeon has purchased the site of the old St. John's Priory, hard by the Trent Inn, which originally belonged to Henry de Ferrers, the first Lord of the Manor of Lechlade, temp. 1080, from whom Mr. Sturgeon is descended. We understand that an attempt will be made in the autumn to excavate the whole of the site so as to determine the exact position of the various buildings.

BRITISH SEA ANGLERS' SOCIETY.

The usual weekly meeting was held at the York Room, Holborn Restaurant, on Wednesday, May 3, at 8 p.m., Mr. C. O. Minchin in the chair. Mr. Graham reported some sport with small plaice at Southend.

The chairman reported fishing at Newhaven April 23, but had little sport owing to heavy weather. On April 29, accompanied by Mr. Preston Gardner, fished the dah ground, taking eight score of fair dahs. He reported that a porpoise swallowed all his apparatus, and went away with it.

Mr. Tucker brought up three specimens of flatfish, samples of a catch sold to-day in Shadwell Market. The chairman pointed out that the great steam trawling corporations were all powerful, and that every channel for agitation was being closed, and that the duty of members was to huttonhole Members of Parliament and point out that the food supply of the people was in peril.

The hon. sec. suggested that not only the Members of Parliament, but also the professional hecklers should be primed and tutored on the subject.

Messrs. Clarke, Simcox, Browning, and others took part. Mr. Preston Gardner reported fishing with Mr. Minchin at Newhaven during heavy tides, and found that he could fish quite close to the boat with much less lead.

Mr. Gardner reported that on Friday last a bass of 10lb. 2oz. was taken in a net at Newhaven, which showed that these fish were making an early appearance.

The hon. sec. read an interesting letter from Mr. W. C. Willcocks concerning sea fishing at Schull, West of Ireland. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

THE SCOTTISH TROUT ANGLERS' ASSOCIATION.

OBJECTS.

The association shall use every endeavour to have a Bill passed, by which a close-time for yellow trout shall be enacted for Scotland.

The association shall use its influence to have the existing law affecting trout fishing duly enforced.

The association may take cognisance of cases of pollution of rivers and lochs, by bringing these under the notice of the Government, the County Councils, Local Government Board, and other responsible officials.

The association shall have power, by lease or arrangement, to increase the area of fishing water available to the public.

For the promotion of social intercourse among anglers, and to assist in carrying out the objects of the association, clubs may be formed in connection with it in the different angling centres, said clubs to acquire suitable premises for their own use, and, upon certain terms, for the use of the association.

EXTRACTS FROM THE REPORT FOR HALF-YEAR ENDING 28TH APRIL 1899.

On the 28th April the association will have completed the first year of its existence, and the support extended to it is very gratifying to the committee of management. The year has been marked by an almost unprecedented activity in the interests of angling on the part of associations, clubs, and individuals, and the committee believe that the series of public meetings held under the auspices of the association has conducted to that end in no small degree.

HALF-YEARLY MEETING.

The first half-yearly meeting of the association was held in Dundee on Tuesday, 13th December, when Lord Provost M'Grady presided, and was accompanied to the platform by a large number of anglers representing Edinburgh, Glasgow, Perthshire, Forfarshire, Fifeshire, and south of Scotland. The half-yearly report was submitted and unanimously adopted, and a number of useful and interesting addresses were delivered. The following resolution was carried with enthusiasm: "That this meeting of anglers assembled in Dundee is of opinion that it is absolutely necessary that a close-time for trout should be enacted for Scotland, and would respectfully urge on Her Majesty's Government the desirability of supporting a measure having this object in view in the coming session of Parliament."

CLOSE-TIME BILL.

The Secretary for Scotland (Lord Balfour of Burleigh) has in the present session introduced a close-time Bill. On 18th April it passed its second reading in the House of Lords without opposition. It provides as follows: "From and after the passing of this Act, between the 15th day of October in any year and the 28th day of February in the year following, both inclusive, there shall be an annual close-time for trout in Scotland, during which it shall not be lawful, except as hereinafter specified, for any person to (a) fish for or take common trout (*Salmo fario*) in any river, water, or loch in Scotland by net, rod, line, or otherwise; (b) have possession of such trout; (c) expose such trout for sale; and any person who shall so fish for, or take, or possess, or expose for sale such trout at any time within the said dates, shall forfeit and pay a sum not exceeding £5 for every such offence."

The committee of management have fully considered the provisions of the Bill. They are of opinion that the period of close-time proposed is a fair and reasonable one in the circumstances, and that to fix one period for the whole of Scotland is better than to leave the period to be fixed by the different County Councils. They would like to see the Bill strengthened in one or two respects, and they are communicating with the proper parties as to this; but they recognise that to have the principle of a close-time established by law is the all-important point, and they would urge the anglers of Scotland to support it by every

means in their power. If the Bill gets that support there is every prospect of its becoming law at an early date.

SALMON-ROE APPEAL.

This appeal to the Court of Justiciary was taken by one of the men convicted of illegal fishing at the instance of the Cnpar District (see last report). The committee of management resolved to take the matter up, and the case came on in February.

On the whole matter the conviction was sustained, and the appellant was found liable in seven guineas of expenses.

MEMBERSHIP.

The membership has increased, and now stands at about 800. There is no reason, however, why it should not be more than doubled during the next year. The committee will be very glad of the assistance of members in making the association known, and the secretary will send circulars explanatory of its objects to all who will undertake to dispose of them to angling friends. A very large membership is imperative if trout angling in Scotland is to have the attention for which it calls.

HERBERT MAXWELL, President.
ANDREW SMITH, Hon. Secretary.

THE CUSTOMS FUND.

Mr. FRANCIS GEORGE HEATH, well known in literary circles, and vice-chairman of the Civil Service Deferred Pay Executive Committee, is again a candidate—in a contest now proceeding in the Customs Department of the United Kingdom—for the directorate of the Customs Fund, a position he has previously held for eight years. Mr. Heath is a Civil servant of thirty-seven years' standing.

Notes from the North.

The spring season is over. As far as the netter is concerned, it has been the greatest failure on record. However, it is a far cry to Aug. 26, and probably the summer and early autumn may redeem the spring season from the total failure it has been on the east and north coasts of Scotland up till now.

The Tay Syndicate are not likely to get rich on their venture on the Tay and Earn. Their first essay at the improvement of the fisheries on Tay and tributaries, on a gigantic scale, has thus been made under the very worst conditions possible. They may have calculated on a poor season, but not so meagre returns as are now to hand. Only 1800 fish to meet the expenses of 100 hands! Barely working expenses.

Mrs. Johnstone had a very nice fish of 19½lb. on the Camhus O'May Dee water, on April 23, Miss Hibbert had two on Glentana, and Miss Pickering one on Kincardine.

Mr. James G. Orr, Aberdeen, has taken the Kincardine-Dee water, for the month of May, from Mrs. Pickering. Mr. Orr is a keen golfer, and one of the crack players of the Balgowrie Club.

Mr. George D. Stihhard will be much missed in the Strathnaver district, where he died recently at his country residence, Syre Lodge. He was not only a keen angler, but an open-handed generous gentleman to boot.

Cruden Bay Hotel is now becoming the angling centre we predicted for it a year or so ago. The Ugie is only a cross country drive of eight miles, by a fine road rich in local associations and not uninteresting scenery, while the Ythan may be reached by train. Both streams are about the pick in the north for a basket of brown trout, from May 15 to June 15, when the fish are most greedy on the fly.

In spite of the variable weather, good baskets of trout are being made whenever there is a blink of sunshine. The Brechin club were out all over the Forfarshire streams last week and better weights were recorded than has been the case for some years.

The salmon anglers on the middle and upper Dee waters are in better luck than they have been since the opening; and the amount of sport, although not brilliant anywhere, is considerable and pretty general all over.

Harbour Commissioner Copland—a member of the Dee Fishery Board—is strongly against extending the open time in the Ythan district. Anglers would then have an extra fortnight after the Dee, Don, Tay, and Spey, and all other rivers were closed (except the Tweed), on the Ugie, and Ythan, and Cruden Burn, should the new law be sanctioned. Those who know these parts best say that this is just what is wanted. It is the only time of the year that there is any salmon angling to be got, while the sea-trout are univalued anywhere for size and quality.

"The King Memorial Fund" has been closed at the magnificent sum of £1494, and the widow of the constable shot by poacher Harry McCullam in the wilds of Strathspey will, in future, have an annuity of £45, plus £15 from the police fund, and a free house from Lady Seafield for herself and family.

The memorial from anglers in Aberdeen anent tidal fishing for finnock was before the council on Tuesday, and remitted to the Bills and Law Committee.

The first annual meeting of the Scottish Trout Anglers' Association was held in Perth on Friday last, Lord Mansfield presiding. Sir Herbert Maxwell and other leading anglers near at hand were on the platform. There was a full meeting of the local fraternity, and the leading officials of the association were all present. After the Secretary for Scotland's Close Time Bill had been formally approved of and agreed to support, arrangements were made for forming a local branch of the association for Perth and district.

The mail steamer St. Ola, while making a passage from Stromness to Seapa, in the Orkney Islands, ran into a whale, stem on, and nearly cut the monster in two. Having the mails on board the captain could do nothing to secure his prize, but as the whale was mortally hurt its carcass will be found in a day or so.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

Our clubs are taking advantage of the quiet time which prevails during the close season to make the necessary arrangements for their annual contests and other important matters concerning the welfare of their members by the time that the season opens. With this in view, I hear that a number of our clubs are arranging for contests to be held at the end of the close season, and also making the necessary arrangements for their annual contests. The large Rose and Crown Society have concluded their arrangements, with the exception of fixing a place to hold a contest on June 25. Several places have been mentioned, but as the club wish to fish the opening contest in a river, and so as not to injure the mowing grass, they have decided to allow the selection of a place to stand over for a while. Bredon has been mentioned, but I do not think they will be able to bring off their contest here upon the date mentioned. Mr. H. Hodgetts, the host of the clubhouse, is again to the fore with his usual liberality. He is going to give twelve dinner and twelve tea services of different patterns to be competed for. The All Saints' Club have also made arrangements to fish a contest at the opening of the season. Last year Mr. J. Green, the host of the clubhouse, gave a gold watch and chain valued at £15 for the opening contest; this year the same gentleman will give a new chainless bicycle to be competed for. It is to be hoped that this valuable prize will be competed for on better sportsmanlike lines, as last year all sizes of fish were weighed-in, and the action of the members was very strongly commented upon in club circles. I hope a better feeling will exist this season, and a standard weight be fixed. Several of our clubs have a number of prizes left over from last year, which will be competed for as soon as the season opens. The Tenhy Piscatorialists held their annual dinner on Saturday evening last, when a large number of the members sat down to a first-class repast provided by host Cottrell. After the cloth was drawn, the members were entertained by vocal and instrumental selections, which was very well received and much appreciated. The Vine Unity have at last succeeded in acquiring a stretch of the river Trent at Hamstall Redware. By those who have been appointed to visit the water they say that it is very good, and some of the swims are as good as any on the river. None of the members will be allowed to fish during the close season. The All Saints' Club have just acquired the Broadwaters Pools, which are near to Kidderminster. The close season is to be observed, and the rent paid for the privilege of fishing is £28 per annum. Mr. Page, the secretary of the Lamp Society, informs me that they cleared over £11 at their concert in aid of the challenge cup fund. This sum is to be augmented in order to obtain a cup worthy of the society. This club continues to make members very fast, as an inducement is offered by the host and president in the shape of a silver watch and chain for the member introducing the most members by the end of the year. We are having more settled weather, and as a consequence our members are having better sport. Some very nice trout have been taken from the Teme by the Hearts of Oak members. Mr. A. Randall took one on Monday last over 2lb. In another column will be found, no doubt, the reports of two important cases concerning the fishing rights of the river Severn, which I enclose for publication.

FROM DERBYSHIRE.

The fishing streams have been, and are, in as good condition as can reasonably be desired, and sport on most of them has, on the whole, been satisfactory, as well to fly as to bottom fishers and trollers, who have been fairly numerous on most of the rivers. Natural flies are more in evidence, and fish at times are rising tolerably freely in places, but in that respect there is room for improvement. There has been about an average number of fly men on the several lengths of the Wye, some of whom have met with fair success on the Blackwell Mill and Millersdale reaches; and on the Monsaldale waters, both open and private, some excellent creels have been made. Fly anglers have also done well between Newbridge, Ashford-in-the-Water, and Holme, where nice lots of fish have been taken, some of large size. There has been nearly the full number of permitted rods on the Bake-well, Haddon, and Rowsley lengths, and several very fair baskets have been made there during the week, the fish being all of good size. On the romantic mountain stream the Goyt, near Buxton, there has been some pretty sport, and some nice creels have fallen to a few favoured anglers between the Clough Head, Goyts Bridge, and Feruilee. The various lengths of the Dove have had their share of

visitors—fly and bottom fishers, and trollers, many of whom have done fairly well. Some good baskets have been made on the Dovedale waters, and several nice lots of fish have been killed on the higher reaches of Milldale, Beresford, and Hartington. On the adjoining river, Manifold, several anglers have had good sport, and some decent creels have been made in various parts of the charming valley, on days when the water has not been too low, as is often the case in places. Fly and bottom fishing and trolling have been generally good on most parts of the Derwent. On the upper reaches from Derwent Chapel Bridge down to Bamford there have been several good lots of fish taken; and on the Derwent valley lengths, between Sickleholme, Hathersage, Grindleford, and Calver there has been some very satisfactory sport, and good creels as a rule have been made on these reaches. The Chatsworth and Baslow waters have had a fair number of visitors, some of whom have, with artificial flies, fared very well, and have killed a goodly number of nice sized fish. Bottom anglers and trollers have also met with success—where permitted. Between Rowsley and Belper anglers of most kinds have been numerous, and, as a rule, they have had fair sport. Killing flies have, among others, been the Claret, Bumble, Olive, Ash, Whirling Dun, Furnace, and Black Gnat.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Although there has been almost an entire absence of sun since my last notes were despatched, the weather has been warmer, and the development of insect life has been considerably enhanced. For the time of year, however, there is a far less number of flies on the water than is usual, and fly fishermen can scarcely be said to have commenced operations. Those who have yet prosecuted this method of angling have found trout most active in the evenings. The majority of anglers, however, continue to wield the bottom tackle, and several nice dishes of trout have been accounted for with the use of the worm. The reports from most streams show that an all-round improvement has taken place during the past few days. The occasional rains have done much towards keeping the streams in good condition, and all that is wanted now to ensure successful sport is a spell of warm weather.

FROM HULL AND DISTRICT.

The river Hull and its tributary streams are in very fair condition in the upper waters for either fly or minnow fishing, so likewise are the famous Driffield trout streams, where, on the opening day of the Driffield Anglers' Club, some very good fish were creeled, and in splendid condition, the best take being four and a half brace. The prospects of a good season on these streams is very promising, and on the river it is likely to be much better than last, and a few very good fish have already been met with, and during the past week, although the weather has not been very favourable, a few nice fish have been taken in various parts, and in the neighbourhood of Arran, Mr. W. Downsworth, a member of the Victoria Angling Society, caught one with worm that scaled 1lb. 12oz.; another is reported from Beverley Beck and that weighed close upon 2lb. The Driffield Hearts of Oaks Angling Club will fish their second match of the season on the river on the celebrated Minto Flatts stretch, where recently some very good catches of flounders have been made; in fact, this favourite resort seems to be at present the best fishing ground on the river for this class of angling. The Duke of York Angling Society fished their first match at Grovehill, resulting in the first three prize winners turning up in Messrs. G. Spence, C. North, and G. Stroud. On Saturday last the first of our big local events took place on the river at Dunsell, being the annual opening angling match of the Victoria Angling Society, which was fished in very inclement weather, resulting in rather poor catches of fish, for out of the 160 competitors only about one half of them caught fish, the first four prize winners being Little Bob, with 13oz.; J. Nightingale, 12½oz.; G. Ogram, 12oz.; and J. Forsey, 11½oz., the sixteenth and last prize winner, Mr. M. Wilkinson, only having 6oz. to his credit. The prizes were distributed at the White Horse Hotel, on Monday evening, a smoking concert following. The Kingston A.S. fished their first match on the river at Hull Bridge, and did fairly well, Mr. C. Singleton taking the first prize with 2lb. 2½oz., Mr. G. Hall, the second, 1lb. 11½oz., and Mr. G. Gower, third, with 1lb. 7½oz.

FROM THE LAKE DISTRICT.

The "merrie month o' May" was ushered in on Monday with about as miserable a day as any experienced during the past season. Cold rain fell in torrents, high rivers being the result. Fishing cannot be described as up to the mark for the time of year, although an improvement is reported from some parts of the district. The lakes are affording best sport to those using natural or artificial minnow; the weather is still too cold for fly fishing to meet with much encouragement. Many anglers on Derwent-water have secured fairly good baskets during the past few days, trout being in good condition, and running up to 2½lb. in weight. Among the most successful have been Messrs Lowther, Hill, Crosthwaite, Denwood, Spark, Wilkinson, Coulson, Hodgson, Henderson, and others. A few good fish have also been taken on different lengths of the river Derwent (mostly with worm), notably one secured by a youth named Plaskett; on the Keswick portion Messrs Grave, Waite, Coward, Hogg, and Moffat have been amongst the most successful during the past week. Although a few fish are being obtained on the Kent after the frequent freshes, the season so far must be written as disappointing, and the same remark applies generally to most other rivers in the district.

FROM LANCASHIRE.

The executive council of the Northern Anglers' Association met at Farnworth, last Saturday, and disposed of a lot of business of a routine character. Additional items of interest were the levy of 3d. per member, and the rules

and regulations to govern their All-England Match in June. The first match of the Openshaw, Bradford, and Clayton Angling Society is fixed to take place at Althorpe; and the first contest of the Openshaw Central Angling Society at Torkey. Both are important events. The officials responsible for the management of the Crompton Lodges Fishery at Moses' Gate and Farnworth have recently turned into those waters several thousands of coarse fish—roach, perch, gugeon, bream, and tench. Not content with these efforts, they are preparing for an elaborate attack on a water from which they expect to get tons of fish to store their own reserves. The East End Association, Liverpool, have opened another branch—this time at Everton—which will receive the fostering attention of Mr. Naylor. At their last meeting they had a paper on Wyresdale Fishery by the chairman. The Centrals in this city have arranged a match for May 17, trout only to count. The Nelsons', also of this city, report progress with their match to open the season. Some of the Liverpool Association have been doing good things in the Dee. Messrs. T. White, R. Wilson, Jefferies, Jagger, and Laycock are all in evidence with fairly good baskets of fish from waters visited. River reports show some little improvement, the Ribble being more favourable for sport has induced a larger number of rods to go out, and they have secured better sport. The rise of fish is also better, but at noon principally is the improvement noticed. The Wyre is reported as a good fly water, especially in the higher reaches, where better baskets are reported, and the rise of fish is also better.

FROM MANCHESTER.

On the 2nd the Welcomb Angling Society, Hulme, had an enjoyable evening. After disposing of routine and general business, the members had the pleasure of listening to an able essay on roach fishing, by the hon. sec., Mr. F. W. Garner. Then followed a most exhaustive essay by Mr. George Wyche on "the best style of fishing in the Worsley Canal Fishery." The next meeting of the board of management of the Worsley Canal Fishery is called for the 12th, to dispose of the ordinary agenda and other business if necessary; the meeting is called for 6.30. The last meeting of the old Standard Angling Society was an important one, and dealt with several items of interest. Only one competition will be held during 1899, but that will consist of four meetings, the first at Chester (June 18), the second at Macclesfield (July 16), the third at Staines (Aug. 27), and the fourth to be arranged for. The Brothers Bethell, from Pendleton, have for some days been enjoying good sport in the Severn, at Ardbeen, averaging about 9lb. per rod each day. The latest club to be added to our local list is located at Weashe, with headquarters at the Swan Hotel. The number of members is to be limited to twenty-five. The responsibilities of hon. sec. are entrusted to Mr. W. Burrowl, of 332, Eccles New-road, Weashe. The May meeting of the County Palatine Angling Association is noted for the 11th, at the headquarters of the Merry Anglers.

FROM NOTTINGHAM.

Angling news is again extremely scarce. The Trent has receded, but the waters have been too high for successful rod fishing amongst salmon at King's Mills and Shardlow. Reports are still current as to the goodly numbers of large fish showing below the ferry at the former place. Trout fishers have patronised parts of the Dover Beck and Greet, but the capture of few fish is to hand. Sport, however, will improve as more settled weather sets in. On the night of April 27 the Nottingham Wellington Society held its annual meeting at headquarters, under the presidency of Mr. W. Gaskell. Members mustered in considerable forces, and business of exceptional interest was transacted. Mr. Harry Spray, the enterprising hon. secretary, submitted the customary financial statements, which showed a balance in hand of about £60. The society's gold medals for the year were won, that for barbel, by Mr. F. W. K. Wallis; that for chub, by Mr. S. Wallis; and that for perch, by Mr. H. Spray. The perch, in fact, carried off the president's medal for the best specimen fish of the season weighed-in. A long discussion ensued as to stocking the society's waters at Shardlow with trout. Various species were suggested, and scientific opinion on the suitability of the stretch (there can be no doubt about this) were invited. The waters teem with gravels, and there is no reason why an experiment should not be tried with, say, a batch of two-year-olds of the old Thames stock. But are there any hatcheries on the banks of the Thames in which Thames trout are bred and reared? The meeting had not thrashed out the subject—a wide and varied one—when the closing hour had arrived. Possibly experts will discuss the matter through your correspondence columns; at any rate, trout bred in the Trent have occasionally been caught at Shardlow and on other sections of the river.

FROM SHEFFIELD.

The weather during the past week has not been all that could be desired, and until it settles down to a warm spell anglers will not go out in any large number. Locally some fairly satisfactory sport has been forthcoming in the Loxley, which appears to have ousted the Sheaf from the position of first favourite. The fish have been of a moderate size, ranging from 6oz. up to nearly 1lb. Trout fishing commenced generally in the Damflash Reservoir on Monday, although a few tickets had been issued during the previous month. The weather was, however, too cold and unsettled on Monday for sport to be good; but anglers are looking forward with pleasurable anxiety to catching some of the big trout that are known to be there. The season also opened on Monday in the waters at Agden, and a few anglers accounted for a small number of roach, but none of them ran to any size. Subscribers to the Hollow Meadows Reservoirs

TRADE MARK (R .).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-, 28/-, 34/-.
11ft., " 28/-, 30/-, 36/-.
12ft., " 30/-, 32/-, 38/-.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Aluminium. The greatest boon to anglers yet invented for Salmon, Mahseer, and Trout, and all kinds of coarse fishing; unsurpassed for long distance casting; simple, and easy to learn. Rods and lines specially suited for these reels.

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is easily operated by the hand, whereby the check can be regulated at will by simply turning the milled disc on spindle. This should prove a great advantage to anglers, as the check can be regulated without having to take the reel to pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies of all sizes. Handy and compact, each fly secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Cocus Wood. Made in 18 different sizes.

ILLUSTRATED PRICE LIST FREE.

Taken on one of our Special Casts, such as we are now selling at 1/- each, or 10/- per doz. Each Cast Warranted.

FIRST-CLASS RODS, FLIES, AND CASTS.

Our MULTUM-IN-PARVO TROUT ROD (2 or 3 Joints) at £1 1s. cannot be equalled.

OGDEN & SCOTFORD,

19, LEICESTER SQUARE, LONDON, W.C.;
And at CHELTENHAM.

were also able to cast their flies for the first time on Monday, but here, too, everything was against a favourable opening to the season. Recent operations in the Amherst have been, generally speaking, of a pleasing character, and the river has now nearly almost recovered from the effects of the floods. Bottom anglers have accounted for a few nice fish on the Mill Pool, near Wingfield, whilst fishermen who hail from the immediate neighbourhood have caught a few good-sized trout, dock grubs having been the successful bait. In the Sheaf the open waters have yielded little recreation, but some of the private stretches of water have furnished capital sport, a number of fine conditioned heavy trout having been grassed. Visitors to the various places on the Derwent have, now and again, found a little fishing, but sport will not get into first-class order until the weather gets a little warmer. At Cromford and Matlock Bridge bottom fishing has been resorted to, and with worms a goodly number of nice fish have been killed.

FROM WORCESTER AND DISTRICT.

The weather all the week has been fairly good for angling, some days beautifully fine and warm, and a lot more flies have been seen on the water. The rivers Teme and Severn are in capital order, and sport has been better all round. Some nice trout were taken in the Teme at several fishing resorts with the worm and the fly, and on Tuesday the Blue Dun, Iron Blue, Stone Fly, and Brown Palmer all killed, and one angler did well with the Red Spinner alone. Several large chub were also taken with the fly and a brace of fine grayling, but they were returned to the water. The taking of several salmon trout in the Severn last week indeed some of our anglers to try for more, and under the weirs and other parts of the river they could be seen industrially plying the minnow, fly, and worm, but I have not heard of another being taken. As we have no water bailiff in the Worcester district, there are a multitude of men fishing for coarse fish, and taking a great quantity of roach, which are now on the spawning beds, and in a condition quite unfit for human food. Two club members have been reported for the like offence, and their case will be investigated by the district committee. If proved they forfeit all privileges and membership of their respective clubs. The several club waters have been sparingly fished during the week, and have satisfied their members, who have every reason to expect capital sport in the future. Salmon fishing shows but little improvement; the take of fish during the week was very small indeed, and there is little chance of improvement unless there should be another rise in the river.

FROM YORK AND DISTRICT.

For a fortnight or more anglers have enjoyed lively sport in the Codbeck, in Thirsk district, good panniers having been taken away. The constant freshes have beautifully tinged the water. Thanks to the Thirsk and Sowerby Angling Society, the Codbeck contains an excellent supply of trout, stocks of fresh young troutlets having been placed in the stream regularly for some years past. Among the most recent, and the heaviest catches have been those of Wm. Burton, in the deeps in the vicinity of North Kilvington, five and a half brace of grand young fish being taken with paste in one trip; and Mr Geo. Hodgson, two and a half brace, caught in the same neighbourhood. Mr. Geo. Dodsworth, of Sowerby, appears to have obtained the premier baskets so far this season. On one occasion he took four brace of fine fish, averaging 1lb. each, with the worm; and on another occasion, a grand one, scaling 2½lb., with a small gudgeon. Mr. Geo. Hudson, of Thirsk, banked a big fish with the spin minnow in the Flats. Mr. Joe Bulwer, of the King's Head Hotel, Thirsk, whose back premises overlook the waters of the dam, caught a grand Codbeck trout, weighing close upon 1½lb., with the worm, and also two medium sized specimens of the "brook" species, with the same bait, while fishing on the landing-stage which overlooks the water. Mr. J. W. Wright, of Thirsk, has experienced fair sport in the water north of the town, having taken two very fine fish at one outing. Mr. Robt. Bolton, Greyhound Hotel, Thirsk, has had average sport. Good reports have been received from the Wharfe, Yore, Swale, Nidd, Derwent, and Esk, which are in good trim for fly fishing. One of the most reliable casts for May on these rivers consists of the Orange Partridge (tail fly), Toulst Bloa, Knotted Midge, and Lime Watchet (droppers).

NEW PISCATORIAL PATENTS.

THE following particulars are compiled by Messrs. Hughes and Yonng, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

- 26,478. Trawling. Patentees: T. F. Adamson, of Exchange-buildings, Tyne Dock, and E. Clarke, of Wadham-terrace, South Shields, both in Durham. The usual otter-board is replaced by a frame in which an iron-shod pulley is mounted. This frame, which may be either one or two sided, is fitted with shackles for the attachment of the net ropes. One or more smaller wheels may be fitted to assist in keeping the arrangement upright.
- 27,169. Fishing. Patentees: Messrs. J. E. Martin, Exchange-square, Glasgow, and H. L. Bellasis, Aboyne, Aberdeenshire, N.B., relate to fly-hooks and tackle cases. A frame with a strip of cork at the top, and a strip of rubber across the back, is placed inside a case with hinged lid. The hooks are stuck into the cork, while each piece of gut is carried around the bottom of the frame, and secured in a slit cut in the rubber.

ANSWERS TO CORRESPONDENTS.

JOHN R. DEWEY.—There is one mile of free fishing, says the "Anglers' Diary," on the Otter, at Rudleigh, and several miles of fishing can be had by staying at the Rolle Hotel, which has one transferable ticket. Write J. H. Mortimer, proprietor.

W. SMITH (North Walsham).—The Miller's Thumb is only another name for the Bullhead.

T. A.—Ruislip Reservoir is now preserved by a club with a limited number of members (annual subscribers only).

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

FISHING AT COLWYN BAY.

DEAR SIR,—Your correspondent ("Newbold") must not expect anything very good in this part, but he will find some fair stream and lake fishing. Waders are useful for the rivers Elwy, Conway, &c., and the various blues, browns, &c., are useful flies.—Yours truly,

J. H. ASTLEY.

LARGE PIKE AND PERCH FISHING IN IRELAND WANTED.

DEAR SIR,—I shall feel greatly obliged if you or any of the readers of your admirable paper can inform me as to the best month for summer or autumn mixed fishing in Ireland, also as to where the best sport may be found, preferably large pike or perch, if fishing for such is of any use during the summer months. At the same time if anyone can tell me where good, comfortable, and cheap accommodation can be found, I shall be much obliged.

One hears great accounts of the large pike taken in Lough Derg, but, perhaps, out of the numbers of your readers, some can be found who know of waters giving better results.

An idea of the probable cost of a fortnight's fishing holiday in the place recommended would prove very useful. Wishing you and your paper every success.—Yours truly,

PIKE.

TROUT FISHING IN IRELAND AND NORWAY.

DEAR SIR,—Will you or any of your readers kindly inform me where I can get some fair trout fishing in Ireland (not Donegal) in August, also fair quarters and estimate of weekly cost? I should also like some information about trout fishing in Norway in August (not Eide or Vik).—Yours truly,

PEDAGOGUE.

THINGS BELATED AND OTHERWISE.

DEAR SIR,—In a few short weeks, many readers of the *Fishing Gazette*, both in this and the neighbouring island, will be foregathering amicably on the shores of some of the lakes of the latter country, intent on the "dap." I hope to be there myself this year, and if I do not think it will be done by other and more capable hands, shall be happy, with your permission, to supply a short account of how the lake fishes. What lake it may be, I do not yet know. Last year Mr. Pine placed us all under a great obligation by favouring us with a most interesting account of his splendid sport on Lough Derg, and it is to be hoped his example will be followed this season by some of those who try their luck on Irish waters. In Shakespeare we are made to laugh at the boy who, having found a bird's nest, showed it to a comrade, with the usual consequences; but it seems to me that there is seldom any good reason for one who finds a good thing in Ireland in the way of dapping to keep it to himself. Dapping never did or will spoil the fishing of any water in Ireland, and it is surely the fear of such a result which alone justifies an angler in keeping a good thing in fishing, which he has chanced upon, dark. The extent of dapping water is so large that all the potential dappers of the kingdom have boat room on it, and to spare, and interfere as little with each other's sport as if each one were on a river to one's self. Still less is the head of fish likely to be reduced by dapping. To begin with, dapping only lasts a brief three weeks or so at the best, and within dates practically the same all over the country; and this, coupled with the important fact that adverse weather is absolutely fatal to sport, gives the fish great law. And it always keeps many would-be dappers from crossing the channel. Neither will the Brahmins of the dry-fly cult be seen there, no matter how heavy our baskets may be. Then, when the dapping is over, solitude falls upon our lakes once more, for it is only by dapping that we can do much with the trout on most of our larger lakes. To sum up, then, dapping is cramped with such limitations that, on the whole it is far from being destructive, and on many waters it is the only way one can get a trout at all. Therefore, I would plead for the dapping enthusiasts, and say, let the dapping resources of our Irish waters be made known to all men, and if it be their pleasure, why, let 'em all come! There is room and fish to spare for all. Arrow is a good dapping lake. Erne was good in my time, fifteen years ago, but I have seen nothing in the *Fishing Gazette* about them for a long time. Mr. Thomas keeps us posted in what the Westmeath lakes are doing and no one need be ignorant of what Derg is like after Mr. Pine's report of last season, but there is still room for further information on the subject from other parts of the island.

From the dap to the May Fly is a very short step. The vulgar derivation of his alternative name always seemed to me very far-fetched, for he is neither green exactly, nor does he cock or, rather, furl his whiskers in

the least like a drake, though it does seem playing it hard on the poor insect to invert the usual order of things in his case, and actually name him after the dressing used in imitating him. In my boyhood in Ireland I sometimes heard the Grey Drake or perfect insect called a May, but with that exception I have never heard any name other than Drake or May Fly applied to this insect, though doubtless there are other local names used for it in some places. By the way, the dapper invariably rejects the Mag in favour of the Green Drake, the earlier sub-imago stage of the winged fly. In some parts of Great Britain other flies which kill well and appear about that month are called May Flies, but it is singular to find this done even in Ireland, where the genuine insect so abounds, and still more when we find it done on the very shores of Lough Derg itself. I was astonished one or two seasons ago to find the anglers at Killaloe calling a certain flat-winged evening fly, which abounds there and on other parts of the Shannon, the May Fly. In other places it is known as the Wall Fly, and is deadly for dapping. In shape it is a Stone Fly in miniature, but just the colour of the moth that flits about the candle flame. The colour is uniform, but on Lough Ree, higher up the Shannon, we have an insect more resembling him at first glance, but the wing is more showy, the thorax brown, and the abdomen deep green. If known to the fly tier, I must say that I don't know the names of either of these flies, scientific or angling, for surely no one ever ordered a dozen "wall flies"; but I should not be surprised if the presence of these latter explain those myriads of caddis in the lough which I, in my simplicity, took for the embryo Drake. By the way, I was greatly relieved to find that I had not to accept these caddis for Stone Fly, for they were literally crawling over the stony bottom in myriads, whereas our season's crop of Stone Fly can only be counted by hundreds or so. We call the Stone Fly a mullah (no relation of the Mad Mullah), and he is good for the dap, especially late in the evening and towards the close of the Drake season. But they are very hard to be got in any quantity.

I have recently been reading much about the larval existence of the May Fly, which was new and interesting to me. The larva, it appears, is a great bark burrower, but likes to be near the surface. This is obviously a river observation. In our Irish lakes, with shallow gravelly edges, it is not easy to see how the little creature can quite do this, but no doubt he does the best he can under the circumstances. He is certainly seen to rise alike from the deepest and shallowest parts of the lake. The winged insects couple in the perfect or imago state, but I have frequently seen the male imago pursue and apparently couple with the newly-risen imperfect insect that came fluttering across the track of the "dancers," who are always perfect insects. But the effort may have been futile.

Thanks to the many learned contributors to the pages of the *Fishing Gazette*, we are all happy in the knowledge that, according to Ælian the Macedonians fished for trout in the second century with a Soldier Palmer. But please don't fail to remark that it was a dry fly. It was "floated gently down the stream." It is sincerely to be hoped that this will save blood and temper when a certain club in London take up the question of ascertaining who the inventor of the dry fly really was, preparatory to erecting him in gold on the Embankment. As well hope to erect a statue of the genuine architect of Stonehenge.

I wish someone would kindly tell me what a "Highland river" is. What are its characteristic features? Not every river found in the Highlands is a Highland river. So, at least, I am given to understand.

There are "dampers" for the casting line (collar) going, which some of us no doubt have seen or used. I don't much care for them, but then I invariably mount my cast before starting so long as I know the water I am for; and dampers necessarily keep the gut in such small coils that now and then the flies get tangled in each other or in the gut when I am undoing the collar. But my fingers are all thumbs. And the smaller the coils the more tedious the operation of getting the cast to work perfectly straight, though if it be really wet it comes straight very soon. However, I prefer to coil it round my cap or hat to any other plan. But, then, be sure to wrap a thin slip of tweed or flannel round the cap over the cast, taking care that everything is quite covered so that no light gets at the gut. The coils are then so large that the cast is quite straight when removed. Then let it play submerged in the shallow margin for two or three minutes, and there you are. I once knew a purist who always wrung out his cap band in a bucket of water before putting it on, till I suggested to him that to do the thing really effectively he should also wring out his cap as well, as only in this way could he make sure of the under surface of the gut being moist.

No fish eat salmon or trout ova. At least, this is my method of expressing scepticism or suggesting examination of a subject. By "eating ova" we mean destroying the hopeful promise of the harvest, and if the ova eaten is not and cannot be such hopeful promise, then I maintain there is no eating of ova properly so called, and so understood by the man in the street. Now I beg to assert that such ova is already wasted and lost to us for ever, so that the eating of it by fish does not matter a pin's point. No fish root up and devour the ova planted and covered by the spawner, but only that washed away, and that must perish in any case. Neither do spawn eaters so disturb or embarrass spawners as to ever cause any miscarriage of spawning operations in any way whatsoever. If all this is true the ova eater is a perfectly harmless creature, though much maligned by many, like other innocents.—Yours truly,

MONA.

P.S.—I have recently seen a word or two about the prospects of the coming dapping season about Boyle in the *F. G.*, and am grateful for it.

COOPER'S FANCY.

DEAR SIR,—Mr. A. Roland Upcher can obtain Cooper's Fancy from Mr. F. W. Dale, fly dresser, 85, Stafford-street, Hanley, Staff.—Yours truly, R. WOOLLEY.
Tubbury, Staff.

DEAR SIR,—Enclosed I have pleasure in sending you a sample of the fly you inquire about in to-days *Fishing Gazette* (Cooper's Fancy). I have used the fly at various periods, and have found it do best during the latter half of the fishing season. I shall be pleased to supply them at 1s. 6d. per dozen if you are ordering.—Yours faithfully, F. W. DALE.

The Anglers' Depot, 85, Stafford street, Hanley,
[Mr. Dale makes lovely dry flies. This pattern looks killing.—Ed.]

DEAR SIR,—In reply to your correspondent, A. Roland Upcher, as to where the above fly may be obtained, if he will write Mr. H. Cooper, Matlock, Bath, he will get them, either dressed on gut or eyed hooks. It is a certain killer throughout the season both on the Derbyshire, Yorkshire, and Westmorland streams.—Yours faithfully, DOTTEREL.

TROUT FISHING.

DEAR SIR,—I am anxious to hear of some fishing quarters where I could go for a week or two in June with my wife, who is rather an invalid, and cannot walk very far.

We should be glad to find a quiet, comfortable inn (we don't care how humble if clean), where fairly good sport and fine scenery are combined, and where the water is close at hand. Lake fishing preferred, but if a stream also, within short distance, so much the better. Fish not to average less than three or four to the pound.

Perhaps some good brother of the rod can kindly direct me to such a spot; if so, I shall feel very grateful. Some years back I stayed at Taly-lyn, near Dolgelly. Can some fisherman who knows this lake tell me if the fishing is now as good as it used to be, and if so, would June be a good time there, or would it be full late?—Yours faithfully, J. T.

SILK FISHING LINES.

DEAR SIR,—Under this heading "Spring Trout" explains that through the increase in price of raw silk, it is possible the quality and present prices of silk fishing lines will not be maintained.

We beg to inform anglers generally that we have a stock in hand which will enable us to meet any demands that may occur, and supply the same quality and at the same prices as heretofore.—Yours faithfully, F. H. C.
(Pro. A. Carter & Co.)

THE CONTINUED POLLUTION OF THE RIVER AXE.

DEAR SIR,—Will you kindly insert the enclosed paragraph re pollution in the *Fishing Gazette*, as it may encourage others? We have stirred and stirred up the farmers, anglers, &c., until the County Council have taken the matter up:

"After a protracted delay the Sanitary Committee of the Somerset County Council are bringing pressure to bear on the polluters of the Axe. Now is the time for the angling fraternity to strengthen the hands of the County Council by all legitimate means in their power. It has been observed that quantities of polluted matter are being continually and wilfully discharged into the Axe at night. This wily move, however, may be easily checked by taking samples of the water at night, in the presence of witnesses, sealing the contents of the vessels, and forwarding them to the Clerk of the Council at Frome. We are told by the Bard of Avon that "There is a tide in the affairs of men which, taken at the flood, leads on to fortune." Will the long-suffering dwellers in the basin of the Axe realise the fact that this is the time of their visitation, and will they unite to strike a blow at the common foe? Some splendid work has been done by the Weston-super-Mare Angling Association in the shape of re-stocking the ponds, but it must not be forgotten that these will only supply a limited amount of sport, and that the real goal of the angler is the Axe! Westonsians, too, should bear in mind that they are interested in this matter. Until quite recently the followers of the gentle art have had few inducements offered to them to visit the Brighton of the West, but with a good trout stream at Bleadon the case would be altered. A larger influx of piscatorial visitors might reasonably be expected, and the town would generally benefit thereby. It therefore becomes an imperative duty on the part of all interested in the welfare of Weston-super-Mare to prevent as far as possible the pollution of the Axe."

I notice in that admirable article "On and Off" that the writer says he never knew a Sheffield angler catch a roach with a worm in the Witham or adjacent drains. Nor have I, but the Sheffield men do not know everything about the Lincolnshire waters, and many cannot use paste at all, as they cast their maggots over head, as if fly fishing, and say paste whips off. Also they leave off fishing before the local (Lincoln men) commence. These wait about a fortnight after their "trips," and until the enormous quantity of ground bait has disappeared, and then commence; and the fish are fat. With other local men, in October and November, when the Witham was in flood, I have caught roach two at a time, with worms in the side streams, particularly in Sincil dyke and Barling's river. Also I have fished against many men who were using creed wheat, and I have done just as well, and many times better, with good white or yellow paste. I lived in Lincolnshire seventeen years, and so am in a position to see for myself.—Yours truly, J. J. MUGRAVE.
Weston-super-Mare A.A.

SALE OF PRESERVED BAIT (FRESHWATER FISH) FORBIDDEN BY THE FRESHWATER FISHERIES ACT (ENGLAND AND WALES) DURING THE FENCE MONTHS.

MESSRS. WM. BARTLETT AND SONS, of Abbey Mills, Redditch, have sent us some correspondence on the subject of sale of preserved freshwater fish as bait.

Of course the clerk of the Fishmongers' Company is perfectly correct in saying that the sale of freshwater fish, whether alive or dead, whether as bait or for scientific purposes, is illegal under clause 4 of section 11 of the Freshwater Fisheries Acts of 1878 and 1884. Anyone convicted of selling is liable to a fine not exceeding 40s. So that we advise all who do not want to be fined to sell preserved sprats or smelts during the close months. We do not see why the law should not be altered so as to admit of the sale of preserved freshwater fish as bait, except that it is a small matter and *de minimis non curat lex*. It is hardly likely anybody would kipper a ton or two of chub or bream in order to sell it as food under pretext that it was "bait."

Here is a copy of the correspondence:

Messrs. Wm. Bartlett and Sons,
11-12, Goldsmith-street,
Wood-street, E.C. March 30, 1899.

DEAR SIR,—In reply to your inquiry of yesterday, by the Freshwater Fisheries' Act, 1878, any person is at liberty to take freshwater fish for use as bait; but, on the other hand, if you will refer to clause 11, sub-section 4, you will see that if any person during the close season buys, sells, or exposes for sale, or has in his possession for sale, any freshwater fish, he is liable to a heavy fine. It is clear, therefore, that the exemption only relates to an angler, but traffic of any description whatever in freshwater fish during the close season is absolutely prohibited.—Yours faithfully, J. WRENCH TOWSE, C.B.

Copy of letter sent to the secretary of the Fishmongers' Company, Fishmongers' Hall, London, E.C., April 17, 1899.

DEAR SIR,—Our London house have forwarded us your letter to them of the 30th ult. We note what you say re the Freshwater Fisheries' Act of 1878. We would, however, venture to point out to you that we cannot think the Act meant to apply to freshwater fish preserved in solution, and simply sold as baits for fishing purposes.

It seems absurd, and when the Act was framed this evidently was not contemplated in any way. With regard to the exposure of freshwater fish for sale, we would point out that gold fish are openly sold every day of the week in London without this being called in question. Surely if this is allowed, freshwater fish preserved for the purpose as noted above in our letter should be allowed to be sold. We shall be much obliged if you will reconsider this matter, and let us have your opinion at once, as it is inconvenient to many of our customers not to be able to obtain supplies of bait.—Yours faithfully,

(Signed) WM. BARTLETT AND SONS.

Messrs. Wm. Bartlett and Sons, April 19, 1899.
Abbey Mills, Redditch.

DEAR SIR,—I have received your letter of the 17th inst. I must refer you to my letter of the 30th ult., to your London house, and regret I can give no other reply.—Yours faithfully, J. WRENCH TOWSE.

ULLSWATER AND THE EAMONT.

SIR,—A correspondent asks in last week's *Fishing Gazette* for information as to the fishing in Ullswater and the river Eamont. As to the lake, there are several private fisheries, and inquiry should be made on the spot as to local rights, &c. Notwithstanding the unfavourable weather so far this season, some good takes of trout have been obtained. The fish run from about three to the lb. up to 1lb., 2lb., or 3lb. in weight, and occasionally even heavier trout are taken. The most popular flies are the March Brown, Steel's Fancy, Dark Snipe, and Broughton Point, with the Brackenlock, Grey and Green Drakes, and the Butcher, in season and according to the nature of the weather. The river Eamont flows from the lake, and may be fished from Pooley Bridge. Some of the best water is in the hands of the Yorkshire Angling Association, who keep their own watcher. Almost any of the regulation flies are suitable on this river, perhaps the best of all being the smaller sizes of the Carlisle Bulldog, the Silver and Blue Doctors, Silver Grey, and Jock Scott. Whittitude should prove a favourable time for sport on both river and lake. Cost of licence, trout, 2s. 6d.—Yours, &c., LAKELANDER.

DEE-CARROG.

DEAR SIR,—The river has been in good volume for some time, and has afforded more than usual sport to anglers.

One day recently two Liverpool clerical friends, staying for a short outing at the Grouse Hotel, had an exceptionally good time of it. They found the fish well on the feed, and in a few hours succeeded in landing sixteen trout and six grayling, the total weight being 9½lbs. I have heard that several others were also very successful during the week. In the course of my twenty-five or twenty-six years' unbroken weekly reading of the always interesting *Fishing Gazette*, I have frequently seen such enquiries as "Where can I get fairly good trout fishing at a moderate charge." To those who may now be contemplating an angling trip, and are undecided where to go, I would strongly advise a visit to the Welsh Dee. Unfortunately, this fine river for several years has never been reported in the *Gazette*, and its advantages, I fear, except to locals, are comparatively unknown. Like all other waters, the fishing is, of course, uncertain, but if catching fish is not all-important, and health is a desideratum, I know of no place where the angler will be so likely to enjoy a reasonable amount of both.

The valley of the Dee is noted for its invigorating air and splendid scenery. For many miles above Llangollen its basin does not exceed half a mile in width. Everywhere nature is now rapidly asserting itself, as seen in the daily increasing freshness of hedgerow and coppice, and a month hence the beautifully wooded slopes of the river will be clothed in rich foliage of the most delicate and lovely shades of green intermixed here and there with the pinky white blossom of the wild cherry, whilst on its banks the unfolding fronds of ferns and primroses galore emit an agreeable fragrance, and the air is filled with the melody of blackbird, thrush, and other songsters that here abound and find a perfect sanctuary. The River Dee Fishery extends from Carrog past the town of Corwen to the village of Cynwyd, a distance of six miles, and with the exception of about half a mile on one side, is fishable from both banks. Tickets are issued at 1s. 6d. daily, 6s. per week, 21s. the season. Good hotel accommodation can be obtained at Cynwyd, Corwen, and Carrog. At the Grouse in the latter village, through which the river flows, I have stayed very often during many years both for trout and salmon fishing, and can confidently recommend anyone giving the fishery a trial to visit this well-known anglers' inn, which, under its present proprietors, Mr. and Mrs. Wilcox, will be found to maintain its old reputation for comfort and good cheer.—Yours, &c.,
AN OLD DEE ANGLER.

LOUGH DERG, KILLALOE.

DEAR SIR,—Kindly allow me to answer, through the medium of the *Fishing Gazette*, several letters which I have received from English anglers, readers of your paper, asking information regarding the trout fishing on Lough Derg during the Green Drake season; also when the fly puts in an appearance, &c.

In years past the lake fishing used to open about May 20, and continue to June 15. For the last few seasons, however, the Green Drake has come "up" earlier. Last May (1898) the pretty Ephemeræ were about in large numbers on the 9th, and in two days after (the 11th) one boat, two rods, killed in a few hours 22lb. of fine brown and gillaroo trout. If the weather should be genial I should say that the approaching season will open about May 12. Grilse fishing begins last week in May.

If any readers of the *Fishing Gazette* contemplate coming over here this month or next after the lake trout I could give them salmon, grilse, and trout fishing on a river beat about a mile in extent. Nothing to surpass it for trout and grilse on the Shannon; exclusive right.

I shall, of course, as usual, be happy to afford to any of your subscribers who may write to me full information as to quarters, fishermen, tackle, route from England, &c.—Yours faithfully, S. J. HURLEY.

Abbey View, Killaloe, co. Clare,
Ireland.

THE NORTH-EAST COAST.

SIR,—I see in the *Fishing Gazette* that one of your correspondents wants to see some report from the north-east coast.

Well, the state of affairs is most deplorable, so much so that it is almost unbelievable. If there is not an absolute dearth of fish, there is something not very unlike it. At Eyemouth, where there is a most industrious, and, until recent times, a very prosperous class of fishermen, there has been a public meeting concerning the poverty of the small fishing town, owing to the havoc made by the steam trawlers.

At Birmmouthe, Berwick, Spittal, and other places it is all the same.

In fact, from Flamborough Head to John o'Groats it is poverty, misery, and consequent degradation, all owing to the steam trawlers. At Aberdeen there is now a strong force of Shields, Hull, Grimsby, and Sunderland trawlers. Why are they there? Trawlers do not travel further than is necessary for supplies. The fact is, the North Sea is used up, or why do these mischievous craft betake themselves to Iceland at great cost and risk? Large quantities of fish are landed at Aberdeen, true enough; but where is it caught?

Large quantities used to be landed at Shields, Sunderland, and Hartlepool, but where do you see those landings now? The Parliamentary Inquiry 1878, and the Royal Commission of 1881, were abundantly warned of what was taking place, and as to what would result from the wholesale destruction of the steam trawlers, but no efficient remedy was given; and it seems to us that nothing but an absolute dearth of fish will bring the nation to their senses. With a greatly improved set of appliances both by trawlers and linesmen, fish grows scarcer and scarcer. You can have no cheap supplies of fish under such an inherently rotten system of going on.

No wonder trawlers have to go further and further afield, and even then come in light, because the method is contrary to all good judgment, and is simply preposterous.

First we are told man cannot deplete the sea, then that there is too much general fishing, that a vast amount of damage is done by catching small fry.

Now, if this absurd and quite contrary to fact statement had any bottom, what would it matter when, where, or how the fish were caught?

When trawlers and linesmen are agreed as to this depletion, and their creditors have "to whistle for their money," what is the use of any individual—no matter how eminently placed—trying to set "Humpty Dumpty up again?"

The thing cannot be done. We of the coast are not to be caught with chaff. Some newspaper editors of inland town may be so deluded, but not us; "the proof of the pudding" is too patent for there to be any room for any doubt of this most unfortunate and most-to-be-deplored condition of our fishing population.—I remain, yours truly, JOSEPH HILLS,
Berwick-on-Tweed.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Months ditto	5s. 4d.
Six Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	27 7 6
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

Telegraphic Address—"RIVSAM, London."

SATURDAY, MAY 13TH, 1899.

THE "EXACT SHADE OF COLOUR THEORY" IN ARTIFICIAL FLY FISHING.

ONE of the greatest charms of angling is that it offers such an infinite variety of subjects on which anglers can agree, and do agree to differ. We find this fact exemplified through all the literature of angling, and from the earliest mention of anything in the shape of an artificial fly down to the latest and most scientific treatise on the subject, the colour question has ever been to the front. The majority of anglers, like Charles Cotton, prefer to have a long list of artificial flies, most carefully dressed, to represent not only the size and shape, but also the colour of the natural flies, and not only the colour, but the exact shade of colour. Cotton, in speaking of the contents of his dubbing bag, says: "But let me tell you there are some colours that are very hard to be got," and that there are scarce any that he could afford to lose, or would not miss some time in the year if he did lose. A hundred years after "The Compleat Angler" was published, one editor of it puts a footnote to the effect that experience has proved that three or four sorts of flies will serve throughout every season of the year. "Some hold (like Sir Edward Grey in 1899) a trout is not very

curious about his flies, nor the seasons of them," and he tells of an experienced artist who "angled very successfully with May Fly in August."

Taking down almost haphazard from the shelf another book on fly fishing, we find that accomplished angler, Edward Chitty, Barrister, writing about sixty years ago, thinks three or four different patterns of flies are enough for the salmon angler (like Sir Herbert Maxwell in 1899), and yet says that "with trout you must be exact (more or less) as to colour."

And one might go on quoting page after page from different writers on this colour question, but my object in referring to it is to call attention to the admirable essay on the subject by Mr. B. W. Smurthwaite, included by Mr. Halford in the new and cheaper edition of his "Dry Fly Fishing." The case for the believer in "exact shade and colour" theory has never been so strenuously and uncompromisingly set forth before, and a perusal of Mr. Smurthwaite's essay will confirm in their opinions that large majority of anglers who hold that the more closely your artificial fly imitates the fly the trout or grayling are taking the better is your chance of success. This exact imitation theory applies, of course, only to those occasions when the fish are taking only one kind of natural fly, selecting that and letting all flies and other insects pass unheeded. If they are feeding promiscuously, taking everything that comes over them, as is very often the case—usually the case in my experience—then the question whether you should use a Red or a Blue or an Olive or a Grey Quill Gnat is not half so important as how you use it. If the trout or grayling are feeding steadily, and you cannot be sure what they are taking, when you do get one follow Cotton's advice, bend a stalk of grass, push it down the throat a little way, turn it half round, and draw it out, and some of the recently swallowed flies, which are still in the throat of the fish, will generally be brought to light, and you get proof positive about the fly which is being taken; whereas, if you cut the fish open and examine the contents of its stomach you can only get a general idea of what the fish has been taking probably hours before it began rising at the particular fly you wish to identify. As Mr. Halford says:

"The contents of the stomach of a fish almost invariably comprise many different species of the same genus, or many varieties of the same species. Insects belonging to different families, or even different orders, are often side by side. The larvæ and nymphæ closely packed together in the gullet and stomach are, when separated and examined, found to differ in colour from the palest primrose to the deepest olive, and from a light buff to a deep chocolate brown."

For this reason, and without wishing to be dogmatic, I confess I cannot see much good for the fly fisher in the certainly unpleasant work of making autopsies of fish—for practical fly fishing purposes it is as vain a superstition as was the practice of consulting the smoking entrails of the sacrifice in vogue among the ancient Greeks and Romans.

But does not Mr. Smurthwaite push the exact imitation theory a little too far in practice when he attributes fish "rising short" to the fact that the angler is using an imitation which is so nearly like the natural in colour that he cannot tell the difference, except with a magnifying glass? So that if the magnifying glass shows that out of the various shades of olives in your book you have selected one which is so near the colour of the natural that only the glass shows the difference, yet because of that difference the fish "comes short." But the colour of the natural flies in the same hatch varies slightly in shade. While fully believing that you should study the general colour and shade of the fly the fish are taking, if they are showing any special preference, I cannot believe that trout on a gloomy day will come short at a fly because it is the "invisible to the naked eye" part of a shade too light or too dark. But I quite agree with the statement that the Little Marryat perhaps will kill when the Ginger Quill or Flight's Fancy will not, and *vice versa*. You can pick any of the three flies named out of your book on a dark day without hesitation.

Mr. Smurthwaite asks some enterprising member of the Fly Fishers' Club to name, say, twenty different shades of flies by reference to the colour of natural objects; but does he mean twenty different shades of one colour? He wants a standard of shades of colour by which one can

order flies, I presume. But even for salmon flies we have not got this yet, although Mr. Kelson has advocated it for many years past. I have often thought that the colours and shades of colour, given by Messrs. Aspinall with their lists, and to be seen in most oil and colour shops, would be very useful as a standard for salmon anglers, and possibly trout also.

Cotton gives as a deadly March fly the Hawthorn Fly, dressed with an "absolute black" dubbing, mixed with eight or ten hairs of "Isabella" coloured mohair, and wings of a bright mallard feather. Isabella colour was so called after the Infanta Isabella, daughter of Philip the Second of Spain, and wife of the Archduke Albert. It seems her husband was besieging Ostend in 1602, and she made a pious vow that she would never change her clothes until Ostend was taken. "Contrary to expectation," as the story says, "it was three years before the place was reduced in which time her highness's linen had acquired the above mentioned hue," viz., "a kind of whitish yellow, or, as some say, buff colour a little soiled." I fear Mr. Smurthwaite will not accept "Isabella" as a sufficiently definite shade!

I was never quite sure what natural fly Cotton's great Whirling Dun was intended to represent. By a note in the edition of Walton now before me (over a hundred years old), I find it is intended for one of the big sedges. "This is a killing fly, and is to be seen rising out of the sedges in most trout rivers late in the evening, seldom before sunset, and continues on the water till midnight or after. It is found most of the warm months, but kills chiefly in a blustering warm evening, from the middle of May to the end of July," and a "variation" of Cotton's dressing is given which would certainly kill well.

"Ash colour" frequently occurs in Cotton's fly dressing descriptions. "Blea" is another well known north country term in connection with trout flies. The learned Mr. Ray, in his "Philosophical Letters," published in 1718, says blea signifies a colour resembling that of a mole's back, which has a bluish gloss—black and blue. Another peculiar north country term is "watchet," i.e., "colour cœruleus albicans," pale or sky blue. "Sheep's russet," "flame-coloured calf," obtained, according to Cotton, by using the hair from an abortive calf, taken out of a skinner's lime pit, "which the lime will turn to be so bright as to shine like gold." Fancy the expression on Messrs. Farlow's face if they got an order to dress a fly with body of abortive calf; or to dress a Brown Ant with "light barge-sail, seal's fur, and brown bear's hair" body, or a Grey Midge with the "down of a sad grey cat."

I think there can be no doubt our fly fishing ancestors took infinite pains to obtain materials in order to carry out the "exact imitation theory," and undoubtedly a great many of their forgotten materials would still be found useful.

R. B. MARSTON.

THE PISCATORIAL SOCIETY'S NEW WATER.

THE Piscatorial Society may deem itself exceptionally fortunate in having leased for the space of one-and-twenty years, should it be minded to hold it so long, one of the most prolific portions of the famous Colne which it is possible to obtain at the present day. Everyone who has anything to do with providing private water for the use of the members of angling societies knows the ever increasing difficulty there is of happening upon really good all-round fishing anywhere near London. This difficulty becomes each year intensified, for the rapid growth of wielders of the rod, and the eagerness there is to snap up any likely piece of river that may be in the market, has had the effect of rendering comparatively small strips of water veritable gold mines to the owners of the meadows adjoining. Water which a short time ago could have been had for the proverbial mere song, cannot be secured nowadays under rentals which are prohibitory except to influential societies or wealthy men. The Piscatorials, therefore, I repeat, have every reason to be satisfied with the last venture of the executive. They have an excellent fishery, and this will become more valuable in years to come, in view of the methodical re-stocking which will naturally

go on every season, in order to keep it not only up to high water-mark but even beyond that point. In fact, already some 400 large chub, roach, tench, bream, and perch have been placed in the new water, and additions to the stock of trout it holds will in due time be made.

The extent of the water is about a mile and a half, and both sides are included in the lease. It is known by the name of "The Weir Fishery," and is only an hour's journey distant from Paddington. A leisurely walk of ten minutes from Uxbridge railway station will land the visitor at the keeper's cottage, charmingly situated at one end of the preserve. The advantage the stretch possesses over many fisheries is that it is not only particularly well stocked with coarse fish, but holds a good supply of trout, both large and small, distributed pretty evenly over the water. In the beginning of the year splendid bags of roach were made by members who tried it, and a few heavy chub were taken into the bargain. It is well known that tench over 2lb. in weight, large bream, and good perch are to be had, and since the trout season opened, despite the adverse climatic conditions which have obtained, fish up to nearly 3lb. have been creel'd with the wet fly.

The Piscatorial section of the water commences at what is called the High Bridge, opposite to a picturesque hostelry designated the Swan and Bottle. Looking down stream, one sees an almost straight run of magnificent broad shallow water, fringed on one side with overhanging trees, a rareholt for trout, chub, and dace. This is a quarter of a mile in length, and has, for the most part, a gravelly bottom. At the end of this shallow the river divides itself into two portions, the shape of the stream viewed from the aforesaid High Bridge being very much like the letter "Y." The left offshoot reaches to Upper Colham Mill, and in high coloured water should fish well, although when the water is at its normal height it is too "thin" and bright for anything but fly fishing, and even this will only prove remunerative when the mill below is running. As the latter is approached, deeper water is found, and 'cute fishermen should discover a spot or two where tench may be tried for with every prospect of success. If one would walk quietly down the sides of this particular part on a summer evening or early morning, and listen attentively, one would be sure to hear the peculiar sucking sound, if I may term it, emitted by feeding tench, which will serve as a certain guide to their whereabouts.

Following the right half of the "Y," deep holes with intervening shallows will be observed down to the weir, and in this stretch, above all others, big coarse fish have their quarters. There are swims suitable for every kind of angling—long and tight corking, ledgering, and the ordinary float fishing. Chub haunts abound, and there is more than one bream hole where, before the society took over the preserve, large takes of the "bellows" were made.

Crossing over the water by the weir bridge, one enters the inside of the "Y," and here will be found some of the finest swims in the river. It would not be difficult to ear-mark or locate them on paper, but those members who have ferreted them out would hardly thank me for giving away what they have been at trouble and pains to unearth.

Below the weir the fishing extends as far as the gate entering the garden attached to the keeper's cottage. The rushing, foamy water holds good trout, which, of course, work up from the water below, and, from information I have been able to glean, barbel are likely to be had here in due season. It will require, however, a skilful hand to pilot a 3lb. trout safely into the net if the fish should happen to bolt down stream on being hooked, for a few yards from the gallery is the celebrated fishing hut erected upon piles in the centre of the run. Some of the members think that this delightful harbour of refuge, or "palace," as it has been termed, might, with advantage to the trout fisher, have found a place elsewhere, but on this point opinions are divided, and when anglers differ who shall decide?

Lastly, there is the mill tail itself, which, when live-baiting and spinning are permitted, should yield heavy fish. The best wind, it may be stated in parenthesis, for dry-fly work is a south-westerly one, and for down stream fishing with the wet fly a nor'-wester.

It will be seen from the necessarily brief sketch

above that the characteristics of the fishing are broad shallows and moderately deep holes. There will always be a stream running, although in exceptionally dry seasons the current will be somewhat affected. Yet, if the proprietor of the Upper Colham Mill keeps his water back to get a head on, there must be a certain volume, in fact, more, going over the little weir itself. There is an amplitude of cover, especially at the top portion of the river, and as to fish, as one member peculiarly competent to judge put it, the river is "alive" with them. In short, the Piscatorial Society possesses as fine a piece of water as one could wish to have, and Messrs. R. C. Blundell and E. Foreman, who, with untiring energy and infinite trouble, were mainly instrumental in carrying the matter through, have for their reward the intense satisfaction of knowing that they have been able to satisfy the most exigent members of a society, in the success and prosperity of which they have ever evinced the keenest and most absorbing interest.

THE CHIEF.

AN OLD TICKET FOR FLANDER'S WEIR FISHERY.

THE Flander's Weir Fishery fifty years and more ago used to be famous among Lea anglers,

and is often referred to in books on angling. The interesting copy of an old annual subscription ticket for this fishery is from an impression of the original engraved plate now in the possession of Mr. Andrew Tuer of the *Leadenhall Press*.

THE TROUTING SEASON PROPER.

THERE is practically no particular time of the angling year set apart for brown trout fishing in Scotland, but there are times when the fish are in better condition than at others, and times when they rise more greedily to the fly. So much depends on the locality and local surroundings that these times vary even in the same stream. Thus an angler may commence on the lower waters of the Don, Deveron, Ythan, and Beaulieu, and make heavy baskets of well-conditioned fish in April, and, when he has exhausted the lower parts, make tracks for the mid waters in May, where the fish are not so highly favoured, and so on into the higher reaches. The brown trout season proper in Scotland comes in between the early finnock in March and April, and the grilse and sea trout season in June and July. April and May are the two best months of the year for making the heaviest baskets of trout. The fish are then ravenously on the feed, especially during the first few days of the advent of genial weather, when the fly first comes on the water. The streams are not then too clear nor too small, as

they are later on, and anything in the shape of a fly, from what will be used for grilse and salmon later on to the ordinary sizes, will be snapped at as soon as it alights.

There is nothing more delightful than a day among the yellow trout, as they are more familiarly called in the North of Scotland, during the first weeks of the season. With a medium sized water, a gentle breeze, a genial temperature to bring up the fly, a double-handed 13ft. or 14ft. trouting rod, and such a stream as the Ythan, Ugie, Deveron, or Findhorn presents, the angler must be hard to please indeed, or else a pure out and out duffer, who does not extract the acme of sport and the highest ecstasy of pleasure under such conditions.

One does not need to wade nor to practise dry-fly or upstream fishing. Nothing half so arduous. Leave that till June, July, and August, when the streams have run down to vanishing point, the fish have gone off the fly, and a basket can only be made under a blistering sun, worming upstream or parr-tailing the rapids. Casting from the bank, and well back, if possible, although it is not necessary to be over particular at this time, with about ten or a dozen yards of line at most, often less, the flight falls slantingly across the stream, and before it has been swung round by the current there is a gobble, the fly is sucked down, and the game begins. The first off go usually shows the mettle and proportions of the quarry. If it be a small fish, it is usually reeled in *volens*; and if lost in the process there is no heartburning over the matter, as it will now have a chance to grow bigger, which is all the better for the good of the stream. But anything of the nature of a ½-pounder or over is handled more carefully, according to the record it can command per scale avoirdupois, as may be calculated by the strain with which it bores up and across the pool, the pull it has on the rod, and the amount of fight it shows. Then it is treated with rising respect. Rising by leaps and bounds, between the time when first its silvered broadside flashes in the water, after the first struggles are over, and that exciting interval of doubt and fear and joy when it lies a shivering silvery beauty safe on the bank.

The little double hook is a terror to the very early trout. There is no getting away from the hold when once the points are embedded in the tissue of the jaw, lip, or tongue. They are all the rage in big, heavy waters, but as the season advances the small double gives place to a smaller single iron. With a flight of March Brown, Grey Quill, Professor, Lord Saltoun, or Red Mallard—three to the flight—and such like, dressed on the smallest single irons, we have more confidence of a better basket than with the same hooks on double irons.

Bar easterly winds, the trouting season has been a good one, and the baskets presently being obtained are very satisfactory indeed. Twenty-five trout, weighing 12½lb., is by no means a bad basket, and is about the average which has been made in spite of the somewhat hard conditions of overnight frosts, blistering sunlight, and easterly winds. The heaviest basket this season was sixty fish, weighing 45lb., with several over 2lb., made on the Don and on waters preserved, but not otherwise encouraged.

When we say "preserved," we mean preserved as far as ordinary watching by the gamekeepers on the estate are concerned, otherwise the preserving does not amount to much, and the assistance in the way of re-stocking nil.

Among the best trouting streams in the north just now may be mentioned the tributaries of the Tay, the South and North Esks (Forfarshire), Dee (lower waters), Don (right up to Alford), Ythan, Ugie, Deveron, Spey (lower waters), Lossie, Findhorn (very early river), Nairn, Ness (parts of), Beaulieu, Connors, and Sutherland lochs, where the fish are just beginning to fatten, and where the prospects of a really good season are fairly bright.

G. M.

APPEARANCE OF THE MAY FLY.

ALREADY we have reports of the appearance of the May Fly, the first early specimens—Uhlans of the great army—on some of the Irish waters. We shall be obliged to any of our readers who will send us word when the fly appears in their districts.

THE THAMES AS A SALMON RIVER.

SIR HERBERT MAXWELL'S articles, recently printed in the *Pall Mall Gazette*, will have been read with the greatest interest by all classes of the community. It is not only the angler who desires to see salmon in the Thames; the mere fact of such a re-stocking proving successful would be the most convincing evidence of the improved condition of the river, and would be the finishing touch to the great work of purification undertaken by the late Metropolitan Board of Works some fifteen years ago, and put into successful operation in 1889. But our sympathy with Sir Herbert Maxwell's wishes must not blind us to facts; and in the articles alluded to Sir Herbert appears to have allowed his desires to outweigh his judicial instincts. More particularly in dealing with some statements made by myself he fails to see the true point of my argument, and even, of course unwittingly, attributes to me opinions to which I have never given expression. Thus, he says that I deny that any improvement has taken place since 1894 in the quality of the effluent discharged from the metropolitan outfalls; but reference to my remarks, as quoted by Mr. R. B. Marston in his article in the April number of the *Nineteenth Century Review*, will show that I did not allude to the effluent at all, but to the condition of the river itself within the limits of what I have called "the zone of maximum impurity." I stated that until 1897, when my personal connection with the question of Thames purification ceased, there had been no alteration of the condition as shown in a report made to the main drainage committee of the London County Council by its then chemist, Mr. W. J. Dibdin, in 1894; and further added that I had no reason to think that any decided improvement had taken place during the last two years. I may say that for several years it was part of my duty to inspect and examine the river between, generally speaking, Charing Cross and Erith, samples being taken at regular points throughout the journey, and submitted to analysis with a view to determining the amount of dissolved oxygen and of sea water present. A great improvement was observed after the opening of the precipitation works at Barking and Crossness, but the improvement then shown has gone no further. The river has proved itself capable of dealing with the sewage of the metropolis, minus the suspended solids, without causing a nuisance or reproducing the shocking condition which obtained in, say, 1884 and 1887. In so far the scheme of purification has been perfectly successful; but there is a very wide difference between this balancing of the opposing forces of pollution and purification and the absolute cleansing of the river by the removal of all sewage matter. The effluents from Barking and Crossness are only sewage from which the greater proportion of the suspended or floating solids has been removed. Sir Herbert Maxwell quotes fourteen analyses made by Mr. Groves, the chemist to the Thames Conservancy, in support of his contention regarding the improvement in the quality of the effluent. As already pointed out, I had said nothing on this head; but I do say now that no such improvement has taken place, or can take place so long as the present system is at work. It was designed to cure a certain evil, viz., the deposition of sewage sludge in the river, and the consequent foul state of the water in the summer time. It has effected that object, but more it is unable to do. Again, Mr. Groves' remarks as to the effluent being "fair," "good," &c., must be taken as applying to an effluent discharging, as this does, into a large body of tidal water which cannot under any circumstances be used for domestic purposes. Not one of the effluents shown in the quoted table would be passed as satisfactory if the point of discharge were above lock, and none would be permitted by, say, the Mersey and Irwell Joint Committee or the Ribble authorities. But, passing from these few analyses, from 1890 to 1897 I made personally, or was responsible for, an analysis of the average crude sewage, average effluent, and the river at high and low water daily. Speaking from this exceptionally large experience, I say that the outfalls at Barking and Crossness never discharge an effluent which can be called

good or satisfactory, except under the special conditions already referred to. Every day some two hundred million gallons of clarified sewage are discharged into the Thames. When the tides are making from neaps to springs, in summer, the water over Teddington weir being greatly reduced, the daily increase in the volume of water between Crossness and London so much exceeds the daily inflow of upland water that the sewage effluent is carried steadily upwards day by day. This is the chief cause of the existence of the foul belt, and in dry weather this cause would not be removed even if the London water companies drew no water whatever from the Thames. And further, Mr. Groves' analyses do not help Sir H. Maxwell's argument; but, on the contrary, plainly show that no alteration has taken place.

The actual condition of the water of the river Thames off both outfalls at high and low water could, no doubt, be readily ascertained by making application to the London County Council, who have such samples collected and analysed daily. The same authority would, doubtless, furnish the Thames Salmon Association with particulars regarding the aëration of the water between Crossness and London Bridge, a factor which is determined by the council's chemist each week.

I do not think the cases of the smelt and the salmon are parallel. The smelt is distinctly a foul feeder, and, according to John Bickerdyke, should, as a rule, be looked for in the immediate neighbourhood of a sewage outfall. Since it possesses such predilections, it is only reasonable to suppose that Nature has fitted it for the purpose, and enabled it to flourish in water which is to a considerable extent deprived of its oxygen.

We can, however, go beyond the smelt, and deal with fish which have great power of survival in polluted waters, viz., roach and dace. Fish of these kinds were kept in a large aquarium, with a constant though small flow of fresh water; and to this aquarium daily portions of Barking effluent were added. Determinations of the oxygen held in solution were frequently made, and it was found that fish perished whenever the proportion of effluent was sufficiently large to reduce the percentage of aëration much below fifty. In other words, when the actual amount of dissolved oxygen did not exceed about one cubic inch per gallon the fish were suffocated. And during the summer months the aëration of the river water between Barking and Greenwich is, as a general rule, far below this standard. A casual sample drawn from the river shows nothing; it may appear clear and bright, and in every way desirable. The only real test is to determine the quantity of oxygen dissolved in a number of samples taken a few feet below the surface.

In conclusion, will Sir Herbert Maxwell permit me to call attention to an obvious error in his statement regarding the quantity of sea salt present at London Bridge? The 22 per cent. relates to sea water. GEORGE THUDICHUM.

"O WAD SOME POW'R THE GIFTIE GIE US," &c.

MADAME MAJAWI to her daughter Phillis B.: "Yes, Phil, dear, I have no great objection to your marrying Bob; he is a good enough lad in many ways, but he, like many men and women that go a-fishing are undoubtedly crackpots. Your father must have been bitten by a fish. If you are unfortunate enough to be bitten by a dog it sometimes brings on hydrophobia, and I say it must be the same with men who go a-fishing. I only exempt the poor men who have to get their living by it, for at times theirs must be dreadful work. Your father was a great angler. It seems very curious to me these men always call themselves great. The late Mr. B. was anything but great; he would fussick and fidget for hours over anything connected with his favourite sport, but he had about as small a mind as any man I have ever spoken to, he never troubled himself about anything outside of it, and as for driving in a nail or chopping a bit of wood, fixing a curtain pole, or any useful household work, he would leave it to me, and delicately tell me he was not brought up a carpenter. Then, dear, directly after our honeymoon was over, off he used to go for a day or two at a time, and when he did come back he

was full of (no, not whiskey, although anglers do drink a lot at times, wetting every fish they catch for luck, as they tell me) tales about a Miss C. or Mrs. C., of the Eel Pot Hotel; not that I cared one jot, for Fred was always a bit of a flirt, and his being away gave me the chance of inviting your grandmother and your aunt to tea. Every Saturday, winter or summer, saw him on the war-path. Out of bed he would bundle, then go down to the kitchen to make up his bait, then without any breakfast rush off to catch the first train. Our landlord used to say 'What a crackpot the man must be to get up at 5 a.m. such a morning as this; why, it was sleeting, after a sharp frost last night; he must be mad.' Yes, and I remember even in the sixties he came home eleven times in succession without catching a fish, but he was at it again the next week as soon as the shop was closed, or earlier if he could get away. Snow, frost, or fog did not matter to him or to his friend B. W. He was another great angler, but I never heard of him bringing home a single fish (at least, what I should call a fish) worth cooking, and that, I feel sure, was not caught by B. W. He took it far too quietly. I know him; he would have made more fuss about it, like he does when he catches a few small things no bigger than sprats, and takes some prize with them, although his wife says it costs three times as much in railway fares and other expenses as the prize is worth. Now, what men can see in pulling out poor little things, or bringing home fish you can't eat, puzzles me; or where the sport comes in, for I guess the greatest angler of the lot could not catch fish were they not hungry. Sport, indeed; much these crackpots have to be proud of!

"Then there was old Mr. F., in whose service your Aunt Sarah was. Mr. F. was a great trout and salmon catcher. He used to worrit your aunt's life out. He would persist in coming down at unexpected times into her kitchen, bringing some long, wet, dirty, drab things, with feet to them, to dry at the fire. He called them his waders. They were like the dress the man used when he went down in the tank diving at the Polytechnic, only without the head-piece; and was not the old crackpot particular about drying them himself rather, after the cook once splashed them all over with fat. Your aunt says you should have heard how the old beauty carried on; swore they were spoilt, and would cost him over £2 for another pair. Serve him right, I say, for going into the kitchen. One day he asked old Jim, their odd man, to fill them with water, to see if they leaked; so Jim hung them up in the scullery, and had nearly finished filling them, when bang! went something. The stout cord had broken with a loud snap, and down they came, knocking the poor old fellow over and drenching him. At first they were inclined to laugh at the plight the poor old chap was in; but the laugh soon changed to black looks, for the water poured in the kitchen, and a nice job they had to sop it up. Drat his drabbity old things, it gave poor old Jim the rheumatics for a month, to say nothing of the fright. When Mr. F. was not in the kitchen, he was always wanting buttons sewn on or bits of tape stitched on for him. 'Sarah, will you do this? Sarah, please do that?' Your aunt did not so much mind doing little jobs for him, but drew the line at being jawed at. She jumped up one day to answer the door, and stuck her needle in a pair of his fishing things. She was sewing some buttons on for him. You should have heard him. It was not so much what he said, but the nasty way in which he said it. So it ended by both girls giving the old crackpot a month's notice.

"Do you remember that nice young man that occupied our top back room, I think most of the time you were away at Annie's; but you saw him once or twice, if you remember. He was a nice looking man, gentlemanly, and used to wear his hair long, like poets often do. My word, he could talk. Talk about a magpie, it wasn't in it with him. Such beautiful words he always used; he ought to have been a preacher. I could not understand one half of them. Your brother used to say, 'Neither does he, mother; he only uses hard words to puzzle you, or to cover up a weak idea.' But as to fishing, it was all business with him; not pleasure. I never knew him to go fishing on a Sunday. Bob used to say, 'I don't blame him if he can sneak a day off in the week.

He claimed to be a fisherman; so I must dub him crackpot in spite of his wonderful tongue. Fishing is only an excuse with some men. I know one man who only goes a-fishing to get a bit more brass (i.e., money, as the song says); but he is another that can talk. Your father and I travelled with him one day to A—. He never once left off chattering on angling or showing us how it was done the whole 112 miles. Then he laid down in the bottom of the carriage, coming back, to show your dad how to peg for bream. If he was a crackpot he was a good old gentleman, and a good friend to your father. I have often wondered why anglers are such excitable men. One very bad specimen was old J.; he was a great Lea angler. Many times has your father made us laugh by his description of the excitable state he would get in, especially if anyone was watching him play a fish, as they call it; but why call it play when it means death to the poor thing I can't imagine. Once J. was playing a big jack. 'Keep out of the way; stand further back, can't you; keep off my line. There, he is gone; no, he is still on. Oh! he is a beauty, over 20lb. Get the gaff; now I have him. No, he is off again; don't touch the line. Now, then, wait a moment until I tell you.' At last it was got out of the water, when J. danced and capered about the bank like the madman he was. They then all adjourned to the Pig and Whistle to wet it once more for luck and to weigh the fish; it scaled 15lb. A short time after this a number of anglers were down overnight; J. was one of them. When in the bedroom several began skylarking, most of them having had as much ale as they could carry. At last, the play was of a rough character. All of a sudden J. jumped out of bed, calling out he was killed. One of the crackpots had accidentally cut J.'s head open with the glass water-bottle; the moment he saw blood he nearly fainted, and screamed out 'Send for my wife, send for my wife; I am a dead man!' A telegram was at once dispatched to London, and down it brought Mrs. J. next morning in a terrible fright. She rushed upstairs, calling out 'Where is my J., is he dead?' but she was quickly satisfied otherwise, for her husband, with his head bandaged up with a towel, sat up laughing in bed as she flew into the room, and into his arms. There was great joy for a time; then she let him have a bit of her mind for being such a fool for frightening her. Your father used to describe these tales with a great number of adjectives, which I purposely leave out. Why so many anglers use such bad language, especially on the river bank, I can't make out; it is a great pity. I wonder the A.A.'s don't bring it before all the clubs, and fine them. The money collected to go to the benevolent fund. And now, dear Phillis, I hope I have said enough to prevent you marrying an angler; what with their disregard for truth, their fidgety, fussicking ways, and their drinking propensities, I feel sure that they are nearly all madmen, and ought to be avoided." "MARJORIE B."

A JULY EVENING BY A WELSH RIVER.

LAST summer I chanced to have an evening to spare while staying at St. Asaph on business, and, passing over the town bridge, it struck me that one might as well learn something of the fishing. Looking up my "Angler's Diary," I found that it read as follows:—

"St. Asaph (Flint). L. and N.W.R. Clwyd; salmon, trout; preserved for some distance by landlord of hotel. (c.s.) Elwy; salmon, trout. (c.s.) Helyg, 5m. E. Lakes, Junction Pond, Helyg, 5m. E. Hotel: Plough. (See Rhyl, Llanfair-Talhaiarn)"

Off I went to the Plough Hotel and asked about the fishing. "Oh," said they, "you must see Tom Deed, the watcher." On asking directions, I was told to "go down the road and ask anybody." This direction worked admirably, and on calling at Deed's cottage, I found him preparing to go his evening round. He told me of an old weir existing about five miles up the Elwy, at Bont-Newydd, which, though provided with a salmon pass, let but very few fish get above. The water being dead low and bright, I decided to go up and take a picture of the fish pass for the benefit of the *Fishing Gazette* readers; so, strapping my

camera on my shoulders, I volunteered to bear the keeper company. Those who know Wales will appreciate that walk; on we went, up hills and down dales, but climbing slowly higher and higher, till at last we stood overlooking the river at the mill. We got down to the bank, and gradually worked along up stream, scaring by our presence a few large trout which were lying under the overhanging bank. At one place this bank was at least ten feet above the river, and, peeping over under the shadow of a tree trunk, the keeper pointed out one of the finest Welsh brown trout that I have ever seen, sheltering himself under an almost submerged tree trunk. As we were peering into the water, Deed noticed a little place where the bark had been freshly knocked off the root of the tree, and jumped down to investigate this recent trace of the poacher's hob-nailed boot. He quickly reappeared, bringing with him a six-foot gaff stick, which the owner had hidden in a rat hole in the bank for future use. This was returned to its hiding place so as not to create alarm, Deed vowing to come along later and catch the offender *in flagrante delicto*. The snatching of trout and salmon is the favourite poaching method in N. Wales, and constant practice has made the average poacher very clever at it. Crouching down, half sheltered between the tree trunks and the bank in the half light, great execution can be done, even in almost still water, by the clever snatcher. Our watcher, however,

the lower 2ft., and the second pocket is of the same faulty shape. Their extreme shortness—4ft. and 5ft. respectively—thus convert them into perfect salmon traps, into which if the fish leap they rarely leave, save and except at the end of the snatcher's gaff, a result not expected by the original designers. Needless to say the fish rarely use the centre portion, but prefer the shelves at the sides, where, however, they are more exposed to snatchers, and require to negotiate the double shelves practically in one rush. Of these shelves, the edges being the shortest and shallowest portion, and the top ledge being only 4½ft. wide in the centre, it follows that though the fish negotiate the two lower, they rarely ascend the third, but are tumbled back repeatedly while attempting this obstacle. Here the salmon poacher lies in wait, gaff in hand, and hoicks out the fish. The consequence of this state of affairs is twofold: firstly, instead of helping the fish, it offers facilities to the poacher, and prevents the stocking of the upper waters, eminently suited to breed young salmon, and at the same time drives the fish into small tributary rivulets below—only in existence during freshes—where the adults fall a prey to man, and the eggs perish from want of moisture. Owing to the upper riparian owners not taking an interest in the fisheries, the conservators are hampered by want of funds, hence the Clwyd and the Elwy boast only two watchers for about fifty miles of patrol ground. While the heavy floods

THE FISH PASS AT BONT-NEWYDD ON THE ELWY, N. WALES.

was satisfied that the last comer had not been successful, as he had left no trace of scales behind him, a trade mark which, he told me, might generally be looked for.

The weir was reached about 7 p.m., and two or three exposures were made on it. By the illustration given it will be seen that the river watcher's statements had not been exaggerated.

Built of cement at an expense of over £800, it stretches across the river, covering twenty-seven paces from side to side. It is built (as is shown) in three tiers or terraces, with a central series of three pockets and two lateral wings. These lateral wings have the shelves raised—the first from the bottom 3½ft., the second 2½ft., while the sill or top is an inch or two shallower than the second; the distance between the first and second shelves is two yards, and the greatest depth of the second shelf is 4½ft. The total height of the weir is 8½ft.

The middle portion, which was intended for a fish pass, is about 6½ft. wide, and is divided into three pockets by two cement partitions; these pockets, which lie at a somewhat lower level than the corresponding shelves of the wings, are practically the same length as the shelves, being 4ft., 5ft., and 9ft. in total length from before backwards. As has been said, the bottoms of these pockets have not been built up, so that the greatest depth of the top pocket is on the upper end 3½ft., and at

are on, the rest of the river must be abandoned; this weir requires watching night and day. It appeared to me that the expenditure of a little money applied to filling in the centre boxes and cutting alternate sides from the centre partitions would really convert the supposed fish pass into an actual one, and probably save a fine salmon river for anglers of moderate means.

This finished fish pass would appear as follows, and the direct force of current would be broken by the projections, and the fish permitted to swim up. The structure of the wings would be left unaltered, and would, indeed, be of benefit, as they prevent the centre being attacked by poachers. I am informed by experts that the bottom could be levelled and the partitions cut for a sum of less than £60, and the benefits apparently would be enormous. On the way back from this evidence of misguided energy, we walked along the river, and saw, over and over again, the trout shooting out of sight at our approach. One needs but reflect that Stewart's book was written for rivers of this type, and the full truth of the importance of up-stream fishing is borne in upon one with renewed significance.

As we approached one pool we found an enthusiast trying the trout in the darkening shades, with but little success. If one had had a fly rod and the dry-fly box, I am inclined to

think that a Black Gnat fished dry would have killed one or two good fish which apparently scorned the wet flies put over them, but seemed to rise with unflinching vigour at every floating particle that passed over them. One fish in a nice quiet pool rose three or four times at a piece of black twig flitted on to the water, but finally, disgusted by the character of the quarry, subsided into quiescence. I have often thought that in fine water the arrival of three or four flies of different colours on the surface of absolutely unruffled water, which flies immediately sink, would alarm even less nervous fish than trout, and would be quite as likely to lead to flight as feeding. On then we

PLAN OF WEIR AS ALTERED.

went on our way, and a little farther down stream startled an otter from its rest on the opposite bank, whence it plunged into the river and made off. This is a famous river for otters, the hounds having killed one of 28lb. weight last season. Crossing the river by means of a tree suspended by two chains and a guide-line, we walked over on to the road, and I arrived back at St. Asaph, having covered eleven or twelve miles, seen some good fish, and investigated a river which I hope to fish when the back-end comes, and those curses of the rodsman, "the nets," are off. My readers will notice that the close season for rods on the Clwyd and Elwy begins Nov. 15 to May 15 for salmon, and Oct. 2 to Feb. 28 for trout. NEMO.

TWO AIDS TO PEACEFUL ANGLING.

THE Thames fisherman, whether he pursues his sport from boat or bank, has often to take exception to the puffing, screeching steam launch, with its siren and its wash, the first deafening the angler, and the second upsetting his swim, and occasionally himself, both mentally and bodily. The bitter cry of the unfortunate fisher has frequently been found amongst the correspondence columns of the *Fishing Gazette*, and has occasionally found its way into the general Press. At last, however, a brighter day seems to be about to dawn. The Automatic Launch Company, who have acquired the English rights for the Escher Wyss motor, are about to introduce their vessels upon the Thames, which are claimed as being a great advance upon the present vessels. The system used is not the explosive principle now in general use, but may be briefly described as a petrol-vaporising process by means of heat, that is to say, the motive power is supplied by the expansion of petrol instead of water. By the courtesy of the company, a representative of the *Fishing Gazette*, on May 9, was enabled to make a practical trial of the new system. The launch *Sparklet* was run from Taplow to Marlow and back with ease and comfort to all on board. Three great advantages to the angler were noticed during the trip: The first was that the launch was built to be driven at no higher speed than eight miles an hour, while at this rate but little wash was caused. Secondly, when passing fishing punts the machinery was easily stopped, and the vessel slipped past with but little disturbance to the occupants. Thirdly, there was no waste of any kind to pollute the stream, the condensed petroleum going back into the tanks after vaporisation, and the sole consumption being the petroleum burnt for fuel, which gives no waste, and but very little smell. The company are offering these vessels for sale in this country at a very moderate price, and expect them to compete very successfully not only with the other petroleum launches, but also with the electric launches now so popular on the Thames. The low cost for working (2s. per hour for fuel,

and the ease with which the machinery is controlled by amateurs, make the launch suitable for many purposes for which other types are hardly fitted; while the fact that twenty-four hours' supply of petrol can be carried in the forward tanks, secure from all chance of explosion, apparently would make the vessel suitable for prolonged excursions, such as sea fishing trips. We are informed that many of the launches of the German Navy are now fitted with the Escher Wyss motor. *En passant*, it may be said that during this launch trial we were introduced to another boon to anglers, namely, the "Sparklet" system, by which, through the medium of a special bottle, and some small cartridges of compressed carbonic acid gas, every angler becomes his own soda water manufacturer. The bottle is filled with water or any similar fluid, and the gas is forced in by a simple mechanism, which the inventors claim is safe, of course with ordinary care. As far as information serves, it is understood that the resulting aerated fluid may be afterwards weakened with some alcoholic beverage.

MESSRS. A. CARTER AND CO.'S NEW CATALOGUE.

WE so recently as the time of the Fisheries Exhibition noticed the novelties of Messrs. A. Carter and Co., of 137, St. John Street-road, that it is not necessary to refer to them again at any length, but we must inform our readers that this firm, which has been established over two centuries, is now publishing a new and very handy catalogue, full of illustrations of all kinds of tackle, &c., at the very moderate prices for which Messrs. Carter have so long been famous.

STEEL TUBES FOR SPLIT CANE ROD CENTRES.

They now inform us that, after several years' experiments at a cost of hundreds of pounds, they are at last enabled to put on the market their patent tubular steel centre, the advantages of which are numerous. They say: "By the introduction of a thin tube of finely tempered spring steel, instead of the solid steel wire formerly in use, we are enabled to produce a rod very much lighter, but with an enormous increase of power, and at prices which will compare favourably with other makers charges for the old form of rod."

Their 12s. 6d. greenheart fly rods are thus described: "9ft. to 12ft., with two tops and cork handle, brazed and winch fitted, with rust-proof snake rings, well balanced and finished, with spear and division bag." They call this a "second quality," but assure us the wood is well seasoned, and, that being so, they are wonderful rods at the price.

For one of their salmon fishing customers, Mr. L. Graham Clarke, of Rhayader, Wales, they make a salmon rod called the "Glanrhos," made of greenheart throughout, two tops, double cork handle, double brazed in German silver, snake rings, universal winch fittings, fitted with patent pneumatic button; 16ft., 35s.; 17ft., 37s. 6d.; 18ft., 40s.

"We advise the 16ft., as being sufficiently strong for ordinary fishing, the 17ft. and 18ft. for heavy work where fish run large. This build of rod is made from best wood procurable."

They quote this letter from Mr. Clarke:

"Rhayader, Wales.
"DEAR SIRS,—I am sending you the 16ft. 'Glanrhos' rod to-day by rail; please make me two more like it. The rod is an extraordinarily powerful one for its size, and with a No. 3 line I can switch almost as far with it as I could with my big 20ft., and its lightness renders salmon fishing from a toil to a pleasure. I killed two fish yesterday (the last day of the season) with it in a very heavy stream—the river being almost in flood, and they seemed to have no chance with me; the little rod held them like a bit of wire. I simply lugged them out. I was surprised what a pressure I could put on in so heavy a water.—Yours faithfully,
"L. GRAHAM CLARKE."

If a pike angler is in any doubt as to the best kind of rod for the purpose, he cannot possibly do better than try the "Jardine Pike Rod," made from instructions given by Mr. Alfred Jardine. It is a powerful, light rod of mottled cane, with hollow butt; and often as we have fished with Mr. Jardine, we never remember his using a rod of greenheart, or, indeed, anything but bamboo cane for pike fishing.

Having so favourably noticed Messrs. Carter and Co.'s novelties and specialities, we are really

at loss to pick out much that deserves special notice in this list, which contains such a great variety, and at such moderate prices. What we can strongly advise Messrs. Carter to do another year is to add a good index, and place it at the beginning of the list; then you see at once where to look for what you want, and where hundreds of different things are priced it is not easy to find what you want without a guide to the page it is on.

TO THOSE WHO WANT TROUT FISHING IN NORWAY.

THOSE in want of trout fishing in Norway this season—many have already made their arrangements, of course—should make a note of the advertisement which Messrs. J. A. Lumley and Co., 34, St. James's-street, London, have in our columns this week. It was at our special request that they made a feature of trout fishings to let in Norway, and Mr. James Dowell, the courteous manager of their fishing department, will give all information in his power.

MIXED BEETLES, LADYBIRDS, &c., FOR DRY-FLY FISHING.

VERY nicely tied patterns for dry-fly fishing have reached us from that very clever fly maker, Miss E. A. Ellis, of 13, Danby-terrace, Exmouth. Since "Black Beetle's" articles in our columns, there has been some demand for good imitations on 00 and 0 eyed hooks of wee beetles. Miss Ellis sends us some Black Beetles, White Beetles, Green Beetles, and Ladybirds, and we can confidently recommend any dry-fly anglers to send Miss Ellis a trial order for her mixed beetles. They very fairly represent many of the little beggars which creep up your legs or down your waders when you are fishing, especially when having lunch or a smoke in the long grass near the water's edge.

Her single wing floating flies, at 2s., and double ditto, at 2s. 6d., are very good killers, and wear well, her Coachman, Badger Hackle, Red Quill, and Peacock Fly, are particularly good, as also are her May Flies, in all shades and in various patterns, from 3s. to 4s. per dozen. Her rubber bodied Mays, at 4s. a dozen, in all shades of wing, look most deadly. We have killed many a good trout and grayling with Miss Ellis's flies in past years, and can with confidence recommend her work. She copies patterns very carefully, and can supply the standard favourites not only for our waters, but also for those of North America.

But her novelties this season are the mixed pickles—we mean beetles—and if you try the beetles you are sure to want some May Flies, Red Quills, &c.

IN THE TASMANIAN BUSH.

IN the vast tracts of country "down below," where the steam engine has as yet made but little progress, a drive or ride of thirty miles is looked upon as an ordinary occurrence of every-day life. A short stay in the colonies had soon led me to be of one mind with the inhabitants on this point, so the prospect of some good sport with rainbow trout was quite sufficient attraction to counterbalance the trouble of a long drive to the home, or, rather, river of their adoption. Now, the rainbow trout in Tasmania are very exclusive, and evidently do not care to associate with their less gaudy coloured kinsmen, the brown trout, for after being turned out of the New Norfolk Fisheries, where they were hatched and brought up, they made off up the Derwent, till they reached the Russells Falls river, which stream they invaded and took possession of, to the exclusion of all other fish. The best reach of this river is about twenty miles from New Norfolk, a place which I had selected as my headquarters from which to make fishing excursions to the neighbouring rivers and streams. New Norfolk, a straggling village on the banks of the Derwent, some fifteen miles from Hobart, can be reached either by train or by a small steamer. Amongst many other attractions, it possesses that of a charming inn, quite one of the most comfortable houses in the colony, kept by an old Yorkshire-

man. There is an air of the old country about this hostelry, which stands perched on the hillside, with its old fashioned garden at the back stretching down to the river, where the willows overhang the still deep waters, and through the hot summer days shelter the big trout from the scorching rays of the tropical sun. The remembrance of that garden brings back visions of trees laden with ripe and luscious fruit, and flowers of gorgeous hue;

A garden where wonderful
Gold apples grow,

Strawberries, too, and raspberries, cherries, gooseberries, mulberries, and apricots, all ripe and ready to be plucked by such as wander therein.

But put off dull sloth, and let us flee from the flesh-pots of Egypt. So one gloriously hot morning early in January the ancient flea-bitten mare was harnessed to the somewhat more ancient buggy, "impedimenta" for a camp were piled up behind, and we started on our way to the Russells Falls river. "We" consisted of myself, Bob, son of mine host of the inn, and my fox terrier, one of the gamest little dogs ever bred, always ready to face anything, be it cat, dog, iguana, porcupine, or kangaroo. *Requiescat in pace*, for I fear that ere now she may have tried conclusions with a snake, and come off second best. Such, unfortunately, is the fate of many a plucky dog in Australia.

Our road lay northwards along the valley of the Derwent, past hop gardens and orchards, till we left the Salmon ponds behind us, and reached a more open country, cleared and fenced off into large paddocks for the purpose of raising sheep. Just a few words as to these Salmon ponds. About thirty years ago the Tasmanian Government started a fishery near New Norfolk for the purpose of hatching and raising the imported ova of salmon and trout. Unluckily, success has not attended the culture of salmon, but the trout have thrived so wondrous well that the rivers and lakes in the colony are now stocked with fish numerous and large enough to satisfy the most fastidious angler.

Jogging along the dusty road we overtook a wayfarer on foot. He proved to be an engineer, and therefore, needless to say, a Scotchman, and gladly availed himself of our offer of a lift. Thanks be to thee, my worthy friend, in that thou didst with many a good story beguile the weariness of the way, and cause us to forget, for a while at least, the heat and that thirst which is ever wont to attack the traveller most fiercely when he is farthest removed from all means of satisfactorily quenching the same.

At Glenora, a small hamlet twelve miles distant from New Norfolk, which boasts a railway station, the terminus of this section of the line, we parted with our passenger and our thirst, and not long afterwards were driving through the bush. After resting a short time for lunch we set off again, and a few miles further on reached the Russells Falls river. Turning sharp off to the left, we quitted the main road, and, pursuing our way along a bush track on the right-hand side of the stream, presently came upon a couple of men, one of whom was fishing. The angler volunteered the information that he had caught more than ten brace of fish, ranging from $\frac{1}{2}$ lb. to 1 lb. in weight; this was good news, but a glance at his bag made me entertain a slight doubt as to the accuracy of his statement. Subsequent events confirmed my first opinion of the man; poor fellow, he suffered from an enlarged imagination, and told me stories which not even Jonah's whale could have swallowed. However, we learnt from him that we had still several miles to drive before we could reach our proposed camping ground, and so left him.

We were now in a thickly wooded valley, covered for the most part with gum trees, but the track being fairly good, in less than an hour we were busy setting up our tent in a small clearing in the forest, not far from the river.

After a scanty meal we hastened to the river-side, for the shades of night were falling fast, and twilight does not last long in these southern lands. There were one or two beautiful little pools just near the camp, and the fish rose freely till the last streak of light suddenly disappeared from the western sky, and darkness settled down over forest and river. The short half hour's port had resulted in the capture of eight nice

fish, weighing together about 6 lb. Finding our way back to camp by the light of the fire which we had lit in front of the tent, we made a good supper, and then

Never before had our tobacco

Such a sweet and pleasant flavour.

But we've soon knocked the ashes out of our pipes, as we were tired after the day's long journey, and smoking could not be allowed inside the tent, amongst the piles of dry bracken upon which we were to sleep.

Although the night was warm we found it expedient to wrap our rugs closely round us, choosing rather to undergo the discomforts of too much heat than the attacks of that pest of all warm countries, the mosquito. Just one glance outside before we turn over to sleep. Through the open flap of the tent the camp fire burns brightly, casting a lurid glare upon the bare trunks of the gum trees near at hand, which stand out like gaunt sentinels against the dark gloom of the forest beyond; there is the ancient one munching away at her hay, and whisking her tail to keep off the flies, and—and—we are off into the land of dreams.

Strange creatures crowd around me as I sleep, monster trout come crawling up from the river, and stand outside the tent, open-mouthed, and ready to devour us. The scene changes: the night wind whistles in my ears as I ride at headlong pace through the forest, silk hatted and frock coated, on the back of a huge kangaroo, on and on till, *οἶμοι τελῶμαι*, I find myself still pursuing my mad career down Bond-street, in broad daylight, but now only clad in a suit of pyjamas. There is a policeman on horseback in hot pursuit, under his helmet I recognise the features of the German Emperor, and he is riding the ancient one. There is no hope of escape, for the season is at its height, and lower down the street there is a block in the traffic; but my kangaroo will not be caught, taking one mighty bound, he rises like a bird on the wing, over carriages, cabs, omnibuses—and the scene changes again: a vision of dark brown eyes, and sweet kissable lips, belonging to—but, gracious Tommy, what is that; is it another fantasy of my dreams? No, this is reality, and we both start up from our sleep, to hear the echo of a mighty noise resounding through the stillness of the night. Bob has an explanation—a gale of wind has sprung up whilst we were asleep, and blown down some rotten old tree. The fire was very low, so I crawled out and threw on some more logs; the ancient one was still there, so evidently Kaiser Wilhelm had no further need of her services. Then back to bed, to be roused up again, after what appeared to be only a few minutes' sleep, by the voice of my henchman, informing me that it was nearly six o'clock. He was already preparing breakfast, so I had to bestir myself, and by half-past six we were making our way upstream in the hope that the early grasshopper might catch the fish. But it was only a half-hearted sort of a hope. Experience had taught me that so long as the cold mist hung over the river good sport could not be expected. In the daylight we were able to get a better view of our surroundings. The valley, which at this point was scarcely a quarter of a mile in breadth, was covered with forest, save where the river, wandering along its rocky channel, crept close under the shelter of the high cliffs, which barred all means of access from the north. At last, towards eleven o'clock, the mist passed off, and the sun burst through the clouds, beating down upon us with all the glorious heat of the southern summer. Then the fish began to feed, and for the next hour or more the sport was all that could be desired, considering the low state of the water. These trout were quite the gamest that I have ever met with, one in particular I remember. Whilst wading upstream I made a cast into a small pool lying close under the farther bank. Scarcely had the grasshopper touched the water before there was a rush, and off dashed Master Trout downstream, taking out some fifteen yards of line; then, with a sudden leap like a young salmon, he came clear out of the water, nearly striking himself against the trunk of a fallen tree which lay stretched across the river. He scaled a good pound, but his first rush had led me to expect a much larger fish.

On returning to camp shortly after twelve o'clock we were astonished to find another buggy

drawn up in front of our tent, and "the ancient one" hobnobbing with two strange ponies. Presently the owner appeared, gingerly picking his way across the rickety footbridge which spanned the stream just opposite our camp. Having introduced himself as a doctor from Melbourne, he informed us that he had driven over from Hamilton, a village some twenty miles distant, to see the falls from which our river takes its name. He was not an angler, and he seemed so impressed by the fact that he was a medical man and a resident of Melbourne, that he could talk of nothing else. We were rather amused with him, for he evidently mistook me for a native of the colony, and was quite patronising; had he been fond of quoting the classics, doubtless he would have adapted *Non cuius homini continjūt adire Corinthum* to his own beloved town. We helped him harness his ponies, and could hardly refrain from laughing as he drove off, his last words being an invitation to call upon him if ever we went over to Melbourne. I was half inclined to call him back and ask him that question so familiar to all who have visited Sydney: Have you seen our harbour? But this to a citizen of Melbourne would have been like holding a red rag to a bull, and might have led to a long discourse on the superiority of Melbourne, for there is much rivalry between these two cities.

After lunch, as the fish were not rising, we decided to pay a visit to the falls. Crossing the river and following a track through the scrub, it appeared as if some magician's wand had cast a spell upon us and wafted us into fairyland. No sound disturbed the silence of the glen, save the soft music of the babbling brook and the murmur of the distant fall; stray shafts of sunshine piercing through the thick canopy of the tree ferns graceful foliage fell on soft banks of bright hued moss and clustering maidenhair. We clambered up the steep hillside, and all around there was the same rich growth of ferns and moss. Above us towered the dark steep cliff over whose side came tiny streams of water tumbling down on to the broad platform of rock on which we stood, and then over into the glen below.

Later in the evening we fished the lower reaches of the river, but without much success, and soon after sunset we turned in. During such periods of the night as were not occupied in repelling the attacks of the mosquitos, we got what sleep we could, but though we fought well and long, our faces were a pretty sight when morning dawned. Then, after holding a council of war, it was decided to strike camp, and the "ancient one" was soon trotting along with her nose towards home. The sun was fast sinking towards the west, and a rich purple atmosphere lay spread over hillside and valley as we drove back into New Norfolk. Mine host came out to welcome us with true Yorkshire hospitality, whilst his good wife bore off our creels in triumph; but, alas, her joy was soon turned into grief, the fish when unpacked were found to be unfit for food, owing to the jolting and intense heat which they had suffered on the journey home. A. H.

AN UNEXPECTED HAUL.

I WAS staying in a cottage overlooking the picturesque and sporting river Lynn, having taken a shooting in that neighbourhood. I and a friend were one evening chatting over our pipes about the beautiful scenery in the surrounding district, when suddenly an idea struck me. Why not have a ride through it? So I said to him, "Look here, old chap, I have to go Plymouth on business, why not ride all the way with me, I'll give you a mount?" The result of our conversation was, that after breakfast on the following morning we started off to Barnstaple, and arrived there in plenty of time for dinner, putting up at a good old-fashioned inn in the centre of the town. The next day we rode to Exeter, a distance of about twenty miles, and the day after to Torquay. At the latter place we stayed for a day or two, so gave our horses a rest, and chartered the little 15-ton yacht the *Lapwing*, belonging to a well-known and genial boatman, to sail across to Brixham, that quaint old fishing village on the opposite side of Torbay. My friend, who was a skilful fly fisherman, said: "I don't mind coming for a sail, but when you get me in the

boat don't expect me to try my hand at sea fishing, I know the game too well. You get a wretched little mud worm for bait, stick it on a hook, and after throwing the line over the side of the boat you haul it up every two or three minutes just to see if the bait is still on. At the end of a day of this sort of amusement, if you are very lucky, you may perhaps have caught two or three dabs not quite as big as the original bait, which day's sport is immediately chronicled in the local papers as an inducement to other enthusiastic sportsmen to try their luck." So it was understood that we were to *sail*, not to fish. Hardly had we got clear of the harbour when Brown, the boatman, said "Would you gentlemen care to fish to-day? I have plenty of tackle and bait on board." "No," shouted my friend, looking at me with a stony glare, as much as to say, "Is this a put up job?" "No, thank you," said I, in a meek voice; "the fact is, we are rather afraid of the motion of the boat when not under canvas." This was, perhaps, a slight prevarication of the truth, considering that I generally spent several months of the year on the sea and had never yet suffered from *mal-de-mer*. After a pleasant sail we arrived at Brixham, and were much interested in the curious old town and its countless fishing boats in the harbour. In the afternoon, having seen all there was to be seen, we re-embarked, and set sail for Torquay. When we were about three-quarters of the way across the bay one of the boatmen touched his comrade on the arm and said, "Tom, look at that small boat there, they seem to be catching a lot of fish!" We all looked in that direction, and sure enough two figures in a boat were catching fish as fast as they could throw their lines out. "By George," cried Tom, "we are in for a shoal of mackerel. Now, gentlemen, this is a

chance you won't get every day; do let us throw out our lines." And I, turning to my friend, said, "Oh! do let us have a try for a quarter of an hour; we've got plenty of time." To which he grumpily replied, "Oh! all right; I don't mind." And in a couple of minutes four lines were over the side of the boat; and in as many seconds four lines were being hauled up, all with fish on. This continued for fully an hour, until our arms simply ached. I forget exactly what the catch was, but it was something more than a hundredweight; and would have been still greater if we had not been obliged to return to keep an appointment, much to our own and the boatmen's disgust. That evening, over a fragrant weed, my friend owned that sea fishing was not so bad after all, and said he wouldn't mind having sport like that every day.

P. H. BEWICKE.

WIMBLEDON LAKE.

PAST AND PRESENT.

WHEN to the sessions of sweet silent thought I summon up remembrance of things past, it verily seems but yesterday that I commenced my piscatorial education more than thirty-five years since, by acting as a very youthful gillie to a noted fly fisher of the old school, when residing on the banks of the lovely Wandle. This was, of course, long before the Wimbledon Urban District Council and the Croydon Sanitary Authority combined, were permitted to establish sewage farms contiguous to that once famous stream, and pour into it yearly, hundreds of thousands of gallons of effluent, a proceeding which has ruined the trout fishing from the Merton Flour Mills, down through Earlsfield to the Thames. On the sides of the Wandle, I, an

eager and willing pupil, received my first lessons in angling at the hands of as ardent a disciple of Walton as ever breathed.

At the age of ten, Wimbledon claimed me as a resident—not the Wimbledon of to-day with nearly 40,000 inhabitants, but a quiet little village with a population of between 5000 and 6000 souls. Here it was, when undergoing the scholastic training deemed necessary to fit me for a commercial life, I made my first acquaintance with Wimbledon Lake.

At this time (it was in the early sixties), the Mansion known as Wimbledon Park House, with some hundreds of acres of land, and the lake referred to, was the abode of the late Mr. J. A. Beaumont. That gentleman purchased it in 1846, but did not take up his residence there until fourteen years later. The grounds, glass-houses, and orangeries, were the admiration of all—in fact, the great Sir Joseph Paxton began life here as under-gardener to his brother, who had charge of them. Overlooking the park from the terraces, views of wide extent, and of surpassing beauty were enjoyed. But now, alas! the estate, or the greater portion of it, has been cut up for building purposes; residences have been erected on portions of the property, and indeed, while the ornamental sheet of water naturally remains where it was in the olden days, the famous walks and many of the landscapes have been for ever blotted out.

At the period alluded to, the lake was the happy hunting-ground of the very few anglers who lived in Wimbledon. Mr. Beaumont was held in high esteem in the parish, and, being an angler himself, never refused permission to residents to fish it. Indeed, he kept a huge galley punt on the water, and many a gay and merry party have I seen on board intent on beguiling to their doom some of the fine roach with which the lake literally swarmed. It was no uncommon event for a single fisherman to catch a hundred good fish between 5 o'clock and dark, in the summer months. The butler of the establishment would, when the family were dining out, frequently make for a fancied spot of his near the boathouse at the shallow end, where there was then 3ft. or 4ft. of water (instead of the mudbank and mass of sedges, as now), with a pail in his hand, which he often half-filled with roach before he gave up. I have frequently creeled dozens at a visit, and on one never-to-be-forgotten blazing hot day in July, I had 150 fish. This take is vividly impressed upon my memory, by reason of a little adventure I had on that particular outing. I was leaning over the bank to lay an eel-line; but, unfortunately, over-balanced, and went head first into the water. I had on a pair of cricketing trousers, straw hat, and light jacket, and the condition I was in when I was dragged out of the water by a fellow angler can be better imagined than described.

I remember, too, that there was a wonderful rise of May-fly on the lake, and by creeping down behind some sedges and dapping with the live insect I have had good sport when the fly was up.

Later on, as my knowledge became more profound I tackled the carp, and many mornings, ere Aurora peeped, have I wended my way to the banks of the lake, returning home to breakfast with a brace of three or four pounders in my basket. My record take was three fish, one being an eight-pounder. One old angler who was a frequent visitor, had a strange way of fishing. He used a long rod, and, as presumably "fattening" the line to induce flotation was unknown to him, he fastened three or four pieces of cork on the running line to keep it on the surface of the water, and facilitate striking at a distance.

Bream were fairly plentiful, too, as on one occasion in later years my brother, fishing with two hooks, had a fish on each! The brace was eventually landed by means of a pail by keeper Day, and weighed 3lb. and 4lb. respectively.

As time rolled on, the property changed hands, but still sport, especially with carp, was good. An old retired Major—Seppings by name—was to be seen almost every day (Sundays excepted), carp fishing by the round sluice, under a willow tree long since cut down, at the deep end of the lake, and many a heavy fish rewarded that gallant officer, for his skill and patience.

BIRTH.—At Surrey Lodge, Denmark-hill, S.E., on May 11, the wife of R. B. Marston, of a son.

[3]

WIRE V. HEMP OR FLAX.

But now, *Omnia mutantur, nos et mutamur in illis*. The glory of Wimbledon Lake has—temporarily only, let it be hoped—departed. In place of a beautifully kept expanse of water, in which it was a real pleasure to angle, what do we find; or, rather, what was found throughout last summer and autumn, and for several years previous thereto? The whole surface of the lake, with the exception of a small open space at the top end of it, was covered with aquatic vegetation which had been allowed to increase and multiply virtually unchecked for years. A few years ago, a fair piece by the keeper's cottage was kept clear, but each season this has been encroached upon by the ever-expanding weed growth. When first I recollect "carp corner," it was a charming nook, 3ft., if not more, in depth, and an overflow at the end. This has given way to an inextricable mass of sedges and mud. The angling fraternity in general were freely allowed to fish in the lake, on payment of 1s. a day for one rod, for some years previous to 1898, but sport, for the most part, was confined to "tin plates," as the diminutive bream caught were dubbed. Still, now and then, good bream and carp were landed. But with regard to the latter, where one fish was brought safely to bank, a dozen escaped, owing principally to the hopeless task of trying to extract them from the banks of weeds into which they would rush when hooked. A few roach were often taken, and in the winter, when the green stuff had decayed somewhat, pike were creel in numbers. But the lake, in the opinion of many, prior to the formation of the Sports Club, Limited, which took over the water last year, has been rapidly deteriorating as an angling resort, not in consequence of the dearth of fish, but simply purely and entirely through the impossibility of fishing in beds of weeds for them. Rumour has it, however, that the newly established club will devote a good deal of attention to cleaning and mudding the lake, but to perform the work in a thorough manner (it has not been cleaned out for, I think I can safely say, over thirty years), would entail the expenditure of a considerable sum of money. Yet I am perfectly convinced that if it were restored to a fishable condition, the cost of this very necessary operation would be soon recouped. The club would naturally obtain a large accession of members to its ranks, and would, at the same time, earn the thanks and gratitude of every true sportsman—especially of those anglers whose delight it has ever been to cast a line on thirty acres of the loveliest water one can possibly find anywhere near the great and growing metropolis. H. A. ROIT.

A NIGHT IN A MACKEREL BOAT.

ALL through the Easter holidays we had strong winds and rough seas, so that fishing was almost impossible, and on those few occasions when we were able to try for them the fish were conspicuous by their absence. But in the Scillies there is always some pleasant method of passing the time, and some fresh beauties of nature to be discovered, so what with wandering into the flower fields to help pick the blooms, tying them into bunches, and watching the men packing them for market, or climbing steep rocks after sea birds' eggs, or bunting among the seaweed for the humble winkle (which, by the bye, is larger and finer than that we are accustomed to see in London), the time passed all too quickly, and as I wanted to spend two days with my Newlyn friends I had to leave Scilly at 9.30 on the morning of Thursday, April 6. We had a strong head wind, and the Lyonesse dipped her nose into the waves or rolled from side to side as though she enjoyed getting as much of the sea on board as she could carry. I need not say the passengers did not share her enjoyment, for we got pretty wet and could not walk about with any comfort on her slippery decks. We left Scilly in a fog, but we soon left that behind us, and when we came in sight of the Wolf we could plainly see the breakers dashing against it, and the spray from them almost hiding the lighthouse. We passed several fishing boats riding at their nets and some, evidently not liking the look of the weather, making for harbour. Off the Long ships we saw a small tug making very heavy weather, but bravely putting and puffing away on some business which evidently brooked no delay; even from the deck of our steamer we frequently lost sight of it, and we none of us envied her crew, who were evidently having a very damp time of it. We soon lost sight even of her funnel, and gladly welcomed the familiar landmarks as they came into view one after the other, the Land's End being followed by the Logan Rock, Lamana Cove, Mouse-hole, and Newlyn, and finally Penzance Pierhead, where we gladly disembarked and went our several ways. After dinner at Penzance I walked over to Newlyn to arrange for a night on one of the mackerel boats, but as the weather was looking so dirty it was arranged that I should

defer my trip till the next day. I passed the afternoon very pleasantly watching the boats coming in and being fixed to their moorings, or the salesmen selling the fish as they were brought ashore; then, as the shades of night were falling, and I had promised my fisher friends to be round in good time in the morning, I bade them "good night" and made my way to Penzance, and as I was very tired went early to bed, but not to sleep, for the noise of the wind, which was blowing a gale, kept me awake, and I could not help feeling thankful that I was safe in bed instead of passing the night in a mackerel boat. After an early breakfast I returned to Newlyn to see how my friends had fared, and found this usually quiet and happy village the scene of terrible distress and excitement. No less than fourteen boats had broken out of the harbour during the night, taking their moorings with them; none knew what had become of them, or of three men who had gone with them; but one thing was certain, that most, if not all, of the boats which had been blown out of the harbour would be lost, and their owners ruined. The catastrophe had occurred at the end of a long and trying winter, and just at the commencement of the fishing season, so it was no wonder that some of the poor fellows were almost heart-broken, and could scarcely trust themselves to speak of the ruin which had so suddenly overtaken themselves and their families; but the anxiety about the fate of the three men who had been on board the boats swallowed up every other feeling. As the day wore on reports began to come in. The first news was that one of the boats with a man aboard had run safely into Marazion Harbour; then, from Porth Leven, that a boat had been driven ashore there with a man on board. The fishermen, seeing her coming in, joined hands and went into the water up to their necks, then, as she struck, called on the man to jump, and catching him, pulled him ashore. Two men saved, but no news of the third. Then from Frab Sands, from Mullion, from Prussia Cove came reports thick and fast of boats ashore and broken up nets and gear destroyed, until the number totalled ten. Nothing could be ascertained of the other three, but after a week the third man telegraphed from Gravesend that he was safe, and his boat has been towed into Brixham by a trawler from that harbour. The remaining two boats probably sank, for nothing has been seen or heard of them. The Newlyn men alone lost in this one night £4000 worth of boats and gear, and later in the day the east country boats began to come in with a tale of disaster and loss of life. Two boats were sailing together near the Long ships, when the lights of one of them disappeared, and eight men found a watery grave. Another boat reported seeing a large steamer go down without being able to do anything to save those on board; and a steamer came in reporting the loss of her captain, mate, and three of the crew washed overboard. Truly never before had such a black Friday been known in Newlyn. Besides the loss of life, the east country boats lost nets, &c., of the value of £20,000. Altogether the loss to the fishermen of the west and east country will not be much under £30,000. The Lord Mayor of London has opened a fund for these distressed fishermen, and I hope all sea anglers will give their mite to assist those who have suffered so much through this terrible night on their mackerel boats. W. J. SIMPSON LADELL.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—It is now just twenty years since the committee of the Thames Angling Preservation Society raised the question in regard to the trout fishing season, in making an alteration as to its time of commencement from the 26th day of January to the 1st day of April, and would then assimilate with the new rules of the upper portion of the river above the City Stone at Staines, which had then passed into the hands of the Board of Thames Conservancy, and this proceeding on the part of the T.A.P.S. was successfully recognised by the conservators. There were other important alterations at that time suggested by the committee: the abolition of snatching fish as both cruel and unsportsmanlike, and the laying of night lines, through which many of the best trout in the river were taken—both of which at that time were practised to a considerable and lamentable extent—and, from the weighty evidence that was collected, left no doubt in the minds of the conservators that it was absolutely necessary to make additional bye-laws to regard them as illegal and punishable offences. I am sure Mr. Alfred Nuthall, who was then on the committee, and took an active part in the work, will endorse my remark; they were two of the greatest evils that ever existed on the Thames, and no one was more delighted than himself when the new bye laws were approved by Her Majesty in Council at the court at Balmoral on the 28th day of October, 1879.—B.

—(**Datchet**).—The trout seem to be moving a bit better at last. Had a fine fish on Monday evening, 6h. On Tuesday I was out a couple of hours, between nine and eleven, saw several more, lost one of them. Wednesday morning I saw one or two more. I have not been out of sight of the landing here since I wrote last. I hope to be among them this week if they continue to move. I know where there are some, if I can get time or anyone turns up. LATER.—Since writing I have been out with Mr. J. C. Tryon, who caught a lovely game fish of nearly 5lb.—G. LUMSDEN.

—(**Hampton**).—The customary netting of the cutting in Platts Egrot, at Hampton, took place on Wednesday afternoon, under the superintendence of head river keeper William Douglas, of the T.A.P.S., out of which were taken a good four bushels of fish, nearly all perch, up to

2lb. each, a carp of 3lb., and a few pike up to 6lb. All the perch are reported as having spawned, and the cutting is going to be filled in. Mr. Benn, boatbuilder, kindly lent a punt, and greatly helped in the removal of the fish into the river.—B.

—(**Hampton Court**).—William Milbourne, writing on Tuesday, says: "There has not been anything done but one small trout weighing 1lb. 12oz., that was caught by Mr. Gunn at the weir. The last few days the trout have been showing well, and the water in good condition, but no one comes to try for them." I am afraid the trout fishers are not so numerous as in days gone by, as the fishermen generally remark, "There are plenty of trout to be taken if the anglers will only put in an appearance."—B.

—(**Shepperton**).—George Rosewell, writing on Monday, says: "Had two more fish, bringing my total up to five this season; not so bad, after all. You see, I only wanted patrons, and I could find the whereabouts of the trout for them. Mr. R. Coles had a nice one of 3½lb., and Mr. Atwood one of 6lb. If we could only get warmer nights there would be some good ones taken."—B.

—(**Sunbury**).—Messrs. T. and A. Stroud kindly inform me that Mr. Brooks, fishing from one of their punts, creel a nice trout of 5½lb.—B.

—(**Teddington**).—Mr. Gunston, of the Twickenham Piscatorial Society, fishing with John Johnson, of Kingston, on Friday last, caught a nice trout of 3½lb.; and the same fisherman, the following day, with another gentleman, who lost a larger fish.—B.

Ancholme District.—The continued cold weather retards the hatching of aquatic flies, and the season is very late. We usually have the Hawthorn Fly by now, but none are yet in evidence. One basket of ten nice trout was taken during the week. The largest fish was 1½lb.—THOMAS FORD (Caistor).

Cornish Streams.—The rivers are all very low, and perfectly clear. Few anglers have been out within the past few days. Mr. C. Vyvyan got twenty-one and twenty-three trout on separate days, on the De Lank stream; and another rod got thirty-eight on the Ruthern, the heaviest 2lb. Peal are not beginning to run yet, although in the Tavy one was caught a week ago. Heavy rain is much wanted.—BODMIN.

Cray.—There is more water in this little river this season, and the fish were rising fairly this afternoon. I had a lot of small fish (chiefly on Red Quill Gnat), but had to put most of them back. The large fish will not rise much in this stream.—J. P. T.

Darent (Farningham, South Darent, &c.)—At last the fish are beginning to rise regularly, though only for a few minutes at a time. I watched them the other evening taking little duns in quite the old-fashioned way, but no one put a fly over them. The few fish that were taken had been chiefly victims to wet fly. Prospects, however, are now fairly good, though water is still scarce, and likely to remain so, in spite of all the rain we have had this spring. Best fly, Red Quill Gnat.—J. P. T.

Dart (Totnes and District).—The best sport with trout has been obtained in the evenings with the natural minnow. Dr. Norman, of Paignton, has had a couple of dozen, and Mr. Persbonse, of Torquay, who has been fishing near Streteford, has killed a similar number on some days. On Monday evening W. L. P. Horswell creel a dozen, and Messrs. H. T. Distin and E. Distin basketed a few brace of nice fish; Mr. H. Full killing nine. Small creels have also been made by Messrs. E. Ackrell, M. Revell, T. Browne, and others, but others are very prevalent, and interfere with sport. Peal, truff, and salmon are scarce, although a few salmon were killed on the moor last week. The Rev. C. Rickards, of Princetown, landed one with Childer's fly, and Mr. Martin secured a 17½-pounder and one of 14½lb. with a Durbam Ranger. After the natural minnow, flies used are Edmond's Palmer, Blue and Yellow Body, Olive Dan, and Black Midge.—DEVONIAN.

Devonshire Streams.—The streams have decreased in volume, and need rain again, although the recent spate did a lot of good. Trouting is not productive of anything like large baskets, the fish lying more in the stickles, but the best takes are about twelve brace. Sport has not been quite so good in the district; around the southern border, where bright coloured flies take well in the pools, and Grannom, Stone, or Blue Upright are also used. The Avon, Dart, and southern streams are quiet, and visitors are not yet numerous on the former, although the waters on Dartmoor are too freely patronised to allow of much good individual sport. Takes of salmon are few and far between. Mr. C. Beresford killed one on the Torridge at Bean, and Mr. C. Pearson added a 20-pounder to his list, the fish being landed at Hele. The Blue Upright and Red Spinner are killing flies for trout.—DEVONIAN.

Esk (Whitby).—Sport has been much improved on this river during the past week, though the majority of takes have been effected in the small streams. On the association water, Mr. J. W. Nicholson has landed five brace; whilst Dr. English has landed five brace also. On the other portion of the river the catches recorded are: Mr. T. Gray, seven brace; Mr. T. Stanforth, six brace; Mr. A. Stanforth, eight brace; Mr. J. Gidden, seven brace; Mr. R. Saddler, eight brace; Capt. Long, three brace. With the continuance of favourable conditions better sport is anticipated. At present the association water is not much fished by enthusiasts, the lower water being probably more remunerative.—J. JACKSON.

Exe and Canal (Exeter).—Fair weather has prevailed during this past week, but wind still hngs the easterly country, to the intense disgust of fly fishermen of course, whose bags generally have not been heavy. Surgeon-Major Barrington, whilst spinning for salmon near Thorverton, killed a fine pike of 17½lb.; and Mr. J. A. Kelley secured another of 7lb. and a brace of perch, 1½lb. and 1lb. Pike fishermen proper will, of course, term

this "unsportsmanlike," but as these fish are denizens of a high class trout preserve, they, in common with perch, are given scant consideration. It is very regrettable, from a sporting point of view, that these fish frequently thrive best where not wanted.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Better things are noticed in the trout fishing district, owing to the warmer weather. But it is some years since we had such poor weather up to the middle of May. Fly fishing is really very poor, scarcely anything but land flies are to be seen, and trout are only rising in the evening. I hear it is likely that the Peterborough anglers will have during the summer an accession to their ranks. Sheffield anglers have been applying for permission to fish their waters on the Nene, and the Peterborough Association have determined to admit them on the same terms as local members.—LIMPET.

Idle District (North Notts.).—Trout fishing is still very quiet on the Idle, Rytton, and other waters running north. But the waters running south to the Trent have had fair patronage from their members. Captures, however, are not of much account. Among the best items noticed is the capture of a trout at Blyth, on the Rytton, scaling 2½lb. Several other fish of a goodly size have come from the same locality. Odd fish are also got from the Idle, bottom fishing in the deep waters between Retford and Maltersay.—L.

Lake Vyrnwy (N. Wales).—During the week 270 fish were killed on the lake, the total weight being 167lb. 11oz. The weather has been against big baskets, as the wind has been keeping between N. and N.E. On the 3rd, seventy-three fish weighed 43lb. 10oz. Capt. Garnett made the best basket with eighteen fish, 10lb. 10oz.; Mr. Chambers killed eleven, 5lb. 9oz.; Mr. Isaac, eight, 5lb. 4oz.; Capt. F. H. Garnett, six, 3lb. 8oz.; Mr. Paliaret, five, 2lb. 14oz.; Mr. Jackson, five, 3lb. 10oz.; and the Rev. Cheshire, five, 2lb. 10oz. The remaining baskets contained less than five each. On the 4th, fifty-one fish scaled 32lb. 10oz. Rev. Burnside made the best basket with ten, 6lb. 4oz.; Mr. Lyett was second with eight, 4lb. 5oz.; Mr. Chambers next with six, 3lb. 8oz.; Mr. Jackson, five, 3lb. 5oz. On the 5th, forty-five fish were taken weighing 26lb. 11oz. Rev. Burnside killed eleven, 6lb. 4oz.; Capt. F. H. Garnett, nine, 5lb. 8oz.; Mr. Henty, nine, 5lb. 14oz.; Capt. Garnett, seven, 4lb. 10oz.; and Mr. Chambers, eight, 4lb. 5oz. On the 6th, forty fish weighed 25lb. 13oz. Mr. Isaac killed twelve, 7lb. 2oz.; Capt. Garnett, 6lb. 6oz.; Mr. Chambers, six, 4lb. 10oz.; and Mr. Paliaret, five, 3lb. 6oz. On the 8th, thirty-three fish weighed 21lb. 4oz. Mr. Henty killed seven, 4lb. 2oz.; Mr. Gee, six, 4lb. 14oz.; Mr. Isaac, five, 2lb. 13oz.; Mr. R. L. Garnett, four, 2lb. 8oz.; Mr. Jackson, four, 2lb. 13oz.; and Mr. Shaw, three, 1lb. 12oz. On the 9th (a bitterly cold day) only twenty-eight fish were killed, weighing 18lb. 4oz. Capt. Garnett creel ten, 6lb. 10oz.; Mr. Jackson, six, 3lb. 12oz.; Mr. R. L. Garnett, four, 2lb. 12oz.; Mr. Henty, three, 2lb. 10oz.; Mr. Shaw, three, 2lb. 10oz.; and Col. Doncaster, two, 1lb. 2oz. The fishing on the rivers has been exceptionally good, the best baskets of the week being made by Rev. Cheshire, who killed forty fish on the 5th.—LONGDRIFT.

Lark (Ecklingham and Lackford).—The cold north-east wind prevailing during the past week has been against trout fishing. I can only hear of two small fish being taken, by Mr. H. Mayhew and Mr. L. F. Best. Mr. A. J. Harvey, out on the 4th, secured two pike. Nice rain here to-day (Tuesday), with warmer wind, which I trust will improve sport.—A. E. KEMP.

Lea and Tributaries.—The Lea is in pretty fair order, and anglers are only waiting for warm weather to do execution among the trout. Cold nights and unfavourable winds have during the past week militated against success among these fish. Mr. Chapman is credited with four trout, weighing 7½lb., secured from the Hertford district, and here Mr. Tehbunt has taken a trout, and other anglers are reported to have had fish. Last week's 3lb. 14oz. trout was landed by Mr. Savage. Up to the time of writing I cannot hear of any trout captures at either Ware or St. Margaret's, and reports (as far as trout are concerned) bring no good news from Rye House, Hoddessden, or Broxbourne. A trout of 2lb. and a pike of about 4½lb. have been found floating dead in the river at Ware—it is to be hoped, not the result of pollution. There have been some pike and perch caught here and returned by trout anglers. The Beane is low but fresh, and has yielded some nice trout in the Hertford district. A boy named Currell has secured a brace and a half, including a fish of 3lb. 9oz.; and Mr. C. Mead, in two outings, has landed two and a half brace, the best fish 2lb. 3oz. and 1lb. 10oz. In Oram's water (Hertford), Mr. W. Garratt has killed a trout of 2lb. 8oz. Trout should now be met with among the trout in the Rib, Amwell Magna, Ash, &c.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these noted streams are now running clear and a nice level, and in good order for fishing. The weather has turned from cold, with east winds, to fine, and Wednesday was one of the first days of summer. The cold weather was against fishing, but a few showers of rain have brought the fish to rise well, and they are now well on the feed, and are taking Yellow Dun, Blue Dun, and Coch-y-Bondhu, and the Alder Fly may be expected any day. A few rods have been out, but there has been no good dishes of fish landed. By the end of the week there is every possibility of good sport. The Pinsley is now clear and in good order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in capital trim, yet sport has not been up to the average for time of year, in fact, quite the reverse. Tuesday, 9th inst., we had a few hours' gentle rain, which has certainly improved conditions, and if the wind would only shift from the neighbourhood of N.E.

prospects would mend at once. Fish are backward in condition. Alder is just coming out. Yellow Dun, Rusty Blue, Stone, Iron Blue, Hardy Brown, and Grey and Red Spinners are all on the water, though not nearly in as great quantity as usual.—R. T. WILLIAMS.

Nene (Peterborough).—I am pleased to be able to announce that it has been decided to cut the weeds in the river for the "summer swims" from Woodstone Stannch to the Thicket, the cost being borne by the Peterborough Angling Association. A deputation of the Sheffield Angling Association has waited upon the secretary of the Peterborough Association, and made an offer of £6 per annum for their members to be allowed to fish in the Peterborough Society's water, which was declined, as it was pointed out that some thousands of Sheffielders might avail themselves of the fishing if it were accepted. It was decided that the Sheffielders could only fish in the waters of the association by paying the same fees as the ordinary members.—E. A. S.

Plymouth.—I have just returned from a three weeks' trip on the moor. On the whole the weather was not very good for fishing. There were one or two days, however, after rain that afforded good sport. The Meavy, Walkham, Tavy, and the Dart have all been in flood, and the peal have had a good chance of running up the rivers. I noticed in the Devonport beat a great number of caddis fly. On Wednesday the beat was run off, and in the small pools several of these caddis worms could be seen. In fact, I noticed more than one leave the shell, and come to the surface fluttering its wings. This explodes the idea that we do not get the May Fly here. Burnaton Reservoir is finished and full of water. It certainly looks a fine piece of water. It is about one and a half miles long, about one mile wide, and the deepest spot is 77ft. We shall have some good sport there in time to come, and with proper care it should bring in a good revenue.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—Up to the commencement of the present week the wind has blown raw and cold, persistently from the north-east or east, but on Tuesday a very welcome change set in, heralded by frequent peals of thunder, and since that time the weather has been all that could be desired from an angling point of view, as many flies are now on the water, and the trout are now rising freely, so that good bags are being made on all these rivers, and more especially on the Tanat and Cain. Anglers have also had a good time in the neighbourhood of Ardlean, about three miles from Llanymynech, on the Welshpool-road, where several fair sized pike have been taken from the canal, and also some nice eels, which were highly prized by their captors—gentlemen from the neighbourhood of Manchester. Mr. Edmund Buckley's other hounds have had capital sport in this neighbourhood. On Tuesday, meeting at the mouth of the Tanat, they had an hour's first-class excitement, and killed an otter which weighed 19lb. On Wednesday, on the same river, above Pen-y-bont Bridge, they also captured a large male otter, which turned the scale at 22lb., after a long chase, in the presence of a large number of ladies and gentlemen, and in splendid weather.—VYRNWY.

Slapton, South Devon (Royal Sands Hotel).—Fishing on the Slapton Ley, a lady in one boat ran thirty pike and caught twenty; a gentleman in another boat ran twelve and caught eleven; the third boat ran eleven and caught nine. On Wednesday, up to luncheon time, nine pike were caught.—J. C.

Sussex Rivers and Chichester Harbour.—With fine weather, streams and rivers are on the bright side, and dace fishing on the Ouse has not been a success. A bag of nine fish was taken by a Lewes angler, and others have taken from five to seven fish. The average has been 5oz., and the leading flies Wickham, Red Palmer, and Coachman. A few trout have been taken at Bolney, where a few fish may always be found. From the main river—the Ouse—in the upper reaches trout up to 1½lb. have been secured with minnow, and from the tributaries from four to six brace a day, principally with worm. A short rod and strong tackle is imperative, as the roots and sunken timber allow of no play. The tributaries of the Adur have yielded a few trout. One fish of 2lb. was taken recently from a culvert near Beeding with maiden loch; and, with permission, a few nice fish may be taken in this locality. The scenery on the Rother is now well worth a visit to the artist angler, and good trout are to be had, although few and far between. A brace of fish, weighing together 2lb. 10oz., were taken on Monday with minnow, and a heavier fish lost. Smelt fishing in Chichester Harbour has not been so prolific. From four to nine dozen have been taken per tide with rsgworm. Chichester Canal is teeming with all kinds of fish. Roach are somewhat late in spawning. Carp of 14lb. may be seen in the basin and under the bridges.—GEORGE F. SALTER.

Taff (Llandowor, Carmarthenshire).—Good sport is being had with trout, and some nice baskets taken during the past few days. The water continues in good order.—H.

Taw (North Devon).—Since my last, when the rain raised the waters, I heard of some nice takes of trout, but the frosty nights and east wind has caused the rivers to run down almost to summer level. Rain is wanted seriously. Salmon fishing is a complete failure. On my road to Exeter, Saturday, travelling with fishermen going back, the rivers were our attraction, and for forty miles I only saw one gentleman fishing, and I heard he took nothing; the rivers were too low and bright. Should rain come now that the weather is warmer some nice catches will be had.—RUSTY GAME.

Teifi (Llandysil, South Wales).—River in good condition, and good baskets of trout have been caught this last week from 10lb. to 3½lb. Six salmon also taken from 10lb. to 18lb. by local fishermen and visitors.—S.

Teme (Ludlow).—The Teme in this part is still running clear and a nice level, and in good order for fishing. The weather up to Wednesday has been very cold, and with easterly winds prevailing, and has been against good sport. There has been a good few rods out, but the fish have not been rising well. On Tuesday rain fell in this part and refreshed the river, and on Wednesday the weather changed warm and like summer, and the fish were rising well at the fly. The best flies to use are the Blue Dun, Iron Blue, Cowdung, Yellow Dun, Stone Fly, and Coch-y-bondhu. Worm fishing has been tried in the deep water with good success. Minnow fishing has met with but little success. In the water below Ludford there has been several gentlemen out, who have taken some very nice trout with Yellow Dun and Coch-y-bondhu, but no large baskets have been landed. With the worm, on Monday evening and Tuesday, good trout were landed. On Wednesday morning a nice lot of trout were caught with the Yellow Dun. The Ony, Corve, Cynn, and Ledwyche, are all running clear and a nice level, and sport in them has been better since Monday, and some nice sized fish taken, and the prospects for sport are good.—S. LUDLOW.

Teme (Tenbury).—In this district the water is now gone down, and is running clear and a nice level, and in capital order for angling. The weather has not been favourable for anglers to get out, with the east winds, but the fish have been rising during the middle of the day. Rain has been had in the district, which has refreshed the river, and to-day (Wednesday) the weather has taken up fine and warm, and after the rain the fish have been rising better, and there is now every prospect of some good sport being had. The best flies will be the Yellow Dun, Coch-y-bondhu, Blue Dun, and Red Spinner.—WORCESTER.

Usk (Abergavenny).—Water at present low and clear. There is a nice overcast to-day, and trout ought to move. Have not heard of any salmon being taken recently. The lad's body, of which I reported last week, has not yet been found, although Supt. Matthew Williams and W. Gale, water bailiff, and others are doing all in their power to find it. It would be great satisfaction to the parents if the body was recovered, as the suspense must be very trying to them. A Mrs. Morgan has been missing since Sunday last; her cloak and hat have been found on the bank of the river by a man named Connelly. It is surmised that she has drowned herself. Searchers with drags have been busy up till to-day (Tuesday), but with no effect.—E. DELAFIELD.

Usk and Tributaries (Senny Bridge).—Rivers at present are very clear, and are getting low again. The trout now are beginning to rise better in the evening. Mr. Gerald Eden managed to catch a basket of 5lb. last Saturday with the fly. It seems a general complaint here that there are not so many flies on the water this season as usual.—PONTSENY.

Witham, &c. (Mid-Lincolnshire).—Reports of sport in north Lincolnshire are very scarce. Even the fine weather of last week had not made much impression, according to the reports to hand. Vegetation is putting out vigorously, and but for the cold nights that have pretty generally prevailed we should have had here this a plentiful supply of flies of different kinds. As yet land flies are about the only ones to be seen, and trout are only rising towards sundown. Captures are very poor, and mostly with worm and grub.—LUCI.

Wye and Derwent (Derbyshire).—These rivers are in order for fly fishing, but no very heavy creels have been obtained owing, it is thought, to a cold north-east wind that has prevailed. A fair number of anglers have been out on the Wye, and a few nice trout have been taken, but not with satisfactory results for this time of the year, as the Yellow Sally is just making its appearance, and fly fishermen all know how eager trout are after this fly. The Hathersage and Chatsworth fisheries have had about an average number of rods, but reports are that the best baskets have not exceeded more than four or five brace. The Darley Dale Club's water has only had a few anglers during the past week, with only moderate success. Mr. Brown, on the lower reaches of this club's portion of the Derwent, has landed several brace of trout fishing with worm. The Matlock and Cromford Angling Association's water, Matlock Dale, has yielded some nice trout. Mr. E. H. Maule, on Tuesday, took a brace or two from this part of the Derwent with minnow; also on Monday, below Cromford, this gentleman landed three brace with Cooper's Farcy.—DOTTEREL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—There has been a falling off in sport this week. The frosty nights and brilliant days which prevailed from Friday until Monday caused our rivers to fall down very much, and most of them are now quite at summer level, and in the upper reaches are very bright, consequently only expert anglers can kill trout, and their takes are very poor. The few fish caught in the Yore have been taken with the natural minnow, fished on fine Ariel tackle in the rough streams. I have also heard of the capture of a nice dish or two of trout with the Stone Fly Creeper. As an instance of the late season, I may say I saw a large flock of fieldfares on my way to the Yore to-day. I never observed the fieldfare in the second week in May before. Reports from the waters of the Hawes Angling Association and the Wensleydale Angling Association are "poor sport generally," and it will not improve until after a fresher row. The Aire is getting low in the upper waters. The cold winds have been against sport in the Esk, one of the most successful anglers since the season opened being Dr. Dreaper, of Grosmont, who I knew as a keen hand on the Yore a few years ago. From Scarborough comes the news that the corporation are going to add 500 more tench, and a like number of perch, to the stock of fish in the mere, and that the water in the upper Derwent, Scalby and Burniston Beck, is running clear. The season so far has not

been good, and anglers up the Wharfe and Nidd are now looking for a fresher to improve matters. I hear Mr. Riley Fortune had good sport on the Yore last Saturday, getting twenty-one trout with the worm in two hours' fishing. But the best panner I have heard of this season is the one made by J. W. Lodge, Esq., of the Rookery, Bishopdale, in his own water, the Bishopdale Beck. He killed in two days ninety-six trout with the Orange Partridge hackle. Good baskets have been scarce on the Wharfe. Mr. Leech has, however, had a good day or two on the Ilkley length, and this water shows good returns so far this season. The club has a vacancy for one more member, and I shall be glad to give full particulars to anyone requiring good and select fishing. Mr. Mitchell has had fair sport on the Nidd, and reports a good rise of the Dark Wabset and Yellow Legged Bloa, but all the Niddersdale anglers are now complaining of low and clear water, bright sun, and cold north-east winds. The fishing in the Roundhay Park lakes, a boon to the Leeds anglers, has been fairly good this season. Some pike have been killed containing rainbows, and the Leeds Amalgamation must rid the water of these pests if the trout fishing is to be kept up. I hear some of the Northallerton anglers have had good sport in the Codbeck, the Rev. D. Jacob, Chaplain to H.M. Prison, being very successful. Some good dishes of trout have also been caught in the Bedale Beck, in the Constable Burton water, by Mr. Elliott and others.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAPH.—Considering low and bright water, some of the Yoredale anglers have been doing better than could be expected. Although there is yet a scarcity of natural flies, I found the Gravel Bed Fly, the Blue Midge of Jackson, well on yesterday; also Red Clock Bloas are few and far between, also the browns. Mr. Willis, Carperby, on Saturday killed fourteen nice trout with Dotted and Yellow, and on Tuesday thirty, all with Blue Dun and Snipe and Purple. Yesterday Mr. Kilburn had eighteen nice fish, caught with Grouse and Purple and Pout Bloa; Mr. Skidmore, Askrigg, had fair sport; Mr. Sadler caught a trout of 1½lb. below Aysgarth. Sport in Lake Semerwater, Mr. Wetherald getting thirty-seven trout in one day's fishing. It is raining heavily. This will freshen Yorkshire rivers and bring warmer weather. Prospects next week good.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Carron (Easter Ross, Ardgay, N.B.).—The weather has been most unfavourable, nevertheless the following sport has been got: On Tuesday, last week, Mr. Thorn, Bainsgown Arms Hotel, landed a salmon of 8lb. and a trout of 1lb. On Wednesday, Mr. Boosey, London, was out from the hotel, and caught a 10lb. salmon; and Mr. Thorn, an 11-pounder. On Saturday, Mr. Boosey landed one of 8lb. They were all caught on Dnie and Invercharon waters.—B.

Deveron (Banffshire).—Last week this river was in fair fishing condition, the weather proving better, the frost not being so keen in the early mornings. Owing to the long continued drought, the water is getting limited in volume, which in a small stream like the Deveron checks the running of fish. On the Blairmore water, on the 2nd inst., Mr. A. Gauld, the keeper, had a new run fish of 7½lb.—the first of the season. On the 5th inst., on the Marnoch section, Mr. H. B. Leatham killed a salmon of 7lb.; and on the same day Mr. Walker, keeper, on the Corniehaugh section, landed four salmon, scaling 6lb., 7lb., 9½lb., and 10½lb. The yield from the net fishings on the river was from one to three fish daily, the average weight of which would be 8lb., the heaviest being 10lb. In the middle of last week the net fishermen caught a grilse—the first taken from the river this season—it scaled 2½lb. Last year it was the 13th of the month before they made their appearance in the river. A grilse of similar weight was also got in a bag net on the coast. At the various stations the yield was much like that of the previous week, half a dozen salmon being the highest number got at any of the stations. Now that grilse are coming on it is expected that the fishings both in the river and sea will improve. For the week ending Tuesday four boxes of fish were consigned to the markets; two less than that of the corresponding week last year.—H. W.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, on Friday, Mr. C. McIntyre caught twelve trout; Mr. Neale Thomson, fishing Loch Chon, caught five trout. On Saturday, Mr. C. McIntyre caught eight; and Mr. Neale Thomson, six. On Monday, Mr. Neale Thomson had a fine basket of thirteen trout (heaviest, 1lb. 7oz.); Major White, four trout.—H. M.

Lochleven (Kinross).—The weather has been too clear for sport during the past week, and there has been a considerable falling off in the number of trout captured since Thursday last week, though that day produced the heaviest yield of the season, viz., 433 trout to forty-three rods; the most successful anglers then being Mr. R. P. Wilson, Mar Rinch, who had forty-eight trout, 30lb.; and Mr. Gray, Edinburgh, who creeled forty trout, 23lb. Of nine clubs which competed the most successful was the Kinross Club, the catch to twenty-one rods being 194 trout, 102lb. 12oz. The heaviest prize basket was got by Mr. J. Fortune at that competition, and contained twenty-four which weighed 10lb. 11oz. Mr. G. Davies captured the heaviest trout. A competition was held by the Northumberland Club, at which nine members took part. Their catch was only twenty-nine trout, 15½lb. Mr. Vaughan secured first prize with eight. With a steadily falling barometer the ensuing week promises to afford the angler better sport. The brightness prevented fly fishing, and minnow has been the principal mode of capture. Most of the boats are already engaged for next week, and with

moist and milder weather, heavy catches should be got.—ROBERT LAING.

Loch Ness (Foyers Hotel), N.B.—The trout fishing on Loch Mhor was opened, with very good results, on April 27, by the Rev. T. J. Yarde, Chudleigh, who on the first day's fishing with fly had a chude of forty-one very fine trout, weighing 25lb. On Monday, May 1, the same gentleman killed eight trout, 7½lb.; Tuesday, fourteen trout, 9lb.; Wednesday, four trout, 4lb.; on Friday he again had forty-one trout, weighing 27lb.; on Saturday, five trout, 4lb. Taking into consideration the bright sunshine and easterly winds, the loch has given great satisfaction, and holds out promise of excellent sport this season.—S. TILSTON.

Loch Tay (Killin, N.B.).—April 29, Mr. Dymond killed a fine salmon of 14lb. May 1, Mr. Thomson, one, 23lb.; 2nd, Mr. Dymond, one, 17lb.; 3rd, Mr. Thomson, one, 16lb.; and Mr. Dymond, two, 15lb. and 16lb.; 8th, Mr. J. Trevor Davies, one, 16lb.—H. J. MAISEY.

Lyon (Portingall Hotel, Glen Lyon, Perthshire).—A gentleman fishing from the hotel (Mr. Stewart) landed a beautiful salmon, weight 16lb., on May 6. River in ply. Many salmon to be seen.—PAUL MACPHAIL.

Naver (Bettyhill, via Thurso, N.B.).—The weather has been too bright for angling, and river rather low. On Monday week Mr. Oats, Dalvina Lodge, landed four salmon on beats 2 and 3. On Tuesday the same angler had one on No. 1. On Wednesday, Major Burnell Milnes, Dalvina Lodge, caught a salmon on No. 2; Mr. Oats, one on No. 3; Mr. Blood, Skelpick Lodge, two on No. 1; Master Gill, Syre Lodge, one on No. 4; Mr. Gill, one on No. 5; and Mr. Anderson, Syre Lodge, one on No. 6. On Thursday, the Skelpick Lodge rods caught three salmon on beats 2 and 3. On Friday, Mr. Gill, Syre Lodge, had one on No. 1; Mr. Lawrence, Skelpick Lodge, two on No. 2; and Master Gill, one on No. 6. On Saturday, Mr. Gill had one on No. 2, and Mr. Lawrence one on No. 3, which made a total of twenty-one salmon for the week.—B.

North-East of Scotland.—Sport is steadily improving, and particularly so on the middle and upper waters of the Dee, Spey, &c. Bar the easterly winds angling conditions could not be better. The coast fishing is still in a backward condition generally, and very few grilse are as yet making their appearance. A genial shower would do a vast amount of good. On the Braemar waters Mr. Granville Farquhar had four fish on the Invercauld reach on Friday, scaling 6½lb., 7½lb., 8lb., and 16lb., and one on Saturday of 6lb. On Tuesday he had another of 14lb.; while Mr. Page had two of 6lb. each; and Mr. Farquhar one of 5lb. Her Majesty the Queen is due at Balmoral on the 27th, meantime the royal keepers are getting one or two fish daily. On the Ballater waters, Mr. Griffith, Mr. Wigelow, and others have had one or two fish daily. On the Crathie section, Major Shnt creeled one of 6lb. On the Glentana waters, last week, Mr. Barclay creeled four fish, scaling 4lb., 12lb., 12½lb., and 14lb., six, of 4½lb., 5lb., 5½lb., 6lb., 7lb., and 15½lb., four, of 5½lb., 6lb., 14½lb., and 26lb., and so on daily for the week; while Mr. Laming had one of 6½lb., three, of 6½lb., 7lb., and 16lb., two of 7½lb. each; and Mr. Farrer, two, of 8lb. and 5lb., one of 7½lb., one of 7lb.; and Major Scott, two, of 6lb. and 7lb. On the Huntley Arms waters, Dr. Lewis, last week, had six fish, scaling 8lb., 7lb., 6lb., 8lb., 6lb., and 11lb.; Mr. Younger, one of 8lb.; Mr. Whitelaw, four, of 6lb., 13lb., 9lb., and 7lb.; Mr. McNeil, one of 13lb.; Mr. Fife-Jameson one of 5lb.; and Mr. Allan, four, of 5lb., 6lb., 6lb., and 8lb. On the Dees water, Major Davidson and friends landed six, scaling from 6lb. to 8½lb. On the Lodge water, Mr. James G. Orr had two, of 6lb. and 8lb. On Carlogie water, Mr. Wm. Monk-Gould landed two, of 6lb. and 12lb.; while Lord Lisburn had one on Borrowstone of 8lb., and Lord Garrioch, one of 10½lb. on the same beat. On the Ballorie section, John Sherit creeled one of 7lb., while Sandy Ross had two on Commonly water of 6lb. and 7lb. On the Woodend water, Mr. John Mortimer landed six of average weights, while Mr. Davies had several on the Upper Blackhall section. Sport improving steadily. On the Don good baskets of yellow trout were made, all to the fly. On the Ythan, Mr. G. M. Mackay, Aberdeen, had a basket of 16lb. on Saturday, on Ellon Castle waters, three of them over 1½lb., while Mr. Shepherd, Aberdeen, had a salmon of 9lb.; and eleven trout on Monday. On the upper waters Mr. Gordon had a salmon of 14lb. On the Ugie anglers had very good sport, several coming from the Cruden Bay Hotel. On the Deveron splendid baskets of trout are being made, and on Tuesday, Gould, keeper, had a fine fish of 7½lb. on Blairmore water.—G. M.

Shin (Inveran, N.B.).—Since last reported the sport by anglers from Sutherland Arms Hotel has been as follows: On 24th ult., Mr. Evans, one salmon, 20lb.; Mr. Jackson, two, 8lb. and 9lb.; and Mrs. Farrer, one of 8lb. On 25th, Mr. Johnson landed a 5-pounder; and Mr. Evans one of 18lb. On 26th, Mr. Evans caught one of 8lb. On 28th, Mr. Johnson grassed a 6-pounder; and on 29th, Miss Evans one of 10lb. On 1st inst., Sir John Ferguson Davie, Bart., of Creedy, Devonshire, got a salmon of 9lb. On 2nd, Sir John landed an 18-pounder; and Sir John Shelley, Bart., of Michaelgrove, Sussex, two, of 12lb. and 6lb. On 3rd, Sir John Ferguson Davie landed one of 9lb. Rest of the week blank. River too low and weather too bright.—B.

South of Scotland.—The Border rivers have been low and clear since Saturday—out of order for salmon fishing, but in nice ply for trout. The spring salmon fishing is ended, and there will be little done in the way of salmon fishing until the back-end of summer. Taken all over, the spring angling was a huge failure in this part of the country. Sea trout will take the place of salmon in June. By the end of that month the herling will be making their appearance, the best of all trout fishing on

the Border streams. During July, herling run up the Annan, Esk, Frith, and Galloway rivers in thousands. On the lower waters of the two former rivers the sport is good on favourable days. Anglers on the Borders have been greatly troubled by cold east winds during the day and snaps of frost in the early mornings. There has been no fly on the water to speak of for the past ten days, and trout have not been taking well. On the Annan not much has been done during the week. Fishing in the Luce part of Mount Annan water on Friday, Mr. Thorburn killed a clean run spring salmon of 9lb. on a Brown Turkey Fly. Mr. Thorburn also had a few yellow trout. The Rev. Mr. Coleby took about thirty yellow trout, but returned all but eight, owing to the trout being under condition. They were all taken with fly. Mr. Pasley Dirom's keeper killed two sea trout in the Mount Annan water, and one or two others have been caught during the past week. In the Solway Derwent around Cokermouth the cold east winds have kept the trout off the rise; nevertheless, some anglers had fair sport for an hour or two among yellow trout. The best baskets during the past week have been with worm bait. Mr. John Soulsby had a dozen yellow trout on the Derwent with worm; Mr. R. F. Brown and Mr. J. Parkin had nice baskets on the Cocker; Mr. J. Soulsby caught ten at another outing. Mr. Jas. Grave, Mr. Bowe, Mr. D. Pearson, Mr. Cooper, and Mr. Burn had fair sport last week. In the Galloway waters nothing comes to hand worth reporting this week. On the Dench of Carsphairn several anglers did fairly well among yellow trout, one gentleman killing two of fully 2lb. each. On the Ayrshire lochs and rivers sport has been very poor of late on the rivers, and little has been done since the last floods. A number of rods have been out on Loch Doon and Finlas. Nothing reaches me as to the results of the week.—HEATHER-BELL.

Tongue Hotel Waters.—Some excellent sport has been got on the Kyle since last reported. On April 27, the Rev. Mr. Mackay, Pitlochry, had six trout, weighing 9lb. On May 1, the same gentleman had five trout, 8lb. On the 2nd he had five fish, 9lb. On the 4th, Mr. Macinnes had two trout, 4½lb., heaviest 3½lb. On the 5th, Mr. Michell, Devon, had six trout, weighing 12lb., heaviest 3½lb. On the 6th, Master A. Mackay, Pitlochry, had five fish, weighing 14lb., heaviest 4½lb.—J. W. MACINNES.

Tweed, Teviot, and other Border Rivers.—Matters piscatorially in the Borderland have been fairly good during the past week, so far as trout angling is concerned, but as for salmon angling, that sport is just about as nearly as possible a "gone coon" (as the Yankees say). On all the famed waters in the Kelso district, and on some of those both above and below, not a single fish has been killed during the past ten days. The rivers are running in good full order, and the weather has also been favourable, but still no fish have been got, much to the surprise of many anglers, who have tried their luck on various of the fastnesses. The seeming want of salmon in the once famed stock-producing river (the Tweed) is now setting angling men to seriously meditating; and the query, "Where are all the fish gone now that need long ago to come up our river?" will take some explaining away. Trout fishers, however, have done fairly well as a rule, and one or two more fortunate than others have killed some large baskets. On the Tweed, on Wednesday last, Mr. James Steel, fishmonger, Kelso, fishing with fly and minnow, had nineteen beautiful trout, which drew the scale at 14½lb.; the next day, on the same river, in three hours' fishing, he had 5½lb.; on the former occasion one of Mr. Steel's trout just touched the beam at 2lb. 5oz., while three or four were fully 1lb. each. In his second day's fishing he killed a trout of 1lb. 2oz., and a grayling of 1½lb. On the same river, Mr. William Mercer, Kelso, has had baskets of 7lb., 9lb., and 10lb., and on the Teviot he had on Monday a very fine dish of 12lb. with worm—clear-water worm fishing. Mr. J. Stewart has also had takes of from 3lb. up to 5lb. and 6lb.; Mr. J. T. Thompson, Newcastle, on the Teviot, 6½lb. on Monday; Mr. James Arnall, 4½lb.; and Mr. Thomas Gregson, 6lb. All these baskets were killed with fly, the Greenwell and Partridge Spider (yellow body) being plentiful, and giving better feeding to the speckled beauties. Prospects for the net angling season are now looking somewhat brighter, more fish being got all over, and prices are now down to 2s. 3d. for both salmon and trout.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotel, Private Water, and Gortnorabbey Hotel, Lough Conn).—The weather has not been at all favourable for angling either on river or lake for the past week, but I am glad to state that it has now turned favourable, and I can now, with some confidence, recommend anglers to pay us a visit. Mr. MacNab killed one salmon, on Thursday, weighing 9lb., and two on Saturday, weighing 7lb. and 12lb. respectively. I have not heard of any other sport been had.—MANAGER.

Ballina (Private Waters, Moy Hotel).—Water in good order; south winds. Nets and weir doing well. Fair show of fish on the private waters. Some grilse have been taken in the nets, showing an early run. On the whole, prospects of fishing fair. There was three fish taken on the lough, one on Friday and two on Saturday. Mr. Schroop lost one on May 7, and rose another. Trout fishers at Runagry Lodge doing well.—JOHN DEVERNS.

Bann.—The frost at night for the past week has caused this river to fall about 12in., and many of the trout casts have been reduced to angling order. The temperature of the water has been too low for any of the Sedges to come to the surface yet. The local anglers are taking a few of the large trout off the banks. Mr. Robert Elder had two trout on the 6th, 1½lb. and 2lb. each, and one of 2½lb. on

the 8th. Good sport is expected in the coming week.—DANIEL O'FEE.

Belfast.—Trouting was rather poor this week on the dams. On Tuesday, Mr. J. M. Murray, Mr. Longhead, and Mr. Atkinson were out on Trooper's Lane Dam, and killed half a dozen fish each. Capt. E. R. O. Ludlow, D.A.A.G., and Mr. M. Stay were out several days, with fair success.—J. A. B.

Corrib (co. Galway).—The Corrib is fishing better now than any time since the season opened. Since my last notes Capt. Ottara killed three salmon; Mr. White, eight (heaviest 23lb.); and the Lydon brothers, twelve (heaviest 17½lb.). Fish seem to be plentiful, and as the weather gets warmer there will be a corresponding improvement in sport.—J. B.

Cummeragh and Inney.—On the Cummeragh, on one day last week, Col.-Surgeon Barry, Bayview Hotel, Waterville, fishing with Tim McCarthy, caught two salmon, 12½lb. and 9lb., and two nice trout, of 3½lb. and 1½lb. In the Inney trout fishers did very well in the late evenings.—T. J. D.

Erne (Ballyshannon and Belleek).—Trouting on the Erne during the past week was not very good, as the bright weather and harsh wind spoiled the chances of sport. The following gentlemen are now angling on the Erne: Mr. C. C. Ralli, Mr. E. A. Ralli, Mr. T. M. Pike, Mr. G. Antonini, Mr. Dandy, and Capt. Heygate. To-day the weather is looking changeable, and with some rain now sport would become good all round.—M. ROGAN AND SONS.

Killarney District.—There seems to be a misapprehension about the proposed sale of a part of the Lakes of Killarney. The water and land to be disposed of are: Muckross House, demesne lands, and deer forests, comprising 13,357 acres, the middle Lake of Killarney—Tore, or Muckross, as it is sometimes called—parts of the Devil's Punch Bowl and Mangerton Mountain, two-thirds of Purple, Durnishere, and Tore mountains, Muckross Abbey, Tore Waterfall, O'Sullivan's Cascade. It is stated that the price of £30,000 has been asked. Trouting on the lakes lately was fairly good, but salmon fishing poor.—J. A. B.

Lee (co. Cork).—The river rapidly running down to summer level. Some rain is badly wanted, as the grilse are just beginning to show, and a good flood would fill the river with them. On Ashton fishery, Mr. J. L. Peach, 7lb. On Mashonaglass, Mr. Allgood, 9lb., 9lb.; Capt. Douglas Penant, 6th Rifles, 6lb., and a grilse, 3lb. On Warrens Court, Mrs. Jameson, 32lb. (a record fish for this river); Mr. J. A. Jameson, 12lb., 12lb., 9lb., 8½lb., 8lb. On Oakgrove, Mr. F. M. Leader, 16lb. On Lee Mount, Mr. W. T. Crawshaw, 15lb. At Castlelynn, Mr. J. O'Brien, 10lb. At the Waterworks, Mr. J. O'Donnell, 9lb. Trout anglers are getting some good baskets on the small rivers. In the tidal water at Sundays Well trout are very numerous, and are rising freely in the evenings. Mr. S. Haynes, on the 4th inst., had four, 3½lb., 3½lb., 3½lb., and 1lb.—W. HAYNES AND SON.

Lough Conn (Cloghans).—In two and a half days the Rev. White got fifty-five trout, averaging 1lb.; Mr. Pitts, in two and a half days, got twenty trout, largest 6lb., smallest ½lb.; Mr. Higgins, in a few days, got some nice trout, average 1lb.; Mr. Carpenter got one salmon, 11lb., and four trout, on same day; Mr. McNabb and friend got three salmon, along with some handsome baskets of trout.—TOM CLARKE.

Lough Mask.—Ont from Mount Gable Hotel, Clonbur, Professor Patterson, of Aberdeen, on May 8, caught one gillaroo trout 6½lb., one brown trout, 6lb., one ditto, 4lb., and three, weighing together 5½lb., in all 22½lb. Major Ferguson got a beautiful specimen of gillaroo trout, nearly 6lb., with a lot of small ones ranging down to 1lb., on the fly. Prospects of sport very good. A most remarkable incident occurred while Professor Patterson was trolling. A large lake trout got on and pulled the rod out of his hand, which he failed in getting out of the lake. Six gillaroo trout, weighing 32lb., have been sent within the past ten days to be set up by Messrs. Cooper and Sons, London.—J. A. JOYCE.

Lough Melvin.—The weather during the past week was very unfavourable for angling, as a hard north-east wind prevailed all the time, and this, with sharp frosts at night and bright, sunny sky in daytime, retarded the chances of sport a good lot. The following are the particulars: Mr. A. J. Troup landed one salmon, of 11½lb., on 3rd inst.; Mr. J. R. T. Mulholland took a fine fresh run salmon, on same day, of 15lb.; Col. R. B. Wilson took one salmon, of 8½lb., on 5th inst.; Mr. A. J. Troup took one salmon, of 14lb., on 6th inst.; Mr. J. R. T. Mulholland took one salmon, of 9½lb., on 5th inst.; Mr. E. Mulhern took one salmon, of 8lb., on 6th inst.; Mr. J. Phillips took another, on same day, of 9lb.; and Mr. J. O'Brien took one salmon, of 8lb., on 8th inst. The Rev. Wm. Verner, Mr. W. King Edwards, and Mr. Wm. Neely took several trout (*Salmo ferax*) trolling, the largest trout taken weighing 5½lb., and caught by the Rev. Wm. Verner. Trout did not rise well to the fly since last report, in consequence of the very bright weather and north-east wind; still, a fair number of baskets of brown trout were taken, heaviest weighing 8½lb.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—The success of fly anglers was somewhat marred during the past week owing to the very sudden change to bright warm days, with easterly winds. Anglers were out in good numbers from Kinlough and Bndoran. Fair baskets were had in the early mornings and late evenings. Some nice trout were also had, trolling, from 1lb. to 4lb. Darker weather must be had before angling is again a success.—P. GALLAGHER.

Lough Neagh.—The pollen fishing continues fair, and the same applies to trout netting. It seems a pity to see so many of these beautiful fish, up to 8lb. and 10lb., taken

so ignominiously in a net. Trout fishing on the tributaries is very poor; in fact, the spring of 1899 has been one of the worst experienced for many years.—J. A. B.

Mountain Lakes (Waterville).—Sport has been good considering the unfavourable conditions. The following were the best baskets had on the different waters last week: On Coppal (bank fishing), one of three dozen brown trout; on Cummeravanig, one of thirty-four; on Coomavoher, one of forty; on Fiealougha, one of three dozen; on Drenane, one of twenty-nine; and on Coomcateun, one of thirty-three.—T. J. D.

Moy Hotel Private Waters (Ballina).—There is a fair spill of water in the river Moy, and to-day some few fish were got in the Boxes and in the nets below the bridge. The big floods this spring brought the early run of fish to Lough Conn, and it was rumoured in town to-day that three salmon have been killed in one day by one rod. It was also stated that one fish was got to-day in the nets above Foxford. A few fish have been seen throwing on the water leaved by the proprietor of Coghlan's Hotel at Foxford. The opinion entertained here is that nothing will save the salmon fishing in this river from utter ruin but an extension of the weekly close time.—INNISH-OWEN.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River in good order; weather fine; run of grilse getting more numerous. Mr. H. McNab, three salmon, 6½lb., 9lb., 12lb.; Mr. Harden, one salmon, 8½lb.; Mr. Perhouse, two salmon, 10lb., 15½lb.; Dr. Bailey, one grilse, 4lb.; Mr. C. L. Duncan, one salmon, 17lb., one grilse, 3½lb.; Mr. Douglas Carter, two salmon, 11lb., 12½lb., one grilse, 3lb. Trout anglers are doing fairly well. The lough is lowering fast, and every prospect of sport improving.—PAT HEARNES (Ballina).

Shannon and Lough Derg (Killaloe).—After three days excessively hot sun, which will hasten the rise of the Green Drake on Lough Derg, a few soft, refreshing showers descended last night, with the pleasing result that the ever welcome fly is to the fore to-day, not in any great numbers, to be sure, but sufficient to assure us of an early lake season. On yesterday, on the lake, young Mr. Courtney, of Newtown, got on the "dap" a dish of trout, largest 4lb. In my report last week I stated that the lake fishing would open about the 12th, so you see I have hit it off just nicely. Any number of English gentlemen and ladies coming over for the grand sport. Speaking to Capt. Gartside-Spaight, Master of the Derry Castle Harriers, near Killaloe, yesterday, he told me that last May (1893) he and his fisherman, James Lucas, fished the lake for a fortnight, and the bag each day amounted to from twelve to fifteen trout, weighing 25lb. Splendid sport, truly! Salmon fishing very indifferent this week. Major Traherne's fishermen, Patsy Ryan and W. Fogarty, killed yesterday a fish of 22lb.—S. J. HURLEY.

Shannon (Castellconnell).—During the preceding part of this season it has been remarked that salmon appeared scarce, and very few were seen at any time. Now there appears to have been a fresh arrival of a large number, as several have been seen rising during the past week on the various stretches. The brilliant sunshine which we have had has no doubt been the reason of the fish not taking freely. On Doonass, Mr. G. C. Williams killed one salmon, 30lb., on 6th. On Prospect, Mr. H. Chapman killed one salmon, 13lb., on 2nd. On New-garden, Mr. F. Cooper killed one salmon, 13lb., on 7th; and Mr. R. Greenfield, one salmon, 11lb., on 6th. On Woodlands, Mr. G. W. Greenhill killed one salmon, 12½lb., on 5th, and one salmon, 29lb., on 9th. On the Castle fishery, Mr. J. H. Wheatley killed one salmon, 14½lb., on 6th. On the same fishery, Mrs. E. T. Ingham killed one salmon, 15½lb., on 8th.—JOHN ENRIGHT AND SON.

Tyrone Rivers.—The Blackwater and Ballinderry are both low, and trouting has fallen off a little. A few days ago a Mr. M. Campbell, whilst fishing a pool known as "Sally's Hole," on the Blackwater, near Augher, killed a 27½lb. pike. The pike contained three rats, three spoon baits, and five hooks. A 21lb. pike was killed on the same pool a couple of years ago.—J. A. B.

Upper Lakes (Waterville, co. Kerry).—Sport continues pretty good on the above waters since last report, though the baskets would, of course, be far better but for the abnormally hot and bright weather of the past week. The best basket had on those waters last week was one of two dozen brown trout, got by Surgeon-Colonel Barry, on Monday.—T. J. D.

Westmeath Lakes (Mullingar).—We are on the very eve of the dapping season on the Westmeath lakes, and before these lines are in print the Green Drake will have made its appearance. I anticipate that sport will be pretty general about the 20th inst. Fortunately, we have had the wind in the east for the past ten days, and there are now indications of a change, so that the dapping time may come in all right this year. Very few fish have been taken since the season opened, so, if the weather be propitious, good sport is assured. Anglers are requested to return any rainbow trout they may hook, as these fish were only introduced into Loughs Ennel and Owel last October.—T. J. W.

It is the custom in a certain village when a farmer kills a sheep for him to send round first to the squire's lady, then to the parson, afterwards to the doctor, and so on in order of precedence, to ask them if they will take some of the meat, and what joints they would like. On one occasion the farmer sent the usual message to say that a sheep would be killed, and each gave an order for the joint selected. When the meat was delivered, the parson's wife said: "I ordered mutton, but this is pork." "Oh, it's all right, ma'am," was the reply, "father was obliged to kill a pig, as the sheep got better."

Angling Fixtures.

May 14.

Islington Brothers: Brake outing.
Second Surrey: Dinner and distribution.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening**. Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The adjourned annual delegate meeting will take place on Monday evening next, May 15, at 8.30. The Netting Fund Committee will meet at 7.30.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £20s. 2d. from the Cambridge Heath Bros., 11s. 2d. Friendship Angling Societies Donation Boxes, 10s. 6d. Izaak Walton, and 5s. Dr. Leapingwell, President Conservative A.S., as annual subscription. On and after May 26, the committee meetings will be held at the Club Union Buildings (adjoining Holborn Town Hall), Clerkenwell-road, instead of the Foresters' Hall.—R. GHURNEY.

Anglers' Association Visiting List.—The next visit on the above List will take place on Tuesday, May 16, at the Blackfriars A.S., the Imperial Hotel, Southwark-street.—E. ROWLES.

Albion Brothers' Angling Society. The Frampton Arms, Well-street, Hackney.—On May 10 there was a fairly well attended meeting, new members were elected, and a lot of business got through. Members please note Wednesday next is yearly night, when it is hoped all will attend, as there is important business to settle re dinner and distribution.—C. J. KING.

Allason United Brothers' Angling Society. Dnke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The ninth annual dinner took place on May 10. Mr. A. R. Matthews occupied the chair, and Mr. G. King the vice. Everything was of usual quality at these festive gatherings. After due justice was paid to the good things at the dinner, and the cloth cleared, the distribution of prizes was awarded by the chairman, the chief winners being Messrs. Sheppard, Abbott, Ben, Barker, Brasington, Turner, Jackson, Leslie, Barlow, Marchant, Prouter, Blades, Hunt, West, &c. The chairman offered £1 ls. in value for two specimen roach, and we have got quite forty prizes just for a start, and will still add to list. I tender thanks to Elgin and Prince Albert Angling Societies for their presence, and all donors, pianist, and all kind friends.—BEN ABRAHAMS.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On May 16 the ninth annual supper and distribution of prizes will take place at

the above. Harmony will follow, when we will be pleased to see any friend that will give us a look in.—J. CHAMBERS.

Amicable Waltonian Angling Society. The Fox and French Horn, Clerkenwell Green.—The Bohemian concert, which took place at the above on Monday last, was a great success, a very large company being present. Mr. W. Musgrave having charge of the musical department, some really excellent talent was produced, and a very successful evening passed. Mr. Frank Newton took the chair, supported during the evening by Mr. Elsmore, vice-president of the Central Association; W. J. Wade, secretary of the same; J. Smith, W. Musgrave, and a host of others. Mr. Fred Thorling, of the St. John's, opened our A.B.S. box, and it was found to contain the sum of £3 2s. I beg to return the thanks of the A.W. to all those gentlemen and ladies who supported us. At the last meeting of the above on May 10 some further prizes were added to our list, and a sum of money voted for a prize for the Central competition.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Wednesday evening Mr. W. Marchant was elected a working member. Our supper and distribution of prizes will take place at this address on Wednesday, May 17, at 8 p.m. sharp, when I hope all members will attend.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Annual dinner and distribution next Tuesday, May 16. Hope to see a good muster of members and friends. Dinner on table at 8.15; concert to follow.—A. JENKINS.

Battersea Piscatorialists, Lord Ranelagh, Verona-street, Battersea.—Our second annual dinner and distribution of prizes took place on the 10th, when we sat down to a splendid spread, provided by Mr. Chubb, of East Hill, Wandsworth. After dinner came the prizes. Mr. A. Painter, first; T. Tringham, second; W. Keene, third; and Messrs. H. White, C. Harris, E. Collins, S. Death, and A. White in the order named, the remainder of the evening being spent in harmony. Some capital songs were sung by Mr. G. Fowler, W. Keene and Ottaway (piano and violin duet), Mr. Bridges, Knight, Marquarth, J. Thorn, of the Clapham Junction A.S., and others. Our prize list for the ensuing season being contributed to by Messrs. E. Wilson, G. Fowler, J. Papworth, Painter, Tringham, C. Saunders, J. Anderson, Mr. Graves, W. T. Montague, sen., Mr. Cousins, A. Slingo, and others promised during season.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack Bermondsey-street, S.E.—The annual dinner and distribution of prizes will take place on Tuesday, May 30, Mr. H. J. Henlon, president, in the chair.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Our supper and distribution of prizes was a record one. Fifty-five sat down to a very good supper, in fact, our room looked more like a Lord Mayor's feast than a working man angler's club. Mr. G. H. Shepherd ably occupied the chair, supported by Mr. Crumple as vice-chair, in the unavoidable absence of Mr. Wade, from whom we received a letter of regret. We had a grand array of talented artistes, our most successful members being Mr. Merrygold, Mr. Howard, and Mr. Wheelhouse. The prize list offered for ensuing season reached in the room no less than thirty guineas. We have also, on Wednesday evening, received promises of another five guineas. I wish to thank Mr. G. H. Shepherd, Mr. Crumple, and all other gentlemen for bringing our event to such a grand conclusion; also I wish to thank Mr. Maurice Cowan, Mr. Musgrave, and the Holloway contingent; also all the talent that honoured us with their presence. I wish to remind members and brother anglers that we take a visit on the S.L.U.V. and Anglers' Association List on Tuesday, May 16, when I hope to see a good muster, as we have an old Colonel that is doing his duty like a soldier and a man.—WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On May 10 Mr. J. W. Blake was elected a working member. The twenty-seventh annual supper takes place on May 18, on which occasion the chair will be occupied by Mr. R. Lummes, supported by Mr. J. Pailles, after which the distribution of prizes and concert will take place, when the company of brother anglers and friends is invited. Will members and friends kindly forward their prizes, and oblige?—T. PATERNOSTER.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—On Wednesday evening, May 17, Messrs. Taylor, Ward, and Jones will give a lantern entertainment (comic only). The proceeds of which will go towards the benefit of the widow of the late Mr. Harry Patman.—J. H.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—Our fifth annual dinner was held on May 3 at the above house, there being eighty-two members and friends present. Sir M. Blownaggre, M.P., presided, and the vice-chair was occupied by Mr. H. Everett. Many prominent anglers were present. A capital dinner, nicely cooked and served, was placed on the tables by host B. Williams, which was done ample justice to by the company. The chairman proposed "The Cambridge Heath Brothers," and said he was glad to hear that the membership had reached seventy-two, and trusted to be often with them. Mr. A. Taylor proposed "The Health of the Chairman," saying how pleased they all were to have him with them. The toast was drunk with musical honours. A start was made with the prize list for coming season. Sir M. Blownaggre headed it with £3 3s.; B. Williams, £3 3s.; H. Everett, £2 2s.; B. Morley, £1 1s.; E. Brockett, £1 1s.; C. J. King, £1 1s.; and three special prizes; Messener, £1 1s.; W. Argent, £1 1s.; H. Deverill, £1 1s.; J. Eaton, 10s. 6d.; F. Newton, Hoxton Brothers, 10s. 6d.; E. Luffingham, 10s. 6d., until the list reached

the total of £42. The rest of the evening was spent in harmony; the health of the host and hostess was well received, and at 2 a.m. Auld Lang Syne brought to a close the most enjoyable and successful dinner that it has been my pleasure to be present at. On May 17 we held a Bohemian concert and fifth annual distribution of prizes; ladies cordially invited. I beg to remind members to clear the books by Tuesday. On the 9th twenty-eight members were present, and four hon. members elected—Sir M. Blownaggre, Mr. B. Morley, Mr. Messener, and Mr. C. J. King, the secretary of the Albion Brothers' A.S. Letters were read from Mr. H. Robertson, M.P. for South Hackney, and Mr. G. Attwood, expressing regret for non-attendance at dinner on May 3. I shall be pleased to receive prizes promised last season, and take names for A.B.S. membership cards.—P. E. L.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—I must again remind members that May 3 was half-yearly night, and it is impossible to get on with the business unless members turn up. As we are very close on our supper and distribution of prizes, I hope members will turn up in force next Wednesday.—E. BOXALL.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Our distribution of prizes takes place on Wednesday, May 17. Mr. F. Honour, our honorary member, has kindly undertaken to take the chair and distribute the prizes. I hope to see a good number of members and friends on this occasion, as Mr. F. Honour intends opening a good prize list for the ensuing year. Chair taken at nine sharp.—A. C. QUICK.

Canning Town Angling Society, Marquis of Salisbury, Hermit-road, E.—Our prizes will be distributed next Wednesday evening. I wish to remind members that their Benevolent tickets are now due.—M. W. BROWNIE.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our twenty-fifth annual dinner and distribution of prizes will take place on Monday, May 15, at 8.30 sharp, when I hope to see a good muster.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our annual dinner and concert took place last evening, and turned out a complete success. Fifty-three sat down to dinner, and as a very lengthy programme had to be gone through, speeches were of the short order; amongst other speakers were Mr. Welch (chairman), Mr. Baldwin (Press), Mr. Powell, Mr. Bolton, Mr. W. Crow (mine host), and last but not least Mr. W. J. Wade, who was very warmly received, and spoke on the L.B.S.C.R. concessions, T.A.P.S., &c., &c. The magnificent sum of twenty guineas was guaranteed to start the season's prizes.—S. VIOLET.

Cobden Angling Society, Kensal-road, W.—Will members kindly attend next Tuesday night and clear up the books? And will those gentlemen who have promised prizes forward them on as early as possible? I hope members will not be later than 8.15 on Thursday night, the 18th, as dinner will be on the table at that time, sharp.—T. TWYMAN.

Collingwood Angling Society, Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Will members please note that the revision of the rules takes place on June 7? Members wishing to make alteration must give notice before that date. The election of officers takes place next Wednesday. Will members please attend? Mr. G. H. Howard and Mr. Roberts elected life honorary members.—W. H. STAFFORD.

Cosy Angling Society, The Plough, Rochester-row, Westminster.—The annual concert and distribution of prizes will take place on Wednesday, May 31.—J. WHITE.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On May 8 we had our return visit, which proved a great success, twelve clubs answering to the roll. I beg to tender my sincere thanks to those societies who supported me, also to the gentlemen who so ably assisted with the harmony. On May 9 a full attendance, when the final arrangements were made for the distribution of prizes on Tuesday, the 16th. Anglers and their lady friends will meet with a hearty welcome. Members who were not present last Tuesday please let me know whether they intend to be present at the dinner on June 4.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Our supper on Monday last proved a grand success; thirty-two members and friends sat down to table, our president, Mr. W. Clatworthy, in the chair. Everything went off splendidly. After supper we had plenty of good songs, also music by way of solos on violin, mandolin, banjo, and cornet. Toasts were given to "the President," "Press," and "Visitors," and were duly responded to by W. Clatworthy, Mr. Widdicombe, Mr. Ball. A vote of thanks was also given to our host, F. Dewdney, for the splendid way he had managed the supper. Distribution of prizes followed, Mr. Ball presenting same to Messrs. H. Brock, D. Ansell, W. Elton, A. Edwards, R. Bennett, J. Edwards, who proved themselves the winners, after which the following ladies and gentlemen offered prizes for ensuing season: Miss Elton, Messrs. W. Eaglestone, M. Brothers, G. Johnson, E. Boxall, W. Clatworthy, F. Drake, C. Sheppard, H. Newman, J. Edwards, H. Brock, W. Elton, A. Edwards, R. Bennett, D. Ansell, Mrs. J. Edwards, Mr. F. Dewdney (host) two, Mr. C. Martin, Messrs. Peek and Son, and there are several more to follow. A general meeting is called for Saturday, May 20, at eight o'clock, at clubhouse, to arrange prize list.—JOHNNY EDWARDS.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Our annual supper and distribution of prizes will take place on Wednesday, May 31, in place of Thursday, May 18. All gentlemen

and members giving prizes will forward same soon as possible.—W. JENKINS.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—The thirteenth annual dinner of the Earlsfield A.S. was held at the Half-way House, Earlsfield, on Wednesday, May 3. Mr. T. Gathercole, president of the society, occupied the chair; vice-chair, Mr. F. Mathews. An excellent repast was enjoyed by a goodly number of members and visitors. The musical part of the programme was contributed to by the following gentlemen: Messrs. Gibbs, Will Scott, F. A. Robinson, Nicholson, T. Frampton, and others. The prize winners were as follows: Messrs. F. Mathews (holder of the silver challenge cup), Fulton, Marter, Adams, Shepherd, Keepin, Smith, and Winch.—A. T.

Elgin Angling Society, Blenheim Arms, Blenheim, crescent, Notting-hill, W.—At our last meeting we made a new member. I am pleased to say that the private prizes for last season are nearly all in. They will be distributed on quarterly night, June 6. I should like to take this opportunity to thank the donors. Will all members try to attend next Tuesday to arrange brake outing?—G. KING.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—On Tuesday last we held our sixth annual concert and grand distribution of prizes, of which there were plenty; and it was an unprecedented success. Mr. Randal, of the Richmond Angling Society, ably filled the chair, supported by Mr. Wiles, of the Lord Nelson and Collingwood Angling Society; and a great number of gentlemen were around the table to ably support them (vice chair, Mr. Ball and friend, of the Collingwood Angling Society, occupied during the evening), and they all thoroughly enjoyed themselves. There was plenty of talent. During the evening Master George Rosser, aged twelve years, gave a negro stump speech, and also sang in costume. I wish to thank all friends on behalf of the Firm and True Angling Society for their very kind support on this occasion, which was brought to a close at rather a late hour; also there were plenty of prizes offered for the forthcoming year.—T. ROSSER.

Globe Angling Society, Earl Russell, Isledon-road, N.—On Monday night last over fifty members and friends sat down to a substantial spread at their headquarters, when host F. Richardson did his utmost to make the gathering a success. The chair was ably filled by Mr. Charles Ellis, supported by Mr. Robert Sharpless. During the night many good prizes were promised for the ensuing season, and the prizes distributed to those anglers who had been successful in the competitions for the past year. No doubt the club's ascendancy is due to the respected secretary (Mr. W. Lawrence), who works very hard for its interest. The gross weight of all fish amounted to 633lb., Mr. C. Ellis being first with 153lb., and Mr. C. Stebbings second, with 125lb. Amongst some of the visitors we noticed the well-known faces of Mr. H. Booth, Mr. J. Pratt, sen. (Globe Hotel), Mr. J. Standen, &c. It may be mentioned that this is the twentieth annual dinner in connection with this club. The night's proceedings terminated with a capital smoking concert.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—Our annual supper came off on Tuesday, thirty-two sitting down to an excellent spread by Mr. Wilson, of Cleveland-street, after which we distributed the prizes. Club prizes won by Messrs. Ellins, Games, and Crow. Mr. King won the Tuesday prize. Specimen prizes were taken by Mr. Payne, perch; Mr. F. Bourlet, barbel; Mr. Ellins, chub; Mr. King, roach; after which we had harmony, contributed to by Messrs. W. McFeely, Whyman, Bourlet, Ellins, Pennell, Wadham, and many others, to whom we tender our hearty thanks. We have many prizes promised for coming season. Will members come up and allot them, so as to have prize sheet printed?—A. W. ELLINS.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—Our annual distribution of prizes took place on May 8, Mr. L. Watling, chairman, and a most pleasant evening was spent. The list of prizes and names of winners are too numerous to mention. One hundred and twenty-five prizes were distributed, and 1219lb. 15oz. of fish weighed-in during the season, all taken from the bank and Sunday fishing only. The thirty-sixth annual supper will take place on Wednesday, May 31.—J. A. FITCH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—On Monday last we elected two members, and booked the names of several more. Next Monday evening we devote to the concert for our esteemed friend, Mr. T. Twyman, C.A.S., and we fully expect a crowded house, when I hope to see all Mr. Twyman's friends, and they are legion.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green.—Our supper takes place on May 29, and I hope members will make themselves eligible.—C. SMITH.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—I have recorded two nice trout during the week: 5lb. 12oz., by Mr. W. T. Attwood, and 4lb. 14oz., by Mr. J. Parsons—the latter a very short and thick fish. Members absent last Wednesday are reminded of the supper on the 17th inst., seven o'clock sharp.—E. W.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—We met on Tuesday last, Mr. Boys in the chair, when the minutes of the previous meeting were read and confirmed. For the outing on May 14 I hope the weather will be fine. The brake starts from clubhouse at nine o'clock sharp, wet or fine.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—The annual general meeting will take place on Wednesday evening next, 17th inst., and as there is some very important and

interesting business to transact, I hope that all members who can possibly attend will please do so.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Will members please attend at their earliest convenience to clear the books, as we have our distribution and concert on June 5 for the benefit of the A.B.; also will gentlemen who have promised prizes forward them on if possible before the above date.—J. BENCE.

Kingston Piscatorial Society.—A meeting of the above society will be held on Monday next, at 8 p.m., at the Sun Hotel, to decide whether the annual general meeting shall be held before the opening of the coarse fishing season, which would allow of the rules of the society being altered so as to meet all requirements.—F. H. AMPHLETT.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville-road, N.—Our seventeenth annual supper and distribution of prizes takes place on Wednesday next, May 17. Supper 8.30 sharp. Members requiring tickets can get them from the stewards, Mr. Cook and Mr. Gilbert. We shall be pleased to see any anglers or friends to our concert to follow.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen's-square.—A meeting of the Liverpool centre of the Northern Anglers' Association was held at the Bee Hotel on Monday evening last, Mr. Wishart in the chair. The date for the first annual competition, Aug. 26, was approved. The question of federation was mooted by Mr. Whittington and favourably received, and this question will be further heard of before long, and will undoubtedly be the best thing for Liverpool anglers to carry out. Very little information as to angling has come out during the last week, but the reports from Lake Vyrnwy are very favourable, our Sir Thomas Hughes being amongst those who have done well. Fair sport with the trout has been had in the Rivington reservoirs, and these waters would favourably compare with any other if one or two, or more, fishing boats or punts were placed on them for the use of anglers, and a pavilion or shelter house erected.—RD. WOOLFALL.

North Lambeth Angling Society, Newcastle Arms, Hercules-road, Lambeth, S.E.—The club's annual dinner takes place at the Black Rabbit on May 21, at Arundel. Members wishing to go please attend at the club on the 14th inst.—E. ROWLES.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—Our twenty-ninth annual dinner and prize distribution is on May 17, at eight o'clock sharp. We shall be pleased to receive friends to the concert after dinner. Shall be at the club on the evening of May 14, when Host Tinson wants to know exactly how many to cater for.—R. C.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—At our meeting on Monday evening all particulars as regards the distribution on May 15 were settled. I am sorry that the date clashes with the complimentary concert at the Harcourt A.S., on behalf of Mr. Twyman, but our date was fixed some time back.—W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On May 9 our annual dinner and distribution of prizes took place, and proved a great success. A splendid dinner was placed on the table by that popular caterer, Mr. W. Wilson. After the tables were cleared some excellent songs were rendered by those well known artists Geo. De Vere, C. Grossmith, P. Garvey, and W. Silvester; Mr. Silvester also presided at the piano.—Geo. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—At our last meeting we were fairly attended, and settled everything relating to our annual supper, which takes place on May 17. Will members kindly make it convenient to attend the club-house on May 14, as we have a little business on hand that must be attended to?—J. GIBBONS.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—Our annual dinner and prize distribution takes place on May 14 at the Black Rabbit Hotel, Arundel. Members and friends to start by the 7.55 train from London Bridge.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On May 9 Mr. Abrahams weighed in two and a half brace of trout. I shall be pleased to receive all prizes and subscriptions as soon as possible to clear up the books.—PILICAN.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Tuesday next at the Blackfriars A.S., The Imperial, Southwark-street. I hope to see a good muster on this occasion.—ALF. PAINTER.

Stepney Angling Society, Bee Hive, Rhodeswell-road, Stepney.—Our annual prize distribution took place on May 8. Several specimen prizes were taken, besides a large number of club prizes, our late secretary, Mr. W. Woodford, being the chief prize-winner, taking no fewer than nine prizes. After the distribution we had a concert, spending an enjoyable evening, with Mr. Morgan in the chair; Messrs. Shnm, Dicks, Bolding, Clark, &c., giving us some good songs.—W. BEATTIE.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—The members of the above club had their annual ramble on May 7 at Amberley, the weather being beautifully fine. We walked through the park, dined at the Black Rabbit, back by the river, and arrived in London after an enjoyable day. The annual supper takes place on June 7.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Our annual supper and distribution was a great success. Forty members and friends sat down to supper, Mr. C. Pennyfather taking the chair, and Mr. J. Tolly the vice. After supper the usual concert commenced, and after songs, speeches, and toasts the

distribution of prizes took place, as follows: Messrs Taylor, Hare, F. C. Gerrard, J. S. Smith, Burnham Holt, Maynard, Ravenhill, Harwood, Lock, Stevens, Parker, Sherman, Brace, Kuitler, Holmes, Knight. The chairman, in a very able speech, proceeded to fish for prizes for the coming season, with the result that two silver cups and guineas and half guineas and special prizes to the amount of £22 were subscribed. Mr. Page also presented the club with some fish plates. Amongst those who subscribed to the harmony of the evening were Messrs. W. Smith (R.A.M.), Tom Huggett, Alf. Howard, Rob. Emerson, Will Diamond, G. Le Roy, Gus Egan, Parker, Fred Collins, F. Tilly and pupil, Bert Lawn, Ponites, H. W. Bland, F. Brooks, H. Broadway, Harry Barton, and Shepherd.—C. E. LOCK.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—We wish to impress on the minds of visiting clubs that our annual dinner is on May 16, and concert at 9.30, extension till two o'clock.—W. H. B.

Waggoners' Angling Society, White Lion, Albert Embankment.—We had a good meeting on the 9th, some very important business was got through; our prizes are coming in, and I hope to have the list complete by Tuesday next the 16th, on which date our distribution takes place. I shall be very pleased to receive prizes not to hand in the meantime, business will start at 9 o'clock prompt.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Our dinner on the 3rd inst. was the most successful one we have ever had. Our president, Mr. G. Smith, occupied the chair, with Mr. Elsmore, our vice-president, in the vice-chair. Mr. Wilson provided an excellent menu for some sixty-five of us. After dinner we had some excellent harmony, contributed to by Messrs. Bert Ray, Otterway, Steptoe, Hart, Powe, R. Russell, F. Webb, Andrews, Carter, C. Wake, and W. Duffield. Members are reminded that the prize list for 1899-1900 is still open.—TIDDLER.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Any member requiring a ticket for the dinner on Thursday next, May 18, please apply at once, as there are only two or three left.—W. WRAY.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—As our members proposed a supper to take place on May 17, I wish they would apply more freely for the tickets, as we have to give the number that are going not later than Sunday night next, May 14. The annual prizes will be paid on that night, and the other business of the club will take place on Wednesday, May 24.—R. LOWTHER.

WHITSUNTIDE ARRANGEMENTS.

THE SOUTH EASTERN AND CHATHAM AND DOVER RAILWAYS

Announce cheap day excursions on Whit Sunday and Whit Monday from Charing Cross, Cannon-street, London Bridge, and New Cross to Ashford, Canterbury, Deal, Dover, Folkestone, Gravesend, Hythe, Margate, Ramsgate, Sandgate, Walmer, &c.; also on Whit Monday to Tunbridge Wells and Hastings. Special cheap excursions will be run to Aldershot on Whit Sunday and Whit Monday from London, but not from New Cross. Special trains will be run to Hayes, Blackheath, Greenwich, and Gravesend (for Rotherville Gardens). Cheap day excursions on Whit Sunday and Whit Monday from Victoria, Holborn, and St. Paul's to Canterbury, Deal, Dover, Gravesend, Herne Bay, Margate, Ramsgate, Sheerness, Walmer, Whitstable, &c. On Whit Monday a cheap excursion will be run to Tonbridge Wells and Hastings from Victoria (Chatham and Dover). The usual extension of time for certain return tickets will be allowed. On Whit Monday frequent special and ordinary trains will run to and from Holborn, Victoria, Ludgate Hill, St. Paul's, and intermediate stations, and the Crystal Palace. Return fares, 1s. 6d., 3rd class, including admission. For intending visitors to the continent, special cheap tickets will be issued from certain London stations (via Boulogne or Calais), Brussels (via Calais or Boulogne and via Ostend), Boulogne, Calais, Ostend, Amsterdam, Aachen, Flushing, The Hague, Rotterdam, and Utrecht. The Continental Services will be as usual. Full particulars of trains by which cheap tickets will be issued, London departure stations, return times, alterations in train services, &c., are given in the holiday programme and bills.

UNITED BROTHERS ANGLING SOCIETY.

The annual dinner of this society was held on May 4, presided over by Mr. Arthur H. A. Morton (M.P. for Deptford), supported by Mr. T. Crumpley ("Old Isaak"), Messrs. W. Elsmore, Holmer, Moss, and Jacob. The room was prettily decorated, and the dinner well served. The usual loyal and complimentary toasts having been proposed and duly honoured, the chairman proposed the toast of "The United Brothers Angling Society," coupling with it the name of Mr. Lawes. Speaking on angling matters, he (the chairman), gave a little resumé of his own experiences in that sport, commencing with the humble gudgeon at Windsor, when a boy at Eton College, following on with dry and wet fly fishing, the Test and Itchen, and also his pleasurable days spent in Scotland salmon fishing, telling humorous anecdotes as an angler knows how, and listened to by anglers who love a little tale, acknowledging that he was an enthusiastic angler. Mr. Lawes, in reply, thanked the chairman for his kindness in presiding, and, alluding to his love of angling, invited him (the chairman) to become a united brother, and become the president of that society. Mr. Morton accepted the invite, and he is now the president of the U.B.A.S. The chairman having to leave to attend

his Parliamentary duties, Mr. Shepherd, of the Bermondsey Brothers, presided over the meeting, and right merrily did he keep the ball rolling, song after song, then pausing to make an appeal for assistance to the prize fund, which, thanks to his tact, was capitally supported, afterwards proposing the toast of the worthy host of the Druid's Head (Mr. Mackrill), speaking of him in the warmest of terms as a friend and business host. Mr. Mackrill suitably replied. The toast of the vice-chairman was next proposed by Mr. Shepperd, duly accepted and drank with musical honours. The chairman had to leave, with the good wishes and thanks of the U.B.A.S. for his assistance that night. Mr. Mackrill then assumed the chair, with Mr. J. Payne as vice, and spent the remainder of the time in harmony of the highest and best class, until "Auld Lang Syne," sung by all present, due the time to depart. The thanks of the society are due to all concerned, and the *artistes* in particular, for making such an enjoyable and successful evening.

W. R. L.

A NOTE FROM TASMANIA.

DR. BRUNTON kindly sent us these extracts from a private letter from an angler in Tasmania:

"I went off with Bedgood to try Yan Yean on Monday, but we went first up to Toorourrong, and got a man to drive us there from the station. It was a fine day, but no wind—simply cat's paws—and not a fish playing on the loch. When the sun set I put on my leggings, and went down to cast over the reeds; but it was very calm, and the fish could see the sway of the rod and my arm. I missed the first that rose; the second I hit hard, and he proved big, and walked off with half my Crochast cast and two flies! Bitter disappointment. I was too anxious and the fish larger than I expected. I fastened on a fresh end fly as the light was fading, and I could see the loops only against the red sky in the west. After soaking well I cast again once or twice, and struck a very active fish. He ran out 30yds. of line, and I let him go, just giving the butt but letting the reel take the strain. He turned and came up, and I wound in and landed the prettiest fish I have seen here, but only 1½ lb. weight. The red markings were lovely. I sent him down to Sir Wm. Zeal, and he 'thought it a pity to eat such a beautiful fish.' It had a perfect head. The next was nearly 2lb. (1½ lb.), game and strong, but good play; and then, as I landed him, darkness came down.

"Next morning at five to five I was in my waders (for wet, long grass), but it was absolutely like glass. The fish saw every move, and you could see the wake of their backs as they 'tore away' into deep water on being disturbed.

"The man came with the trap, and we drove down to Yan Yean—about seven miles off—and had an afternoon's experience—bitter wind, rain, hail! No wonder fish did not take. I saw not one fish (trout), but about thirty English perch guzzling along on top of the water, but they would not take the fly. I daresay I tested two miles of water, and then gave it up; and we came down tired out by the evening train. My arm was sore constantly casting! Bedgood fished Grasshopper all day (I had got them from Albury), and landed one small trout at Toorourrong, so the fly is quite as good as the 'hopper,' although I doubt if I could equal Officer in equal circumstances.

"We are quite decided that, as fishing ground, Yan Yean is not worth considering for us; and I think that if I get another day before the weeds get too hard, I could do well, and especially at dusk, to use a heavy cast."

TO BE CHEERFUL.

THE sovereign voluntary path to cheerfulness, if our spontaneous cheerfulness be lost, is to sit up cheerfully, to look round cheerfully, and to act and speak as if cheerfulness were already there. If such conduct doesn't make you soon feel cheerful, nothing else on that occasion can. So to feel brave, act as if we were brave, use all our will to that end, and a courage fit will very likely replace the fit of fear. Again, in order to feel kindly toward a person to whom we have been inimical, the only way is more or less deliberately to smile, to make sympathetic inquiries, and to force ourselves to say genial things. One hearty laugh together will bring enemies into a closer communion of hearts than hours spent on both sides in inward wrestling with the mental demon of uncharitable feeling. To wrestle with a bad feeling only pins our attention on it, and keeps it still fastened in the mind, whereas if we act as if from some better feeling, the old bad feeling soon folds its tent like an Arab, and silently steals away.—*Scribner's Magazine*.

Toffings by the Way.

THE various bodies interested in natural history are losing no time in the matter of discovering the contents of lake Tanganyika, and other portions of rivers and lakes in Africa. A committee has been formed, with Professor Ray Lankester as secretary. It is assisted by the Royal Society and the Natural History Society at Kensington. Professor Moore has been chosen as naturalist, and a complete fit-out of dredges, trammels, trawls, mounted lines, baits, and traps of all descriptions, has been supplied by Mr. William Header, the well known fishing tackle-maker, of Plymouth, who fitted out the Challenger expedition. Amongst the various gear supplied was a new "Duplex" trawl, made in such a manner that whichever way it falls to the bottom it will fish right, it being provided with two ballies and beams. All the gear had to be packed in sacking parcels, each weighing 56lb., as it

had to be carried about 2000 miles on niggers' heads, and they absolutely refuse to carry any package heavier than 56lb. It is to be hoped their investigations will lead to an increase in our knowledge of natural history.

A KINGSTON correspondent writes that "the enormous quantities of roach, dace, and perch, about two inches long, as well as many of a takable size, to be seen from the bank is simply astounding." This augurs well for a successful season.

MR. BUCKLEY'S otter hounds met on Tuesday last, at the Tanat's mouth, about a mile above the village of Llanymynech, where an otter was soon found, and, after affording excellent sport, was eventually killed, and weighed 19lb. On Wednesday, in beautiful weather, they met at Penybont, and had another capital day, and after a prolonged chase ran down a very large dog otter, which scaled upwards of 22lb. They are now hunting in the Bala and Bettw-y-Coed district for about a fortnight, when they will again pay another visit to the Tanat. [Poor otters! Wish the weather was 'otter!]

WELSH station-masters are proverbially polite and most obliging, and anxious to give information in the best of Queen's English at their command. The other day, a tourist arrived in a hurry at a remote station, and hastily asked the station-master when the next train was due for Manchester. The reply—as hurried as the query—was, "I am very sorry, sir, but it has just left!"

THE twenty-sixth annual show of the Bull Dog Club will be held at the Royal Aquarium next Tuesday, Wednesday, and Thursday. Of all the many breeds which now find favour this is the one that most appeals to John Bull. It will be a good show, and will include a fine display of toy bull dogs, which hitherto have been excluded from the club's shows.

ON and after May 26, the committee meetings of the A.B.S. will be held at the Club Union Buildings (adjoining Holborn Town Hall), Clerkenwell-road, instead of the Foresters' Hall. All other meetings in connection with the Anglers' Association will be held in the same place.

IN answer to a correspondent ("H. W."), the largest bream on record was caught, a little over thirty years ago, in a pond—less than an acre in area—at Beeston Regis, New King's Lynn, Norfolk. This fine specimen weighed 11½lb., and measured 2ft. 2in. in length from the nose to fork of tail, by 22½in. inches girth at the dorsal fin. It was afterwards exhibited by Mr. T. E. Gunn, the taxidermist, of Norwich, at the 1883 International Fisheries Exhibition, South Kensington. As to the approximate length of a bream weighing 5lb. 8oz., perhaps some of our readers can answer for you. There is a bream weighing 7lb. 6oz. in the club-room of the Caxtonian Angling Society. Its extreme length from nose to fork of tail is 22½in.

IN the absence, through domestic bereavement, of Sir T. Powell Buxton, Bart., recently Governor of South Australia, Mr. E. H. Pickersgill, M.P., took the chair at a meeting on Wednesday, in celebration of the twenty-third anniversary of the Bethnal Green Free Library, and the second year of the opening of the free lending department. Elquent testimony was borne by the chairman, by Sir M. M. Bhowmaggree, M.P., and other speakers, to the excellent work done by the institution in a district whose poverty alone prevented it establishing a rate-aided library. The committee's appeal for increased financial support was heartily endorsed, and the earnest hope was expressed that the efforts being made to obtain a site contiguous to the Bethnal Green Museum might be crowned with success. Meanwhile, the committee are in need of a boy's reading-room, to relieve the congested state of the limited reading accommodation.

MR. H. S. HEATON writing from Kennett, says: "Fishing in the river Lark on May 5, I caught a beautiful specimen of the Loch Leven trout scaling 6½lb., length 24½ins., girth 13½ins. This fish was taken on a light fly rod and fine cast, and a gallant fight of over two hours he gave me before I could bring him to the net. After his first rush the cast got twisted under one of his gills, and the strain thus taken off the hook, which accounted for this prolonged struggle with the gamest trout it has ever been my fortune to encounter. I got him on a small live minnow on a single hook." This fish is now in the hands of Messrs Farlow and Co. for preservation.

THE Nottingham Wellington Angling Society have decided to hold their annual dinner on Wednesday evening, May 31. The chair will be occupied by that evergreen sportsman, Mr. W. Gaskell. I have received a pressing invite. The boys—yes, they have an 'all'—tipped a chair for "Drag" one side of the chairman, and the "copper" on the other. The idea! Why, the "copper" is the Lord High Commissioner for Nottingham!

The *Architectural Review* for May is a particularly fine number, containing as it does a special supplement showing the work of Blomfield, Mountford, Pomeroy, and other distinguished artists in the Royal Academy. There is also a charming article on "The Art of Ancient Egypt," and "The Church and Village in North Devon" is illustrated by some beautiful views of Devonshire scenery. Taken altogether, the number is up to the usual high standard of the magazine, and higher praise could scarcely be given.

"THREE months for being innocent," disgustedly remarked a malefactor at the Old Bailey recently, as the sentence of the court was pronounced. "Yes," remarked the counsel for the prosecution, with fine irony, "if you had been guilty you would have had six."

AN ANGLER'S YARN.

I stood beside the flowing stream
In the delightful summer gleam,
And there I watched with eager sight,
In patient longing for a bite.

At last, although I could not note
The slightest twisting of my float,
I felt that something in the brook
Had caught and firmly held my hook.

The thought was fathered by the wish
That this might be a mighty fish;
I pulled and pulled with all my mettle,
And hoisted up—a rusty kettle!

Of a kettle of fish men often speak,
But the kettle alone seemed a curious freak,
I took it away from my hook in a trice,
And cast it away with a feeling of vice.

Once more I let my bait sink low,
And patiently watched the river's flow;
And once again it strangely appeared
That something had caught it and adhered.

Once more I stoutly hauled it out,
Thinking to find a lusty trout;
But, alas! it was not a fish that had bitten—
'Twas the mournful corpse of a murdered kitten.

By the riverside, in the summer bright,
To angle may be some men's delight;
But when to its charms I tried to settle,
I caught a cat and a rusted kettle.

OUR F. G. ALBUM OF ANGLERS.

No. 41 (New Series).

MR. J. DALGETY HENDERSON

Is a well known angler—that is, to Londoners. When not engaged in his business as a paper agent, he is off at the first opportunity after the trout. Scotland is his favourite hunting ground, although he does not object to Wales for an occasional turn. Not long since I had the pleasure of fishing with him in Montgomery, when two of six sons proved as successful as any of the party. In fact, all the boys are ardent trout anglers. The face of "Dalgety" is familiar to us on account of his appearing at so many of the highest class angling functions throughout the year, not only in London, but the chief cities of the United Kingdom. A repertoire of from 500 to 600 songs might be described as a fairly comprehensive one; yet Dalgety sings that quantity, and sings them with such sweetness and tenderness of expression as to thoroughly rouse and delight an audience. Verily he is a true angler-artist.

OUR Irish correspondent sends a cutting from the Amicable Waltonians Club report of April 29, and remarks, "Not a bad bull for an Englishman!" This is the "bull": "On the 29th a smoking concert will be held on behalf of our old friend H. Nunn, who, after twenty-two weeks' illness, was knocked down by a cab and killed." Now, where's the bull? He was ill for twenty-two weeks; got better; went out; cab knocked him over and killed him. If the twenty-two weeks' illness had happened after he was killed it might be construed a bull.

BERTIE: Father, it worries me to think how much trouble I give mother. Father: But mother don't seem to mind much. Bertie: No; she is very patient. But she often sends me on errands, and the shops are a long way off, and I know she gets cross waiting when she's in a hurry. Father: Not very often, I fancy. Bertie: Oh, she's nearly always in a hurry. She gets everything ready for a cake, and finds at the last moment she hasn't any

baking powder; or she gets a pudding mixed, and finds there is no nutmeg or something, and then she's in a state because the oven is all ready, and, maybe, company coming, and I can't run a very long distance, and I feel very sorry for poor mother. Father: Well, what can we do about it? Bertie: I was thinking you might get me a bike. [I think the name of "Bertie's" play is entitled "Diplomacy."]

As I was going to St. Ives—I felt a pain, well, just like knives. The wife applied balm to my temple, and said, "At once see Dr. Semple—Jnst take a 'Sandwich'—'Drag'—and 'T. (teR) Ruston.' Seeing friend Hon. Sec. Col—lin—son!" Too late! Cruel fate! A telegram to "Ned" to state—"Sorry cannot attend Fête. Meet you in the summer!"

I NEVER have been to one of these high class St. Ives dinners, although many invites have been sent to the F. G. office. The London contingent has generally been strong at St. Ives; not because some good fish are to be had in the society's waters, but that the St. Ives boys are good sportsmen. Unfortunately, this year of "Flues," there were many letters and wires from those who were unable to attend—from Earl Sandwich and the Hon. A. E. Fellowes, M.P., down to the bloated aristocrat "Dragnet."

VERY well; not being able to be present, the account of the "good old annual" was expected—and *veni* (I mean, it came). Here it is: The *Hunts Post*, May 6.—"St. Ives Angling Association—an. din.—(Dear, dear; where do these long shorthand writers find room to put all the proceedings of an annual dinner?) A bell—the phone—"Are you there?" (That's to "Drag," from his chief.) "See me—AT once!" (Oh, that cruel foreign asparagus!) "Coming sire, as soon as I can settle terms for the best method of exterminating trout for the benefit of the coarse fisherman, and taking out all the dreadful coarse fish for the benefit of the trout fishermen. I have a gentleman here from Kamschatka, who wishes to see you—to know—if you think—what are your opinions on—as to time of year—"R—R—R—R—R— See me at once!" [The first duty of a soldier is to obey. I obey with obeysance.] "Yes, yes; what's this—er, 2½ cols. re St. Ives Ang. Din. Were you there?" "No, sire; I was not thar." "Well, give them all you can. Just pick out the salient points, and no try and please everybody."

THEN the 3½ cols. devoted to the chronicling of that very pleasant function—the St. Ives A. D.—has to be dotted—that is, brought down to dots. [My chief is inexorable. He will not allow me to put 140 pages into a 38 pp. paper. Well, well; if he does not know what's what, why should I presume?] Here goes:

EIGHTY-TWO members and friends sat down to an excellent banquet at the Golden Lion Hotel. The decorations were simply delightful. Dr. Semple presided over this large assembly, amongst whom were the Mayor, M.P.'s, Aldermen, J.P.'s, Councillors, artists—in fact, all the *élite* of the county. The speeches were more than usually brilliant. The songs and music could not have been better—for they can sing at St. Ives. The toasts commenced with "The Queen," and finished up with "The Visitors." Hon. Sec. Collinson read his report, from which it was gathered that the society was never in a more prosperous condition. Some first-rate specimen fish had been taken during the season by the members, and a prize list read out which would make some of our London clubs "sit up." The president handed the prizes to the successful anglers in his own inimitable way—a right word at the right time. After one of the most pleasant evenings had been spent, the audience rose *en masse* to the strains of the National Anthem, and retired. Tableau! Bravo!

THAT fish have more intelligence than we generally give them credit for is the firm belief of ichthyologists and other scientists who have given any study to the question, but I doubt whether the world has ever before heard of any fish one half as wonderful as the herring I am now going to tell about. The story is so extraordinary that many sceptic fishermen will probably refuse to believe it, but I can't help it. The French *Journal des Debats* is my authority, and surely that should be dignified enough and conservative enough for anybody.

WHY are schoolmasters and schoolboys like dogs and cats respectively? Give it up? Because one is the canine, the other the feline race.

WHY is a hot roll like a chrysalis? Because it's the grub that makes the butterfly.

THE "Sunday" (the "Money" Fly) was to have been described this week. Something gone wrong with the dressings; sent Daisy out for some fly-tiers' wax—and she brought back tie-flyers' wax (cobblers'). I have the whole thing at my fingers' ends—wool, cotton, silk, fur, feather, and lots of other things that have no business there—and hope to describe this fearfully and wonderfully made—or partly made killer (kill at a hundred yards). A friend happened to see it before it had got the hasting stitches out of it, and does not think much of it! Of course not. Let him wait till it appears as a beautiful living thing! I asked him to take one home, and give me a wrinkle as to how to improve it—if that were necessary. He only said, "Take it away! Mind the step!" DRAGNET.

NO MORE BULKY FISHING BOOKS.
PALEY'S TACKLE AND FLY POUCH.

Length 5 inches, Width 4 inches.

Has nine compartments for keeping Casts, Flies, and Hooks, and, though holding a large quantity of tackle, takes up very little room in the pocket, and, having turned down leather flaps, always keeps closed. It has solid leather backs and waterproof vegetable leaves.

Price—No. 1 size, 1s. 7d.; No. 2 size, 2s. 6d., post free, from all Fishing Tackle Dealers, or

CLOSED.

PISCATORIAL SOCIETY.

MR. J. W. ZAEHNSDORF was in the chair at Monday's meeting, but things piscatorial were, on the whole, somewhat quiet. Dr. C. S. Patterson, who had been down to the Lambourn, had taken eight brace of trout in two days, the best fish weighing 1lb. 8oz. The doctor exhibited a live specimen of the Pale Golden Sedge, which had been "up" on the stream mentioned in considerable numbers. This in the present cold month of May, too! Mr. E. M. Mayes was on the Kennet for the opening day, and had good sport. He took several fish over 2lb each, besides grayling, which latter were returned. Mr. Mayes, it may be added, has been unanimously chosen to represent the society at the forthcoming Loch Leven tournament in June next. Mr. R. Bradford had done little with trout on the Kennet, but he caught a fine grayling of over 2lb. weight with a large Dusty Miller! On the Uxbridge water the fish had been very much "down" in consequence of the cold weather. The only take recorded was a brace of fish by Mr. H. A. Rolt, the heavier one weighing 2lb. 8oz., the largest trout taken up till now from the new water. Chub of over 3lb. had been caught while trouting, besides perch and dace. The chairman stated that he had seen immense shoals of roach, dace, and chub on the broad shallow by the High Bridge, which speaks well for the coming coarse fishing season, which opens on June 16 next. For the information of members who fish the Hungerford water, it may be stated that the popular proprietor of the Bear Hotel, Mr. W. Osmond, has arranged a special tariff for anglers. Several members of the society have already sampled the accommodation to be had at the quaint hostelry, and have given a distinct pronouncement in its favour. The Bear is close to the water, and the inclusive terms *per diem* are most reasonable. Mr. J. W. Zaehtendorf reported that Mr. R. Clay had kindly presented to the library a copy of Sir Edward Grey's book on "Fly Fishing," for which the donor was warmly thanked, and that he, Mr. Zaehtendorf, as hon. librarian, had purchased a copy of Aldam's "Quaint Treatise on Flies and Fly Making," an exceedingly curious and interesting work. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE ordinary weekly meeting was held in the York Room, Holborn Restaurant, May 10th, 1899, Mr. C. O. Minchin in the chair. Mr. John Hsndly, at Southend, May 8, in three hours and a half took four score flounders up to 1lb., and many small ones were returned. Mr. Wood, at Southwick, on May 6 and 7, had poor sport, the weather being very rough; plenty of sand eels could have been taken with proper tackle. Mr. H. J. Moore reported sport at Deal last week. Mr. Tucker, with Mr. Mignot, senr. and junr., on May 8, at Southend, took thirty small fry, and ten nice flounders (boating); weather rough. Mr. Canton, St. Leonards, reported that prospects were promising for the week. Weavers were in evidence, which are locally considered a good omen, whitebait very plentiful. Mr. Bates showed a new eight-inch reel made of German silver; it has an adjustable break, the action being very simple, and apparently the maker has hit upon an idea which is likely to be a boon to sea anglers. The weight of the reel is trifling in comparison to its size. Mr. Minchin showed an improved pollack bait made of grey gurnard belly. The usual vote of thanks to the chair closed the meeting. CHARLES S. PATTERSON (Hon. Sec.).

GRESHAM ANGLING SOCIETY.

AT an ordinary meeting, Mr. T. Gilbert in the chair, several additions to the already large library were announced by the hon. librarian. Fishing reports: Mr. Frank Bridgman, three brace of trout (returned); Mr. Emery, several trout (returned), the largest being 13in.; Messrs. Dryden and Ladell, at Brighton, several fine dabs; Mr. Connellan, four trout (Chesham), three being returned, and a quantity of dace and one trout from Hertford (all returned); Mr. Gibson, one brace of trout and quantity of dace from Hertford (all returned). Mr. Emery also reported several pike and chub, taken from private waters on the Lea (all returned); Mr. Goodwin, two and a half brace trout from Chesham (all returned but one), largest fish 15½in. long. Mr. Goodwin will read a paper before the society next Tuesday, the 16th inst., entitled "Roach Fishing." I hope to see a good muster. The usual toasts and vote of thanks to chair concluded the proceedings. ALEX. WRIGHT (Hon. Sec.).

THE OLDE CLAPHAM ROVERS.

FISHING AND HOLIDAY TRIPS BY THE S.E. RAILWAY.

A LECTURE, illustrated from photographic views, was given on Tuesday at Mr. Harry Edwards's house, The Windmill, Clapham Park-road (the headquarters of the Rovers), by Mr. W. J. Wade (Secretary C.A.), on behalf of the funds of the Thames Angling Preservation Society. The society's meeting room was profusely decorated with rods, nets, and lithos of a typical character. The chair was occupied by the genial secretary of the Rovers, Mr. Nat Linden, and a goodly audience of admirers of the sport paid close attention throughout, which, without doubt, the lecture merited. After a few words from the chairman on the subject and object of the meeting, Mr. Wade said that it was his pleasure to come that evening to give a

gossipy chat, and mentioned that his services were free, also he would be delighted to give similar lectures to any club, and take it as a labour of love. He notified an important concession to Clapham, Brixton, Stockwell, Wandsworth, and surrounding districts, through his intervention, by the Brighton Railway, the privilege granted being that instead of having to travel to London Bridge or Victoria, anglers could now entrain at Clapham Junction, thereby ensuring travelling by the early trains. The first design cast on the sheet was a hearty welcome to all, followed by that of a South-Eastern train in motion. Here the lecturer importunately said that the many excellent waters in touch by the aid of this railway had scarcely received the attention they merited. After dealing with the popular resorts of Ramsgate, Broadstairs, Canterbury, Margate, and a view of the *Empress* under steam, which plies between Dover and Calais, the popular town of Dover received an ovation owing to the fact that the Anglers' Benevolent Society have their Convalescent Home here. An admirable arrangement in connection with this home is that pocket money was provided as a general view to the extent of a guinea. Deal, with the lower stage especially built to afford facilities to anglers, was mentioned as a good cod fishing ground to the tune of 18lb.; also a fair supply of conger eels. Grove Ferry claimed several views, this being under the supervision of the Canterbury Preservation Society, and being especially fruitful with extensive bags of roach, one day's fishing being stated to weigh 32lb., and the largest 1lb. 12½oz. The splendid bank was highly commended, and, owing to the weeds that fringed the bank, a 20ft. roach pole, with heavy float, was most suitable, the bait advised being a loaf of bread with bran, mixed to a stiff paste, and cubes being cut to the size of a dice. Last year a Mr. Ireland was reported to have hooked a roach of 2lb. 15oz., but unfortunately gave it away to a countryman instead of having it cased.

After a short interval Sandwich claimed attention, but owing to the water being very swift and brackish was very little use for fishing, but the beauty of the scenery claimed a visit. The Brick Ponds, owned by the S.E. Railway, provided two or three pleasing views, and for a quiet hour or so were unsurpassable. Chilham, situated one or two stations above Canterbury, is a private fishing ground of no mean repute, accessible by sanction of the lord of the manor, and here the lecturer was able to instance the hearty goodwill felt by fellow anglers one to another by a pleasing incident.

Amberley was much favoured by Mr. Wade. He mentioned in the course of his remarks that a 20-guinea and 8-guinea cup were for competition, as well as fifty other prizes. Many photographs of ardent workers on the committee of the Central Association met with a hearty welcome.

After a hearty vote of thanks to the lecturer and lanternist, harmony brought the evening to a close. N. L.

HOLLOWAY ANGLING SOCIETY.

THE first annual dinner of the above society was held at headquarters, the Holloway Station Hotel, on May 9. The president of the club, Mr. Frank H. Clay, occupied the chair, and Mr. G. Johnson the vice-chair. Many well-known anglers were present. After the toast of "The Queen and Royal Family" had been duly honoured, an excellent programme, arranged by Mr. Tom Johnson, was gone through. Mr. George Johnson, in proposing the toast of "The Holloway Angling Society," said that this was the first year of the club, and it had been one of which any club may be proud. Until he joined the society his knowledge of the pleasures of angling as a sport were small. This was now, however, changed. He had become one of the most ardent disciples of the large number of fishers mainly through interest infused through the Holloway Angling Society, and he hoped that their coming year would be even more successful than the past.

The chairman, in response, said that it afforded him a great deal of pleasure to answer to the toast of the evening. As his colleague in the vice-chair had said, this was their year, and it had been a year of which any club might well feel proud. In spite of the adverse conditions as regards weather, they had weighed in some excellent fish, amongst others roach of over 2lb., and several dace of over 1lb. There were few clubs who could show better results than they had done, and when they considered that this was their first year they had every reason to feel proud of the first year's success. He hoped that they would add to their successes, and make the club one of the best in the locality. They were in a strong financial position, and were rapidly adding to their membership roll, and were generally in a most healthy state. They had an excellent secretary in Mr. Clayton, and a hard-working committee, and the smooth working was in no small measure due to their efforts. He must conclude with a heartfelt wish that the Holloway Angling Society would grow into a club whose career they could look upon in the years to come with pleasurable interest.

The prizes won during the year were presented to the following during the evening: Messrs. E. Steinhart (gold medal for specimen), F. H. Clay (silver medal for specimen), F. Hawes (bronze medal for specimen), A. Clayton, A. Stevens, G. Johnson, G. H. Jones, J. Johnson, G. Horner, G. Caines.

Mr. R. Blunden, the host, was the recipient of many compliments for his excellent catering.

The following artistes assisted in the making of an excellent programme: Mr. George Renn, comedian; Mr. E. Stevens, bassoon solo; Mr. W. T. Clay, clarinet solo; Mr. Ansell, selections from Dickens; Mr. F. Hawes, sen., F. Hawes, jun., G. Johnson, H. Hilbert, W. Whitehead, F. Johnson, H. Wates, vocalists.

SOUTH BERMONDSEY PISCATORIALS INSTITUTE,

ROTHERHITHE NEW ROAD, S.E.

THE fifth annual dinner and distribution of prizes took place on Monday last in the hall of the above institute, and was crowned with success from beginning to end, Mr. Wilson, of Cleveland-street, W., being our caterer, and every credit is due to him for the manner in which he served us. The harmony was everything to be desired. The Royal toast was responded to in a most hearty and cordial manner. The secretary reported the financial position of the club, and we shall have a good balance to start the ensuing season. Distribution of prizes: Mr. W. Fawcett, first, gross weight of season, 337lb., chiefly roach; Mr. W. Streeton, 173lb., second, also a very nice specimen carp of 4lb. 6½oz.; Mr. Allam, third; Mr. Davis, fourth; Messrs. Whicelaw, Thomas, Byers, Smith, Costin, Clark, Sutherland were winners of prizes. Mr. A. G. Smith was then presented with a rod and reel, as a testimonial for services rendered during his five years of office, as a token of regard from the members of S.B.P. Mr. E. Gowers was also presented with a very handsome walking-stick, as a testimonial, given by the members of the institute. Mr. W. Gowers was also presented with an illuminated address, also for services rendered the T.A.P.S. and A.B.S., was very suitably responded to by Mr. W. Streeton, and Mr. W. Capewell gave a very warm response on behalf of the visitors. I am also pleased to say we have a record list of prizes promised for the ensuing season, and we can only thank the donors heartily for their kindness in the present instance as in the past, and I can only hope we shall be spared to spend many such happy evenings as we did on Monday. J. H. DAVIES.

THE PAST SEASON'S SPORT AT ALTNAGEALGACH.

Now that the trout and *ferox* angling on the Sutherland lochs is commencing, the following brief statistics may be of interest to numerous anglers. The fish caught with the rod were as follows:—

1898.	Ferox.	Weight. lb.	Trout.	Weight. lb.
April and May ...	—	—	831	251
June.....	4	14	6693	1716
July.....	4	15	2974	1095
August.....	2	5	2521	855½
September.....	1	3	1870	547½
Total.....	11	37	14,689	4465

Of the above, the various lochs yielded as follows:—

Loch.	Ferox.	Weight. lb.	Trout.	Weight. lb.
Urquhart.....	3	7½	4552	1025½
Cama.....	3	7½	4355	1602
Veyatie.....	4	20	2173	818½
Boarlan.....	1	1½	1788	543½
Mheallin and other waters...	—	—	1821	465½
Total.....	11	37	14,689	4465

The following figures will show at a glance the total sport of the past five seasons, viz.—

Year.	Total fish all kinds.	Aggregating Tons. cwts. qrs. lb.
1894.....	13,911	2 9 0 ¾
1895.....	15,369	2 9 2 9
1896.....	15,348	2 6 3 10
1897.....	10,569	1 10 1 23
1898.....	14,700	1 19 1 6
Total in five years	69,897	10 15 0 20½ B.

NEW PISCATORIAL PATENTS.

The following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

21,201. Fishing. Patentee: Mr. G. G. V. Norrman, Handtver-karegtan, Stockholm, relates to line floats. A tube passing through the centre of the float is closed at its upper end by a diaphragm perforated. Within this tube slides a second one, the upper half of which is cut away to a semi-circular section, and bulged outwards through an opening in the tube. The line passes up the tube through the hole, and then between the tubes and to the hole. By pressure, the grip on the line is released, thus enabling the position of the float to be adjusted.

6676. James Yelverton Payton, and Hubert Jackson Hall, Chancery-lane, London. "Improvements in fish-hooks."

28,641. Swivels. Patentee: Mr. W. Smallwood, Lion Works, Redditch, Worcestershire; relates to swivels for fishing tackle, which is made of two pieces of wire coiled, bent, and headed.

THE ESCAPE OF A MURDERER.—A man in Yorkshire was recently arrested for the murder of his employer, but after being in the hands of the police for nearly a week, awaiting his trial, he actually succeeded in making his escape. He has not yet been recaptured. How he succeeded in getting away no one can imagine. The police consider the escape to be almost miraculous. But still more wonderful is the escape from death of a man whose health was ruined, and who found himself almost within the very grip of death. This man, in his hour of desperation turned to Holloway's Pills, and he was saved. To-day he is sound and healthy, in the full enjoyment of vigorous life.

WHITSUNTIDE HOLIDAY ARRANGEMENTS, 1899.

THE GREAT EASTERN RAILWAY

Announce that, in addition to the tourist, fortnightly, and Friday or Saturday to Monday, Tuesday, or Wednesday tickets, which are issued from Liverpool-street and their other London and suburban stations to the east and north-east coasts and the Norfolk Broads districts (Yarmouth, Lowestoft, Cromer, Mundesley, Southend-on-Sea, Clacton, Walton-on-Naze, Dovercourt, Harwich, Felixstowe, Aldeburgh, Southwold, Hunstanton, Scarborough, Whitby, Bridlington, &c.), they will on Saturday, May 20, issue special cheap excursion tickets to most of the above stations; also to Norwich, Cambridge, Wisbech, Lynn, Fakenham, and the other principal stations in Essex, Norfolk, Suffolk, &c. Cheap Saturday to Monday tickets will also be issued to most of the Great Eastern country stations. Excursion tickets will also be issued from Liverpool-street and suburban stations, by the cathedral route, on Friday, May 19, to Durham, Newcastle, Berwick, Edinburgh, Glasgow, &c.; and on Saturday, 20th, to Lincoln, Doncaster, York, Leeds, Bradford, Wakefield, Manchester, Sheffield, Hull, Edwinstowe (for the dukeries), Chesterfield, Durham, Newcastle, &c. Tickets (ordinary, excursion, &c.) can be obtained in advance at Liverpool-street Station; at the Great Eastern American Rendezvous, 2, Cockspur-street, S.W.; and at the company's various City, West End, and other booking offices. Relieving trains will be run on the Friday and Saturday to Colchester, Clacton, Walton, Ipswich, Norwich, Cromer, Yarmouth, Lowestoft, Cambridge, Lynn, &c. Special trains will leave Liverpool-street on Friday, 19th, at 1.30 p.m., for Colchester, Clacton, Walton, Ipswich, Norwich, and Cromer, and at 1.35 p.m. to Yarmouth and Lowestoft; and on Saturday, 20th, at 8.10 and 9.55 a.m., and at 1.55, 4.5, and 7.12 p.m., for Ipswich, Yarmouth, Lowestoft, &c.; at 1.30 and 7.12 p.m., to Felixstowe; and at 4.5 p.m., to Clacton, Frinton, and Walton. For the accommodation of persons detained late in town on Saturday, midnight trains will leave Liverpool-street at 12.0 for Norwich, via Cambridge, and at 12.30 for Norwich, Yarmouth, and Lowestoft, via Ipswich, calling at the principal intermediate stations; and at 12.3 (night) for Colchester and Clacton (express supper train). On Bank Holiday, excursion trains will be run from Liverpool-street and Fenchurch-street to Southend-on-Sea and Burnham-on-Crouch; from Liverpool-street to Clacton, Frinton, Walton, Dovercourt, Harwich, Yarmouth, Hertford, Cambridge, and Ely; from St. Pancras to Yarmouth, Cromer, Cambridge, and Ely. Excursion tickets will be issued and special trains run to Epping Forest, Broxbourne, and Rye House. On Whit Tuesday a special early train will be run from Yarmouth, Lowestoft, Ipswich, &c., due in London 8.0 a.m., and several of the usual up Monday only expresses (including the 7.5 a.m. restaurant car train from Cromer) will be run on this day instead of Bank Holiday. Restaurant cars will also be run on the 7.45 a.m. train from Clacton. Restaurant cars are now run daily on the trains leaving Liverpool-street at 4.55 p.m. for Norwich and Cromer, and at 5.0 p.m. for Yarmouth; and on the up trains leaving Cromer at 8.5 a.m., and Yarmouth at 8.25 a.m.

Notes from the North.

THE rivers are beginning to run small and clear again, yet good volume withal, and bar the easterly winds first class angling conditions prevail. Results are mounting upwards, and sport on the whole fairly good. Better returns from the netting stations on the coast are to hand, although still far back in the main.

Angling on the Spey is improving with the season, a few fish being got on the Knockando, Carron, and Elchies waters. Trout anglers on the Deveron and Ythan upper waters are having good baskets of yellow trout, while one or two salmon have been got on both streams. The best day on the Dee last week fell to the rod of Mr. Barclay, Glentana, who had four fish, scaling 4lb., 12lb., 12½lb., and 14lb.

Loch fishing commenced last week, when there was a fairly good rise of well-conditioned fish, and good average baskets have been the order of the day. On the Parkhill Lake, Donside, Mr. Johnstone had twenty-five fish for a few hours' angling.

Miss Pickering, Kincardine Lodge, is one of the youngest and best lady anglers on the Dee. She wields a 17ft. greenheart of the ordinary type after the manner born, and despises anything of a lighter make. She has an occasional run north in the spring, but autumn is the time when she is most actively and steadily on the river.

Smolts are making a fine show on the lower and tidal reaches just now, and for size and general condition they bear all the marks of having wintered well during the past two seasons.

Ignorance is no available plea now for those who kill salmon smolts, as a man, Robertson, found to his cost when he was fined at Berwick Police Court last week for having eight of them in his pockets.

A more interesting case was that of Andrew Percy, Tweedmouth, who was convicted for having eight sea trout

smolts in his possession. The defence that they were orange fins or yellow trout would not go down with the justices, and rightly so. Orange fins are in the stage of growth between the parr of sea trout and the finnock. The tidal angler has hitherto regarded the orange fin as his peculiar property, but after this we expect it will be as rigorously protected as the salmon smolt. Both are protected by the same law as "fish of the salmon kind."

The Bills and Law Committees of the Aberdeen Town Council are to find out from existing charters and leases if the council has lost all their rights in regard to the Dee tidal waters. The question has already been settled in the affirmative with regard to the Don, when the opinion of eminent counsel was obtained some time ago.

Her Majesty the Queen will make her spring visit to Deeside towards the end of the month. She is due at Balmoral on the 27th, and meantime the usual active preparations are being pushed vigorously forward.

Mr. Farrar has taken a lease of part of the Glentana waters from Sir Wm. Brooks right on to the end of the angling season in October.

Sheriff Robertson has given no uncertain sound as to how he is to deal with trout poachers in future. In the Aberdeen Sheriff Court last week he fined a man, Scott, who was one of a party found "sweeping the river with a net," not far from Dyce Bridge on the Don, in the sum of £3, with £1 8s. 3d. of expenses, and at the same time warned the fraternity that "if any other cases of the kind came before him he should impose the full penalty."

In passing judgment his lordship said: "There was no form of poaching that he regarded with so much objection as that of trout poaching. It was the sport of the many, and the doings of the accused and such as he were depleting their rivers and making them useless to anybody."

At last we are promised a remedy for the vexed question of distillery effluent. Extensive experiments are in progress on Speyside, which are very favourably regarded as a solution of the problem by those in the swim; but, meantime, details are withheld. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the committee of the Birmingham Angling Association was held on Friday evening last at the headquarters. Mr. T. Coles presided, and Mr. H. W. Miller occupied the vice-chair. Several apologies were read from members who were unable to attend through illness and pressure of business. The minutes of the past monthly meeting were read and adopted without discussion. An application for removal by the Aston Park Society from the Queen's Hotel, Victoria-road, to the Fountain Inn, Vicarage-road, Aston, was considered, which, after a short discussion, was sanctioned. This club seems to be making very little headway, but the report went to show that the removal would be a benefit to the club. This club have had five removals in about six years, and I hope that they will now find a place of meeting that will place the club in a better and sounder position. New officers have been appointed, and all looks well for their future success. Two more new clubs are in the course of formation, and their applications will be brought before the next meeting of the committee, when the preliminary stages of the next great association contest will be gone into. One of the most difficult things will be to find a suitable place, as the association is growing so strong that the places we have hitherto patronised will not be sufficient to accommodate us, as this year over 1000 members will take part in the competition. Although the committee of the Birmingham Anglers' Benevolent Society have passed a resolution to fish their annual contest in the canal at Fenny Compton on Saturday, July 9 next, there seems to be certain obstacles in the way of the contest being fished there, as we cannot get to know who has the rights of the fishing. The Banbury Association has been approached, and also the secretary of the canal company, but both write to say that they do not hold the rights for fishing the water. We are now waiting to see who has the rights, and if permission cannot be obtained we shall have to fall back upon a canal or river where we know that we can fish. We fished the contest in the river Avon at Wyre last year, but this was not a success. The year before we fished at Alrewas, in the canal; this was a great success, and a financial gain to the society. The Fenny Compton canal is far before the one at Alrewas for fish, but if we cannot bring off the contest at the former place we shall have to fall back upon the latter. Speaking of the Benevolent Society, I wish to place the important matter of prizes before the clubs, and hope that all those who can will forward a prize this year, so as to make the contest worth the attendance of those who are members and those who are not. The contest tickets will be 6d. each for members and 1s. each for those who do not belong to the society. The Spring Hill Society is making a large number of members just now, the reason being that a special prize of a valuable nature is offered for competition at their annual contest. The new Bridge Society, held at Smethwick, is making

rapid progress. This is in a measure due to the officers. The secretary is a man in the right place, and the president is a gentleman holding a high position at Mitchell and Butler's brewery at Cape Hill, who takes a deep interest in the society. The Bellarn, Highgate Park, and Rose and Crown Societies will have to keep their members well together or the Lamp Society will soon pass them in point of numbers.

FROM DERBYSHIRE.

The past week has not been very favourable for angling on Derbyshire streams. Anticipations of warm days have as yet been but partially realised on a few days; for the rest, strong north-easterly winds have prevailed, harsh and cold. The waters have been, and now are, in excellent condition, and in sheltered places on them moderately good sport has been had by both fly and bottom fishers and trollers. On the Ecclesburn, between Alton and Dnfield, several anglers have taken decent lots of fish; and a few fair baskets have been made on its pretty tributary, the Sherburn. Sport has not been very good on any part of the Amber, moderate creels only having been made both on the open and on the private lengths. There has been a fair sprinkling of anglers on most parts of the Dove, and some satisfactory sport has been had on the warmer and calmer days. The Dovedale, Load Mill, Beresford, and Hartington reaches have furnished several tolerably fair creels, but the angling, as a rule, has not been really good. A few brace have been killed on the tributary streams, the Fenny Bentley and Henmore or Schoo, but successful anglers have not been numerous on either of them. The Wye has scarcely had an average number of visitors. On the higher lengths, by Blackwell Mill and Miller's Dale, there have been, amongst others, anglers from Buxton and the Manchester district, and some moderately good sport has been had there. A few nice lots of fish have been killed on the sheltered parts of the Monsdale open and private waters, but, with one or two not very important exceptions, not much has been done on the Ashford, Bakewell, Haddon Hall, and Rowsley lengths of the river. On the Chatsworth and Baslow reaches of the Derwent anglers have not been very numerous, and although some fair creels have been made during the week, yet the fishing has not been, on the whole, satisfactory. Higher up, on the Derwent Valley lengths by Calver, Stoke, Grindleford, Hathersage, and Sickleholme, in the parts sheltered from the east and north-east winds by the hanging woods and the hills, rather better sport has been had, and several good baskets have been made there of nice sized fish, principally by members of the Hathersage Angling Society and their friends from the Derby, Manchester, and Sheffield districts. Not much has been done with the fly on the Bamford and Yorkshire Bridge lengths, and only moderate creels have been made by bottom fishers and trollers. A few decent lots of fish have been killed on the Ashopton and Derwent Chapel reaches; and several brace have been captured on the adjoining tributary, the Ashop, between Crook Bridge and the Snake Inn. Some tolerably fair sport has been had on the Nowe and on the Castleton burn, near Hope, where several decent creels have been made. Sport has improved somewhat since Sunday last, but settled warm weather is needed to make it what it should be, of which, after nice showers of rain, there are, this evening, Wednesday, favourable indications.

FROM THE FEN DISTRICT (LINCOLNSHIRE):

There is very little to relate in reference to trout fishing. Last week the weather changed somewhat for the better. Warm sunshine in the daytime and mild nights promised well, but all this has been changed again by the cold north-east winds and frosty nights. Under these conditions the fish are still keeping down, and, although one or two are occasionally seen, they are not really feeding in a way at all satisfactory to anglers. There was a heavy downpour of rain in the district on Tuesday. This will further improve the streams, but fly fishing will not be good until the water becomes warmer and flies hatch out more freely. Bottom fishermen continue to obtain fair sport with the maggot and worm; but the bags, as a rule, have not averaged more than three to four brace per rod.

FROM HULL AND DISTRICT.

The weather in this district for the past week, although fine, has been extremely cold for the time of year, a strong north-easterly wind prevailing during the day, and being very cold at night, which has caused quite a scarcity of the natural flies usually seen during May, consequently the fly fisher has met with very poor success, either on the river Hull or its tributaries; but as both the river and contributory becks are in excellent condition, all that is required is a little milder weather. A few brace of fair sized trout have been taken in the Wansford and Brigham district; and below the lock, at the beck-ends, odd fish, going from 2½lb. to 1½lb. each, have been secured with worm. At Hull Bridge some fair catches of flounders have been made, but the cold weather has thrown the eels off the feed even in the lower waters below Beverley. At Hull Bridge, the Victoria Angling Society fished a match and did fairly well, Mr. W. Downsworth taking the first prize with 1lb. 15oz., and the others had decent takes, considering the weather was extremely cold on the day in question; the second and third prizes were taken by Messrs. R. Walmsley and A. H. Dahle. The Stoneferry Angling Society fished their first match of the season on the same day, on the celebrated Minto Flatts stretch, but did not do so well as their confrères at Hull Bridge. Messrs. W. J. Cox, W. C. Cox, and W. Smith were the first three prize winners. This society will hold its annual opening dinner on the 22nd inst., at the New Inn, Stoneferry, when the prizes will be distributed to the successful competitors. The Holderness Angling Society also held their first match on Minto

Flatts on Thursday last, Mr. J. Dobson winning the first prize with a little short of 1lb. of fish, Messrs. J. Thompson, R. G. Fetch, and W. Culting coming in for the next three. The prizes will be delivered to the winners at a meeting at the club's headquarters, the King's Arms, in Witham, on the 16th inst. A much respected member of Messrs. Blundell's Employees' Angling Society has just passed over to the great majority in the person of Mr. B. Plant, who was one of the founders of the society several years ago, and will be much missed by the members, by whom he was greatly esteemed.

FROM THE LAKE DISTRICT.

After the heavy rainfall of Monday week, which brought out rivers, good sport was obtained with worm on the Lune, Eden, and some other streams, and this was maintained for a time, after the waters had settled, with natural minnow and fly. The first named river was patronised by visitors from Lancaster, Kendal, and other places, and there was a fair turn-out of local rods. Amongst the more successful were Messrs. Henderson, Remington, Turner, W. Fisher, J. Bland, and P. Crane, the last named having three nice trout which weighed 2lb. A few good fish have also been secured on the Derwent, the best being one to the rod of Mr. J. Spark weighing

a little over 3lb., two or three others of 2lb. being taken, Messrs. Williamson, Carr, Cutts, Lowther, Denwood, Moffatt, Hodgson, Coulson, Hill, Wilkinson, Newton, Elliott; and, lower down the river, Messrs. R. F. Brown, J. Parkin, J. Soulsby, and G. Banks being amongst the successful ones. On the upper waters of the Eden paniers of from three dozen downwards have fallen to the lot of Messrs. M. Howson (thirty-six), T. Howe (thirty and thirty-four), Rev. E. Rhodes, Dr. de Montmorency, Messrs. W. H. Laycock, E. A. Heelis, Addison, Thornton, and others. Fishing on Ullswater and Windermere has not been good.

FROM LANCASHIRE.

The Ribble has suffered in consequence of the prevailing north-east winds, which have tended to keep the fish down. The rise of fish has been scarce, except at noon, when it has been fair only. Fair average sport has been obtained. The most useful flies were March Brown, Olive Dun, Little Waterhen, Dark Snipe and Purple. On the Wyre and tributaries, although all have been in fair condition for fly fishing, very few rods have been out. The cold winds, no doubt, are to blame for this. A satisfactory rise of fish during the day, but the early morning and evening have been too cold. Fair baskets of fish have been made at

Garstang, and on the majority of the tributaries. Nine brace is the best basket recorded. The Lune and tributaries, owing to recent floods, are pretty well free now of smelts, the majority having been enabled to get to the sea. The waters, as a rule, have been too heavy for the fly, the best basket reported being three brace. The minnow and worm have been fairly used at Hornby Castle and Tunstall waters, resulting in baskets of eight and a half, seven and a half, and six and a half brace. Codling fishing in the estuary at Morecambe Bay being good. The Warrington Anglers' Association have been disappointed with their efforts to secure suitable trout ova, so decided to buy 1000 yearling trout from the Wyresdale Fishery, and to reserve their energies to the hatching of roach ova, with a view to stocking one of their waters near the town. On the 6th, ten carriers, containing yearling rainbow trout, arrived for this association, and were turned into the river Bollin at Heatley. They were in fine condition.

FROM MANCHESTER.

The County Palatine Angling Association have, it is officially stated, secured the fishing rights of eleven miles of the Poynton or Macclesfield Canal, commencing at Marple, at the junction of the Peak Forest Canal, and continuing to the Buxton-road Wharf, at Macclesfield, join-

TRADE MARK (Regd.)

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-, 28/-, 34/-.
11ft., " " 28/-, 30/-, 36/-.
12ft., " " 30/-, 32/-, 38/-.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL (Improved Pattern).

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Aluminium. The greatest boon to anglers yet invented for Salmon, Mahseer, and Trout, and all kinds of coarse fishing; unsurpassed for long distance casting; simple, and easy to learn. Rods and lines specially suited for these reels.

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is easily operated by the hand, whereby the check can be regulated at will by simply turning the milled disc on spindle. This should prove a great advantage to anglers, as the check can be regulated without having to take the reel to pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies of all sizes. Handy and compact, each fly secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Coen Wood. Made in 18 different sizes.

ILLUSTRATED PRICE LIST FREE.

Lancashire.

MAY FLY SEASON ONLY.

During the May Fly Season we will

SELL OUR CELEBRATED GUINEA MULTUM-IN-PARVO TROUT RODS (TWO OR THREE JOINTS) AT £1
and present each customer with one dozen of assorted flies (eyed or to gut).

TAPERED CASTS (240 TROUT TAKEN ON ONE), 1/- each; or 10/- dozen.

OGDEN & SCOTFORD,

19, LEICESTER SQUARE, LONDON, W.C.;
And at CHELTENHAM.

ing up to the length governed by the Macclesfield Association. The water has the reputation of being one of the best canals in the North of England, and if extensive stocking will do it, this good name is to be maintained. A drawback to most canal fishing, the constant procession of boats, will not be found on this water to such a large extent as is generally met with, which is very much in its favour, and there is little doubt that the commendable efforts to be put forth in the near future to carry out a lengthy stocking programme will be much appreciated by those for whose benefit it is intended. A water bailiff, officers, and places for the sale of tickets have been appointed, and posting has been carried out right through the entire length to be preserved, and all things are now ready for the opening on Saturday, May 20. The Longsight Angling Association are making extensive preparations to launch out when the close time for coarse fish has once more gone by. No less than eight contests are down for decision, the first taking place on July 21, in their private waters in Derbyshire—waters that are well stocked with fine fish, comprising rainbow and Loch Leven trout, perch, tench, roach, dace, and chub. No wonder is it that hopes are high for a good season. Several vacancies are noted on the roll call. The officers for the ensuing season were elected.

FROM NOTTINGHAM.

Angling news is still very scarce in our district. On Tuesday heavy rain fell, bringing on a rise of a few inches on the following day, and this should do good as regards helping onward coarse fish on the spawning grounds. Very soon roach will be at the weirs going through the process of scouring. A few trout anglers have visited the local tributaries, and on the Dover Beck sundry choice fish have fallen to the worm. Fly fishing has so far resulted in general failure, this being due to the cold nights prevailing. The Nottingham Nag's Head Society have, since my last, held their annual meeting at headquarters, under the presidency of Mr. W. Packer. All the officers were unanimously re-elected, and the champion prize of the season was awarded to Mr. F. J. Lindley, of Beeston. As to the stocking of the Shardlow Fishery (leased by the Wellington Association) with trout, Mr. W. Gaskell, the esteemed president, has taken up his fertile pen with a view to elicit expert opinion on the subject.

FROM SHEFFIELD.

The river Amber has been running on the clear side, but a few anglers well acquainted with the river have accounted for several brace of nice fish. Bottom anglers have fared the best, but in order to achieve any success they have been compelled to use the finest tackle, baited with maggots on a small hook. The waters rented by the Sheffield Trout Anglers' Society at Wingfield have yielded several brace of nice trout. Visitors to the Derwent have obtained a fair amount of sport, bottom anglers fishing with maggots accounting for the greater number of fish. The upper reaches of the Derwent have been fairly well patronised by anglers from Sheffield and other places, and in the Darley Dale Club waters a lot of nice fish have been taken. Locally the best sport has been obtained in the Loxley, which has taken the place of the river Sheaf in the affections of Sheffielders. Both in the stream and in the dams adjacent a lot of capital fish have been killed. The opening of the season in the Hollow Meadows Reservoir has not provided any sport of an unusual character. There is some talk of re-stocking portions of the river Sheaf, which was depleted of trout by the cleansing of a dam some time ago. Arrangements have been made between the Sheffield Anglers' Association and the Peterborough Anglers' Association, whereby the Sheffield anglers will enjoy the privileges of fishing in the river Mene on the payment of the same entrance fee as the Peterborough members.

FROM SHROPSHIRE.

By the decision given in the Divisional Court of Queen's Bench recently, the question whether or not the public have the right to angle in the non-tidal, but navigable, parts of the river Severn has been determined, and in a manner predicted in these notes some time ago. It was held that prescriptive right to fish could not be acquired by the public, and, further, that the Act of Geo. III., upon one clause of which reliance had been placed, could not bear the construction that had been placed upon it—namely, that public fishery rights were thereby conferred. The result of the case is that the magistrates, whose decision had been appealed against by the Shropshire Association, will have to reverse such decision and convict; and it follows that the fishery rights are vested solely in the owners of the land adjoining the river. Public rights can only exist where the river runs past public property, as in several places at Shrewsbury. The decision of the Justices of the Queen's Bench appears absolute; facts, especially legal ones, are stubborn things, and the angling public will have to accept the verdict, unpleasant though it may be, with good grace. The right of the Shropshire Association to control the greater part of the fishing in the Severn in their county has been upheld, and anglers generally will do well to make whatever terms are possible under the circumstances. It is hoped that the association will be ready, on their part, to make concessions to the coarse fish angler, for it would be a sorry necessity if the river were closed against them. By cordial co-operation the Shropshire Association and the angling public might vastly improve the fast failing fisheries of the upper Severn. For the last few years a state of confusion has existed, owing to the uncertainty of the legal position of the association; meanwhile, the river has been neglected, pike and chub swarm in every part, salmon and trout have been practically exterminated, and, if steps be not taken to net them out, grayling, roach, dace, and other fish will share the same fate. Very little can be accomplished by the association as it is at present

constituted; and anglers generally will be well advised if they now take out membership tickets and enable the association to set up a proper system of river management, in place of the conditions of neglect and chaos which have so long existed. The anglers of the Thames have set an example which could be followed with the greatest advantage. There is room for the coarse fish angler as well as for the trout fisher; but the extermination of predatory fish is essential if anything is to be done in the common good.

FROM WORCESTER AND DISTRICT.

The rivers continue in first class condition, but not much has been done among the game fish, for anglers are waiting for warmer weather. Nights have been exceedingly chilly, several degress of frost being registered on some of them. Some of the days have been very fine and sunny, and flies more abundant on the water, the Stone Fly and Yellow Dun showing up well, and on the Teme the trout rose well at them, and with the Blue Dun were the best flies of the week. On other waters Iron Blue and Blue Dun are given as the best. Anyway, some very nice fish were creoled, and the fish are getting in very good condition. There has been a great number of anglers fishing the Severn for coarse fish during the week, and some members of clubs have been reported for doing so, contrary to the rules of the District Association, and the matter will be brought before the committee at a special meeting, to be held at the Plough Inn on Saturday evening next, the 13th inst., when the matter will be thoroughly gone into. Much satisfaction is expressed by anglers in this district that the Court of Appeal has decided that it is not necessary for coarse fish anglers to take a trout licence if they are fishing for coarse fish only. This has been a vexed question between the Severn Fishery Board and anglers for some time, and the Provincial Angling Association has been most anxious to have the matter decided. On several occasions, when the board have been worsted before the magistrates, they have asked for a case for the higher court, but failed each time to go on with it. An angler at Kynesham was summoned before the magistrates for fishing without a licence, and the case dismissed, the magistrates being satisfied he was fishing for coarse fish. The case was before the Court of Appeal on Monday last. The case was well argued. Mr. Justice Channell said the magistrates said the man was fishing for coarse fish, and how could the Court say they were fishing for trout. The appeal must be dismissed. Mr. Justice Charles agreed, and the case was dismissed. It will lead to a great reduction in the funds of more than one fishery board, and of the Severn Fishery Board in particular, which the loss of licence duty has already much affected. All clubs would gladly pay for a licence if the board would protect their sport, and it is to be hoped it will lead to a better understanding between the board and the rapidly increasing number of anglers, for the board cannot work without funds.

FROM YORK AND DISTRICT.

Fly fishers have experienced most unfavourable times, owing to the prevalence of north-easterly winds, and from day to day results have varied considerably. On the whole, the rivers have yielded fairly gratifying sport with the artificial fly and the minnow. In the Ure (Ripon district) there has been excellent water for spinning, and several baskets of from ten to eighteen trout were reported at the close of last week. The Partridge Bloas have accounted for some nice fish in the Hawes water, and fair sport has been obtained both by fly anglers and bottom fishers about Leyburn. Good baskets of trout were recently taken on the Otley banks of the Wharfe, the most enticing flies being the Winter and March Browns, Waterhen Bloa, and Orange and Yellow Partridges. It is surmised, in accounting for the scarcity of flies on the water, that the floods a few months ago washed the larvae from the head of the river. The prospects for angling on the Wharfe, Ure, Swale, and Nidd have improved with the change of the wind and temperature, the north-east wind at the time of writing having given way to southern breezes and far more spring-like conditions than have prevailed of late. Reports generally show a settling down of the waters, and the trout streams should, if no untoward meteorological conditions assert themselves, yield better sport than has been obtained for some time. Harrogate Club waters are in fine trim for all kinds of angling. A number of rods have been out since minnow fishing opened, and good results have accrued. The long stretches of the Nidd have yielded capital fishing, more than usually weighty baskets having been made. Visitors have done well with the Waterhen Bloa, Snipe, Spanish Needle, and Orange Partridge. The fly has risen earlier since the east wind subsided. Should the cold return, from ten to two o'clock will be the best time to anticipate the fly.

THAMES RE-STOCKING ASSOCIATION.

The first annual dinner of the Thames Re-stocking Association was held on Tuesday evening at Carr's Restaurant, 265, Strand, W.C. The president of the association, Mr. C. H. Cook ("John Bickedyke"), occupied the chair, and was supported by Mr. Wm. Senior ("Red Spinner"), Messrs. W. H. Cate (Caxtonian Angling Society), F. G. Littlewood (hon. treasurer), F. H. Amphlett, G. R. Clarke, A. Drinkwater, G. P. Andress, C. W. Littlewood, T. Lyne, A. W. H. Marsom, A. R. Matthews, W. A. Smelt, H. G. Hankins (hon. secretary), and other gentlemen.

The usual loyal toasts having been duly honoured, Mr. F. H. Amphlett proposed the "Thames Re-stocking Association." He said he was pleased to see present that evening so many gentlemen who were present at the first meeting of the association, a fact which showed that

their interest in the question of re-stocking the Thames had not diminished. He maintained that the Thames Re-stocking Association, and those responsible for its management, had no desire to interfere with older re-stocking and preservation societies.

The toast having been drunk with enthusiasm, Mr. C. H. Cook, in reply, said that since the idea of the hatchery had been started a large number of people who had previously taken an interest in the question of maintaining the stock of Thames fish had come to him and expressed the hope that the scheme would succeed. He quite expected they would have some difficulty in getting the money, but they meant to go on until the whole of the money needed was subscribed. (Applause.) But they not only wanted funds, they wanted to create a feeling of brotherhood amongst all classes of anglers. At present there was a good deal of jealousy between angling societies and preservation societies, but he hoped this would cease, and that a healthy spirit of determination to work together for the common good of the Thames would prevail. (Hear, hear.)

Mr. W. Senior next gave the toast of the "President," and in doing so he said the Thames Re-stocking Association were fortunate in having a man of the stamp of Mr. Cook as their president. He had known Mr. Cook very many years, and he had always found that when he took up a scheme he worked away at it until it became an accomplished thing. He was pleased to see they were going to try and start a hatchery on the Thames, and he hoped they would be successful in raising the necessary funds. (Applause.)

Other toasts were the "Officers," proposed by Mr. T. Lyne, and responded to by Mr. H. G. Hankins (hon. secretary) and Mr. F. G. Littlewood (hon. treasurer), and the "Press," proposed by Mr. G. Read Clarke and acknowledged by Mr. Senior.

During the evening an excellent musical programme was carried out by Messrs. W. H. Cate, A. W. H. Marsom, Drinkwater, G. P. Andress, and others.

HON. REPORTER.

MAIDENHEAD, COOKHAM, AND BRAY THAMES ANGLING ASSOCIATION.

THE annual meeting of the above association was held at 1, Park-street, Maidenhead, on April 29. Mr. H. W. Russell, C.A., presided. The minutes of the last half-yearly meeting having been read and confirmed, the annual report and balance-sheet were presented and adopted. From the report it is gathered that in May last year the association turned in twenty-one brace of good trout averaging 1lb. in weight, and that the improvement in the perch still steadily continues, both as regards size and quantity. The committee are most anxious that the association should be strengthened by the addition of new subscribers. Mr. W. H. Grenfell was re-elected president, and the following vice-presidents were also re-elected, viz.: Lord Boston, V. W. B. Van de Weyer, Esq., Capt. Oliver Young, R.N., M.P., Col. Ricardo, and Ernest Gardner, Esq. Messrs. H. W. Russell, R. Goolden, H. Hoare, J. J. Jonas, F. D. Lambert, R. Nicholson, A. N. Gilbey, and F. Brewer were chosen as members of the committee. Mr. Alfred Fossick was re-appointed as solicitor, and Mr. C. H. Ricks as secretary to the association. The head bailiff (Mr. Harry Wilder) reported with regard to trout that some very good fish had been seen, and that there was a prospect of a good season. The river was well stocked with coarse fish of all kinds. The meeting closed with a vote of thanks to the auditors, Messrs. R. D. Lee and W. Naylor.

ANSWERS TO CORRESPONDENTS.

PEDAGOGUE.—If you write to "J. S. N." 35, Harrington-square, N.W., you will probably get the information you require.

H. P. SATLOCK.—June 16 will be the opening day of the Thames coarse fishing season. Unlike the Lea, eels may not be taken during the fence months.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

A TROUT THAT DID.

SIR,—Mr. Dewar, in "The Book of the Dry Fly," and Mr. Halford, in "Dry-Fly Fishing," agree in the opinion that it must be an extremely rare event for a trout to allow itself to be netted after getting clear of the hook. The story of a trout that did may, therefore, be worth the telling.

In 1869 I was fishing with a friend one evening on the Avon at Salisbury. It had become too dark to see the rise when I joined my companion just as he was into a fish of some size. After a longish encounter, characterised rather by a display of stubbornness than of dash, the hitherto unseen fish was brought near to the spot where I was ready with the net. Almost in the same moment I caught sight of a good trout, saw the line go slack, and heard my friend, in a sad tone, exclaim, "He's off." I was just able to reach far enough to slip the net under and bring to grass the unhooked fish. Never were two anglers more astonished than were we at this piece of good luck, which, of course, was a fluke. The defunct scaled a few ounces over 4lb, was in excellent condition, and pink fleshed, the latter quality not being common to trout in that water. I should add that he was floating right way up at the time of disaster and success; whether he had

been on his side, and happened to roll to the normal pose just for the moment, is a question for speculation.—Yours obediently,
BIPISCATOR.

PIKE "HANGING ON" TO WEEDS.

DEAR MARSTON,—I was interested on reading your review, in last week's *Fishing Gazette*, of Sir Edward Grey's book on fly fishing. At page 302, *Fishing Gazette*, you speak of the author's conviction "that trout at times, when they rush into a weed bed, hang on to the weeds with their teeth;" and the editors—i.e., the Marquis of Granby and Mr. George A. B. Dewar—say "it would surely be hard to over-estimate the importance to the angler, and the interest to the naturalist, of this theory."

You and I have noticed, when fishing together, that pike, while fighting for liberty and life, do sometimes take hold of weeds with their teeth. You will no doubt remember my hooking a large pike—it was 15lb.—in that weedy backwater just above Holme Bridge, river Frome, Dorset, and how it held on for some minutes to the bottom. I had hard work to get it loose, and when you gaffed the fish for me its jaws were tightly clenched on a bunch of weeds. A similar thing happened to our friend, Edwin Frost, when angling with me at the large pool near Wareham Bridge. He was snap fishing far out in the middle of the river. A large pike took his live bait, and dived down into 12ft. of water, and held on for at least ten minutes. When landed the fish had in the grip of its closed jaws a bunch of weeds bigger than my doubled fists.—Yours sincerely,
ALFRED JARDINE.

FISHING IN CO. LEITRIM, IRELAND.

DEAR SIR,—I would be very grateful if, through the medium of the *Fishing Gazette*, you, or any reader, could give me the address of a reliable owner of boats and fisherman in or near Kinlough, co. Leitrim, Ireland. I am going there in July with a party who intends to fish Lough Melvin, and wants information regarding familiar flies and other lures. I also want to have boats and lodgings provided.—Yours truly,
YOUNG ANGLER.

FISHING NEAR LOWESTOFT.

DEAR SIR,—I propose spending a week or two at Lowestoft in July, and should feel greatly obliged if you would advise me as to the best rivers or broads to fish, and whether the tackle used there is the same as used on Thames or Lea.—Yours truly,
HILLS.

COOPER'S FANCY.

DEAR SIR,—I shall be pleased to forward a pattern of Cooper's Fancy to Mr. A. Roland Upcher if he will favour me with his address.—Yours truly,
J. E. MILLER.

DEAR SIR,—This fly can only be obtained, correctly dressed, from myself. I brought it out three seasons ago, and have used it, fishing one fly only, on every water I have visited with great success, killing more fish than I ever did before. I use it from the beginning to the end of the season, rarely changing it, and it kills as well wet as dry. One evening last August, fishing in the Derwent here, I put it over four fish, rising one above another in the stream, and hooked and landed all—a trout, grayling, dace, and a roach.

Mr. F. Walbran, Leeds, writing on Sept. 14, 1898, has the courtesy to acknowledge the origin of this fly, by saying, "This fly, which I believe is an emanation of your active brain, I am besieged with orders for."

I have not yet heard from Mr. Dale, Hanley, to the same effect.—Yours faithfully,
HENRY COOPER.

NETTING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt of following sums: West Green A.S., 13s. (second donation); Clisold A.S., 6s. (second donation), and 1s. Queen's Piscatorials.—Yours faithfully,
ALEX. WRIGHT (Hon. Treasurer).

TROUT AND PIKE FISHING IN IRELAND.

DEAR SIR,—If "Pike," "Pedagogue," and "J. T.," whose letters appeared in last week's *Fishing Gazette*, will communicate with me I shall be happy to give them full particulars as to the sport, &c., obtainable here. As I am the recognised correspondent of the *Fishing Gazette*, your English friends may count on getting from me most reliable information regarding fishing of all kinds on the Shannon and its lakes, both here, at Killaloe, and elsewhere along the river.—Yours faithfully,
S. J. HURLEY.

Abbey View, Killaloe, co. Clare,
Ireland.

TROUT FISHING IN IRELAND AND NORWAY.

DEAR SIR,—In reply to the query of "J. T." and "Pedagogue" for good trout fishing in last issue of your paper, might I venture to suggest Lough Melvin, still unrivalled for trout angling? Bracing air, lake, and mountain scenery. Dapping with "daddys" in August is really a success. Cheap, clean, and comfortable lodgings can be had near the lake. If the above named send their addresses to me I shall be pleased to furnish all information required gratis.—Yours faithfully,
ROSSFRIAR, KINLOUGH, CO. LEITRIM. P. GALLAGHER.

DEAR SIR,—"J. T." would find a comfortable inn, with very fair trout fishing in the river Yore, the Bain, and in a small lake called Semerwater, if he makes his headquarters at the Rose and Crown Hotel, Bainbridge, Wensleydale. I have so frequently called attention to this beautiful district in the *Fishing Gazette* and other newspapers, that its features must by this time be well known. Respecting Bainbridge, H. Speight, in his work of "Romantic Richmondshire," says: "The approach to Bainbridge is most inviting, and the houses composing the

village are ranged round a spacious and pleasant green. There are several interesting old buildings, including the hall, and an ancient and commodious hostelry, the Rose and Crown, which is believed to have been an inn since the old Forest days. The doorway had formerly a good Norman arch, and above the porch (a late work) was formerly a stone bearing in raised letters the date 1445. Adjoining the inn was an old house, which was rebuilt much in the original style a few years ago, and has in front of it a Greek and Latin inscription. On the green are the remains of the old stocks, which have not been used for over sixty years. The last occasion, I am told, on which they were put into use was when a tinker named Jos. Swales and his wife (a riotous couple) for being drunk and disorderly, were committed to sit in them. One of the most romantic excursions from Bainbridge is into Raydale, where the visitor may obtain a peep at lonely Semerwater, a beautiful silvery expanse lying in the bosom of sequestered hills, remote from the busy world and its tribulations. The lake ordinarily covers a space of about 100 acres, but after rains, the banks being low, it sometimes swells to nearly double that area. Its greatest normal depth is about 40ft., and the walk round it is from three to four miles. The marshy flats and banks abound in rare plants, and the ornithologist, too, will find the retired mere the haunt of many a *rara avis*. Its waters abound in fish, which in former times, as appears by ancient surveys of Richmondshire, were of considerable value; in Edward I. (1281) being valued at 40s. yearly (about £30 of present money), though in the time of Edward III., A.D. 1340, it is returned as of no value 'because it cannot be let, nor any profit made of it,' doubtless owing to the devastation caused by the border raids after Bannockburn." Rudd and bream are particularly plentiful in the lake, and sometimes during storms numbers of these fish are left high and dry on land, having been blown from the shallows about the margins. Rudd sometimes collect about the sides of the lake in such numbers that it has been possible to rake scores together out of the water with a hay rake. There are also thousands of crayfish, and trout are fairly numerous. The fishing is owned by the Wensleydale Angling Association, and day tickets, 2s. 6d. each, may be had at Aysgarth station, or from the secretary at Askrigg. The season is from March 16th to October 1st. A good deal of interest centres round Semerwater. It was from the large boulder at its foot, known as the Carlow Stone, that the artist Turner, the greatest of England's landscape painters, drew his unrivalled view of the lake.

The story is that the stone named (which is said to bear supernatural marks) was one of many hurled by some despairing genius of this remote valley upon a city that once stood here, which was renowned for its pride and selfishness. Another legend of similar import relates how, once on a time, a poor but God-fearing man (some say he was an angel in disguise) entered this wicked place, then overflowing with wealth and abundance, and failing to obtain either food or shelter at any house save that of the poorest tenant in it, he, after a little deliberation, walked up the hillside above the poor man's cottage, and, raising his hand heavenwards, then exclaimed:

"Semerwater rise, Semerwater sink,
And swallow all the town, save this little house
Where they gave me meat and drink."

No sooner said than the proud and uncharitable city, with all its inhabitants, sank out of sight, and a body of water gradually rose and spread over the site. As the legend runs:

"They tell how once a busy town
Stood where these waves are flowing,
The streets are hidden where, far down,
The lily roots are growing."

But the saint's blessing, be it known, rested upon the poor man and his wife, and they ever afterwards prospered:

"Nor did it reach to them alone,
But reached to son and daughter,
Until the land was all their own
Around lake Semerwater."

The Crown is now in the occupation of Messrs. Kendall and Chierici, formerly of the Bruce Arms, Tanfield, and well known to many Yorkshire anglers. Mr. Chierici is an expert angler, and will gladly give "J. T." or any other brother piscator every advice.—Yours truly,
J. E. MILLER.

Northern Angler's Depot, 19, New
Station-street, Leeds.

SALMON FISHING IN BRITISH COLUMBIA.

DEAR SIR,—If some of your many readers and contributors know anything about salmon fishing in British Columbia, I am sure they will be kind enough to provide me, without delay, with all the hints that they consider useful to a would-be angler in those parts.

Any information whatever on this point, provided it were reliable, of course, would be most acceptable; and it could not be too extensive or too detailed for.—Yours, &c.,
WOULD-BE ANGLER.

SOFT DRESSING FOR A LINE WANTED.

DEAR SIR,—Could you or any of your readers give me a recipe for dressing an eight plait silk line for spinning for salmon, to be used on a patent casting reel?

The line is loosely plaited, and I, of course, wish to have a soft dressing. Thanking you for past favours.—Yours, &c.,
IRON BLUE.

FISH TO PAINT FROM WANTED.

DEAR SIR,—In venturing to ask a favour of you, I feel sure you will oblige me if you can do so. I am making a series of water-colour drawings of British fish. Many of the common species I take here, but it takes more interest than I have to get specimens of char, grayling, sea trout,

&c., which frequent the northern lake district. Would you object to insert a note from yourself asking any friend to send one specimen, when it can be spared, to me direct, and any expense I will repay.—Believe me, yours very faithfully,
A. WHEELER.

71, Queen's Road, Clifton, Bristol.

[We shall be very much obliged to any of our readers who will assist Mr. Wheeler to complete his drawings of our fresh-water fish.—Ed.]

GREEN DRAKE—"THINGS BELATED OR OTHERWISE."

DEAR SIR,—Many of your readers may be glad to know that a few Green Drake have been showing on Lough Derg, and as the weather is now brilliantly fine and warm, and looks "set fair," the fly will, no doubt, be "up" in its thousands by the end of this week; so "dappers" look sharp!

The lake is some 4in. above summer level, and the nights cool and keen, but for which, I am sure, the rise would now be well on.

It surprised me to learn from "Mona's" letter in last week's *Fishing Gazette*, that the Caddis Fly or large Pale Sedge Fly, which so abounds in the Shannon at Killaloe, is called the May Fly by local anglers. I never heard it so called, and I am a local angler. It is called the Cinnamon, Sedge, or Rail, and is a first cousin of the Lough Ree Fly "Mona" makes mention of, which is also a Caddis Fly.

The latter fly is well known on Lough Derg, and is locally called the Olive, or Dark Olive, or Rail. It makes its appearance when the May Fly is on the wane, and is taken as evidence that the dapping is practically over. I entirely differ with "Mona" when he says it is "in shape a Stone Fly in miniature," for this Caddis Fly has, like all its family, sloping wings of a roof-like shape, whereas the Stone Fly has absolutely flat wings.

He says the Stone Fly is called the "Mullah." In this he is doubly astray. There is no such fly locally known as the "Mullah." He probably means the "Murragh," derived from "mnr," or "mor," the Irish for large or great. The Murragh is a very large Sedge or Cinnamon fly, much larger than the Stone Fly, and appears later on in the season than the Stone Fly. The Stone Fly is known to very few of our local anglers, for it scarcely ever takes to wing, and lies hidden under flat stones on the lake shore. The Stone Fly is of the Perlidae family, whilst the Murragh is, I believe, the *Phryganea grandis* of the Trichoptera; so one could not be confused with the other.

The Stone Fly appears about a week or two before the Green Drake. When I find the orange tip butterfly skimming the road hedges I look out for the Stone Fly, and the brimstone butterfly arrives with the Green Drake. I send you, this post, specimens of the Stone Fly, picked up on the shore of Lough Derg the past few days, and you can say if it is or not the Stone Fly proper.

I generally try a few days' dapping with the Stone Fly, if the weather suits, before the Green Drake is on, and it will also kill near the shore by being sunk under water with a small shot on the cast.

I also enclose a specimen fly, which I imagine is the Yellow Sally. I found it on the Nenagh river last week. It is a most killing fly when out if the weather be at all breezy, but I can never get a good artificial imitation. Mr. Halford says it is not relished by trout, in which I must respectfully differ from him, but then I fish the pattern wet in preference to dry, which makes all the difference! The Willow Fly, or Hare's Ear and Claret, to give it its local name, is also the most deadly killer as a dropper in the months of March and April, when the natural fly hatches out in large numbers on our local rivers.

By the way, in "Dry Fly Entomology" it is stated that the Stone Fly inhabits rapidly flowing water. How then is it so numerous on certain rocky shores of Lough Derg, where there is practically no flow? The male fly (wingless) is very scarce in proportion to the female. Not one male to thirty females can be met with.

"Mona" can at the present time find the larva of the May Fly in the mud or sandy shallows of Lough Derg. I do not think it burrows into banks, but even in rivers lives in the mud or sandy bottoms under water, on a shallow, perhaps, for preference.—Yours, &c.,
OIRMUHAN.

Nenagh.

FISHING NEAR GALWAY.

DEAR SIR,—Will you or any of your correspondents kindly answer the following questions?

1. Is there a decent hotel to stay at in the town of Galway?
2. Is this a good time to fish in the river Corrib and lake for salmon, trout, and sea trout?
3. What does one have to pay for salmon fishing; and from whom does one have to get leave to fish on Corrib?
4. Do the fish one lands belong to oneself, or has one to surrender them to the proprietor?
5. Is there any other good fishing near Galway with convenient and decent hotel close by? Any other information gladly received.—Yours truly,
X.

FISHING IN SUTHERLANDSHIRE.

DEAR SIR,—Can any of your readers tell me whether during the first fortnight in June I am likely to get good loch fishing in Sutherlandshire (fly), also what places are recommended? I should expect on going so far north to get better sport and bigger trout than can be obtained by travelling a less distance. Am I likely to be disappointed? Preference would be given to a spot where a little salmon or grilse fishing might be obtained at a moderate daily charge, particularly if wading were not absolutely necessary. Are the hotels likely to be empty so early in the year? I don't want to be the only guest, as I may have to take my fishing holiday alone. Any information I may obtain through the columns of the *Fishing Gazette* I shall be grateful for.—Yours, &c.,
VOLUNTEER.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newspapers and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Months ditto	5s. 4d.
Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is Insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

Telegraphic Address—"RIVSAM, London."
TELEPHONE, No. 83 Holborn.

SATURDAY, MAY 20TH, 1899.

MR. JAMES OGDEN'S ARTIFICIAL MAY FLIES.

MR. JAMES OGDEN, of 28, Winchcomb-street, Cheltenham, makes superb artificial May Flies, and uses a special hook, which suits the purpose admirably, and does not overweight the fly, as so many of the hooks used in May Flies do. Among some lovely samples sent us by Mr. James Ogden we must mention the famous "Marquis" pattern, which killed so well last season. Some anglers use one favourite pattern of May Fly, and stick to it, saying, if the fish will not take it they will take nothing else; but we have often killed fine trout which had refused an artificial of a light shade with one with dark wing and strongly marked dark body, like the "Marquis," and *vice versa*. We have also found it a good plan when there is a lot of natural fly on the water, and the fish only pick out a few of those floating over them, to use an artificial which is much lighter than the natural in colour, or if that is very light then a dark pattern. Of course, it is unnecessary to endeavour to call the fish's special attention to your fly in this way if he is taking all he can get.

It would be difficult indeed not to be able to pick out of Mr. James Ogden's beautiful variety

of patterns something to suit the taste not only of trout, but of far more fastidious anglers. They bear examination with a magnifying glass. To describe the dressings would be giving them away; but we particularly recommend the "Marquis," with dark body and grey wing, and ditto with light body and light wing—also the winged and hackled spent gnats.

The winged patterns for floating—and none beat them in this respect—are 6s. per dozen; and the hackled, for wet-fly fishing, are 4s. per dozen.

HEWETT WHEATLEY'S PRACTICAL HINTS AND DAINY DEVICES FOR THE SURE TAKING OF TROUT, GRAYLING, &c.

IN 1849 Messrs. Longman, Brown, Green, and Longmans published one of the best and most original books on fly fishing and spinning ever written.

Wheatley's little book is called "The Rod and Line; or, Practical Hints and Dainty Devices for the Sure Taking of Trout, Grayling, &c." It is beautifully illustrated with hand-coloured steel engravings, and I can advise anyone who comes across a copy to secure it; it has long been out of print.

FLIES DRESSED ON EYED HOOKS FIFTY YEARS AGO.

Wheatley ought to have lived and fished nearly half a century later than he did, for he would have delighted in the "dainty devices," to use his own words, of the dry-fly fisher. That he was in advance of his time seems clear from the fact that he had eyed hooks made to dress his flies on; and most beautiful eyed hooks too—small, slightly turned-up eyes on the most perfect of Limericks, also special long-shank eyed hooks for May Flies, beetles, &c. Thanks to the kindness of one of my correspondents, Mr. H. Longfield, of Broad View, Mallow, Ireland, I have in my possession a fly and a caterpillar dressed by Wheatley on his eyed hooks, and given by him to Mr. Longfield in 1856. I referred to this in the *Fishing Gazette*, in September, 1884, after there had been much correspondence on the question of eyed hooks, which, for dry-fly fishing purposes, were re-invented by Mr. H. S. Hall and Mr. George Bankart.

The caterpillar has a piece of gut still attached to the eye, and the knot used is the same as that which I, nearly thirty years later, christened the "Turle Knot," after Major Turle, who first showed it to me when I was fishing with him on the Test.

Here are Wheatley's reasons for using eyed hooks, written in 1849, or exactly half a century ago.

"The beetles are used like the artificial fly; but I think they kill best when allowed to float gently down the stream. . . . I generally use them made on hooks having a fine eye at the extremity of the shank. In fact, I very commonly make all flies, large and small, on similar hooks; a practice which will doubtless be much scouted by many anglers. Nor shall I attempt to persuade anyone to adopt it, though it possess the advantage of enabling me to use either fine or thick gut with the same fly. It is far more durable, for when the fly is tied on gut, the gut is very soon so worn as to be unsafe, and the fly consequently valueless. Besides, in an ordinary sized snuff-box, I carry to the river 300 flies—a compression of material with which I am well pleased, more especially as each is separate, and available without trouble.

"Should the good-natured fishing public ask for a second edition, I may, perhaps, give more details on this subject; for it is somewhat of a pet, though not exactly the child of our old age; rather the mistress of our youth, and the friend of our riper years, combining, as Keats most correctly sings,

"The bread of friendship, and the wine of love,"

Exhilaration and sustenance—the excitement of sport, and its fruits."

Unfortunately no second edition was called for—Wheatley was in advance of his time; and quite likely the anglers of the old school resented his somewhat caustic style, and called his "dainty devices" fads.

DID WHEATLEY INVENT THE RED TAG?

I think it would be difficult to prove that he did not, for among the flies which he figures in colour on Plate V. is one which he says he has never seen used by others, and it is an exact

representation of the famous Red Tag, which has slain so many thousands of grayling and trout, and here is Wheatley's dressing:

Body.—Peacock herl. (He does not say so, but his illustration shows it is green herl.)

Hackle.—Plain red.

Tail.—The tips of two feathers from the head of the crimson crow. Not more than the sixth of an inch, at most, need be shown.

Hook.—No. 12.

EXACT COLOUR IMITATION.

Mr. Smurthwaite (whose essay on exact imitation of the natural colour of flies I noticed last week) doubtless knows Wheatley's book—if not, I am sure he would be delighted with it—for Wheatley also carried a magnifying glass when fishing to aid him in discovering "the true colour of the living insect." He adds: "I esteem the colour of the fly's body of far greater importance than that of the wing. . . . What may appear the right colour when looking down upon it, may be found wrong when viewing it between the eye and the light—the way in which fish must, from their position beneath the object, always see it.

DID WHEATLEY INVENT THE "ALEXANDRA" SALMON FLY?

On p. 128 he says:

"I consider the great perfection of a salmon fly to consist in its life-like motion; I mean, that in moving it through the stream, by short jerks, the wings shall very visibly collapse, and suddenly resume the position they present to the eye when out of water and dry. This double motion of the wings looks more life-like than any mere movement of the whole bait, and it is to be communicated to the fly by drawing it quickly toward you for a few inches, stopping suddenly, and again drawing. This will not only give motion to the whole mass, but a seemingly separate motion to the wings, exhibiting, therefore, a more lively appearance of the whole than can be given by any other means. Fig. 3, Plate VIII., is incomparably the best fly with which I am acquainted for producing this effect; the play of the peacock's strands is perfection."

He tells us that, in consequence of the success Capt. Russell had with this fly "this spring" (1849), it has been christened "The Captain."

Plate VIII., fig. 3, is a Red "Alexandra," thus dressed:

Body.—Bright red worsted. Rib with a strand of black ostrich and rather fine gold alternately.

Wings.—From a dozen to twenty strands of the peacock's tail feather. A few of the bright green strands from the sword feather of the peacock may be laid over them.

Hackle.—Brightest golden pheasant's tippet feather under the wings.

Tail.—Red and yellow.

The common "Alexandra" has usually a silvery body, but the red and gold, as described by Wheatley, was a favourite variation with the late Dr. Brunton, who used the "Alexandra" with most deadly effect—of course on waters where its use was allowed.

Wheatley in his "Introduction" says: "My book may, in some measure, be considered a sequel to Mr. Ronalds's 'Fly Fisher's Entomology.' Most admirably has he fulfilled his intentions by producing the best work extant on the imitation of the natural fly." Wheatley supplements this natural every-day fare with tit-bits and *sauce piquante*—"a sort of cayenne to a jaded appetite"—and he certainly gives some most killing dressings.

There has been some correspondence in the *Fishing Gazette* recently about "Cooper's Fancy." Here is Wheatley's dressing of a fly not very unlike it, viz., "dark claret body hackled with a small, very pale sea swallow's feather."

"Dark claret" for body has always been a favourite with me, and for many years past Mrs. Richardson, of Kingston, has dressed for me a fly with gut body stained a dark claret colour, medium starling wing, with soft dark blue hen's hackle at shoulder, and ditto tail. Wheatley says, and says most truly, "There is one colour which enters far too sparingly into the composition of our flies, and that is dark claret or tortoiseshell," and he points out that many flies are dressed with black bodies which should, if nature were copied, be "dark claret colour." On the Itchen we used formerly often to notice a beautiful dun with a body of this dark claret—almost port wine colour. It has not been so common of late years, though I was glad to see some again last season. I think, with Theakston, that

the nature of the soil, &c., in which the eggs are hatched and the larvæ feed, has a good deal to do with the colour of the body of the fly. If the nature and colour of the food of trout affects the colour of their flesh, as it undoubtedly does, why should not the same apply to the colour of water flies. Worms dug out of a light sandy soil are of a light sandy colour; out of a rich dark soil, a dark colour. I think, therefore, it is quite reasonable to suppose that flies hatching from a stretch of bright sandy gravel will be more of the amber tint of a tortoiseshell; and those hatching from a dark rich loam or peaty bed, of the dark claret colour in a tortoiseshell. For the same reason, or, rather, for another reason, the warmth of the sun will hatch out flies on a dark bed of the river sooner than on a light bed, because a dark substance absorbs and a light one reflects heat. This is only "speculation," but I think it may well have something to do with the fact that on different days we get hatches of the same fly varying much in shades of colour. What is the best imitation of the wing and body of the Iron Blue Dun? The natural fly has a dull soft violet blue tint most difficult to imitate, and the body has the same tint, with a dash of purple in it.

I should like to see samples of a really natural artificial Iron Blue. R. B. MARSTON.

MR. J. R. RICHARDSON'S "CORRIE" WHOLE CANE TROUT ROD AND NATURAL ALDERS.

In our Christmas number we gave an illustration of Miss M. A. B. Corrie and the little trout rod with which she killed a 19lb. salmon in Scotland last autumn.

In a letter we had from Mr. Corrie at the time, he said: "The best fun we had was when my little daughter, who was fishing for sea trout, hooked a clean run salmon of 19lb. Luckily I had fitted her up with a pretty strong line, but it took her forty-five minutes to kill the fish on her feather-weight rod—a 10ft. whole cane, made by Mr. J. R. Richardson, of Kingston-on-Thames. I am now a firm believer in the strength and 'recovery' of whole cane rods made by 'J. R. R.' The wee rod bent until the only part of it which did not point straight at the fish was some 3ft. 6in. of the butt. The rod came perfectly straight almost directly the strain on it was released, and shows no sign of hard usage, though it has since killed a good sized grilse and a lot of sea trout."

The following is a description of this powerful little rod, which is thoroughly well made, and suited to either wet or dry fly fishing:

Length, 10ft. 4½in. Weight, 9½oz. (this can be reduced to 7½oz., if desired, without loss of power, Mr. R. says). The rod is in two joints, with snake rings, the butt being whole cane, with solid universal winch fittings, and the top is best selected greenheart. It is an excellent rod in every way, and the price (25s.) is very moderate.

"The Alder is plentiful. No May Fly at present." So writes a keeper of a Hertfordshire water, which we hope to visit shortly and renew our acquaintance with the innocent ubiquitous Alder, a favourite on every river, and one of the most deadly of the standard trout flies. Mrs. J. R. Richardson, of 57, High-street, Kingston-on-Thames, makes Mr. Chas. Walker's dressing of the Alder admirably, with the wings put on as carried by the natural fly, and with the nice little fat brown body wonderfully imitated. We have asked Mrs. Richardson to make for us some Duns with a similar body. Mrs. R. says many of her customers had great sport last season with Mr. Walker's clever dressings of the Alder and the other flies, &c., described by him in his very suggestive and interesting work, "Old Flies in New Dresses; or, How to Dress Flies with the Wings in the Natural Position, and Some New Wet Flies." We believe all the artificial flies from which the illustrations in this work were done were specially dressed for it by Mrs. J. R. Richardson, who is one of the most accomplished fly-tyers living, and always ready to carry out the suggestions of customers as far as practicable.

"LOCHS AND LOCH FISHING" is the title of a work which Mr. Hamish Hay Stuart, who has had great experience in the matter, has in the press.

SWEDEN AS A FISHING GROUND.

NEARLY three years ago (July 18, 1896) I wrote a few lines as to angling in south-eastern Norway, and perhaps a word or two as to Sweden as a fishing ground might not be unacceptable. The southern districts of the two countries are much alike in this respect, and the rivers as a rule abound in fish.

The chief centres in Sweden of the gentle art are Falkenburg, Laholm, and Alfkärlby for salmon; also the Norrland rivers and lakes, where great quantities of salmon trout, grayling, &c., dwell. The fish of the inland lakes are both easy to catch and much prized for their flavour, and the perch are in most parts of a very fine quality. Strangers must obtain leave from the proprietor of the fishing; it is only in the sea and in the still virgin Lapland that angling can be indulged in without let or hindrance.

Full particulars as to the fishing may be obtained by subscribing to the Swedish Touring Club, Stockholm, at the nominal cost of 3s. 6d. a year. No intending visitor to Sweden should fail to become a member of this wonderfully well-organised club, which affords all information that can possibly be required, at its chief office, and 400 branches; constantly opens up new routes, and erects shelter-huts and sign-posts; ensures reduced

the middle of May, and in North Sweden as late as the end of June; the close is respectively in September and August. F. E. LONGLEY.

THE SALMON ANGLING SEASON.

"DEAD failure" but poorly expresses the unfortunate results which have attended the season's netting operations. There is no previous record so low; and when this is the case at the various sea, river, and estuary netting stations, it cannot be much better at any of the great salmon angling centres further inland. With the exception of certain fisheries on the Dee, in Aberdeenshire, and one or two of the smaller rivers in Sutherlandshire, the spring salmon angling season has been almost as dead a failure all over as the netting season has been; and, whatever may be the cause, or causes, there is no blinking the fact that a serious crisis has been reached in the present conditions of *Salmo salar*. The returns of Scotch salmon sent up to Billingsgate for April may be taken as an authoritative criterion of the present state of matters. In 1898 616 boxes were received at the London market from across the Border for April, and this was 15 per cent. below the normal average. For the same period this year only 522 boxes were sent up,

TROLLHÄTTAN: GULLÖ AND TOPPÖ FALLS

From Photo by Axel Sjöberg and Co.

charges at many hotels; issues beautifully illustrated pamphlets free; and in every way studies the comfort of the tourist. Full particulars from the Secretary, Stockholm.

Gothenburg, the nearest port to England, is, to my mind, the best point by which to enter the country; and the best route, to my way of thinking, is by the "Thule" line, one of the fine steamers of which leaves Tilbury every Friday morning. (Full particulars may be had of Philipps and Graves, Botolph House, Eastcheap, London.)

From Gothenburg every part of Sweden may be easily reached, and innumerable excursions made; one of the most notable is to Trollhättan, whose celebrated falls (or weirs) are seven in number, altogether 112 feet in height. They are called the Gullö, Stampeztöm, Helvetes (three), and Toppö, the highest, 44ft. Of two of these we give an illustration.

Of course there is not room here to give any details of the country and its beauties, but a very full description may be obtained in Philip and Son's "Sweden" (Fleet Street, 5s.), to which I can cordially refer my readers, and am certain that a holiday trip to "Sunny Sweden"—outside its angling facilities—would amply repay them. It may be mentioned that the summer (of course the best time for touring), begins in South Sweden in

being one-sixth less than the previous bad year! The season from Tay to Thurso is now over for spring fish, and netsmen will have to depend on the summer run of grilse and the few summer and early autumn fish as their future supplies to make up past deficiencies. It simply cannot be done, however prolific the grilse run may turn out, and from present appearances it need not be looked for.

The returns up to date from many of the largest fishing stations have not paid the men's wages, and this in spite of the record rates ruling for the price of salmon. The rent, tear and wear of plant, and interest on capital expended have all as yet to be made up. The tear and wear has been something enormous, and here we may look for one of the mysterious causes of the present slump in our salmon supply. Everything about the ways of *salar* is more or less mysterious and speculative, and so we may be pardoned if we speculate a little too. The storms on the east coast have often been more violent, but they have never been more protracted than has been the case during the past three months in the memory of the oldest fisherman. The wind has been "aired" wrongly ever since the early days of February. It has been a continued series of easterly, north-easterly, or south-easterly winds,

with scarcely two days on end from any more favourable point. Whatever be the controlling cause, fish make off the east coast in an easterly wind—not only salmon, but all kinds of fish. Added to this is the fact that whenever there was a break in the easterly direction of the wind, a fresh impetus was given to the salmon trade, and supplies began to flow in. The only marked runs that have taken place in the Dee, and slightly in the Spey, have come away at those times, and these are the fish that are now affording anglers sport in the inland pools.

That the severe winter weather of four years ago (1895-96) has much to do with our poor supplies of salmon at present we doubt very much, and in this we are not alone. No doubt the rivers being so long icebound during that memorable spring, was not conducive to the protection and furthering of the salmon ova and fry, but that is a contingency which occurs frequently, and although more damage may have been done from ice and frost than in a normal year, yet those who have had any practical experience of how nature protects salmon and other deposits of a like nature, place no reliance in any such belief. The meteorological returns of the spring of '99 will have to be looked to mainly as contributing to the dead failure of the salmon supply. What affects the fisherman equally affects the angler in a greater or less degree, and when it comes to be so serious a falling off in the salmon supply, the rodsmen may well feel uneasy as to the prospects of his sport. In fact, in the lower half of such a river as the Dee, where sport has been exceedingly bright otherwise, scarcely a fish is being got. They are not on the coast, and they have not been coming away in anything like numbers to fully stock the pools. What fish have been running through the nets, or getting away with the Sunday's slap, have kept travelling, so that while on such reaches as the Ballater, Glentana, and Aboyne waters five, six, and even nine fish are being got daily to a single rod; yet on the Park, Drum, and Culter reaches only an occasional fish is being seen. As the temperature advances, the fish run higher up, and in a season like the present we would certainly look for a good summer fishing on the very far inland waters, and we have no hesitation in recommending intending anglers to hold well upstream. What salmon are already into the rivers are gradually congregating in these pools, and their forces will be constantly augmented with every fresh spate.

It is very satisfactory to note that present appearances point to a successful grilse season. Several of these maiden *salar* were secured about three weeks ago, two on the Don stations, two at Portsoy, in the Moray Firth, one at Aberdeen, and two on the South Esk. They scaled from 2½ lb. to 3 lb., these being considered extra weights for first fruits of the season. Since then, one and two have been got daily, but it is somewhat too soon yet to look for any great run of them. Another fortnight from now, and we may expect to be in the thick of the early grilse season on the Feugh and such like feeders, where they first make their appearance to the angler in anything like numbers.

The quality of the salmon has been excellent all through. Anglers have seldom seen such models. Scarcely a lean fish has been met with, and disease has been conspicuous by its absence. Water bailiffs say they have not met with so few diseased fish on such rivers as the North Esk, Don, and Spey since the disease was so prevalent some years back; while the number of affected fish taken from the Dee up to date is only sixty-nine as against 360 or so last year—a mere nothing when compared with the vast shoals constantly teeming all over its ninety miles course. Very few have been met with on either the Earn or Tay, and we may now confidently rest assured that we have at last seen the worst of the ravages of *Saprolegnia ferax*, and that we may fish our salmon pools without the horrid dread of every second fish being a fungoid brute to be thrown to the dogs.

The fly has been the killing lure on the Dee and on such rivers as have yielded anything like fair sport. The larger patterns have been discarded long ago, and even the medium irons have now given place to those tiny mites of salmon hooks, which seem the special delight of the up-to-date salmon angler. Shade of Jock Scott!

What would he have said to killing a 35-pounder with an imitation of his inimitable lure dressed to a-quarter inch or three-eighths iron? Yet this was the case on the Thurso last week; and although the Loggie, Jeannie, Jockie, Cocky, and all the rest of the brood of bantams are more popular on the Thurso, Ness, Spey, and Dee than the real Jock Scott, yet they are mostly imitations, and are never used after this time on anything bigger than a half-inch iron.

G. M.

AN AUTOMATIC POACHING SPRING FISH HOOK.

A PATENT has been granted to James Y. Payton, of Waldron, Ark., for a novel spring hook, which is constructed to close and catch a fish when the bait has been seized.

The fish hook comprises two spring grab hooks connected at their central bends and two spring bait hooks pivoted to the grab hooks and arranged symmetrically with relation to each other. When set, the hooks all lie in the same horizontal plane, the bait hooks holding the grab hooks distended, as shown by the full lines in the illustration. As each pair of hooks is maintained in unstable equilibrium, the hooks can be readily tripped by

the fish, by a slight pull upon the bait hook, by clamping or biting, or by causing a displacement of the abutting bait hooks. The hooks' action depends upon the tendency of the springs to free themselves. Following this tendency the external grab hooks, when the bait has been seized, approach each other, unless one of them be obstructed. But the obstruction of the one in its forward movement has no effect upon the other, since each hook acts independently by the tension of its spring. The dotted lines show the grab hooks in the act of closing upon a fish, the bait hooks projecting forwardly into the mouth of the fish, thus doubly securing it.—*Scientific American*.

[In the old fishing books spring hooks to fly open when a fish takes the bait are described and illustrated; but our grandfathers condemned them as poaching dodges unworthy of a sportsman. And so they are.—ED. F. G.]

ANTI-ANGLING MOVEMENT IN GERMANY.

WE understand that the professional fishermen in Germany are combining to destroy the sport of angling in the German Empire.

If they are successful, angling even in private waters is to be restricted to fishing with a cork float with line fastened to end of rod, no spinning, fly fishing, or any other kind of angling is to be legal, and even the use of the winch is to be illegal.

Fortunately, the Emperor of Germany is a sportsman, and will never allow such absurd suggestions to become law—at least, we should think not.

NATURAL FLIES, LARVÆ, &c.

WE have to thank many of our readers for sending samples of the above from rivers and lakes. They will be identified by recognised authorities including the Rev. A. E. Eaton, and described later on in the *Fishing Gazette*.

MAY FLY FROM THE BEANE.—Mr. C. L. Gill, of the Gresham Angling Society, sent us, on May 15, a live May Fly, caught the previous day on the Beane, in Herts. The body is a very dull, dark olive.

DEATH OF THE AUTHOR OF "A COTSWOLD VILLAGE."

WITH much regret we have heard of the sudden death, from failure of the heart after an operation last Saturday (May 13), of Mr. Joseph Arthur Gibbs, author of "A Cotswold Village," which was published last autumn by Mr. John Murray, and had an unusual but well deserved success, for it is one of the most charming pictures of English country life ever written.

Mr. Gibbs, who was only 31, was educated at Eton and Christ Church, Oxford, and was well known in Gloucestershire as a keen angler, hunter, and shot. His first attempt in literature consisted of some articles on the laying down of cricket grounds, which appeared in the *Field*, and were afterwards brought out in book form.

Very recently we referred to "A Cotswold Village" as follows: "We can strongly recommend it as one of the best books about country life—hunting, shooting, fishing, &c.—that we have ever read."

THE EXACT SHADE OF COLOUR THEORY.

THE exact shade of colour theory is so fascinating to the mind that one would naturally wish, if one could, to accord it unconditional belief. But the practical angler finds that if he set himself to reconcile this theory with the facts, the facts will at times provide him with hard nuts to crack. Let me take one or two examples from my own experience.

In September every year there comes daily upon the Itchen a rise of small, pale, maggot-coloured Duns with legs of a pale ginger hue. One would infer that Little Marryatt, No. 1 Whitechurch, Flight's Fancy, or Ginger Quill was the proper selection for the occasion, but my experience is that the fly for the occasion is invariably the Blue Quill, which bears no resemblance to the natural fly.

Again, on the 9th May I was fishing perhaps the most difficult length of that difficult river the Itchen. From about eleven till one there was a tremendous rise of a pale olive which would have been well represented by a lightish Blue Quill with the faintest possible tinge of onion dye. The trout went mad over it, taking it under water before it hatched; big fish were careering about right and left, and feeding furiously. I tried every kind of light olive I could think of, and the Wickham, Blue Quill, and Red Quill in vain. In the last ten minutes it occurred to me to put up a Green Nondescript on two cyphers. The first cast produced a rise; I turned over the fish without fastening. The same thing occurred at the second cast. At the third cast I rose a fish, but, striking too hard, lost my fly to him, and my gut point.

I rigged up a new point, and put on a fresh Green Nondescript, and tried the next fish. He came at the first offer, but I failed to fasten, and only turned him over. The same thing occurred at the next cast. The sixth cast proved abortive; but at the seventh I hooked a big fish which tore yards off the reel, and, after leaping twice into the air, took refuge on the far side of a heavy bank of weeds, from which I failed to dislodge him, and in a few moments my fly came back to me. By this time the rise was over, ceasing with extraordinary suddenness, and I had not another chance.

Now, here was an extraordinary instance of the trout rejecting good imitations and coming (short, indeed, speaking generally, but still coming) at a fly which bore no resemblance to that on which they were feeding. For the benefit of those who may not know it, I may mention that the Green Nondescript is a fly dressed thus:

Wing.—Medium starling.

Body.—Dark green floss.

Rib.—Flat gold tinsel.

Hackle.—Red.

Whisk.—Do.

Hook.—0, 00, or 000.

It would be easy to multiply such instances. On the other hand, on the preceding day, when a somewhat similar light olive with ginger legs was coming down, I put up a No. 1 Whitechurch with some success, the fish taking it willingly when I could get it into the wind to them under my own bank.

VAL CONSON.

THE "G.O.M." MAY FLY.

THE popularity of this famous brand of May Fly is so great that Messrs. Ogden Smith (of 6, Park Side, Hyde Park Corner, London, and 34, St. John's Hill, Clapham Junction) now make it with twelve variations in the dressing, including the original two (the Light Green Drake, with olive hackle and gold rib, and the Grey Drake, with dark hackle and gold rib), which still are our favourites. With a good supply of these two May Flies we should feel safe on any May Fly water. The flies are so delicately light that the least touch of oil on wing and body (for it is a mistake not to oil the whole fly, in our opinion) makes it float almost on the points of the hackle only; the wings arch over on each side well, and thus act as a parachute, causing the fly to fall lightly and at full cock, and if the angler pulls the trigger properly at the signal he is pretty sure to kill a good proportion of the game which gets up to his fly—to miss a lot in May Fly fishing is fortunately inevitable—we say fortunately because May Fly fishing is a big tax on any water, except in those bad May Fly seasons which seem to upset the angler's liver for the rest of the year. To say the truth, there is one feather used as a hackle in these patterns which we do not like in a May Fly, and that is bittern or bustard, or something of the same speckled kind; it is too opaque and thick, and hides the body too much, as the fibres of the feather cling together, instead of each standing out separately, like the spines on the "fretful porcupine." Excellent hooks with the original turned up eye (which we always prefer, though there is no difference probably in their killing powers, whether turned up or down), make one confident, not only in the rising, but also in the holding quality of the G.O.M. Mays. Long may they flourish!

DRY-FLY AND WET-FLY FISHING.

I HAVE read Mr. F. M. Halford's book on "Dry-Fly Fishing" with much pleasure; but, in my opinion, many anglers who fly-fish for trout and grayling, also some who write about the advantages of dry-fly fishing, fret their theories to shreds. Much can be adduced in favour of dry-fly fishing, but as much, or more, can be said for wet-fly fishing; both have their advantages, under varied conditions of weather, water, wind, &c. Dry-fly fishing does admirably when the stream is not too rapid, but it is frequently found that more trout may be caught in most rivers with wet fly, and with less labour. As for myself, for sixty years I have been more of a practical than a theoretical fly fisherman. I was born on the Kentish Darenth. From twelve years of age I watched the methods of practical anglers on that, the Cray, and many other streams, and I don't believe the art of angling can be acquired from books, however scientific. From 1860 to 1875 I continually fished the Wandle, many times having had the pleasure of meeting on that stream the author of "Dry-Fly Fishing in Theory and Practice," and from the model of his greenheart rod I had an exact copy made. It proved the most perfect and serviceable 10ft. 8in. trout rod I ever used—strong as steel, but withal flexible. With it, I could cast a line straight as pin-wire into the "wind's eye," and with it, on May 24, 1874, I killed, in the Wandle, trout of 3lb. 10oz., 3lb. 6oz., 2lb. 8oz., 2lb. 6oz., 2lb. 3oz., 2lb. 1oz., 2lb., and 2lb.; also ten others, weighing together 12lb. 8oz. In the Colne, May 23, 1882, I caught ten trout, weighing 11lb. 6oz., the largest fish 2lb. 5oz., and smallest 1lb. 6oz. All the above were caught with wet fly—Small Alder, Cowdung, and Coachman—in fact, the fish would not look at a cocked-wing fly, floated dry, ever so nicely. A wet fly can be "fished" either downstream, across, or upstream, if the angler has acquired the requisite proficiency.

Another argument in favour of wet-fly fishing is that a sunk fly skilfully cast into, and worked through, an eddy, or along and down a swift "run" of water, where a dry fly would drown* (probably because of a "sagged" line), will often-

* If the fly is oiled it will not drown as long as you can prevent the line dragging—if you cast an oiled dry fly upstream, even into a rough mill tail, it will float all right, and fished close to the stone work is often very deadly.—Ed.

times be seized by a non-rising trout, and the finest and best conditioned are, as a rule, caught in such places as I have mentioned. Therefore, whether fish are rising to fly or not, the wet-fly angler should always try likely places, for, as the "gillie" said, "Mon, ye'll ne'er catch a saumon, unless y're flee is in the watter." Mr. Halford seems to have altered his opinion about "trying likely places," for in his first edition he advocates floating a fly on spec over a likely place, even if no movement of a feeding fish has been seen there. This he has expunged in his new edition, which, however, is thoroughly up to date, as he mentions all real improvements made during recent years in rods and tackles used for trout and grayling fishing; but the illustrations of "How to Cast," such as plates 2, 3, and 4 (the overhand cast), and plates 6, 7, and 8 (the underhand cast), and plates 9, 10, and 11 (the steeple cast) convey the inaccurate impression that (in proportion to the rod) the line is 60ft. or 70ft. in length, although the author says "from 10 yards to 15 yards from fly to reel, is the length for most anglers."

ALFRED JARDINE.

CAPTURE OF AN ALBICORE.

A RATHER singular capture of a large fish was made at Coverack, South Cornwall, last week. As the fishermen, Eustise, Barker, and Hosking, were drawing their net they found a very large albicore—a variety of *Delphinidae*—enmeshed,

LARGE ALBICORE, 672LB. WEIGHT, CAUGHT AT COVERACK, CORNWALL, IN A MACKEREL NET.

which they succeeded in securing. It was 8ft. 6in. long, 6ft. girth, and weighed 6cwt., i.e., 672lb. It required eight men to lift it into a cart for conveyance to St. Kevern, where it was exhibited, at a small charge for admission to view the monster, which, no doubt, had pursued mackerel into the net, and so got caught itself. The captors of the albicore reaped a small harvest, I am informed, and afterwards got "three sheets in the wind" at the snug little Cove Hotel, Coverack, kept by Mr. H. M. Bennetts. An illustration is here given of the fish.

A. JARDINE.

THE PROPOSED NEW NORWEGIAN SALMON LAW.

THE United Kingdom of Great Britain and Ireland is not the only place where the laws which apply to the salmon fisheries appear to require revision, and an effort in that direction is about to be made in Norway. Some time ago a commission was appointed by the Storting to collect all possible information upon the subject in the different fishery districts, and the report of the labours of this commission, together with its recommendations, have now appeared in the form of a voluminous pamphlet of 170 odd pages.

In view of the very considerable interest, pecuniary and otherwise, which British anglers now possess in Scandinavian waters, some of the conclusions arrived at—especially those which refer to the annual and the weekly close times, and the *pros* and *cons* there for—are worth reciting.

One of the few points upon which both the river and the sea fishery proprietors appear to agree is that the annual close time should continue throughout the spawning season and for some time afterwards, but as to the date upon which it should commence there is a considerable difference of opinion.

As a matter of fact, this question is one which affects the coast netmen but little. By the end of July in some, and by the middle of August in nearly all the different districts, the sea fishing is over, principally because there are no longer any salmon to catch, and partly also on account of the numbers of jelly fish which permeate the water and render the nets useless. And so, too, in regard to the spring fishing, there being hardly any part of the coast where bag nets or other contrivances of the kind can be employed before April 14. Fishing on the rivers only, therefore, it may be said, is limited by the duration of the yearly close time and the dates at which it commences and terminates.

Here and in this connection it may not be out of place to give the results of a series of investigations conducted by the inspector of fisheries in regard to the periods at which salmon ascend, cease to ascend, and begin to spawn in the principal Norwegian rivers.

Of 119 rivers, salmon begin to run upon one in March, five in April, fifty in May, fifty-six in June, six in July, and one in August.

Of 114 rivers, salmon cease to run upon three in June, sixteen in July, forty-two in August, thirty-

seven in September, thirteen in October, and three in November.

Of 108 rivers, salmon begin to spawn upon forty-five in the latter half of September, thirty in the first half of October, twenty-one in the latter half of October, seven in the first half of November, four in the latter half of November, and one in the beginning of December.

From the above it will be seen that the run of fish ceases, and that spawning commences upon the majority of Norwegian streams very much earlier than upon those of the United Kingdom. In England, Scotland, and Ireland the largest number of spawning fish ascend the rivers in September, October, and November, some even later; but on many of the water systems of Norway they cease to do so in August, and, with few exceptions, the run is over in September. All things considered, and in spite of expressions of opinion from sundry coast fishery proprietors as to the advisability of determining an earlier date for the commencement of the autumn close time, the commissioners have come to the conclusion that a change in this respect is undesirable, and recommend that, as now, the use of nets, cruives, and all similar contrivances should become illegal on Aug. 26. By the law of June, 1869, the date for the termination of the close season on rivers, mouths of rivers, and inland lakes was altered from Feb. 14 to April 15, but even the latter date was found not sufficiently early to protect the kelts. On many rivers these fish do not begin to return to the sea until the latter half

BURBERRYS' GABARDINE SLIP-ON COAT

Proof

against

**RAIN, SLEET, SNOW,
HOT and COLD WINDS,
THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

NEW VOLUME OF THE ANGLERS' LIBRARY.

SOUTH-COUNTRY TROUT STREAMS.

By G. A. B. DEWAR, Author of "The Book of the Dry Fly." With Illustrations. Crown 8vo., 5s.

"This volume is the result of wide experience; it is both workmanlike and practical."—*Sportsman*.

In the Anglers' Library have appeared

SALMON and SEA TROUT. By SIR HERBERT MAXWELL, Bart., M.P. Illustrated. 7s. 6d.

*** 130 copies of Sir Herbert Maxwell's book were printed on large paper, £1 1s. net. A few remain for sale.

COARSE FISH. By C. H. WHEELLEY. Illustrated. 5s.

SEA FISH. By F. G. AFLALO. Illustrated. 5s.

PIKE and PERCH. By ALFRED JARDINE. Illustrated. 5s.

DRY FLY-FISHING.

The BOOK of the DRY FLY. By G. A. B. DEWAR. With a Photogravure Frontispiece and Coloured Plates of Flies. Demy 8vo., 15s. net.

FLY TYING.

OLD FLIES in NEW DRESSES: How to Dress Dry Flies with the Wings in the Natural Position, and some New Wet Flies. By CHARLES EDWARD WALKER. Illustrated by the Author and Edward Wilson. Demy 8vo., 7s. 6d. net.

Sportsman.—"I heartily wish his book the patronage it deserves. He is a skilful angler, a good sportsman, and a clever entomologist. 'Old Flies in New Dresses' is beautifully illustrated and printed."

St. James's Gazette.—"Mr. Walker's inquiries possess considerable interest and value."

Scotsman.—"A plea for realism in fly dressing . . . His own experience seems to have justified his contentions, and his statement of it is likely to induce other anglers to try whether they are equally fortunate, should they follow his example."

THE RAINBOW TROUT.

The RAINBOW TROUT: A Monograph. By CHARLES EDWARD WALKER and CHARLES S. PATTERSON. Illustrated. Crown 8vo., 3s. 6d. net.

*** Papers dealing with Rainbow Trout have been contributed to the columns of the *Field*, *Land and Water*, the *Fishing Gazette*, &c., but the present monograph is the first book that has been devoted to this subject.

Shortly will be published.

A HANDY BOOK on FISHERY MANAGEMENT. By J. W. WILLIS BUND.

LAWRENCE & BULLEN, Ltd.,

16, HENRIETTA STREET, COVENT GARDEN, LONDON.

of April, on others not until May, and vast quantities were annually netted out. In order, if possible, therefore, to remedy this state of matters, the date was further altered by the law of June, 1891, to April 30. Singularly enough, as it would appear, and in spite of the fact that so few clean fish run before May, the commissioners advise a recurrence to April 15, exceptions, however, to be made by Royal decree in regard to those rivers where the destruction of kelts is proved to have become pronounced. In view of the increasing extent to which the rivers are being taken up by sportsman, and the small proportion of fish captured by them, they recommend that rod fishing be permitted, as is now the case, until Sept. 14. The advisability of amending the law of May, 1863, in regard to the extension of the weekly close time, was broached in 1868, and upon this important question the commissioners have, unfortunately, been unable to arrive at a unanimous conclusion.

Formerly, the only legal restriction which practically applied to the coast and fjord fisheries was that which determined the size of the mesh at 2½ in., all the others affected the rivers only. The yield from the latter used to be large and well maintained; but gradually, from want of proper protection, more especially during the spawning season, it fell off very materially, and, as a result of exhaustive inquiries, the then fishery inspector, Herr Hetting, declared it as his opinion that in the course of the period 1816 to about 1855 the decrease on many of the best salmon rivers, from the Swedish frontier to and including the Mandal, was from 75 to 90 per cent. (see Inspector Hetting's report for 1856 and 1857). In the meantime, however, a good deal had been done in the way of artificial hatching, regulating the close times, &c., and the results of these efforts at improving matters became manifest about 1859 and 1860, when the inspector was enabled to report a marked improvement. In regard to a large number of the rivers, however, this satisfactory state of things did not last longer than the latter half of the sixties, and after that another change for the worse took place in the fishery districts, especially those in the South Bergenhus Amt and northwards. Complaints of the falling off in the quantity of full grown salmon became numerous from such important streams as the Namsen, Gula, Orkla, Surendal, Driva, and Rauma, although these had been under supervision for six or seven years, and, according to Herr Hetting's report for the period 1868-1870, the fishing on these rivers had reached almost as low a point as it ever had before protection was initiated.

There was only one cause to which this falling off could possibly be attributed, and that was the largely increased number of bag nets on the coast.

Partly on account of the time which has elapsed, and partly because they are in some degree evolved from the old "Laxevaerp," it is not easy to say when these destructive engines were first employed in Norway. Real hag nets, however, were introduced in the Lister and Mandal Amt during the first quarter of the present century, as also in Nedenaes Amt, in Jaederen and Dalarue, and at the entrance to the Bukkenfjord in 1830.

In Nordhordland the first hag net made its appearance in 1846, in Søndhordland perhaps a little earlier, in Ryfylke somewhat later, and in North Bergenhus about 1860. In Søndmør they were not in general use until 1865; in Romsdal and Nordmør they were not introduced until about that year, nor to the Trondhjem and Namsen Fjords until 1865 and 1860 respectively. Prior to 1870, with the exception of a couple of isolated cases, hag nets can hardly be said to have been used to the north of the North Trondhjem Amt. In that year the total number on the whole coast was 810, while, according to the fishery inspector, there were not more than twenty in 1860 beyond the limits of the Lister and Mandal Amt (see Report on Fresh-water Fisheries, 1876-1879, page 95).

The considerable increase in the number of bag nets which took place between 1860 and 1870 was in great degree due no doubt to the general improvement in the quantity of salmon brought about by the measures taken for the protection of the rivers, and in a lesser degree to the higher prices obtainable for fresh fish owing to increased facilities for transport abroad.

In 1868 numerous petitions, with many hundreds of signatures, from Local Government Boards and from private owners were received by the Home Department, praying that the use of bag nets should be forbidden, or at any rate limited by law, and Mr. Inspector Hetting was accordingly instructed to frame measures with this object. The proposals made by this gentleman were approved by two other experts, and, after sundry alterations by the Storting, became law in June, 1869. By this law power was given to the authorities in different parts of the country to regulate the bag net fishing in accordance with the local conditions, and advantage of this was promptly taken, weekly close times being determined as follows:

In Finmarkens, Tromsø, and Nordland's Amts, from and including 1871, four days.

In the North Trondhjem Amt, from 1871 to 1882, four days; after that year, three days.

In the South Trondhjem Amt, during 1871 and 1872, two days, within a distance of 1000 alen (about 670 yds.) of the mouth of a river; and afterwards throughout the whole Amt, three days.

In the Romsdal Amt, from 1873 to 1888, four days; and after that year, three days.

In the North Bergenhus Amt, from 1873, three days.

In the South Bergenhus Amt, from 1873 to 1881, four days; after that, three days (of twenty-four hours each).

These extensions of the weekly close time naturally enough caused a good deal of grumbling amongst the coast fishery proprietors, but the results proved very satisfactory, as is evident from Herr Hetting's report of January, 1874. According to that document the fishing in 1873 in Nordland's Amt was considerably better than during the preceding years, especially in the Salten; on the Vefsen there was a marked improvement, and an unusually large number of grilse were taken, while similarly favourable accounts were given of the Fussen, Rydselv, and Beiern. One of the inspectors on the Namsen, who had fished that river with the rod for thirty-three years, was more successful in 1873 than he had ever been before, and expressed his conviction that the salmon had increased in numbers perceptibly year by year since a limit had been put to the proceedings of the hag netsmen; the coast and fjord fisheries, too, in the neighbourhood, and in other parts of the North Trondhjem, Amt, showed a distinct improvement. Not for many years had so many salmon been taken on the Stenkjer, Ogna, and Figen as in 1873; on the Orkla and Gula the fishing was excellent; not for ten years had so many salmon been seen in the Rauma, and not for fourteen or fifteen in the Surendal; while, in regard to the Sundal, old inhabitants of the valley said they had never noticed so many fish in that river. From numerous other rivers and fishery districts, too, equally good reports were received, the improvement being in nearly every case attributed to the restrictions placed upon the hag nets, as no exceptionally favourable conditions of weather or water prevailed.

While the more northern provinces took early advantage of the new Act, the Stavanger and Lister and Mandal Amts did not do so until considerably later; but for the former a close time of three days a week was determined, commencing in 1882, and in the latter as from 1879; while in the Fogderi of Larvik a close time of the same length began in 1888. When therefore the law of June, 1891, was passed, the three days weekly close time had voluntarily been adopted to all intents and purposes everywhere; and yet so great was the outcry raised by the coast fishermen against the clause in that measure which fixed three days as the minimum weekly close time for the whole country that it had to be rescinded.

As pointing the same moral in regard to rivers, the case of the Laagen is worth quoting here. This stream used to rank as one of the most productive in Norway, but to such an extent were its lower reaches netted that in 1880 it yielded only 7315 kilos. That year, with intent to remedy this state of matters, a four days weekly close time was applied by the local authorities, to commence in 1881. In 1882 an improvement began, and continued until 1887, when 17,063 kilos. were captured; while for the period 1890-94 the average annual take was 29,035 kilos. Thus,

after fourteen years, during which net fishing was permitted only three days a week, the yield of the Laagen was four times as great as in the last two seasons when it was carried on during six days.

As a matter of fact, the total annual yield of the Norwegian Salmon Fisheries has increased considerably of late years, as the following figures, which are official, and may be taken as fairly correct, show:

For the years 1876-80 the average was 507,120 kilos. 1881-85, 659,264 kilos. 1886-90, 824,703 kilos. 1891-94, 951,479 kilos.

But the hag nets also have increased in numbers, for during the period last named there were no fewer than 3756 more in use upon the coast than during the first (at the present time, it may be added, there are about 7000 in all). Whether, therefore, the increase of 440,000 kilos. (or 88 per cent.) be an indication of any real improvement in the fisheries is very questionable. The majority of the commissioners do not think that it is. Prior to 1885 reliable returns are not available in regard to the average annual takes by the bag nets; but while in that year the quantity of salmon taken by each was 166, it gradually diminished, until in 1894 it was only seventy-nine, or rather less than one-half. Moreover, the increase in the total annual yield shown above applied to the sea fisheries only; the rivers did not share in it, as appears from the following figures:

In the period 1876-80 there were annually taken in fifty-four rivers, 170,293 kilos. 1881-85, in sixty-five rivers, 206,354 kilos. 1886-90, in eighty-seven rivers, 224,685 kilos. 1891-94, in ninety-three rivers, 220,615 kilos.

In the opinion of the majority of the commissioners, things would have been much worse, and the rivers completely fished out, had it not been for the weekly close time, which neutralised to a certain extent the destructive influence of the bag nets. In view of the experiences and the state of matters above described, the conclusion arrived at is that three days a week close time for both sea and river fisheries (excepting, of course, with rod and line) is the shortest that can be recommended, and a clause to this effect will probably form part of the proposed new Norwegian salmon law.

Perhaps the question next in importance to the one last referred to is the one with regard to the size of the net mesh, and it is not so easy of solution as would at first appear.

With a view to protecting the grilse, 2½ in., or 5.8 cm., was determined by the law of 1863 as the legal minimum, and this was increased to 6.5 cm. by the Act of 1891, as experience seemed to show that with the former an undue number of these fish were captured. Grilse generally weigh from 2 to 2½ kilos., and with a 5.8 cm. mesh they may be taken down to 2 or even 1½ kilos., whereas fish of 3 or, at any rate, of 2½ kilos. escape the 6.5 cm. mesh. This seemed to be confirmed by the measurement of a large number of fish taken in different parts of the Lister and Mandal Amt. The larger mesh, too, seemed all the more desirable, inasmuch as "lax" (generic for salmon and grilse) of less than 3 kilos. each are worth from 50 to 75 per cent. less than full grown fish, and because a grilse of from 2 to 2½ kilos. approximately doubles its weight in the course of a year, at the end of which time, therefore, its value is at least trebled. Great was the dissatisfaction created among the coast netsmen with this clause. Not only was the extra cost of nets with the new mesh said to be excessive, but the probable diminution of the take, owing to the proportion of fish which must escape, was considered a great hardship. According to reports from different districts, fish of 3.00, 3.25, 3.70, 3.75, 4.00, 4.30, 4.50, 5.00, 5.25, and even up to 5.50 kilos., escaped capture, and many salmon were injured in such a manner as to be rendered unfit for export abroad. These statements the commissioners would appear to have taken with a good deal of salt, but taking all things into consideration, and more especially the amount of mischief which would be done among the salmon fry and spawn by the vast quantities of sea trout that would escape capture with the larger mesh, they recommend a return to the 5.8 cm. minimum.

Of the additional subjects with which the contemplated new Act deals, the only other to which reference need here be made as of direct interest to sportsmen is in regard to the letting for rod fishing purposes of rivers or parts of rivers owned

by several proprietors. According to the chairman of the Namsen Fishery Association, a large portion of that river has, for between fifty and sixty years, been let to Englishmen, who, one way and another, spend some 50,000kr. at least in the valley annually. The salmon fishery rights that belong to each farm are not, however, defined, and the consequence is that unless all the owners of a piece of water are unanimous it cannot be let; indeed, it not infrequently happens that an advantageous bargain falls through owing to the unreasonable demands of some single individual. In former days the fishery was carried on for the common benefit, and the proceeds distributed; now the small co-landlords demand as large proportions of the sum paid under a lease as their larger neighbours. After acknowledging the necessity for remedying this state of matters, the commissioners make the following proposals:

(1) Any co-proprietor of a fishery on a water system may demand an official delimitation of the individual rights therein.

(2) Such delimitation shall fix either the proportion of the daily catch to which each owner is entitled, or the portion of the water system upon which he may exercise his fishing rights.

(3) Should the former be chosen, and the co-proprietorship include both banks of the river, the days of the week upon which fishing may be carried on shall be divided equally between the two sets of proprietors.

(4) Should the properties be all on one side of the river or water system, allotment of the days upon which fishing may be carried on shall be in accordance with the registered value and area of each; but so that where any owner possesses particular rights in the joint property, allotment as far as he is concerned shall be upon this basis.

RUGDE.

"THE LIFE OF A SEVERN SALMON."

THIS is the title of a very interesting little pamphlet by Mr. J. W. Willis Bund, F.L.S., F.Z.S., chairman of the Severn Fishery Board. It is a paper read by him at the Victoria Institute, Worcester, on Feb. 18, 1899. We hope to refer to some points mentioned in it shortly.

MAY FLY PROSPECTS.

THE following are replies from correspondents who kindly answered queries we sent to them:

BALLYSHANNON.

DEAR SIR,—A good May Fly season is expected, and the natural fly will be well up, probably about May 25, or may be a day or two earlier; will let you know.

M. ROGAN AND SONS.

COLN, LEACH, & CO., GLOUCESTERSHIRE.

DEAR SIR,—Anticipate the Green Drake being well on about the 27th or 28th inst., but very much depends on the weather. Larvæ in a forward state, and several May Flies have already been seen on the Coln. As a rule, the Drake is not generally on until about May 29, but it varies even in the distance of a few miles. Will write or wire you latest information respecting the May Fly on Wednesday or Thursday morning. Thames, at Lechlade, is in grand order for trout, and lost a whopper there myself on Monday last.

F. LOCKWOOD.

Fairford, East Gloucestershire.

COLN, GLOUCESTERSHIRE.

DEAR SIR,—In reply to your inquiry, I think the prospects for May Fly fishing on the Fairford water "good." There is a nice lot of water this year, and owing to adverse wind and weather the usual number of fish have not been taken out as yet, so that an extra good time is expected with the May Fly.

F. R. BUSBY.

DOVE, DERBYSHIRE.

DEAR SIR,—In reply to your card, I may say there is every indication at present that the water will be in good trim for the May Fly season. There is, I know, a very good stock of trout in the Dove, so what we must hope for is a good rise of May Fly.

WM. PRINCE.

Izaak Walton Hotel, Dove Dale.

ITCHEN, HAMPSHIRE.

DEAR SIR,—The May Fly has been dying out at the Worthys for this last two years. I cannot say what prospects there will be this year.

Abbotsworthy. JOHN LOCK (Keeper).

KENNETT AND LAMBOURNE.

DEAR SIR,—The prospects for the May Fly fishing is good and expect a rise early in June. The Lambourne is

full of fish, and I look forward to a good season. We have had several good fish with Wickham Fancy, Red Quill, &c. Tell Howard eels are not rising.

Jack Hotel, Newbury. W. S. VEITCH.

ROWSLEY, DERBYSHIRE.

DEAR SIR,—As yet we have heard nothing of the May Fly—the weather is much too cold—and we are not expecting anyone for fishing until the end of May and early in June.

The Peacock. J. COOPER.

A MAY FLY FROM THE WYLIE.

DEAR SIR,—Herewith I send you May Fly I caught this morning on the Wylie, between Wilton and here. If there were only plenty of them and fish appreciating them sport would be better.

Royal Oak, Wisford, Salisbury.

May 18. W. R. REEVES.

RIVER TROUT FISHING IN IRELAND.—We notice that Mr. Dan O'Fee, of Rasharkin, co. Antrim, maker of those grand salmon flies the Black and Gold and Judge, in his report from the Bann this week says: "No English anglers are yet at Mercer's Hotel, Kilrea, though the best trout and best river fishing in Ireland is to be had there." He also says the trout are taking the sedge freely.

SPORT ON THE BOYNE.—Mr. W. H. Wilson, who is fishing on the Boyne, at Navan, co. Meath, has killed fourteen salmon in ten days, most of them on Mr. McFee's dressing of the Judge and the Black and Gold. If Mr. McFee's health allowed him to make any number of these flies, what a sale he would have for them, but it is not an easy matter to get the real McFee patterns.

THE HARDEN ROD.

HAVING four hours to spare, to go out of London in the hope of a trout, to catch nothing but dace in the month of May, and to have the felicity of finding the water fouling after two hours with the rod is not altogether a satisfactory experience. It was mine, nevertheless, on Tuesday last; but it did not matter, since my main object was to try the Harden rod, made by Hardy Brothers, of Alnwick. Something was written about this rod in connection with the Fisheries Exhibition at the Westminster Aquarium in March. It was then stated that it was named after a well-known member of the Piscatorial Society, its peculiarity being that to a certain extent it flies in the face of accepted ideas as to rod building. In other words, to borrow what I have reason to believe is a slang phrase, it is a rod "on the bulge." It has not a true taper from butt to top, since the wood is thinner midway between the handle and the first ferrule. At such a theory one might be inclined to be amused, but many practical anglers of the Piscatorial Society assured me that it was no laughing matter, and seeing at the Aquarium what Hardy Brothers had done with the idea after going out with Mr. Harden to see the rod in action, I began to think that there was, as the saying goes, something in it. I am now able to report that the rod is really one of decided excellence. It is a perfect specimen of rod building in all its parts, with nice attention to details apart from the Harden principle.

As to what I have just called the Harden principle, the claim was that an extraordinary length of line could be sent forth by this rod with a minimum of exertion. This is literally the truth. The rod so springs from the butt that when the preliminary sense of awkwardness and suspicion of top heaviness are surmounted the action becomes easy and delightful. On the water which I visited there is a certain stream, the other side of an island in the middle of the river, which for many years I have used as a test as to my particular form; here I knew to a couple of inches the outside distance to which I could cast when I was at my best, and until the other day I never could send a floating fly to the edge of a particular run. I never passed it without a trial with a single-handed rod, and once or twice threw to within a foot of the required distance. The new Harden rod (10ft. 6in.) enabled me at last to do it, and, further, to go half a yard beyond, though the light wind was against me. It was, though I say it, a good straight line, too, that dropped the fly in a workmanlike way. There are two tops to the rod, one a little lighter than the other, and for long distance casting, without concernment of delicacy, the heavier would probably for most men be the best. I tried the rod with a light and a heavy line. The former was fair enough with the lighter top, but to do the rod justice, the Hawksley line, with its somewhat heavy taper, is the best. Until you are used to the novel action, it seems as if the angler had to do all the work, but after half an hour's usage you get into the humour of the implement, and all is well. Amongst the powerful rods, I should place the Harden in the very first rank, and the 10ft. 6in. edition appears well adapted for ordinary dry-fly fishing, and has the special merit of being tractable a short distances.

My trial of this rod gave me the opportunity of making the personal acquaintance of two improvements of which I had read and heard and seen something, but had never seen the theories tested by practice. The first is the lock-fast joint devised by Mr. N. Lloyd, and described by "Detached Badger" in the *Field* of Sept. 25, 1897, and again in the *Mayfly* edition of "Dry Fly Fishing."

Hardy Brothers are the patentees and manufacturers of this "treble-grip rod ferrule," and it undoubtedly merits all that has been said of it. The manufacturers make a point of advising that care should be taken to push home the parts before twisting what Mr. Halford calls the steel hook, and adjusting the sliding sleeve, and, this precaution being scrupulously observed, I do not see how this clever device can ever go wrong; at the same time carelessness may easily bring about disaster. The other novelty is the Hardy combined spear and butt cap. Most anglers will remember probably, at some time or other, leaving that wretched spear at home or losing it when away. I saw a friend's magazine of six rods once, each of which had lost its screw button or spear. In this patent you keep the spear in the butt. It has a double turned flange, which is concealed and fastened by the simplest plan, leaving no points or edges protruding to catch the grass. It is a capital arrangement.—*Field*, May 13.

ANGLERS' ASSOCIATION.

REPRESENTATIVES from forty-one clubs attended the adjourned annual meeting of the London Anglers' Association, held on Monday evening at Foresters' Hall, Clerkenwell, under the presidency of Mr. P. Geen. The revised balance-sheet was presented and adopted. It showed a balance in favour of the association of £104 19s. 10½d. With reference to the association's charge for privilege tickets—the colour of the same will be a salmon tint for the coming season—which had hitherto been 2s., Mr. Harwood moved that in future the tickets be issued at half-a-crown, the extra 6d. to be devoted towards preservation and re-stocking work. Mr. Barber seconded, but the resolution, on being put to the meeting, was lost. Mr. R. Gurney was empowered by unanimous resolution to engage the room offered at the Cripplegate Institute for the association's meetings, and with reference to the June delegate gathering, due notice of place of meeting will be given in the *Fishing Gazette*, &c. Mr. Derry asked if eel fishing was now allowed in other association waters besides the Lea, and Mr. Gurney stated that members of the association could fish for eels now from the tow-path of the Grand Junction Canal. In regard to a tributary of the Lea at Sewardstone, however, it was stated that neither eel nor trout fishing was allowed there, as the landowner from whom the water was rented wished to preserve the grass at this period of the year. Delegates were informed that in future they would only be allowed to vote by card, and application should be made to the secretary for new voting cards next month. Mr. A. Wright, hon. treasurer, owing to increasing pressure of business, resigned the position, and was accorded a very hearty vote of thanks for his past services. Mr. J. Powles-West was elected to fill the vacancy. A vote of thanks to the chairman for presiding closed the proceedings.

HON. REPORTER.

WHITSUNTIDE HOLIDAY ARRANGEMENTS, 1899.

THE GREAT EASTERN RAILWAY

Announce that, in addition to the tourist, fortnightly, and Friday or Saturday to Monday, Tuesday, or Wednesday tickets, which are issued from Liverpool-street and their other London and suburban stations to the east and north-east coast; and the Norfolk Broads districts (Yarmouth, Lowestoft, Cromer, Mundesley, Southend-on-Sea, Clacton, Walton-on-Naze, Dovercourt, Harwich, Felixstowe, Aldeburgh, Southwold, Hunstanton, Scarborough, Whitby, Bridlington, &c.), they will on Saturday, May 20, issue special cheap excursion tickets to most of the above stations; also to Norwich, Cambridge, Wisbech, Lynn, Fakenham, and the other principal stations in Essex, Norfolk, Suffolk, &c. Cheap Saturday to Monday tickets will also be issued to most of the Great Eastern country stations. Excursion tickets will also be issued from Liverpool-street and suburban stations, by the cathedral route, on Friday, May 19, to Durham, Newcastle, Berwick, Edinburgh, Glasgow, &c.; and on Saturday, 20th, to Lincoln, Doncaster, York, Leeds, Bradford, Wakefield, Manchester, Sheffield, Hull, Edwinstowe (for the dukeries), Chesterfield, Dnrham, Newcastle, &c. Tickets (ordinary, excursion, &c.) can be obtained in advance at Liverpool-street Station; at the Great Eastern American Rendezvous, 2, Cockspur-street, S.W.; and at the company's various City, West End, and other booking offices. Relieving trains will be run on the Friday and Saturday to Colchester, Clacton, Walton, Ipswich, Norwich, Cromer, Yarmouth, Lowestoft, Cambridge, Lynn, &c. Special trains will leave Liverpool-street on Friday, 19th, at 1.30 p.m., for Colchester, Clacton, Walton, Ipswich, Norwich, and Cromer, and at 1.35 p.m. to Yarmouth and Lowestoft; and on Saturday, 20th, at 8.10 and 9.55 a.m., and at 1.55, 4.5, and 7.12 p.m. for Ipswich, Yarmouth, Lowestoft, &c.; at 1.30 and 7.12 p.m., to Felixstowe; and at 4.5 p.m., to Clacton, Frinton, and Walton. For the accommodation of persons detained late in town on Saturday, midnight trains will leave Liverpool-street at 12.0 for Norwich, via Cambridge, and at 12.30 for Norwich, Yarmouth, and Lowestoft, via Ipswich, calling at the principal intermediate stations; and at 12.3 (night) for Colchester and Clacton (express supper train). On Bank Holiday, excursion trains will be run from Liverpool-street and Fenchurch-street to Southend-on-Sea and Burnham-on-Crouch; from Liverpool-street to Clacton, Frinton, Walton, Dovercourt, Harwich, Yarmouth, Hertford, Cambridge, and Ely; from St. Pancras to Yarmouth, Cromer, Cambridge, and Ely. Excursion tickets will be issued and special trains run to Epping Forest, Broxbourne, and Rye House. On Whit Tuesday a special early train will be run from Yarmouth, Lowestoft, Ipswich, &c., due in London 8.0 a.m., and several of the usual up Monday only expresses (including the 7.5 a.m. restaurant car train

from Cromer) will be run on this day instead of Bank Holiday. Restaurant cars will also be run on the 7.45 a.m. train from Clacton. Restaurant cars are now run daily on the trains leaving Liverpool-street at 4.55 p.m. for Norwich and Cromer, and at 5.0 p.m. for Yarmouth; and on the up trains leaving Cromer at 8.5 a.m., and Yarmouth at 8.25 a.m.

THE SOUTH EASTERN AND CHATHAM AND DOVER RAILWAYS

Announce cheap day excursions on Whit Sunday and Whit Monday from Charing Cross, Cannon-street, London Bridge, and New Cross to Ashford, Canterbury, Deal, Dover, Folkestone, Gravesend, Hythe, Margate, Ramsgate, Sandgate, Walmer, &c.; also on Whit Monday to Tunbridge Wells and Hastings. Special cheap excursions will be run to Aldershot on Whit Sunday and Whit Monday from London, but not from New Cross. Special trains will be run to Hayes, Blackheath, Greenwich, and Gravesend (for Rotherville Gardens). Cheap day excursions on Whit Sunday and Whit Monday from Victoria, Holborn, and St. Paul's to Canterbury, Deal, Dover, Gravesend, Herne Bay, Margate, Ramsgate, Sheerness, Walmer, Whitstable, &c. On Whit Monday a cheap excursion will be run to Tunbridge Wells and Hastings from Victoria (Chatham and Dover). The usual extension of time for certain return tickets will be allowed. On Whit Monday frequent special and ordinary trains will run to and from Holborn, Victoria, Ludgate Hill, St. Paul's, and intermediate stations, and the Crystal Palace. Return fares, 1s. 6d., 3rd class, including admission. For intending visitors to the continent, special cheap tickets will be issued from certain London stations (via Boulogne or Calais), Brussels (via Calais or Boulogne and via Ostend), Boulogne, Calais, Ostend, Amsterdam, Aarheim, Flushing, The Hague, Rotterdam, and Utrecht. The Continental Services will be as usual. Full particulars of trains by which cheap tickets will be issued, London departure stations, return times, alterations in train services, &c., are given in the holiday programme and bills.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—I do not regard with any regret the filling in of the cutting through Platt's Eyot at Hampton, which was netted again last week by the Thames Angling Preservation Society. I can remember when the cutting was being made, and first detected by the committee on one of their visits down the river, and was then regarded with some concern as likely to take some of the stock fish out of the river beyond their reach and control, but on the first occasion when application was made to the talented engineer, Mr. J. W. Rother, I received a most courteous reply, granting permission on each occasion, when the water would be lowered for the purpose of netting and the removal of the fish into the Thames again, and he very kindly sent me a plan showing the width and depth of the water. It has always been remarkable, not only in the cutting, but in the West Middlesex Water Company's reservoirs opposite, the large proportion of the fish that were found there in the nettings, and especially on this last occasion, were perch, there only being one carp and a few jack besides. In this particular respect of the river I can very well remember in my angling days having had some excellent sport amongst the perch, fishing with the veteran William Milbourne, and accompanied with the then head river-keeper, the late Abraham Stroud, and on that occasion, if I had not been obliged to leave early in the afternoon, I should have been able to have made a record take of perch, and this my old friend Milbourne will thoroughly indorse, and we have frequently talked about it since. The reports of Mr. T. W. Gomm's capture of a 5½ lb. trout at Staines, and Mr. Jenkyn's success with one of 6½ lb. at Sunbury, reached me too late for last week's publication. We have at last got the rain, and if it is succeeded with some fine, milder weather, it is to be hoped the trout fishers will be able to make up for the lamentable deficiencies of the past few weeks. In another month the general body of Thames anglers will be in possession of the river, but there is plenty of time yet for some good trouting if the anglers will only show up and give those fishermen the chance of realising what they have said each week lately as to there being "plenty of trout, but no one coming to try for them."—B.

(Datchet).—Not much been done here. I was out with Mr. Walter Eyward on the 14th and 15th, had bad luck; on the 14th four runs, didn't get one; on the 15th he caught a very pretty fish nearly 4 lb. The fish are moving very well, in fact, I don't know where it is there is not a trout, but they are so artful.—G. LUMSDEN.

(Hampton Court).—William Milbourne reports: "Mr. George Woods, of Molesey, on Tuesday creelred a very handsome trout weighing 5½ lb. at Hampton Court Weir. The river is in good condition, and the trout have been showing well. There is still a good many barbel taken at the weir, but returned to the river again."—B.

(Hampton Wick).—Head river keeper, William Douglas, in his official report, says: "I have not heard of any trout being taken. All the perch have spawned, also most of the barbel and roach, but there may be a few stray ones to come up. The swans were returned to the river to-day (Tuesday), having been up four weeks."—B.

(Lechlade).—The river here is in capital order for trouting, and several good fish have been seen on the move; a fine one was lightly hooked at St. John's Bridge,

estimated to be a 7-pounder; and another large one by Mr. George Moir in Buscot weir pool. A 4-pounder has been taken near Inglesham. Silver Devon, minnow, bleak, and small dace have been the lures. The Green Drake came up on Sunday at St. John's Bridge, and at noon on Monday was thick on the water in the weir pool. Mr. Lockwood, when fishing for trout in this pool with Mr. Stocklet, with a large floating Green Drake, had his fly actually taken by a bleak or blay, which was safely landed and used as a bait by Mr. Moir, but unsuccessfully. There has been a quantity of large Alder flies on the water as well as Drakes, and the chub rise freely to these flies in the evening. Should think a trout, if spotted rising, ought to be taken on these flies, or a large gold ribbed red Soldier Palmer, fished wet.—RAMBLER.

(Shepperton).—George Rosewell writes: "I have had three more trout—Mr. J. Parsons, one of 5½ lb.; Mr. R. Coles, one of 6½ lb.; and Mr. Westrop, one of 2½ lb., which he returned to the river again. I have had three different members of the Highbury Club down within the last week, and each of them has caught their first Thames trout whilst fishing with me." George Rosewell, writing again on Tuesday, says: "Out to-day with Mr. Charles Turner for his first trial this season, and he caught a nice trout weighing 5½ lb. During this season I have landed nine trout with different clients, seven of the best weighing 4½ lb.; the two smaller ones, weighing respectively 2½ lb. 8oz. and 2½ lb. 12oz., having been returned. My largest fish was 8½ lb. 12oz., and, considering all things, I have not done badly." Major Arthur Terry, on Saturday last, creelred a very pretty female trout weighing 6½ lb., and another on Tuesday, at Sunbury, weighing 6 lb. 4oz.—B.

(Staines).—The report of Charles Hone reached me too late for last week. He got a nice fish of 5½ lb. 12oz. with Mr. T. W. Gomm. Writing yesterday (Tuesday), he says: "We ought to score soon, after this nice rain."—B.

(Sunbury).—Mr. Jenkyn, of Sunbury, has creelred a nice trout of 6½ lb. 12oz., which was weighed in at the Kingston Piscatorial Society. This report reached me too late last week.—B.

Coln, Leach, &c., East Gloucestershire.—The weather has been very bad for trout fishers, being rough and very boisterous. The Green Drake has been up on the lower Coln, near Inglesham, and at the mouth of the Leach, near St. John's Bridge, since Monday last, and I expect with warm weather that it will be up generally by about Wednesday or Saturday after Whitsuntide. A large number of rods have been out both on hotel and private waters, amongst others being Col. Porter, Justice Hannen, Drs. Hooker, Good, March, and Wolfendale, and Messrs. Carbolzell, Faulkner, Battersby, Crowley, Barkley, John Morgan, Hough, Perry, H. B. Millward, Stocklet Moir, Peto, Reade, Yeates, Hough, Jackson, Lea, Mills, &c. The Duke of Leeds is fishing the Williamstrip Park waters, which he has rented for the May Fly season. Dr. Lockwood has been having nice sport on the Little Farringdon waters, and Mr. F. Lockwood has been out, with sport, at Lechlade and the Priory Mills. Saw the Green Drake thick on the water at St. John's Bridge on Monday.—PAN.

Cornish Streams.—The Camel, after the recent rains, is now in good condition for fly fishing, and is fairly high. The winds are, however, cold, and sport below expectations. Baskets of sixteen, twenty, and thirty trout have been taken in the higher parts of the river, and lower down one fisherman got 10 lb. weight. Perch are not yet running in this river or the Fowey, but if these waters continue they may be expected in the lower reaches almost immediately.—BODMIN.

Dareth (Farningham, Sutton-at-Hone, &c.).—Water is now in very good order, and the smaller trout are rising fairly in the evenings at the Black Gnat, but the larger fish do not move so much. There is every prospect of some fairly good sport at Whitsuntide, though very little has been done this spring so far. It must, indeed, be considered that trout fishing proper has only just begun here.—J. P. T.

Dart (Totnes and District).—There has been some fair sport with trout since the early part of last week, chiefly by evening fishing. On Thursday several good baskets were made, Mr. E. Distin killing a nice lot of nearly 5 lb. weight; Mr. H. T. Distin and Mr. H. Full also had nearly a dozen each; and Mr. E. Ackrell killed a few brace. Mr. T. Browne creelred some nice fish in Hempston Leat; whilst Mr. H. Searle and other Staverton rods have had fair takes. Mr. Sethbridge, of Paignton, killed a small lot; and on Monday Mr. E. Distin secured seven brace at Staverton; Messrs. Ackrell and Full also getting some sport.—DEVONIAN.

Devonshire Streams.—The weather this week has not been favourable, with cold winds and showers. Fish are beginning to find their way into the rivers, the first from the upper Lyd district, a 2-pounder, being secured by T. L. Winsor, of Whitechurch, in the Lady Pool. A few salmon, too, have been killed on the Dart and the big northern streams. Trout, however, showed improvement last week, the best sport being obtained from the southern border rivers. Some capital fish were creelred in the Ashwater district, takes running up to 5 lb. or 6 lb. weight, the best trout scaling from 1 lb. to 1½ lb. The Half Stone and Red Palmer was killing, whilst in the upper Lyd and Tavy (Cleaves district) the Blue Flax with Silver Twist proved most effective. Mr. Bishop killed a nice lot, ten brace, on Saturday, in the Bridestowe tributary, several fish being a foot in length. Other rods have had fair sport, trout being plentiful and of good size. One rod on the Tamar took over forty fish after a few hours' fishing, the Red Palmer and Hawthorn being the favourite bait. From the upper reaches some good sport has been obtained, principally in the evenings. Mr. Stainton has had good catches up to two and a half dozen,

and Mr. C. Woodley killed a nice lot in the preserved water, both returning a good number.—DEVONIAN.

Eden (Carlisle).—Salmon angling may almost be said to be over for the spring, and a wretched season it has been. Sea trout are now running fairly well, and several have been caught by anglers below Carlisle when fishing for trout. Some good baskets of trout have been taken with the fly, the Dark Bloa and Yellow Woodcock being the most killing. On Monday, Archdeacon Prescott had 16 lb. in the Wetherall water, and several others had from 6 lb. to 10 lb. Creeper fishing has not yet begun, the river being too heavy and the trout not fairly in the streams. Salmon are now making a somewhat better show, and one or two grilse have been taken in the nets. For the early fish they are large—5 lb. and 6 lb. From all districts comes the report that river trout are unusually plentiful and poachers scarce. This must be so, for the water bailiffs, though watching every night, have not yet come across a gang this season.—SILVER GREY.

Exe and Canal (Exeter).—Weather very unsettled, with thunder showers at intervals. The rivers rose a foot or so a day or two since, but the rise was of short duration. Sport has not been particularly lively, the thunder influence rendering trout generally sulky. Many of our local enthusiasts are now eagerly anticipating the Whitsun holiday, and it is to be hoped that the clerk of the weather will be in more genial mood on that festive occasion.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Angling prospects are but poor, notwithstanding that we have got into the middle of May. What is really wanted is a higher temperature of the water, and this would set aquatic life going. As yet fish have to be brought out of the holes with worm grub or other bottom bait. Fish only rise in the evening, after the day's sunshine.—LIMPET.

Idle District (North Notts.).—Fishing in the Idle district is still unexciting. Members fishing the club waters in the direction of Southwell have very little sport, as many of them are confined to the fly. The same remark applies to the npland district. There are a fair quantity of land flies about, but the water is too cold for much sport. Several good trout have been landed from the Rytton lately, and the best reported last week scaled 4½ lb. It was caught near Blyth. This and others from this stream and the Idle have all been taken with the dock grub.—L.

Lake Vyrnwy (N. Wales).—The take for the last week was 247 fish from the lake. No fishing was possible one day (the 13th), owing to stormy weather. The above take is, therefore, the result of five days' fishing only. On the 10th, thirty fish were killed, weighing 18½ lb. 1oz. On the 11th, seventy fish, 42½ lb. 9oz. On the 12th, forty-six fish, 29½ lb. 2oz. On the 15th, fifty-five fish, 32½ lb. 1oz. On the 16th, thirty-five fish, 22½ lb. 9oz. On the rivers, Mr. S. Garnett made the best basket with thirteen fish. On the 10th, Capt. Garnett killed seven fish, 4½ lb. 1oz.; Col. Doncaster, five, 2½ lb. 15oz.; Mr. R. L. Garnett, five, 3½ lb. 4oz.; Mr. Jackson, five, 2½ lb. 13oz.; Mr. Henty, four, 2½ lb. 8oz.; and Mr. Graham, three, 1½ lb. 10oz. On the 11th, Col. Doncaster had the best creel with sixteen fish, 8½ lb. 14oz.; Mr. Henty killed nine, 5½ lb. 8oz.; Mr. Gee, seven, 5½ lb. 1oz.; Mr. Duprey, seven, 4½ lb. 8oz.; Mr. Graham, seven, 4½ lb. 4oz.; Capt. Garnett, six, 4½ lb. 2oz.; Mr. R. L. Garnett, four, 2½ lb. 1oz.; Mr. Murly, four, 2½ lb. 4oz.; Mr. Jackson, four, 2½ lb. 4oz.; Mr. Shaw, three, 2½ lb. 1oz.; and Mr. Watts, three, 1½ lb. 10oz. On the 12th, Messrs. R. L. and S. Garnett killed ten fish, 7½ lb. 1oz.; Capt. Garnett, nine, 5½ lb. 2oz.; Mr. Henty, eight, 4½ lb. 14oz.; Mr. Jackson, seven, 4½ lb. 2oz.; Mr. Graham, five, 3½ lb. 9oz.; and Col. Doncaster, four, 2½ lb. 14oz. May 13 was a very stormy day, and the lake was too rough for boats. The rivers, however, gave good sport, Mr. S. Garnett killing thirteen, Mr. Graham eleven, and Mr. Murly eight fish. On the 15th, Messrs. R. L. and S. Garnett killed ten fish, 6½ lb. 4oz.; Messrs. Davison and Wymer, nine, 5½ lb. 8oz.; Messrs. Broadmead and Andrews, seven, 3½ lb. 12oz.; Mr. Jackson, seven, 4½ lb. 5oz.; Capt. Garnett, five, 3½ lb. 7oz.; Mr. Henty, five, 2½ lb. 12oz.; Col. Doncaster, four, 2½ lb. 7oz.; and Mr. Watts, four, 2½ lb. 2oz. On the 16th (a very stormy and wet day), Mr. Henty killed eleven trout, 6½ lb. 8oz.; Mr. Jackson, six, 4½ lb. 2oz.; Mr. Graham, five, 5½ lb. 1oz.; Mr. Clarke, four, 2½ lb. 13oz.; and Capt. Garnett, three, 1½ lb. 14oz. The fish rise only to very small flies mounted on 00 hooks. The favourite flies at present are Black Midge, Partridge and Black, Teal and Black, and Teal and Red.—LONGDRIFT.

Lea and Tributaries.—The rains have been very welcome in the Lea Valley, as the river had grown stale, and required freshening up. There has been a nice flush of water through, and trout should feed better. There has been little sport during the past week among the trout, although numerous anglers have been out spinning, fly fishing, worming, &c. The principal capture has been a nice fish of 4½ lb. 1oz., and measuring 2½ in. in length, which early in the week fell to the rod of Mr. Anderson, of the Cambridge Heath Brothers, while fishing the Black Pool, at Rye House. Mr. A. E. Jackson had a grand trout miss the bait at St. Margaret's, the fish literally jumping at it. The angler failed to rise the trout a second time. The river in the Ware district was showing signs of pollution early in the week, the water being inky black in some places. A few decent trout have been met with in the tributaries. Mr. Jackson has had a pretty little fish of just under 1½ lb. in the Hertford district of the Beane. Trout have been seen on the move in the Stort, at Harlow, but none are yet reported captured. The warmer weather should make the eels run in the Lea.—IZAAK WALTON.

Lugg and Arrow (Leominster).—Both these streams are still running clear and a nice height, and in good order for fishing. There has been some good showers of rain, which has improved the water in this part, but

the weather has been so changeable that angling for this time of the year has been remarkably slow to former years. The fish have been moving fairly well, but there has not been so many flies on owing to one day being warm and another cold, and until the weather becomes more settled sport will be slow as at present. A few nice trout are taken occasionally with Red and Gray Spinners, Yellow Dun, Alder, Iron Blue, and Stone Fly. Minnow fishing quiet. Bottom fishers have been successful. The Pinsley is in order.—G.WYNN.

Lugg, Arrow, and Pinsley (Kingland).—Rivers in capital order; sport, though improved, not yet to say good; weather variable, and wind shifty. The Alder has made its appearance, and with Yellow Dun, Blue Dun, Iron Blue, Hardy Brown, Stone Fly, and Spinners form the best selection to rely on. With improvement in weather, prospects of sport during the holidays appears hopeful.—R. T. WILLIAMS.

North Staffordshire Rivers.—The streams in this district had become very low and clear, needing the utmost care in fishing, but the intermittent showers of the past few days have quite altered their condition, and they are now flowing with a nice water. Sport has been had with Hare's Ear, Wickham's Fancy, and Fogg Black, but chiefly on smaller streams. The Dove seems a bit backward on most of its lengths, but anglers are preparing for the oncoming drake season. Some excellent fish have been taken on the Leek and Moorland Club's length of the Churnet, chiefly to bottom fishing, but the Moss's Cocking has accounted for a very good fish to the 101 of Mr. Hawksworth.—F. W. DALE.

Otter (Budeleigh Salterton).—During the past week the dry-fly men have had all the best of it, and some good catches have been made by experts. The river was very low up to Tuesday, May 16, when the rain came down in full force. During the night a perfect gale, accompanied by heavy rain, raged, and to-day (17th inst.) the river is full and slightly coloured. If no further floods come, fishing ought to be good for the next week or so. The trout are now in very good condition, and show splendid sport.—HERON.

Flymouth.—The rain during the last week has been welcomed both by the farmer and the fisherman, and the result has been very favourable to the rivers—it has put plenty of water in them, and they are coming down a nice colour. Fresh run peal have been taken in the Tavy. A gentleman had one last Tuesday 2lb. weight, and on Wednesday one of 11lb. weight. I did not see the fish, but I hear they were in very good condition. Better sport has been obtained in the Dart, and several good salmon have been landed. The weather has been rather cold for trout fishing; still, some nice dishes have been taken.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—Towards the close of last week the weather was very favourable for angling, and all these rivers in good condition, consequently some capital sport was had by those anglers fortunate enough to be on the spot, and several gentlemen from Manchester, Liverpool, Oldham, and other parts of Lancashire secured some nice trout from the Vyrnwy, Tanat, and Cain. Several fair-sized pike were also taken in the Severn and lower part of the Vyrnwy, and also in the deep water in the last mentioned river, below the bridge at Llansainffraid. A salmon was recently observed in the Vyrnwy, in the neighbourhood of Llanymynech, but has escaped capture so far. The angling in the Vyrnwy has greatly deteriorated since Lake Vyrnwy was constructed, and it is the decided opinion of several practical anglers in this vicinity that it was a very great mistake to construct the lake so that the compensation water which flows from it into the Vyrnwy proceeds from the bottom of the lake, whereas it should have been taken from the top part, the consequence being that all the dregs from the lake find their way into the Vyrnwy, and the fish captured, when the water is in the river, are always found to be very dull and listless. At present the weather is much warmer and more settled, but very few flies are to be seen moving about.—VYRNWY.

Sussex Rivers and Chichester Harbour.—During the early part of the week rain has fallen heavily, accompanied by the wind blowing half a gale, and both streams and rivers are now in good colour. A number of anglers have patronised the Onse with but indifferent success. A few small trout have been taken from the Haney district, but nothing exceeding 8½oz. Dace have been taken with fly, but are not rising well at present. Small trout have given sport in the brooks, taken principally with worm, and from the upper portion of the river trout up to 1½lb. have been captured with minnow. The Rother has yielded trout of 2lb., taken by paternoster with gudgeon. A few trout have rewarded anglers in the tributaries of the Adur. Smelt fishing in the harbour has not been so productive. Bass are coming in, and smelt departing. They are antagonistic.—GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—The water continues in first rate order for trout fishing, and good baskets have been taken during the past week.—H.

Taw (North Devon).—The rain during the past few days has made the rivers fishable, and although cold some good catches have been had. Mr. P. got two dozen on Friday; Mr. T., four dozen; Mr. J., a nice catch at Molland. Two gentlemen did well also on the Bray. G. Anstey has taken some catches on the Taw. Mr. M. C. Campbell had a nice take on Monday. On the Lynn, at Lynmouth, good sport has been got. Some gentlemen told me of some takes on the Mole. The netmen are very much disappointed; their labours have been fruitless, or nearly so. Wednesday, rivers higher, and fresh salmon are running up. The otter bounds have killed on the Taw this morning, being the third in eight days. The flies mostly used are Blue Upright (real), Rustus (red

and blue), Pinket, Caddis, March Browns, and Red Palmer.—RUSTY GAME.

Teifi (Llandysil, South Wales).—River in fair condition. Good baskets of trout taken last fortnight. Twenty-six fish last Thursday, 7½lb.; on Friday, twenty-eight fish, 6½lb. Several salmon caught. One on Tuesday, 12lb., in the village.—A. E. S.

Temē (Ludlow).—The Temē in this part continues to run clear and a nice level, and in good order for fishing. The weather has been unsettled, and some good falls of rain have been had, which has made the fish more on the move, and has also greatly refreshed the river. The wind has been strong, and to-day (Wednesday) rain threatens, and there will be more storms, and until it takes up there is little prospect of good baskets of fish being landed. There has been a good few anglers out, and they have used Red Spinner, Blue Dun, Alder, Coch-y-Bondhu, Grey Spinner, and Yellow Dun. Minnow fishing has been tried, but with little success. Worm fishing has been good, and some large trout landed. Eels have now begun to run well, and some good lots have been landed. On Monday morning an angler in the Castle Pound, with the worm, took a fine trout scaling 2lb. 5½lb. and an ounce. With the Red Spinner and Yellow Dun four good trout were taken the same day. On Tuesday, some good trout were landed with the worm. In the water near Ludford several trout have been caught with the fly. On Wednesday, trout were on sale at the fishmongers at 1s. 4d. per lb. The Ony, Corve, Clun, and Ledwyche are all running clear and a nice level, and sport has been had in them with fly and worm.—S. LUDLOW.

Temē (Tenbury).—The water in this district is running clear and a nice level, and in order for fishing. The weather has been very changeable, and heavy showers of rain have been had, which has refreshed the river, and the fish have been more inclined to rise at the fly. A few anglers have been out, but until the weather gets more settled fishing will be slow. The flies used are the Red and Grey Spinners, Stone, Yellow Dun, Iron Blue, and Hardy Brown, and several very nice lots of fish have been taken. Trout are inclined to feed on the bottom, and no doubt are after the caddis bait, as if the weather was warmer they would soon be showing themselves.—WORCESTER.

Upper Yore.—We have had a few floods, and a lot of baskets have been made with the worm and minnow; one gentleman staying at the Crown caught a good basket of trout, also returned to the river seventeen grayling, these fish were in the very best of condition. Blades, as usual, has been catching his 7lb. or 8lb. each day this week, most of them average ½lb. With the weather a little warmer, the next week on this river should be the best of the season.—FAWCETT (Crown, Hawes).

Witham, &c. (Mid-Lincolnshire).—Reports from the trout fishing districts are but very meagre. The supply of flies is as yet but very scant. The Cowdang, Hawthorn, and other land flies are about in the sunshine, but water flies are a rarity. As a rule, fish have to be sought for in the deeper holes. Now and then an angler gets a haul, but oftener he is out of luck. One of the best baskets we have heard of was five brace, taken from a stream in North Lincolnshire, above Horncastle.—LUCI.

Wye and Derwent (Derbyshire).—The above rivers were in order for the fly up to Saturday in last week. Sport has been better on both streams, baskets ranging from three to five brace have been obtained. The Darleydale Club's water has yielded some nice fish. Mr. Brown, fishing the lower portion of this club's water, took two and a half and one and a half brace on two occasions, several of these nearly 1lb. each. E. H. Maule, Esq., fishing the Matlock and Cromford Angling Association's water, Matlock Dale, landed several nice fish with minnow. This same gentleman, fishing from a boat by the Lovers' Walk, took one about 2lb. and several others smaller. On Wednesday night, Mr. William King, fishing from his balcony at Matlock Bath with a small Devon minnow, hooked a splendid trout, and after an hour's combat he succeeded in landing it, which proved to be 22in. long, 12in. in girth, and weighed 4½lb. This fish has been sent to Messrs. Cooper and Son, London, for preservation. Several other gentlemen have taken a few nice fish below Cromford, but there is still a lack of natural flies on the water. The showery weather we have had this week should improve the fishing for Whitsuntide holiday anglers, as the prospect is good. Useful flies: Yellow Dun, Ash Dun, Cooper's Fancy, Furnace Fly, and Bumbles.—DOTTEREL.

Yore, Swale, Wharfe, Nidd, Dove, &c. (Yorkshire).—"Do you call this May? It's more like November," said a Coverdale man to me the other day, when up fishing that beautiful little tributary of the Yore, and I must admit that so far the balmy month has not been of the character the old writers describe it. Perhaps the climate has changed. Anyway, we have had plenty of water to fish in, and if it's been cold and against fly fishing, sport with the worm and minnow has been good. I have missed a lot of the flies usually seen in quantity during the months of April and May, and the fish even on likely days have had little inducement to rise to the artificial fly. This lack of insect life is, doubtless, the cause of the trout being backward in condition, but a good feed on the Stone Fly creeper, and then on the fly itself, will put them all right. I send you by same post a bottle of larvae and fly of the Gravel Bed Fly I found hatching out in numbers the other day, also a few Red Cloaks and Stone Fly creeper. You will notice that the latter have made little progress for a week or two. A gentleman writes me asking for a few dozen Stone Fly to try dapping on the Irish lakes next Tuesday. I have no doubt they will kill trout anywhere, but I don't anticipate them hatching out until June. This is often the case. I got twenty-four trout on Monday, and sixteen on Tuesday, with the Miller's

Thumb Devon. Several other anglers have done well up the tributary streams of the Yore since Friday, they being much better trim than the main river itself, although in the upper waters there has been nothing to complain of as far as worm and minnow fishing is concerned. Lower down there has been too much water, but things will right themselves, and fine weather is all that is required for the fly fisher to have a real good time of it now. To-day the Yore is in grand trim for the fly, but a strong westerly wind has been against angling, and only a little could be indulged in in sheltered places. Some nice dishes of trout have been caught in the Swale during the week, between Catterick and Muker, chiefly with the worm and minnow; and Mr. Robert Lee, of Thirsk, tells me some large fish have been caught in the Codbeck, one of 3lb. 10oz., another of 2lb. 9½oz., and a third weighing 2lb. 11oz. When I knew this stream years ago it used to contain burbot, but I am told they are now almost extinct. A lot of spawning pike run up the Codbeck from the Swale to spawn. There has been too much water in the Wharfe for fly fishing, but as I write prospects are good for the holidays; all that we want now is genial weather. At Ilkley, Messrs. Leach and Richardson have done very fairly, and Mr. Binns killed thirty trout last Saturday with the Partridge and Yellow; this is always a good fly on this river. Higher up, Mr. Wood and other gentlemen have found the minnow, the March Brown, and the Waterhen Bloa to kill well. Until we have much warmer weather all the flies usually fished at the opening of the season will be best to rely on for this river and the Nidd, on which Mr. Riley Fortune, of Harrogate, caught twenty-four trout in the Conservative Club water with fly. Messrs. Lupton and Dent return twenty-three for one day; Mr. Dickinson, twenty; and baskets containing from half a dozen to a dozen trout have been common. Mr. Waddington has done well with the Snipe and Yellow and March Brown, but the most killing flies on the Dove have been the Red Drake and the Brown Bodied Drake ribbed with gold tinsel. Mr. J. C. Frank had a very good day at Sinnington. The Dove is well worth the attention of anglers for Whitsuntide; there is plenty of water, and prospects for sport could not be better.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—The Yorkshire rivers are all in fine trim for angling. The weather has changed, and is now genial and springlike, with a south-west wind and warm showers. Prospects for sport for the Whitsuntide anglers are A1. The flies are March Brown, Snipe and Yellow, Partridge and Orange, Waterhen Bloa, Snipe and Orange, Cooper's Fancy, Thompson's Fly, Olive Bloa, Dotterel, and Yellow Blue Partridge, and Pout Bloa, until the Stone Fly comes on.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Awe.—Fishing from Taynult Hotel on the 10th, Mr. Macdonald had a salmon of 10lb. On the 12th, Mr. John Hassack McNiven had one of 15lb. On the 13th, Mr. C. T. W. Gardener had one of 13lb. River in grand order.—D. MACDONALD.

Border Esk and Liddle.—The weather is a trifle warmer than it was ten days ago, but owing to the cold spring yellow trout are not yet in prime condition. Salmon fishing has been most disastrous. Few fish have so far been caught, and not many are expected to be taken before the back-end of the season. The same scarcity of fish prevails in the Tay, the Tweed, and other Scotch rivers, as well as in the Elen and the Annan. Mr. T. Graham's capture of a sea trout weighing 4lb., in the Duke of Buccleuch's reserved water at Canonbie, with fine fly tackle, is one of the chief recent angling events. He was fishing for yellow trout, and had a hard struggle with the sea trout, which was full of fight. Mr. Wm. Thompson had eleven yellow trout in Langholm water, and other anglers have had fair baskets in the Ewes and upper reaches of the Esk. Mr. W. Murray, Canonbie, caught 5½lb. of yellow trout in the Liddle, above Penton Linns, and hooked a sea trout, but lost it. Dr. McLellan, Liverpool, staying at Est Bank, Canonbie, close to the Esk, had fifteen yellow trout with fly, in Tommy's Pool and Mill Pool, in the Esk. Mr. S. McKune had a nice basket of yellow trout in the Byreburn-foot water; and Mr. D. Little, Claygate, Canonbie, landed eighteen trout with fly in the same water. The Liddle is now in good order for angling. Fishing in the upper reaches, below Newcastle, Mr. J. Smith had a nice basket, which weighed 10lb. Mr. J. Murray, Copshaw, had also a good basket, one yellow trout weighing over 1lb. During the last few days the weather has been unfavourable for angling, and in consequence comparatively few rod fishers have been out. On Saturday Mr. Wm. Law, Canonbie, fishing in Jock's stream, in the Esk, had a nice new run salmon, with fly, weighing 9lb. Sea trout are not running freely, but may be expected soon.—Mr. Telford Langholm had a good basket of yellow trout in the upper reaches. Mr. Macmillan had also a nice basket in the same water. Fishing in the Liddle, above the magnificent Penton Linns, Mr. Hill Slack had a nice catch of 6lb. of yellow trout. Mr. Oliver had a good basket below New Castleton. There have been no sea trout taken in the Liddle up to the present. Yellow trout are furnishing the bulk of the sport in the Liddle; the same applies to the Esk. In the lower reaches of the Liddle several local anglers have had good sport with yellow trout, but in the lower parts of the Esk little has been done. Mr. Mason, Rockliffe, had one sea trout in the Metal Bridge water, and an angler staying at Longtown had a couple below the bridge, and lost another one. A Metal Bridge angler had a grand run with a salmon on Saturday at Lynfoot, but the fish eventually got away. Last week the weather was damp in the Langholm district, yet the river ran high, and as

no fishing could be done, a good many of the anglers joined in a grand hunt with the Dumfriesshire otter hounds. A start was made at the junction of the Esk and Ewes, at the foot of the Castle Holm, one of the most picturesque spots on the river. At Langholm Lodge the favourite seat of the Duke of Buccleuch, there was a grand burst of hounds' melody, which swept over the mountain tops and resounded through those deep glens of far-famed beauty. The otter got away. On returning to the "muckle toon," the water being in fair order, several of the otter hunting anglers were out with their rods in the gloaming. One gentleman staying at the Eskdale Temperance Hotel, Langholm, creel'd a dozen yellow trout above the Skipper's Bridge; while Messrs. Thompson, Graham, Anderson, and others had good catches. At time of writing temperature low and water cold.—GILNOCKIE.

Breadalbane Arms Hotel (Aberfeldy).—The Rev. T. J. Yarde, fishing Loch-na-Craig on the 11th, caught fifteen trout, 4½lb.; on the 13th, twenty-four trout, 8½lb.; and fishing the Tay on the 12th, caught nine trout, 3lb.; on the 15th, eleven trout, 5½lb.

Carron (Easter Ross, Ardgay, N.B.).—Quite a number have been out, both from hotel and lodges, but owing to unfavourable conditions sport has been poor. Mr. W. Allis Smith, of Glencalvie, landed two salmon of 8lb. and 10lb. on Glencalvie water. A few other fish were caught since last reported, but particulars not to hand.—B.

Deveron (Banffshire).—In the end of last week and the beginning of the present week genial showers of rain have fallen in this district, which had a beneficial effect on this river. Anglers are having fair sport, the only drawback being the large amount of smolts which the rising of the stream have brought down. The smolts are of good size, and in a healthy condition, which augurs well for future fishing. Some good baskets of trout are getting. Salmon and grilse are exceedingly scarce, and we hear of only one salmon having been killed this week on the Carnoustie section, weighing 5½lb. There was a slight increase in the take in the net fishing, some fine clean run salmon having been got. On the coast there was an imperceptible improvement in the fishing on Saturday last and on the first half of this week. The weather is more favourable, the wind blowing more milder from a westerly direction. On Monday two large boxes, weighing close on 20wt. each, on Tuesday one of 13wt. and another on Wednesday of similar size, were dispatched to the markets. The salmon are not of particularly heavy weight, the average being 9lb.—H. W.

Isa.—The weather has been milder for some days back, and, though there is still a good deal of snow brot, sport has greatly improved, and fairly good baskets are being made with fly, the most taking being March Browns, Hackles, and Hare's Ear. On the Erich, on Friday, at Bridge of Cally, Mr. Durward Lyell landed a trout of 5lb., and measuring 18in. in length. This trout has been known to frequent the same pool for ten or twelve years, and has frequently been hooked, but has broken a great amount of tackle and temper, and given occasion for a great deal of strong, and even vile, language. Friday's capture is to be preserved in the form of a cast. On the Arde, Shee, Blackwater, Dean, and Melgum tributaries fair sport is now got; but there is still a great absence of insect life, as up till now there has been no genial, sunny weather.—JASGATE (May 15).

Loch Awe (Loch Awe Hotel).—The following are the best takes recently: Mr. J. M. Ross (Glasgow), seven trout; Mr. McFarlane (Edinburgh), twelve trout; Mrs. Carter (London), eighteen trout; the Rev. G. Marjoribanks (Stenton), one salmon, 10lb.—D. FRASER.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, on May 10, Mr. Fitzwilliam caught seven trout; on the 11th, Mr. C. McIntyre caught fourteen trout; and on the 12th, Mr. Neale Thomson had a fine basket of twenty-six trout.—H. M.

Lochleven (Kinross).—A week of dull, cold weather, with moderate winds, has done nothing to improve sport as was expected, and anglers have had a very disappointing time on the loch. There was no rise of fish on all the week, even when the weather appeared all that could be desired. Fish are now feeding on the bottom, and until the weather becomes milder good catches cannot be looked for. On Tuesday the wind, which has been persistent from the south-east or north-east, veered into the south-west, and became very squally, so that only a score of trout were killed by forty-five anglers. The most successful angling club out during the week was the Glasgow Angling Club, the catch to ten rods being fifty-five trout, 34lb. 6oz. The heaviest prize creel of trout was secured by Mr. W. N. Machan, of the Dundee Club, who captured, with fly, thirteen, of 9lb. 12oz. The best sport was got by the following private parties: Mr. and Mrs. Laird, London, twenty-three trout, 17lb.; Mr. Dunbar, fifteen trout, 12lb.; Mr. T. Lawson, Glasgow, sixteen trout, 11lb.; Mr. G. Stirling, Crieff, fourteen trout, 14lb.; Mr. Dunlop, Bridge of Allan, eighteen trout, 13lb. 8oz.; Mr. Sloan, Glasgow, fourteen trout, 10lb. All the boats are engaged for the ensuing week.—ROBERT LAING.

Loch Ness (Foyers Hotel), N.B.—Trout fishing during the past week has been very good, and anglers have been most successful. On Monday, Messrs. McGregor and Pile, fishing Loch Knockie, had a nice basket of forty-one trout, weighing 11lb. On Tuesday, fishing Loch Mhor, Messrs. McGregor and Lindsay had twenty-one trout, weighing 12lb. On Wednesday, on Loch Mhor, Mr. Pile had twenty-six trout, weighing 15lb.; and Messrs. McGregor and Lindsay, thirty trout, 18lb. On Thursday, Mr. Pile, on Loch Mhor, had twenty-two trout, 13lb.; and Messrs. McGregor and Lindsay, thirty-six trout, 23lb. On Friday, Mr. Pile had a splendid basket of thirty-one trout, weighing 20lb.; and Messrs. McGregor and Lindsay had thirty-eight trout, 21lb.—S. TILSTON.

Naver (Bettyhill, via Thurso, N.B.).—The water is low, and very little done either by rod or net. On 8th, Mr. Oats, Dalvin Lodge, landed a salmon on Beat No. 1; on 9th, one on No. 2; and on 10th, on No. 3. On 11th, Mr. Lawrence, Skelpick Lodge, had a salmon on No. 2; and Mr. Gill, Syre Lodge, a grilse of 2½lb. on No. 6. This was the first grilse of the season either by rod or net. On 12th, Dr. Turner, Syre Lodge, had a nice salmon weighing 13lb.—B.

North-East of Scotland.—Splendid sport has been enjoyed all over during the past week, while the prospects are daily getting brighter. On the upper waters of the Dee one rod last week had nine fish one day, scaling from 6lb. to 16lb. This, of course, is exceptional, the average being two and three daily on the best water. There is a scarcity of fish on the lower waters, owing to the falling off on the coast, and this will be more severely felt as the season progresses. Grilse are making their appearance in fairly large numbers. On the Fife Arms water, Braemar, Mr. Wyburgh had one of 6½lb.; and Mr. Fred Usher another of the same weight on the same beat. On the Crathie section, Mr. Page creel'd one of 7½lb. and one of 8lb.; while Mr. Granville Farquhar had one of 6lb. on the Invercauld private water. On the Ballater reaches anglers have had excellent sport every day during the past week, five, six, and seven fish being got per rod per day. On the Glentworth waters, Mr. Barclay creel'd two, of 7lb. and 16lb., two, of 9lb. and 16lb., two, of 5lb. and 8lb., two, of 7½lb. and 15lb., three, of 5lb., 7lb., and 17lb., and two, of 5lb. and 7lb.; while Mr. Fraser Sandeman had one of 6lb., and two, of 6lb. and 7lb.; Mr. Laming, one of 8lb., one of 8½lb., two, of 8lb. and 8lb., and three, of 8lb., 8lb., and 10lb.; and Mr. Farrer, one of 13½lb. On the Aboyne section, Mr. Whitelaw creel'd two, of 8lb. and 13lb., and two, of 6½lb. and 7lb.; Mr. Fife-Jameson, one of 5lb., two, of 6lb. and 8lb., two, of 6lb. and 7lb., and one of 6lb.; Mr. Watson, one of 5½lb.; Mr. Barclay, two, of 6lb. and 13lb.; Mr. Allan, three, of 6lb., 6½lb., and 7½lb.; Dr. Lewers, one of 9½lb.; and Mr. Younger two, of 6lb. and 7lb. On the Kincairdine O'Neil section, Major Davidson had four on Dees water, scaling 6½lb., 7lb., 7lb., and 8lb., and two, of 6lb. and 8lb.; while Mr. Findlay had one of 10lb., and two, of 7½lb. and 8lb.; while Harper, keeper, one of 17lb., and two, of 7lb. and 8lb., on the same waters. On Borrowstone water, Lord Lisburn creel'd two, of 7lb. and 8lb., one of 6lb., and one of 12lb.; while Lord Garrioch had two, of 6lb. each, and one of 7lb. On the Ballachie water, Mr. Crawford Logan had two, of 6lb. and 7lb., two, of 6½lb. and 9½lb., three, of 8lb., 8½lb., and 14½lb., and two, of 7lb. and 10lb.; while Mr. Levett had one of 6lb., one of 6½lb., and two, of 6lb. each. On the Carlogie water, Mr. Monk Gould creel'd one, 8lb., and Mr. Cook Taylor one, 7lb. On the Comonty water, Sandy Ross had one of 8lb., and one of 7lb. On Kincairdine water, Mr. G. Orr landed one of 10lb. On the Slinie section, Charlie Gill creel'd a fine fish of 15lb.; while John Mortimer had six on the Woodend water, scaling from 6½lb. to 10lb. On the Upper Blackhall water five fish were got, scaling from 6lb. to 8½lb. On the Cairnton and Durris sections a like spell of good sport was had, but few fish were seen on any of the lower reaches. On the Don excellent baskets of trout were made on the Parkhill, Pitmadden, and adjoining beats by Baillie Brown, Mr. Chas. Graham, Mr. G. M. Mackay, and others. On the Ythan, Mr. Shepherd had a salmon of 14lb. on the Eilon Castle waters; while Messrs. George Stephen, Geo. Stott, and others had good baskets of trout. The Ugie is also fishing exceedingly well, now that the weather has taken a more favourable turn.—G. M.

South of Scotland.—The weather is still unsettled, and quite unfavourable for angling. Yesterday (Tuesday) there were severe falls of hail in the northern parts of Moffat Dals, and more hail fell this morning. Several anglers have been out trout fishing on all the Border

streams, but sport has been decidedly poor. Yellow trout have not been rising to the fly at all well, but several baskets have been had with the worm bait, fished in the clear water style. In the Solway the run of sea trout is much under the average for the third week of May, and so long as the weather remains cold and unreasonable the lessees and fishermen do not anticipate any improvement in the run of sea trout. The following is a note of the sport had on the different rivers of the Solway with the exception of the Border Esk, which is reported upon separately. **THE ANNAN.**—This river is in fair order in the middle and lower reaches for trout fishing. In the higher waters near Moffat the streams are low and clear, and very little has been done in that part. Mr. Hullet, of Moffat, a well-known angler, had a heavy basket of yellow trout in the Wamphray portion, caught with worm and fly. On Tuesday, Mr. J. Rae killed over a dozen yellow trout in the Wamphray and Dinwoodie portions. They were all caught with worm. Not a fish would look at the fly. Mr. Thorburn, Brydekirk, was reported as having killed a sea trout and a dozen yellow trout in the Monut Annan water last week. There has been no sport in the lower reaches. **THE NITH.**—Angling is about at a standstill just now. Only a few rods have been out, and very indifferent baskets have been the rule. On the Cluden and Cairn the yellow trout angling has shown considerable decline since last report. This is attributed to low waters and the cold weather. **THE GALLOWAY RIVERS.**—There are no particulars of the angling from this district this week. On the lochs the trout have not been rising at all well, while the fish that have been caught are not yet in good condition. **AYRSHIRE LOCHS.**—More rods have been out since last week. Two anglers caught about a score of yellow trout on Friday by fishing from the Eglington Hotel boat on Loch Doon. On Monday, Mr. Murray and friend killed twenty-five on the same loch. Angling on the Ayrshire rivers very poor at present. **DERWENT OF SOLWAY.**—On this river some fair sport was had towards the end of last week in the Cookmouth district of the river, as also in the Cocker. The May Fly was up in thousands. Among the more successful rods were Messrs. T. Ritson, J. Soulsby, Grave, Thompson, Fleming, Hewitt, and Plaskett. The fishing on the lakes is also poor. One angler caught three trout, weighing 4½lb. The rivers Ehen, Calder, Irt, Mite, and Esk were in good order last week-end. The most of the trout were taken with the worm bait. With a spell of mild weather good sport would follow. The barometer is low, and there is every appearance of more rain.—HEATHERBELL.

Tongue Hotel Waters.—On May 7 Mr. Michell of Lynton, on the Kyle of Tongue, had eight sea trout weighing 10½lb., heaviest 2½lb. On the 9th he had ten trout, 15½lb., heaviest 3lb., on the Kyle. On the 10th, on Loch-na-hacon, the same gentleman had seven brown trout weighing 4½lb. On the 11th, on Kyle of Tongue, he had ten trout, 12lb. On the 12th he had seven sea trout weighing 8½lb., and on the 13th he had fifteen weighing 24lb., all on the Kyle.—M. MCINNES.

Tweed, Teviot, and other Border Rivers.—A few good baskets of trout have been killed both on Tweed and Teviot, while on some of the tributary streams the results, so far, have been satisfactory. On the Tweed, on Monday, Mr. Archibald Steel killed between 16lb. and 17lb. of trout. Others who have had good baskets during the week were: Mr. James Affleck, Heiton, who on Saturday had 4½lb., on Monday 6lb., and yesterday he had again 4½lb., these being killed on Teviot. On the same stream, Mr. Robt. Ferguson, Kelso, had 5½lb.; 7½lb. tell to the rod of Mr. Charles Farquharson, Kelso, on the Tweed; while Mr. George Thompson had 7½lb.; Mr. Geo. Turnbull, Slater, 4lb.; Mr. Wm. Barff, 3½lb. (Teviot); Mr. R. Hardie has had baskets of from 3lb. up to 6lb. on Tweed and Teviot; Mr. Wm. Lowery, on Teviot, 4lb. and 5½lb. Mr. John Gibson, fisherman, Kelso, on the Tweed, has during the past week killed baskets of trout varying from 4lb. up to 8lb.; Mr. R. Newton, on the Teviot, with fly, takes of from 2lb. up to 6lb.; Mr. T. Stewart, takes of from 3lb. to 4lb., including one sea trout of 3½lb. In the Galashiels district of the Tweed and Gala sport has been capital, excellent baskets of trout having been got on both streams, ranging from 3lb. up to 12lb. In the Peebles district of the Tweed the river is also affording good sport. On the Tweed, at Sprouston, Mr. George Wright has had a fine basket of 15lb. of trout; and on the Rutherford water, Capt. Key had a basket of trout of nearly the same weight. On the Bowmont, Kale, and Eden, baskets of from 3lb. upwards have been killed. On the Blackadder (Berwickshire), last week, Mr. John Moffat had 4lb. (clear water worm fishing); Mr. Robert Trotter, 4½lb.; while Mr. Robert Thomson had 6lb. During the past fortnight angling competitions by various clubs have been in full swing, and on the whole good sport was got. On the Rutherford water Capt. Key killed a couple of salmon, weighing 14lb. and 21lb. respectively. No fish have been killed in the Kelso district during the past ten days.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Water, and Gortnorabbey Hotel, Lough Conn).—Mr. J. Timlin killed one salmon, weighing 14lb., and lost two others; Mr. Little killed one salmon and one pike, the salmon weighing 9lb. and the pike 16lb.; Mr. Carroll, one salmon; Mr. Hoban, one salmon and one pike; and Mr. MacNulty, three baskets of trout, weighing 21lb. The weather is very cold here, and we are having heavy hail showers, which is not at all favourable for fishing, but I am glad to state the pools are getting well stocked with fish in both lake and river.—MANAGER.

Ballina (Private Waters, Moy Hotel).—Water clear; occasional showers; fair runs of fish on the river. Mr. W. C. Wilson rose a few fish on Monday. Mr. Schrop got a fine trout on 14th inst. On the whole

F. E. LONGLEY, 39, Warwick Lane, London, E.C.

trout rising fairly well. Mr. McKinsie got a nice basket at Runagry. Major Brooke Collingwood got some trout also.—JOHN DEYERS.

Bandon River (co. Cork).—Salmon and trout anglers have been doing very well for the past week, the river being well stocked, especially on the upper waters near Ballineen. Capt. Richards, Hants Regt., had two fish, 11½lb. and 10lb., on the Carrigmore water, 14th inst.; Mr. Joseph Pike, D.L., on the same water, has also had good sport with salmon.—W. HAYNES AND SON.

Bann.—This river has been a little discoloured by the late rains, but is now in grand order for trout angling. A few sedges are now on the water, and trout are taking them freely. The Messrs. Coates, of Belfast, in three days, took twenty-four fine trout on the shallows at Kilrea, two of the largest 3½lb. each. No English anglers are yet at the Mercer's Hotel, Kilrea, though the best trout and best river fishing in Ireland is to be had there.—DANIEL O'FEE.

Caragh Lake (Caragh).—Trout fishing is still good on all mountain lakes, especially Caragh. Some good fishing has been had by anglers staying at Southern Hotel, Mr. and Mrs. Woodhouse getting some baskets.—G. C.

Corrib and Tributaries (Corrib).—A good deal of rain fell since last report. The river was in fair order, and a good many fish were killed in the past week. Amongst those out were Mr. A. Gesson, Mr. G. Meldon, and Commander Law, R.N. The Lydon Brothers had good success. The Black and Yellow Goldfinch flies and the prawn were the killing lures. Salmon fishing is improving on the other Galway streams, notably the Clare, Galway.—J. A. B.

Erne (Ballyshannon and Belleek).—Anglers fishing the Erne for trout since last report had rather indifferent sport, owing to the bright days and cold evenings. The following gentlemen took some trout: Mr. T. M. Pike, Mr. G. Antonini, Mr. C. Ralli, Mr. E. A. Ralli, Mr. Hoskyns, &c. The largest we heard of taken was 3½lb. weight. The Fishery Company got a fair number of salmon in the nets and boxes during the past week, and next week rod fishing for salmon on the Erne will be in full swing.—M. ROGAN AND SONS.

Lee (co. Cork).—River has been in fair fishing order for past week; inclined to be low. A fair number of grise are now running. On Mashonaglass, R. L. C. Hobson, 60th Rifles, 19lb., 17½lb., 7lb.; Mr. Algood, 11½lb., 6lb. On Ashton, J. L. Peach, 7½lb., 3½lb. On Lee Mount, W. T. Crawshaw, 9lb., 10lb. On Warren's Court, J. A. Jameson, 15lb., 10lb., 9lb., 7½lb. On the free water of the Gullane river (Macroom), Mr. John Barry, 22lb.—W. HAYNES AND SON.

Lough Curran (Waterville, co. Kerry).—Sport has been very poor on Lough Curran, the principal free water here. Only one salmon has been had since last report on this water, and the baskets of brown trout were either poor or indifferent. No sea trout have been had up to time of writing. Peal are coming in, but in very limited numbers so far. On the upper lakes (preserved waters) some average baskets of brown trout have been had, but no sea trout. It is too early, however, to expect any sport at the latter fish on these waters. On the mountain lakes sport has been fairly good in the late evenings.—T. J. D.

Lough Derravaragh (Westmeath).—The May Fly is rising steadily on this well-known loch, and by the end of the week it will be well on, the 20th being the average date. Messrs. Gibson, Stonehall, made several fine baskets of trout in the past fortnight.—J. A. B.

Lough Mask and Lough Corrib.—Fishing from Mount Gable Hotel, Major and Mrs. Ferguson, Dr. Skyes and party, and Mr. Evans have had excellent sport. They made record baskets on May 13 and 16, from seven to ten grand trout per rod each day, ranging from 1lb. to 3½lb., all taken on the fly. Rivers and lakes in good condition, and with the May Fly on sport promises good.

Lough Melvin.—Since last report the weather has been very changeable; very hot and bright in midday for the most of the time, and afterwards turning quite cold in the evenings, and consequently sport was not near as good as it would be if more favourable weather prevailed. During the past week the following salmon were taken: Capt. H. Wood, one salmon of 12lb., on 11th inst.; Lord F. Conyngham, one salmon of 7lb., on same day. Mr. James Johnston, one salmon of 9½lb., on 12th inst.; Mr. W. Barton, one salmon of 7lb., on same day. Capt. Wilding, one salmon of 8½lb., on 11th inst. Mr. Edward Mulhern, one salmon of 8lb., on 15th inst.; Mr. P. Hughes, one salmon of 9lb., on same day. Mr. P. Gallagher took a trout (*Salmo ferox*) of 5½lb., on 13th inst.; and Mr. J. Conolly took two more trolling, of 3½lb. and 4lb., on 16th inst. A fair number of baskets of trout were taken on the lake during the past week; but owing to the bright sun in daytime, followed by cold evenings, the gillaroo trout did not rise well to the fly, and it was chiefly all brown trout that was taken since last report. A few May Flies have already made their appearance, but it entirely depends on the weather during the next ten days whether there will be a good healthy rise of May Fly or not.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—In the early part of the past week weather conditions was dead against fly angling. Bright summer-like days, a change to rain on the 10th, has improved matters, and trout are sporting fairly well. Trolling on the 11th, Mr. H. Higgs had a nice brown trout of 5½lb. Trolling with Devon minnow on the 12th, Mr. Rutherford landed a nice salmon of 11lb. Quite a number of Dublin and English anglers are arriving at Whiteside's and Moor's hotels, Kinlough, this week. Angling prospects looks promising.—P. GALLAGHER.

Lough Neagh.—Pollen fishing was not so good lately, and the same may be said of trout netting. On the tributaries little angling has yet been done.—J. A. B.

Mourne (Newton Stewart, co. Tyrone).—Although considerable rain fell this week the Mourne is in fair order, and trout fishers had excellent sport in the past week. Fishing from the Abercorn Arms, Messrs. Evans, Allnutt, Ranson, and Howe killed, in one day, 100 trout on the Glenelly tributary. Mr. Burden and friend had fair baskets this week. No salmon or sea trout have yet appeared about here.—J. A. B.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Weather very much against angling, heavy hail showers and peals of thunder having put fishing aside here for the past week. Mr. Croke, one salmon, 11lb.; Mr. Preston, one, 9½lb.; Dr. Bruce, one, 11lb. A few salmon have been got on the lough trolling; trout rose badly. A fair number of jack have been got on Lough Cullen, largest 17lb. The Moy Company nets have had the best take of spring fish for the past week that they have had for the past ten years.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—There have been a few good sized salmon taken this week. May 12, Major Traherne killed, on his preserves, one fish, 19lb.; 13th, one, 9lb.; 15th, Mr. W. A. H. Martin, one, 18½lb.; and on 16th, one 30lb.; same date, Major Traherne's fishermen, one, 12lb. The weather all this week has been rough on the lake trout; nevertheless, several fairly good bags have been made. Col. Rogers, on one day, landed six trout, weighing 14½lb.; another gentleman got 14½lb.; Mr. W. Malsbury Cotham and Mr. Bertram Cotham (Prescott), fishing from the one boat, killed eight trout, 16lb. Other baskets too numerous to mention have been made. On my salmon water a good many nice dishes of river trout have been had. To-day (Wednesday) is an ideal fishing day on the lake. A spanking breeze is blowing from the west, the sky is clouded over, and the Green Drake are about in clouds. Quite a flotilla of boats have gone up the lake this morning, and their occupants, mostly English gentlemen, should realise good sport. Each train that arrives here brings numbers of English anglers for the salmon and trout fishing on river and lake. Major Traherne and Miss Hope-Johnstone have returned to London; Mr. A. P. Thornley has arrived from Birmingham.—S. J. HURLEY.

Shannon (Castleconnell).—The river is now in excellent condition, but though salmon seem to be plentiful they are very shy in taking anything offered them. On Hermitage, Lord Massy killed one salmon, 21lb., on 12th. On Woodlands, Mr. F. Cooper killed one salmon, 11lb., on 15th. On the Castle Fishery, Mr. J. H. Wheatley killed one salmon, 12lb., on 9th, and one salmon, 27½lb., on 12th. On the Worldsend, Mr. E. T. Ingham killed one salmon, 15lb., on 11th. On the Landscape water, Mr. R. Greenfield killed one salmon, 36lb., on 10th.—JOHN ENRIGHT AND SON.

Westmeath Lakes (Mullingar).—Previous to the advent of the Green Drake good sport has been had on Lough Derravaragh with artificial flies. A few trout have been taken on Lough Ennell or Belvedere, dapping with the natural fly, the best I have seen being a plump, well-conditioned fish of 4lb. Monday, 16th inst., was comparatively calm, and little was done. Tuesday was ushered in with a strong, squally S.W. wind. Weather cold, and one trout per rod would hardly be under the average. To-day (Wednesday) is much worse, and is causing serious disappointment, as all the anglers' resorts in the lakes district have been engaged.—T. J. W.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address **Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London,** marked "CLUB REPORT" outside envelope.

Anglers' Association, Cripplegate Institute, Golden-lane.—Secretaries of societies please note, so as to inform their delegates, that Rule 13 will in future be strictly enforced.—R. GHURNEY.

Anglers' Benevolent Society, Club Union Buildings, Clerkenwell-road, E.C.—The committee will meet on Friday evening next, May 26, at 8.30, at Club Union Buildings, Clerkenwell-road.—R. GHURNEY.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—Will members please note that a special meeting of the above takes place on May 24. Programmes for C.D.U. concert can be had of—G. MERRY.

Albion Brothers' Angling Society, The Frampton Arms, Well-street, Hackney.—Wednesday, 17th, being quarterly night, brought a good muster of members. Mr. C. J. King was again elected secretary for the coming year, there being no opposition. Messrs. Yeowell and Carey were elected auditors. A brake outing has been arranged to Stamford rivers on June 26. Any friends wishing to join us, kindly send in names early. All members please note: Prizes that have been promised, whether won or not, must be paid in by June 7. Seven new members have just been made.—C. J. K.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate, W.—A special general meeting takes place on May 24th, at 9 p.m., to revise certain rules, arrange conditions of silver challenge cup, fix date for our first match in the opening season, and other items of an important nature. Mr. E. Jackson gave the Anglers' Association delegate report, which was accepted. There are one or two outstanding prizes for past season not yet in. Will those who have received my letters kindly respond on or before 24th, and to those in arrears, I may inform them that Rule 23 will be enforced. I have received lists for A.A. privileges and

A.B. cards, and taking names and cash for same on 24th. We have an agreement on our above house, and we are now comfortable.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Port-month-place, Lincoln's Inn Fields.—On May 16 the ninth annual supper and distribution of prizes took place, presided over by Mr. Pailk. Much credit is due to Mr. Wilson for the catering, after which Mr. Pailk distributed the prizes. Messrs. Drew, Montgomery, Utting, Hopping, Hall, and Butlin were the chief recipients. A good list of prizes was booked for the ensuing season. The harmony was of the best, Messrs. Houghton, R. Chambers, J. Hawes, Langton, Habbijam, Drew, sen. and jun., Smith, and our worthy chairman pleasing the company. "Auld Lang Syne" finished a very enjoyable evening.—J. CHAMBERS.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Our annual dinner, &c., on the 16th, was a grand success. The ample spread supplied by Mr. Chubb, of East Hill, Wandsworth, did him great credit, forty members and friends participating. After the usual toasts, the prizes were distributed to the successful winners, and a new list opened for the coming season with capital results, about £20 being promised on this occasion. At the concert which followed some really good songs and solos were rendered by the following artists: Messrs. F. Edwards, A. Chettle, Evans, A. Vine, J. Smith, A. Quibell, C. R. Townley (cornet solos), J. Curtis (pianist). "Auld Lang Syne" terminating an enjoyable evening. There will be no meeting next Tuesday, 23rd inst., but a general meeting is fixed for Tuesday, May 30, to arrange the first outing and other important business.—A. JENKINS.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—There was a fairly well attended meeting on Tuesday, May 16, and a lot of business transacted. I beg to remind members that our dinner and prize distribution takes place on June 6. All members intending to be present are requested to let the secretary know not later than May 30. All donors of prizes will oblige by sending same to clubhouse as early as possible. Don't forget June 13, concert for "Old Uncle."—F. RANDALL.

Burlington Piscatorials, Burlington Hotel, Burlington-road, W.—Our second annual dinner took place on May 11, which was most successful, twenty-seven sat down. The caterers were Mr. C. E. Revill and his wife, which was served up in excellent style. Our president, Mr. L. C. Greenhill, took the chair, and Mr. A. Hibble, the vice, followed by a grand concert given by the following gentlemen: Messrs. Sanger, Rowbottom, Revill, Dare, Tierney, Morrison, Mason, Wren, Amos, Green, Orlebar, and Emery. Pianists, Messrs. A. Pocock and Dare. The prizes promised, value £5 19s. 6d. The next meeting will be held on Wednesday, June 7, at nine o'clock. Members wanting privilege tickets let me know as soon as possible; 2s. must accompany the order this year.—P. LAVINGTON.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On May 14 Mr. R. Anderson weighed in a trout measuring 21in. and weighing 4lb. 1½oz., taken whilst spinning in the Lea, near Rye House Bridge. Our distribution of prizes on the 17th was a grand success, Mr. Golding taking £1 ls. specimen jack; H. Hackett, specimen roach; H. Deverill, specimen dace; B. Sawyer, specimen perch; W. Elliott, specimen bream; W. Elworthy, sen., specimen trout; and H. Deverill, in addition to three special prizes, won the £4 4s. challenge cup, presented by Mr. B. Williams, our worthy host. Over £45 in prizes was distributed, and a very enjoyable evening was spent. There will be no meeting on May 23, Whit Tuesday. Found in the club-room on the 16th a receipted ticket for goods; owner can have the same by applying to—P. E. LOFT.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilbarrn.—Our distribution of prizes last Wednesday was a great success, Mr. F. Honour in the chair; our most successful members being Mr. J. Tanner, Mr. J. Bowry, and T. Batchelor. Our prize sheet for the ensuing year was well patronised, but I hope to have a good many more names before the season opens. Very pleased to state that the A.B. box was well patronised, and also that we made two more new members, and several more promised.—A. C. QUICK.

Clapam Junction Angling Society, The Clarence, Winstanley-road, Clapam Junction, S.W.—The twenty-fifth annual dinner and distribution of prizes of the above society took place on May 15, when thirty-five sat down to a good and substantial meal, which was done justice to. After the cloth was removed harmony was the order. Among those contributing were Messrs. J. Bergeman, Batchelor, Thorne, Burrage, Moore, Nichols, Keen, Ern, Bailey, Jones, &c. During the evening the following prizes were distributed to the successful members: Mr. J. Thorne, first, with ten prizes to his credit; Mr. H. Moore, second; Mr. A. Ward, third; also Messrs. Wm. Evans, Runnigar, J. Willgoose, Ball, Bowater, Hines, Woodhouse, Jones, Heyman, Bethol, Pegg, G. Jameson, &c. Over £20 were distributed during the evening; and also we have a grand balance in hand from our annual balance-sheet. A new prize list was started, when over £10 10s. was made up by several gentlemen. A vote of thanks was accorded to all officers of the society, when the evening was brought to a close with the usual musical honours ("Auld Lang Syne"). I wish to return my sincere thanks to all members and visitors who favoured us with their company on this occasion.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our presentation of prizes for the past season will take place on May 30, and I shall be glad to receive all donors' prizes in by that date.

A committee meeting will be called next week to arrange a six months list of prizes and fixtures for the ensuing season, also prize outings for honorary members. We made two members last Tuesday. Our annual dinner was a grand success.—S. VIOLET.

Collingwood Angling Society. Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Will club secretaries please note that our address is as above, as we have had some important letters sent to our old address. The election of officers resulted as follows: President, Mr. Jeffreys; vice-president, Mr. Sorge, sen.; chairman, Mr. Jarrett; vice-chairman, Mr. Downs; trustees, Mr. Poole and Mr. F. Beames; delegates to the A.A., Mr. Poole and Mr. Sorge, jun.; auditors, Mr. Ford and Mr. Ball; assistant-secretary, Mr. Sorge; secretary, W. H. Stafford. Will members kindly attend next Wednesday for important business?—W. H. STAFFORD.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—Our annual general meeting took place on May 17, when the following gentlemen were elected to serve for the ensuing year:—Committee: G. Norris, W. Attridge, C. Glover, W. Macdonnell, H. Wright, B. Richardson, A. Anderson, W. Richardson, and H. Haines. Delegates to the A.A.: G. Norris and C. Walter. Delegates to the C.A.: G. Franklin and W. Attridge. Delegates to the C. and D.V.L.: G. Norris and G. Franklin. Auditors: J. Leadhester, W. Richardson, and H. Haines. Secretary: G. H. Franklin. The balance-sheet was read, showing a fair amount in the treasurer's hands. The annual dinner will take place at Chertsey. A brake will leave the clubhouse at nine o'clock on June 11; seats can now be booked. I should advise those who wish to go to give in their names at once. Two working members were proposed, who will be balloted for next week.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On May 16 our annual distribution of prizes took place. The recipients were Messrs. H. Poore, T. Thompson, E. Wild, A. Morgan, W. Thompson, C. Pocock, J. Eagles, S. Wood, G. Davies, and T. Swain. During the evening the A.B.S. box was opened, and found to contain £1 12s. 3d. The chair was taken by Mr. A. E. Lloyd, faced by Mr. T. Thompson. During the evening some excellent songs were rendered by several ladies and gentlemen, Mr. C. Pocock presiding at the piano. Members please note that on Tuesday, the 23rd, the society will not meet, likewise all members who intend to be present at the dinner on June 4 must give in their names by May 30.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday's meeting quiet. After usual business the members adjourned to Bostonians' comic lantern show, in aid of the widow of the late H. Patman.—JOHNNY EDWARDS.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Our annual dinner and distribution of prizes will take place on June 1

instead of May 31, on account of it being Derby day.—W. JENKINS.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—The annual general meeting will be held on May 30, when all members are requested to attend. We desire that members will send in their applications for privilege tickets as early as possible.—A. T.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—The above society hold their annual general meeting on Wednesday, May 31, when I hope all members will kindly attend.—W. LEFEVRE.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Our first return visit on the No. 1 Eastern District will take place on June 5, when I hope to see all clubs represented. The district officer, Mr. Manning, will open our Benevolent box on the occasion, and our distribution of prizes will take place on June 13. I hope all members and friends will give in their prizes promised by Saturday, June 10.—R. MURPHY.

Harlesden Angling Society, The Crown, Harlesden.—The first annual dinner of the above society was held at the above house on May 3, when thirty-six members and friends sat down to a capital dinner supplied by host Pimm, afterwards enjoying a musical evening, during which upwards of £7 was promised for prizes for ensuing season.—W. N. DAWES.

Highbury Angling Society, Globe Hotel, Upper TOLLINGTON-road, N.—Our annual supper took place last Wednesday, Mr. J. B. Close being in the chair, faced by Mr. J. Moore. After the good things provided by the host, Messrs. Pratt and Son, in their best style, had been disposed of, the usual toasts were honoured, and the chairman presented the prizes won last season to the various winners. Mr. Wymer holds the challenge cup for the year. Mr. F. Berry took the silver cup, also silver medal for the best fish (pike, 17lb. 5½oz.). There were in addition four other silver medals presented. Mr. W. D. Hall (perch, 2lb. 4½oz.), Mr. W. T. Attwood (dace, 13½oz.), Mr. F. Woods (chub, 4lb. 5oz.), and Mr. E. Wymer (dace, 14½oz.). The other prizes were varied and numerous. The harmony was contributed to by Messrs. R. Lawrence (bass), T. Day (comic), W. Sycklemore (tenor), E. Barrett and Harry Thorne (comic), T. Pocklington (tenor), F. Hudd (violin), &c. Mr. F. Berry has weighed in three more trout during the week, two of them being over 3lb. each.—E. W.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—At our meeting on Thursday evening last, which was general meeting, Mr. W. Bishop was elected as trustee and Mr. T. C. Sowerbutts as treasurer. The annual dinner will take place on June 11, at the Bull Inn, Ware. Will members please note that we meet on Thursday evenings to do business? I should like to see some of the absentees, as we have some important business to be done, viz.: Names for annual dinner, second weight prizes, and also distribution.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On May 14 our brake outing

was a success. On Tuesday last (Mr. Croker in the chair) our steward gave in his report and bills of the outing, which were all satisfactory. I hope those members and friends who have promised prizes will have them up at clubhouse on or before Tuesday, May 30, as the distribution of prizes takes place on that night.—J. H. HERBERT.

Leightonstone Piscatorial Society.—Mr. J. Harwood had a very fine take from Southend on May 14, his catch including thirteen eels. We have enrolled six new members in the following gentlemen, viz., Messrs. Waterhouse, Spillman, Sanders, Ferdinand, Wright, and Routledge. I am also very pleased to state that the following gentlemen have promised to present prizes for the forthcoming season, i.e., Messrs. Doherty, King, Harwood, and myself.—W. CLOUTING.

Liverpool Angling Association, Bee Hotel, Queen-square.—The past week appears to have been a very quiet one as regards angling in this neighbourhood. Yesterday there was for sale in our fish market a large lot of good roach, which the vendors say came from Ireland, and are exempt from the operation of the Freshwater Fisheries Act, at least, so say the Markets Committee through the town clerk, though Mr. Minndella is of an opposite opinion, and he ought to know. There is a great scarcity of salmon, and what there are, mostly small. Several of the dealers say there will be none at all in a few years, as in consequence of the overnetting in the estuaries and the mouths of salmon rivers there are not enough parent fish allowed to get up to the spawning beds to keep up the stock, and there should be a standard of weight set below which no salmon should be offered for sale.—RD. WOOLFALL.

North East Brothers' Angling Society, Star and Garter, Green-street, Bethnal Green.—Our fifth annual dinner and distribution of prizes took place at the above house on May 11, and a very enjoyable night we had. There were about eighty at dinner, which was served in grand style, and the prizes we got to fish for in the coming season passed all record. The talent was also very good, but too numerous to mention. Chairman, Mr. J. Thornton; vice-chairman, Mr. C. Lamb, sen. On May 30 a special general meeting is called. Hope all members wishing to take up their fishing tickets for the coming season will call and give in their names.—G. TAYLOR.

North London Angling Society, Tap House, Holloway-road.—On May 10 the eighth annual dinner and distribution of prizes took place, the chair being occupied by Mr. J. Pales; vice, Mr. W. Stretch; Mr. Shirley, of Old-street, doing the catering in first class style. Covers were laid for thirty-eight, all of whom did justice to the good things provided. After the cloth was cleared the harmony was started, several songs being sung. The chairman then distributed the prizes, the principal winners being Mr. W. Stretch, Mr. Pink (each of them taking six each), Mr. Harris, Mr. Black, Mr. Hellicar, Mr. H. Stretch, Mr. Hayes, Mr. Christmas, and others (taking from one to four each), the said prizes ranging in value from two guineas to 7s. 6d. The chairman then opened

CURIOUS AND INTERESTING FACT

CONCERNING AN

ITCHEN TROUT AND THE MAY FLY

The "Fishing Gazette," April 16, 1898.

"The Major caught a brace of trout and several troublesome grayling; the largest trout was about 1½lb., and by this trout there hangs a tale.

"When I was fishing in the same meadow last June I lost many a trout and many a May Fly; now it so happens that in the gill of this trout was found, firmly hooked, a very perfect May Fly—the G.O.M.—with 6in. of gut. He has worn and no doubt been proud of this distinctive decoration ever since. It seems to me to be a very remarkable thing that fly and hook should have been in that fish for more than nine months, and now as perfect and fresh as if it had been in my pocket-book all the time; the gut is rather rotten. The gold tinsel round the body is as bright as ever it was, one wing is slightly mangled, as if other envious trout had tried to nibble it. I fully believe that fly is mine, that I lost that fish on that particular spot last May; the only doubt I have about it is that I then estimated the fish I lost as at least 1½lb.,

whereas this one, after nine months' growth, now weighs only 1½lb.; on the other hand, you know how much larger are always the fish you lose than those you take! I find there are other claimants for this fly. The Professor, who

is not here now, has certainly a claim. I can only say, 'Palmarum qui meruit ferat,' if it can only be proved. It is distinctly a G.O.M. of Mrs. Ogden Smith's make."

THE AMATEUR ANGLER.

The "Fishing Gazette," April 30, 1898.

"Here is a picture of the G.O.M. May Fly imitation, after it had been worn in the gill of a trout for about eleven months, as described by me in the Fishing Gazette of April 16. Of course there is no novelty in finding a fly in a trout's mouth; but it is somewhat of a novelty to be able to identify the fly, and also to find it in such a perfect state of preservation after so long a time of wear and tear."—AMATEUR ANGLER.

THE "GLADSTONE" MAY FLIES,

The invention of Mrs. OGDEN SMITH, were the most successful flies used last season, proving more killing than any other pattern, especially on the Hampshire streams. They float remarkably well, dry very quickly, and can be had in twenty varieties of shade, both in the body and wings. Price 4s. per dozen. To be obtained only at OGDEN SMITH, 6, Park Side, Hyde Park Corner, S.W.; and 34, St. John's-hill, Clapham Junction, London, S.W.

MAY FLIES

OGDEN SMITH,

6, Park Side,

HYDE PARK CORNER, S.W.,

And at 34, St. John's Hill, Clapham Junction, London, S.W.

the prize list for the ensuing season, which was liberally responded to, being better than the last. The harmony again being set going, was kept up till two o'clock, all being of opinion that this annual was the pleasantest that they have had.—H. STRETCH.

Ormonde Angling Society, The Royal George, Carlisle-street, Westminster-road.—On May 30 this society will remove to their new head-quarters, at the Rose, Saville-place, Lambeth-road, S.E., Host W. King, when our meeting nights will be altered from Wednesdays to Tuesdays. On the opening night, May 30, a concert will be held on behalf of the T.A.P.S., when as many anglers who can make it convenient to attend will be esteemed a favour.—A. HOLBROW.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham.—We held our twenty-first annual dinner and distribution of prizes on May 11, host Clarke putting on an excellent repast, to which I am sure we all did justice. Our president, Mr. Reed, was in the chair, and Mr. H. Colman in the vice-chair, between thirty and forty being present. After the dinner the distribution took place, Mr. W. Stone being first prize winner, followed very closely by Messrs. Etherington, Childs, Steedman, Watkins, Gardham, Gibbs, and a host of others. We have an excellent prize list (which is still open) for the ensuing season. Our sincere thanks are due to the St. Albans, St. Thomas, and the Amicable Waltonians for the handsome way in which they supported us both in prizes and musical talent. Altogether we had an enjoyable time.—GEO. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—Our annual on May 17 went off nicely. Thirty sat down to Host Tinson's repast, and were well satisfied, after which we had a little harmony. Chair, Messrs. Bonflier and Skinner; vice, Mr. Greene; pianist, Mr. Holmes. Messrs. Clifford, Broughton, Sherlock (trio), and numerous others gave a turn. The prize winners were: Messrs. Bonflier (top weight, 303lb. 12oz.), Austin, Bros. Dove, Sherlock, Carr, Carter, Silcock, Shaw, and Reed. We have a capital list for next season.—R. C.

Royal George Angling Society, Queen's Arms, Bateman-street.—On May 17 we held our annual supper and distribution of prizes, and it proved beyond doubt a thorough success. Messrs. Wells and Ackerman carried out their duties in a thorough competent manner. The concert, under the able management of Mr. Steptoe, was in all respects up to its usual calibre. Our prize list for the coming season promises to excel all previous seasons.—J. GIBBONS.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—Our dinner and prize distribution on the 14th, at the Black Rabbit Hotel, was in every way a success; an excellent dinner being backed up with a substantial prize list for next season.—W. ANSTLEY.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—May 16 was our annual supper and distribution of prizes, when a very successful evening was spent. Mr. Phil Samuels in the chair, and Mr. C. F. S. Barker the vice-chair. The distribution of prizes to the members was as follows: first gross weight, Mr. North, 134lb.; second gross weight, W. Aldis, 78lb.; third gross weight, G. Campbell, 60lb.; and every member of the club receiving prizes. A capital evening was spent after the supper, when the following members and friends rendered some good harmony: Messrs. Wadham, Whyman, and others. I beg to thank all friends and donors for our new prize list.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—Our annual dinner and distribution of prizes will take place on Tuesday, May 30, at 8 p.m. sharp. Tickets, 2s. 6d. each, at Mr. Dent's, The Hop Pole, Wardour-street, W. I shall be pleased to receive prizes and subscriptions as soon as possible.—PILICAN.

South Bermondsey Club Piscatorial Institute, Rotherhithe New-road.—We have one or two more prizes to add to the list, and I must therefore impress upon the members to attend the meetings every Friday night to arrange prize list, and any alteration in rules they might suggest. Three of our members were down at Amberley on May 14.—J. H. DAVIES.

South London United Anglers' Visiting List.—A return visit on the above list took place on Tuesday last at the Blackfriars A.S., The Imperial Hotel, Southwark-street, when thirteen clubs were represented. The next visit goes to the Collingwood A.S., Lord Nelson, Nelson-square, Blackfriars-road; date later.—ALF PAINTER.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—At the meeting on the 16th of the members of the above club, Mr. W. Drake in the chair, three gentlemen were proposed as working members, late of the W. H. Brothers. The election was delayed for a week for the secretary to write their late secretary. Mr. J. Sanders was elected an honorary member.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—At our weekly meeting it was proposed that there should be a meeting next Tuesday. Also that a committee meeting should be called for Thursday, the 25th, at nine o'clock, to arrange prize list and outings for coming season. We made two new working members last meeting night.—C. E. LOCK.

Waggoners' Angling Society, White Lion, Albert Embankment.—Our distribution took place on Tuesday last, and was a grand success. The following were the principal winners during the past season: Messrs. Allan, Clegg, G. Clayton, W. Betts, J. Clayton, J. Clayton, jun., and H. Walton. Three new members were nominated: W. Heppelthwaite, G. H. Mitchell, E. Reid. The audit took place on the 18th, and I am very pleased to state that the Waggoners are in very flourishing circumstances. The gross weight of the club is fully up to the average, although not so good as last year.—H. O.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Dinner committee gave in their report and laid it on the table for next week. We also made two more new members, and hope all the members will turn up strong next Wednesday for very important business.—TIDDLER.

West London Angling Club, Dartmouth Castle, Hammersmith.—Our auditors met on Thursday to balance accounts, and note that several subscriptions and donations are still due. Members are requested to clear the books on or before our next quarterly night, June 1, as we have a heavy list of prizes for distribution, which takes place at our annual dinner on June 8.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—Our annual concert was a grand success. After a short speech by the chairman, Mr. Westlake, the following gentlemen contributed to the harmony: Messrs. Frank Landen, Bob Berry, Steptoe, H. Church, Mandry, Godfrey, and G. Barrett. The club and special prizes were then presented by Mr. Greg. After a vote of thanks to Mr. Greg harmony was renewed, Mr. G. Barrett's encore song being one written and composed by himself, entitled the "Old village green," for which he was deservedly encored. Mr. Humphrey sang the last song, and the evening was brought to a close with the "National Anthem."—S. J. H.

White Hart Angling Society, The White Hart, Tottenham Hale, N.—On May 10 our annual supper and distribution of prizes took place. It would have been a better success had the landlord got an extension; consequently, it gave us no time after supper to have any harmony, or to do the usual business. Will members please note that our annual general meeting for the election of officers for the ensuing season takes place next Wednesday, May 24, at 8.30 p.m., when I wish all members to attend?—W. E. BEAUMONT.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good attendance at club, and got through a lot of business on Tuesday. Revised rules, elected new officers for the ensuing year, and arranged for supper and distribution of prizes on June 6, when we hope to see some of the old faces, and spend a very cheerful evening, having secured some good talent to follow supper.—N. LINDEN.

EXPLOSIVES AS PIKE DESTROYERS.

LAST week at the instance of the Trent Fishery Board, at the Ashbourn Police Court, Samuel Whittingham, labourer, was summoned for having used gelignite to destroy fish in the river Henmore, at Sturston, on March 31; and Mr. Peveril Turnbull, of Sandybrook Hall, Messrs. Edward Sellers, Horace Sellers, Wm. Barnes, of Ashbourn, and Thomas Treadwell, water-keeper, Mayfield, were also summoned for aiding and abetting. The cases of Whittingham and Mr. Barnes were first heard; and Mr. G. R. Eddowes, of Derby, who appeared for the prosecution, stated that the proceedings were taken under the 2nd section of the Fishery Dynamite Act of 1877, which provided that any person who used dynamite or other explosive substance to catch or destroy fish, rendered himself liable on conviction to a £20 fine or imprisonment, the Act applying to public as well as private waters. Mr. Barnes and almost all the other defendants were members of the Ashbourn Fishing Club. At one time the Henmore was an excellent trout stream, but it had become spoilt through pike getting in. Mr. Turnbull was president of the club, and on several occasions had taken the advice of the Trent Fishery Board as to the best way to destroy the pike. The board had expressed their willingness to help anyone to destroy pike in a legal manner, for the purpose of preserving trout and other fish. Two years ago there was a prosecution against two men, under another Act, for using gelignite, and Mr. Eddowes said that he did not ask for a full penalty, but if the Bench decided to convict, to inflict a penalty which would tend to effectually debar

anyone from using gelignite or any explosive substance for the destruction of fish. Mr. W. H. Foster, the secretary, deposed that he saw a little pickerel, a dace, and a trout killed by the explosive, which was used in several parts of the stream. There was no concealment of the affair whatever. Some six or eight pike had been killed recently in this particular small length of water. Mr. Barnes, who elected to give evidence, said that when he arrived at the water he heard it was illegal, but at the same time he heard that they had had a kind of unqualified permission from the board to do it. It was done entirely on his own account, and not with the assistance of the club. The chairman said that ignorance of the law had nothing whatever to do with the case. At the same time, the Bench believed that defendants had no intention whatever of breaking the law. The only thing that struck him as curious was, that if they decided to blow up a certain part of the stream, how were they to avoid destroying trout as well as pike. Mr. Barnes would be fined 10s. and Whittingham 2s. 6d. with costs each. In the case of the Messrs. Sellers, Mr. Wilson (who defended them as well as Mr. Barnes), said that they did nothing beyond being spectators, but the Bench looked upon Mr. Edward Sellers as an interested spectator being a member of the club, and fined him 2s. 6d. and costs. The case against his son was dismissed, and against Treadwell withdrawn. The case against Mr. Turnbull (who did not appear) was adjourned.—From the Field.

SHOULD THAMES PIKE BE PRESERVED?

Now that so much attention is being paid to the re-stocking of the Thames with trout and coarse fish, the above question is one which is well worthy of the serious attention of the Thames Re-stocking Association and the numerous other preservation societies of this river. When we consider the proverbial voracity of the pike it would seem more rational to protect the fish which are already in the river from their ravages than to abstract fish from other waters and place them in the Thames, probably to fall victims to the insatiable hunger of the pike. The reason which is usually assigned for the real or imaginary decrease of fish in the Thames is the increase of anglers in recent years. In view of the remarkable fecundity of coarse fish, if the fish, their ova, and their fry were efficiently protected from their destroyers (the pike, the steam launches, and water fowl) there can be no doubt that, notwithstanding the increase in the number of anglers, there would be no scarcity of coarse fish. As regards the fecundity of the perch, I notice that Mr. T. Ford, the pisciculturist, of Caistor, states that a single large perch will yield about a million eggs, and that fifty female perch will yield at the most moderate computation 5,000,000 to 10,000,000 eggs. (Thames Angling News.) The numerous dangers which these and the ova of other fish encounter in the process of their evolution to the Thames standard length cannot be dealt with in the present paper; it only falls within its scope to deal with the fish which can be accounted for by the pike. The amount of damage done to the fishing in the river by the pike depends on two factors: (1) the number of pike in the river; (2) the number of fish which a pike devours. Now, it is, of course, impossible to accurately estimate the number of pike in the river. In ten miles of the river Wylie, a small stream near Hungerford, 3619 pike were destroyed during four years. ("Making a Fishery," Halford). Let us imagine, then, as a working hypothesis, that there are on an average 200 pike of 1lb. and upwards weight in one mile of the Thames. This estimate has been regarded by those fishermen to whom I have spoken on the subject as a very low one.

The second factor is also very difficult to estimate accurately, for not only will the number depend on the size of the fish taken, but also, if one is to judge from angling experiences, the fish go off the feed for days together. So far as my experience goes from the examination of the contents of the stomachs of pike which I have caught, the stomachs of the larger pike have usually contained larger but fewer fish than the stomachs of small jack; in fact, from the stomachs of small jack of only a pound in weight one can often express five to eight freshly taken small fry. Mr. Halford, in his book "Making a Fishery," gives the following among other examples of a pike's voracity. "On Sept. 27, 1893, a pike of 9½lb. was taken in the nets. The contents of its stomach were as follows: Two small pike about 9in. long, nine lampreys, five tullheads, and a small trout about 1½lb., with only its head partially digested and the tail projecting from its mouth. March 26, 1894, a pike 11in. long, wired in a hatch hole, had three lampreys, two tullheads, and two yearling trout in its stomach." Mr. H. C. Pennell, in his "Book of the Pike," relates how eight pike, of 5lb. in weight, devoured in three weeks 800 gudgeon; this is approximately at the rate of five fish a day. If we assume, then, that a jack over a pound in weight consumes on an average five fish a day, and that in each mile of the Thames there are 200 jack of over a pound in weight, we find that 100,000 fish are daily destroyed by pike in 100 miles of the river. Now, even allowing for gross exaggeration in this estimate, how insignificant must be the influence for good of the various re-stocking associations when compared to the ravages of the pike. "One 4lb. pike will do more mischief than all the poachers in the district." ("Practical Management of Fishery," Francis Francis.) It is evident that if we preserve the pike we *ipso facto* destroy the other fish in the river. Now, as the roach and other coarse fishermen very largely outnumber the pike fishermen, is it fair to favour by legislation the few at the expense of the many? No sane fisherman would think of stocking his private water with trout and at the same time preserving the jack. He would first exterminate or, as far as possible, reduce the jack before

he put in the trout. Why should the Thames be restocked in a different manner? It has been said there are such a number of bleak, roach, and dace in the Thames that pike do less harm than in other rivers to the trout. Now, though there may be a very large number of other coarse fish, there are a proportionately large number of pike, and I think that most jack fishermen would admit that the best bait for a jack is a trout, but of course this is not regarded as a permissible bait. The success of the wagtail as an artificial bait is probably due to its resemblance to a trout. Now, as I do not think it would be practicable to do so, I will not discuss the extermination of the Thames pike. But though it may not be advisable to exterminate them, it is quite another matter to protect them by the present legislation. By allowing any method of angling for jack, and most of all by allowing any sized jack to be retained, the number of jack in the river would be quickly reduced and the number of other fish thereby enormously increased. This subject is one, as I said at the commencement, for the consideration of the various Thames angling societies. If they think that the large increase in the number of jack of below and about the sizeable limit, which has undoubtedly occurred since these fish have been protected by the bye laws of recent years, is prejudicial to the interest of Thames anglers in general, then it is their duty to approach the Thames Conservancy for the repeal of the bye laws. If properly brought before the conservators, the appeal would be successful, and then when the pike in the river began to diminish, their praiseworthy efforts at re-stocking would be attended by more appreciable results than at present.—PTERODACTYL, in the *Thames Angling News*.

Offings by the Way.

THE Anglers' Association have shifted their quarters. Instead of meeting at the Foresters' Hall, they will in future hold their meetings at the Cripplegate Institute, Golden-lane, Barbican. June 5 will be the date of the first meeting.

THE account of the Wye Board of Conservators annual meeting, and the Yare and Bure Preservation Society's annual dinner, will appear next week.

OYEZ! OYEZ!! OYEZ!!!—In the name of our Sovereign Ladye Queen Victoria, verily you are summoned, by request of mine Hoste of ye Olde Crown Hostel, Slough, to celebrate ye birthday of Her Most Gracious Majestie, by a junket in ye said hotel, on Wednesday, ye twenty-fourth day of May, in the year of our Lord one thousand eight hundred and ninety-nine; musick at 8.30. All good citizens are cordially invited. God Save the Queen!

THE Whitsuntide programme at the Royal Aquarium is a continuous succession of entertainments from ten a.m. until 11.45 p.m. Every element of variety is introduced, and there is much to provoke mirth. Searchers for amusement will be difficult to please if they do not find much to their taste in the programme of 100 "turns." As the doors open at 9 a.m. visitors will be able to obtain 14½ hours' enjoyment for the small entrance fee of one shilling, and children at sixpence.

A FINE pike weighing over 12lb. was taken on Monday last, by Mr. James Harris, of the sausage gill restaurant, St. John's Street-road, Islington, while fishing with some gentlemen in some private water, on the estate of Col. Marden, at Norwich.

WHEN on one of my angling excursions into Lancashire, I stayed at an old Inn where a "stoop," so called, of four steps, led down into the cellar, or the so-called "spirit vaults." An ascent of other six stone steps ascended to the "select wine and spirit bar." This sign was painted over the front door:

"We have spirits above, and spirits below,
Spirits of bliss, and spirits of woe;
The spirits above are spirits divine,
The spirits below are spirits of wine."

ON Saturday last a flock of fifteen wild geese was observed by several persons. The geese were travelling in a north-easterly direction, over the parish of Llanyblodwel, near Oswestry, and continually uttering their peculiar and discordant cries. On the same day, seven others were also seen flying very high in the air over the village of Llanymynech. These were also heading for the north east; but two others were shortly afterwards seen passing over the village in the opposite direction. Their appearance is said to indicate stormy and unsettled weather, and at present such is the case in that respect.

A FEW days ago, as an aged lady, Mrs. Gittins, Voel, Llanael-fraidd, Oswestry, was attending to her poultry, she observed a hawk swooping down on a brood of chickens; but the hen in charge of them gave battle to the intruder, and a sanguinary struggle took place for some time, until the old lady interfered, and with her walking stick disabled the hawk, who lay motionless for a while, but showing signs of a resurrection. The old lady effectually prevented anything of that sort occurring by placing a large stone on the body of the hawk, and she is, quite naturally, very proud of her exploit, and which is without a precedent in that neighbourhood.

WELSH river watchers, or, to give them their proper title, water bailiffs, are occasionally recruited from the ranks of river poachers, on the principle of setting a thief to catch a thief, and as, before their conversion, they had to appear frequently before their "betters," it is small matter for wonder they should seize every opportunity to be revenged on these "betters." Some time ago, a young gentleman, ten years of age, son of a county magistrate, and who is also a master of hounds, was from home on a visit, and, to amuse himself, commenced to fish in a primitive way on a stream which was under the guardianship of one of these worthies. Had it been a gang of poachers, perhaps, the bailiff might not have observed them; but, knowing the young gentleman, it was too good an opportunity to be lost; so he got a summons against the boy for angling without a licence, and which was served in rather an informal manner at the residence of the boy's father. To complicate matters, this precious piece of paper was blown from a table on to the floor, and the footman, observing what he conceived to be a waste piece of dirty paper, promptly consigned it to the flames. It was some time before its contents were known, but someone in the house had glanced at it, and surmised what it meant. To give as much trouble and annoyance as possible, the summons was made returnable at a county town upwards of twenty miles from where the alleged offence was committed. The young gentleman's father very promptly took out an angling licence for his son, and as the magistrates considered the affair a piece of sharp practice to be discouraged, the summons was withdrawn, and the officious official found it best to seek "fresh fields and pastures new" to watch over in future.

A CORRESPONDENT, writing from North Wales, says: "The paragraph in the last *Fishing Gazette* respecting the substitution of pork for mutton recalls to mind another yarn. A party of tourists travelling in 'Wild Wales' arrived late one night at an hotel, and had for supper what is termed in Welsh 'Pastai Perchill.' It was a sort of pork pie—the literal translation being 'little pig pie.' They heartily enjoyed it, and next year, calling at the same hotel, asked for another pie of the same sort. The waiter, with more candour than discretion, explained that it could not be supplied, as, although the old sow had recently had another family of pigs, they were all born alive. The inference was, of course, that the pie was composed of several still-born infants of the porcine tribe, and ever since that time 'Pastai Perchill' has been most religiously avoided by that party of tourists. Where innocence is bliss it is indeed folly to be wise, and the moral of this true tale is that it is not always expedient to be too candid, especially as to the composition of rare and choice dishes. A nod is as good as a wink to a blind horse, and tourists in Wales will, perhaps, in future, not care to partake of 'Pastai Perchill.'"

MR. DURWARD LELY, who has been enjoying a well-earned holiday for some time past on his own property, Glenardle, near Bridge of Cally, caught a trout on Friday weighing about 5lb., and measuring over 18in. long. This fish has a history, as it was known as a "cannibal," owing to its predatory habits upon its own kind, and had haunted the same pool for ten or twelve years past, during which time it had often been hooked, but as often lost. On learning of its existence, the famous tenor, who is an expert handler of the rod, resolved to land the fish, and succeeded. He has asked Mr. Crockart, Allan-street, to get Mr. Dickson, artist, who is an adept at this class of work, to paint a cast of it. It is calculated to have been fifteen years old.

As announced recently, the Gresham Angling Society's list of meetings is to hand, from which the following are quoted:

- June 13.—Paper by Mr. J. Jeffery ("Straw Hat").
- 20.—Trout fishing at Chesham.
- July 8.—Outing and cricket match at Witham.
- 11.—Paper.
- 18.—Bream fishing.
- Aug. 15.—Outing to Newhaven.
- 29.—Outing to Kelvedon.
- Sept. 12.—Outing to Chesham.
- 26.—Paper by Mr. E. F. Goodwin ("Chub Fishing").
- 30.—Closing dinner at Chesham.

The remainder of the most important fixtures for Feb. 27, 1900, will appear later.

MAUD: "Don't you think there are just as good fish in the sea as ever were caught?" MARIE: "I don't know. But they're smarter, anyhow."

SEVEN flies—one for each day in the week. Magic number! Seven Sisters' Road, Seven Dials, seven candlesticks—but I promised to give the "dressings." Somehow they—the dressings—or I have got a bit mixed. There's the dry fly, the wet fly, the sunk fly, the floating fly, and the fly that will do neither. The "Sunday Fly" (or, rather, the "Money Fly") is an expensive one to make. The tail feathers from the cockbird are absolutely necessary; also the breast feathers from the weathercock. See that is freshly gilded, or your trouble will be in vain.

ANOTHER way: Pick up one; drop two; pearl four; chloride of sodium, two grains; paraffin, three; castor oil *ad lib.*; worsted, silk, cotton; horse hair—in fact, anything you can get, if properly managed, will make a good fly. When you have finished throw it in the river, or stream, or lake, to see if it will swim or sink. This will enable you to form an opinion as to whether it is a floating

fly or otherwise. Should it not come up to your expectations drop it into some salad oil. This will keep it wet for a long time.

Do not be too particular with the wings. Let one hang and the other down. Put one eye in each wing (there is already one eye on the hook), and the fox that the trout get into will be an eye-opener. This is the time to bring the landing net into play. Several samples of my own make of flies have been sent to newspapers and critics, also a copy of my work (now O.P.). Modesty, unadulterated, prevents my quoting further from it. One or two "Opinions of the Press" may be given, and the only copy in existence—that is, if anyone should care to read it—is in the Chamber of Horrors.

"It is hardly probable that any hungry fisherman thirsting for instruction will read this more than once! Perhaps it is as well."—*Winkle Boiler's Journal*.

"*Bradshaw's Guide* is a well thumbed monthly, but we must truthfully admit there is more entertaining reading in it than this—!—!—!—!" * [The asterisk explains.]

* There are words which are given to men to express their thoughts. We have them handy (like Grant's Morella Cherry Brandy—Advt.), but refrain.—*Churchman's Quarterly*.

"The author of this new book has sent me an *edition de looks* (and it looks like it!) for review."

"I thank him for the flies, and tried them on the Southend flat fish. I also find the flies or fly papers an excellent substitute for bait. Unfortunately neither mussels, oysters, nor winkles will take these flies, but I made a very successful catch of an *Epigastrius moreatus*, which I send for identification."—*TRUTHFUL TOMMY*.

"Ought to be in the hands of every duffer at fishing. Hard work made easy, and brain work unnecessary. . . . It is simple as shelling peas. If cut up nicely into proper slices, will be useful as pipe lights."—*Thick Bits*.

"We have seen a few worse books and worse specimens of the fly tier's art—but not many."—*Chelsea Flab-gaster*.

"The matter is so skilfully written, and there is such an air of candour and bashfulness in this unique instruction book, that no counsel (Q.C. or F.G.) would care to risk his reputation in defending it."—*Lairful Times*.

"The author of this treatise should not hide his light under a barrel. . . . It a treat is. With recalcitrant rigidity he clumsily treads down the trammels of technicality and soars into ethereal effluence, a certain satisfaction gilding the circumambient atmosphere. . . . We frankly confess that we do not understand one word of it—and certainly do not wish to."—*Terrouth*.

"Fearfully and wonderfully made—especially the former. Children will not look at it."—*Lancers*.

"There is not a living authority (with the exception of the author) who could have written the book. Certainly none but a master hand could have formed or transformed such a beautiful fly into such a bundle of old clothes!"—*Haberdasher*.

"Entomologists beware! You will all have to begin *de novo* if you read this. Well, our advice is—Don't!"—*Puncture*.

"Worthy of a niche in the vabhalla of people of genius—the flies a case in the Chamber of Horrors. Not one of us could possibly have done it—not if we died for it!"—*Oratorator Slipcamorial Society*.

"Not only a terror to fish of every known or unknown species, but a certain preventive to soiling fly papers. One of these celebrated 'scarers' may be stuck in the centre of a freshly-treaded paper, and not a living fly will come within miles of it. . . . One quire of 'stickers' will last a lifetime."—*Fly Paper Chronicle*.

The end of evolution's this:

One thing's no better than another;

We all came from the chrysalis—

That is to say, a common mother!

The idea! To speak of the new and condensed list of flies in this way is not worthy of—*Scraps*.

THE author of the "Seven Day Flies" has sent us a copy of his work—also two flies. His instructions as to how to throw them are a bit involved. . . . Instead of "throwing" them, we should advise him to "chuck" it. —*ED. F. G.*

"REMEMBER you are on your oath," remarked a judge, who is as celebrated for his skill on the golf links as for his legal abilities, to a witness who was contradicting himself. "By the way," he continued, "do you understand the nature of an oath?" "In course I do, me ind, I ain't li' your ludship's caddie for close on two years without learning that much!"

"I HAVE a scheme to improve your play," said the indigent idiot to the manager. "In that fisher-girl scene use gilt tackle and luminous bait." "What for?" "It would make the lines bright and catchy."

"CAN you oblige me with some bait?" "Could you lend me a few hooks?" These questions were addressed to a veteran angler who was fishing at the pier. "They seem to take me for the loan fisherman," remarked the angler to his friend. *DRAUGHT*.

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d.. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper
that can be read and enjoyed by the senior and the younger members of
the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised
in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to
friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from
The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

PISCATORIAL SOCIETY.

JUDGING from the reports received from members who related their angling experiences at Monday's meeting, Mr. R. C. Blundell presiding, trout fishing had been in a very bad way during the previous week. Several gentlemen had visited the Kennet, but the results had been exceedingly poor, there having been an absolute dearth of fly, and very few fish moving. The chairman, however, had had on a good fish of over 3lb., which performed some extraordinary antics for a trout. On being hooked it immediately bolted into the bank in the same manner as a chub will often try to do, and endeavoured, apparently, to get its head into a rat's hole. By careful handling the fish was extricated from its unusual position, but, unfortunately, owing doubtless to the gut having been frayed in the "horing" operations aforesaid, the three-pounder broke away, and left the angler lamenting. On the Lambourn sport had been fair. Messrs. R. C. Blundell, R. Bradford, and C. H. Bywaters having creel'd plenty of fish, although none were of exceptional size. From Uxbridge only one trout was reported as having been caught, but some very large fish had been seen and their whereabouts carefully noted. The Alder was up slightly on Saturday, and for days past there had been a good sprinkling of Pale Olive Duns in evidence. The trout, however, were not in a rising mood. Dr. C. S. Patterson, on private water, got a brace of nice fish with the Alder, but no other takes were chronicled. A party of members have left for Ireland for the May Fly fishing on Lough Derg, and it is hoped that they may meet with good sport. Members who wish to have a key of the gate by the High Bridge, on the Uxbridge water, can procure one on application to the keeper at the cottage for a small payment. The 22nd inst., being Whit Monday, there will be no meeting.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Holborn Restaurant on Wednesday, May 17, at 8 p.m., Mr. R. C. Preston Gardner in the chair. Mr. Lane reported poor sport off the pier at Deal. The chairman showed a sea-fishing winch, made for him by Mr. David Slater, of Newark; also a spliced wire line for great depths. Mr. Lane announced that he had been over Hanger's new house at Deal, and found it very comfortable. He stated that he himself had stayed at the New Inn, and found the accommodation good, and moderate as to price. Some interesting extracts were read from various papers regarding the controversy on steam trawling and the depletion of Icelandic line-fishing grounds; and the feeling seemed to be that no steam trawler should be allowed to fish within the three-mile limit in any waters. The members present were strongly in favour of the Bill now before the House of Lords regarding the imposing of penalties on trawl owners for infringement of the regulations as regards territorial waters. Mr. Bates showed a very handy lead buckle, which allowed of the buckle being removed in a minute and placed anywhere on the line. The chairman referred to the photograph at the dinner, and thought that if the photography was correct, the evening must have been very convivial.

CHARLES S. PATTERSON (Hon. Sec.).

GRESHAM ANGLING SOCIETY.

At an ordinary meeting, Mr. F. R. Ohlson in the chair, three new members were elected. One new nomination was received, and will come on for election this day fortnight. Fishing reports: Mr. Buckingham, trout of 2lb 9oz., from private water; Mr. Fowning, two and a half brace of trout, all returned but one of 13½ inches; Mr. Chastaney, two brace, one brace retained of 14½ inches and 15½ inches., killing flies, Alder and Red Quill; Mr. Bridgman, two brace, one brace returned, fly, the Brouley; Mr. Goodwin, two and a half brace, all returned, flies, Alder and March Brown; Mr. Connellan, dace, trout, and swallow with fly, all returned; Mr. Eldred, two and a half brace of trout, Chesham, all returned. The trout mentioned above were taken from the society's water at Chesham. Mr. Gibson, trout and dace from Hertford, returned. A very interesting and instructive paper was then read before the members by Mr. E. F. Goodwin, entitled "Roach Fishing." He described where the fish are mostly to be found, and their habits, described the spawning process, the various kinds of rods and tackle in use, and the best to use. He advocated the use of a 16ft. rod, and exhibited one made by one of the members, and named after another member, and said to be the rod *par excellence* for Kelvedon. He described the various ways to fish, and the way to select the swim, the way to bait the hook, in fact, every possible hint that could possibly be of use to the roach fisherman. At the conclusion, and after some discussion on the paper, a most cordial vote of thanks to Mr. Goodwin was passed for his labours and the pleasure he had given the members. The usual vote of thanks to the chair, and usual toasts concluded the proceedings. ALEX. WRIGHT (Hon. Sec.).

CAMBRIDGE AND ELY ANGLING SOCIETY.

THE annual general meeting of the members of this society was held at 12, Market Hill, recently. Dr. Cooper presided, and among those present were Messrs. W. W. Gray, C. S. Roe, G. Stoe, G. F. Knowles, C. Hoppett, Fawcett, Hayward, Robinson, Lee, Beales, Stearn, Salmon, Percy W. Gray (hon. sec. and treasurer), and others. The committee, in their 21st annual report, stated that they had the satisfaction to announce that the accounts showed that after discharging all liabilities there was a balance of £7 2s. 5d. The past season had been a disappointing one. At its commencement the sport was good, but owing to the long continued drought and the

intense heat, the autumn fishing gave very poor results. Of course there had been exceptions, and some excellent catches had been recorded, yet upon the whole the season had been noted more for its disappointments than for its successes. But the society had only experienced the same ill-luck as attended similar clubs in all parts. The committee hoped that the coming season would prove more favourable. The committee had made arrangements during the coming season to publish periodical reports of the condition of the water, with such other information as would prove useful to the members as to the chances of obtaining sport. To the Great Eastern Railway Company the thanks of the society were due for the continuation of special privileges for anglers. It was a matter for congratulation that notwithstanding the unfavourable aspect of the past season, the membership had not decreased. The committee recommended that the rule as to subscription of residents in Littleport be altered. The report and accounts were adopted. It was also resolved to raise the subscription of Littleport members from 2s. 6d. to 5s. per annum. Dr. Cooper was re-appointed president. In returning thanks, Dr. Cooper referred to the report that other angling societies were prepared to give more for their fishing than their own society. He had made it his business to approach the South Level Commissioners, and be found that their desire was that the fishing should remain in the hands of the present society as long as possible. The commissioners were desirous of preventing the incoming of a body of strangers, as had occurred in some parts of the Isle of Ely, to the great inconvenience of the anglers in that part of the country. The committee were re-elected with the substitution of the names of Mr. Champion and Mr. Ling for those of Mr. Perkins and Mr. Moyes. Mr. Percy W. Gray was unanimously re-appointed secretary and treasurer, and Messrs. C. Hoppett and Salmon were elected auditors. The meeting closed with the usual vote of thanks.

Notes from the North.

GRILSE are now making their appearance in satisfactory numbers. The weights are also heavy for pioneers, being nearly 3lb. of an average. Two were got in the Deveron district last week, being ten days or so earlier than last year.

The protracted easterly winds have surely come to dead stop at last. On Sunday a genial change was perceptible, and after a night's rain the pent up vegetation seemed to burst out all of a sudden. It was like riding through quite a different country from what was the case only a week before. The season is fully a month behind, both for the angler and agriculturist.

The most popular trout fly in the north just now is the fancy known locally as "Dr. Fowler," after its inventor, who made some grand baskets with it on the Ythan. The "Red Brick" would have been a more descriptive appellation, as it is all of that colour, both hackle and wing. Mr. Milne, Trinity-street, Aberdeen, has had his bands full to meet the constant demands for this pattern alone.

They are getting five, six, and seven fish per rod per day just now on the Ballater Dee section. This is something like sport, and gives a fresh impetus to the art. Hitherto, he has been indeed a lucky angler who has been fortunate enough to get two fish a day, even on these now prolific parts.

The Glentana Dee waters are also yielding very good results, and probably the most popular angler, with the fish at least, if not otherwise, is Mr. Barclay, who has had four, five, and six fish daily, for some time back. Mr. Sandeman is now doing some salmon fishing up there.

Most of the best angling sections of the Don are let either to single rods or by ticket, and very good brown trout angling is being got. We sampled the Pitmaden water on Saturday, and had an excellent basket, heaviest 2½lb., all to "Dr. Fowler."

A sad accident occurred to an angler at the rocks south of Stonehaven on Saturday last. George Forrest, secretary to the Stonehaven Rock Anglers' Association, and a companion went to a point known locally as Teelong, at a creek called the "Cappie," a famous fishing spot in the neighbourhood. Forrest elected to fish from rather a dangerous position, and was helped out of it by his companion, Middleton. It is surmised that he had returned to it again after the tide had turned, as he was last seen there at six o'clock, and shortly after a cry was heard from that quarter, as of a drowning man; but when assistance reached the place nothing could be seen of Forrest but his clip lying on the rocks.

Mr. and Mrs. McGregor, who are leaving the Invercauld Arms Hotel, Ballater, were the recipients of handsome presents on Saturday from the nobility, gentry, visitors, and residents in the charming village and district of Deeside generally. The McGregors have long catered both at Braemar and Ballater to a wide circle of all classes, from the prince to the peasant. They long rented the famous Ballater and Invercauld fishings, and in this way no more popular hosts than the McGregors, *pere et fils*, were to be found in the north. There was a right royal demonstration on Saturday when Sir John Clark, Bart., Deputy Lieutenant of the county presided and made the presentations.

Mr. Andrew Carnegie, the American millionaire, has just commissioned a Paisley firm to construct a specially designed yacht for service in connection with his recently acquired estate of Skibo in Sutherlandshire.

A woman named Brown was fined £1 or seven days for inciting boys to collect lapwings' eggs, for which she paid them a penny apiece. It came out at the trial in the Aberdeen Sheriff Court that her husband was a regular dealer, and had this year alone dispatched upwards of two tons of lapwings' eggs to London. All Aberdeenshire and adjoining counties must have been pretty well scoured to secure them.

Mr. Shepherd, Lemon-tree Bar, Aberdeen, on Tuesday last creel'd a salmon of 14lb. and a fine basket of trout on the Ellon Ythan water. He had a salmon of 9lb. the previous week, and 11lb. trout. Daily tickets cost only one shilling.

Mr. Hugh McDonald and other trout experts believe in the single iron for small flies when the river runs small and clear. We hold similar views, but give us the double iron when there are any big game about. We like to have the confidence of a double grip.

We pin our faith to casts such as Carswell, Glasgow, can produce; the tear and wear in them is truly marvellous when compared with some of the stuff we have had to contend with some years back.

There is no "May Fly Season" in Scotland, but the first rise of the March Brown after an April or May shower may be likened to a good substitute. At such a time a pool on some of the mid reaches of the Don is a sight worth seeing—with rising, leaping, tumbling fish—and once seen will never be forgotten.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A communication has been forwarded to me from a member of one of our angling societies which is to the effect that he would like to see a series of contests arranged, in which a selected number of members from each club should compete for a silver cup, the contest to be fished after the same manner in which the English football cup is played for, that is, that the clubs should be drawn together, the first contest to be called the first round, the next the second, and so on, until there were only two clubs left to fish, the winner to hold the cup for twelve months. A contest of this kind would, no doubt, bring about a lot of friendly rivalry and enthusiasm, and, as the writer points out to me, it would show which club had the most skillful team of anglers each year. I have no doubt that if a cup could be obtained, the clubs would go in for it with a will. Mr. G. Stanley, of exhibition fame, has promised us one, and when we get it the representatives of the clubs at our general meeting may decide to adopt the scheme as suggested, and contest for it in the manner indicated. Last week I mentioned in my notes that two more new clubs were in the course of formation. Another one has just applied, making three in a fortnight. One is being formed at the Gnn Inn, Bath Street, another at the King's Arms Hotel, Harborne, and the other at the Men's Early Morning School at Oldbury, outside Birmingham. This club have taken Titford Pool at White Heath for the members, who number about forty. The secretary, Mr. Watts, informs me that the committee intends to get a large number of the men who attend the school, to join, and if they cannot afford it they will be presented with a cheap outfit by several influential gentlemen who are interested in the schools. The Trades Exhibition closed in Birmingham on Saturday evening last, May 13, having been open eight weeks; the exhibition was a great success, so much so, that the manager, Mr. G. Stanley, presented a cheque of two hundred guineas to the Queen's Hospital. Every member of our association paid a visit, and upwards of £200 worth of tickets were sold to our members and friends. We shall have another show of fish next year, when Mr. Stanley visits us again. The prize money will be larger, and, as a consequence, the cases of fish will be more numerous. The East End Society have acquired a nice stretch of the river Alne, near to Aston Cantlow. The water contains a fair quantity of all kinds of fish with the exception of pike. Some very fine dace have been had from this water previous to the close season coming in, and of late some very good trout have been taken, both with the fly and worm. A large number of our members will be out during the holidays. The majority of them will be on the Severn, Teme, and other local streams where there are trout to be found. Some will visit the local canals just merely for the outing, not for the chief purpose of fishing, as some of the pimperns like to visit their old haunts during the close time. I am pleased to say no fishing will be allowed on the popular parts of the Avon during the holidays, the Evesham, Pershore, Defford, and Eckington landowners being very much against fishing during the close time, and until such time that the hay crop is got in. Under the circumstances, I would advise anyone not to go to the places mentioned for some time to come.

FROM DERBYSHIRE.

There has been a considerable improvement in the angling on Derbyshire streams this week, owing to an agreeable change in the weather. Warm showers have fallen and freshened the waters without materially disturbing them. They are now in excellent condition, and fish are rising in places pretty freely. Anglers are

tolerably numerous on most of the streams, and sport, as a rule, has been satisfactory. On the upper waters of the Wye, by Ashwood Dale (Burton District), Blackwell Mill, Chee Dale, and Miller's Dale, some very fair baskets have been made, and good creels up to seven brace have fallen to fly anglers on the private and open waters of Monsal and Cressbrook Dales, where the fish are very plentiful and of large size. Several nice lots of trout have been killed on the Ashford lengths, and also on the Holme reaches between Holme and Bakewell. About an average number of rods have been out on the Bakewell and Rowsley waters, and artificial fly anglers there have, as a rule, done well, some excellent baskets having been made by several of them. On the upper waters of the Derwent sport has been much better than of late. Several good creels have been made on the Ashopton and Yorkshire Bridge lengths; and also on those of Bamford and Sickleholme, by fly and bottom fishing and trolling. There has been a considerable number of anglers on the Derwent valley reaches, between Hathersage, Grindleford, and Stoke, where the sport has been of a satisfactory character, several good creels of nice sized fish having been made there, chiefly by visitors from the neighbourhoods of Manchester and Sheffield. Both the open and the private lengths of the river in the Calver district have been well patronised, and several capital lots of fish have been killed by fly anglers. There has been, during the week, an increased number of visitors to the Chatsworth and Baslow waters, many of them from London and other distant places; and sport has generally been found satisfactory. Some really good baskets have been made there, principally on the Park lengths, by fly anglers; and some nice lots of fish have been killed on the lower adjoining reaches of Calton and Beely. Several large trout up to 4½ lb. have been killed on the Derwent within the last few days, chiefly at Matlock Bath and the Bridge. Fly and bottom fishers have done well on the Holmesford and Watstonwell lengths, and several very fair baskets have been made there. Angling has been satisfactory on most of the lengths of the Dove. On the Dovedale waters fly anglers have, as a rule, met with good sport, and some excellent creels have been made there, and also on the Alsop-le-Dale and Mill Dale reaches. The Baresford and Hartington lengths have furnished some nice lots of fish, and sport has been pretty good there. In bottom fishing ant eggs, gentles, worms, and dock grubs have proved successful; and killing flies have been the Dotterel, Claret Bumble, Cooper's Fancy, Cock-wing, and Yellow and Ash Duns. Angling prospects are good.

FROM HULL AND DISTRICT.

We have had an entire change of the weather in this district during the past week, and in place of the cold north-easterly winds, south-westerly breezes and copious showers of rain have intervened, causing the waters to be nicely coloured, which will bring the fish well on the feed again. The top stretches of the river Hull, and the becks and streams in the neighbourhood of Driffield, Frodingham, and Hempholme are now all more or less in grand condition for trout fishing, either with fly or minnow; and in the tidal waters below Hempholme, and at the becks, shoals of fish are scouring themselves, evidently after spawning, so that there is every prospect of a good season amongst coarse fish when it opens. A few decent sized trout have been taken by those who have ventured up stream, and odd fish have also been taken with worm in the lower portion of the river, but owing to the unsettled state of the weather no quantity of anglers have been out, but there is prospect of some good fish being taken in the upper waters when the wet weather subsides. A letter has been received by the Hull Amalgamated Anglers' Association from the Leeds Amalgamated Anglers asking their co-operation relative to the expenses of the Yorkshire Fishery Board in prosecuting offenders under the Fishery Act, i.e., for the sale of coarse fish during the close season; but in the absence of fuller information relative thereto nothing was done at the May council meeting. A committee was formed to carry out the Amalgamation's charity match, which will take place on the river Ancholme on July 1. Another big local event took place on Saturday afternoon last on the river Hull, at Dunsell, in very inclement weather, resulting in the takes being very small. It was Blundell Spence and Co.'s Angling Society's annual open match, but the number of anglers was not near so large as had been anticipated, no doubt owing to the unfavourable weather. Mr. A. Waites was the fortunate winner of the first prize with 9½ oz.; Messrs. S. Dean, J. W. Petty, S. Conyers, E. Robertson, and D. Friend taking the next five with about 4½ lb. of fish each, whilst the 20th prize was taken with 3½ oz. The Kingston Rovers A.S. fished their first match this season on the river on Minto Flatts, Mr. T. Lambert being first prizeman with 1½ lb. 1½ oz., Messrs. D. Jordan and C. Wilson taking the next two. The East Hull Brass Band A.S. fished their second match of the season at Wawneferry, but had only very moderate sport, Messrs. W. Gale and T. Nicholson taking the first two prizes with only about 4½ lb. of fish each. On Monday the Hearts of Oak A.S., of Driffield, fished their second match on the river on Minto Flatts; so likewise do the Derringham A.S., of Hull; and the Stoneferry Star A.S. will fish theirs at Hull Bridge on the same day; whilst the Hull

Excelsiors will journey to Broomfleet, and fish a match on the Market Weighton Canal. Another addition has been made to our long list of local angling societies, called the City Angling Association, whose headquarters is at the Talbot Hotel, in Scale Lane. The West Hull A.S. have just held their first meeting and elected officers for the season of 1899, Mr. T. Chester being voted to the presidential chair.

FROM THE LAKE DISTRICT.

Although the Cumberland County Council has refused to remove the protection accorded to certain species of seagulls, the West Cumberland Fishery Board seem disinclined to let the matter drop. Notwithstanding that some members of the board have described their own action as childish and absurd, the question is to be placed on the agenda for next meeting, when Mr. Grice hopes to be able to prove that the gulls do destroy fish. Following heavy rains towards the end of last week, angling improved in some parts of the district. On the Keswick waters good fish and good fishing has been the rule—with exceptions, of course—for some time, many trout of 2 lb. or 3 lb. and over having been secured, especially from the lake, while the river also affords sport. Since the rain, on Thursday, Mr. T. Hodgson has had nearly thirty fish; Mr. Sparke and friend, nine trout and two or three pike, from the lake; Mr. A. Wilkinson, a 14 lb. pike, and several trout running from 1½ lb. to 2 lb. each; Mr. Denwood, Mr. Lowther, and others being also successful. Lower down the river sport was poor. The best fish we have heard of in the district fell to the rod of Mr. A. H. Gregson, of Kirkby Stephen, who captured a trout of over 3 lb. whilst angling near Mallerstang. The Petteril and Eden have yielded baskets of from thirty to forty trout downwards to the rods of Messrs. Wappett, Howe, Thornton, &c. Owing to the high state of the rivers, the worm has proved the most killing lure. At the time of writing the weather is not very promising, and some anxiety is being expressed regarding the holidays.

FROM LANCASHIRE.

Our Warrington friends are irrepresible; they will not keep quiet. No sooner do they get rid of one item than they are full swing into another. At their last meeting they decided to go in for 500 two-year *farrios* to stock the river Bollin a little more, and 2000 roach for the old Quay Canal. The latter water has been carefully nursed for some time, and when opened will be sure to provide good sport for their members, who will be limited to one rod each. The Ribble has been in condition for the fly, and there is reported a better rise of fish in the Clithero district and the higher reaches. Sport of better character has been obtained. The best flies have been March Brown, Cowdung, and Snipe Bloa, all having killed well. The Wyre with better weather is also improved. Trout are showing better, and there is a good rise from 5 to 6 p.m. More rods have been out and better baskets made, the tributaries fishing well. The most successful flies have been March Brown, Dark Snipe and Purple, and Light Woodcock. The Lune and tributaries are reported as having fished much better. One good basket of thirteen brace is reported from Jedbergh, and another from Middleton, and one of seventeen and a half from the Wenning. Good killing flies are given as Coch-y-Bondhu, Hawthorn, and Yellow Dun. The Lne Fishery Board are doing everything in their power to improve the fishing in all the streams they control. It is gratifying to learn that the anglers of St. Helen's do not mourn the loss of any of their numbers by the recent terrible explosion, but they have lost friends and property. Next Monday they fish a match from 6 a.m. until 12 noon for trout only. Local circumstances compel these hours for the event. During Whitsuntide all the fishermen in Liverpool will be busy, but any details cannot be dealt with in these notes. Suffice it to say all the principal societies are negotiating contests.

FROM LINCOLNSHIRE.

Trout fishing has considerably improved during the last few days. The weather is warmer, and there is an increased number of flies on the water. Under these conditions trout are showing infinitely better sport, and those who have operated with the fly have obtained a number of nice fish, especially in the evenings, when they have risen more freely than at any other time of the day. Bottom fishermen continue to do extremely well with the maggot, which has proved a very killing bait during the last week or ten days. The streams are now in the pink of condition, and if the warm weather continues, a spell of successful fishing should be had.

FROM MANCHESTER.

The Whitsuntide holidays will interfere with the ordinary meetings of several clubs in this city, the Moss Side Socials in consequence do not meet again until June 5, and the Buckland until June 7, the latter society have arranged a match for June 17 and June 21, in their own waters in Derbyshire. A party of our citizen anglers, out at Coombs' reservoir on May 15, report good sport but the fish rather small. At the board meeting of the Worsley Canal Fishery, held on May 12, a deputation representing a large number of canal fishermen attended; and asked that this fishery be opened like the other canals in the district. Considerable discussion followed, but in the end the board decided to grant the request, and open on May 20. Our locals can now go in for the coarse fish to their hearts' content. The Urmston anglers open the season on June 17, with a match for Capt. Stott's silver challenge cup and prizes. The County Palatine Angling Association at the last delegate meeting, on the 11th, had a good attendance, no less than thirty-seven clubs being represented. After disposing of routine business, the question of establishing a central headquarters was dealt with, and after some little discussion it was decided to accept the offer of Mr.

Prax, Silver Grid, 100A, Market-street, Manchester. It was also decided to have a contest in the Peak Forest Canal on Aug. 26; prizes, £15 in cash and medals, and an additional medal for specimen, given by the president. The delegates received with satisfaction the announcement of the acquisition of the Poynter Canal. Both their canals open to-day, but the Irlam waters remain closed until June 17. The next meeting is on July 13, and in the meantime all rules, &c., will be printed and sent to the various clubs affiliated with the C.P.A.A. The Halme Crown Angling Society have selected Althorpe for their first match on July 2. The Globe Angling Society, Salford, at their last meeting elected officers, &c., for the coming year. The new executive is practically the same as the old one.

FROM NOTTINGHAM.

The Trent has undergone a substantial change, and there is absolutely nothing doing. The waters have been too high for successful salmon fishing, and so far no follower of the sport has taken a fish. Prospects at the period of writing were the reverse of favourable. Privileged visitors caught a few choice trout on portions of the Dover Beck in the closing days of last week. Wild, stormy weather has militated very considerably against the chances of the "surface whippers," and warmer conditions must prevail ere much good will accrue.

FROM SHEFFIELD.

The conditions for angling in the Sheffield district still remain of a somewhat unsettled character, days of warm, genial sunshine alternating with days of miserably cold, wretched rain. Under these circumstances it is only natural that the number of anglers who go forth should be somewhat limited, but the fishermen who are fortunate enough in choosing the fine days have generally succeeded in obtaining some good sport. The season for the waters at Hollow Meadows and Redmires is now in full swing, and, as the tickets are limited to a reasonable number, fishermen can usually reckon on getting a fair day's fishing if the conditions are anything like favourable. A good deal of sport has lately been forthcoming in these waters, but unfortunately some of the fish have not been in as forward a condition as could be desired, resulting in a number of them having to be returned. Visitors to the Loxley Valley generally anticipate some gratifying sport, and so far this season their expectations have not been disappointed. The Damflask Reservoir, which always contains some big fish, already shows evidence of maintaining its reputation, but warmer weather is required before the fish will arrive at that well-favoured condition which is the delight of all true anglers. Up to the present a few big fish have been landed, but all show need of further development. Visitors to the Idle and Ryton have not been very numerous so far, but without a doubt anglers will soon be having a try at the former river, which is a favourite trout stream, whilst the latter stream is said to contain a lot of nice fish. In the river Amber, at Wingfield, a fair amount of sport is reported, a few good specimens having fallen victims to dock grubs. In the Derwent the reaches near Bamford have come in for considerable attention, maggots having been the most successful bait, and some of the catches have amounted to four and five brace per rod. The higher reaches of the Derwent have been moderately well patronised, though up to the present no particular good catches have been made. There is some talk of steps being taken to re-stock the river Sheaf. I hope the project will be carried out, as it will be a pity if this once popular trout stream should suffer by reason of a little neglect. Prospects for Whitsuntide are encouraging, but will depend very much upon the weather, which no one, however, can guarantee or prophesy about with any degree of certainty.

FROM WORCESTER AND DISTRICT.

There has not been much angling done during the past seven days by club members in this district, although the weather has been favourable. We have had some heavy rain and tempest, but not enough to affect the streams appreciably, for they continue in excellent condition for bottom or fly fishing, but the high wind has been much against the latter. The Severn has been but little fished by club anglers. Some few have been trying the artificial minnow under the weirs and other likely places for trout, but without success. The take of spawning fish by unattached anglers, I am sorry to say, has been very large indeed. The Teme has been more patronised, but sport anything but good. One angler was fortunate enough to take three brace of nice trout on Monday last with Blue Dun and a Yellow Dun, and some others had a brace or so, but rises came very slowly. On private water sport has not been good this week. I heard of one of the Malvern anglers taking one fine trout of over 2 lb. on their club water, this the best fish of the week. The Upton-on-Severn Angling Society held their annual meeting at the Star Hotel on Friday evening last. In the unavoidable absence of the president, Dr. Mountford, the chair was taken by Mr. Ludford Docker, C.O. There were a large number of members present. The chairman addressed the meeting briefly, and called on the secretary, Mr. C. Evans, for his report and balance-sheet, which showed they had had twelve competitions, and had a balance in hand towards another season. Mr. R. Wingfield said he had audited the accounts, and they were quite correct. The officers for the coming year were: Dr. Mountford, president; Sir E. Lehmere, captain; G. W. Grice Hutchinson, M.P., Rev. A. Beal, and L. Docker, Esq., C.O., vice-presidents; C. Evans, hon. sec.; and a good working committee. The rules were revised, and the headquarters of the club was removed to the Bell Inn, New Street. Vote of thanks to the chairman closed the meeting. A meeting of the committee of the Worcester and District Angling Association was held on Saturday

WHAT MONEY CAN DO.—Money can do a great deal, but it cannot do everything. It cannot stop the passing of time, it cannot make us young again, it cannot renew with health the enfeebled frame. In the face of the demon ill-health, rich and poor are on an equality. Rich and poor have to seek the same remedies, and wise indeed are they if, in their sorrow and suffering, they turn to Holloway's Pills and Ointment. These are within the reach of the poor as well as of the rich, and it is no idle testimony, but the natural result of long experience, which has declared Holloway to be the poor man's friend.

TRADE MARK (Regd.).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-, 28/-, 34/-.

11ft., " 28/-, 30/-, 36/-.

12ft., " 30/-, 32/-, 38/-.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

The diagram shows the hand reversing
the drum.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Alumi-
nium. The greatest boon to anglers yet invented
for Salmon, Mahseer, and Trout, and all kinds
of coarse fishing; unsurpassed for long distance
casting; simple, and easy to learn. Rods and
lines specially suited for these reels

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is
easily operated by the hand, whereby the check
can be regulated at will by simply turning the
milled disc on spindle. This should prove a
great advantage to anglers, as the check can be
regulated without having to take the reel to
pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies
of all sizes. Handy and compact, each fly
secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Cocus Wood. Made in 18 different sizes.

ILLUSTRATED PRICE LIST FREE.

evening last, at the Plough Inn, Silver-street, and was very largely attended, nearly every delegate being present. The president, Mr. L. Higgs, occupied the chair. The meeting was called to consider the case of some members who had broken rule 3 by taking coarse fish during the close season. Mr. W. Bridges objected to the meeting as it was a special meeting, and the requisite fourteen days' clear notice had not been given. He also objected to the formation of rule 3, and the power to deal with the matter under the existing rules.

FROM YORK AND DISTRICT.

All was bright and beautiful at the time of penning these notes a week ago, for the north-east wind seemed to have spent its rage, and southern breezes were in the ascendant; but the cold quickly reasserted itself, and chilling rains having fallen in plenitude. Whereas rivers were running low, they are now mostly bankful and discoloured, and trout anglers must wait yet a little while ere they have complete enjoyment of sport. Though at the moment of writing the outlook is more settled than of late, it is unsafe to prophesy even for a day. Warmer weather is wanted by anglers as well as by agriculturists, insect life on the streams being backward. Trout are plentiful on the best rivers, but have not, so far, given experienced anglers anything like a fair chance, lurking in the deep waters and refusing to rise to the most tempting lures. Should warmer weather set in fishing with such casts as the Orange Partridge, Poult Bloa, Knotted Midge, and Light Watchet may be expected to yield satisfactory results. On the night of the 13th inst. a large number of York fishers assembled at the Bay Horse, Mary Gate, to do honour to Capt. Key, J.P., a veteran patron of the gentle art. They held a "smoker," and presented him with an illuminated address in recognition of the kind services he has rendered to anglers generally. They are proud of having at their head so enthusiastic and so true a disciple of Izaak Walton. At a meeting of the York North-Eastern A.A. a letter was read from Col. Meysey-Thompson offering a handsome present to the association for competition at the next match. It was decided to fish the first match at Elvington, by permission of Mr. Carr, on June 17. At Leeds, recently, Mr. Jas. Brown, president of the Leeds Fish, Game, and Poultry Association, and proprietor of the Albion Hotel in that city; Mr. Charles Brown and Mr. Albert Brown, trading as Messrs. Brown and Son, fish and game dealers, were summoned under the Fresh-water Fisheries Act, at the instance of the Yorkshire Fishery Board, for, as was alleged, having exhibited for sale grayling after the beginning of the close season, on March 16, 17, 18, and 20. The summonses against Jas. and Chas. Brown were withdrawn, it being pointed out that they were in favour of protecting the fish, they being partners in the firm of Brown and Son, whilst the other defendant was a paid servant. The Bench considered that the case against Albert Brown was a most flagrant one, because he continued to expose the fish for sale after he had been warned. He was fined 40s. on the first summons, or seven days' in default; and was mulcted in the costs, or three days' imprisonment on each of the other three summonses.

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

ZEBRA TROUT.

DEAR SIR,—In the *Fishing Gazette* of April 22 I notice that G. H. Ward submits a query re great zebra trout. Two years ago we placed in the reservoir at Pen-y-Cae fifty zebra trout, two years old, which the Howietoun Fishery Co. described as a cross between trout and *fontinalis*. These we placed in the above water. Our experience of them was unsatisfactory, as they did not rise well nor fight much when hooked. With these fifty we had fifty two-year-olds of a cross breed—*S. salar* and *S. leuvenensis*. These have turned out remarkably well, rising boldly and struggling to the last. They grew fast, and have given the best sport of the many trout we have stocked this water with. We shall have no more zebbras.

RD. WOOLFALL
(Sec. Liverpool Angling Society).

THE TRENT AS A TROUT RIVER.

SIR,—The executive of the Nottingham Wellington Angling Society have had under consideration the practicability and advisability of stocking some portion of their extensive stretches of the river Trent with two-year-old trout, and I would like to lay before my executive the opinions of your expert readers and trout breeders on this matter.

The upper part of our Shardlow stretch of water is, as far as physical features and conditions are concerned, a natural trout home. Long stretches of bright, clean gravel and sand beds, shallows, rapids, deep pools, innumerable weed beds, well wooded banks (Willow Fly), stonework, and fairly pure water are a few of the commendable points. The preliminary points to settle appear to be the following: (1) The purity of the water. (2) The pike and chub. (3) The straying of the fish. (4) Ways and means.

(1) With respect to the polluted state of the river in

this particular locality, I got our keeper, Mr. Bailey, to procure for me two samples of water—one on April 4, out of rapid water, on its clearing after a rise; and sample two on April 7, out of a sluggish pool at the bottom of a long stretch of gravels. I took them into the laboratory, and asked my scientist to put them through the usual analytical tests, and this is his report:

Sample I., collected April 4, 1899: "I find this water contains suspended matters amounting to 3.4 parts in 100,000, which consists of undecomposed vegetable matters, fine sand, and aluminoid growths; the latter is the most dangerous constituent, yet it is present in such minute quantity, not more than 1 part in 200,000, as not to be injurious, unless the quantity be largely increased. The dissolved solids amount to 50 parts in 100,000, or 35 grains per gallon, and consist of:

	Grains per gallon.	Parts in 100,000.
Calcium carbonate	4.27	6.10
Calcium sulphate	10.37	14.81
Magnesium carbonate	4.92	7.03
Sodium chloride	9.70	13.85
Silica	1.02	1.46
Iron and alumina	0.45	0.64
Nitrates	0.82	1.19
Ammonia	Trace	Trace
Organic matter	3.35	4.80
	35.3	49.88

The removable hardness amounts to 6.5 grains per gallon."

Sample II., collected April 7, 1899: "I find this second sample to differ but slightly from No. I. The suspended matters are alike in amount and nature. The dissolved solids are slightly more, amounting to 52 parts in 100,000, equal to 36.5 grains per gallon, and consisting of

	Grains per gallon.	Parts in 100,000.
Calcium carbonate	4.31	6.14
Calcium sulphate	10.55	15.07
Magnesium carbonate	6.08	8.70
Sodium chloride	10.10	14.42
Silica	0.74	1.05
Iron and alumina	0.50	0.71
Nitrates	0.85	1.21
Ammonia	Trace	Trace
Organic matter	3.41	4.87
	36.54	52.17

"The samples of water contain much less dissolved solids than water taken near the Trent Bridge, whilst the amount of organic matter is about the same. From the amount of sodium chloride in solution, and high percentage of nitrates, together with the absence of nitrites, and small quantity of ammonia, I am led to infer that these waters have contained a much greater amount of organic matter, which has undergone oxidation by passing over long stretches of gravel where the water has no great depth. The amount of iron and silica present tends to confirm this view. I should consider that the lower reaches of such gravel would be highly suitable for the breeding of trout.

"The physical properties of the water are all that could be desired; it is transparent, free from clay, and its sediment rapidly subsides, and I find nothing in the contained gases or dissolved solids that would be detrimental to trout life.

"I append results of analysis from other sources for comparison:

	Above Trent Bridge.	River Dee, near Chester.	Thames (middle).	Don (Scotland).
Calcium carbonate ...	0.32	0.85	10.80	2.23
Calcium sulphate	21.55	0.12	3.00	0.13
Calcium nitrate	Trace	—	0.17	—
Magnesium carbonate	5.66	0.36	1.25	1.07
Sodium chloride	17.63	0.72	1.80	1.26
Silica	0.72	0.14	0.56	0.52
Iron and alumina	0.50	0.16	0.27	0.27
Organic matter	3.68	—	2.36	3.06
Calcium phosphate ...	—	Trace	Trace	—

Grains per gall. 50.06 ... 3.89 ... 20.21 ... 8.54

From this report of the state of the water in the district in question, your readers will be able to form some opinion as to its merits of purity."

(2) Then, as regards the natural enemies of trout, viz., pike and chub, there are any amount of such fish in the water; but would not two-year-old trout be fairly well able to take care of themselves? Dace are a dainty pike dish, and yet dace seem to thrive and increase. And if the members thought it advisable, the pike family could be "picked off" by special attention from time to time. In fact, if trout be introduced successfully into this beautiful Shardlow water, by and bye, nothing will disgust one of our members more than to hook a "loggerhead" of a pike when spinning for a trout, and wish the family not at home.

(3) Will some of your gentle readers kindly advise us as to the kind of trout that would be suitable for the experiment in contemplation? They must be of the "homing" kind, more disposed to work up the river than down, and also of rapid growth, and attain in years goodly proportions.

(4) Any other information which suggests itself as being useful to my society, I shall be thankful to receive, and if this letter meet the eye of any fishery proprietor or proprietors, tenders for the supply of a couple of thousand

ORIENTAL BOOKS formerly issued by W. H. Allen and Co.) now published by Sampson Low, Marston and Co., Limited, 25, Dunstons House, Fetter Lane, London, Publishers to the India Office.—A CATALOGUE of these Text Books, Class Books, Histories, and Indian Government Publications can be had on application

would break the ice in that direction; and, better still, small donations of live fish would be thankfully received and acknowledged by—Yours sincerely,

W. GASKELL,

President of the Nottingham Wellington A.S.

Forest-road, West Nottingham.
P.S.—Our good sportsman, T. Wood, Esq., lessee of the renowned King's Mill Fishery, has promised to act in unison with the Wellington, and put a good head of two-year-olds in his adjoining reach.

(If he can get them, we strongly advise Mr. Gaskell to stock with fish bred from native English trout (*Salmo fario*), the fish which made the reputation of the trout as a game fish, and undoubtedly the naturally most suitable fish for English trout streams. Given plenty of food and water, our common trout will grow to 10lb. or 15lb.; its descendants in New Zealand grow to 20lb. and even 30lb.—Ed.]

THE DARENTH.

DEAR SIR,—In reply to your inquiry as to the May Fly prospects on our little Kentish trout stream, I will tell you the plain, unvarnished truth. Thanks to mill pollutions and pike, the Darenth fishing has gone to the dogs. Nothing short of concerted and sustained energy on the part of riparian owners and tenants of fishing rights will restore this stream to its former place as the most prolific trout river in the South of England. When I tell you that I have myself killed a hundred pike this spring on little more than a mile of the Darenth, you can well understand what chance the trout have against such odds. But we have done our best so far as our Eynsford length of water is concerned, and have put 1000 two-year-olds in after getting the pike out, some of the brutes up to 12lb. And we mean to keep pegging away until we make this the finest piece of trout fishing in the South of England. But it is very uphill work, so long as other people above and below us fail to do anything to rid the stream of the vermin which infest it. Eighty pike were killed from the lake in front of Lullingstone Castle—in addition to the 100 I killed—a few weeks ago; and it is useless to cry "Peace! peace!" when there is no peace, and to talk of good trouting prospects in the face of such ugly facts. The Darenth has been shamefully neglected of late years; and as "soft words butter no parsnips," it is better to tell the truth, in the hope that those responsible will rise to a sense of their responsibilities for this deplorable condition of things. The whole of the Darenth, with the exception of one short length, is now in private hands, extravagant rents being paid for the shortest lengths of fishing. But still the paper mills continue, at intervals, to poison the fish wholesale, and no serious efforts are made to rid the stream of the pike which infest it. No one loves the Darenth more sincerely than yours truly, and no one deprecates the existing condition of things more than I do; but something more than individual effort is necessary if our queen of Kentish trout streams is to be restored to its former fame. Personally, I am doing my best to retrieve its reputation; and, so far as the Eynsford section is concerned, no efforts are being spared, but the same cannot be said of those who own adjoining sections of the stream.—Yours truly, C. W. GEDNEY.

Bromley, Kent.

THE THAMES AS A SALMON RIVER.

DEAR SIR,—May I explain to Mr. Thudichum, who apprehends that my "desires have outweighed my judicial instincts" in this matter, that my connection with and interest in the Thames is as purely Platonic as any sentiment which partakes so largely of admiration can be. I possess no property in England, save a house in London, which I scarcely think will entitle me to share, either as an angler or otherwise, in any benefits which may accompany the possible return of salmon to the Thames. I was invited to join the Thames Salmon Association because it was understood that I had given some attention, extending over a larger number of years than I care to contemplate, to the habits and requirements of salmon in rivers of very different character. Perhaps if Mr. Thudichum were aware of the nature of my small influence I have exerted in the deliberations of the committee, he would acquit me of having been too sanguine, and of having erred on the side of precipitate counsel. The utmost that I have said is that the time seems to be at hand when it would be not imprudent to undertake the experiment.

I do not for one moment question the accuracy of Mr. Thudichum's statistics down to 1897—I am wholly disqualified from doing so—and I recognise fully the formidable obstacle of the zone of maximum impurity. But I do not understand that Mr. Thudichum maintains that this zone persists throughout the year. It seems to depend chiefly on the flow of land water, which sinks to a minimum in August and September. At such times I freely admit that the river is barred, under present conditions, to the ingress of sea fish. But in how many British salmon rivers is there an "open door" at all times? Certainly in nineteen out of twenty of them salmon can only pass beyond tidal influence in times of flood; and it is precisely in those rivers which depend most upon wet weather, as, for example, the little streams of the Lewes, that there is still to be found a heavy stock of salmon and sea trout. In such estuaries the fish just have to wait for a suitable time to make the ascent.

In the Tyne, which is a river of grander proportions than the little streams of the West Highlands and islands, and which present a zone of impurity of far greater intensity than the Thames, although not of equal extent, salmon are often detained by drought for weeks seeking entrance. I have killed them in the autumn with their jackets quite red, yet with the sea lice still upon them, ten miles above Hexham, showing that they had been kept in the sea long after they desired the fresh water. There is another feature in the Tyne which bears on the subject of

pollution. It may have been modified of late years, but when I used to fish that river it existed in full force. The main stream is formed by the junction at Hexham of the North and South Tyne, both appearing equally attractive angling waters. But the South Tyne twenty years ago, whatever it may be now, was devoid of fish altogether, being thoroughly poisoned by waste from lead mines. The South Tyne bears a far larger proportion to the main river than the outfalls at Barking and Crossness do to the estuary of the Thames at these points; but it does not interfere with salmon entering the North Tyne in large numbers. In 1872 I killed, with fly, in that river forty-six salmon in five consecutive days.

I incline to the opinion that at the present time the Thames is accessible for salmon, except at such times when the land flow is so weak as to be overpowered by the tides, and the column of impure and de-oxygenised water forms a block in the channel.

Greatly as I respect Mr. Thudichum as an expert in analysis, I venture to differ from the conclusions he draws from the presence of the smelt. "The smelt," he says, "is distinctly a foul feeder, and, according to John Bickerdyke, should, as a rule, be looked for in the immediate neighbourhood of a sewage outfall." Now, I submit that the smelt is a foul feeder just as much as, and no more, than the common river trout. In Scotland the smelt, or spurling as we call it, abounds in many estuaries where there is no pollution or sewage at all. Trout also are usually associated with pure waters, but in unregenerate days, when sewers were allowed to pour their treasures into the Thames, the mouth of one of these was a sure place to look for a big trout. Does Mr. Thudichum know the outfall at Romsey, on the Test? In the pool immediately below this very large trout, nourished by their unhallowed diet, are taken each year by minnow or prawn. I have seen one of these which weighed 1½ lb., and I have one in a case before me as I write which weighed 8 lb. Is the common trout therefore to be designated as "distinctly a foul feeder?" Rather, like the smelt, he is a general feeder, but neither species is fastidious, and both will repair to those places where food is most plentiful.

The fact is, that both smelts and smolts are organised so as to pass through, or even to sojourn in, water which appears to us impure because it is turbid, as water must always be in a muddy or sandy estuary. Mr. Thudichum must not suppose that I underrate the importance of a due proportion of oxygen in the water. All that I maintain is that there is not a shred of evidence to prove that smelts can endure more imperfectly aerated water than salmon smolts.

HERBERT MAXWELL.

COOPER'S FANCY.

DEAR SIR,—A letter from Mr. Henry Cooper in last Saturday's *Fishing Gazette* concludes with so personal a reference that it calls for a line from me by way of clearing myself of an implied deficiency of courtesy.

The implication is somewhat singular, but in order to dispell it I may put forward three pleas: 1. That when reference has been made to the good little fly (Cooper's Fancy) in the presence of various angling friends, I have frequently explained that it owes its origin to Mr. Hy. Cooper, of Matlock Bath. 2. That as I have not hitherto had the pleasure of a personal communication with Mr. Cooper, there has been no opportunity of displaying my "courtesy" and also my appreciation of the fly and its inventor in the direct manner Mr. Cooper's letter leads me to suppose is his desire. And, last, but not least, that in a previous letter to you, Mr. Editor, you will remember I referred to the fly as bearing the "name of its inventor, a Derbyshire angler, who is not unknown in the annals of angling," or words to that effect.

Trusting the above will smooth the ripple in Mr. Cooper's mind, and subscribing to the principle that *Honos alit artes*.—I remain, faithfully yours,

Hanley, Staff.

F. W. DALE.

COOPER'S FANCY.

DEAR SIR,—I enclose you a dozen of my particular fancy to try. It is not a beauty, but the fish come to it. There seems to be a lot of interest taken in it.—Yours faithfully,

Parade House, Matlock Bath.

H. COOPER.

[We are much obliged to Mr. Cooper, and will introduce his fancy to some very particular south country trout presently. Mr. Cooper is secretary of the Matlock Angling Association, which has many miles of water, and lets day tickets to visitors for fly fishing.—Ed.]

LARGE BREAM.

SIR,—With respect to the weight of the largest bream on record, J. H. Keene, in his "Practical Fisherman," says (page 96): "Blakey asserts that it has been known to attain the enormous weight of 20 lb. in the north of Europe; and Bailey, in his 'Angler's Instructor,' mentions one of 17 lb., taken from the Trent. It may attain the enormous weight of 20 lb. in the north of Europe, but in referring to Bailey's book it says: 'I have known a keeper on the Trent to catch no less than 18 cwt. (2016 lb.) at one draw of the net; two of the lot weighed 16 lb.'" I opine Keene must have written by guess work. In Couch's History of British Fishes, vol. iv., p. 38, it says: "Rondeletius professes to have seen a specimen which measured two cubits in length, 12 in. in depth, and weight (how much do you think?) 14 lb. The cubit is equal to 18 in. English measure; so, this bream that was one yard in length and 1 ft. in depth weighed 14 lb. So much for Rondeletius."—I am, &c.,

MARK.

FISHING IN CO. LEITRIM, IRELAND.

DEAR SIR,—In reply to "Young Angler," in last issue, might I suggest that the combination he requires—professional fisherman and boat proprietor, lives within one

mile of Kinelough. With regard to reliability, if required I can send him the addresses of sterling English gentlemen who will satisfy him with a recommendation of me. If he communicates with me I shall send him all information required.—Yours truly,

Rossfriar, Kinelough, co. Leitrim.

P. GALLAGHER.

FISHING IN CO. LEITRIM, IRELAND.

DEAR SIR,—In reply to the inquiries of "Young Angler," in your issue of 13th inst., permit us to recommend Garrison as the most suitable place "Young Angler" and his friends could stop at while fishing Lough Melvin, for the following reasons: First, the village of Garrison is within a gunshot or so of the lake shore. Second, Mr. A. Scott, the proprietor of the Angler's Hotel there, supplies good boats and experienced men at a very moderate charge, and for comfort and attendance "Young Angler" will find Mr. Scott's hotel at Garrison everything he can desire. Third, the Garrison end of Lough Melvin is much the best fishing part of the lake, either for salmon, grilse, or gillaroo trout and brown trout. Any further information required we shall be pleased to supply. The following is the hotel proprietor's address at Garrison: Mr. A. Scott, The Hotel, Garrison, Co. Fermanagh, Ireland.—Yours, &c.,

M. ROGAN AND SONS,
Fishing Tackle Makers, Ballyshannon.

RAINBOW TROUT.

DEAR SIR,—The interesting article by "A. H.," in your last issue, entitled "In the Tasmanian Bush," should be particularly noticed by anyone interested in rainbow trout. He says on p. 325: "Now, the rainbow trout in Tasmania are very exclusive, and evidently do not care to associate with their less gaudy coloured kinsmen, the brown trout, for after being turned out of the New Norfolk Fisheries, where they were hatched and brought up, they made off up the Derwent, till they reached the Russells Falls river, which stream they invaded and took possession of, to the exclusion of all other fish." The italics are mine.—Faithfully yours,

CHARLES H. WHEELLEY.

EATON AND DELLER'S SPECIAL DRY-FLY BOX.

DEAR SIR,—In a recent issue of the *F. G.* attention was called to a special eyed box, sold by Messrs. Eaton and Deller. This same arrangement we have sold and shown in several exhibitions during the last twelve years, and, as far as we know we are the originators. You kindly

noticed this dry-fly box in the *Fishing Gazette* of May 22, 1897. The block we are sending you is from our catalogue.—Yours faithfully, F. T. WILLIAMS AND CO.

Great Queen-street, W.C.

[Now that Messrs. Williams remind us, their box is certainly much like that of Messrs. Eaton and Deller.—Ed.]

TESTIMONIAL TO BEN ABRAHAMS.

DEAR SIR,—After many years ardent work in connection with various Anglers' Benevolent competitions, and secretary and founder of the Allason United Brothers' Angling Society, it was our duty of the latter society to start a fund, open to the London and suburban anglers, to subscribe their mites to the lists which will in due course be sent to all societies, and with the sum so collected we shall purchase Ben a gold chain, to wear with the gold watch presented to him in the year 1896. I'm sure all anglers know how Ben works for any cause, and when I state that Ben, through his energy as honorary secretary to the various angling benevolent competitions, has paid into the Anglers' Benevolent Society the sum of £107 1s. 5½d., that alone speaks if he is a worker. I shall be pleased to receive any mite towards the fund, for which, up to May 16, I have received the following amounts: Per members of the Allason United Brothers' A.S., £2 0s. 6d.; J. W. Blakey, of the Angler, 5s.; A. R. Matthews, 2s.; J. Hardie, 1s.; A. Etheridge, 1s.; per G. Bence, 2s. Total, £2 11s. 6d. The trustees are J. W. Harris (Western District visiting officer) and G. Bence (secretary Jubilee Angling Society), and the secretaryship will be undertaken by—Yours faithfully,

E. JACKSON

(Chairman of the Allason United Brothers' A.S.).

2, Bulmer-place, Notting-hill Gate.

Where all communications should be addressed.

HINTS ON DAM BUILDING WANTED.

DEAR SIR,—Will you or any of your readers instruct me how to build a practicable dam? The stream is about 18 ft. wide, banks 4 ft. high from bed of stream. All hints will be gratefully received by—Yours, &c., A NOVICE.

FISHING QUARTERS IN DONEGAL WANTED.

DEAR SIR,—I shall feel greatly indebted to you or any of your correspondents if they will kindly tell me of any good, clean lodgings, or house, with attendance, in the best fishing centre of Donegal. They would be required for a party of six from July, for two or three months.—Yours truly,

CONSTANT READER.

TROUT FOR THE SUFFOLK STOUR

DEAR SIR,—The river Stour in this part of the country, although affording excellent sport among coarse fish, has never been regarded as one likely to produce trout. An experiment will therefore be watched with keen interest by those anglers and others living in the districts as to whether trout will thrive.

On Monday last 2000 yearling trout were placed in the Stour, near Sudbury, by a gentleman, to whom the thanks of the local anglers are due for thus trying to increase the sport in the neighbourhood.

Time will show if and what success this action meets with, and no doubt reports later on will duly reach you.—I am, dear sir, yours faithfully,

LEONARD B. WRIGHTSON.

Gresham Angling Society.

[The upper waters of some of the east Anglian rivers are admirably suited for trout, and we hope the experiment will succeed.—Ed.]

THE MAY FLY PROSPECTS ON THE LUGG, HEREFORDSHIRE.

DEAR SIR,—Replying to your query re prospects of coming May Fly season. As far as can judge at present rivers will be in good condition, with a rather full flow of water. The floods of last winter, which were heavy and continued, have altered the bed of the rivers very considerably, in some places deepening and others silted up, from which am of opinion the larvae of the May Fly has suffered to a considerable extent, and expect to see the rise of fly patchy, yet sufficient to induce the trout to look after them, in which case sport should be quite equal, if not better than usual. Will advise advent of the May Fly.—Yours truly,

R. T. WILLIAMS.

THE GREEN DRAKE (MAY FLY) ON THE SNIR IN IRELAND.

DEAR SIR,—I first saw the Green Drake on May 13 on the river Snir; to-day they were on in considerable numbers, also the yellow May Fly, but trout taking neither, being mad for the Blue Bloa or Iron Blue Dun, which swarmed, and I could meet only an odd one here and there, dry fishing up out of a cot. The eel fry have run up four or five times this spring, spoiling trout fishing very much, but consequently the latter are in first-class condition. However, they generally bring up a fresh stock of trout from the tide, which comes to within eight miles of Clonmel. I caught a big female Stone Fly on Saturday, which probably found its way to the Snir from some of the numerous mountain feeders, as the big river does not breed them.—Yours, &c.,

WATCHET.

MAY FLIES SEEN ON THE ELWY.

DEAR SIR,—In reply to your request, I beg to inform you that I saw two May Flies on the river Elwy, N. Wales, on Saturday, May 6, and I was told some day or two previous that the May Fly had been seen on the river Clwyd, N.W.—Yours truly,

F. M. LESLIE.

RAINBOW TROUT IN THE ALYN.

SIR,—Two members of our association fished the river Alyn, at Rossett, on the 7th instant, and one of them was fortunate enough to catch a rainbow trout weighing about 6oz., and beautifully coloured. The fish was full of spawn. There appears to be considerable doubt here as to how a rainbow trout happens to be in this river, and if this is the first caught. Perhaps some of your readers having information as to this will kindly supply same to—Yours truly,

GEORGE W. HANN.

FISHING AT EDENBRIDGE.

DEAR SIR,—I should be obliged if any of your readers could give me any information as to fishing at Eden Bridge. I think of staying there for a short time next month, and shall be glad of any information about fishing, as regards payment or otherwise.—I remain yours truly,

W. A. R.

FISHING IN S. WALES.

DEAR SIR,—Could any of your readers kindly tell me what trout fishing can be obtained at Newcastle, Emlyn, S. Wales? I should be very grateful for a little information about the same.—Yours truly,

T. H.

SEA FISHING IN AUGUST.

DEAR SIR,—I should be greatly obliged if you could inform me through the columns of your interesting paper where I can obtain good sea fishing—bass, pollack, or sea bream—in August. Any part of the United Kingdom would suit, as long as it is comparatively quiet. The less known the place is the better. Any information with regard to accommodation, boats, &c., would also be welcome.—Yours truly,

SPRATS.

SOFT DRESSING FOR SILK LINES.

DEAR SIR,—In answer to "Iron Blue's" query of last week re a dressing for silk lines, we beg to advise the use of a preparation called Ceroleum, a prepared dressing which has been used for some years with every satisfaction. It is very easily applied, the *modus operandi* being as follows:

Place a small portion of the dressing upon a piece of flannel, and rub well into line, leave for a short time (if convenient in a warm place), then remove any dressing left on surface of line with a piece of soft cloth.

We shall be pleased to forward "Iron Blue" a sample on receipt of his name and address.—Yours truly,

A. CARTER AND CO.

Several letters unavoidably held over.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsgents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Mon'tly ditto	5s. 4d.
Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is Insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

Telegraphic Address—"RIVSAM, London."

SPRING RAMBLES.

By THE AMATEUR ANGLER.

My days for fly fishing are few and far between, and when they come round they are generally the worst days in the month. Trout fishing on "The Teme" begins in March, so I thought that by the end of April I might have a chance. Having the privilege of fishing some preserved water, I ran down there. I fished the whole length, about two miles. I never saw a fly on the water or a single rise. What can one do with floating flies in such a case? I met the keeper—he was fishing—he said he had fished that stretch of water, man and boy, for fifty years, and he had never known such a season as this. He had fished that morning for two hours, and, like me, had caught nothing. He was fishing wet fly, and he knew how to do it. I was immensely consoled, for I had seriously begun to consider whether it was my fault or the fish's, that I didn't catch them. The wind was blowing cold from the north; keeper said east was the wind for him—he could always kill fish in an east wind.

I gave it up. I had only another day, and that I devoted to long walks across green fields, through

rugged lanes with high banks clad with primroses. I strolled through the park, lovely and picturesque as could be found even in this picturesque country of ours in this springtime of the year, when all nature is alive with the singing of birds and the springing up of buds and flowers. The park lies on a hill, here and there clad with clumps of pine and firs, and dotted with small enclosures for game, and bosky dells inlaid with ferns just throwing out their curly fronds above the brown dead leaves of other days. There were small herds of fallow deer scattered in different parts, and browsing in the open glades. Climbing over the top of the hill, under a spreading oak and hard by a clump of firs, I came upon a singular sight. Many of your readers, I am sure, have never seen a dead donkey—for it is a well-known tradition that they never die within the range of mortal ken. I have never seen one, but here in the midst of the forest I came upon what seemed to me to be a still more singular sight, for there, under the oak, lay the dead body of "a poor sequestered stag"—(only it was a doe). It must have lain there for some days, for the green grass was springing up around the carcase. How came she to lie there? How was it that keepers and keepers' dogs had not long since found her out? Was she a victim "that from the poacher's hand had ta'en a hurt," and then, lost by him, had found a last refuge on this distant hill? Had she died from some poisonous weed or wicked reptile? She was not a poor starved thing, exiled intentionally from the herd: she was fat and well liking. I am sure it is a case where an apt quotation from "As You Like It" may be admissible. Shakespeare's deer, it will be remembered, had come to languish "under an oak, whose antique root peeps out upon the brook that brawls along this wood." Mine had fallen on the hill-top, far away from any brook; but then you may be sure that there, as the melancholy Jaques bemoaned, she

"... heaved forth such groans
That their discharge did stretch her leathern coat
Almost to bursting, and the big round tears
Coursed one another down her innocent nose
In piteous chase.

"... then being there alone,
Left and abandon'd of her velvet friends:
'Tis right,' quoth he: 'thus misery doth part
The flux of company.' Anon a careless herd,
Full of the pasture, jumps along by him (her),
And never stays to greet her. 'Ay,' quoth Jaques,
'Sweep on, you fat and greasy citizens;
'Tis just the fashion: wherefore do you look
Upon that poor and broken bankrupt there?'"

I left the poor stricken deer as I found her. Dead she was, but how she came by her death is a mystery I had no time to inquire into.

I found my way down the pathless hill, disturbing thousands of rabbits, through a wood, and across green fields into the turnpike road. The only thing I noted was what seemed to me a curious fact, that rooks, those singular birds, should have established a rookery at a corner where four roads meet, in the elms overhanging the turnpike road. Why could they not go away into the woods, far from the haunts of men? No, here they were, here they had been for many years, with their nests just over the heads of every passer by who chose to pot them or their young ones sitting outside the nests—the truth is they are sociable birds, they love the haunts of men, in spite of the instinct, the knowledge they possess, that man is their worst enemy, and will shoot them whenever they come within reach of his gun. It is not as if they were ignorant—they know exactly whether it is a gun or walking stick you point at them. A quarter of a century ago a number of pairs of rooks established themselves in some elms above a new house then being built in the village of Hampstead; they were, of course, the cause of its being called *Rookwood*, and there in those trees they have nested and reared their young in undisturbed happiness till the beginning of this year. Then it was that a large board was put up on the garden wall announcing the fact that the place—their place—was to be sold or let.

At this board they took great offence; they immediately gave their unfeathered bipedal tenant down below notice that they would quit their ancestral trees. They began at once to pull down their old nests, cleared them right away, and now they have disappeared entirely.

Last week my bad luck as to weather pursued me down to Hampshire. Hither, to my old haunt on the *Itchen*, I came, full of hope, for some Whitsuntide trout fishing. I have had a bad beginning. On Friday afternoon the wind and rain were dead against me, and there was nothing doing to encourage a dry-fly man to hope for the most modest success; not a rise could be seen, and yet there was apparently an abundance of flies, driven hither and thither by the ceaseless wind. The swallows were outrageously greedy. Over and over again would they pick up my fly from the water, and drop it like a nasty thing. I had armed myself, to begin with the fly so highly spoken of by Sir E. Grey, and which may be called *Sir E. Grey's Black Spider*.* With it I soon captured a brace of grayling, which I did not want. Thinking it was perhaps more attractive to grayling (which abound), I rashly changed it for a nice Yellow Dun. I played at floating fly in a "chuck-and-chance-it" sort of way—for what else can a dry-fly man do when there is nothing visible over which to display his skill?—but nothing came of it till I came down to the *Pub.*, that is to say, a fine ash tree, now beginning to show its curling leaves (away behind the oak, which is in full leaf). Below this tree, lying just atop of the water with a bunch of weeds hanging on to it, a wicked barbed wire crosses the stream, and there close up to this wicked wire a big trout was rising, I might almost say rubbing his nose against it.

It was a long cast, right in the teeth of the wind; and with the fear of catching hold of that accursed wire, or being entangled in the weeds, always before me, I made many a cast before I could put my fly over him. He saw my lovely Yellow Dun, he came at it, and he was nicely hooked. He did not like it at all. His first move was to spring out of the water half a yard or so, and then into the weeds below, and there I left him with my pretty Dun sticking in his gills. That was the only Dun I had of that exact pattern. "To-morrow," I said, "I mean to have that Dun again, and you, too, my friend." And so I went home, for it rained and blew, and there was nothing else to do.

Next day being Saturday, my good landlady—for she is good to me, looking after me like a mother, though she is forty-five years younger than I am—asked me what I would like for dinner, not only for that day, but being Whitsuntide she had to provide for Sunday and Monday as well. I could only say "My dear Mrs. B—, you know exactly what I like, better than I know myself; I leave it entirely to you." That is the way we always settle that important question when I am here alone. Of course, when the *Professor* is here, things are quite different, then he rules the roost.

And so, in spite of wind and despite of weather, I and my little Sancho sallied forth again for further adventures. It was a day; if Friday was bad, Saturday was far, far worse. Sancho valiantly carried my impedimenta. The rain it rained, and the wind it blew, and now and then the sun shone out for a few minutes, and I cast my insect on the troubled waters; as well may I have cast it on the turnpike road.

I came at length to the barbed wire, and there was my friend as lively as ever, so I sent my barbed betrayer to look after that Dun in that trout's mouth, and, forgetful of the little game he had played yesterday, he tried it on again to-day. I hooked him, he adopted his old manœuvre—my line and fly came away without the trout, and he is still free to wriggle up against that barbed wire. But Whit Monday is coming, and I don't want to go home without that trout and the fly that is in him.

We were glad to get out of the rain and into the mansion sacred to fishermen. There we ate our luncheon, and watched the dappled cows across the water. My young philosopher told me all about them. He gave me their names and fighting qualities. "See that cow there, down by the water, she's called *Draper*? She's the leader of the lot—if any other cow goes into her stall she'd kill her. She fought her way to the top, and now they all respect her as the head cow;

* The "A. A." should kindly note that Sir E. Grey only recommends the Black Spider for a warm, quiet evening when the trout are rising, but refuse the ordinary Duns.—Ed.

and so it is with the second, and third, and fourth down to the last, every one has had to fight for the position she holds. See that red cow yonder? She is No. four. She broke both her horns off fighting for that place. Of course, she can't fight any more now, but she keeps the place she won in fair fight."

Now, that was a lesson for me, for I had no notion before that cows were so punctilious and jealous of the position they had fought for. There are a score or more of them, and each one of them knows her own stall, and keeps it till she has promoted herself by her valour. As a rule there is perfect harmony amongst them when once the question of precedence is settled.

Now let us home to dinner. It is a pleasant thing to be hungry, and at the same time to know that a good dinner awaits you. I knew that much, but I had not the remotest idea of what that dinner would consist—and it was a dinner. Why, O Professor; why, O Piscator Major, were you not there to partake of it? It was too good to be eaten alone! It was a feast for a round tableful of jolly anglers. It was a feast such as I had not tasted, or perhaps even heard of, for sixty years. What was it? It was four-and-twenty black birds baked in a pie! I do not vouch, however, for the exact number. The last time I tasted a pie like this, and the flavour of it remains with me to this day, was when, as a boy, I shot the birds myself (Anno Domini 1840), and never have I tasted *rook pie* since. I had come to regard the shooting of young rooks as a merciless cruelty, but now—surely the end justifies the means! Let no angler in future compound for his sins who hooks the trout by condemning man or boy who shoots the rook.

Sunday—a *dies non* for all anglers who have conscientious scruples, or who respect the conventionalities—a lovely morning, soft and balmy, no wind, only a gentle S.W. breeze, an ideal day for fishing; trout rising freely all down the river as far as I could see. May Whit Monday be as gracious; but the evening is wet and ominous.

Whit-Monday was really a splendid day for holiday makers in these parts,* and I fancy for anglers in some places. Between 10 and 11.30 there was a fair rise of small fish, after that I saw scarcely any up to four o'clock, when I left off.

Of course I looked after my trout at the barbed wire—there he was as lively as ever. I changed my fly twice, and covered him fifty times, till at last he came at me with a dash, seized the fly, was hooked, and he made such a fluster in and about that bed of weeds—for he is a big one—that his lip gave way, and he returned my fly safe and sound. He has taken up more than half an hour of my precious time, and I am loth to leave him.

I hope when the May Fly is up I may have another tussle with him. Three times have I had that trout within my grip, as it were, and thrice has he eluded me. Surely it will be my turn next.

Tuesday morning, before leaving for London, I walked down to the barbed wire (without my rod) on the opposite side of the river. There I could see him plainly, gay and frisky as ever. I think I shall find him there when I come again, for, happily, he has chosen a spot not easily accessible to even an expert angler from this side.

My success has been of a negative kind, for I lost several big trout and caught only one brace, and two brace of grayling—two of them big fellows, but certainly under 2lb. each. They gave me a little sport, and I gave them their freedom. I am not disappointed, because I did not expect to do much. On the contrary, I have found "books in the running brook, and good in everything."

PANORAMA OF THE RIVER THAMES.

THE Woodbury Permanent Photographic Printing Company are about to place on the market an excellent shilling "Panorama of the Thames." The whole of the river is shown in blue, and the rest of the map is in a photographic brown, and there are about a score of views on the river scattered along its banks. It is nearly 4ft. long, 9in. wide, and folds up into a stiff cover. All who want a good map of the river should see this.

* It was a gloomy, wet, dull day in London.—En.

FISH CATCHING HOLD OF WEEDS WHEN HOOKED.

In noticing Sir Edward Grey's book on "Fly Fishing" recently, I quoted the foot-note in which the editors (the Marquis of Granby and Mr. G. A. B. Dewar) referred to the author's remarks about trout, when they have weeded you, sometimes taking hold of the weeds in their teeth to prevent you pulling them out.

Sir Edward says, on page 85, "A trout's method of resisting in weeds is, I am convinced, to lay hold of them with its mouth." He adds, that he was incredulous that this could be so at first, but carefully watching what took place has convinced him that trout do attempt to resist the strain of the tackle in the way described.

The Marquis of Granby and Mr. G. A. B. Dewar add this note:

"It would surely be hard to over-estimate the importance to the angler, and the interest to the naturalist, of this theory of Sir Edward Grey's. The resistance often offered by trout of a moderate size when they have reached a small patch of weeds in a chalk stream is quite mysterious."

In connection with this question I mentioned that in an article about pike fishing in the April number of *Hammsworth's Magazine*, published before Sir E. Grey's book had appeared, I had referred to the fact that, when pike fishing with Mr. Alfred Jardine, we had noticed that pike will at times hang on to weeds to prevent being pulled out of them.

In looking for the dressing of the Cinnamon Sedge* in that best of angling books ever published, "A Book on Angling," by Francis Francis, I was amused, though not much surprised, to find that this question of fish hanging on to weeds was all clearly set out by him thirty years or more ago! The fact is, Francis Francis had such wide and varied experience during his more than forty years' career as an angler, that there can be very little that he did not know.

I have occasionally heard it said that Francis was not a good fly fisher; but this is perfect nonsense. I doubt if any man ever killed better baskets of good fish over such a long period of years as Francis. The following advice for playing a fish in a weedy place is admirable:

FRANCIS'S ADVICE FOR PLAYING A FISH HOOKED IN A WEEDY PLACE.

"When the angler hooks a fish in a very weedy place, the best policy is a bold one. Let him at once, before the fish is aware of what has happened to him, put on a heavy drag, and pull him through or over the weeds into safe water. I assure the angler that this is much easier and safer than it either sounds or looks. It is one thing for the angler to take a fish through weeds, but quite another thing for the fish to take himself through them. In the one case he does not see where he is going, and yields to the impulse, while his fins offer no resistance; in the other, these circumstances are reversed, and he holds the weeds by his outspread fins, and very often also by his mouth. I am frequently obliged to exert my persuasive powers in this respect. I was once fishing in a very weedy river, and to the great astonishment of the keeper I hauled four fish, one after the other, out of very dangerous holes through heavy weeds into safe water, and landed them; three of them weighed 1½lb. each, and the fourth 2lb. "Never see anyone so lucky as you be, sir, w' big fish; don't seem to care about the weeds, not a mossel," said the keeper; and certainly some of the places were as nasty-looking places to hook a good fish in as anyone could desire to see; but prompt measures succeeded where a timid and hesitating hand on the rod would have been sure, sooner or later, to have ended in the fish bolting into a weed of his own accord.

"Should a fish run up under a weed in his efforts to escape, it is manifest, if the angler pulls against the stream and the lay of the weed, or even endeavours to pull the fish up through the weed,

* I have often had fine sport with this fly all through the May Fly time especially when the fish are getting a bit shy of the artificial May Fly, and I prefer the dressing given by Francis, viz.: Body, dark barm coloured silk; legs, a light or dirty brown hen's hackle, with a darkest centre; wing, any reddish cinnamon coloured feather, or yellowish hen landrail or owl. Should be dressed on a fine wire-eyed hook, ½in. long, with the wings ¾in. longer than the hook.—R. B. M.

or sideways out of it, that he will fail. The only way to extricate such a fish when he has succeeded in hanging your tackle up is to get well below him, let out a longish line, sink the point of the rod to the level of the water, and put a steady strain on straight down stream. The fish may, perhaps, for a time be able to resist this strain, but patience and perseverance will often fetch him out at last. *Even if he has gripped the weed in his mouth, as fish will do, he must open his mouth eventually, particularly as he has the fly in it straining and pulling at him.*

"I do not say that this plan is always successful, but it is the best plan you can adopt, while to attempt to pull the fish against or across the weed is almost certain destruction. A gentle sawing motion may at times be used with excellent effect if the angler has reason to suppose that the weed hangs at all on the line. Poking or stoning a fish is a very uncertain remedy, and unless you can see and manage the weed very well, cutting or hooking it up is unsafe, and sometimes results in cutting the line. If you get thoroughly hung up, and there is nothing to do for it, try patience; take off the strain and leave a moderately slack line, and the fish . . . will probably come out of his own accord."

There can be no doubt from the remarks in this extract which I have put in italics, that Francis was quite certain that fish will try to save their lives by hanging on to weeds with their teeth, and that he published his knowledge of the matter thirty years ago.

I have read Francis's work many times since it was first published in 1867, and I often find that things I thought I had discovered for myself I really owe to his invaluable book. We absorb ideas and forget them, and then some day the required conditions are present, the idea comes, and we think it is our own, when really the seed was sown perhaps twenty years before.

I knew Francis Francis, and fished with him, and when I hear anglers refer disparagingly to his skill, I know they have spoken ignorantly or jealously; he spoke his mind very freely, and consequently made enemies, often without knowing it. Some people have an idea he always fished with a double-handed fly rod for trout; this idea got abroad because he recommended, and often used, a 14ft. rod, especially on big waters, and in the later years of his life, but he was a master of the single-handed fly rod, and with another man's rod of that description cast twenty-six yards on the Old Barge Canal at Winchester, the other man being his friend, G. S. Marryat, who cast the same length of line.

R. B. MARSTON.

SIR EDWARD GREY'S BLACK HACKLE.

In my notice of Sir Edward Grey's delightful book on "Fly Fishing," I expressed a wish to have a pattern of the Black Hackle fly, with which he often does so well in chalk streams.

Sir Edward has most kindly sent me patterns, and informs me that it was not a special pattern of his originally, but was sent to him some years ago by Messrs. Hardy Bros., of Alnwick, from whom he continues to get it, in fulfilment of an order for Black Spiders (it is a Black Spider, but with a more sombre body than usual). Sir Edward adds: "If you care to try the Black Hackle as a dry fly over rising fish between six and eight o'clock in warm, still evenings in June and July, I should be very interested to hear whether you find it successful. . . . My experience is that trout either ignore it or take it well, and that I do not get many short rises at it."

I have had some Black Hackles dressed by Messrs. Hardy, and shall certainly give it a good trial when I get the chance. I must confess that I have never had much faith in Black Spiders, and have very rarely tried them.

Since hearing from Sir E. Grey, I have also received some nicely dressed samples of his Black Hackle from Messrs. J. Bernard and Son, 5, Church-place, Piccadilly, London.

"HAIR, GUT, AND WIRE LINES."

It may not possibly be known to the generality of the disciples of Isaac Walton, that anglers, like violinists, may be divided in two classes. In the latter division a once celebrated instrumentalist included—First, those who played upon the violin, and secondly, those who did not. Similarly it might be said that anglers might be divided into two sections, viz., those who pin their faith on gut as a medium for bringing the denizens of the deep to the bank, and those who rely upon horse-hair to effect the same purpose. Occasionally, principally, more by private notification than by the instrumentality of the publicity given by angling journals, the question of gut v. hair crops up, and I have been fairly astonished of late at the number of rodsters who strenuously advocate the superiority of the latter over the former, in spite of the various improvements that have taken place in the manufacture of the former-named commodity. They maintain that with a rod specially built for striking, a greater number of fish up to three pounds in weight may be safely landed. Residing, as I do, in a town where a goodly number of thoroughbred horses are constantly trained, I have been much surprised at times at the number of applications which I have received from angling friends for a supply of horse-hair of the white, chestnut, bay, and sorrel colours. To many of these I have forwarded the best of the kind mentioned that I could procure; but, at the same time, I have asked the recipients to favour me with their reasons for their predilections. At first the combings, or pullings, of the tails that I forwarded were not satisfactory, and I began to imagine that the tails of thoroughbreds were unsuitable for the purpose; but as time wore on, and as I gained a little more experience, I was able to remedy the faults, which were of my own creation, so that I am able now to pass an opinion on what is, or is not, a suitable strand. The rod for the purpose must be specially built. It must not be too stiff, or the hair will part at the first stroke probably; but it should be light and supple, with a top joint that will readily give and accommodate itself to the "drawing" stroke of the angler. Regarding the hair itself, that should be put through the mill in the following manner: Let each separate length be taken, in making up the cast, between the left and right hands (fingers and thumbs); draw the right finger and thumb down the length, with the thumb nail just scraping the hair, at the same time testing its capability of holding fish of the weight to be angled for. Should the hair break, cast it on one side, retaining only those strands that have proved satisfactory. In making the selection the experimentalist will be astonished to find that the elasticity of hair will be much greater than that of gut, and in this is the principal safeguard of the hair-line fisher. If it passes through the ordeal of the "strike" successfully the battle is more than half gained, and it is odds on the fish being grassed. For clear water the best hair for use is the white, as it is far more transparent than gut or any other kind of horse-hair. In the sandy beds of rivers or ponds a chestnut colour may be used to advantage, as it cannot be distinguished by the (human) naked eye when drifting over the yellow bottom. For gravelly bottomed streams an even darker colour may be utilised. As regards the takes or bags of the hair angler some very heavy ones have come under my notice. Not many months ago an account of a splendid take of roach was given in the *Fishing Gazette*, it also being asserted that the fortunate angler used a horse-hair cast, the lengths of which had been pulled from sorrel colts. The hairs from the tails of mares are inferior in strength to those pulled from colts or stallions. An angler with whom I have lately been in correspondence says that occasionally his takes have been extraordinary. Upon one occasion he and a friend had eighty-three brace of trout, four of grayling, and one good chub, in one day, fishing with chestnut hair. Some few years ago I used hair in preference to gut, and in the Witham, at Great Ponton, near Grantham, I took, in three hours, eleven and a half brace of trout, while fishing from a meadow near the mill. This meadow was so situated that I was able to keep my body below the bank of the river, and to bring my eyes to its level to watch the top of my float as it drifted

slowly towards the mill. The miller was very wroth with me, and threatened proceedings; but I was not upon his land, and his powers as "bank mender" did not include this particular meadow, or I should have heard more about it.

The use of gut is so widely known, and its popularity as a factor of fishing furniture is so evident, that any fresh information regarding this commodity is extremely welcome. From amongst the gut workers of Spain the produce of the worm is sent over to England in three distinct sorts, viz., "Selecto," "Superior," and "Estriada." On its arrival in England it again goes through a second inspection and selection by our tackle-making experts. There are also other names which seem to indicate the quality of the gut, for instance, "Refina," "Fina," and "Corta." Great care is absolutely necessary in the pulling of the gut, and even the most experienced workers in this class are apt to pull unevenly, and so to disadvantageously taper it. This work is only entrusted to the most skilful pullers, who perform the tension from left to right. By uneven pulling the tapering comes in at the point that it is not intended, and the consequence is that the strand is weakened so much that it may be only of equal strength to the quality in the next inferior class, just as the weakest link in a chain represents the full strength of it. In many tackle maker's workshops the gut, as I said before, is again examined and re-selected, for which work skilled labourers are sometimes paid as much as 15s. per week. In selecting and re-arranging the gut an instrument called a gauge is used, which resembles in shape the bridge of a violin. In the topmost ridge of the gauge are five slits, and through these the lengths of gut are passed and sorted. But with some tackle makers this process is not in operation, and the consequence is that the selection has to be made entirely by the eye. One may easily understand how it is therefore that casts, especially salmon casts, are not of equal strength as regards the selected lengths. We may also clearly understand that, with no skilled workwomen (for the selecting is performed by women) to pay, a tackle maker may place casts upon the market much cheaper than the maker who does his work effectively by employing gauge workwomen. The best gut is perfectly round, free from marks, and not at all flattened in any portion of its length. The second quality is marked, more or less, and a little flattened in various parts, while the third quality has all the bad marks in a greater degree. We will consider now the lengths. It is, of course, obvious that the longer the strand the greater will be the value of the cast generally. To put a value upon lengths, we should say that a hank of 8in. gut would be worth about 15s. wholesale; but a hank of 11in. of the same kind would fetch as much as 95s. "Hebra" gut, of 8in. strand, is worth probably 40s. per hank; but 11in. lengths, of the same class, would fetch about 225s. per hank, thus showing that an increase of 3in. in the length of the strand increases the value sixfold nearly.

Before the gut is exported great care has to be taken in what might be called the seasoning or bleaching. This process takes place in the sun, and here, again, the skilled artisan comes in; for should the gut be exposed for too long a time it deteriorates, and may possibly become worthless. Then comes the polishing process. This is always done with pieces of chamois leather, which have to be used very judiciously, for too much friction will generate heat, which would have the same detrimental effect that a too long exposure to the sun's rays would have. In the course of my long experience as an angler (1842) I have, even from the best tackle makers, had casts which have proved worthless. Once, at Wraybury, I had soaked my casts well; but a small dace of 4oz. broke the first, and a quarter of an hour's use settled the other. The casts that I have used for years are those denominated the "Hercules." I can always rely upon them; in fact, I have handled them so long that I could, with my eyes closed, pick them out from amongst other casts placed before me. The preparation which they undergo renders them so soft and pliable that they cannot be mistaken for others.

And now as regards wire. I am of opinion that there is a future before it. I have, in thick water, tried lines of this kind of my own making. With a fine wire line one may altogether dispense

with small shot and leads between the float and the hook. Casting may also be performed with greater facility. The chief difficulty with wire (proper) lines seems to be in the kinking. This might be avoided by the use of a small swivel or two, and by carefully winding or unwinding the line. My practice is to purchase three reels of very fine wire at the ironmonger's (fine, finer, finest). With these I construct my cast below the float, using a prepared silk back-line. The finest wire will hold fish under 5lb. When done with for the day throw the wire away, and make another for the next occasion. No shot is required. I have at times done very fairly as regards catches with lines of this description; and I hope to see the time when wire will be used as well, and as often, as either hair or gut.

STRAW HAT.

FISHING IN INDIAN WATERS.

PART IV.

"THE ANDAMAN ISLANDS."

"'Tis a far cry to Loch Awe," is a well-known Highland proverb, and a far cry it no doubt is from Aden to Port Blair, from the spot I last introduced to your readers, to that to which I would now draw their attention. The one is also a complete contrast to the other. While the ragged and barren outlines of the Aden rocks at first sight tend to repel, the first view that one gets of the Andamans coming in from the sea is almost fairy-like in its fascination. A group of islands wooded down to the very water's edge (except where the settlement clearances have been effected), with a luxuriant growth of tropical foliage, and set in a sea of brilliant cerulean hue, they are indeed a picture of surpassing loveliness, and besides that they give one the impression of perfect peace and calm. Not that the sea here is always calm; far from it, for these islands are the cradle of those terrific cyclones which often form and sweep with irresistible violence up the Bay of Bengal, and breaking upon different parts of the Indian and Burman coasts, cause infinite devastation to the districts over which they sweep. Curiously, the islands themselves do not always escape. In November, 1891, a terrible cyclone swept over them, and the effects were such that many of the hillsides were swept bare of trees and vegetation, and twenty years will certainly not suffice to repair the damage done in less than half as many hours.

Lying as they do in the fairway of the traffic up the Bay of Bengal, they have, of course, been known for many centuries, and at one time were, together with the lesser group, the Nicobars, in the possession of the Danes, who established certain missionary settlements in them, but of these settlements there are no traces, unless it be in the curious blue eyes and fair hair which are occasionally seen in individuals of the Joruas, a negroid tribe who run wild in the Nicobars, and also in the strain of wild cattle, which are to be found there. Malays and Chinese have traded with these islands from time immemorial, but the islands were never seriously taken in hand until somewhere in the early fifties, when they were chosen by the Indian Government, as a fit and proper place to establish their penal settlement. They are administered by a chief commissioner and a staff of settlement officers, and rule and order is maintained by a body of about 800 Sikh police, a small body of European troops (two companies generally from the regiment stationed at Rangoon are detailed for this duty), and half a native regiment of Madras infantry. The criminal population is about 15,000. Many of these latter, the better behaved ones, are allowed to marry, and have plots of ground allotted to them, and settle down on these clearances, and cultivate the soil. But by far the larger number are kept in durance vile all their lives in immense prison buildings erected in different parts, and their labour is utilised for the benefit of government.

The aborigines are unique. A negroid race, utterly unlike the inhabitants of the neighbouring countries, their very existence is an ethnological puzzle. Where they came from, and who and what they are, is a problem which has not yet been satisfactorily solved. An adult male Andamanese stands from 4ft. 3in. to 4ft. 7in. in height, and a female from 4ft. to 4ft. 3in. Though so small, they are perfectly formed

miniature men and women. The men are pleasant to look upon, and very strong and muscular; but the women, as a rule, are singularly ill-favoured. They live in small communities in the jungles, exist almost entirely by the chase, and as hunters are extremely expert with their primitive weapons; while their dexterity with the bow and arrow, both on land and on the water where they hunt, shoot, and spear the fish, is simply incredible. Like most aboriginal savage races, since coming in contact with a higher civilisation they have deteriorated physically, and are rapidly dying out, and before very many years will probably have disappeared, leaving behind them absolutely no trace of their existence. There is one officer of the settlement who has been placed specially in charge of them, and he is devoting his whole life and energies to the task of recording their history, and in future days his voluminous notes, his most excellent

it is, however, that I wish to draw your attention to it, and from this point of view it is unsurpassed. As in the case of Bombay and Aden, in each of which places, as I have before noted, one fish is found to engross the angler's attention, so here it is the same. However good the general fishing may be, and very often is, either with the mullet, gar fish, seer, barracouta, and horse mackerel, still the main stay of the fishing, and the fish for which the angler generally looks, is what is locally known as "Khokhari."

Caranx carangus, or *Malabaricus* (and Sketch No. 1 will give your readers an idea of what this magnificent fish is like), are the commonest and most often got, but there are altogether nearly thirty sorts of caraux, and often enough one may come across others of the genus than those named above. It is somewhat difficult to describe our friend. A deep, full-bodied fish, something like a perch, body oblong and more or less com-

fish into the shallowest water; and a very favourite place to angle from, and one of the best when the fry are about, is the principal pier or landing place for Ross Island. Standing there and looking down into the pellucid waters, one can see, and almost count, every fish that comes near. Then a time comes when you see the ordinarily white sandy bottom clouded and darkened in colour; and unless you were prepared for it you would hardly realise that the darkness was caused by a dense mass of small fish. Such, however, is the case, and where these are our friend the *caranx* is sure to be.

Naturally, also, it follows that the very best bait for him at such seasons is the sardine or smelt; and it should be just lightly hooked, and allowed to roam. Such a bait is irresistible, and many and many a good fish have I had in this way. Of the two species noted above, the *caranx carangus* is by far the better. He grows much bigger, and

FIG. 1.—*CARANX CARANGUS* (locally known as "Khokhari").

FIG. 2.—*SPHYRENA OBTUSATA* (better known, perhaps, as 'Barracouta').

collection of photographs, and his wonderful museum of their instruments, both of war and peace, of all sorts, will be all that future students will have to enable them to form an idea of what this most interesting and curious race was like.

The headquarters of the settlement are on Ross Island, better known, perhaps, as Port Blair, and there are also considerable settlements at Aberdeen and Viper Islands, and also at Port Mowatt and Hope Town. This latter place was the scene of the assassination of the then Viceroy of India, Lord Mayo, who met his death at the hands of a fanatical Mussulman convict in 1872. There is a small pier or landing stage here, and it is the landing place for and on the way to Mount Harriet, the Government Sanatorium. It was here, on returning from a visit to Mount Harriet, that the tragedy took place. As a fishing resort,

pressed, with resplendent scales, high shoulders, a small and shapely head, provided with very powerful tail and fins, lateral line in some species wholly, and in others only partially formed of platelike scales, each of which is armed with a lateral spinate, keen edge, and two dorsals. He is of a distinctly pugnacious and omnivorous nature, appears always ready to be hooked, and, like the Irishman, always spoiling for a fight, and what is better still, there is no trouble in finding him, he is always all over the place.

There are times and seasons, just as at Aden, when the waters swarm with the small sardine or fry of many sorts of fish, chiefly, I believe, of the atherinides, large quantities of which are caught in the nets, and are eaten by Europeans and called "Whitebait," and then the "Khokhari" is at his busiest. He will follow the shoals of small

is also the handsomer fish. In colour he ranges from a bluish silvery sheen on the back to a golden colour below, and in season his fins appear to be of beaten gold. Scales, not particularly large, are inclined to be loose, and come off easily; while, curiously enough, at times they disappear altogether along the anterior portion of the abdomen, and up to and around the pectoral fins; and on the smaller and immature fish are four or five vertical bands, very like what are seen on a perch. His size may be anything from 3lb. to 70lb. Very ordinary fish run from 16lb. to 25lb. The record "Khokhari" was killed, I believe, in 1893 or 1894, by Lieut. A—, in the 14th Madras Native Infantry, while stationed there, and weighed 72lb. This fish was not caught from pier, but a little further out, where the small station steamer was lying at anchor. The officers

BURBERRYS' GABARDINE SLIP-ON COAT

Proof against **RAIN, SLEET, SNOW.
HOT and COLD WINDS,
THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

OUTSIDE GABARDINE, INSIDE WOOL. Both Fabrics WEATHERPROOF.

Price - - 63s.

BURBERRYS, 30, HAYMARKET, LONDON,
AND BASINGSTOKE.

Experts in WEATHERPROOF KIT.
Patentees of "Gabardine" and "Urber,"
Combines, The Equi-Pede,
Burberry Coats, &c.
Specialists for Shooting, Fishing, Golfing,
Polo, Yachting, Cycling and
Racing Garments.

CURIOUS AND INTERESTING FACT

CONCERNING AN

ITCHEN TROUT AND THE MAY FLY

The "Fishing Gazette," April 16, 1898.

"The Major caught a brace of trout and several trouble-some grayling; the largest trout was about 1½ lb., and by this trout there hangs a tale.

"When I was fishing in the same meadow last June I lost many a trout and many a May Fly; now it so happens that in the gill of this trout was found, firmly hooked, a very perfect May Fly—the G.O.M.—with 6 in. of gut. He has worn and no doubt been proud of this distinctive decoration ever since. It seems to me to be a very remarkable thing that fly and hook should have been in that fish for more than nine months and now as perfect and fresh as if it had been in my pocket-book all the time; the gut is rather rotten. The gold tinsel round the body is as bright as ever it was, one wing is slightly mangled, as if other envious trout had tried to nibble it. I fully believe that fly is mine, that I lost that fish on that particular spot last May; the only doubt I have about it is that I then estimated the fish I lost as at least 1½ lb.,

whereas this one, after nine months' growth, now weighs only 1½ lb.; on the other hand, you know how much larger are always the fish you lose than those you take! I find there are other claimants for this fly. The Professor, who

is not here now, has certainly a claim. I can only say, 'Palmar qui meruit ferat,' if it can only be proved. It is distinctly a G.O.M. of Mrs. Ogden Smith's make."

THE AMATEUR ANGLER.

The "Fishing Gazette," April 30, 1898.

"Here is a picture of the G.O.M. May Fly imitation, after it had been worn in the gill of a trout for about eleven months, as described by me in the *Fishing Gazette* of April 16. Of course there is no novelty in finding a fly in a trout's mouth; but it is somewhat of a novelty to be able to identify the fly, and also to find it in such a perfect state of preservation after so long a time of wear and tear."—AMATEUR ANGLER.

THE "GLADSTONE" MAY FLIES,

The invention of Mrs. OGDEN SMITH, were the most successful flies used last season, proving more killing than any other pattern, especially on the Hampshire streams. They float remarkably well, dry very quickly, and can be had in twenty varieties of shade, both in the body and wings. Price 4s. per dozen. To be obtained only at OGDEN SMITH, 6, Park Side, Hyde Park Corner, S.W.; and 34, St. John's-hill, Clapham Junction, London, S.W.

MAY FLIES

4/- per doz.

G.O.M.

And at 34, St. John's Hill, Clapham Junction, London, S.W.

on board were at breakfast. A rod had been left over the side, when the bait was suddenly taken. Eventually Lient. A—had to take to a dinghy, and follow the fish about, but it was landed in the long run after a contest lasting considerably over an hour. Bait, I believe, but of this I am not quite sure now, was a half-boiled potato. The other species, viz., *caranx malabaricus*, is also a good fish and a handsome fish, but is said never to grow anything like as large as his *confrère*, nor is he so brilliantly coloured. His back is a dull bluish grey, sides silvery, shot with purple, while his fins are a pale yellow, dorsal fins and tail grey, with spots. Both species, however, give very fair sport. When hooked, there is just a whisk of the tail, and they are off, and their first rush is grand; any check, and you lose the lot, but they do not fight brilliantly up to the end. After the first run or two they are given to boring heavily round and round, and, if you have a heavy fish on, your rod is likely to suffer a great deal more from them than from any other fish I know, for towards the end it is a case of "pull devil, pull baker" to get them within reach of net or gaff.

But the *caranx* is by no means the only fish that the angler has to depend on. As in Aden, so here, when the sardines appear large numbers of barracouta (*Sphyræna obtusata*), sketch No. II., seer fish (*Cybiium gallatum*), sketch No. III., and large gar fish and horse mackerel appear also, and you may vary your sport considerably by taking a boat, and towing a live bait about slowly—a form of fishing very similar, in fact, to what is known in Scotland as "harling." Then, again, on the outlying reefs you will, if you fancy it, get the red rock cod known locally as "gobra." These often run very large and very heavy. One big fish for a long time took up his quarters among the piles of the landing stage at Port Blair, and, though often hooked, always eluded capture by breaking away in among the piles. Apparently his favourite amusement was to lie "dog o'," and as soon as he saw any other fish in difficulties, struggling at the end of a line, for instance, as he often did, he just used to open a huge carpet-bag of a mouth, and, closing it on his unfortunate victim, to clear out with the best part of a fish, and leave only the head to the angler. I have known of his taking fish up to 6lb. weight thus when they were hooked, and the curses that were launched at his devoted head were many and deep. He fell a victim himself eventually, I believe, to a havildar, or sergeant in the police, who inveigled him into taking a bait about 2lb. in weight, upon what was practically a small shark hook, mounted upon stiff wire, and he weighed somewhere about 65lb.

It is difficult within the limits of a short paper to enumerate all the different fish that can be got here, and to specify also the different means for "sarcumventing" the same, but to your angling readers this will not be at all necessary. Any man who is a keen angler, on finding himself in such a place will most certainly very soon find out for himself all that is really necessary, and thereafter his innate power of inventiveness will lead him on until he will probably become a great deal more expert than I am, and will know more than ever I can hope to teach him. Of the fishing for mullet and gar fish I have written in detail on a former occasion, so will not refer to it. It is generally only necessary to give hints, &c., but I do not think that any mention of Port Blair fishing would be complete without a passing reference to the atherine (or smelt) fishing that is occasionally to be obtained. Whether or not the fish I refer to are true smelt I know not, but all I know is that they are very like them; and also that, as a change from the heavy coarse fishing I have been describing, it is a real treat to turn away at times from the large sea rod, reel, and lines—which are so necessary for *caranx*, barracouta, seer fish, and gobra—and taking down one's 10ft. toy to go down and have a turn at something smaller and more delicate. From my own personal knowledge there is only one place where these fish are to be had, though I have no doubt that there are many other quiet nooks which these fish affect; but the place I refer to is not far from the landing-place on Aberdeen Island. The tide, or surf, breaks very quietly in there, and there is a fringe of semi-submerged rocks and sand, upon which the waves break, and here sometimes the smelt are to be found in great numbers. I used to use the soft tail part

of a hermit crab for bait, a two-hook Stewart tackle, an ordinary trout gut cast, and cast for them as one would do when clear water worming just outside where the line of foam—caused by the break and wash of the tide—appeared, and if they were there one could very soon fill one's creel; and they were excellent for the table.

FRED. ORD. GADSDEN.

(To be continued.)

FLY FISHING IN A FAIR.

LONDON fly fishers who have been accustomed in past years to run down to Eynsford and take a day on the much whipped waters then belonging to the Plough (now, alas! no more open to the public at any price), will be apt to fancy that this article refers to that fishery. The title certainly is applicable to the sort of sport one used to enjoy on this public—very public—part of the Darent.

First you whipped out a little trout from the stream into the road, and then you reversed the process, perhaps, with a lady's bonnet. This was at least possible.

And then the school treats held in the river during July and August, and the great variety and abundance of the children always in the neighbourhood! It was seldom indeed that one could cast a line in quiet, though I must say that the boys who were throwing stones all day usually avoided intentional disturbance. The curious thing was that trout could be caught in spite of all, and many a dozen have I had out of that little bit of water in old times.

But it was not mainly of the Darent that I was thinking of when heading these jottings.

There is another little river, even nearer to town, which yields similar sport, and a visit which I paid to it the other evening may be worth a brief description.

Wild horses should not drag from me the name of the village through which this stream ripples and dances, for it is only by favour of the miller that leave can be obtained, and I do not wish to compel him to employ a secretary.

After showing my order to the manager, I started in the little mill pool with a Wickham and a Red Quill Gnat; and before long found two feeding fish in an eddy, and promptly hooked one with the Wickham. Being only a 9in fish, I returned it, pitying "his youth and the short time he had enjoyed the vital light of heaven."

I fear he took advantage of my clemency to turn informer, for it was long before I had another rise. After much fruitless casting I looked up, and found myself the centre of attraction for half the village, to say nothing of all the passing cyclists.

However, the spectators were quiet enough, and, though standing on the bridge within 10yds., did not in the least disturb the rising fish. Even when a waggon and two or three horses was driven into the pool and round and round it, the trout seemed to go on rising just the same, and I even rose a fish within a yard of the horses' heels; and this happened repeatedly.

For an hour one decrepit animal was tethered to a post in the water, soaking its legs; but nothing seemed to stop those trout, and eventually I caught eight of them, after rising, I should say, eighty, and hooking a lot which escaped—the big one among them, of course. The Red Quill Gnat was most effective, and had to be fished dry; but the Wickham and Alder also did execution, and also the Coachman towards his own time, though I had to leave before he was quite due.

The boys here are fairly civilised, and when it is explained to them that if they stop playing ducks and drakes there is a better chance of seeing sport, they sometimes do so.

Also one can cast from the mill yard, and need not endanger the hats of the passing lady cyclists, though a little carelessness may easily end in disaster.

It may be noted by anglers having perhaps an hour to spare in some country place, with a preserved stream, that very often whipping from a bridge is tolerated, if not openly allowed; but I believe that is not the case here. The stream and pool are very small, and do not afford room for more than one rod to work comfortably.

J. PAUL TAYLOR.

DEEP SEA FISHING IN THE SOUTH PACIFIC.

I HAVE lately received a very interesting letter from a nephew of mine, Mr. J. Arthur Shaw, who has for many years resided at Savu-Savu, one of the Fijian group, South Pacific. He owns that island, with its cocoa palms, bananas, and bread-fruit tree plantations. In the slack season, when not making copra and palm oil, &c., he indulges in deep sea fishing, or fishing among the coral reefs and atolls of this group of the Melanesian archipelago. An atoll is a more or less circular ring of coral, enclosing a deep water lake or lagoon, communicating with the outer sea by a breach in the coral ring. Some are of large size. Bow atoll is thirty miles long by six miles broad, Rimsy is fifty-four miles long by twenty across, Suadiva is forty-four miles by thirty-four. These atolls are infested by sharks of large size. As Mr. Shaw's description of the sport to be had is unique, and likely to be interesting to English anglers, I feel pleasure in giving readers of the *Fishing Gazette* an account of it, supplemented with some extracts from that excellent work, "Wild Life in the Southern Seas."

My nephew says: "As to fishing, there is any amount of it to be had round these islands. Not much science is needed, as the fish almost hook themselves. We frequently get them up to 120lb., and at times much heavier; but it is tremendous work getting them to the boat or canoe after they are hooked."

Among the various fish of the South Pacific which are caught in the vicinity of the Melanesian and Polynesian archipelagoes, are the *palu*, the *tau-tau*, and *takuo*. All are semi-nocturnal in their habits, and feed best just before dawn, or an hour or two before sunset. They prey on flying-fish which swarm about the coral reefs; the islanders catch and use flying-fish for baits. All three kinds of fish mentioned are sport giving, and appreciated as palatable food. The *tau-tau* is in appearance very much like a salmon, except that its head is covered with hard bony plates, and the jaws armed with large serrated teeth. The *palu* is a deep water inhabitant, varying from 3ft. to sometimes 6ft. in length, is scaleless, but covered with horny projections that curve backwards. The *takuo* is a species of albicore, and is frequently caught of 120lb. and upwards. There is another fish called *pala*, of no affinity to the *palu*, inasmuch as it is a surface-swimming fish, and is never caught at night; *pala* attain the length of 7ft., but are slender. The flesh is coarse, and seldom eaten, even by the natives of the islands; but they are beautifully coloured fish, the back dark blue, and sides silver grey, and in shape like mackerel. The head is composed of bony plates, and their long jaws are fitted with terrible teeth, sharp and saw-like, the bite of which would sever a man's arm, like a shark's. The islanders display much skill when fishing for *pala*, which is exciting sport, because of the immense strength of even a moderately sized fish. The tackle used is a four-plait cord made of coconut fibre, the end 3ft. of which is bound with wire, so as to prevent the fish's teeth severing the line. A small shark hook baited with a flying-fish is towed thirty or forty yards behind the canoe. One man attends the line, while four paddle swiftly along, at about two miles from the shore. Bits of flying-fish thrown overboard occasionally attract the *pala*, and soon a splash shows that one is following astern, and devouring the pieces of fish. Another splashing swirl still nearer, and the fisherman hauls in the line with both his hands, while the paddlers put on increased speed; suddenly the line tautens, and a tremendous commotion shows that the *pala* is hooked. Then the paddlers instantly reverse their positions, and face the other way; the bow of the canoe has become the stern, the man attending the line takes a "bend," or "turn," with it round a thwart, and the men paddle at top speed after the *pala*, which is immensely strong, and tows the canoe along a mile or two before it is exhausted, and got near enough for a bowline noose to be slipped over its body. The strain ceases, the *pala* is pulled near, but it has only rested for a few seconds, and away it darts again, and drags the canoe and its occupants at terrific speed for another mile or so; the speed decreases, and the line is hauled in until the

gleaming body of the fish is visible; but it may yet have strength enough to dive down under the canoe, and perhaps foul the outrigger and capsize the crew. At last the big fish is got to the port side of the canoe so as to avoid the outrigger, which it might break in its dying "flurry"; the fisherman deals a heavy blow with a club on its bony head; the fish, although half stunned, is still strong, and throws itself aloft, to fall back on the water with a resounding smack; then with a last short struggle is hauled alongside, killed, and towed ashore, if its length is such, as is often the case, that it cannot be taken into the canoe.

The clergyman of a coast village in South Cornwall jumped out of his pulpit one Sunday evening, and, saying to his congregation "start fair," raced with them to the beach, divesting himself of his vestments on the way, for shoals of pilchards were coming into the bay. Similarly my nephew, as the mission bell rang for evening prayers, gathered his crews together with their canoes and made for beyond the reefs, where was the prospect of good sport among the flying-fish.

On one side of each canoe a bamboo framework is "outriggered," on which is placed a bundle of torches made from dried leaves of the cocoa-nut palm; these torches are from 6ft. to 8ft. in length, and are quickly made by the women. The crews consist of five men—two to paddle, one to steer, one the torch bearer, and the other to use a scoop net stretched on a large ring of cane, and mounted on a 12ft. pole. Sometimes a score canoes are employed, and the little fleet dash over the surf on the reefs into the deep water beyond.

A small torch made of resinous fibre, in which gleams a spark of fire, is carried to ignite the larger torches with; the fleet divides, some going to the south, the others to north of the island. Every now and then flying-fish leap out of the sea and skim away into the darkness, to fall with a splash a hundred yards away. At length the order is quietly given to "Light up!" A torch is passed amidship, and one of the men thrusts the smaller torch into the end of the big one, and blows on the spark till it bursts into flame; this is done in the other canoes. The torch bearers stand up, and glares of red light illumine the sea; a man stands in the bows of each canoe with the scoop net. A minute more and the fleet is among the flying-fish swarming on the surface of the sea, dazzled by the blinding light. With a rapid sweep of the net the man scoops the fish up, gleaming of burnished silver and blue; reversing the net he tumbles a dozen into the canoe, where, with quivering tails and outstretched fins, they expire.

Splash, splash, and the netsmen scoop up more fish until the canoes are filled, the torches have burnt out, and the sea is dark again; then the fleet, merry with success, make for the island, where the wives and sweethearts meet them and join in congratulating the men on their grand capture, for the flying-fish are welcome fare to the islanders, even the white population eat them with relish, for the fish are very toothsome and wholesome. A few dozen are kept as baits for *tau-tau* and *takuo* fishing, which I shall describe in my next article.

ALFRED JARDINE.

(To be continued.)

NATURALLY VENTILATING WATERPROOF KIT FOR ANGLERS.

MESSRS. BURBERRYS, of Basingstoke, and 30, Haymarket, have sent us a most attractively illustrated catalogue of their latest inventions and designs for the benefit of those who engage in sports and outdoor pastimes.

We can strongly recommend the goods made of the patented gabardine combination materials, in which the outside is gabardine, and the inside tweed or homespun.

"This is the plan of uniting gabardine and its advantages—strength, thorn and rain resistance—with wool and its advantages—warmth and general comfort—the outer texture being gabardine, the wool tweed coming next the body, both fabrics waterproofed.

"This plan of making establishes gabardine as a weatherproof material in advance of any other form of mackintosh or rainproof cloth, affording, as it does, healthful comfort under the most varied conditions and maintaining the normal heat of the body, whether the exercise be violent

or light. Thus the essential requirements of sport are met, and one may start in the morning with the weather fine, knowing that should it change and the rain pour down later, he will still be as comfortable as it is possible to be under such adverse circumstances.

"Proof against rain, sleet, snow, thorns, brambles, fish hooks, hot or cold winds, yet porous as ordinary cloth, and therefore naturally ventilating.

"It is essential that gabardine should be made in combination in all cases where rainproofness is the primary consideration; gabardine unlined being recommended for colonial wear, and for shower-proof garments where extreme lightness is a necessity."

Having for years used and had experience of the excellent qualities of gabardine for all kinds of outdoor sport, we have no hesitation in recommending anglers who are not acquainted with it to send to Messrs. Burberrys, 30, Haymarket, London, for their new catalogue.

ANOTHER PART OF THE WANDLE THREATENED.

WE are sorry to hear that the river Wandle is again in danger. This time it is not the Croydon authorities who are the guilty parties, but the village of Carshalton, which is pouring a disinfectant into the hitherto pure branch of the river, which rises in its midst. Within the last ten days nearly all the yearling fish have disappeared, the older ones only being able to hold out against the noxious fluid.

We understand that steps are to be promptly taken to bring the offending parties to book; but surely it is the business of the Surrey County Council also to take the matter up.

A BIG PROJECTED GAME PRE- SERVE.

THE *Daily Chronicle* says: "A number of sportsmen in Canada have in contemplation the establishment of what, if the project is realised, will certainly be the largest game preserve in the world. The club, which will bear the title of the Lake St. John Limited Privileged Club, will have rights to the fishing and hunting in 30,000 square miles of territory, and the outlay on the preserve is expected to be about a quarter of a million sterling. Already £80,000 has been spent in acquiring the rights of most of the trout and other fishing waters of Lake St. John and its tributary rivers and lakes, as well as in erecting hotels, &c., which will be under the supervision of the club. Arrangements are, it is said, also being made with the Government of the province of Quebec to secure two tracts, each a thousand square miles in extent, for game parks for the club. These are to be stocked with moose, elk, red deer, and caribou, as well as the best species of foreign game birds, which live under similar climatic conditions to those of Canada. The admission fee is expected to be £100. Many prominent Canadians and Englishmen are interested in the scheme."

CONCERNING SHALLOW SWIMS AND COLOUR OF RODS.

No one would believe the number of anglers I have seen fishing in clear, comparatively shallow water, when every movement of both the rod and angler could be distinctly seen, and then wonder why they were not successful. When one considers that even such fish as dace will rush off at the sight of one, whilst our old friend the chub will dart out of sight under the first bush, willow root, hollow bank, bunch of weeds, or even a hole in a stone wall, I think it strange that anyone calling himself a fisherman should expect to catch fish when angling with a highly varnished, white, glittering rod, constantly moving over the swim, and the shadow from some of these long formidable rods is very pronounced. I have seen anglers fishing with a tight line in bright, sparkling water, not more than 2ft. or 3ft. in depth, when I have no hesitation in saying that every fish in the swim could see every movement of both rod and angler, and I firmly believe that on these occasions even a hungry fish, once fairly

frightened in the manner described, would be more likely to refuse a bait than a much less hungry fish when offered a bait where he could examine and, if necessary, test the lure free from danger and suspicion. I have frequently caught fish in shallows, 5ft. to 6ft. from the rod, in a discoloured water, where one would stand a very poor chance of taking a single fish in the same style in a bright, gin-fine water. A novice not in the know might fancy there would be no difficulty in the matter, but let him strike, say, a chub and play it to the net, and he might stay there until the cows come home before he could catch another.

On innumerable occasions fishing "fine and far off" is excellent; in fact, is the only method one can adopt. On the other hand, the young angler should not forget that there are certain bank swims easy to command in certain rivers in which he should make it a rule to catch the fish nearest to him first.

After hooking and playing some good fish a short distance from the bank, and thereby disturbing the swim, the fish naturally move lower down the stream, where by judicious ground-baiting, and by swimming the float with care and caution, he can often try for them with success, and so catch all that was possible within a certain distance; but with respect to fishing fine and far off it requires considerable skill and practice to strike a fish forty or more yards from the bank. With several anglers that I have seen it has been a case of attempting the impossible. Neither the rod, reel, or line were adapted for the work; the latter, from not being prepared previously, has clung to the rod in a most provoking manner. Fish after fish has been missed, because the strike was much too weak, and often did not even reach the float, let alone the fish, and that at a depth ranging from 6ft. to 7ft., and even more.

If these clever gentlemen had been content to catch their fish in a run down of 20yds. they would probably have been more successful. They would have struck with better effect, and certainly have avoided the nuisance of the line constantly clinging to the rod.

By keeping a good backward pressure on the float it can be kept straight in a line with the rod top, the bait kept well in front of the tackle, and the fish given a better chance of taking the lure.

Some distance before the float had travelled 40yds. it had gone off at a tangent; in other words, all command over it had ceased, and a considerable amount of slack line had sometimes to be struck up, thereby greatly impeding the force of the stroke, and the line did not make the water hiss. I may just mention for the benefit of the novice that one angler can, and will, often make a run down of 20yds. last as long again as another angler will a swim of 40yds., simply by allowing the float to creep, instead of cut through the water like a thing of life; and I have an idea that the former method holds out more hope and expectation of success; but this may be a mere fancy. At any rate, for more reasons than one I am rather partial to putting plenty of pressure on the float; it gives any fish inclined to feed time to take the lure, keeps the tackle well slanted, and it is capital practice for beginners. Harking back to the colour of rods, these highly-varnished, white, glittering roach poles, although they look so pretty, are an abomination, more especially when manipulated even in the most scientific and skilful manner over clear and shallow swims. All the science does not prevent the weapon flashing, nor the skill allay the fear of the fish; and consequently they bolt, and the angler is left alone in all his glory, often without being any the wiser.

I recollect perfectly well Bailey, of Nottingham, making me a rod, nicely tapered, strong, and lissom, three joints of which were perfectly black, and the top joint the colour of an ordinary fly top, whilst an old relative of mine always used rods painted green from end to end, and would use no other colour. On asking him the reason he would reply: "What colour are the rushes near which you often fish, the grass on which you sit or stand, and several weeds through which the fish roam?" "Why, green, of course." "Very well, that is the reason why I use a rod painted green. And do you suppose, young gentleman," he would say, "that the heron would be such a successful angler if it were the colour

of a flamingo?" "I suppose not, sir." "You suppose; why it would frighten every fish in the place."

After all who, may I ask, absolutely knows that a rod painted green from end to end may not be as bad as the worst flashing fly rod, or a highly-varnished, white, glittering roach rod?

OLD ANGLER.

BOSTONIAN ANGLING SOCIETY.

IT was, as usual, for the good old cause that the members of the Bostonian Fishing Club met at their headquarters on the evening of Wednesday, May 17, to assist the fund being raised for the benefit of the widow and children of the late Mr. Harry Patman, a respected and now lamented brother of the rod, who himself in life was foremost in every philanthropic movement. At first it had been proposed to have a subscription list, but eventually that good and proved trio, Messrs. Taylor, Ward, and Jones, offered their services with a lantern *soirée*. Although a series of pictures had only recently been shown, these before-mentioned princes of the magic art drew on their treasury of many past seasons, and produced a dazzling array of scenes which met with an enthusiastic reception alike from the home birds and the visitors. Music goes well with every art, but not every art can command the services of such music as was happily at the call of the founders of this feast. It is not every day, for instance, that a gold medallist can be expected to charm at such an unpretending affair; but Mr. Bert Jones (violin), the indefatigable Mr. Alf Jones (cello), the piccoloist known as the great C. B., and Mr. Upton, at the piano, supplied a no mean share in the pleasure of the evening. The chairman, Mr. Joe Jennings, who is always to the fore in the manly work of benevolence, was not lacking in appreciating and explaining the various phases of life presented on the screen—he knew every detail, and could do so—look, stock, and barrel, especially the *lock*. The songs of the evening, as usual, fitted to a nicety the subjects illustrated. When the contribution box was opened it showed a cash total of £6.

GREAT YARMOUTH PISCATORIAL SOCIETY.

THE members of this well-known club met for their annual dinner recently at the Bath Hotel. The mayor made an ideal chairman, his quips and jokes continually adding to the merriment. Amongst those present were Messrs. C. G. Baker (the chairman), H. R. Atkins (vice-chairman), L. P. Garrett (hon. treasurer), W. Kirby (hon. secretary), T. Green, Harry Moore, J. Ellis, J. H. Fortescue, G. Sill, F. Allen, A. C. Bradshaw, L. B. Garrett, E. W. Buckingham, G. H. L. Blake, C. Pitcher, W. C. Steward, C. Rowland, J. A. Williams, M. Simpson, A. E. Bond, S. Allen, A. Pank, E. Hayden, A. Beavor, W. H. Draper, W. Staff, R. H. Tooley, P. Search, W. Harwood, J. Read, S. Hassall, P. Musket, C. Ellis, G. Sherman, A. Ellis, R. Beazor, A. T. Dawson, R. Mond, C. H. Harrison, E. B. Freeman, W. Marjoram, A. J. Penny, R. B. Thompson, T. Shreeve, S. Graystone, J. Steel, J. Brett, R. Taylor, J. Buck, H. Freeman, J. Blanchflower, J. English, Capt. Darnell, G. Hughes, T. Royal, and others. The menu and programme were set forth in a manner exclusive to the G.Y.P.S.

After the discussion of the toothsome edibles, served up by Mr. Foulsham, the company abandoned themselves to toast and song, the *post prandial* proceedings of course opening with the "Queen."

Mr. Stewart proposed the "Mayor," which toast was received with musical honours.

The Mayor said that if there was one thing calculated to take away one's breath, it was very conspicuous kindness. He had known such acts to bring tears into a person's eyes. They did not have that effect on him as a rule, but rather deprived him of the power of speech. He very thoroughly appreciated the kind and generous way they had received the toast. He did not know whether the town was fortunate in having him as mayor, but he really did love the old town, because he was greatly indebted to it. When he was a medical student he was such a miserable figure that they called him "The Spectre," but twenty years of hard work, prosperity, and happiness in Yarmouth had altered all, and they called him "The Spectre" no longer.

"Success to the Piscatorial Society" was the toast of the evening, his Worship, in a very witty speech, congratulating the members on the proud position they continued to hold in the angling world.

Mr. G. H. L. Blake ably responded.

Mr. O. G. Baker proposed the health of the treasurer, Mr. L. P. Garrett, and said that that gentleman had held that post for some eight years, and they had found in him a very capable and efficient officer. He had looked well after their financial matters and had not allowed opportunity to stray in the wrong direction, and that was a great thing to say of any man. His books were a model and very easily understood. He had given no trouble to the auditors, but had carried out his duties in an able manner. In fact they had been very happy in their treasurer, and felt they had in Mr. Garrett a capable man. But as time rolled on Mr. Garrett found it necessary for business purposes to move nearer London. On leaving the society he was presented with a handsome testimonial, subscribed by the members, in the form of a pair of pictures painted by Mr. C. H. Harrison, in his best style, and handsomely framed, one being a piece of Fritton Lake and the other Potter Heigham.

Mr. L. P. Garrett suitably replied. He said his office had always been a pleasant one, and he had had no diffi-

culty in inducing the members to think in the same way as he did.

A pleasant interlude was the presentation by the mayor of the prizes won during the year.

The remaining toasts were "The Visitors," proposed by Mr. H. R. Atkins, and responded to by Mr. E. Hayden, and the "Host."

The musical programme was of exceptional attractiveness. Mr. W. Baldwin sang some delightful bass songs, and also collaborated successfully with Mr. Ernest Collinson, whose sympathetic and tasteful singing was also heard with unmistakable enjoyment. Mr. Sam Allen was another popular contributor, while Mr. George Jenks and Mr. Haines Read maintained the continuity of variety with admirable effect; and Mr. C. B. Diver received a warm encore for his violin solo. An excellent gramophone was manipulated by Mr. W. Sbearman, and it only remains for us to say that the accompanying was in the efficient hands of Mr. W. R. Hunn, to show that in every sense the programme was perfectly ordered and perfectly carried out.

WYE BOARD OF CONSERVATORS.

THE annual meeting of the Conservators of the Wye Fishery District was held recently at the Shirehall, Hereford. Mr. J. Hotchkiss (vice-chairman) presided, and there were also present Sir George Cornwall, Mr. C. P. Evans, Mr. A. Battiscombe, Mr. Hope, Rev. F. J. Aldrich Blake, Mr. H. C. Moffatt, Mr. J. A. Miller, Mr. T. Miller, Mr. D. Miller (Chepstow), Mr. D. Miller (Llan-dogo), Mr. R. Lewis Lloyd, Mr. H. Haywood, Col. Davies, Mr. G. Seys, Mr. J. F. Symonds, Mr. M. K. M. Power, Col. W. J. Thomas, Mr. A. G. Vaughan, Col. Cnre, Mr. W. Hughes, and Mr. Evan Owen (clerk). It is quite impossible in the space at our disposal to give anything approaching to a detailed account of the vast amount of business that was transacted, but in brief:

The chairman, in feeling terms, spoke of the loss the society had sustained in the death of the Duke of Beaufort, who for nineteen years had been their chairman; and the present Duke of Beaufort was unanimously elected chairman, and Mr. Hotchkiss vice-chairman for the ensuing year.

The clerk produced the series of questions issued by the Board of Trade with reference to the salmon and freshwater fisheries within the district, and the replies thereto. From these it appeared that the take of salmon during last year was below the average throughout the district. No salmon disease was reported. The licenses issued for instruments numbered 1,455, which brought in a revenue of £285; and the licenses used for rod and line numbered 192 for salmon, bringing in a revenue of £186 10s., and 3,394 for trout, bringing in a revenue of £169 14s.

The chairman then moved the following resolution: "That in the opinion of this board the time has arrived when a Royal Commission should be appointed to inquire into the state of the salmon and trout fisheries of England and Wales, and into the working of the Salmon and Trout Fishery Acts, 1861 to 1896." He said every member of that board would allow that the fisheries had decreased in the take of fish very considerably, especially in the river Wye. However, he did not only base his request for a Royal Commission upon statistics of that river alone, but he took the returns which were given them by the Chief Inspector of Salmon Fisheries for the whole of England and Wales from 1886 to 1896, and what he found was this—that from 1886 up to 1896, taking the whole of England and Wales, there were only four years in which the take of fish was above the average. There were only two years in which the take of fish was about the average, and there were five years in which the take of fish was below the average. With regard to the Wye itself it was a still more serious matter.

A long discussion ensued, and the question of pollution was also brought forward.

The quantity of coarse fish, and how to net them out of their waters; the question of water bailiffs, and other matters were lengthily and animatedly discussed, and a very busy meeting was brought to a close.

YARE AND BURE PRESERVATION SOCIETY.

THE forty-second annual dinner of the above society took place recently at the Maid's Head Hotel, Norwich, when there was a very full attendance of members and friends. The dinner was splendidly served by Mr. H. L. Clark, and during the dessert the usual toast list was proceeded with.

The president (Major Jary) having given "The Queen," and "The Prince and Princess of Wales and rest of the Royal Family," in felicitous terms, proposed "The Army, Navy, and Reserve Forces," and said that writers in certain newspapers had complained of what Gen. Gatacre said at a recent dinner in Norwich as to the desirability of cultivating a military spirit in this country. But the general was right. It was no use bringing up boys to be milkops, for there was no knowing how soon Great Britain might have to fight to retain her possessions.

Lieut. G. B. Kennett responded to the toast.

Mr. G. Hustler Tuck, in a humorous speech, proposed "The Mayor, Sheriff, and Corporation," and said he was afraid the county would be very badly off if it had not the city in its midst. He commented jocosely on the way in which the corporation effected improvements in the city, but remarked that the authorities were to be congratulated on having nearly reached the completion of their sewage scheme, one result of which would, he hoped, be that no more of the drainage would flow into the river. With the toast he coupled the health of the Sheriff.

The Sheriff, in the course of a brief response, said that Mr. Tuck had made some rather caustic remarks upon the

action of the Corporation in various matters, but as he was not a member of that body he was not responsible for what had taken place. He believed, however, that the Corporation had done their best in the interests of the citizens, and with the new technical schools, the improvements that were being made in the streets, and the better provision that was being made for the housing of the working classes, he thought the old city would bear favourable comparison with any other of its size in the kingdom.

Mr. R. J. Colman next proposed "The Yare and Bure Preservation Society and the Health of the President." He applauded the work done by the society in preserving the rivers so as to provide sport, not only for the citizens, but for visitors from a distance, and said that the same idea was being carried out in other parts of the kingdom, for they were endeavouring to re-introduce salmon fishing into the Thames. He trusted that the purification of the Norwich river would lead to the production of more fish, so as to enhance the opportunities of sport, and coupled the name of Major Jary with the toast.

The President, in response, said he feared that the supply of fish in the East Anglian rivers was decreasing in quantity, and various reasons were advanced for this result. Of course if they were constantly taking the fish from the rivers in large quantities there would not be so many left, but one of the causes urged for the depletion was the influx of salt water. They had importations of many things from Germany, and now they had the German Ocean. It was said that Germany was a progressive country, and so it seemed, if, as was stated, the German Ocean invaded our rivers. As to the sewage that Norwich deposited in the river, he had heard it said that this fattened the fish, and he really did not know how they would get on when it was removed from the stream. He appreciated the honour that had been conferred upon him in his election as president of the society, and in recognition of it he invited the members to fish upon his broads during his year of office. With regard to visitors from a distance, he found that they were not excessive in their display of gratitude, for he understood that last year only about 18s. 9d. was contributed by them in return for the sport that the society provided, and if they would leave their guns at home he would be much obliged to them.

Mr. G. M. Chamberlin proposed the health of the "Visitors," and Mr. W. Warner Cook ably responded.

Mr. R. B. Morgan proposed the "Hon. Treasurer (Mr. Geoffrey F. Buxton) and Hon. Solicitor (Mr. J. C. Chittock)," and expressed the hearty thanks of the society to those gentlemen for their services. The toast was very cordially received.

Mr. G. M. Chamberlin proposed the "Secretaries," and said that both Mr. Greene and Mr. Rudd were held in high esteem by all fishermen. (Cheers.)

Mr. Greene, in reply, said that this was the twenty-ninth consecutive occasion on which he had responded to this toast. The society had lost many friends of late by death, and he would like to see more members come forward to take their places, as there was a difficulty in making both ends meet. It was true that the society had a balance at the bank of £100, but they did not know how soon they would require this to oppose some bill that might be brought forward in the House of Commons, and which would be inimical to their interests. They had beaten Mr. Mundella on one occasion—(bear, hear)—and a similar battle might have to be fought again. Mr. Greene also called attention to the fact that when the Bure Society was received into the Yare Preservation Society, it involved the latter in an expenditure of £60.

M. A. J. Rudd also responded, and read letters of apology for absence from several prominent gentlemen.

A MENACE TO LONDON.

THE report of the Hydrographer to the Admiralty reveals the fact that a hitherto unsuspected risk menaces London. This is nothing less than the sitting up of the Thames estuary. In less than twenty years the chief channel has decreased in width from one and a half miles to half a mile, and, adds the Hydrographer's report, "the operations of nature in the estuary are far too great to be controlled by works."

In the twentieth century we are confronted by the cheerful possibility that London will be another Sandwich or Winchelsea, so far as shipping is concerned. The thought that even the Thames, our old familiar friend, is slowly but surely being taken from us by the steady and continued aggression of alluvial deposit, is such as to warrant the darkest forebodings as to our future.

One remedy is to stop the hase uses to which the river is put by a large part of the riparian population as a convenient dumping-place for rubbish. Father Thames must flow to the sea unencumbered with the dead dogs, river-side garbage, ashes, and sewage which he at present is compelled to receive into his none-too-capacious bosom. Another remedy would be to undo the drainage work of the last twenty years in the river basin, which results in heavy floods, bringing down a large deposit of silt.—*Daily Mail*.

THE Royal Aquarium holiday programme has met with tremendous success, and is to be repeated daily next week. On Tuesday next, in the St. Stephen's Great Hall (adjoining Royal Aquarium), a great International Chess Congress will commence, and continue until the middle of July. Play will take place daily from 12 until 4.30 p.m., and from 6.30 to 10.30 p.m. The congress is organised by the British Chess Club, and is under most distinguished patronage. £2000 is to be given in prizes.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—Whit Monday has always been the starting point of the world-be anglers of the Thames who know nothing of the bye-laws of the river nor the seasons and sizes of the fish, and were always disappointed, after their investment in fishing tackle, when they were warned against using it by the river keepers. I always regarded it as a portion of my duty to assist the officials at that time, and never found it an unpleasant or disagreeable work. I will say this much for the would-be anglers who, though under a feeling of disappointment, were always ready to give up the pursuit, as it was done in perfect ignorance and with no intention of violating the law. During my forty years' work on the river I never gave the anglers occasion to offer me any abuse, as I always cultivated the advantage I had acquired of possessing a polite and courteous education, which carried me through every difficulty, and it is a very useful lesson for others to learn who have shown the want of it. I am very glad to notice in last week's *Fishing Gazette* an effort is being made to give a further appreciation, or addition, to the valuable and praiseworthy services that have been so ably and willingly given by Mr. Ben Abrahams for the benefit of angling and anglers, with special reference to the Anglers' Benevolent Society. I can very well remember the time when he was most desirous of working for the T.A.P.S. in asking for a deputation, and of getting up a competition in the lower Thames. The feeling of the committee was that he was living too great a distance from their portion of the river to be able to do anything for it, and, as regards the competition, it will be remembered by some that such competitions did exist in connection with the clubs on a Sunday at Penton Hook, and great complaints were made of the quiet and peaceful character of the locality being disturbed by the van loads of competitors that came down and took possession of the river. The committee were of opinion it would do them more harm than good, and therefore could not entertain it. They fully appreciated the kind offer of Mr. Abrahams, and regretted their inability to meet his wishes. I hope the present movement will be a successful one, and some of the members of the T.A.P.S. will support it, as, from what I have stated, he had evidenced a willingness to do something for it.—B.

—(Goring).—A gentleman took a trout at Cleve on Tuesday, weighing 3lb. 13oz.—H. J. GARDINER.

—(Hampton Court).—William Milbourne writes: "Mr. George Woods, of East Molesey, during the last week has creel'd three trout at the weir, weighing respectively 5½lb., 3½lb., and 2lb. The water is in good condition and the fish well on the feed. There are more trout at Hampton Court this year than I have seen for the last ten years. The only anglers I have seen are those fishing in private boats, and the professional men have not got anything to do, as no one comes to go out with them."—B.

—(Hampton Wick).—Head river keeper, W. Douglas, reports he had heard of a trout having been taken at Sunbury, but on inquiry there nothing was known. The trout are well on the move in different portions of the river. The greater portion of gudgeon have spawned, and the river in good condition for fishing.—B.

—(Shepperton).—George Rosewell has succeeded in adding another brace of trout to his list, one of the fish, weighing 3½lb., taken by Mr. Robert Smith; and the other, weighing 7½lb., by Mr. Henry Hills. On Wednesday Mr. C. B. Seils, of Giffordford, fishing in the Tumbling Bay, creel'd a lovely trout of 7lb. 10oz., measuring 24 inches in length and 16 inches in the girth, and, being landed on the Queen's birthday, my kind informant rightly describes it as his "first Victorian trout"—B.

Ancholme District.—The weather remains in a very unsettled state, but as it is much warmer the conditions are not altogether unfavourable for trout fishing for those who do not mind a shower or two. The Alder fly has been on in full force for about ten days, and the Black Gnat is on in limited numbers, which will be augmented probably to myriads in a few days. By the time this is in type we shall doubtless have a few Hawthorns. There are not, as yet, many Duns. The Freckled Dun, which is a fine fly, is in evidence, and so is the Checkwing. The angler cannot get wrong with any of the above, but he may also add the March Brown and Cowdung to select from. I have not yet seen the Green Drake; flies are late this year.—THOMAS FORD (Caistor).

Coln, Leach, &c., East Gloucestershire.—A large number of trout fishers have been out on Gloucestershire streams during the Whitsuntide holidays, and in some instances good sport has been had both on hotel and private waters. May Fly has been up in some parts, but not generally as yet, Alder and Yellow Dun being the killing fly, as well as Red and Sherry Spinner. Cold rain and rough weather has checked rise of May Fly very much. Saw Capt. Bartholomew bring in a nice leash of trout at the Swan, at Bibury, on Tuesday. The Duke of Leeds has been having fair sport on the Williamstrip water. Mr. Yeates has been fishing the Bibury Court and Swan waters. Drake will be full on about June 1.—PAN.

Cornish Streams.—The grand rain of last week and this has brought rivers up to a capital level, and some very good baskets of trout have been made. One rod, fishing the Camel, got seventeen trout, the heaviest weighing 1lb. 9oz. Other rods on the same river got from thirty to forty at a single catch. Mr. Jago got a basket of 6lb. On the De Lank stream, Mr. Reffell, staying at Glen View, St. Breward, near Bodmin, got thirty-six trout (with Coch-y-Bondhn and March Brown. The local papers report a trout of nearly 3lb., caught in the neighbourhood of

Lanncoston. Peal are beginning to run, and anglers of the Fowey are trying daily for these fish. The Fowey is rather earlier than the Camel for peal, but below Nanstallon, in the latter river, there should be sport during the coming week, especially after this spring tide.—BODMIN.

Darenth (Horton Kirby, South Darenth, &c.)—Very poor sport was the rule on Bank Holiday, the day being generally unfavourable. Several anglers that I met had scored blanks, and reported no rise on, and only an occasional Jenny Spinner visible. By good luck I got two fish during a brief rise in the morning. Both took the Olive dry. One, being a rainbow, I returned. The other was a nice bright fish of 3½lb. and gave good sport. The water is now higher, and the rain falling to-day may bring a little fresh.—J. P. T.

Dart (Totnes and District).—A good number of salmon have been killed by the nets lately, hauls at the weir running up to a dozen, whilst lower down some fair catches have resulted. On Monday, however, Mr. W. Holmes, an experienced salmon angler, was out, and could not rise a single fish, although it is reported that salmon are numerous in the pools, in one of which a keeper counted no less than nine salmon and twenty-five trutt at one time. Trouting has afforded some nice occasional takes. Mr. E. Ackrell was out early on Saturday morning, after the flood, and killed eighteen splendid fish (about the finest lot caught this season), and Mr. Full basketed ten. Mr. E. Distin secured nineteen on Monday, and Messrs. Martin and Densham have had good sport on the moor. Small lots have been creel'd by Messrs. H. T. Distin and Brelly, whilst Mr. Rogers killed some nice lots by evening fishing at Buckfastleigh. The last named rod also killed a 12lb. salmon, and Mr. Martin secured a 14-pounder in the Double Dart. The Midge are on the water, the black being most prominent, Childer's Fly and Popham being useful for salmon.—DEVONIAN.

Devonshire Streams.—A fair number of holiday rods were on the streams, but the weather was anything but settled, whilst the rivers were also in flood, and sport generally was consequently quiet. A few salmon have been killed in the upper reaches, and a 5-pounder was taken on the Axe with a trout fly. It is worthy of mention that this is the largest fish killed in the Axe for some time. Trouting has not provided large baskets, the best not exceeding a couple of dozen, the flies used being varied. The Avon (South Brent and Kingsbridge) is under the control of the association and a board of conservators. The price of the two tickets is somewhat high, and, in addition to this, the association, which has the best of the river, only dispose of a limited number of permits, and these have been taken up. Naturally, intending visitors stand but little chance of getting much sport.—DEVONIAN.

Eden (Carlisle).—Since April 20 there has been very little salmon angling attempted owing to the scarcity of fresh run fish; but in the last week in April a few fish took the river, and some seem to have made for the upper waters, for between May 17 and 22 Mr. Branson, of Leeds, killed two, 8lb. each, in the Edenhall water, and another gentleman one of same weight. If the salmon pass at Armthwaite into the lower reaches of the river, the anglers there will have an incentive to deal kindly with the young smolts, such as they have not hitherto had. Good baskets of trout are being made with the fly owing to the dull, showery weather. Mr. Raine had nearly 20lb. on Whit Monday. Sea trout are running pretty well, but salmon are scarce. It is held by some that, as the swallows were this year about a month late, the salmon may yet come on in good numbers.—SILVER GREY (May 24).

Esk (Whitby).—With the recent rains this river has been running in moderate flood during the whole of the week, which has enabled some fresh run salmon and sea trout to get up the stream. A fair number of anglers have been out, and, taking into account the time of year, sport may be said to have been fairly brisk. All the salmon landed have been caught with worm, minnow, and fly. The catches to hand are: Dr. Dreaper, one salmon of 5lb.; Mr. H. A. H. Rastall, one salmon of 7½lb.; Dr. English, three salmon, of 4½lb., 4½lb., and 7lb.; Mr. Baker, one salmon of 9½lb. (caught with fly) and eight brace of trout; Mr. Scoones, two and a half brace of trout; Mr. F. Schoefeld, two and a half brace; Mr. A. Stanforth, four brace. Some capital sport has been had on the Esk, at Lealhome. Mr. J. Bradley, of West Hartlepool, landed nine brace of trout; Mr. J. Turnbull, of Heckmondwike, three and a half brace; Mr. A. Bell, two brace; and Mr. J. Calvert, six brace. Whilst fishing on Monday, Mr. Calvert, in the act of casting, caught a swallow, the bird having swooped down upon the fly in its flight, and became hooked and entangled in the line.—J. JACKSON.

Exe and Canal (Exeter).—Bank Holiday proved a fine day for all, but sport was not very fast in this district, bags proving light generally. Among those who scored were Messrs. Snell, Taylor, Theeuwissen, and Roberts, the trout making up in quality what they lacked in quantity. Mr. J. Coombe was fortunate in securing a fresh run salmon of 10lb. from his private water at Thorvorton. To-day (Wednesday) heavy rain has fallen all the day, so expect rivers will be in spate for next day or so.—RED PALMER.

Fen District (South Lincs. and Cambs.)—Bank Holiday proved a great disappointment to trout fishers in the midlands. Cloudy, cheerless, and cold, with a temperature just the same as Christmas Day, a rise was next to impossible. Several local experts had arranged for a holiday visit to some noted water, whilst others had determined to flog the local streams. It need hardly be said the enterprise proved a frost. A few captures were reported for the previous week. The grub is still the favorite bait.—LIMPET.

Frogny (Anglesey).—This small lake, but little known, is patronised by anglers from Llangefni, and very good baskets have been taken by Mr. Thos. Hughes, Mr. Crewdson, Mr. Jones, vet. surgeon, and Mr. Jones, the Bank—W. H.

Idle District (North Notts.).—It is seldom that the Whitsuntide holidays have opened more inappropriately than has been the case this year. Cold and cloud has followed sunshine and storm, and though many went into the district for the holiday few have come out of it burdened with fish. Locals report a blank, and though water is all that can be desired, whipping it with flies is like flogging a dead horse. Surely we shall have a change soon, for are we not on the eve of the May Fly season? Aquatic flies are scarce, and land flies are "daft." A few fish fell to the bottom artist on the Idle last week, but they are not worth a report.—L.

Lake Coron (Bodorau, Anglesey).—Messrs. Evans and Smith, Holyhead, had fine baskets of fifteen and thirteen trout respectively, caught in the evening rise with a fly. The writer took seven on Saturday (best fish, 1lb.), which took a Mallard, scarlet body. Lake too high for good sport.—W. H.

Lake Vyrnwy (N. Wales).—Nothing could have been worse than the weather during the past week. Incessant rain, accompanied by high winds, practically made fishing impossible. Only the keenest of anglers made any attempt to venture on the lake for more than an hour or two. The fishing in the rivers, however, has been up to, and perhaps better than, the average. The take for the week on the lake has been only 156 fish, weighing 94lb. On the 17th, twelve fish were killed, scaling 7lb. 14oz. On the 18th, twenty-two fish weighed 14lb. 9oz. On the 19th, fifteen fish, 9lb. 8oz. On the 20th, seventeen, 10lb. 1oz. On the 22nd, when the weather was not as bad as on other days, forty-nine fish were killed, weighing 29lb. 1oz. On the 23rd, forty-one fish scaled 24lb. 1oz. The following are the best baskets on the river: Mr. Graham, thirty-two fish; Mr. Henty, seventeen; and Mr. Mason, twelve.—LONGDRIFT (May 24).

Lea and Tributaries.—The river on Wednesday was in condition for trout fishing, but sport during the holidays was of the most disappointing description. The stormy, unsettled weather and cold nights quite put the trout off feed. Eels are not yet running properly, owing to the cold weather, but a few have been caught up to 1lb. Coarse fish, especially roach, have been seen in considerable numbers, and if there is a good flow of water the summer angler should do well with "cads" among the dace and roach. The season for the former fish begins on the 16th prox., and the roach can be taken on July 1. The tributary, Beane, has yielded a few nice trout, the best brace reported 3½lb. In Oram's water a 2lb. trout has also been landed. No sport is reported from the Rib or Stort and tributaries. All have been well flushed.—JAZAK WALTON.

Lugg and Arrow (Leominster).—Both these celebrated trout streams have been visited this week with some very heavy falls of rain, which has caused them to rise a little, and there has been a stain on them, but it will soon run off. The rain has improved the water, and has brought the fish more on the feed, and they have been rising fairly well at the Iron Blue, Hardy Brown, Spinners; Alder, Yellow Dun, and Stone Fly, and a good few rods have been out during the holidays, and some very nice lots of trout taken. The trout are feeding on bottom baits and the caddis, and with a few warm days we should no doubt see the May Fly, as it is due now, only the weather has been cold. The Pinsley is running in good order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Wind and weather very variable, with occasional heavy storms, which have rose the rivers nearly a foot of deeply stained water. To-day (Wednesday), running down and clearing. We have had slight frosts most nights, which has checked sport. To-day saw the first May Fly on the Lugg, though these appeared on Pinsley on Monday last. Judge it will be the 29th at the earliest before anything will be done with it. Alder, Yellow Dun, Stone Fly, Orange Palmer, Coch-y-bondhn, Iron Blue, and Hardy Brown, with Spinners, Female Yellow Dun, and caddis, for evening, are the best flies just now.—R. T. WILLIAMS.

Mid-Taw (Eggesford District).—River is now in good order, and large baskets are being made. W. T. A. Radford and Rev. R. D. Wade, on Thursday, took twenty-seven very fine trout with the minnow.—F. A. M.

North Staffordshire Rivers.—The Whitsuntide holidays have proved disappointing, through the cold winds and rain, and sport generally has been of a moderate character. On the Churnet, Messrs. Dewis, Goldstraw, and Bowyer took fish up to 1lb. weight. On the Blythe, Mr. Morewood had pretty sport to Partridge Hackle. The Dove has fished best to Olive Dnn. Prospects are rather down until the weather takes up.—F. W. DAVE.

Ouse (Denver).—That the sea trout referred to in recent report from here as being in evidence, causing several inquiries to be made in relation thereto, was practically demonstrated during the holidays, for, notwithstanding the downpour of Saturday to Monday, several enterprising anglers from London paid the river a visit. A brace of trout, scaling 6lb. and 4lb. respectively, was secured from the tide-way by two of the visitors staying at the Jernys Arms Hotel. Bleak would appear to be a most alluring bait. The weeds, I regret to say, are somewhat troublesome, but not so numerous, I think, as in the past season. Weather (Wednesday) improving.—WATER WAGTAIL.

Plymouth.—The rivers are still full of water, but there are complaints of the scarcity of trout. The fish do not seem to be sporting this year so well as last, whether it is from decrease in numbers or any other reason I cannot say, but one thing is certain, that if some hundreds of dozens are taken out from the rivers, they should be

replenished with fresh blood. I hear sad grumbings from the fishermen. The floods have allowed the peal and salmon to run up both in the Dart and Tavy, and some fine fish have been caught, principally with a minnow.—WILLIAM HEARDER.

Seven, Vynwy, Tanat, and Cain (Llanymynech).—More unfortunate weather for holiday visitors than at present could not be imagined. At the end of last week everything pointed in favour of anglers, as the rivers were all in good condition, the weather warm, and flies on the rivers more numerous than has been observed all the season. Since that time everything has undergone a complete change. Cold winds, wet, and very unsettled weather has been the rule, getting worse day by day, until at present the rivers are all more or less flooded, and all the sport possible for anglers is trolling for pike, and of those river pests not a few have been captured during the past week in the Severn and Vynwy by angling visitors, in fearfully bad weather. They deserve all praise for their pluck and perseverance, in lessening these unwelcome habitants from the streams in this vicinity. Anglers who are in the habit of visiting this neighbourhood will hear with sincere regret that the Rev. Elias Owen, vicar of Llanyblodwell, died very suddenly on Friday in last week. He was the most unselfish of men, and not only enjoyed angling himself, but was only too pleased to grant permission to any gentlemen visitors to the Tanat to angle in that part of this noted trout stream over which he had the control.—VYNWY.

Sussex Rivers and Chichester Harbour.—During the holidays a number of anglers were out, but the high wind was a great drawback to all kinds of angling. At times it was almost an impossibility to get a fly on the water. A few dace were taken below Hamsey on the Ouse with Coachman. Some very good trout have been taken from the Sloop, a backwater of the Ouse. From the main river, below Fletching, a nice trout of 2lb. was taken with spinning minnow, and from the streams in the vicinity trout up to 10oz. by worming. From private water in west Sussex three brace of trout, averaging 1½lb., were taken on Monday, but here we have no rise of May Fly. From the Rother a brace of 1lb. trout were taken, and a fine perch of 3lb. was returned to the water. The harbour at Chichester had a few patrons, but the bulk of smelt seem over. A few bass have been caught with rag worm, heaviest ¾lb.—GEORGE F. SALTER.

Taw (North Devon).—The waters are in good condition. I have seen one or two nice baskets of fish, and hear of some good sport on Saturday and Monday, one angler having thirty fish and another twenty-four. Two of our best rivers are closed, but will be open in a month. Salmon are still scarce. The spring flies still in use are the Yellow Badger and Pinkett.—RUSTY GAME.

Teifi (Lampeter, Cardiganshire).—Water in fine condition; good baskets of trout caught daily, visitors in the town having very good sport. Salmon fishing not so good.—H.

Teme (Ludlow).—The Teme in this part is now running clear and a nice height, and in good order for either fly or bottom fishing. The weather during the holidays has been anything but suitable for anglers to get out, and heavy falls of rain have been had, with occasional sunshine, which has caused the fish to move better, and they have been rising well at the fly. The best killing flies are the Blue Dun, Red and Grey Spinner, Hardy Brown, Stone Fly, Alder, Coch-y-Bondhu, and Iron Blue. Bottom fishing since the rain has been very successful, and some fine dishes of trout have been landed. The trout are evidently feeding on the caddis bait at the bottom, and if there was a few fine days the May Fly, which is now due, would be up, and some good sport had with it. On Saturday, with the worm, a nice lot of trout were taken. Fishing on Monday morning a nice dish of trout, averaging from 1½lb. to 2½lb. each, were landed. With the Alder and Iron Blue some fine trout were taken near Ludford. Fishing on Tuesday with the worm and fly was good, and some very fine trout were landed. More trout have been on sale at the fishmongers this week than have been since the trout season opened; price, 1s. 4lb. per lb. The Ony, Corve, Clun, and Ledwyche are all clear and in order, and sport has been had in them with worm and fly; prospects good.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is still running in good order for fishing, being a nice level and colour. The weather has been very unsettled, and heavy rain has been had, which has made it uncomfortable for anglers to get out during the holidays; but there has been a fair number of anglers out, who have used fly and bottom baits. There was a slight stain on the river on Wednesday, and more rain threatened. The fish have been well on the feed, and have been rising well, and some good lots of trout have been taken. The best flies are the Blue Dun, Iron Blue, Alder, Coch-y-bondhu, and Spinners. Bottom fishing has been good, and some nice trout have been landed. The Rea, Kyre, and Ledwyche are all in order.—WORCESTER.

Witham, &c. (Mid-Lincolnshire).—Hopes had been flattered for the Whitsuntide holidays by a more genial outlook, but after Saturday came another change, which was disappointing, to say the least of it. Monday was as cold as Christmas, and though Tuesday was brighter, thunderstorms were not absent. Those who tried for sport were grievously disappointed on the local streams, but a few fish were brought from the holes by the bottom fishers. The weather is so changeable one does not know what to recommend. The condition of the water is all that can be desired, but the rise of fish depends more on the sunshine, which is so very often absent.—LUCI.

Wye and Derwent (Derbyshire).—The weather during the past week has been very unsettled, that angling pursuits have been uncertain. There has not been sufficient rain to make the rivers unfishable, but it has

been uncomfortable fishing, thunder and heavy rain with hail, and a cold east wind on some days. The few gentlemen who have fished the Wye have only had moderate sport. The same remarks may be said of the Chatsworth, Hathersage, and upper reaches of the Derwent. Reports from Darley Dale are rather discouraging for fly fishing. Where bottom fishing is permitted a nice lot of good sized trout have been taken from this latter club's water, also from private and free water about Matlock Bridge during the holidays. Several baskets of trout were obtained from the Matlock and Cromford Angling Association's water. A gentleman from Nottingham took one trout, 1½lb.; another visitor took one the same weight on Saturday. There is now an excellent woodland water for bottom fishing, and those who have ants' eggs for bait will no doubt be well rewarded, as this is the best bait that can be used for trout. Several good fish have been taken with minnow and worm. Mr. Edgar Buxton, with the latter, obtained a very good trout, 2lb. 2oz., near the old petrifying well, Matlock Bath; also the Holmesford and Whatstandwell reaches of this river have yielded some nice fish, mostly by bottom fishing. When the river is fined down good sport may be expected with the fly. The May Fly has not been seen on these rivers at present. Trout seldom take the dace here until June 3rd or 5th. Useful flies: Yellow Dun, Cooper's Fancy, Ash Dun, Furnace Fly, Sand Fly in the evening, and Claret Bunnies.—DOTTEREL (May 24).

Wye (Builth Wells).—River has been in flood since Friday last, and, if no more rain, will be in order end of the week. Both salmon and trout anglers should have good sport for some time. Brook fishing has been good. Baskets of trout, 7lb. to 10lb., have been had with the minnow and worm.—W. B. ROBERTS.

Yore, Swale, Wharfe, Nidd, Dove, &c. (Yorkshire).—The weather during the Whitsuntide holidays has been utterly wretched; and, with the exception of a day or so, May has so far falsified the eulogies of the old writers, that angling in Yorkshire has been followed with the discomforts and disadvantages that thousands of holiday people have experienced all over the country. Nearly all the anglers I have come across during the past ten days are clothed *cap-à-pie* with waterproof garments; and they need them, for the rain has fallen almost hourly, and the bitter cold north-east and easterly winds have been something cruel. I need hardly say, therefore, that fly fishing has been at a discount owing to the frequent heavy freshets that have run into our trout streams; and we have had any amount of "winter scowls" but precious little of "summer shines," and I cannot call to mind a season like this. We had snow on all the hills on Monday morning, and to-day a cruel north-east wind, a leaden sky with rain at intervals, is the Queen's birthday weather that we are experiencing. The worm fishermen have had the best of it during the week, but some good dishes of trout have been caught with the minnow in the upper Yore, where James Blades, with visitors staying at the Crown Hotel, at Hawes, have on some days done fairly well, and a basket or two have fallen to the fly on days the weather could be caught right, all the very early spring flies killing better than the lighter duns and brighter browns generally in request at the end of May. Mr. Dennison, of Leeds, staying at the Rose and Crown, Bainbridge, and other anglers fishing the river there have done fairly, so has Mr. George Helliwell, at Redmire, but sport below there down to Middleham has not been remarkable, and there has been too much water to make it good at Tanfield or Masham. I had very fair sport up the Cover on Monday, catching nine nice trout with the minnow. Another angler I came across had seven with the worm; but Mr. Booth, of Catterick, and two friends had not done so well with the fly, and Mr. Middlemost and party had only moderate sport. Sport in the Swale has not been at all had, considering the bad weather and unsettled water. Mr. Booth and Mr. Gill, of Catterick, have done well in Skeby Beck, the latter well-known angler getting thirty-three trout on one occasion. Mr. C. Musgrave one day caught 9½lb.; and the Rev. A. Vasey, Mr. A. Elwood, Mr. A. Gregory, Mr. Wallace, Mr. Parkin, and a number of visitors have had no cause to complain. Up to to-night's post I have only meagre reports from the Wharfe and Nidd, too much water and too cold weather being generally the summing-up of my correspondents' communications. The most killing flies have been the Dark Watchet, Waterhen Bloa, Orange Partridge ribbed with tinsel, March Brown, Snipe and Purple, Thompson's Fancy, and Cooper's Fancy, and on the first named river Mr. Richardson, J. E. Miller, jun., Mr. J. P. Walker, and others have made nice dishes. Dr. Leonard Masters speaks well of the sport he has had on the Dove during the holidays, and highly recommends my minnow and the Black Swan Hotel at Kirbymoreside to all brother piscators. Heavy rains and thick waters have, of course, interfered with fly fishing on that river and its tributaries, the Hodge; but streams have been well putronised, and Mr. D. Stoor and son, Mr. E. Hill, Mr. M. Snowdon, Mr. C. Russell, Mr. J. Hebron, Mr. Allen (of London), and other visitors have made good baskets.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—There is an improvement in the weather to-day, but it is very cold, and the wind is north-east. The main rivers are in good condition for spinning minnow, with which bait some good dishes of trout were caught yesterday. The tributary streams are in good condition for fly fishing. Salmon fishing in the Esk has been very fair, and several fine fish up to 9½lb. have been caught during the week. The best flies are the Dark Watchet, the hackled pattern of the Iron Blue Dun, Thompson's Fancy, Dotterel and Yellow, Snipe and Yellow-legged Bloa, Woodcock and Orange, and March Brown. Prospects for next week good.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddle.—Rain fell more or less during last week. On Thursday there was a steady down-pour all day long, and both rivers were considerably swollen. Sea trout are now ascending to the upper reaches of the Esk, and some fair catches have been made, principally by local anglers. In the Langholm division of the Esk, Sergt. Bell, Langholm, killed three sea trout. Mr. W. Ross, of Langholm, creelred three sea trout in Glenfira; and Mr. Wm. Bell caught a sea trout weighing 1½lb. nigh the Skippers Bridge. Good baskets of yellow trout have been got in the Langholm water, also in the Ewes and in the little roaring Tarraz. Mr. Johnstone, Langholm, had two dozen yellow trout at a fishing. Anglers in the Caunobie water have been doing fairly well. Mr. Beattie, Wigan, had a basket of 8lb. yellow trout, and he killed two sea trout, weighing 2lb. and 1½lb. Miss Church, Park House, caught a sea trout, 1½lb., and a number of yellow trout. Mr. Wm. Law, Canonbie, had a sea trout, 1½lb., at Jock's Pool. Mr. Wm. Edgar, Rowanburn, landed one of 2lb. from the Hush pool. Mr. Murray, Canonbie, had three sea trout, weighing 6lb. Mr. David Murray, Rowanburn, had a nice sea trout and some yellow trout. Mr. Wm. Riddle, Canonbie, caught two sea trout and a dozen yellow trout. Mr. R. Steel, Bowholm, had two sea trout and a nice basket of yellow trout. Mr. Wm. Beattie, Bowholm, creelred two sea trout and 6lb. of yellow trout. Mr. D. Little, Claygate, had two sea trout and a number of yellow trout. Fishing near Canonbie bridge, a visitor caught two sea trout, 1½lb. each. Some good takes of sea trout have been made in the Longtown and Metal bridge sections. Good sport is being had in the Liddle with yellow trout; Messrs. J. Smith and J. Murray have both had good baskets in the upper reaches. Rivers in good order.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—Mr. Thornley (London), Mr. Boosey (London), and Mr. Marcus, all from Balmagown Arms Hotel, have landed a few salmon; also Mr. R. T. Coupland, of Grunards. On the Glencalvie waters, Mr. W. Allis-Smith, of Glencalvie, got a fish of 9lb.; on 17th, a 13-pounder; on 18th, three salmon, of 8lb., 8½lb., and 14lb.; and on 19th, one of 9lb. Weather most unseasonably cold, and in every sense unfavourable.—B.

Deveron (Banffshire).—Towards the end of last week the weather became very rough and unpleasant. A strong gale was blowing from a northerly direction, and on the coast at the entrance to the river there was a heavy sea running, which would deter fish from entering. The river was in flood on Saturday night, but the water fell in the beginning of this week. A run of fish was expected, but the experiences of the net fishermen on the two first days of the week were none better than that of the former, and only a few salmon were got, and no grilse. The water was too discoloured for successful angling, and little was done at the trout fishing. On the Blairmore section of the river, on the 18th, Mr. A. Gould, keeper, had a fresh run salmon of 7½lb. Owing to the storm on the coast, the cohes could not get to sea to visit the nets on Saturday, and as has frequently occurred since the opening of the fishing this season, the leaders remained in position over Sunday. Only at one station did the fishermen get to sea on Monday, and a fine shot of a score of salmon, including four grilse, were got. Grilse continue very scarce, only half a dozen having as yet been got this season. On Monday a large box was consigned to the market, and a couple on Tuesday. On Saturday a box of 1½cwt. was sent from the fishing at Gardenstown.—H. W.

Dochart (Luib Hotel).—On Monday, the 22nd inst., Mr. S. M. Normand had seventeen trout, 9½lb., five largest weighing 5½lb.; heaviest trout 1½lb.—D. MCNAUGHTON.

Durossness.—A visitor staying at Messrs. Henderson's boarding house has had fair fishing considering the cold weather, taking 41lb. of trout in nine days, including one of 3lb. and one of 2lb., all with the fly. Green and Teal doing best.—R. and T. HENDERSON.

Laig (Alnaharra Hotel).—Angling on hotel waters, May 22, Mr. and Mrs. Straker, Loch Break Bui, fifteen trout, 4lb.; Mr. Day, Loch Meadoie, fifteen, 5lb.; Mr. Kirkbride, Loch Meadie, twenty, 6lb. May 23, Mr. and Mrs. Straker, Loch Hallam, twenty-three, 10lb.—W. D.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, on Saturday, Messrs. Clegg caught ten trout; Mr. James Menzies had a fine basket of thirty-seven splendid trout. On Monday, Rev. Mr. Cut-hill caught eleven trout; Mr. James Menzies had another nice basket of twenty-six trout; the Messrs. Clegg caught seven trout, heaviest fish weighing 1½lb. and 1½lb.—H. M.

Lochleven (Kinross).—Rain fell in torrents towards the close of last week, and the loch, which has been very high since the opening of the fishing, rose to a height unprecedented at this season. The water was on a level with the top of the pier, and the oar shed was flooded. Had it risen a few inches higher the office would have been flooded. The cold has been such as to make anglers glad to return. The dirty state of the water and the adverse weather kept fish from taking, and those that were got were mostly small. A good number of anglers are here at present from England, and are having a very disappointing time. Should the weather remain dry for a few days better sport should be got, as the water is clearing, and subsiding at the rate of fully an inch each day. Sir George Elliot, in two days, had thirty-three trout, 18lb. 8oz.; Mr. Chas. Elliot and Mr. Hugh Maughan, Yorkshire, on the same time, had twenty-four trout, 18lb.; Mr. Rushworth, Colne, two days, twelve trout, 11lb. 4oz.; Mr. Bramwell and friends, Newcastle, thirty-three trout, 27lb. 8oz.; Mr. J. A. Railton, Manchester, nine trout, 6lb.; Mr. Scott, Newcastle, two days, eleven trout, 7lb.; Mr. R. W. Armstrong, Newcastle, eight trout, 5lb.; Mr.

Annan, Helensburgh, and Mr. Stevenson, Stirling, sixteen trout, 13lb.; Mr. Riddal, London, and Mr. Cameron, Armadale, two days, twenty-six trout, 20lb.; Dr. Allum and Mr. Smith, twelve trout, 11lb.; Mr. Hardie, Edinburgh, fourteen trout, 11lb. 8oz.; Mr. Annan and Mr. Sheriff, Helensburgh, sixteen trout, 12lb.; Mr. Macleod, Edinburgh, sixteen trout, 10lb.; Mr. Thomson, Edinburgh, seventeen trout, 11lb.; Mr. Hugh Barr, Glasgow, fourteen trout, 11lb.; Mr. Brown, Edinburgh, thirteen trout, 12lb. Club competitions have been held daily. The most successful was that of the Edinburgh Amateur Club, the catch to seventeen rods being eighty-nine trout, 45lb. 7oz. The heaviest prize basket during the week was got by Rev. J. King, of the Clackmannan Club, who had with fly nine trout, 6lb. 15oz.—ROBERT LAING.

Lyon (Fortingall Hotel, Glen Lyon, Perthshire).—Fishing from the Fortingall Hotel, Col. Burn landed a beautiful salmon, weight 14lb., on May 15. River in good ply. Trout rising freely.—C. W. R.

North-East of Scotland.—The weather has been somewhat unsettled and cold. Snow quite common on the high grounds, although not lying long; rain in torrents on the low grounds, and the rivers and streams in spate. On the Braemar waters, Mr. Farquhar had a salmon of 6lb. on the Invercauld private waters on Thursday, and two, of 7lb. each, on Friday. On the Fife Arms Fishery, Mr. Wybergh had one of 8lb.; and on the private section of Inver water, Mr. Neumann creel one of 8lb. Her Majesty's Balmoral reaches were never so tempting at this season, and the Court officials should have excellent sport during the next few weeks. On the Ballater section, Mr. McGregor's guests finished up a very good spring season on May 26, Mr. McGregor's tenancy expiring on that date. On the Glentana waters, Mr. Bulteel creel one of 5½lb., one of 5lb., four, of 7lb., 7lb., 8lb., and 8lb., and two of 11lb. each; while Mr. Farrar had two of 5lb. and 9lb., and one of 8lb.; and Mr. Jameson, one of 6lb. and one of 8lb. Mr. Larning had two, of 8lb. and 14lb.; and Sir William Brook's keepers a few of average weights. On the Huntly Arms water, Mr. Crawshaw, Mr. Whitelaw, Mr. Watson, and Mr. Fife-Jameson had one each, ranging from 6lb. to 22lb. On the Kincardine O'Neil section, John Harper had three on Desa water, scaling 7lb., 7lb., and 8lb., while Captain Brooke had also one of 8lb. On the Lodge water, Mr. James G. Orr creel four, of 7lb., 8lb., 12lb., and 18lb. On Carlogie section, Mr. J. C. Haslam landed three, of 7lb., 9lb., and 22lb.; and Mr. Lewis Haslam, two, of 7lb. and 15½lb. On Borrowstone, Lord Garrioch creel two, of 6lb. and 6lb. On Ballagie water, Mr. Crawford Logan had two, of 8½lb. and 16lb.; and Mr. Levett, two, of 8½lb. and 11½lb. On the Comonty, Sandy Ross creel two, of 7lb. and 22lb.; and John Mortimer, on the Woodend section, four, of 6lb., 7lb., 9lb., and 14lb. Mr. Burrows has now arrived for the late spring and summer season. On the Kinneskie water, Mr. James Berry had one and two daily, of average weights. This section is now vacant till end of July, in Mr. Berry's (Banchory) hands. On the Upper Blackall water, Mr. Smith, Feughside Inn, had four of 8lb., 10lb., 10lb., and 12lb., on Thursday and Friday last. Mr. Davies and friend creel twenty-five fish on this section during April, and two for the first week in May. It is to be let for first two weeks in June. On the Durriss water, Mr. Baird and party had several fish last week, and up to date have creel upwards of eighty fish on the lower beats. On the Park waters, Capt. McLean and friends are getting an occasional fish. On the Kingessie, Mr. and Miss Fortescue are having one or two fish every other day, but most of the other sections are blank. The salmon supply is still very poor. Grilse are scarcely quoted in the market lists, and sea trout are about as dear as salmon. On the Ugie, Mr. Ingram, Peterhead, made the best basket one day last week, having twenty-five trout weighing 18lb. On the Ythan anglers have been out of it, owing to the unfavourable turn in the weather. The same with regard to the Don. Weather steadily improving; sport getting better. On Tuesday a few fish were got on the Banchory reaches of the Dee; and Mr. James Berry had one of 12lb. on Kinneskie water, to the fly, at Roe's Pott.—G. M.

Shin (Inveran, N.B.).—Since last reported the following sport has been obtained: On 6th inst., Sir John Shelley, Bart., of Michelgrove, Sussex, landed a 10lb. salmon; Sir Redvera Buller, one of 9lb.; and Sir John Ferguson Davie, Bart., of Credeney, Devonshire, a 13-pounder. On 8th, Sir Redvera Buller caught a 14-pounder. On 10th, Sir J. Ferguson Davie, one salmon, 11lb. On 11th, Sir John Shelley, one, 13lb. On 12th, Sir John Ferguson Davie caught a salmon weighing 21lb.; and Sir Redvers Buller, one of 9lb. On 16th, Sir J. Ferguson Davie landed two salmon, averaging 19½lb. each; and on 17th, two, of 10lb. and 15lb. On 18th, Mr. H. Ferguson Davie had four salmon to his own rod, 23lb., 15lb., 10lb., and 11lb.; and Sir John Ferguson Davie, two, of 14lb. and 11lb. On 19th, Sir John, a 10-pounder.—B.

South of Scotland.—In this part of the country a great deal of rain has fallen since last week's report. With the rivers running bank full, very little fly fishing has been had. Worm fishers have been getting good sport among yellow trout this week, and more sea trout have been landed. The weather keeps cold and unseasonable for the end of May. With a low barometer and watery looking clouds we are likely to have more rain. The rivers are in capital order for sea trout running from the sea, and it may be remarked that the run of trout is much better than that of last week. The month of May has been the coldest for a great many years. Unfortunately the cold weather has kept the fly off the water, and yellow trout are not yet in such good condition. Apparently it will take another fortnight's fine weather to bring the trout into order. The following is a note of the sport on the different rivers of this district since last week. **THE ANNAN.**—This river was in flood on Thursday. Heavy

rain fell again on Friday, and the river overflowed its banks on Saturday morning. While the waters remained muddy bait fishers were out in numbers, and many fine catches were made with the worm as a lure. Fishing above Annan Bridge on Saturday afternoon, Mr. David London, jun., killed two sea trout, of 2lb. and 1½lb., besides a good number of yellow trout, all caught with the common garden worm. Another local rod had a big catch of thirty-two yellow trout, the heaviest weighing 1½lb. Mr. McGiverin, fishing in the Craigdale water of Northfield, had a few burn trout with worm. He also hooked a grand yellow trout of about 4lb., but lost it. Mr. Thomson had a number of nice fish, and Mr. Jas. Loudon killed nine or ten above the town bridge. In Mount Annan water, Mr. Pasley Drom's keeper had a couple of sea trout last week, and Mr. Thorburn was also reported as having a few yellow trout. In the upper portion of Mount Annan water, on Monday, Mr. John Rae killed two sea trout and lost three. They were taken with the Silver Devon Minnow in Luce stream. The same gentleman had some fair sized yellow trout. Other rods had fair sport with worm bait. In Hoddon Castle water a few sea trout have been caught. Mr. Learmont and Mr. McDonald were reported as having killed one each last week, and another angler had one. A fair number of yellow trout were caught with bait on Saturday. In Sir Robert Jardine's portion of Castlemilk, as also Murraythwaite, Dormont, Jardine Hall, Wamphray, and Moffat waters the sport has been fair for the period of the season. All the tributaries were in order for worm fishing, and baskets of trout from six to a couple of dozen were killed. **THE NITH.**—This river was in flood on Saturday, and quite a number of rods were out fishing with worm bait. The catches were not of much importance in the lower waters, but further a-field anglers met with better sport. In some of the semi-private reaches a number of good trout were taken. In the Mid-Nithsdale waters the prospects are now better, and sea trout are running. The tributary streams have been doing better, more especially the Cluden and Cairn. **THE GALLOWAY RIVERS AND LOCHS.**—On the rivers of this district some good sport has been obtained, chiefly with the worm bait. On the Ken above Carsphad a local rod killed thirty yellow trout. On the district lochs of Galloway the cold weather has been against trout rising, and little or nothing has been caught this week. **AYRSHIRE LOCHS AND DISTRICT.**—Not many rods have ventured out on the lochs owing to the cold and unsettled weather. On Saturday, Mr. Graham, Manchester, out from the Eglinton Hotel, Dalmellington, killed sixteen yellow trout on Loch Doon with fly. The rivers have not been doing much of late. On the river Gryffe a number of Paisley anglers belonging to the Abercorn Club had fair sport on this water. An angling match took place between six members of the club and a similar number belonging to the Bridge of Weir Association. The strangers (Paisley) won, but only 8lb. 15oz. of trout was caught against 7lb. 12oz. by the Bridge of Weir Club. On the Stinchard and Glangarnoch streams moderate baskets have been had. **THE SOLWAY.**—A remarkably late run of spring salmon took place in the Solway on Thursday last. These were beautiful little fish of 9lb. on the average. Such a late run of spring salmon has not occurred in the Solway for a great number of years. Sea trout are making a better show in the nets this week, and the trout have increased in weight.—HEATHERBELL.

Tweed, Teviot, and other Border Rivers.—Matters piscatorially have not favoured the angler in the Tweed in the Kelso district during the past week. Floods, more or less, have been the predominating feature, and fly fishing has not been what it ought to be at this season of the year. Cold easterly and north winds have prevailed to a great extent, and the want of sunshine has been the means of causing few or no flies to be on the water; and the trout that have been killed were mostly got with worm and other ground-bait, while a few have also been killed with minnow. For the season of the year the fish are not in the condition that one expects just now—plump and full—as they are still lean and lanky, as a general rule. On the Eden, however, which is a more sheltered river than the Tweed or the Teviot, the trout killed there have been in better condition, more natural feeding having an influence to this end. However, notwithstanding all the various diemical causes that have militated against the disciple of old Izaak, some fairly good baskets have been made when the opportunity offered itself, which anglers were not slow to take advantage of. Little has been done in the way of salmon angling during the past ten days, but the recent floods may have been the means of bringing up a few clean fish to the middle reaches. Yesterday, on the Teviot, Mr. Frank Stephani, Kelso, hooked, but unfortunately lost after a twenty minutes' run, a good big salmon, guessed at 16lb., clean run, his tackle (trout fishing) being very fine. Of those who have been most successful in trout fishing during the past week were: On Tweed, Mr. Mercer, on Tuesday, 10lb.; and on Wednesday, 8lb.; and on Saturday he had 8lb. on the Teviot. This week he has had baskets ranging from 3lb. to 6lb., killed on Eden and Tweed. Mr. Mercer's takes were mostly got with worm. On the Tweed, Mr. G. R.-id, 9lb.; Mr. George Watson, Kelso, 8lb.; Mr. Jas. Robertson, 7lb., 7lb., and 9lb.; Mr. Robertson, three baskets, of 6lb., 5lb., and 8lb. At the "Cradles" cast, on the Tweed, yesterday (Tuesday), Mr. William Currie, Kelso, had a fine trout of 2½lb. weight. On the Eden, on Tuesday, Mr. Archibald Steel, jun., Kelso, had 8lb.; Mr. George Robson, on the Tweed, had 4½lb., and on the Tweed he had two baskets of 3½lb. and 6 lb. On the Tweed, Mr. John Wright, Sprouston, with fly, had 12lb. on Monday. On Monday, on the Kale, Mr. Foster, The Felling, Northumberland, had 6lb. of nice trout. On the Kale, Mr. Handyside, Cupar, had 6lb.; and Mr. James, Dalkeith, 8lb. On the Bowmont,

on Monday, Mr. John Currie, London, killed 8lb.; Dr. Currie, London, 7lb.; Mr. Jas. Thompson, 6½lb.; Mr. C. West, Kelso, 4½lb. On the Tweed, Mr. W. Shiell, Kelso, had sixteen trout, weighing 6lb. 4oz.; Mr. G. Robson, on the same river, 4lb. The fishing competitions on the Borders are still in full swing, and the best basket got in the Galashiels Working Men's Club was one of 6lb. 7oz., by Mr. John McInnes. The other baskets ranged down to 2lb. St. Ronan's Club, Innerleithen, had a good turn out, and Mr. James Anderson won with 8lb. Other baskets down to 2½lb. On the Whitadder, on Friday week, Mr. William Martin, station master, Mossend, Berwickshire, killed 16lb. of fine trout on the above river, with fly, and he only fished the Ellenford water.—MAX-WHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Water, and Gormorabney Hotel, Lough Conn).—Weather altogether most unfavourable for fishing, consequently a very poor report this week. Mr. Little, for the week, killed twenty trout, the largest weighing 4lb., and one salmon. On the 22nd, Mr. Whetherell killed a few trout, the largest weighing 3½lb.; Mr. Garvey also killed a few trout, the largest 2½lb. The weather still against angling.—MANAGER.

Ballina (Private Waters, Moy Hotel).—Since last report weather cloudy and occasional showers. Water in good order. Fish getting more plentiful on the river. On the private waters of the Moy Hotel there is a good show of fish. Anglers coming this way may expect good fishing. Major Brooke Colliogwood, Mr. McKenzie, and Mr. Kempsey had some nice baskets of trout at Runagry. (May 22.)—JOHN DEVERS (Ballina).

Bann.—There has been very little done on this river for the past week, as the water was constantly discoloured. It has not ceased raining for the past four days. Lough Neagh is now full, and the river at winter level. It will require a week to bring the water into angling order. There are salmon on all the reaches.—DANIEL O'FEE.

Belfast.—On Tuesday night a heavy thunderstorm was followed by torrents of rain, which sent the rivers rapidly into flood and out of order. Previous to that trouting was fair on the Dams, Capt. E. R. O. Ludlow killing two dozen fish in one day. All over Antrim and Down the rivers are in flood to-day (Wednesday).—J. A. B.

Caragh Lake (Kerry).—Sport has greatly improved here since last report. Anglers staying at Southern Hotel have had some good baskets of trout. Mr. Day and friend killed, on the 20th, one and a half dozen; 21st, two dozen; 22nd, four and a half dozen. Peal are now running into the lake. Salmon anglers can get tickets at the hotel at 2s. per day, to fish both sides of the river. All the lakes in this district are free to anglers.—G. C.

Cork Rivers.—Though the weather has been generally favourable, and the waters in fair order, sport has not been up to anticipation, but the prospects for the next few days are much improved.—T. J. D.

Corrib and Tributaries (Galway).—The variable weather has had its usual effect on the Corrib, for, although the river is full of salmon, and in pretty fair order—a bit high—they do not seem inclined to rise readily to the anglers' lures. Peal are putting in an appearance rather slowly. Since last notes the brothers Lydon killed several fish; Mr. Goddard had four; Commander Law, R.N., four; Capt. O'Hara, three; Mr. A. Jesson, two; and Mr. Shackle, two. Major Barton, Capt. O'Hara, and Mr. Jesson had several nice dishes of trout on Lough Corrib.—J. A. B.

Cammeragh and Inney.—Sport is now good on the above waters at brown trout, and a few good sea trout have been had during the last few days on the latter water, but none, so far, on the former. Salmon and peal are numerous in the tidal section of the Inney.—T. J. D.

East Tyrone Rivers.—The Blackwater and Ballinderry are in a desirable condition for bait fishing, but too high and coloured for fly fishing. There is not much to report from either. No salmon have yet appeared, though they are up the Bann.—J. A. B.

Enniff.—The river is now open for angling. It is a well-known salmon fishery. Dr. Allman caught three salmon on Saturday, weighing 21lb., 18lb., and 18lb.—MACKKOWN (May 22).

Erne (Ballyshannon and Belleek).—Although the Erne has been in high flood for the greater part of the past week, some splendid trout were taken on it by the following anglers: Mr. E. A. Ralli, during the past week, killed eight trout, weighing from 1½lb. to 4½lb., three of this lot 3lb. each, and largest 4½lb.; Mr. C. C. Ralli killed nine trout during same time, weighing from 1lb. to 3lb., in this lot there were two trout of 2lb. each, and one of 3lb. (heaviest); Miss Cornelius, in same time, killed five trout, largest 2½lb.; Mr. T. M. Pike and Mr. G. Antonini also took a number of trout during the past week; Mr. W. H. Woods took one magnificent trout, weighing 6lb.; Dr. Fred. Condon, another fine fellow of 6½lb. On 20th inst., Mr. Wm. Neely and Mr. P. R. took upwards of half a dozen of fine trout since last report, weighing from 2lb. to 4½lb. The first salmon taken with rod and line on the Erne this season was landed by Sir William Williams on 23rd inst., a beauty of 15lb., after a gallant fight of five-and-twenty minutes. The May Fly has appeared on Loughs Erne and Melvin, but not in any quantities up to time of writing.—M. ROGAN AND SONS.

Killarney.—Sport is now pretty good, generally speaking, and the prospects for the coming week are much improved. On the mountain lakes sport has been very good at the small—but game—brown trout of those waters. On the rivers in the Castleisland, Castlemaine, Killorglin, and Caragh districts good accounts have come to hand of the prospects of the summer fishing.—T. J. D.

Lee (co. Cork).—The river has been keeping in a very high state for past week, owing to the continued wet weather. A large number of fresh fish have passed to the upper waters, and excellent sport may be looked forward to. On Lee Mount Fishery, S. O'G. Roche, 12½lb., 7½lb.; on Mashanoglass, Mr. F. Barry, 10½lb., 9½lb., 9½lb., 7lb.; on Ashton, J. L. Peach, 10lb., 7½lb., grilse 3½lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport is slowly improving. Four salmon have been had by anglers since last report, weighing respectively 12½lb., 11½lb., 11lb., and 10lb., and those fish have been rising much better at time of writing. The brown trout fishing is now giving good sport, especially in Coffey's Bay, Eddira Bay, Cummeragh Bay, and around the Rabbit and Tub Islands. Peel and sea trout are now coming up.—T. J. D.

Lough Mrik and Callow (Coghlan's Hotel, Foxford).—Very good trout fishing on the above loughs. Dr. Luther and friend got sixty-two trout in two days; Mr. Mitchel and Mr. Birch, twenty-five in one day; Mr. Schargill, some nice baskets of trout last week. River out of order, but any amount of fish up. Good sport on clear of water.—ANGLER.

Lough Mask and Corrib.—The following anglers, fishing from Mount Gab'e Hotel, Clonbur, are getting excellent sport: Major and Mrs. Ferguson, Capt. Talmer, Messrs. Drake, Haynes, Alington, McCausland, and Fletcher, Major Ferguson making the largest basket, seventeen trout, weighing 28lb.; Mr. Alington caught sixteen, weighing 25lb. (largest trout, 4lb.); all on the fly; some large pike also.—J. A. J.

Lough Melvin.—Owing to the almost incessant heavy rainfalls in this locality since last report, sport on this lake was not up to the average, in consequence of the unsettled state of the water, which has been much discoloured and some days unfishable during the past week. The following are the particulars: Mr. K. H. took one salmon of 8½lb. on 18th inst.; Mr. H. Philips, another of 9lb. on 19th; Mr. James Gallagher, a trout (*Salmo ferox*) of 7lb. on 20th; Mr. P. Gimes, another of 4½lb. on 22nd; Mr. E. Mulhern, one salmon of 10½lb. on same day; and Mr. A. Gilbride, one salmon of 8lb. on 23rd. Several baskets of trout were taken in the early part of the week. The heaviest basket was taken by J. W. Pane, weighing 13lb., and contained nineteen trout.—M. ROGAN AND SONS.

Lough Sheelin.—The Green Drake is putting in an appearance on Lough Sheelin, and by the end of the week will be well on. Heavy rain fell this week.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport has been very good since Saturday last, when rain fell heavily. On Saturday evening and throughout Sunday, Monday, and Tuesday the brown trout rose readily, and three were frequently had at a cast on Loughs Drenane, Cummeravanig, Fílealougha, and Coomcateun. No sea trout can enter the mountain lakes owing to natural obstructions.—T. J. D.

Moy, Loughs Conn and Cullen (Bailina, co. Mayo).—Still no improvement in the weather or angling in either lough or river. Plenty of fish in the lower pools of the river, but not even a minnow could entice one of those beauties. Fine weather is all that would be required, and good sport would be sure to follow. A good number of trout anglers are fishing lough daily, and their best bag is from three to six trout daily, and many bags empty. The lough has risen over a foot since my last report.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—There has been a great rush of anglers here this week for the lake trout. If some of them have been disappointed they have only themselves to blame. Why will people permit themselves to be led astray by persons who know nothing about fish or fishing? Own affair. There have been a few good baskets made this week, some of them weighing from 5lb. to 16lb., 20lb., and 22lb. The Rev. J. L. Peach, England, killed on Thursday, on the lake, eleven trout, weighing 19lb., and on Friday, six, 11lb.; Head Constable Carbery, Tulla, amongst other fine trout landed one, 7lb. I have just seen a beauty landed, 8½lb. Weather has been very wild and cold both on lake and river. Quite a flood in the river to-day. Just what we like. Salmon will run up in goodly numbers; grilse ditto. First grilse of the season landed to day. Next week I shall hope to send you a better report.—S. J. HURLEY.

Shannon (Castleconnell).—We have again had a very heavy rainfall, and consequently the river is in high flood. Sport has been very poor for the week. On Doonass, Mr. G. C. Williams killed one salmon, 14½lb., on 20th. On Woodlands, Major C. Hayes, Newington, killed one salmon, 7½lb., on 19th. There has not been many trout anglers out, but some very nice fish have been got.—J. ENRIGHT AND SON.

Upper Lakes (Waterville, co. Kerry).—Sport has shown much improvement at brown trout on all the above waters since last report, and the fish had were generally of a better size and in very fine condition.—T. J. D.

Westmeath Lakes (Mullingar).—Up to date, May 23, I can only speak from experience of one of these lakes, viz., Lough Ennell or Belvedere, as the rise of the Green Drake is usually a week earlier than on Derravaragh, and a fortnight or so before it becomes general on Lough Owel. The fishing has been of the most disappointing character, sport being very poor. The only reason which has been assigned for this is the abnormal rainfall for the season, in consequence of which the lake has risen considerably, and become in many places near the influx of streams partially discoloured. It is hardly worth while giving particulars of "takes." On Wednesday evening, 17th inst., a friend and self got four trout, weighing 12lb.; and on 20th, self, two fish, 6lb. A very large number of tourist anglers have arrived, including a big sprinkling of ladies.—T. J. W.

MAY FLY PROSPECTS.

THERE has been no rise of May Fly to justify the sending of special reports, but we gather from some of our river reporters that—

"The Midges are on the water (Dart), the black being most prominent."

"Surely we (Idle, North Notts) shall have a change soon, for are we not on the eve of the May Fly season? Aquatic flies are scarce, and land flies are 'daft.'"

"The trout are feeding on caddis, and with a few warm days we (Lugg and Arrow) should no doubt see the May Fly." From the Teme, Ludlow, the same report is given.

"The May Fly has not been seen on these rivers (Wye and Derwent) at present. Trout seldom take the Drakes here until June 3rd or 4th."

"Green Drakes appeared on the north end of Lough Mask in the first week of May, and are to be seen every day till the middle of September, more or less. There is not such a great rise of Drakes on Lough Mask as on the dipping lakes."

"The May Fly has appeared on Loughs Erne and Melvin, but not in any quantities."

Angling Fixtures.

May 29.

Hearts of Oak: Annual supper.

May 30.

Bermondsey Brothers: Dinner and distribution.

Clapham Strollers: Distribution.

Islington Brothers: Distribution.

Izask Walton: Sea fishing outing.

18.—West Ham Brothers: Match.

21.—Brompton: Annual dinner.

25.—Allason United: Pegged-down match.

July 17.—Amicable Waltonians: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The special meeting took place on May 24, when several rules were revised, also the first match arranged as follows: The first pegged-down match takes place in A.A. waters, Veitche's Pound, Langley (meadow side), on June 25. Two rods allowed; all fish, except perch and pike weighable. All to leave by the 12.13 (midnight) train, S.W.R., or any subsequent trains. Members to report themselves to secretary to have their names entered, and show fish and answer roll-call at the finish, when the secretary will give the usual signal for cease fishing. Messrs. Prouten and E. Jackson are the appointed stewards for placing the pegs in. Will all A.A. affiliated societies please take notice where our pegged-down match takes place, so there will be no interference in our match. I thank my brother secretaries to make note of this. We had a circular sent by friend Conn, sec. Bermondsey Bros. A.S., re benefit concert for the widow and eight children of our late and dear old brother angler, and we unanimously voted 10s. 6d., and promised to further take concert tickets.

Ben was chosen to serve on the committee for that purpose, and Ben will be happy to do so. We have also done more good for the little fishes. We have raised the standard line over the present standard of the Thames, and we have, of course, abolished gross weight. We were busy till twelve o'clock.—BEN ABRAHAM.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—At the meeting of the above, on May 24, it was proposed that the annual dinner should take place on July 17. Messrs. Watling, Nunn, sen., Nunn, jun., Haks, Hulme, King, Walker, Millin, and Merry were elected to serve on committee. The special meeting is adjourned until Wednesday, May 31.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On Wednesday next a special committee meeting will be held, when some important business will be brought forward. Two cases of dace, caught by Mr. B. C. Booth recently, will be shown in club-room on the same evening, having been preserved by our member, Mr. J. Jones.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Members are reminded of general meeting next Tuesday, 30th. Messrs. Hersant and Hudson were out trout fishing last Monday on the Darenth; both returned with well filled creels. Lists opened for new privileges; will members let me have their names at an early date.—A. JENKINS.

Battersea Piscatorialists, Lord Ranelagh, Verona-street, Battersea.—Will members kindly attend club next week for important business, also for privilege tickets, Anglers' Benevolent, &c.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack Bermondsey-street, S.E.—The annual dinner and distribution of prizes will take place at the clubhouse on Tuesday, May 30, at 7.30 sharp, Mr. H. D. Hinton in the chair. Members and friends who will favour us with their company are particularly requested to notice the time the dinner will be on the table, 7.30.—ALF. CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Will members turn up in force next Wednesday to arrange prize list for ensuing season? Mr. Lincoln was proposed as working member. Members who want privilege tickets may have same by applying to secretary. Mr. Maurice Cowan was made a life honorary member. Any gentleman wishing to join we shall welcome. Our visit on the S.L.U.V. list was a success, although only thirteen clubs answered the roll, but the talent was grand, with thanks to Mr. M. Cowan; also the gentlemen who favoured us with their presence from the Drayton Park Piscatorialists through Mr. Greg, whom the members thank.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On May 17 Mr. J. Windsor, jun., was elected a working member. The twenty-seventh annual supper and distribution of prizes took place on May 18, on which occasion the chair was most ably filled by Mr. R. Lummes, faced by Mr. J. Pailles. After the supper, which was most excellent, our worthy chairman distributed the prizes, Messrs. J. Taylor, W. Bray, F. S. Pavett, C. Davis, and H. Davis being the chief recipients. A good list of prizes was then booked for the coming season, to which I should be pleased to receive any addition. I thank members and friends of other societies for their company on that occasion. On May 24 Mr. H. Walker was elected an honorary member.—T. PATERNOSTER.

Brompton Angling Society, Doyley Arms, Marlborough-road, Chelsea, S.W.—Our attendances have improved lately, and much pleasure was evinced last Wednesday when our chairman, Mr. Barber, put in an appearance after a severe illness. Several important items of business have been dealt with, our annual dinner being fixed for June 21. Outlying members are kindly asked to note the date, and also that we are making up our lists for new privileges and Anglers' Benevolent cards.—C. ASHBY.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—Mr. Boxall having resigned, Mr. Marshall has been appointed sec. pro tem. All members not clear on the books are requested to attend on Wednesday next, when they will hear something to their advantage. Supper on June 7, at 7 p.m. All donors kindly forward prizes.—R. MARSHALL.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our prize distribution takes place on May 30, and I shall be pleased to see all members present. A committee meeting takes place on Thursday, to arrange prize fixtures for the ensuing season. Privilege tickets are now being issued, and I shall be pleased to receive all names of members wishing to take up same. It will interest members and friends to know that, in response to an invitation, Mr. Percy Thornton, M.P., has accepted the presidency of our society.—S. VIOLET.

Clerkenwell and District United Visiting List.—The concert in aid of the prize fund of the above will take place at the Empress, St. John-street-road, on Monday, June 5. The secretaries of all clubs on the list have a supply of programmes. There will be plenty of good talent and a large room, and ladies are respectfully invited. The next visit on the above will be to the Great Northern Brothers. Date later.—F. CASTELL.

Cobden Angling Society, Keussal-road, W.—On May 18 our annual dinner and distribution took place at the Cobden Club, when a splendid dinner was put on the table by Mr. Wilson, of Cleveland-street, Soho, for eighty-five members and friends, who did ample justice to the different courses placed in front of them. Among the visitors were members of the Duke of Norfolk A.S., Allason United, Jubilee, Harcourt, Prince of Wales, and the Queen's Piscatorialists. After the dinner, £37 10s. in prizes was given away, and I am pleased to state we have £35 to start the new year with. The usual harmonic meet-

ing closed a pleasant evening, and the members dispersed at half-past one.—TWYMAN.

Collingwood Angling Society. Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Our new rule for abolishing gross weight was carried unanimously by the members. Members wishing privilege tickets must apply to me for them as soon as possible. Several members were out sea fishing on Monday and had some good takes.—W. H. STAFFORD.

Crown and Buckland Piscatorial Society. Middlesex Arms, 35, Clerkenwell-green, E.C.—At our last meeting, Mr. J. Steadman and W. Wretton were elected working members. Our concert and distribution of prizes takes place on May 31, when we shall be glad to welcome anglers and friends who will favour us with their company. I shall be greatly obliged if donors will forward their prizes as soon as possible.—G. H. FRANKLIN.

Dibdin Angling Society. St. Martin's Tavern, Pratts-street, N.W.—Saturday's meeting to arrange prize list was a good one. The list was got through in good form, but there are still three or four more to get. On Wednesday evening Mr. Snell swelled the list by offering another guinea, and he also became a working member. Our first outing is on June 18, for three prizes; all fish to weigh. I got twelve members on A.B.S. This is good for a start; at least, so thinks—JOHNNY EDWARDS.

Duke of Norfolk Angling Society. The Apollo, All Saints-road, Westbourne Park.—On June 7 our annual dinner and distribution of prizes takes place. Gentlemen and members will please forward same as soon as possible, and oblige.—W. JENKINS.

Good Intent Angling Society. The Crown, Church-street, Shoreditch.—Our return visit takes place on June 5. Chairman, Mr. G. Hunt; vice-chairman, Mr. G. Hinggett. Chair to be taken at 8.30 sharp. Our distribution of prizes will take place on Tuesday, June 13; chairman, Mr. J. Williams.—R. MURPHY.

Grange Angling Society. The Earl of Derby, Grange-road, S.E.—The seventeenth annual meeting of this society was held on the 23rd inst., Mr. J. H. Rich presiding. During the course of the last twelve months seven honorary and five active members were enrolled, and, after paying expenses and giving several donations, there is a balance in hand of £68s. 10½d. Weight of fish weighed-in showed a decrease of 5lb. 4oz. The following officers and committeemen were re-elected for the ensuing year: President, Mr. J. Hamilton; vice-president, Messrs. E. Ryder and T. Forbitt; treasurer, Mr. J. H. Rich; committee, Messrs. Geo. Gibbons, W. Rich, S. Tagg, C. Green, E. Stoker, J. Chalkley, T. Wolland, W. J. Wade, and E. Lee; hon. secretary, Mr. W. Kayes. Votes of thanks were given to the auditors, Messrs. Lee and Quinn; also to the officers and committeemen for past services. Mr. W. Rich, jun., nominated four friends as active members, and they will be balloted for on Tuesday, 7th prox. The annual outing and dinner was discussed, and suggested that we go either to Windsor or Watlington, on the 27th prox., but that the matter be finally settled at the next meeting.—W. K.

Greenwich Angling Society. Morden Arms, Circus-street, Greenwich.—At our weekly meeting, held this evening, three hon. and three full members were elected, making up to date 116 members. We hold our annual dinner at the clubhouse on Wednesday, June 7, when our president, Mr. G. H. Dowsett, will take the chair. Dinner on the table at 7.30 p.m. prompt. An excellent programme is arranged, and the distribution of prizes won during the last season will take place after the dinner. The committee have recommended that in future no gross weight prizes be given or accepted by the club. A discussion on the subject will take place at a special meeting before the opening of the season for coarse fishing. Several members have been out on Thames and Lea in search of trout, but, with the exception of myself, who caught a small one of 1lb. 9oz, they were unsuccessful, probably on account of the unsettled state of the weather.—J. DRYDEN.

Harcourt Angling Society. Harcourt Arms, Harcourt-street, Marylebone.—Our annual supper and distribution of prizes takes place on June 5, when I hope to see all the members together. We have made two new members, and have more to propose. After June 5 our meeting night will be changed from Monday to Thursday, to meet the requirements of the house.—A. E. PAYNE.

Hearts of Oak Angling Society. Ye Olde Crown, Brick-lane, Bethnal Green.—Our annual supper takes place on May 29, and distribution of prizes takes place on June 5. Mr. W. Wright, of Bethnal Green-road, will cater for the supper.—C. SMITH.

Highbury Angling Society. Globe Hotel, Upper Tollington-road, Holloway, N.—In spite of the unfavourable holiday weather, the following weighed-in trout on Whit Monday: Mr. T. A. Saunders, one fish, 4lb. 2oz.; Mr. G. West, one fish, 3lb. 13½oz.; and Mr. E. Wymer, one fish, 5lb. 13oz. (third silver medal for season). The Kennet fishery has also yielded some smaller fish, Mr. Berry and Mr. Woodruffe both obtaining sport on the 24th. Four nominations for membership were received on Wednesday night, and will be balloted for next week.—E. W.

Islington Brothers' Angling Society. Myddleton Arms, Canonbury-road.—We met on Tuesday last, but so few member present that no business was transacted. The prize distribution on Tuesday, May 30, but the prizes are coming in very slow at present. Members and friends who have kindly promised prizes please forward same to the secretary as soon as possible.—J. H. HERBERT.

Izaak Walton Angling Society. Old King John's Head, Mansfield-street, Kingsland-road.—The distribution of annual and special prizes will take place on Wednesday, June 7. To celebrate the event it has been arranged to have a supper. Those who intend being present at the

supper please send in their names as early as possible. Privilege tickets for the ensuing season are now in course of preparation, so would thank members to forward their instructions without delay.—H. B.

Limhouse Piscatorial Society.—We are now settling down, and getting into good working order. The rule book is now ready, and members can have a copy at the meeting on Friday next. Three new members proposed at the last meeting.—R. J. WELLS.

Lincoln Angling Society. Metropolitan, Winchester-street, Pentonville-road, N.—On May 17 between thirty and forty members and friends sat down to our seventeenth annual supper, which was a great success. Mr. Pearce, our worthy host, catering for us in his usual good style; Mr. C. Watling, sen., made an able chairman on this occasion. A very pleasant evening was spent. The principal prize winners were: Mr. Johnson, 1st gross weight; Mr. Killick, 2nd; Mr. Cook, 3rd; Mr. Bowdrey, Mr. Killick, Mr. Biggs, and Mr. Packer, also taking prizes for specimen fish. Mr. Richardson started our prize list with a guinea roach pole for the coming season, and a great number of other prizes were promised by the visitors and members. In all a very jolly night was spent. I must remind members that Wednesday next is our fourth quarterly night, and election of officers for coming season. I hope to see a good muster.—W. WATLING.

Liverpool Angling Association. Bee Hotel, Queen-square.—Our competition on Whit Monday was completely spoiled by the weather being very wet, cold, and gloomy, consequently only a few faced the music. The result was: Mr. White, first; Mr. Veale, second; and Mr. Whittington, jun., third, all with trout from the Dee and Pen-y-Cae. Climatic surroundings continue most miserable, and to-day (Wednesday) shows no improvement. Worming for trout should be successful for those who care, for the fly is of no use, at least, it was not on Bank Holiday. Well, let us hope for better things before long.—RD. WOOLFALL.

Original Alexandra Angling Society. The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Our annual dinner takes place on June 4 at the Railway Hotel, Burnham-on-Crouch. Train leaves Bethnal Green Junction 9.31 a.m. On June 13 we move from the Lamb to the Crown and Anchor, Cheshire-street, Bethnal Green. Will members state what privilege ticket they want, and pay for their Benevolent card?—G. BARRS.

Ormonde Angling Society. The Royal George, Carlisle-street, Westminster-road.—On May 30 this society will remove to their new headquarters at the Rose, Saville-place, Lambeth-road, S.E. (host, W. King), when our meeting nights will be altered from Wednesdays to Tuesdays. On the opening night, May 30, a concert will be held on behalf of the T.A.P.S., when as many anglers who can make it convenient to attend will be esteemed a favour.—A. HOLBROW.

Prince of Wales' Angling Society. Windsor Castle, Church-street, Edgware-road.—On May 29 we resume business after the holidays, when we have three new members to ballot for. Absent members requiring A.B. and privilege tickets must inform the secretary as soon as possible, as the fishing season is close on us.—W. B.

Royal George Angling Society. Queen's Arms, Bateman-street.—May 31 being quarterly night, we hope to see a crowded attendance to elect new officers for the coming quarter. On June 7 a general meeting is called, so as to discuss some very important business; and members will greatly oblige by turning up on both occasions.—J. GIBBONS.

Royal Oak Angling Society. Coborn Arms, Coborn-road, Bow.—A smoking concert and distribution of prizes will take place on May 30. Our annual dinner will take place at Waltham Abbey on June 4, by brake. Members wishing to go must give in their names by May 30; not later.—F. PIGNATELLI.

St. Alban's Angling Society. Rising Sun, Prince's-road, Kennington.—Our annual dinner and distribution of prizes took place on May 18. The chairs were occupied by Messrs. G. Hewitt and W. Stone. Our prize list for the coming season is an excellent one. Messrs. T. Rosser and W. Graveney have been elected working members. Please note special early meeting next Wednesday; never mind about its being Derby night. We want to take names and subs. for new privilege tickets and other special business—9.30 sharp.—H. ALLAN.

Silver Trout Angling Society. Bedford Head, Maiden-lane.—Our annual dinner and distribution will take place on Tuesday next, May 30, at 8 p.m. sharp, at Mr. Dent's, The Hop Pole, Wardour-street, Oxford-street. Remaining prizes will oblige.—FELICAN.

South Bermondsey Piscatorial Institute. Rotherhithe New-road, S.E.—Several of our members were down at Amberley for the holidays, and the weather being fine gave them a good opportunity of getting about. During our rambles we came across several members eel fishing, and I did hear one of them caught a roach about 2½lb., but returned it to the water. Good sportsman. I must again remind the members of the above that time is getting on, and I shall thank them to attend on Friday to assist in arranging prize list and other business; also, we have another new member to be introduced among us.—J. H. DAVIES.

South London United Anglers' Visiting List.—The annual delegate meeting of societies on the above list will be held at the Woolpack, Bermondsey-street, Bermondsey, on Tuesday, May 30, at nine o'clock, for election of officers, payment of subscriptions, &c.—ALF. PAINTER.

Victoria Brothers Angling Society. Princess Victoria, Robert-street, Hampstead-road, N.W.—On June 6 we have a Central visit, and trust to have the support of the visiting clubs.—W. H. BOUFFLER.

Waggoners' Angling Society. White Lion, Albert Embankment.—We had a fair meeting on May 23, Mr. H. Walton in the chair. The previous week's minutes were read and confirmed. Messrs. W. Heppethwaite, G. H. Mitchel, and E. Reid were balloted for and duly elected. Several prizes have been added to our list. We have vacancies, should any gentleman wish to join us. Personal application preferred on any Tuesday evening.—H. C.

Walworth Waltonians Angling Society. St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Our annual dinner, which was a great success, took place last Thursday, May 18. Mr. G. H. Shepherd very ably presided over a crowded room, and, after the usual toasts, we got through a first-class programme. Messrs. Norton, Greenop and T. E. Daniell's scored immensely, as did also Messrs. H. Payne, W. E. Prior, and several others, whose names I have not space enough to mention.—W. WRAY.

Wellington Angling Society. Prince George, Hillingdon-street, S.E.—Our supper took place on May 19, and was in every way a success. Several gentlemen offered prizes during the evening. A hearty vote of thanks was passed to our worthy host for the splendid supper he provided, and the remainder of the evening was wound up with harmony. I beg to announce that our annual distribution of prizes for season 1898-99 takes place on Tuesday, May 30, on which occasion all club anglers will be welcome.—F. WESTOBY.

West Ham Brothers' Angling Society. Coach and Horses, The Grove, Stratford.—At our last meeting night it was decided to open the season with a peg-down match at Hatfield Peverel, on June 18. All to go down by the last train on the Saturday night.

Ye Olde Clapham Rovers' Angling Club. The Windmill, Clapham Park-road.—A very good attendance at club on Tuesday, making four new members, and room for more. We finally arranged for supper and distribution of prizes on June 6; to follow supper a select concert (free). As we have secured some good talent, we hope to see a full room, and spend a pleasant evening.—N. LINDEN.

NEW PISCATORIAL PATENTS.

The following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

7193. William Hardy, and John James Hardy, Surrey-street, London. "Improvements in fishing-reels."
- 29,367. Fishing. Patentees: Messrs. W. and C. F. Ward, Neptune-street, and G. H. Wise, Rosamond-street, both in Hull, Yorks; relates to trawling gear. The bottom of the otter board is fitted with rollers mounted in brackets. The axes of the rollers may be inclined to the plane of the board, or the rollers may be tapered with the smaller ends pointing forwards to obtain a spreading action. The rollers may be replaced by balls.
- 30,188. Fishing. Patentees: L. Levi, of Hesse-road, and G. Cartwright, of Hesse-road, Hull. Trawling gear. The foot-line is replaced by a rigid tube, and the head-line by a flexible one. When these are distended with air or water under pressure, they assume the shape desired, and keep the mouth of the net open, thus dispensing with beams and otter boards.
8085. John Shepherd, Buchanan-street, Glasgow. "Improvements in and relating to steering gear for fishing and other boats or vessels."
- 29,539. Fishing. Patentees: Messrs. T. Green, Grimsby, W. Broadbent, Weelsby, and J. M. Young, Cleethorpe, all in Lincolnshire, relates to shoes for otter boards. The metal shoe is made broad and heavy, with upturned ends and a channel in which the tapered bottom of the board is bolted. The shoe may be divided at the middle, in which case a strengthening plate is employed. When worn, the shoe may be reversed.
869. Fishing. Patentees: R. Ray, and W. H. Johnson, both Hainton-street, Great Grimsby. Trawling gear. The top and bottom of otter boards are connected by fixed louver boards in the desired manner.
1169. Fishing. Patentee: T. I. Whipp, of Yorkshire-street, Rochdale, Lancashire. Rod fittings. Rings are made by inclining two rings together, and then soldering them together at the apex and to a plate which is whipped to the rod as usual. [We fear Mr. Whipp will find this idea has been on the market here and in America for many years.—ED. F. G.]

THE first number of a new publication, entitled "The Skipper; A Weekly Log of Nautical Matters," will be issued on Wednesday, May 31. Mr. E. F. Knight, the well known war correspondent of the *Times*, has written an interesting account of how he ran the blockade during the Spanish-American war in his attempt to reach Cuba. Mr. H. Lawrence Swinburne, Mr. Whelan Boyle, Mr. C. H. Burrow, Mr. H. D. Lowry, Mr. Alfred Benson, the originator of the *Garman* rating rule; "Jib Topsail," of the *Figaro*; Mr. C. N. Boyn, of "Le Yacht"; and many other well-known writers are among the contributors of the new paper, which is edited by Mr. Julius Gabe.

Toffings by the Way.

THIS is from the Lychnobite poet (Sid. Ransom), and written expressly for "his beloved F. G.":

"The world unites in one caress,
And nations bow the knee,
And pray that Heaven our Queen may bless,
Long spared to us may be.
Join, then, ye anglers, with one voice
Unite in loyal strain:
'God save our Queen'—Rejoice! Rejoice!
Long o'er us may she reign!"

MR. W. C. WILLCOX, hon. sec. of the Portsmouth Waltonian Angling Society, writes: "I shall be glad if you will kindly find space for an announcement respecting the decease of our hon. treasurer (Mr. Edward Rubie Hill). He died on May 13, after only three days' illness, at the age of fifty-nine years. He was manager of the Portsea branch of the Capital and Counties' Bank, was for many years connected with the Artillery Volunteers, but retired some time ago, then holding a captaincy, he also had the Volunteer decoration for long service. The society has lost a very active member. He has been with us sixteen years, the last seventeen of which he held the post of hon. treasurer. He was an enthusiastic angler, and was respected by everyone he knew. The interment took place on May 17, at Kingston Cemetery (local), several of the members being present to pay a last tribute of respect to one who was dear to us all."

"ALL angling visitors to the pretty angling station of Llanymynech," writes a correspondent, "will hear with the greatest regret that the Rev. Elias Owen, vicar of Llanblodwell, near Oswestry, died very suddenly, at the vicarage, on Friday, May 19. He was in his usual health up to the very last, and succumbed to an apoplectic seizure. He was one of the most excited of the spectators of the otter hunt a short time ago on the Tanat, when the otter was found in a bolt nearly opposite the vicarage, and after affording capital sport, was killed a short distance below the Llanblodwell Bridge over the Tanat. Mr. Owen was not only an enthusiastic angler himself, but the greatest friend to anglers in general, and nothing afforded him more gratification than granting permission to any natives or strangers to angle in that part of the Tanat under his control."

"It therefore is no matter for surprise that on hearing of his death all the angling visitors in the neighbourhood of Llanymynech promptly joined in a subscription to purchase a funeral wreath, and the sum collected does credit to their generosity, and a very handsome wreath was obtained for the purpose, towards the cost of which many of the local anglers also subscribed. The funeral took place at Llanblodwell on Tuesday last, and although the weather was most unfavourable, as it rained in torrents all the day, a very large assemblage of friends and neighbours were present to pay their last respects to one of nature's own gentleman, and of whom it can truly be said he had not an enemy in the world, and by none was he more beloved than by his Nonconformist parishioners."

THE business of the Tay Fishing Syndicate, which includes the working of all the salmon fishing leases between Perth and Dundee, as well as some below Dundee and above Perth, has just been taken over by a company formed for that purpose, called "The Tay Salmon Fisheries Company." The signatories to the memorandum and articles of association are the Earl of Ancaster; Archibald Coats, Woodside, Paisley (chairman of J. and P. Coats, thread manufacturers, Paisley); P. M. Coats, Paisley; John Morcrist, manufacturer, Elmside, Perth; P. D. Malloch, fishing tackle manufacturer, Perth; David Robb, salmon fisher, Newburgh; and Henry Robb, Bathfurn, Rynd. The purposes set forth in the memorandum of association are, in addition to the acquisition of the business of the Tay Fishing Syndicate, the carrying on of the business of salmon tackmen and salmon merchants. The capital is £70,000, in 70,000 shares of £1 each. We understand the shares have all been taken up privately, and so are not to be issued to the public. The solicitors are Messrs. McCash and Hunter, solicitors, New Scott-street, Perth.

THE following story, illustrating the luck which sometimes favours the novice, is told by "Piscator," in the *Birmingham Mail*: "A licensed victualler in the Midlands recently started an angling club in connection with his house, although he was altogether unacquainted with the use of rod and line. Some time ago, a contest was organised, and, anxious to participate, Boniface purchased some hooks and other tackle, and borrowed a rod. As demonstrating his ignorance, I may say, he could not even thread a worm, and when the day of contest arrived he had to seek instruction at the river side. Those who have taken part in like competitions will readily appreciate the unpopularity of the man who seeks advice from his opponents. Still, he managed to get his hook baited, and in a very short time succeeded in capturing a good sized eel. He again baited, with the aid of his neighbour, and caught a second eel. In his third attempt, with borrowed hook and bait, he managed to secure a large bream. His success occasioned him such surprise that he rushed away into the middle of an adjoining field with the fish under his coat. When asked what he was doing, he remarked,

'I ain't going to get near the water again until I get this chap safe.' When weighing-in this arrived it was found that the publican's catches exceeded in weight those of any other competitors, and he consequently carried off the first prize—a handsome marble timepiece—much to the chagrin of the whole of the other contestants."

ON May 1 the Great Eastern Railway Company commenced to run first and third-class restaurant cars with corridor carriages, which are attached to express trains, to and from London. Although a quick ride to Cromer, it is yet a long ride—for, of course, it is a long way. Now, thanks to the enterprise of the G.E.R., passengers may breakfast, luncheon, or dine en route at a very small cost. In the third-class saloon car breakfast (bacon and eggs, or chop, or steak, with tea and coffee) for 2s. Luncheon (soup, fish, joint, vegetables, and cheese) 2s. 6d. *Table d'hôte* dinner 2s. 6d. In the first-class saloon, breakfast is charged 2s. 6d.; and dinner (five courses and dessert), 3s. 6d. Surely a travelling "Fruscati's." Third-class passengers can change into dining-car en route.

THE wine list consists of sherry, port, claret, Burgundy, Hock, Champagne, spirits, liqueurs, bottled beers, aerated waters, cigars, cigarettes, even to the renowned Player's Navy Cut tobacco. Fancy an imperial half-pint of bottled Bass for 4d., or a bottle of ginger beer for 3d. Yet so it is; I have sampled many of the good things during a recent "run" to Norfolk, and consider that the courteous manager, Mr. H. C. Amendt, deserves every credit for the manner in which, under his supervision, the attendants carry out the scheme. On Sundays a restaurant car will be attached to the 9.50 a.m. train from Liverpool-street to Norwich. On and after July 1 a restaurant train will leave London on Saturdays for Cromer. Passengers should watch the trains to which these saloons are attached, and Mr. H. C. Amendt will give any particulars on application to the Great Eastern Hotel, Liverpool-street.

THE following account of a duel—not between journalists or fish—between birds is "going the rounds": "An extraordinary scene has just been witnessed in the grounds of Milton Park, at Peterborough. A heron, which had been fishing in a pond near Milton House, captured a fine fish, which it brought up struggling at the end of its long bill, when another heron, which had been watching from the shore, plunged into the water and tried to take away the fish. A desperate combat ensued, as both birds were full grown, powerful, and majestic. They fought with both bill and wing, dealing out hard knocks rapidly, and uttering shrieks of anger. So furiously raged the duel that the combatants raised quite a cloud of feathers round them. Suddenly one rolled over, and the other, uttering a victorious "frank," the heron's peculiar cry, and gathering up its long legs, soared to the trees, where it began preening its disordered plumes. An examination proved that the other bird had been killed outright, and it was the would-be robber, too."

A mossy bank in a leafy bower,
Within my reach, my favourite flower,
Peace, gentle peace, by a silver stream,
Each ripple kissed by a golden beam.
My reel, my rod, my line, my hook,
And by my side, my favourite book.
If aught compares with Heaven's own bliss,
Surely it is—it must be—this. MOSNAR DIS.

THE other day, a gentleman, rejoicing in the salubrious name of Isaacs, went out with a few friends for a day's fishing. Towards mid-day one of their number busied himself with a spirit lamp and a small frying-pan, and managed to land a nicely cooked steak, which he placed in a convenient spot for immediate reference. Going to the bank for a moment to fix his rod safely, he was surprised on his return to find that his intended luscious repast had disappeared, and his rage found vent in "the finest flow, &c." Things came to a climax, however, when Isaacs mildly remarked "that there must be some pig mistake somewhere." "Missed steak!" yelled the other, "of course it's missed! Of course it's somewhere! And, look here, you confounded Shylock, I'll tell you what it is! It's my belief that you know where my pound of flesh has gone to."

MR. W. H. ELSMORE, writing from Norwich, says that "The second competition of the Caxton Club, Beccles, took place on Saturday afternoon. The weather being favourable, some good catches were made. Twenty members took part in the competition. The following are some of the takes: F. Ulph, 7lb. 4oz.; H. Butcher, 6lb. 6oz.; W. Upcraft, 6lb. 13oz.; W. Lee, sen., 4lb. 13oz. The special prizes were secured by Mr. F. Ulph, heaviest weight; Mr. W. Lee, best half-dozen; Mr. H. Ulph, largest fish. Total weight, 3st. 9lb. 11½oz. No fish under 7in. were allowed to count."

I HEAR that my old friend, that well known "salt," George Read Clarke, has been trying his luck this Whitun at Dawlish, in the Channel, but although he fished all he knew (and that's saying something), and railed from Dawlish to Teignmouth river, the sport was poor. The only luck he had in three days was a pollack of 3½lb. and three smaller fish, all taken on sand worm. The fish would not look at an artificial bait, although Mr. G. Read

Clarke tried several. His boatman was William Spicer, of 4, High-street, Dawlish, who can take one to some coarse fishing in the season. Dawlish, however, is worth a visit, the surroundings being simply delightful!

THE following is from the *Daily Mail's* Brussels correspondent: "The hunting of the snark is becoming a mere trifle as compared with the hunting of the seal, a pastime which is now in vogue on the Meuse. It will probably be remembered that two seals belonging to the Liège Zoological Society escaped into the Meuse, where they did enormous damage to the fish, and roused the ire of all anglers. Rewards were put on their heads, but it took many days of persistent hunting to effect the capture of one of them. Since then, the other has roamed the river, but pursued from time to time by fishermen anxious to obtain the reward, and by anglers desirous of checking the spoliation of their preserves. To-day, as one boat was in hot pursuit it capsized. One man was drowned, but a lock-keeper gallantly rescued his three comrades. A moment later the brave rescuer himself fell dead from excitement. And the seal is still at large."

"DESPITE the lowering clouds, the cold winds, and ever and anon the drenching showers, the invitations issued by Mr. Capon for his fishing excursion to the Lark Angling Society's lovely waters," says a Newmarket friend, "were eagerly taken up by those who had been before, and a most enjoyable outing was passed on Whit Monday. Mr. Capon had well stocked his houseboat, the *Leisure Hour*, with the good things of this life, and nothing else was wished for but sport. But, alas! for the fickleness of our climate, scarcely any sport could be obtained; in fact, only one man of the ten or twelve good men there succeeded in catching anything. This angler is just now the envy of Bury St. Edmunds. He laid his rod on the bank, with his line in the water, and proceeded to the boat to quench his thirsty soul, and on again taking his rod, found to his amazement that he had a bite. He steadily played his fish for some moments, pulling him towards him, and then letting him have line again, and eventually got his bite to the top of the water, to find a very fine bottle of ginger-beer attached to his hooks. Our angler friend had to put up with a good deal of chaff over his fine catch, and one member of the company went so far as to suggest he had been jumping 'hedges' for it. The angler was quite disgusted, and asked them not to make a 'mountain' of a small hill, and that he did not care a 'capon.' However, with a good supply of John Dewar things were soon running in their old groove; the boat wended its way homeward, having, in spite of lack of sport, had a most enjoyable outing."

THE Limehouse Piscatorial Society (newly formed have evidently come to stay. They have sent the Editor a copy of their rules in oaken covers. The rules are very creditable to them; the standard of takable fish, Thames and Lea measurement, with the exception of roach—which they make 8in. Boards of oak are their rules; hearts of oak are their men (a bit hard-hearted, perhaps); and they evidently are ready for June 16.

"BEN," of the Allason United, announces that, in order to save the little fishes, they have put their stand up an inch. The new secretary of the go-ahead Collingwood also announces that his society have unanimously abolished gross-weight fishing. Bravo! Collingwood. I am a life hon. member, and cannot take first gross-weight prize now!

IN answer to J. C. Lacey, the *Thames Angling News* will be sent post free for one year for one shilling on application to Mr. F. H. Amphlett, 43, High-street, Kingston-on-Thames.

JUNE 16 will be the day on which the coarse fish season opens, not, as several correspondents imagine, on June 15.

THE annual report of that flourishing society, the Reading and District Angling Association, is to hand, and will be noticed in next issue.

MESSRS. NEWBERRY and VERNON celebrated the Queen's Birthday by getting several ling from the pier at Ilfracombe. Mr. Vernon had one of 20lb., and one of 16½lb.; and Mr. Newberry one of 12lb., and they hooked and had two others up to the top. Mr. Newberry had a cod of 16lb. the preceding day.

"WHAT's the matter, 'Diag?' Cold no better? Done any trout fishing? Have you—?" Now, wait a minute. Visited a lovely trout stream near Cambridge; rain; cold; wet; confined to the hotel; lunch; something hot to drink; rain; wet; cold; dinner; bed ("caught no fish to-day"). Next day: rain; wet; 2½ minutes' sunshine; wet; lunch; easy chair; dinner; Scotch; home; bed; and glad enough to get back!

THE Nottingham Wellington Angling Society hold their annual dinner on Monday evening, June 5. They have graciously altered the date from Wednesday to Monday to suit the convenience of the London contingent, which, it is expected, will be pretty strong, and amongst whom—if the "flue" can possibly be shocked off—will be

DRAGNET.

NO MORE BULKY FISHING BOOKS. PALEY'S TACKLE AND FLY POUCH.

CLOSED.

Length 5 inches, Width 4 inches.

Has nine compartments for keeping Casts, Flies, and Hooks, and, though holding a large quantity of tackle, takes up very little room in the pocket, and, having turned down leather flaps, always keeps closed. It has solid leather backs and waterproof vegetable leaves.

Price—No. 1 size, 1s. 7d.; No. 2 size, 2s. 6d., post free, from all Fishing Tackle Dealers, or

BRITISH SEA ANGLERS' SOCIETY.

The usual weekly meeting was held on Wednesday, May 24, at the Holborn Restaurant, Mr. R. H. Wood in the chair.

Mr. G. Read Clarke gave an interesting account of fishing experiences at Dawlish.

The chairman gave his experiences of the Whitsun fishing at Southwick with Messrs. Minchin, Mallett, and Orisfield. The fishing was poor, eels, dabs, flounders, and small bass only being taken.

Mr. Clarke gave some most valuable reports on the influence of trawlers on the dab fishing at Dawlish, and the hon. secretary again raised the question of the trawlers and the three-mile limit, referring to the matter of the absurd £10 fine inflicted on the French fishing vessel captured while fishing within British territorial waters.

Mr. Lane asked if any member could explain why mackerel was apt to disagree with six out of eight persons. The hon. secretary stated that in most cases the indigestibility of these fish was mainly due to their having been kept too long before cooking, and the speed with which these fish decompose. This latter fact was emphasised by Mr. Handley, who pointed out that an old Act, still in force, permitted the culling of mackerel on Sunday.

Mr. Glassington reported moderate sport at Deal with flat fish and dog fish.

A short discussion took place on the neglect of the east coast stations by members of the society.

The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON.

HERTFORD ANGLING PRESERVATION SOCIETY.

On May 17 the newly-elected hon. sec. of this society invited the active members to a supper, at the Station Hotel, to inaugurate the present season. The chair was taken by Mr. Wm. Burgess, president, supported by Mr. W. Garratt, ex-president, and a goodly number of guests. An excellent repast was provided, to which full justice was done. The health of the president was proposed in suitable terms by Mr. Fairall, who thanked him for having undertaken to fill the position, and assured him of the cordial support of every member of the society. Mr. W. Waller, V.P., proposed the health of the host, Mr. Fairall, and enumerated the many services he had rendered to promote the success of the society since its formation, eleven years since. The vice-president presented the society with a framed portrait of the late Dr. Brunton, who was for many years a member of the committee. The portrait was that published in the *Fishing Gazette*, which those who knew him declared to be a capital likeness, and better than the photo from which it was taken. The remainder of the evening was devoted to angling gossip in general and some of the ex-president's "tales" in particular.

MATLOCK AND CROMFORD ANGLING ASSOCIATION.

On Saturday last, May 20, members of the committee of the above association, including T. J. Hodson, Esq. (chairman of the committee), H. Cooper, Esq. (treasurer and hon. sec.), also Messrs. Rose (of Spondon), Wyman (of Derby), Davenport (of Matlock Bath), and E. H. Maule, Esq. (of London), assembled at the rearing tanks for the purpose of turning their two-year-old trout into those parts of the river Derwent which are under their control. The trout in the above tanks were the grandest lot of cross-breeds (*Salmo fario* and *Salmo leuvenensis*) this association has ever had, ranging from 7in. to 11in. in length, and numbering about 1200. Two hundred of these were put in the river between the Jubilee Bridge and the Station Bridge, Matlock Bath, and 1000 below Cromford, as far down as what is known as the Alteration. These should be a great addition to the already well-stocked waters of this association, as some of them are takable fish. These fish were all successfully transferred from the rearing tanks and put in the rivers under the supervision of Collinson, the keeper, almost without losing a fish.

J. H.

SEVERN FISHERY RIGHTS.

At the Condover (Salop) Petty Sessional Court on May 20, Frederick Humpherson, secretary of the Castle Fields (Shrewsbury) Angling Association, appeared in answer to the charge of illegal fishing in the Severn. The case was one in which defendant was summoned by the Shropshire and Severn Angling Association for fishing in their waters. At the original hearing the magistrates, on a term of prescriptive right being set up, ruled that their jurisdiction was ousted. The case was carried to the High Court, and sent back for conviction. The chairman said the bench had now no option but to convict. Defendant, in explanation of his case, said their society was induced to go on by the action of the Provincial Angling Association at Birmingham. That body was at their back at the beginning, but afterwards declined to go further. The chairman said he did not think they had anything to do with that. He did not, however, wish to give his opinion of what he thought of the behaviour of the Birmingham Society. Defendant said the case had already cost £30; it was taken out of his hands by the Central Society. Mr. John Williams, the secretary of the Shropshire and Severn Angling Association, and complainant in the case, said they did not press for a heavy penalty; they had, however, been met with every possible opposition. As secretary to the association, he had offered to show defendant their leases, and to meet him with every information. Defendant, however, had been urged to take the course he had

taken by the association in Birmingham, which had not the slightest interest in the fishing of the Severn in Shropshire; whereas, the association with which he was connected had done much for the river, and would now be in a much stronger position than they had ever been before. Defendant handed in two letters from Mr. White, the secretary of the Provincial Angling Association, Birmingham, which the chairman said he should have much pleasure in reading. In one letter the association said it had paid £20 in the matter, and had instructed its committee to brief a barrister for the defence of the case in the Appeal Court, which would cost some ten guineas. After the bearing of the appeal, the secretary wrote saying that the case was one of trespass, and not of fishing for coarse fish without a licence. "My committee," it added, "are of opinion that we did wrong in taking up the case in the first instance." (Laughter.) The costs had been already heavy, and they had decided not to spend more money on the case. (Laughter.) The chairman said he now doubly sympathised with defendant.—Fined £1, and the legal costs, £3 8s.

DESCRIPTIONS OF TWO NEW GOBIIFORM FISHES FROM THE CAPE OF GOOD HOPE.

By G. A. BOULENGER, F.R.S.

GOBIUS GILCHRISTI.

No canine teeth. Depth of body four times in total length, length of head $3\frac{1}{2}$ or $3\frac{1}{4}$. Head as broad as deep, $1\frac{1}{2}$ as long as broad; lower jaw projecting beyond the upper; maxillary extending to below anterior border of eye; diameter of eye, $\frac{4}{5}$ to 5 times in length of head; interorbital space narrow, about half diameter of eye; head naked; organs of the lateral line forming six vertical and two horizontal series on the cheek. Dorsal VI, 12; first dorsal in contact with the second, nearly equally distant from the end of the snout and the base of the caudal; none of the rays produced; longest ray of second dorsal half length of head. Anal I 10, opposite to soft dorsal. Pectoral without filiform rays. Ventral reaching vent or not quite so far. Caudal rounded. Caudal peduncle $1\frac{1}{2}$ as long as deep. Scales 55-56 in a longitudinal series, 17-19 in a transverse series between dorsal and anal. Olive above, spotted and marbled with blackish, dirty yellowish beneath; fins dark grey; spinous dorsal streaked with black, soft dorsal and anal with small black spots, both dorsals edged with whitish.

Total length 110 millimetres.

Specimens were obtained by shrimp net in Little Brak River, Mossel Bay, in June, 1898. The river is salt for several miles inland, as I am informed by Dr. Gilchrist, to whom we are indebted for the discovery of this and the following species:

CALLIONYMUS COSTATUS.

Depth of body eight times in total length; length of head not quite four times. Head $1\frac{1}{2}$ as long as broad; eyes close together, as long as the snout, $\frac{1}{2}$ length of head; gill-opening reduced to a small foramen on the upper surface of the head; preopercular spine curved upward, unispined, not $\frac{1}{2}$ diameter of eye. Dorsal III, 10; first dorsal very small, longest ray measuring $\frac{1}{2}$ length of head; first ray of soft dorsal longest, $\frac{1}{2}$ length of head. Anal 10. Ventral reaching beyond vent. Lateral line single, much developed, sending off perpendicular branches above and below, the upper branches, 35 in number, extending to the middle line of the back, giving the body a ribbed appearance. Yellowish grey, back finely speckled with brown; small blackish spots above and below the lateral line; spinous dorsal blackish.

Total length 55 millimetres.

This new species is described from two of four specimens (probably young) procured in trawl eleven miles off Cape St. Blaize in June, 1898, 40 fathoms.

[The Government of the Colony of the Cape of Good Hope, having undertaken an investigation into the marine fauna, &c., of the coasts from an economic and scientific point of view, the services of various specialists have been procured to work up the material. This investigation will deal with marine biology in the widest sense of the term, including the study of conditions of life dependent on physical factors, such as currents, temperature, &c. Each paper will be published separately as soon as received, and a volume containing a number of papers will be issued at intervals.—J. D. F. GILCHRIST, M.A., Ph.D., B.Sc., Marine Biologist to the Government of the Colony of the Cape of Good Hope].

Notes from the North.

THE subject of pollution is again strongly to the front, and this time it has been authoritatively stated that the problem has been solved. The *modus operandi* is to inject by nozzles the effluent, after being roughly filtered of solid matter, into the chimney stalk, where the strong beat of the furnace immediately converts the spray into vapour and carries it off. The residue cakes, and can be used up in the furnace.

So much for the "wash." The spent lees is to be pumped into the boiler and utilised for water in raising steam. The experiments are being carried out at Ben-rinnes' Glenlivet Distillery, and after four months' trial are said to give every satisfaction to the distillers and inventors alike. We hope so.

The body of George Forest, who was drowned while rock fishing near Stonehaven last week, was found in the hole in the course of Monday afternoon. The rod was first fished up, when the line was found attached to something which, when wound in, proved to be the owner's corpse. He leaves a young widow and three of a family to mourn his untimely loss.

Nethy Bridge Hotel, on the Spey, is to be opened on July 1. It has been specially rebuilt in view of an angler's retreat—fine views, handsome rooms, &c. It is in the centre of an angler's paradise, all of which can be had almost for the asking.

The Ballater and Balmoral Dee waters promise extra well just now. Owing to the late season, low temperature, &c., the bulk of the spring migration is only just showing up there. Lucky dog who can get a rod on these parts this season.

There is no more genial lessee, excellent all-round sportsman, expert angler, and really jolly good fellow than Mr. J. C. Haslam Carlogie, whose greatest delight is to see everyone around him happy and killing fish. He has had the Community for a short spell in addition to the Carlogie water, and although his bag has not been a record one, his chances have been poor indeed owing to the general breakdown in the weather, which is particularly hard on such reaches as his. However, there is a good time coming when once the grilse come away.

Mr. David Smith had four fish one day last week on his upper Blackhall water, of 8lb., 8lb., 10lb., and 10 $\frac{1}{2}$ lb. Mr. Davies and friend had twenty-five for the month of April. The last two weeks in June are let, but the first two are still open. D. Smith, Feughside, Banchory, for particulars.

Mr. James Berry, Burnet Arms, Banchory, had two fine fish on the Kinneskie water, a splendid little section for grilse and summer salmon, and which has just come into the market. Mr. Berry will supply particulars.

Mr. Garden, the celebrated angler, pisciculturist, and authority on everything in the sporting line in the north, has just got back to business after a very severe attack of influenza, followed by complications. Anglers everywhere, for they are legion, will join in congratulating Mr. Garden on his return to business with restored health.

A deputation of Dee tidal anglers is to be heard on the finnock question and the claims of anglers to the tidal waters in the course of the next few days by a committee of the Town Council.

Mrs. Barrie, Kildrummie Inn, Donside, died last week. She was the oldest innkeeper in the north of Scotland, had been in the trade thirty-three years, and was eighty-seven years of age. Her house was an angling resort for Upper Donside, and there was no more popular old lady to be met anywhere.

Grilse are coming away in fairly good numbers, and there should be a good show up soon, as everything has been in favour of bringing them on the coast. Probably the low temperature and thundery weather may keep them out at sea.

Salmon have been seen leaping by trawlers thirty miles off the coast. This is a very rare experience, and shows that the bulk of the spring fish have never yet been within the influence of our fresh-water streams, and certainly accounts for the scarcity of fish in one way, viz., that they have been driven off the coast by the adverse winds.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the Birmingham Anglers' Benevolent Society was held at the headquarters on Thursday evening last, May 18. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The meeting was fully attended. Mr. Hopwood, of the St. Thomas's Society, owing to ill-health, tendered his resignation as a member of the committee. This was accepted with regret. The minutes of the previous meeting, held on April 20 last, were read and confirmed, after which Mr. White gave in his report of his endeavours to obtain permission for the society to fish their annual contest in the canal at Fenny Compton on Saturday, July 8. The report went to show that, although letters had been sent to the Banbury Association and to the Canal Offices at Oxford, no definite reply had been given, as it appeared from the letters received that neither of the parties mentioned had any power in granting the desired permission. With this in view, Messrs. Rabone and McMullen were appointed to pay a visit to Fenny Compton and obtain the necessary particulars as to who is in a position to grant the permission. A discussion arose as to the date when members could join the society in order to compete for the challenge cup, when it was resolved that new members who wish to join in the competition must become members before June 30 next. The reports from the visiting committee were of a very satisfactory nature, the visit to the Junction Society being the means of making a number of members.

Messrs. Coles, Rabone, and Tullett's visit to the Baisall Heath Britannia Society was also the means of inducing a number of members to become identified with the society. Messrs. Wright, Rabone, and Shale's report of their visit to the Belmont Society went to show that they had succeeded in making a number of new members. Twenty-one members of the new Hope and Anchor Club had paid their subscriptions, also a number of new members from the Aston Park Club. The reports were very satisfactory, and the best thanks of the committee was accorded to the visitors for their services. Previous to the next meeting of the committee, the A.B.C., Green Lanes, Salmon, and Southend clubs will be visited. The weather during the holidays has been of the worst description for all outdoor pastimes. We have had rain, hail, thunder, and lightning; in fact, it has been "anything but an ideal holiday." When we ought to have been gladdened by the balmy air and bright sunshine of early summer we shivered in overcoats under an ashen sky. The memory of Whitsuntide last year is by no means a grateful one, but this year's Whitsuntide will remain long in the memories of the midland anglers. On Saturday and Sunday last we had heavy rains. It was also wet, damp, and miserable to the extreme on Monday. On Tuesday we had heavy thunderstorms in the afternoon, which lasted for some hours. On Wednesday we again had rain. Owing to the unsettled state of the weather a number of our members who had made arrangements to go out trout fishing wisely resolved to stay at home, and those who did go out did not do good, and returned home on very bad terms with themselves. A large number of our members have been to North Wales for trout fishing, but the wind and rain caused them to return with empty creels. Mr. Page, the secretary of the Lamp Angling Society, writes to inform me that they have decided to fish their opening contest on July 2 next, in the canal at Alrewas. All fish to weigh-in must be over 6in. in length. A large number of valuable prizes will be competed for. The St. George's Society held a re-stocking contest last week at Amington, in the canal, all fish caught being placed in the river Anker, which runs adjacent to the canal. A large number of fish were taken. The members taking the largest number are in the order named: Messrs. E. Grimes, C. Wainwright, C. Artus, E. Apps, J. Moore, and R. Beddell.

FROM DERBYSHIRE.

Frequent heavy thunder showers and variable winds, mostly from an easterly quarter, have prejudicially affected angling on the Derbyshire rivers during the week, and have kept all but very enthusiastic fishermen from the waters, which at times have been too high and too much discoloured for successful fly angling. On no part of the Dove has that kind of sport been anything but indifferent, and but few good creels have been made. The bottom fishers, however, have had a fairly good time of it in places, and numerous lots of fish have been taken by some of them on the parts of the Dove where permitted. The Dovedale, Beresford, and Hartington fly waters have not had the numerous visitors usual at the Whitsuntide holidays, nor has sport been in the least satisfactory. Good creels have been but few on any of these lengths, as angling conditions have been so unfavourable. Matters have been but a trifle better on the Wye, which is a stream that soon fines down. A few small baskets only have been made on the Miller's Dale, Monsal Dale, and Bakewell and Rowsley lengths, chiefly by heroic and patient anglers who have stood out "in thunder, lightning, and in rain." Very little has been done on the upper Derwent, between Derwent village, Ashopton, Yorkshire Bridge, and Bamford. Fly fishing there has been but of a very poor description, but bottom angling, with ant eggs and worms for bait, has produced some good baskets. Only a few small creels have been made on the Derwent valley waters by fly anglers, who have not been very numerous there. The Chatsworth and Baslow lengths have not had a very large contingent of fishermen, and, excepting a few small creels which have been made, nothing scarcely has been done with the fly on any part of the waters. Bottom fishing has, however, been good in places where allowed. There has been about the same unsatisfactory state of things as regards fly angling on the lower reaches of the Derwent; but bottom fishing and spinning, both with artificial and natural minnow, have been successful; and some very fair baskets have been made on the Holmesford, Watstanwell, and Ambergate waters, chiefly with ant eggs, which are just now very killing, and garden worms. On the "Lums" portion of the Bentley brook, near Matlock, where the trout are carefully preserved, several holiday visitors have taken good lots of fish by bottom fishing with worms and dock grubs, and some very satisfactory sport has been had on those wide sheets of water. At present there are no reliable reports that the May Fly (Green Drake) has been seen on any of the Derbyshire streams. Not until we have warm, settled weather will fly fishing improve. This evening (Wednesday) there are slight signs of amendment in angling conditions: the waters are fining down, and the air is much softer; and if this improvement continues fly anglers may look forward for good sport with confidence. The under-mentioned flies will be useful on most Derbyshire streams: the Dotterel, Ash and Yellow Duns, Cooper's Fancy, Furnace, Alder, Red and Grey Spinners, and Bumbles. Ant eggs, in particular, for bottom fishing.

FROM HULL AND DISTRICT.

The weather for the past week in this district has been very mild, but owing to frequent showers only meagre sport has been met with amongst trout, either on the river Hull or its tributaries. One splendid fish, weighing over 4lb., is reported from the neighbourhood of Grove-hill, and several grand fish have been on the rise in the Weelferry and Figbam district. The flounders and eels are well on the run in the lower waters below Beverley

Beck, and at Wawne and Dunswell; and in the Wawne and Quinton district, on the 21st, three local anglers had a combined catch of ninety-nine fish, one of them having forty to his credit; and on Thursday last Mr. J. Cheeseman had a take of forty-one flounders and eels, some of the fish going from 1lb. to 2lb. each, the black-headed worm being answerable for the best fish. On the 14th inst. the Royal Albert Angling Society fished a match in the upper waters at the Eske Landing, Mr. W. Dixon securing the first prize with 1lb. 7½oz., Messrs. R. Huntsman and H. Hill taking the next two. The Whit Monday matches were about as much a failure as to fish as the Easter tide matches were, for owing to a strong easterly wind setting in the fish went off the feed, and sport was at a discount; and from Hull Bridge to Wawneferry, where the matches were chiefly fished, very little sport was had by the competitors. The River Hull Angling Society fished on the celebrated Minto Flatts stretch, Mr. H. Vinson taking the first prize with 1lb. 2oz.; Mr. J. Powell, second, with 15½oz.; Mr. George Millard, third, with 14½oz.; and Mr. G. Skow, fourth, 14½oz. Next to them came the Hull Ramblers' A.A., on the Cally stretch, Mr. Ike Austin being first prizeman with 12½oz.; Mr. E. Wilcox next, with 11½oz.; and Mr. W. Cheeseman, third, with 11oz. The Derringham Angling Club, who fished at Wawneferry, had worse luck still, the first three prize winners, Messrs. G. Cheeseman, John Thorpe, and T. North, having only a little over ½lb. of fish each to weigh in. Since Monday we have had some heavy thunderstorms and heavy downpours of rain, so that very little will be done until we have an agreeable change of the weather. During last week a few brace of nice trout were taken by our local anglers in the Lincolnshire waters, and from some private waters in the Brough and Cave districts. Worm fishing for flounders has also proved good sport in the havens and drains on both sides of the Humber. At the annual smoking concert and prize distribution of the West Hull Angling Society, under the presidency of Mr. T. Chester, Mr. Thomas Barber was the recipient of the society's gold medal for most points, and also a gold medal for the largest fish. Other special prizes were also presented to Messrs. Crossland, Chester, Bardsley, Carle, Clay, Burt, Breaker, Goodwin, Hall, Mino, Needler, and others. The Central Hull Angling Association's first match of the season was fished at Hull Bridge, Mr. J. Barnett winning the first prize with 1lb. 9½oz., Messrs. J. Simmonds, R. H. Barlow, and G. Dixon winning the next three with a little over 1lb. of fish each. The prizes were delivered on Tuesday evening. The Holderness Angling Association have fixed their second match of the season for June 22, at Newport, on the Market Weighton Canal.

FROM THE LAKE DISTRICT.

On Bank Holiday large numbers of visitors had arrived in the district for the fishing, but many were prevented from casting a line. Tuesday was warmer and showery, and there was a more general turn-out of rods, as there had also been towards the end of last week, when angling may be described as, on the whole, good. Rivers on several days were high, and good sport was obtained with worm and minnow, trout subsequently taking the fly readily, considering the cold winds. The same may be said of Windermere, Derwentwater, and other lakes, where some good panners have been secured. In the Keswick waters Messrs. Denwood, Telford, Lowther, and Spark were amongst the most successful; while on the river and St. John's Beck Messrs. J. and M. Stanley had twenty-four and fifteen fish respectively; Rev. J. O. Crosse, fourteen; Messrs. J. Jackson and T. Moffat, about half a dozen each; and Mr. T. Hodgson, four one-pounders, very nice fish. On the Upper Eden anglers have had little to complain of in the way of sport, several locals having had about a score at a fishing on successive days; and some more, namely, Mr. T. Ellwood, fifty; Mr. A. C. Whitehead, thirty-nine; Mr. G. H. Heelis, seventeen and twenty-five; Mr. W. Kennedy, twenty-seven; Mr. T. Howe, two twenties, &c. Capital baskets have also been taken on the Lune in the neighbourhood of Tebay and Kirkby Lonsdale, while the Kent and its tributaries had their share of patrons, who met with varying success.

FROM LANCASHIRE.

The Whitsuntide of 1899 will unfortunately have to be classed with many others as a popular holiday complete y

ruined by climatic surroundings. Hopes were high that as we had so much bad weather before the time, that we should certainly have the best of times in Whit week; but alas, it has not been so, and we now reflect on our disappointments. The chief item of news is from Warrington, but before going into the recording of the same, it may be useful to state in answer to many inquiries, and perhaps prevent others, that the Warrington Association control the fishing in the Bollin from the Manchester Ship Canal to the Mill Pool at Billington. The fishing is confined to members, and the cost of membership is—entrance, 2s. 6d., and annual subscription 5s.; this sum includes all the privileges of the association. The "Supplementary Society" of the parent association have arranged a very interesting and attractive programme for the ensuing season, as follows: August 26, at Tattenhall; September 14, at Beeston Castle—both events in the Shropshire Union Canal; and Sept 30, at Vale Royal, in the river Weaver. The St. Helen's anglers are noted for a special meeting, to arrange for a grand two days' outing to a mere in Cheshire containing any amount of fish. As regards the promotion of fishing in the river Bollin, a few days ago one of four others reported as frequenting this water was killed, and it is now being set up in Manchester. Its weight was 28lb., and length over all 49½in. The sooner the other three follow suit the better. Our rivers—the Lune, Ribble, Wyre, and all tributaries—are not yet in proper trim, but are fishing better. The great complaint is the scarcity of natural flies. The fish taken are not yet in fine condition, needing a few good rises of May Flies and Duns to feed them up. Local canals have been fairly well patronised, but the fish taken do not show signs of spawning, and although a few have been killed in good condition, the majority plainly show that the waters should have been kept closed for another month.

FROM LINCOLNSHIRE.

Trout fishing during the Whitsuntide holidays was entirely spoilt by the wet weather. Heavy storms occurred at frequent intervals, and many of the streams were so badly flooded on Wednesday that angling was entirely out of the question. Some time must elapse before they recover their normal condition, as, owing to the continuance of the rain, the soak is very high. On occasions, too, the weather has been extremely cold, thus retarding the already backward development of both insect life and aquatic vegetation. Under such circumstances there is very little to report this week, in fact, it has only been the keenest Waltonians who have ventured to wet a line. Encouraging accounts have reached me from the Fen waters, where the spawning season is said to be progressing satisfactorily. I fear, though, the flooded condition of the drains on Wednesday would have a prejudicial effect on this process.

FROM MANCHESTER.

This city is about the chief offender in the matter of Whitsuntide insanity, and is perhaps the chief sufferer also from the general upset and dislocation of the commercial world. At the same time, it allows the bulk of fishermen to get in a few days' fishing, and our men are never slow to take the fullest advantage of the opportunity. Just now they are scattered all over the land, and from the few reports reaching home they are not satisfied with the amount of sport obtained. One or two reports from distant places speak of a few May Flies on the water. Perhaps the best show was at Llanymynech, and the next best on some Cheshire brooks, but in no case were there many. It is pleasing to learn that the Levenshulme Anglers appreciate the grand win of the first prize at the late Wyresdale competition by their representative, Mr. C. H. Robinson, who has been presented with a handsome gold medal and one of Hardy's perfect reels in acknowledgment of his success on that occasion. Two Levenshulme anglers, fishing the Derwent on Bank Holiday, made baskets totalling sixteen brace of trout. During the day there was a fair hatch out of the Needle Fly, but the fish were too quiet, not a single rise all day; the worm and maggot was the only way to kill fish. The returns of sport obtained by the Kingfishers, in the Isle of Man, are not exciting, but they are enjoying themselves. Mr. McCrirkick, in Scotland, is doing well amongst the burn trout, which run about five to the pound, and occasionally a little larger, with an occasional larger one. The streams

he is whipping are the Euchar and Crawick. Mr. Walmsley and party, in private Cheshire waters, have had some very fair dishes of trout with worm and minnow. There is a look of warning in many an eye when inquiries are made as to results, but by next week somebody will be back who has had a few good few fish to report.

FROM NOTTINGHAM.

Angling pursuits have, as regards local fishermen, been at a standstill. The holidays were associated with drenching rain, and enthusiasts who ventured out for trout returned home with wet jackets. To-day (Wednesday) the Trent was in semi-flood volume; and no fishing, even for eels (in private waters) and salmon, will be possible for some days to come. On June 5 the annual banquet of the Nottingham Wellington Society will be held at headquarters, when a large and influential gathering of devoted fishers, top and bottom, is expected.

FROM SHEFFIELD.

The weather during the past week has not been altogether favourable for outdoor pursuits, and those anglers who had entertained hopes of having a few days enjoyable sport during the Whitsuntide holidays have been sadly disappointed. The weather has been simply wretched, but, notwithstanding this fact, a fair number of anglers have been out, and, generally speaking, they have found sport to reward them for braving the elements. Towards the end of last week the heavy thunderstorms had put a good colour on both the Derwent and the Wye, with the result that bottom anglers took advantage of the opportunity, and obtained some good sport. In the waters that are well looked after and preserved anglers have fared very well, some very big fish having been killed. The upper reaches of the Derwent, where nearly all the big fish have been caught this season, have come in for a good deal of attention. Bottom anglers have put in a good deal of time, and some very good catches have been made, maggots and worms having proved the most successful baits. In the waters near Darley Dale and Matlock a nice lot of big fish have recently been secured, anglers who have resorted to worms, maggots, and ants' eggs having scored the best. In the Wye the most satisfactory sport has been obtained between Rowsley and Miller's Dale, bottom anglers finding the best returns. Locally, the waters in the Loxley Valley have provided the best sport for Sheffield rodsters. In the Loxley stream itself a fairish quantity of decent sized fish have been killed, whilst in the reservoirs a few big fish have been obtained. The Dam Flask reservoir, which always contains a lot of big fish, is now beginning to fish up to something like its reputation, and in the Dale Dike reservoir a few moderate sized fish have been caught, but none of them have been in anything like prime condition.

FROM WORCESTER AND DISTRICT.

A large quantity of rain has fallen during the last week, which made it bad for the holiday keepers. There has been an 18in. rise on the river Severn, and the water was slightly coloured. In spite of the wet and unsettled state of the weather a great number of anglers sought the riverside on Sunday and Monday, and a lot were fishing the weirs. A great quantity of coarse fish were taken, chiefly chub, and there was a good run of eels, which bit freely, and a lot of samlets were also taken. On the weirs the old poaching game of snatching was freely indulged in, and occasionally two or three fish were hooked at a time in back, belly, or sides, and nothing is being done to restrain these men. I am told samlets are being taken in large quantities this season in the Severn and the Teme, which is much to be deplored, and irresponsible anglers say, as the Severn Fishery Board want to take all the coarse fish out of the river, they shall not spare the samlets. Surely the Severn Fishery Board should do something to stop these fellows in the interest of the salmon fishing. Many have patronised the Teme this Whitsuntide, but had the weather been fine their numbers would have been very much increased. Sport was not good, and the take of trout was limited. Mr. Cooper, of the City Club, had one fine fish, 1lb. 6oz., and I did hear of another being taken twice that weight, but did not see it. Several grayling were hooked, and a lot of chub seems also to have been taken in this river. The May Fly has made its appearance in limited numbers, but with finer weather no doubt they will be out strong.

"ANGLERS NOTE!"

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

"THE RESOURCES OF THE SEA."

DEAR SIR,—In the review of the above volume in your issue of April 15, the scope of the criticism falls hard on the scientist, and, with your permission, I should be glad if you will allow me to make some remarks on the article in question.

I quite agree with the writer as to scientific arguments being carried on without respect of persons, only suggesting they should be met in a fair judicial spirit.

In the critic's tone there is a certain corrosiveness as if he were as cocksure of his position as he attributes to the author of the volume reviewed. Now when he himself states "that the dab loves rough ground or little patches amongst rocks," it causes doubts to arise if other statements as positively asserted are on a par. He will possibly allow Mr. J. C. Wilcocks to be a practical "sea fisherman" of sound reputation, who says "they are found on all the sandy and oozy shores of the British Isles." One need not quote scientific works on ichthyology, or the researches of Cunningham and Holt on board the trawlers in the North Sea, but simply add dabs revel in abundance in the sands and mud of the Thames estuary.

Such sea denizens as oysters, lobsters and crabs, and the river and lake fisheries, are quite within man's scope to seriously injure, and this is freely acknowledged by Professor McIntosh; but these cases do not overturn the factors of oceanic life.

The critic advises "that the author should have noted carefully the results of fishing not only within the closed areas, but also outside in British waters." So far as I can gather, this is just what has been done (*vide pp. 79-95*), the data being chiefly restricted to the east coast of Scotland, wherein the main subject of dispute is located. This brings me to think that the reviewer elides the origin of the controversy. It was the lice and drift-net fishermen complaining of the injuries received from the steam beam trawlers that set up the commotion. Then followed the Royal Commission and Report (1884), and subsequently the F.B.S. experimental investigations. Besides averred injuries to their lines, the liners accused the trawlers of destroying the ground food, the spawn, and the brood of fish; but if the truth were told, possibly the competition of the capitalist and steam were the real bogies. Albeit, it was the scientists, and not the practical men, that showed the majority of food fish eggs were surface spawned and buoyant, and that both larval fish and their food were seaborn, and not alone ground residents. So, after all, the dreaded trawl was not the sole aggressor.

It should not be lost sight of that the essence of the controversy is: In the areas closed have the fish increased, or, otherwise, matters worked beneficially? Both the board and opponent reply no, as do the outside public. It seems unreasonable, then, to continue the restriction, and on a new tack assume the ex-territorial trawlers are guilty of destroying the inshore fisheries from as yet suppositions and meagre data.

Moreover, I would add for the consideration of the reviewer that at the Sea Fisheries conference of last year, the resolution for the opening of the Moray Firth was agreed to with but one dissentient, and the most powerful arguments for this proceeding came from the delegates of the English eastern counties, the very trawlers and fish salesmen supposed not to favour Prof. McIntosh's suggestion.

Again, as to destruction of small fish by liners, I would refer our critic to the evidence in the 6th Ann. Rep. F.B.S. for 1887, p. 4. Comment on my part is unnecessary, though I might ask the question: How does the critic propose that fish are to be caught without destruction of a considerable amount of immature ones? It is easy to say do this, and, *ergo*, that follows.

It is to be deplored that the number of the fisher sailing craft are reduced, but then who is to arrest steam and mechanical progress, and the inexorable principle of supply and demand? Besides, where once fishing was the inevitable sole occupation open to local sea coast communities, now the spread of communication and traffic draws away the younger generation broadcast.

As to the increased price of prime fish, is not this due partly to expenses in carriage to the middlemen, but mainly to the entire changes and more luxurious habits of the people? Fish is now a common diet in inland places previously seldom reached. The grand hotels, the great banquets, forced city life, with its wealth and display, have completely metamorphosed the face of things. Take for instance sprats in London, these at one time were relatively a dainty, but other fish flood the market, and adult sprats have been superseded by the ché's toothsome whitebait—the same but young fish supplanting the adult, and consequent modification of fishery. To go further afield for fish that pay the capitalist better is precisely comparable with every other branch of trade, and yet one cannot boldly affirm British commerce is ruined thereby, though undoubtedly it has been wonderfully transformed within the last few decades.

But my intention is not to hack, piecemeal, an opinion prejudiced towards science, but rather to show she may go hand in hand with practice. Even if it were granted, for argument's sake, that the North Sea fisheries are declining (Hewitt's fleet withdrawn), or that Professor McIntosh's deductions are absurd, the patent fact is the appointment of a North Sea conference at Stockholm, June 15, where the scientists are to be the advisers *re* international legislation of sea fisheries. Three Scotchmen are to be representatives, and the S.F.B. to the fore; wherefore not add Cunningham, whose North Sea re-

searches are patent, and, say, George Alward, of Grimsby, a broad viewed practical trawler and keen debater, as representing English views and interests?

At the present juncture, whatever merits or demerits attach to Professor McIntosh's extreme views, I hold we are indebted to his bold expressions, for they at least show there is more than one side to the knotty questions of what is the most judicious steps to be taken for the benefit of all concerned. It is not to be forgotten that the liner's idea is, give us territorial monopoly; the net fisher's is, mesh to our liking; the trawler's, grant us freedom of area; the fish merchant and capitalist provide us statute to make money; the public's cry is, we must have plenty and cheap fish, while foreigners justly reason why should Britain have the sole product of the North Sea and grasp the fish at our own doors. Now I cannot at present see how all are to be satisfied by a special Act of Parliament or dominant power vested in the Fishery Board for S., however good their labours hitherto. No amount of so-called practical knowledge can allay the widespread feeling that thorough inquiry is necessary at present; the more need, therefore, that science should not be shunted when undoubtedly a worthy helpmate in practical affairs of everyday life.

JAMES MURIE, M.D.
(Member Kent and Essex Sea Fisheries Committee).

A CURIOUS EXPERIENCE.

DEAR SIR,—I had a very curious experience while fishing on the Lower Lake, Killarney, the other day. After fishing some time, and with fair success, "something big" took my tail fly, and with a mighty drag took cast and all away with him. My friend said it was a salmon, but I rather thought it was a big trout. He was right; it was an illb. springer, for it was killed next day, and my March Brown and part of the casting line were still in his mouth.

Later on in the day I killed four perch, about $\frac{1}{2}$ lb. each, on a Green Drake. After this my friend very carelessly let his flies go to the bottom whilst searching his book for a Zulu; and when he went to take in his cast he found that nothing less than an eel had taken his Green Drake.

To finish up a very curious day's fishing I hooked a bat in the evening, which took away my top dropper.—Yours truly,

W.M. GRAHAM.
P.S.—Perhaps some of your readers may doubt the truth of the above statements; but I can assure you that it is "the truth, the whole truth, and nothing but the truth."—W. G.

THE SALMON QUESTION IN AMERICA.

(From *Forest and Stream*.)

SALMON IN THE OSWEGO RIVER.

Editor *Forest and Stream*.—In late numbers of your paper reference has been made to the former presence of salmon in Lake Ontario and its tributaries. Up to the time the Oswego Canal was constructed and the dams built, salmon in great numbers frequented the Oswego river, coming up each year from the sea through the St. Lawrence river and Lake Ontario to visit their spawning beds.

My father has told me of seeing shoals of them on bright sunny days, stopped by the shadow of the bridge at Oswego Falls, twelve miles above the mouth of the river, waiting until the sun was off the water to pass up; and at night of seeing the river covered with boats and canoes, the men in them spearing the salmon by torchlight. These salmon were never known to take a fly or any bait so far from the sea, except that a man fishing for trout many years ago on Salmon River (coming into the lake twenty miles below Oswego), at the foot of the high falls, took several grilse.

Some years ago fishways were placed at each dam on the Oswego; but the demand for water, for power, and for the canals at low water time, when the salmon were running up, was too great, and the fishways had to go dry.

Up to 1870, and perhaps a little later, salmon were occasionally taken in the whitefish nets set off the harbour of Oswego.

FISHERMAN.

FISHING NEAR LOWESTOFT.

DEAR SIR,—In reply to your correspondent "Hills" letter in the *Fishing Gazette* with regard to the best fishing near Lowestoft, I should certainly recommend him to try the river Waveney. If he will apply to Mr. George Finch, of Ballygate-street, Beccles (half an hour's run by train from Lowestoft), he will be able to obtain all information he may require; and I can assure him, that given reasonably favourable circumstances, if he engages Finch to accompany him, of such sport amongst the roach, and possibly bream (although July is full early for them), as should satisfy the most impatient angler. For the benefit of those of your readers who do not know the Waveney, I may say that it is one of the most charming coarse fishing rivers it has ever been my lot to fish, clear water—everywhere of good depths, mostly varying from 7 ft. or 8 ft. to 14 ft. of water—very clear of weeds, and literally teeming with fish, in addition to which the fish when hooked are more sporting than in any other river I know. I have fished the river on many enjoyable occasions in company with Finch, who I have always found to be most obliging, and is certainly a very genial companion.

Last year on one occasion we killed to our two rods something over 60 lb. of roach in one day, few of which were under $\frac{1}{2}$ lb., and a good many of which exceeded $\frac{1}{2}$ lb.; and, of course, when the big bream are feeding this catch can be very easily considerably exceeded.

I have no hesitation in recommending anyone desirous of obtaining good sport to fish the Waveney, as I believe it to be one of the, if not the, best roach rivers in England; and I certainly have never yet seen so smart a bottom fisherman as Finch, or one who will take greater pains both to

find his patrons' sport, or to point out to them any small faults they may possess in handling a rod.

His charges for accompanying anglers and finding bait are 5s. per day and food, which, I think, everyone must admit is anything but extortionate, considering that when I, for instance, am out with him in the summer, we usually start about four o'clock in the morning and return home about eight o'clock at night. If anyone, however, is desirous of not having a man, as the river is unusually variable, I do not think, except absolutely by a fluke, strangers are likely to find much sport by themselves.

If you can find room to insert this letter I shall be much obliged, as I should personally be very glad to introduce fresh patrons to Finch, in recognition of the trouble he has always taken to procure me the many very enjoyable days' sport I have had in the Waveney.—Yours faithfully,

H. H. STONER.

FISHING IN SOUTH WALES.

DEAR SIR,—In the *Fishing Gazette* of May 20, I notice "T. H." inquires with reference to "Fishing in South Wales," and particularly wants to know what can be obtained at Newcastle Emlyn. The fishing at Newcastle Emlyn is all free and open to the public. Consequently the water is very much whipped, and if "T. H." wants to have some sport, I should strongly advise him to stay at Llandysil, where he will fish the same river nine miles higher up, and have the privilege of two and a half miles of preserved water by staying at the Porth Hotel.—Yours truly,

S.

BLACK BASS, AND THE WATERS THE TWO KINDS ARE SUITED FOR.

DEAR MR. MARSTON,—I am under great obligations to you for your prompt compliance with my request concerning the grayling. I have already received a valuable communication on the subject from Messrs. Andrews and Andrews, of Haslemere, and the promise of one from Mr. Peter Ormrod, of Seorton, Lancashire.

Referring to the black bass, would say that it was the large-mouthed bass that I recommended as suitable for the lakes and ponds and broads of England. Such waters are suitable for pike—grassy or mossy meres, and sluggish streams not inhabited by trout or grayling, though, as a matter of fact, the black bass is not at all destructive of those species as is the pike and perch. The bass is not, strictly speaking, a piscivorous fish, but prefers crayfish and other crustaceans and larvae. The small-mouthed bass will only thrive in swift and rocky or gravelly streams, such as are suitable for trout or grayling; they will not exist in the broads or grassy still waters, and it is "love's labour lost" to attempt it, and which has already been proven in British waters. Yes; the black bass of both species have done well in Germany and the Netherlands. I was instrumental in inducing Mr. von Borne to attempt it in Germany, and gave him full directions how to proceed. He was very successful in his enterprise. I presume they could be obtained in Germany for British waters, and the distance not being so great as the United States, I think such an effort would be successful. I am sorry there is such an unwarranted prejudice on the part of British anglers against the black bass; he is the gamest fish that swims, "inch for inch and pound for pound."

Thanking you again for your kindly interest in the grayling matter,—I am, yours very sincerely,

Bozeman (Montana) Station. J. A. HENSHALL.
[Dr. Henshall is the leading authority on that magnificent game fish, the black bass of N. America. We think it probable that if his advice was followed, and the proper kind tried in suitable waters, they would do here as well as in Germany, where both kinds have been successfully bred for many years. We hope that Capt. Ormrod will take up this question, in fact, he has half promised us that he will do so already.—Ed.]

BASS AND GREY MULLET FISHING.

SIR,—In reading the *Fishing Gazette* week after week, I have waited patiently for some account of bass or grey mullet fishing, but up to now have not seen it. In these waters we have splendid sport amongst grey mullet about August and September, and bass there is plenty; but no one attempts to catch them. It is very hard to get tackle suitable for large fish in this place, and if one sends away the dealers never seem to understand what is required, and the result is failure. The mullet are fine fish, weighing from $\frac{3}{4}$ lb. to 8 lb., and, unlike most fish, have a very tender mouth; so that, instead of playing and landing by gaff or net, one has to lift them straight up from the water and land them in rear without turning, for the least extra strain the fish is gone. You will understand the strain a 7 lb. fish would place upon a single gut, especially if he resisted. During last season I and a friend caught 107 grey mullet, besides mackerel, horse mackerel, snipe fish, and bream. Well, you only have to place the line in the water and pull it out again, they are so thick. Of course to have this result one must use a special ground-bait. I use chervie. It is a minute species of shrimp, caught by the fishermen in Jersey. They salt it and sell it so much a quart. A spoonful about every five minutes for a quarter of an hour, and if one is in the proper place the water will be alive with fish. I usually get on the breakwater here, and drop the bait in a recess at the foot of the steps. The tide does not carry it away, and the fish can be held as it were, until the tide is done. There are some noted rocks around the coast where a deep hole is at the foot. Twice last year at one of these places I had a splendid catch; the fish were rolling over one another at my feet, and as soon as they commenced to rise I put my line in the water baited with peeled shrimp. The first occasion I had six large ones, and the second I and my friend had nineteen, all over 4 lb. It is strange that in Guernsey, the sister

island, the mullet caught around the pier are not more than $\frac{1}{2}$ lb. weight, and the anglers from there pay us a visit each year for larger fish. If any of your readers should be visiting these waters, I should be very glad to give them a day's sport. Trusting you will be able to give me some advice on the bass fishing, believe me to remain—Faithfully yours,
MULLET.

Alderney (C.I.)
P.S.—I could give "Sprats" the information he requires; he would find plenty of sport here.

WHY DO SALMON TAKE THE FLY?

DEAR SIR,—“I ought to be insulted, but I ain't,” used to exclaim Mr. J. L. Toole in one of his parts, where he had been mistaken for the butler, whilst really master of the establishment, and tipped with half-a-crown. In like manner there are, no doubt, anglers who will be ready, nay, eager, to suggest that the above heading should read, “Why don't salmon take the fly?” Speaking personally, I should vote for the amendment, having still to experience that delicious delight which appears to be the result of capturing one's first salmon. A recollection is yet quite clear of five days' flogging on the Conway, in the wildest days of last October, the nearest approach to my own sport being a good view of sundry well-developed tails as their lordships ploughed onward to the upper waters. True, the water was up and down three or four times a day, and they tell me that is very bad indeed. However, let that flee stick to the wa'. I was lately reminded of a chat which I had a few years ago at Langholm with an elderly man, on whom I had called to purchase a few sea trout flies. As he quickly showed an interest in me—the readiest way, not through the stomach (that's exploded), to one's heart—we were soon engaged in an earnest talk. I knew Mr. So and So, had heard of Mr. What'shisname, and lived close to Mr. Thingumbob, all of whom were in the habit of fishing the Esk and Liddle. So by stages we got to tales of slaughter of the king of fresh-water fishes. “The point is this,” I said at last, for there was much spilling of ink going on at the time on the subject; “why the deuce do salmon take what you call the salmon fly at all? There's nothing like it in real life, so he can't want to eat it. Besides, they say he never does eat after he comes from the sea.” “I have my own idea,” he replied, “and, mind, it's the result of personal experience.” (As I am not Mr. J. M. Barrie, I shall deal gingerly with a dialect which I much admire, though reproduce imperfectly.) “One day I was standing on the Brig at Annan, and sure enough down below was a gran' fish lying still. A frien' o' mine was casting away below him. By an' bye the fish begins to give a bit move, and then I see his tail slowly going from side to side like this. It reminded me of a cat just about to mak' the spring. But nothing more. What does I do but I just sings out to my frien' ‘Stop throwing a wee hit. Now, then,’ says I, ‘gie him a rest for five minutes, change your fly, step this way 10 yds. and try him again.’ My frien' carries out the programme, round gangs the line, down comes the fly, up jumps the fish, head clear out o' the water, turns himself ower, and—bang! he grabs the fly like a terrier wi' a rat, drops down deeper in the water, and—well, in something like a quarter of an hour he was on the bank breathing his last; twenty pound if he was an ounce.” “Good biz,” I remarked, “then he just went for that sir fly to worry it?” “Preceesely; to do away with it, to put it out of existence; he was angry, his dander was up, and he had to destroy it, as he thought.” “I rather think,” said I, that notion has not yet been advanced, but there seems to be something in it.” With that I bade him good morning, and sallied forth to the Skipper's Bridge. The day came on very stormy, a strong westerly gale blowing, so when a gust of wind landed my tail fly in a tree top, and as I know sufficient to realise the fish were not there, I reeled up and smoked in an out-of-the-world corner, trying to get up an enthusiasm for autumn's beautiful colouring in the splendid woods thereabouts. Presently I strolled to a fine pool where a farmer was felling away with a twenty-footer. Soon there was a boil, down went the rod top, and “You're into him,” I shout d, for the noise of wind and water was great. One minute elapsed, then the line came back fishless. He smote his thigh with a heavy blow, and ejaculated something in good broad Scots. We sat down together, and smoked in silence like two Red Indians. After a while I said cautiously, “Now, what did that fish think he was doing? Was he hungry? Surely he couldn't want to eat the derved fly?” “I ken na what he thoct, I know what he did; I wad ha' gien a sovereign to land him,” was the reply. There was no theory here evidently, so I did not intrude any opinions. It was too painful a time for speculation on the matter.

There is one more point to be touched upon. Some little time ago I read that when the beam of a trawler is examined, there are occasionally found upon it brightly coloured creatures swept up from the floor of the sea. Is it possible that the salmon, remembering these experiences of his sea-going days, when, perhaps, he gobbles them, spying the brilliant colours of a Jock Scott, Silver Doctor, or Butcher, says, like Rip Van Winkle, “I had sworn off, but will not count this one,” and accordingly goes for it?
E. E. H.

COMFORTABLE FISHING QUARTERS.

SIR,—One of your correspondents recently inquired through your columns for information as to snug quarters, with fair fishing, whereto to spend his holiday. Permit me, with your usual courtesy, to recommend to such inquirers the consideration of the many merits of the Inveroran Hotel, Argyll, under the excellent management of its new proprietor, Mr. Cameron.

It is most accessible, being only a couple of miles from the Bridge of Orchy Station, on the new West Highland

line to Fort William. Few hotels in the highlands, even of much greater pretensions, equal it for comfort and excellence of cuisine, none certainly surpass it, and the charges are most moderate. As to the fishing, the hotel guests have at their door Loch Tulla, which contains some very fine trout up to 3 lb. or 4 lb. in weight, and also, alas, pike. Mr. Cameron has several boats on it. Visitors can also fish Loch Buidhe, in the deer forest, where there are abundance of small trout, say, of five or six to the lb. There is also some stream and burn fishing, and one or two hill lochans. Perhaps the chief feature, however, is the salmon fishing on the Orchy, over some four or five miles of which Mr. Cameron has the fishing, which he places at the disposal of his visitors. With luck in hitting off a good water (and rain is no scarce commodity in the West Highlands), the fishing is often really excellent. There are also trout in the Orchy, but I can't say from experience much about them.

Situated as is Inveroran in the heart of the Black Monnt deer forest, surrounded by magnificent mountains towering to over 3600 ft., standing on the shore of a lovely loch, fringed with straggling remnants of the ancient Caledonian forest, within a couple of hours' drive of the gloomy Pass of Glencoe or the wild Glen Etive, within a stone cast, so to speak, of station, telegraph, and all such modern necessities, and offering not only the comforts, but even the refinements of life, at most moderate charges, it seems to me, who have just returned from a pleasant stay there, to be almost an ideal resting place for any wearied brain-worker. One last word. All this is placed at the stranger's disposal through the kindly liberality of the noble proprietor, the Marquess of Breadalbane, whose charming residence stands just across the loch. It is, therefore, I think, not too much to ask that, in return, all visitors will conform most strictly and cheerfully to the few regulations which are laid down, such as those regarding the 7 in. limit as to trout, the avoidance of trespass in the forest, and such matters.—I am, sir, yours, &c.,
CHAS. H. ALSTON.

COOPER'S FANCY.

DEAR SIR,—Some weeks back a customer of ours wrote you asking for some reader of the *Fishing Gazette* to oblige him with the dressing of Cooper's Fancy, stating that he had written “the celebrated fishing tackle firm of Foster's, of Ashbourne, who do not know the fly.” We thereupon wrote Mr. Cooper for the favour of a description of it, as it has figured in the weekly river reports of late. Mr. Cooper replied, refusing us the favour we had asked on the ground that the fly had cost him a lot of trouble to perfect (or words to that effect, we are quoting from memory), and that he was in a position to supply these flies himself. So far so good. This last week a friend of ours has obtained for us a fly of this name, and we are now desirous of acquainting our patron, the Rev. Roland Upcher, and any other inquirers, that they need have no further anxiety about the matter, for if they will order our Black Gnats they will get Cooper's Fancy. The only difference between the thin bodied Derbyshire Black Gnat and the fly sent us as being Cooper's Fancy is this—the Cooper is a more thick headed fly than is our own, and by that we mean a larger head has been formed with the black tying silk than is the case in the typical Derbyshire pattern. Of course, it is just possible that our correspondent has blundered in the pattern procured for us, but we have no reason for thinking so.—Yours faithfully,
Foster Bros.
Ashbourne.

THE 20LB. LEA PIKE.

DEAR SIR,—You kindly noticed my Lea jack of 20 lb. last February in the *Fishing Gazette*; should you care to see it, it is now on view at Holroyd's fishing tackle shop, 59, Gracechurch-street, City—not in the window, but on the counter inside.—Yours truly,
FRANCIS BAKER.

JARDINE'S PURE SILK FISHING LINES.

DEAR SIR,—Will you kindly let me know in your next issue if Mr. A. Jardine's pure silk fishing lines can now be bought, if so, where? These particular lines were referred to in your issue of Sept. 10, 1898. Thanking you in anticipation.—Yours truly,
R. A. SIMMONS.

[Mr. R. A. Simmons and “John Dory” might possibly obtain the fine Saigon silk lines spoken of in Mr. Alfred Jardine's book on “Pike and Perch,” page 53, and referred to in the *Fishing Gazette* of Sept. 10 last, of either Messrs. Wm. Bartleet and Sons, or Messrs. S. Alcock and Co., both firms of Redditch, Staffordshire.]

“AN AUTOMATIC POACHING SPRING HOOK.”

DEAR SIR,—I have perused with some interest the article in your issue of the 20th inst. on “An Automatic Poaching Spring Fish Hook.”

I incline to think that this arrangement of hooks might be used for the capture of fish other than from a poaching point of view. I refer more particularly to the capture of “squid” when deep sea fishing. Everyone who has fished to any great extent off the South Devon coast must have experienced the great annoyance caused by “squid.” I have frequently found that when pollack, bream, and rock whiting are feeding well there is a sudden cessation of sport, which, as a rule, is caused by the appearance either of conger or squid; the former one knows how to deal with, but the latter, especially in deep water fishing—say 15 fathoms—is much more difficult of capture. Directly the lead reaches the bottom, when paternostering or hand-lining, you feel the quiet tug-tug of “Mr. Squid”; you reel up very quietly, feeling all the time the dead weight which assures you that the squid is still on the bait; your man stands by with the landing net, ready, if possible, to place it under the rascal when he comes to the surface; but, as a rule, eleven times out of twelve the wily squid

lets go his hold of the bait just as the net seems under him, and he is off like a flash of light, and with such extreme swiftness that he is down at the bottom of the sea again and ready for your bait more quickly even than a heavily leaded paternoster can reach the bottom.

Now, if some such arrangement of hooks as that shown in your illustration could be fixed to the bait, I fancy the tentacles of the squid would probably become entangled, and his capture made certain. This would prove a double joy to the fisherman—one, that he has captured the greatest nuisance which exists when other fish are biting freely, and the other that he has provided himself with a supply of the best possible bait for conger, large pollack, and, in fact, almost all deep sea fishes.

Perhaps some of your readers will be disposed to give their views on the suggestions thrown out by me. You do not say if the spring hooks are to be had in this country, but if they could be made to open outwards instead of inwards, as I fancy the article suggests, they would prove useful for my purpose.—Yours truly,
FRANCIS HOWSE.

[We do not know that the spring hooks referred to are to be had in this country, but a line to the editor of the *Scientific American*, New York, would doubtless obtain the address of the American inventor.—Ed. F. G.]

HOTEL, GARRISON, LOUGH MELVIN BY BELLEEK, Co. FERMANAGH, IRELAND.

DEAR SIR,—I am pleased to read the letter of Messrs. Rogan and Sons respecting the accommodation at the hotel at Garrison—boats and men. I have a letter from Mr. Scott, the proprietor, telling me that after the recent floods the run of grilse is plentiful, and many salmon, lake trout, gillaroo, and brown trout have been caught at Garrison end of the lake, because the salmon can't get any further. I have been there several times the last twenty years, and have always had good sport. The last time and day I was there was on a Friday, and caught a salmon of 16 $\frac{1}{2}$ lb. and a char, which were on the table at the Piscatorial Society the Monday following. Now Mr. A. Scott has enlarged his hotel. He can accommodate more anglers, for I have known gentlemen occupy apartments at Belleek till the cabin-like rooms, then, were vacated.

The lake at Garrison end and islands is a perfect angler's paradise; the boats large and trustworthy, and experienced boatmen.

The way to reach Garrison: Take train from Dublin to Belleek, where a car will be in waiting to transport the anglers to Garrison, a nice six miles' drive, if Mr. Scott is written to to send car at any appointed time. The charges at the hotel are very moderate, so for boat and two men. There is no shore fishing. I only wish I was there instead of at Deal, where at present there is no fishing.

Anglers should write to Mr. Scott to know if rooms are vacant, as there is no other accommodation at Garrison. There are perch, but no pike in Lough Melvin.—Yours faithfully,
T. R. SACHS (P.P.S.).

EATON AND DELLER'S SPECIAL DRY-FLY BOX.

DEAR SIR,—Messrs. Williams and Co., of Great Queen-street, are under a slight misapprehension as to the exact design of our registered eyed fly box. It is made of a sheet of felt sandwiched between two sheets of parchment, well glued and compressed, with strips of parchment sewn across to receive the flies. The strips of parchment are, we believe, similar in design to their own; but the point for originality that we claim is the combination of the strips and the compressed felt between the parchment, which is thus sufficiently elastic to retain the point of hook beyond the barb without the fly shaking out.—Yours truly,
EATON AND DELLER.

TESTIMONIAL TO BEN ABRAHAMS.

DEAR SIR,—I have received cash from the following: Allason United Bros. A.S. £2 0s. 6d.; Mr. J. W. Blakey, 5s.; Mr. A. R. Mathews, 2s.; Mr. J. Hardie, 1s.; Mr. A. Etheridge, 1s.; per Mr. G. Beuce (Jubilee A.S.), 2s.; Mr. W. H. Brougham, 2s. 6d.

All communications should be addressed to
E. JACKSON
2, Bulmer Place, Notting (Secretary to the fund).
Hill Gate.

SEA FISHING IN AUGUST.

DEAR SIR,—In answer to “Sprats,” I should recommend him to go to Looe if he wants a quiet spot; Charlie Toms or Ben Pengelly are good boatmen, moderate in charge, and very obliging. Hotel, The Ship. Looe is about nine miles from Menheniot Station, G.W.R., Cornwall Railway. There are coaches from Menheniot to Looe.—Yours truly,
WILLIAM HEARDER, B.S.A.S.
195, Union-street, Plymouth.

MR. JONA: “Say, Maria, what on earth are you huyin' fish to-day for? Didn't you forget that I was goin' fishin' to-day.” Mrs. Jona: “No, I remembered you were goin' fishin'. When I set my mind on fish I don't like to be disappointed in not getting any—there!”

WANTED, A WIFE.—A farmer in Manitoba recently wrote to England, asking for a wife to be sent out to him. We believe he meant well, and we hope he met with success; but good wives are not usually to be obtained in this way. In such a matter a man can not safely trust to the judgment of another, but must use his own. In choosing a wife, every man's judgment varies. In other things it is not so. For instance, the judgment of every sensible man is in favour of Holloway's Pills and Ointment for the cure of liver complaints, disordered stomach, shattered nerves, rheumatism, gout, lumbago, scalds, burns, and all skin diseases.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Months ditto	5s. 4d.
Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

Telegraphic Address—"RIVSAM, London."
TELEPHONE, No. 83 Holborn.

THE HOLIDAY ANGLER.

By "KRYPTOS."

WE all know the "holiday angler," he who for fifty weeks out of the year has his mind concentrated over ledgers and letters, and who, during the two which comprise his annual holiday, flings himself unfettered forth into the country, talks of his "little place up in Scotland" and his "friend the Honourable Tom Roundabout," as though his time were his own all the year round.

Usually he goes to a seaside boarding-house, and, in spite of his aristocratic connections and limitless wealth, he usually selects one in the part of the town farthest removed from the front; not because living is cheaper, oh dear, no! but because it is handier for the railway station, in case he should be suddenly called back to town!

The seaside resorts by the Norfolk Broads know him well, welcoming his appearance effusively, for, although his holiday garb is, to say the least of it, startling, yet he is quiet and inoffensive, pays without grumbling, and is out all day.

When he comes by steamboat to the place of his choice, he very rarely attempts sea fishing

afterwards, save from the pier; but if he makes the journey by rail, he is likely to be beguiled by the dulcet lures of the boatmen, and one fine morning discovers him, with a very new rod, being pulled out on to the briny deep.

It is pitiable, indeed, to see that young man go out, and then to watch his return. To notice how he disregards the nice new rod whilst landing, and how he leaps for the shore directly the keel grates on the shingle, is a liberal education in misery, and you wonder whether Father Neptune can really find pleasure in worrying such a frail, damp-looking wretch. Henceforth, he is only found upon the pier with half a dozen of his kind laying long lines carefully over the promenade, that children may entangle their feet, ladies their skirts, and old gentlemen their sticks. Having performed this to their own satisfaction, they proceed to bait numerous hooks with shrimps, mussels, or worms, showing a great nicety about it, and carefully wiping their hands after each one. Then, with a critical glance around, they swing the lead about their heads until nothing can be seen of the whirling line. Shoo! You watch the heavy weight leap into the air; you watch every bait spin off on a journey of its own, and you know by the dull plunge when the lead takes six bare hooks to the bottom, clean across four other lines!

The holiday angler does not know it, however, so he lights a cigarette and hangs over the balustrade with the line in his hand, gazing contentedly at the sky.

Number one along the row of anglers fancies he has a bite, and strikes vigorously; number two, whose line is mixed with that of number one, feels a sharp tug, and begins hauling in. Our friend, the fifth on the row, feels two distinct bites, and with a yard and a half strike makes the intervening gentlemen fairly jump into the impression that they have fish.

The result is that five tangled lines are raised in a bunch, when, with profuse apologies, their owners sort out their respective properties preparatory to another cast.

Tiring of this form of sport, our friend hies to the reedy water wastes inland, and hires a very broad boat, that he may not want for room; then he slowly pulls to a quiet corner of the broad, until his aching arms tell him they have reached the exact spot; so he ships his oars, heaves the heavy stones overboard from each end, and in such a way that the boat swings to and fro, like an erratic weathercock. To throw his ground-bait overboard takes but a few seconds, and having done so, he drifts over it, and starts fishing beyond it, at mid-depth, for roach, perch, or eels.

The fish are shy, and bite not; so eventually he lies down in the bows with his beloved cigarette, finally dropping off to sleep, lulled to slumber by a little brown lark above, who cheerily translates to earth the calm joys of the upper world.

At dusk the boatman comes searching after him, fearing accidents; and with fine scorn wakes the sleeper, helps him pack his goods—all but the rod, which is missing—and tows him back from his Elysian joys. The holiday angler insists on his taking a glass for his trouble; and at the inn the boatman, a good-humoured old fellow, as the Broad-men invariably are, recounts his experiences among the larger fish. Our friend is not to be outdone, so he thinks he will quiet this old countryman with his more thrilling, if less authentic, experiences.

"Do you know the Scotch lakes?" he begins grandly. "I do that, sir! Lived years among 'em. Do you?" is the astonishing reply. This is awkward, for our friend does not. Evidently his story cannot be produced; so he simply remarks that a friend of his, the Honourable Tom Roundabout, has invited him there, and soon afterwards he bids the boatman good night and sets out for his supper.

That evening in the smoking-room of the boarding house he gives forth the boatman's adventures as his own, all having happened within the past six hours. The admiration of his listeners is mixed with regret that he did not show them the fish before sending them to town for setting up.

"Pity I lost that rod," he remarks, "I valued it far above its intrinsic worth!" which is a good thing, or he would set little value upon it.

Our friend nearly caught a good fish once. It was on Oulton Dyke, when the boatman, having

fitted up a rod with snap tackle, gave him a roach and directions, and sent him on his way rejoicing.

Early in the afternoon the bait was taken by a fine pike, which immediately made for the weeds.

"Come out of that!" quoth the angler, with steady mechanical turns of the reel. The pike came; and after a long, exciting struggle, which tested the line thoroughly, he was brought to the side of the boat. Looking over, our angling friend noticed the long, dark form, the cruel jaws, and the devilish eyes. "You in the boat with me!" he exclaimed. "Not if I know it, my friend! You may go." And availing himself of this permission, *Esox lucius* went with 2 ds. of gimp, which the fisherman kindly cut off for him.

DEEP SEA FISHING IN THE SOUTH PACIFIC.

(Concluded from page 367.)

I MUST correct an error (at line four) in my last week's article on the above subject. I should have said, "Mr. Arthur Shaw owns Savu-Savu, a big estate on Vanu-Levu, the second largest of the Fijian Islands." The natives start at nightfall and fish for *tau-tau* until morning. As stated in last week's article, these fish are very like salmon in appearance. Over the reef, and a mile beyond, the canoes are paddled, while a native prepares the rods and tackles. Four rods lie lengthways on the outriggers—rods, 14ft. long, of tough, springy cane, tapering from 2in. diameter at the butt to 1in. at the point, to which the line, about the length of the rod, is securely fastened, and these tackles are for fishing in the shallow lagoons of the coral atolls. Lying beside the rods are lines for deep sea work, neatly coiled ready for *takuo* fishing. The natives know from the crowds of clamorous sea birds and the splashing water when they are approaching a shoal of fish, then they drop their paddles, seize their rods, and cast the bait into the sea; but almost before it reaches the surface a fish leaps out at it, the tough rod bends, and with a strong, steady sweep, of his arms the fisherman swings a 10lb. *tau-tau* clear out of the water, and drops it into the canoe, where, glinting of burnished silver and steely blue, it struggles among the men's feet. Soon all the other fishermen are hard at work; and their shouts, added to the screams of the wheeling sea-fowl, and the flapping of the fish as they are dropped into the bottom of the canoes, increases the excitement of the sport. Thus it goes on for some hours, until the men are growing tired, for each of them may have taken a score or thirty fish from 8lb. to 10lb. in weight; so they hand their rods to their comrades, who add fish after fish to the quivering heap. Suddenly the sport ceases, the fish are gone; for some dozen *pala*—the dreaded foe of the *tau-tau*—have appeared on the surface. So the men light their pipes, and the canoes are paddled homewards again to the island. The *takuo* is often captured of 120lb., and at times much exceeding that. My nephew, Mr. Arthur Shaw, and his friends make a night of it when they go *takuo* fishing. Provisions, &c., and some torches made of cocoa-palm leaves are put in his boat, also a dozen or two of flying fish for baits; and they sail away outside the reefs to Savu-Savu Point, then lower the sail, make all snug, light their pipes, and bait their hooks. *Takuo* are usually caught when drifting with the tide or current; so "sounding" for the depth, and finding about twenty-five fathoms, they fish twenty fathoms deep, for *takuo* are caught more frequently some distance off the bottom. Each angler baits with a whole flying fish, and all are on the alert, when a savage tug results in a heavy fish being hooked, which, after much struggling, with "give-and-take" of the line, is at last got alongside, knocked on its head, and lifted into the boat, a fish weighing 50lb. Then making a long drift, with no luck, they sailed across the bay to Kubulau Island, between where and Namena—or Direction Island—half a dozen large fish were taken, the biggest exceeding 80lb. A *takuo*, when played nearly up to the surface, makes desperate efforts to free itself from the hook by violently shaking its head, after the manner of tarpons of the Florida seas; also, they will dive almost vertically in, may be, thirty fathoms of water, so that the rough fibre line, as it runs with great velocity over the boat's gunwale, is likely to injure the

angler's hands, unless protected in some way. Sometimes the fish will make a straight dart upwards at great speed, then slew round, and dive with lightning-like rapidity, perhaps snapping a hook or line strong enough to hold a shark of large size, which, by the bye, among the Melane- sians is called "Jack of the Atólls."

At times these great *takuo* are seen basking near the surface of the lagoons among the coral reefs, and are speared with a harpoon with a line attached to it. *Takuo* are rather delicate eating, even Europeans consider them palatable.

There are plenty of sharks. These "Jack of the Atólls" swarm near the reefs and in the lagoons of Fiji. Go out at night, light a cocoa- palm leaf torch, and look over the side of the canoe. At a few fathoms' depth at first only one or two may be seen swimming about; in ten minutes, fifty; and all hungry. A man falling overboard at night would have a bad time; but in the day time the natives feel no fear of "Jack," although at night a young shark not 6ft. long could snap off the arm of a full-grown man.

At varying distances from Savu-Savu, Viti- Levu, Levuka, and the other 250 islands of the Fijian archipelago—of which about seventy are inhabited—are patches of coral, algae, and some- times white sand, lying at irregular depths beneath a shallow covering of the most crystalline emerald green water, producing every shade of aqua-marine, mauve, sienna, and orange, marvel- lously blended, the shades continually altering with the ebb and flow of the tide, which at high water covers the reefs to the depth of several feet; but they are very dangerous to sail amongst, being infested by sharks of large size, for although the canoes are built with an outrigger of buoyant wood, which floats on the leeward side as an equi- poise, and is fixed to the canoe by bamboo rods 5ft. long, yet, while running at full speed, powerful wind gusts sometimes strike the sail, and upset the canoe with its occupants.

The following catastrophe was reported in a *Levuka Times* newspaper of 1874: "News reaches us of a sad accident, which has resulted in the death of upwards of twenty people. It appears that a canoe left Loma-Loma with twenty-five natives on board, bound for Tortoya. They were going about, when a sudden squall sent the sail against the mast, capsizing them. The unfortunate passengers clung to the canoe, and might have escaped but for the horrible fact that the capsizing occurred in a locality infested with sharks. These ravenous monsters seized their victims one by one, devouring twenty-three of the twenty-five unfortunates. Of the two who escaped, one, a woman, had the whole of the flesh stripped off one of her legs."

Many of the lagoons among the coral reefs and atólls abound with pearl-shell oysters, which the natives obtain by diving, afterwards selling them to traders, who export these iridescent shells for use as ornaments and decorative inlaid work.

Gigantic clams—*Hippopus maculatus*—are also dived for, and many a native by missing his aim, and plunging his hands into instead of beneath the bivalve, its shell has instantly closed and held the man fast, and his companions, alarmed at his staying so long under water, have themselves dived, but only to recover his dead body. The hand of a native woman is sometimes seized while she is "groping" for crabs among the fissures in the coral. Fiji crabs grow to a great size, with claws so powerful that the woman, unable to loose herself, is often drowned by the rising tide.

Exquisite tiny fish tenant the coral reefs, which would be beautifully adapted for marine aquariums. Some are of pale blue, dark blue, bright green, some striped black and white, and others golden bronze; yet there are others of a dangerous kind frequently met with. An acquaintance of Mr. Shaw's, when slipping her hand under a rock ledge, had it seized by a great sea eel called the *dabca* that lives in the coral; it darted out, and tried to swallow her little finger, which, happily, was not quite bitten off, but it bled profusely, and had to be soaked in salt and brandy for fear the bite was poisonous.

In one of C. F. Gordon Cummings' letters, dated Good Friday, 1876, Isle of Koro, Fiji,* is described a feast given at the marriage of Naga-

vindi, daughter of King Tanoa, to the chief of the fisherman tribe.

Among various edibles was a gigantic dish, 20ft. in circumference, of bananas and bread fruit, baked in a Fijian oven, which is simply a pit hollowed in the ground, and lined with heated stones and plantain leaves; the mass of bananas and bread fruit is again covered with a thick layer of green leaves and hot stones until baked.

On the occasion mentioned, another of these dishes was 10ft. long by 5ft. wide, on which were piled turtles and pigs roasted whole. There was also a "wall" of cooked fish, 5ft. in height and 60ft. long. At another great feast nineteen gigantic puddings were prepared, the largest being respectively 19ft. and 21ft. in circumfer- ence. At a great meeting of chiefs at Bau, Viti- Levu Island, Fiji, in January, 1880, on the return of Sir Arthur Gordon from England, the menu of the feast given to welcome him, included 104 pigs, and a large shark cooked whole.

ALFRED JARDINE.

A WHIT MONDAY QUARREL.

WHIT MONDAY on the Darent was one of the very worst of fishing days—"drizzle all the morn- ing, with showers in between," as the keeper called it.

I had gone out with "the Baron," who is a really fine fisherman, and who, alas! will not play the strict game, a matter about which we have had troubles before. Once in particular, when I found him putting a worm to a trout under a bush, there was a tremendous row, but that is another story.

We only found two rising fish all the morning, and they would not look at a fly, and seemed to be taking some small beast that was not big enough to see. This sickened the Baron. He first grew restless, and then put on an Alder (a fly that was not on the water), and proceeded to fish it wet, with the result that he got two fish.

Now, I pride myself on playing the game, and, there being no rises, I did not even cast; and when the Baron asked me to admire his fish I found it rather hard to do, as any dry- fly fisher will understand, and I half made up my mind that I would not go fishing with the Baron again.

The view I take is, that modern fly fishing is a game as well as a sport, and that the fisher is only supposed to get his fish by certain methods. For instance, if he is dry-fly fishing he must get them by pure dry-fly work, and not with sunk Alders.

No doubt the old idea was get fish, but, with the best of our modern anglers, I think this is no longer sufficient. An angler once said: "If getting fish is to be the game, I'll use a net," an answer that clearly shows that the method of getting the fish is the qualification that gives the true value to the bag.

As far as I can make out, the Baron's view is that getting fish is the chief thing; he won't use a worm (if any one is looking), but if you open his fly box you will generally find such things as March Browns, Alexandras, and big Palmers. The Baron may be right, I don't say he is not; all I say is I won't fish with him again.

I tried to explain to him that we had started for a day's dry-fly fishing, and that I had stuck to it and he had not. I said dry-fly fishing was fishing with a dry fly for some particular rising fish, and that wet-fly fishing was fishing the water where the fish should be. I admitted that one method was just as good sport, and required just as much knowledge, as the other, and said my only point was that wet Alders down a sharp run on a dry-fly stream was not playing the game.

But it was no use; the Baron either could not, or would not, see. He only laughed, and said I was jealous.

I don't object to wet-fly fishing—I am very fond of it—and for exercise and good air I think it is a better sport than dry-fly fishing. But what am I to do with the Baron? I know he is a real good fellow, and yet he will not play the game as understood by

TRAMP.

MISS CECILIA WAERN writes in the June *Scribner's* of "The Modern Group of Scandinavian Painters," giving some of the best examples of the work of Zorn, Larsson, and others.

POPULAR LESSEES.

IN these days when poaching is so rampant, when ready markets and railway and postal facili- ties provide an easy avenue for the disposal of the spoil, and when large sums are paid for sporting privileges, it is not only a wise policy on the part of the sportsman to welcome the *vox populi* on his side, but he might even go a step further and not only encourage it, but openly court it. The battle is not always to the strong nor the race to the swift; and no army of watchers and keepers, however faithful and numerous, can protect the preserves of the sporting lessee or laird in a populous or other glen half so well as the day labourers, cotters, farmers, shepherds, and other natives and workers on the spot, if they are minded to do so. And no class has a better chance of causing endless trouble and quiet destruction if they are evil disposed, or have an unseen grievance to redress or private spite to revenge. Sportsmen do not, as a rule, trouble themselves much on this latter head until the evil has reached a climax, when, if they are not prop- rietors, they usually shake the dust off their feet as a testimony against that place, and look out for fresh fields and pastures new; whereas, if they have profited by their past experiences, they adopt a fresh policy, study the *vox populi* a little, and find it to their enhanced pleasure and profit to go with the stream, ever to make a friend, and, if possible, never a foe.

Two very striking instances of the popularity of sporting lessees occurred in the north of Scot- land last week—one in Sutherlandshire and the other in Aberdeenshire—both of which are not only worthy of passing mention as acceptable compliments paid to popular sportsmen, but each has its respective lessons which those who run may read. In the first case alluded to as the outcome of being on the winning side of the *vox populi*, Mr. Andrew Carnegie, the American millionaire, was welcomed home to his new estate of Skibbo by his future tenants, and the demon- stration accorded the late tenant of Cluny Castle, and latterly Skibbo itself, was no servile display, nor mere homage to the golden calf. But we have naturally less regard for "home- comings," "house-warmings," "majorities," and such like demonstrations, because they are the correct thing, and so regarded in the highlands, when there is a proper understanding between the laird and his people; and however much Mr. Carnegie's welcome to Skibbo Castle and estates may have been above the common for- malities of such an auspicious occasion, it cannot "hold the candle" to the second instance alluded to as having occurred in a quiet and remote glen in Aberdeenshire last week, when Mr. Percy Hargreaves, the fishing and shooting tenant of the demesne, was waited upon by a deputation of the parishioners of Glenbucket, and presented with an illuminated address "as a tangible ex- pression of the esteem in which he is universally held in the district," "every householder in the parish," the report goes on to say, "desiring to contribute and being allowed to do so." If the silence of the multitude be the death of kings, surely Mr. Percy Hargreaves has reason to feel justly proud that the humblest in a remote mountain glen, widely scattered and but sparsely populated at the best, should desire to join the throng in sounding his praises for probably unthought of acts of kindness on his part towards them, the outcome of his spontaneous good nature and from no studied desire.

Mr. Hargreaves has been going and coming to the trout angling on the Don and Bucket in the spring and the grouse shooting on the moors of the glen during the past seven years, and with a ready smile and an open hand he has scattered, quietly and unostentatiously, his gifts and kind words around him. We know not the *modus operandi* of this particular case, and although we know the country well, and have made many a jolly basket of plump half and quarter-pounders—mostly the latter weights—from the Bucket and its sister streams the Nocty and the Kindy too, yet we have no personal experience of the glen since Mr. Hargreaves' advent, nor have we any further details than are given in the address and the brief report of the attendant proceedings, which took the quiet form of being made by deputation in deference to the wishes of the gratified recipient. Had it been permitted,

* "At Home in Fiji," page 163, edition 1892. Published by W. Blackwood and Sons.

there would have been few events in the history of Upper Donside more worthy of remembrance. But although we have no personal knowledge of this particular case, we claim to have some knowledge of the people in districts similarly situated, and of the powers Mr. Hargreaves and his class have at their disposal for good or evil towards themselves.

There is no fears of Mr. Carnegie's young deer being snared and strangled. There is little danger of his salmon pool—and he has good ones to boot—being netted. There is no fears of Mr. Hargreaves' nests of grouse being trampled upon by thoughtless shepherds, or his partridge eggs ground under the heel of the irate crofter. There is little danger of his fishing hut being ransacked overnight, his streamslimed, his minnow trap destroyed, and such wanton and ruthless havoc played with his sporting accessories as to practically ruin his fishery for the nonce, and cause a world of worry, anger, and trouble, to say nothing of attendant expenses. But although they are not common, especially in the north of Scotland, yet we know of outrages much more violent, and destruction much more rampant—kennels and moors poisoned. Even where sporting lessees have made themselves obnoxious, and so ran *contra* to the *vox populi*. These annoyances will be absent from such as Mr. Hargreaves and Mr. Andrew Carnegie. Every crofter, labourer, woodman far and near, will take a pride in watching. Let a tramp pass through the district and he must show clean hands. Let a suspicious gang of poachers stop at the inn to refresh, and Mary will be sent from the kitchen to see what is in the cart, while the landlord or landlady, or both, ply the thirsty wayfarers (*sic*) with an extra drink—the landlord's dram; and if anything be discovered the whole gang will there and then be "held up" till the head keeper or the policeman arrives. The only decent captures that have been made for the past twenty years that we have personal knowledge of on either Donside, Deeside, or Speyside, have been made after this manner, and for the sake of such popular lessees, who, we are thankful to say, are by no means uncommon, nor a scarce product after a few years residence in the north. The genuine gentleman, the true sportsman, the give-and-take man of the world is not yet defunct. He remembers the farmer who loves a shot, the crofter who has nothing to shoot with. The labourer who spends his life keeping his roads metalled and repaired has a dish of trout sent him, or a brace of rabbits thrown from the machine into his cottage door. The local postmaster is thanked for his kindness, while the butler has orders to keep a bite and a sup for all whose business leads them round by the back door. These are trifles, but they are the small change of life in the glen, and, added to the other more patent duties and heavier calls, are the best protection our angling and shooting lessees can have for their salmon and trout streams and grouse moors. The hand that giveth is twice blessed.

G. M.

THE OTTER (*LUTRA VULGARIS*).

IS HE AN ADVANTAGE OR DISADVANTAGE TO OUR RIVERS?

As the years roll on so does our knowledge of animal life gradually, but surely, in the greater number of instances, unfold itself.

There is plenty of truth in the saying "Give a dog a bad name and hang him," and in no creature is this better exemplified than in the one whose name appears at the head of these few notes. I do not mind admitting that in the early days of my youth—which time I date from my twenty-first birthday—I was one of those who would have shot, trapped, or snared any otter whose "trail" I might have had the misfortune—I say misfortune advisedly—to strike. But as I have further advanced in my learning of the habits of the otter by having resided many years in a county in which they were, even in my time, fairly plentiful, where I have spent many hours in watching them, I have become aware I was as far out of the "right path" as the north pole is from the south, and perhaps a bit further.

In the first place, it must be considered what is the otter's favourite food. Some will say im-

mediately, "fish." But steady a bit. Why do you say "fish?" How many times have you seen one with a fish in its mouth? The chances are not once, because, comparatively speaking, few are the anglers who have seen an otter in his wild state. Yet, though I have seen many, only once have I seen one with a fish in that position. What has carried the general public into this belief is by the stories they have read, or, perhaps, only heard, of the destruction which they have occasioned among fish, written evidently by some poorly informed author. Even the greater number of ancient naturalists have added their quota to this erroneous idea, unless they included one single kind in the whole species. Having made these statements, it will be necessary I should give some evidence to substantiate my assertions. Here is one. Why are otters often seen, and, if not seen, "spurred," far up a ditch many miles from a main river, even where there are no fish? Make an examination of the gutter, and presently you will find that it is inhabited by a large number of frogs. It is a tight race between the French and the otter as to who is the most fond of these savoury (?) reptiles. Now, I do not say they visit these places from what I have been told; but many are the otter hunts of which I have been a "follower," when we have followed the trail of an otter for some miles up one of these water leaders, which eventually merely led to a marshy spring whose only living inhabitants were the common frog.

I believe I am right in saying that all naturalists agree that the food of frogs is of an animal and insect character; and therefore it may be assumed—without any wide stretch of imagination—that they do not object to a good breakfast, afternoon tea, or dinner off fish spawn of every sort and kind. I will give an instance of an otter I once met which had been "frogging," even before I had "graduated" in the glorious pastime of otter hunting.

Some years ago it was my habit to walk, about twice a week, some four miles to fish the river Inny, which rises in Cornwall, emptying itself into the Tamar. In those days my usual starting hour was about 6 a.m.; and one morning, as I travelled through a place called Worm Wood—which lies on the Cornish side of the last-mentioned river, opposite Endsleigh, one of the Duke of Bedford's beautiful country seats—I saw what I at first took to be a fox making his way across my path. As I was some two miles from the river, the thought of an otter being in the neighbourhood never entered my head; yet the strange gait of the animal immediately called my attention, and in a second I knew that instead of having "viewed" a fox I had "gazed" an otter. At once I began to look round to see what had brought it so great a distance from the water, and "running heel" on what I thought to be about his line, soon came to a swamp, on the edge of which I found the remains of some frogs evidently not long slaughtered.

On making inquiry of one of his Grace's keepers, I was informed that to find otters in this locality was nothing uncommon. This was a proof that the visit was not an accidental event, and will show one advantage of the otter, if, as I consider, it is most probable that frogs devour spawn. In dealing with the next item of their favourite food, I must admit that your first conjecture was not entirely wrong—that of "fish"—yet I hardly think the one to whom I am about to refer was that which occurred to your mind. This is one for which they undoubtedly, above all others, have a great relish; but there is no question that it is the greatest poacher of salmon and trout spawn which inhabits our rivers. This is the eel. Watch for yourself any spawning bed of which you may have the location, and you will see these wriggling brutes as busy as a "May bee," working in and out among the stones, now and again halting on their way while they suck the spawn from off them. What would be the result if there was nothing to keep them from increasing in unlimited numbers? It means eventually the ruin of a salmon river or trout stream; and I know well a river which at one time was a "sure find" for an otter hunt, but latterly they have become very scarce, and the increase of eels has since been proportionably enormous. What will be the ultimate result I have little doubt. I will now give some evidence of the otter's preference of the eel before other fish. One

evening, sitting on a high bank by the Tamar with a friend who had just come from London to spend his holiday with me, so that he might enjoy some fishing, suddenly we saw a great commotion in the pool at our feet, and at the same moment I "gazed" the "pole" of an otter as he went below.

"Hush," said I, as my friend was about to shout, "let us watch him." And as soon as the waves had subsided, which they took much less time to do than if a dog had dived—the otter gliding so gracefully through the water—we could see him walking along the bottom, grabbing now and then at an eel as he would push their shelter on one side. How does this prove his attachment to the eel rather than other fish? Why, at the same time he was eel hunting, certainly no less than half a dozen trout might have been his easy prey. I do not intend to say that they took no notice of his presence, but trout, even clever as they are, cannot see behind them, and not until the otter came almost alongside did they seem to know of his proximity, and then of course they did not stay. The first exclamation my friend made on the otter's seeking "fresh fields and pastures new" was, "Well, I never could have believed that he would have preferred those mudlarking, slimy devils to a beautiful trout." My answer was something to the effect that you should "never judge by appearance."

These are arguments of course on behalf of "my friend" the otter, and the other side has been ventilated so freely that I do not think it necessary to enter into it here. I could say a great deal more on the subject, but as I believe this is the first time such a theory—no I cannot call it a "theory," because my evidence is too solid for that—let me say such "observation" has been promulgated. I am anxious to hear if any one else has seen anything of the same kind, and I do not think it will be necessary for me to apologise to our editor for any space that may be required for correspondence on such an important matter—should any arise.

Before concluding I will give you a short account of the first and only time I ever saw an otter capture a trout.

Once upon a time I rented about a mile and a half of the Devon side of the Tamar (there is still a dispute as to whether the Tamar isn't all Cornish), and when I was fishing one evening, about 7 o'clock, as far as I can now remember, suddenly I saw swimming down towards me what I took to be an Irish terrier, as all that I could see was the "mask," the rest of the body being under water. Immediately I looked round to see who had invaded my preserve, but could see no one. At the same moment the animal, who was now passing in front saw me, and uttering a quick succession of screeches, dived. My eye at once travelled up the river, being by this time fully aware that it was an otter, and there, not twenty yards higher up, did I see another, who at the moment I "gazed" him also dived, but came to the surface again immediately with a trout in his mouth, not holding it in the position in which we see them generally "stuffed," or, more technically speaking, "set up," that is with the belly inwards, but having a firm grasp of the fish's shoulders from the back.

This is a matter which has often come to my attention, that of placing the fish in the otter's mouth in the wrong way, but this is the first opportunity I have had of mentioning the fact, or, may be, I might have saved many a distressing picture.

I trust, however, these few words will help to throw some further light on the habits of the otter, and as those I have put forward will only show too plainly that they do more good than harm by the partiality they exhibit for two notorious destroyers of our fish in their origin, we shall in future hear less of their being shot, trapped, or snared.

PHEASANT TAIL.

"THE Battle of the Blockhouses" is the picturesque title of an article in the June Scribner's which describes the recent fight in Manila, told by an eye-witness who makes the strange conditions of that campaign very real to American readers. It brings out with great distinctness the bravery of the Western volunteers, men who are of the same fighting stock as the Rough Riders. It is said that the long months of discipline preceding the fight made these volunteers soldiers equal to the regulars.

KERRY AND ITS FJORDS.

KILLARNEY is as a household word, and a name to conjure with, and yet it is not without a rival (and that even "next door") possessing a charm all its own, with the added merit of novelty.

Until about three years ago the splendid district indicated was virtually inaccessible, and although anglers are not wont to let time, trouble, or inconvenience bar their way to a choice swim, yet I am sure they can none the less appreciate an efficient train and coach service and comfortable and reasonable hotels, such as are now provided by the enterprise of the Great Southern and Western Railway.

I will presume my readers to be making a start from Killarney, and point out a few charming resorts, any of which may be reached by means of the "Grand Atlantic Tour," which I will very briefly describe.

Starting northward from Killarney, and leaving behind its "soft swelling hills, deep-eyed lakes, and dark mountains," we branch off from the main line at Farranfore, and passing Castlemaine and Milltown, cross the beautiful Laune to Killorglin, with its picturesque Knights Templars' Castle. (From this point is a seven miles grand drive to Glencar. See below.) The next station is Caragh, at the north end of Caragh Lake, where the new Southern Hotel, nestling amongst the trees on the lake side, forms a most acceptable headquarters for a day or two. Here there is excellent salmon and trout fishing (many of the latter 3lb.), and also in the Caragh, Caraghbeg, Ougariv, and Meelagh rivers, while within easy reach are lakes Acoose, Cloon, Coomlonkir, Oulagh, Loughnakirkna, Corravoula, and Nabrackdarrig, "all of which would gladden the heart of old Izaak." The Caragh, says "Hi-Regan," is the earliest white trout river in Kerry, and a few charr are got in all the small lakes.

An excursion from the hotel at Caragh to Blackstones Bridge by car, returning by boat through the lake, is one of great beauty. From the road, which for the first few miles runs along the heights over the lake, there are fine views of the lake itself; while toward the west is the Bay of Dingle, its placid waters glistening in the sunshine. After a drive of about six miles the road joins that from Killorglin, about a mile from Acoose Lake, and then descends, following the course of a small mountain stream, which noisily brawls along its rocky bed, and the fishing hamlet of Glencar is seen in the distance, with the Glencar Hotel a little beyond it, prettily situated on rising ground, in the midst of a grove of fir trees.

The inland drive from Glencar to Parknasilla, about twenty-five miles, by way of the magnificent Pass of Ballaghbeama, with the grand mountains towering some 2000ft. above, is unsurpassed in the country.

Resuming the rail, we next reach the watering-place of Glenbeigh, in the close vicinity of which is the grandly forbidding Lough Coomasaharn, and then a journey of surpassing loveliness, with the Atlantic on the one hand, and the towering Dingle Mountains on the other, brings us to Mountain Stage and Kells, at the summit of the line. Thence we rapidly descend to Cahirciveen, where, at the now ruined Carhen House, Daniel O'Connell was born. Backed by the grand Iveragh Mountains, with the blue waters of Dingle Bay at our feet, the situation is perfect, and in the neighbourhood are the ruins of Ballycarbery Abbey, the ecclesiastical remains on Begenish and Church Islands, and a number of remarkable caves, all easily visited from Leslie's Hotel.

The rail carries us on a little further to Valencia, whence we should ferry across to Valencia Island, the headquarters of the Anglo-American Telegraph Company. Here there is magnificent scenery and first-class sea fishing.

The "tour" on which we started ends its first stage at Cahirciveen, where a well-appointed coach awaits us, and carries us by a grand inland drive of eleven miles to beautifully situated Waterville, on a little streak of land which seems to protect from the ocean's embrace the lovely fresh-water lake of Lough Currane, as fishful as the Erne, and "the best free fishing lake in Ireland." At its head is Coppal, where sea trout and small brown trout abound. While at Water-

ville, my readers will be glad to know that "full information as to the flies suitable for the lake and the places best to troll may be had from the best known angler in Kerry—Teigue McCarthy. Like Sir Roger de Coverley's friend, Will Wimble, he can tie a fly 'to a miracle,' and is an enthusiastic devotee of the gentle art. Ask anyone in Killarney or Waterville about 'Tim Mac,' and they will tell you where to find him or of someone who knows where to find him."—*The Sunny Side of Ireland.*

Our way now lies by the shores of Ballinskelligs

"Parliamentary party," which has just been touring Ireland, after taking a thirty-six mile drive from Glengarriff to Parknasilla, say that it "was a delightful experience, and everyone was charmed with the picturesque scenery." A few more miles, all too short, bring us to Kenmare, where we join the train to take us back to Killarney.

Of course I have but touched the fringe of the beauties of the district. For further details I will refer my readers to "The Sunny Side of Ireland" (A. Thom and Co., Dublin) and "The Lakes and Fjords of Kerry," sent post free by the Manager,

Bay, which it overhangs in parts at a height of some hundreds of feet, and the retrospective as well as forward view is very grand. Defiling through a gloomy pass, we emerge at Derrynane, with its ruined abbey, and, grandly looming out from the Atlantic, are the giant Skellig rocks, with their vastly interesting ecclesiastical ruins. Onward we go by the northern side of Kenmare Fjord to the beautiful semi-tropical Parknasilla, with its glorious groves and romantic islands that transport one, as it were, into fairyland. The

G.S. and W.R., Dublin; while for the fullest information as to angling there can be no better authority than "How and Where to Fish in Ireland," by "Hi-Regan" (London: Sampson Low).

As a concluding word, I am confident that no more enjoyable a time can be had anywhere in the Three Kingdoms, whether for angling or mere holiday-making, than in "those lovely lands that the Gulf Stream crosses the Atlantic to kiss."

BURBERRYS' GABARDINE SLIP-ON COAT

Proof against **RAIN, SLEET, SNOW,
HOT and COLD WINDS,
THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

OUTSIDE GABARDINE, INSIDE WOOL. Both Fabrics WEATHERPROOF.

Price - - 63s.

BURBERRYS, 30, HAYMARKET, LONDON,
AND BASINGSTOKE.

Experts in WEATHERPROOF KIT.

CURIOUS AND INTERESTING FACT

CONCERNING AN

ITCHEN TROUT AND THE MAY FLY

The "Fishing Gazette," April 16, 1898.

"The Major caught a brace of trout and several troublesome grayling; the largest trout was about 1½ lb., and by this trout there hangs a tale.

"When I was fishing in the same meadow last June I lost many a trout and many a May Fly; now it so happens that in the gill of this trout was found, firmly hooked, a very perfect May Fly—the G.O.M.—with 6 in. of gut. He has worn and no doubt been proud of this distinctive decoration ever since. It seems to me to be a very remarkable thing that fly and hook should have been in that fish for more than nine months, and now as perfect as if fresh as if it had been in my pocket-book all the time; the gut is rather rotten. The gold tinsel round the body is as bright as ever it was, one wing is slightly mangled, as if other envious trout had tried to nibble it. I fully believe that fly is mine, that I lost that fish on that particular spot last May; the only doubt I have about it is that I then estimated the fish I lost as at least 1½ lb.,

whereas this one, after nine months' growth, now weighs only 1½ lb.; on the other hand, you know how much larger are always the fish you lose than those you take! I find there are other claimants for this fly. The Professor, who

is not here now, has certainly a claim. I can only say, 'Palmar qui meruit ferat,' if it can only be proved. It is distinctly a G.O.M. of Mrs. Ogden Smith's make." THE AMATEUR ANGLER.

The "Fishing Gazette," April 30, 1898.

"Here is a picture of the G.O.M. May Fly imitation, after it had been worn in the gill of a trout for about eleven months, as described by me in the Fishing Gazette of April 16. Of course there is no novelty in finding a fly in a trout's mouth; but it is somewhat of a novelty to be able to identify the fly, and also to find it in such a perfect state of preservation after so long a time of wear and tear."—AMATEUR ANGLER.

THE "GLADSTONE" MAY FLIES,

The invention of Mrs. OGDEN SMITH, were the most successful flies used last season, proving more killing than any other pattern, especially on the Hampshire streams. They float remarkably well, dry very quickly, and can be had in twenty varieties of shade, both in the body and wings. Price 4s. per dozen. To be obtained only at OGDEN SMITH, 6, Park Side, Hyde Park Corner, S.W.; and 34, St. John's-hill, Clapham Junction, London, S.W.

AN ARTIFICIAL MAY FLY RISE.

Most of us have enjoyed the pleasure of a good day on good water when the May Fly has been in evidence, and require but little to be said on the pleasures of such a day. About the end of May we begin to furbish up our tackle, and get our pet pattern May Flies in readiness, awaiting the welcome wire from the country. On Tuesday last, May 23, I got my message that "The fly was up, and would be all right by Saturday." So on Saturday morning by the first streak of dawn I was stirring, and caught the first train down to my fishing water. A change had, however, come over the weather during the preceding day or two. Instead of bright, sunny days and warm nights, the temperature had been low, while daily a keen N.E. wind had prevailed, turning to frost at night. On arrival on the banks of the Kennet my friend and I were informed by the keeper that but few fly had been on the water. The morning was cold and windy, with occasional bursts of sunshine. So it was with feelings of disappointment that we put our rods together. No fly was on the water at 9.30 a.m., though here and there under the banks one could discern a moving fish, which occasionally bulged at something. We started trying with the Olive Dun, but nothing paid any attention to it, so I changed to a small yellow-winged straw-bodied May Fly, and on putting it along the trail of some weed close to the bank, at once rose and hooked a fish. After a fair bit of sport, I netted him out—a nice little fish of 1½ lb. in weight. His mouth and throat were full of May Fly larvæ and water shrimps, at which, no doubt, he had been bulging. In about twenty minutes I saw another rise, and, putting the fly over it, secured a smaller fish, about ¾ lb., which was speedily returned to grow older and wiser. In the meantime, my friend, seeing that my May Fly was killing fish, also mounted one, and tried along a sheltered reach further down the river, out of the piercing wind. On the opposite bank, close under it, he noticed one or two gentle rises, and his May Fly, first cast, was taken by one of the Kennet leviathans, a fish of about 3 lb. to 4 lb. This grand fellow gave him plenty to do, and, finally, as he was being drawn, quite exhausted, into the net, he rolled over, the hook came away, and he slowly sank down into the depths. *Sic transit! Eheu!* It is ever thus. Meantime I had not been idle. Over on the other shore, across a shallow, which wanted careful navigation in wading stockings in order to avoid an overflow, close under an overhanging tree a gentle rise was seen. The stream here ran very swiftly, and the water was rather broken; the May Fly, when cast above, was whisked under the tree at railroad speed. The first cast, not quite near enough to the bank, resulted in nothing, but the next elicited a splashy rise. After resting the fish for a few moments, utilised by the fisher in getting more freeboard for his waders, as a suspicious trickle had been felt, another cast was made with a fresh fly. Again the fish rose, and upon striking off rushed the fish, making the reel screech. How that fish ran, here, there, and everywhere, while nothing that I could do seemed to have much effect upon him. The only thing was to pull him down stream, which was promptly done; still he resisted, and every time a little line was got in off he would go again. When he was got to the surface the reason was revealed, as the fish was seen to be foul-hooked.

As much strain was put on as dared be, and at last the net was got under him, about fifty yards below the spot at which he was hooked. The difficulty of struggling ashore through water about an inch below the top of one's waders, and then travelling through a squashy reed bed for about fifty yards, all the time keeping a tight line on the fish, must be patent to all. A dozen times I thought he was bound to get away, but there he was at last in the net, a fish of only 1½ lb., foul-hooked in the ventral fin. After this three small ones took the May Fly, and were returned, and then we lunched. While at lunch the first May Fly was seen, raising delusive hopes that there might be an afternoon rise; hopes which, alas! were doomed to be frustrated, as the rising of the fly seemed the signal for the trout to leave off.

All the afternoon nothing save a dace or two

rewarded our efforts, with the exception of one fish under the opposite bank, which came spasmodically at my comrade's May Fly, but refused to take it or anything else. As evening came the cold increased, and all fly disappeared from the water. Just before leaving I decided to put up a big Red Sedge (floater with chenille body), and try again for the pertinacious one. He lay right in a little eddy, where as soon as the fly touched the water it was at once dragged down by that outside stream. By casting on to the bank and then flicking the fly off, it fell with a morsel of slack line; at once Mr. Trout had it, and I had him—a nice fish of 1½ lb. And so my day ended: three sizeable trout and four returned, all but one on the May Fly, and not a sign of a rise. What did they come at? Was it memory or anticipation? Were they looking forward to the rise that is coming this week, and which will be nearly over by the time these lines are in print? Or were they remembering Tuesday's rise, which at the time was too novel to be taken advantage of? Whichever or whatever it may have been, there is no doubt that trout were eager for the fly, as can be easily seen from the fact that though the water swarms with dace, only three were taken against ten trout.

One thought strikes one particularly, namely, whether it is always the wise course to wait for the rise. If one had waited on Saturday, the whole day would have been wasted, whereas the fish must have been feeding under water before ten in the morning, as the first fish, as has been said, when taken at that hour had his throat full of larvæ. It will be noticed that for Kennet trout the fish run small; but this may be accounted for by the fact that frequently the old, big trout do not think it worth while to come up to the May Fly till it is fairly plentiful, and then get two or three at a time. However, there is little doubt that with a few days of warm weather we will have the leviathans all agog, and hear some of the astounding anglers' tales of great fish lost with the May Fly. To all who have the chance, "Tight lines!" NEMO.

FISHING IN INDIAN WATERS.

(Continued from page 366.)

SKETCH No. 4 shows the fish I refer to. They seldom exceed 6 in. to 6½ in. in length. It is, I believe, the *Atherina forskalii* of Day. Great numbers are caught in nets about the coasts and bays, but they are not as a rule so large, seldom more than 3 in. to 3½ in. in length, and are always spoken of as "white bait."

It is quite unnecessary for me to lay down times and places here for the Port Blair fishing. The place is naturally such a harbour of refuge and happy hunting ground that its waters seem always to teem with fish life. Any time will do for a trial; but, of course, as I have said before, the best times are when the sardines are about; the fish are then more in evidence, and one needs lose no time in looking for them. Then, as I have said, the jetty or pier is as good a place as any. At other times out near the station steamer buoy used, in my day (now some years ago), to be considered a very good place indeed, and for "haring" most of us used to trail about a bait whenever we went anywhere, just as a matter of course, and on the off-chance of a fish. Again, near the wreck of the sunken Indian Marine steamer *Enterprise*, which was blown ashore in the great cyclone in 1891, there is a reef which used to be good for the golden caranx, and off the rocks near the Post-office was a favourite resort for catching the rock and coral fish, which we often wanted for bait when sardines were scarce or unobtainable; but, in fact, most places are good down there, and one need not bother much as to where to go. The rule used to be to go out and trust to luck.

With regard to bait, far away the best bait for any or all of these predaceous fish is the sardine, so called; and you may vary the size to suit the fish you are after; but ordinarily a 4oz. bait would be found to be large enough. Often, however, sardines are not procurable, and then you must go and catch your bait upon the rocks. As in Aden, so here you will find that an hour or two's angling will produce the most curious collection of brilliantly-coloured, but rather evil-smelling rock fish, and these are excellent in their

way, and are not despised by the larger fish. Then you may try our old friend "sarcelle" at times with advantage, or even make a weird and curious representation of a flying fish with cotton wool, silver or tin foil, and a white or red rag, and drag the whole skipping along on the top of the water. This is best done when sailing along with a brisk breeze, and lo! your counterfeit flying fish shall be taken with such a splash and a rush that shall make your heart flutter, and after a grand fight you will find that you have got a "barracouta." Here, again, the inventiveness of the angler will have full scope, and many a man has his own particular artificial lure, which he fondly believes is better than any other. I had a very good arrangement once. A deadly scheme of triangles, something like a Thames pike flight, and from each hook depended a strip of cotton tape, cut to different lengths, and they all wobbled and waved when being towed in a manner that fascinated many a fish.

For the smelt nothing is so good as the soft tail of the hermit crab. The crab itself is easily got. They swarm on the beach, and if you will only sit still you will see the old shells lying on the beach begin to move and then walk about. Rather embarrassing to a stranger sometimes, who begins to wonder whether he is seeing right or not, but a little investigation soon shows him the cause. In each of these shells a crab has taken up his abode. You have got your crab now, but the question is how to remove him. Pull him out you cannot, while if you break the shell (in itself not a very easy job) you generally mash up the occupant. I give you a tip for what it is worth. Perchance you may be smoking; well, if so, take the shell and hold it quietly for a minute or so with the back or closed end of the shell near the business end of your cheroot, and in a short time the hermit will begin to wonder what is up with his hind quarters, and as the heat increases he will very quickly and suddenly evacuate his fortress, and then you have him at your mercy.

While on the subject of hermit crabs and shells, I would remark that anyone with a taste for conchology would here be in his element, for he could gather here, with very little trouble, a wonderful collection. Some of the reefs here abound with beautifully-marked tiger cowries and curious and spikey specimens of all sorts and sizes are to be had. I say of all sorts and sizes advisedly. In the one case, I know a rev. gentleman who sorted out 1500 complete shells, and, for safety, stowed them away in an ordinary small homœopathic medicine bottle; while down in the Nicobars, in a quiet bay, on a shallow reef which is very nearly dry at low water, I know of the existence of a huge tridacno or clam, each half of which would make a very decent bath for a man, and I, moreover, tried one day for hours, with a crowbar and six men, to detach him from the ledge where he had anchored himself. When we commenced operations he simply shut himself up, tightened his hold on the rocks, and utterly defeated me. I have, however, at different times, obtained some very decent specimens of tridacne, and at one time possessed a set of dessert dishes which were simply the half shell. All the miscellaneous marine growth which was on them originally had been allowed to dry up and remain, and as dessert dishes they were certainly unique. I was very sorry when, through no fault of my own, I lost them. And now for the gear required. I have on one or two occasions before fully described the class of rod, reel, line, and trace required for general sea fishing out here, so that I will not long detain you. What I have said before regarding rods and reels here holds good, but in the case of Port Blair fishing, there is one alteration in the way of traces that is imperative. In Bombay the water never pretends to be very clear; in Aden, though it is much clearer, still, when compared to the absolutely clear and pellucid waters about the Andamans, it is as "muddy tub swipes" to a glass of Perrier Jouet; hence the twisted brass traces which are so suitable in the two first-named places are entirely out of it here. Nothing but the very finest gear will do, and when you come to consider the class of fish you are likely to get, you will understand that it has been no easy task to get a trace that shall be sufficiently invisible and yet sufficiently strong. Gut is of no use at all. There is a metal worker out here, in Delhi, who makes a perfectly lovely

steel wire. Originally intended for the strings for some native musical instrument, it was taken up by some keen fishermen, and is to be had occasionally, but only in limited quantities. Men who use this use it triple, as it is less likely to kink. I only once managed to get any; but since then I have used a very decent nice wire, supplied by Robertson, of Bothwell-street, Glasgow, who, I understand, has sent out several lots since then to the Andamans, direct to order. I don't know the gauge, but in thickness it is about the size of linen thread, and costs 3s. a pound. I have found this suitable in every respect, finely tempered, and put up in large coils. When a piece is cut off it springs out quite straight, and as long as it is kept free from kinks it is amply strong enough for anything. These traces must be well mounted with swivels, blackened or bronzed, to suit the colour of the wire. On the other hand, the disadvantages of using these traces are that the action of the salt water affects the steel to such

water, and deliberately swam across to where I was fishing.

I cast in where I thought he might possibly be, and at the second attempt had a very modest offer. To this I struck, and he then at once showed himself. He began by making a series of very short sharp runs, zig-zagging backwards and forwards, and at the end of each rush he made a series of magnificent leaps out of the water, rising some 3ft. or 4ft., but covering certainly some 10ft. or 12ft. in each leap. Thus he was plainly visible, and all this time he had not got more than from 25yds. to 30yds. away. The natives called it a "Dagole," but from what I could see of it I imagine it must have been a *Cybius* of some sort, or, perhaps, *Thynnus Pelamys*. Its apparent length was, roughly, some 6ft., and I do not think I am over-stating its weight when I put it down at about 60lb. However, after carrying out these tactics for some fifteen minutes or so the fish had evidently come

tunity, or, perhaps, even the wish to visit these places, but, in case anyone should wish to go, I would point out, not with any idea of damping their ardour, that on account of its being a penal settlement, it is not easy to obtain permission to stay there, unless with friends. All the house accommodation is the property of Government, and no more is provided than is necessary for the requirements of the settlement officers, and all Europeans there resident are officials. In fact, it is a pretty close preserve. One can, of course, visit the place by taking a passage for the round voyage, either from Madras or Calcutta; but, in doing this, though one sees the beauties of the islands, one gets no time to loaf about, enjoy the place, or to fish. Once the steamer has left, it is entirely cut off from the world. There is no telegraphic communication, and until the steamer again comes round they may truly be said to be in, but not of the world. This old world state of affairs constitutes one of the chief

FIG. 3.—CYBIUS GALLATUM, OR SEER FISH.

FIG. 4.—ATHERINA OR SAND SMELT (probably *Atherina forskalii*).

an extent, that they only last a few hours; can certainly not be used a second time; in fact, I have felt them roughened and pitted after a couple of hours' immersion, and I change at once as soon as I feel this; and, secondly, if perchance a kink should occur, they part with the first strain. However, as one gets several thousand feet for about 5s., and as each trace is, as a rule, not more than 6ft. in length, it is not ruinous to discard them when once they become doubtful. I had a very sad experience with one lately. Only the other day I went out fishing, accompanied by a friend, a Mr. J., and, quite contrary to my usual routine for Bombay, I mounted one of these steel traces, in lieu of the ordinary twisted brass wire. Shortly after we had commenced fishing, Mr. J. had a sort of half offer from a very large fish, which came to the top of the water after his bait, but stopped short. Immediately after, presumably, the same fish made a rush, and took one of a small swarm of garfish swimming about, and, having taken this, again came to the top of the

to the conclusion that that neighbourhood did not suit its delicate constitution, for it turned tail, and proceeded with a fearful rush to go straight out to sea. Having run out some 100yds. or so, he again threw himself straight up on end out of the water and made a further run. He had got away 180yds. by this time, when he made one supreme effort, and this time, while in the air, the line came back to me, and he was off with a 5 0 hook, 4ft. of steel wire trace, a 1½oz. lead, and three swivels. On examining the remains of the trace I found it all kinked and twisted at the point of fracture, and I wonder now that it held out so long. I am convinced that, somehow or other, in one of his leaps he got a twist in my trace, probably with his tail, and hence the disaster. I live in hopes, however, that I may renew my acquaintance with my friend the Dagole; and if he beats me next time, well, then I will forswear steel and revert to brass wire.

To wind up with: It is not very likely that many of your readers will ever have an oppor-

charms of Port Blair and the Andamans in these days of rush and skurry to the older generation, though the younger and more ardent spirits often find that time hangs heavy on their hands.

FRED. ORD. GADSDEN.

READING AND DISTRICT ANGLING ASSOCIATION.

THE twenty-third annual report from the committee of this association is very satisfactory. Everything possible is done to improve the angling between Goring and Ship-lake by the prevention of illegal practices, adding to the stock of fish in the river, by the recovery of "stray" fish from ditches, low lying pools, backwaters, by every means in their power; and although prosecutions have been few and far between, a strict watch is kept over the whole district, not only by the bailiffs but also by several members of the association who act as honorary river keepers, and no doubt these gentlemen receive the best thanks of the association. Considerable difficulty has been experienced in procuring stock fish, but in March a consignment of Wycombe trout ("spawners"), measuring from 12in. to 15in. in length, were turned in in the upper reaches of the river, and 4000 splendid crayfish were distributed at suit-

able spots in the district, the generous gift of Mr. Henry Lewis. These creatures are excellent scavengers, and are very numerous in the Lea, below the mouth of the Mimram, at Hertford. Between three and four dozen good carp-bream were also very acceptable, the gift of Mr. Frederick Groves. Excellent results have attended the netting of backwaters, ditches, &c., and by this means alone no fewer than 1½ cwt. of barbel (sixteen of them weighing over 5lb.), ten trout between 1lb. and 1½lb. each, 100 ditto up to 8in., about 2000 small perch averaging 4in. to 5in., many good roach and chub, some 3cwt. of fry of various sorts, and a bushel of crayfish; and it must not be forgotten that these additions do not include the netting operations after the floods. A gentleman residing on the upper portion of the river also turned in seven dozen of Wycombe trout at his own charge. Regular inspection of the river by the hon. secretary and other members of the committee proves the Thames to be wonderfully well stocked with fish in this district, and the extreme lowness of the water during the summer and autumn had very little effect on piscine health, very few unhealthy fish being seen between Pangbourne and Goring. The Patrick stream and stretch of the Loddon, under the joint care of this and the Henley-on-Thames Society, also teem with all sorts of fish. The annual meeting and dinner of the association were held on Feb. 18, Mr. James Simonds, J.P., the president, in the chair, whilst the bailiffs, lock-keepers, and ferrymen in the district had their yearly dinner (which, as usual, they much enjoyed) on April 29, when Mr. A. H. Bull filled the chair, supported by several members of the committee. Six members have been lost, and sixteen new members have been elected during the year. The total expenditure was £65 4s. 4d., there being a balance at the year's end of £12 3s. 4d., and anglers will do well to support this excellent association.

REPORTS FROM RIVERS, LOCHS, &c.

Lower Thames.—GENERAL REMARKS.—Under the old rules of the Thames Fishery, Thursday last would have been regarded by the anglers as "the glorious first of June, and the commencement of the general angling season, but has been wisely extended to the fifteenth day of June, when the great army of anglers will have entire possession of the river. I think, after the precaution that has been taken by the T.A.P.S. in reference to the safety of the spawn and other fish, the future will be a bright one in regard to the stock of fish which the grand old river still contains, and emphasis has been specially laid on that of the perch, which has been reported as having spawned more plentifully this season, and it is one of the best of the species in giving good sport to the anglers, and in my angling days an especial favourite of mine. I have always been anxious at this time of the year to say a few words to the anglers in reference to the condition of their fishing tackle, as, from experience, I have found repeated instances where good fish have been lost through the defective character of the lines, and left to stray about, carrying with them "the order of the flight," as my old friend Greville F. used to term it, amongst their finny neighbours. There was one instance, at Sunbury, in which a fine trout had run out about 50yds. of line, and then the line being weak at that point, gave way; and, if I remember rightly, was afterwards found dead with the tackle in it attached to the line. It was just previous to the time when I became secretary, but when I was a member of the committee, and the information was given to me by my predecessor, who was the unfortunate angler. I am glad to find the head river keeper, William Douglas, has been busily employed this last week in placarding prominent portions of the river with quotations from the bye-laws as to illegal offences, and giving the sizes and seasons of fish. In reference to the society itself, I hope it will be more liberally supported.—B.

—(Shepperton).—George Rosewell continues to pilot his clients in the capture of trout, and one day enabled Mr. D. Matthews to creel his first Thames trout, a nice fish of 5½lb.; and another day, with Mr. G. W. Ellis, one good one of 6½lb. This excellent fisherman further reports: "The fish are now feeding better than they have been all the season, and I only wish anglers would come down and try for them."—B.

—(Sunbury).—Messrs. T. and A. Stroud, one day, with Major Arthur Terry, landed a nice trout of 6½lb.; and another day, with Mr. Jenkyns, one of 4½lb. The trout are now well on the move, and the water in good condition, and anglers should give these excellent fishermen the chance of piloting them amongst the fish, as the neighbourhood of Sunbury has long been noted for the capture of trout, and in the days of the late Mr. Lukyer and Mr. H. L. Rolfe holds a very good record.—B.

Ancholme District.—Brilliant summer weather has brought on quite a host of flies which were previously slow to hatch. Black Gnats are on in myriads, and the Hawthorn is just appearing. The Alder Fly continues one of the leaders. Dotterel Duns are coming out in the evenings; that with yellow body is the most numerous and best. Some Apple Greens and Soldier Beetles are also taken by the fish. I had my first turn on Monday, in connection with my son from London. We took sixteen very nice fish between twelve and four o'clock, but could not fish the evening owing to an engagement. It was very bright, and the fish were mostly secured in shady places.—THOMAS FORD (Caistor).

Cornish Streams.—Fine, dry weather, east winds, and capital water make up a combination of circumstances which leave the fisher doubtful between a good basket of trout and none at all. This has been the state of affairs during the past week. In some cases, as, for instance, on the shady, sheltered parts of the Camel and the Tamar,

there have been good baskets; and in others, where the river is exposed, there have been none at all. Peal have run up, but few seem to sport. Trout fishing, taken all round, is very good.—BODMIN.

Darenth (Horton Kirby, Farningham, &c.)—With the warmer weather sport has improved, and the dry-fly man is in his element once more, as the conditions are now such as to render any other mode useless. The most killing flies are the Olive Dun, Red Quill Gnat, Ginger Quill, and Blue Dun. I had fish with each of these yesterday (Wednesday) morning, and the Ginger Quill was so attractive that it actually took a 1lb. fish which had just been following and refusing a natural May Fly, floating down. Perhaps by Saturday this latter fly may be of use, as the fish are just beginning to take it. My best fish (1½lb.) took the Olive Dun with gold twist. The finest gut is now essential. Water in fair order.—J. P. T.

Dart (Totnes and District).—Exceptionally large hauls of salmon were made on Monday, the net at Totnes weir securing no less than thirty-four at one haul in the morning, their total being forty, and two peal. I hear the nets at Stoke Gabriel caught even a bigger lot the same day. Six, however, is a record haul for the Totnes boats this season. Mr. W. H. T. Martin has killed five on the moorland waters; Mr. W. W. Symington, two; Mr. Holman, two; and the Rev. C. Rickards, of Princetown, one; the weights running up to 12lb. The first-named rod had a struggle with a game fish, which took him nearly an hour to land. Fish on the moor are reported in good condition, and takes of trout have been made on the Cherrybrook, Blackbrook, and other tributaries. Mr. Densham secured twelve brace, and other rods have had smaller lots, but the fish are "off" artificial flies. Of the Buckfastleigh rods, Mr. H. Wright and Mr. R. Rogers killed several dozen between them, and Mr. Evans has had some sport at Buckland. Salmon and trutt are in the pools near Staverton, and on Tuesday one rod creel a fair lot with the Black Fly and maggot. Messrs. Revell, E. Distin, Fnl, and Ackrell, by evening fishing, have had small creels, but the fish will not look at anything but the Black Midge or Caterpillar, the latter being difficult to obtain. Visiting rods seem to have difficulty in getting any decent catches.—DEVONIAN.

Dee (Carrog).—A good body of water is still coming down, but the bright sun makes it far too clear for successful day fishing, and the only chance one has is after Sol disappears behind the hills. Last week the river was in semi-flood, and a lot of very fine fish were taken, principally with minnow and Garden Fly. One day, Major Sparrow had four good trout, and the head keeper, Williams, told me he was informed that Mr. Fream had a basket of eight trout that averaged 1lb. each, truly a wonderful catch for the Dee, if authentic, as the river being a rapid flowing one with stony bottom, the fish do not run large, and, indeed, are seldom met with over 1½lb., except when a heavy water is on, and then only with the lures above mentioned. Mr. Amos Williams had nine trout one day and five another, many of them 1½lb. and 1lb. Mr. C. Trubshaw, of Southport, and self, both staying at the Grouse Hotel, had one and a half dozen in a few days, up to nearly 1lb. each. On Monday of this week we had a visit for the day from the Rev. Mr. Sparrow, a very enthusiastic fisherman, who sought to repeat his record of a month since, when in a few hours he landed nineteen fish, weighing 8½lb., but the water conditions being now altogether different, he had to be satisfied with three fine trout, which he caught with fly, but not, however, till late in the evening.—AN OLD DEE ANGLER.

Derwent (Malton, Yorks.).—We have had a very wet time of it lately, and the river in flood over and over again. The water has now fined down, and the weather quite summerish, and lots of flies on the water.—H.

Devonshire Streams.—The hot weather has set in, and the days this week have been very bright, so that the best sport has been with evening fishing. Sport with trout generally is somewhat quiet, although some capital baskets have been made in the Upper Lyd and Tavy, Cleave district. In the Bristow stream there are some fine trout, which are said to be much larger than the average Dartmoor trout. Several recently taken measured from 12in. to 14in., and takes have run up to a couple of dozen. There has been talk of some exceptionally big catches of trout in the northern streams, lots including 1½-pounders and 2-pounders. If these reports are correct, however, the North Devon anglers are specially favoured. A fish of over 5lb. was killed in the leat at Tiverton by Mr. C. Warner. A number of visitors are on the streams just now, and among the friends of the Hon. Mark Rolle who have been fishing his Biston waters, on the Otter, was Lord Mountcashell. The southern streams have only afforded fair sport. A quantity of salmon have fallen to the nets on the Dart lately.—DEVONIAN.

Dove and Tributaries.—The Mays are not yet up. They will not be before the end of the first week in June, as per usual in Dove Dale, according to all appearances. Several anglers have turned up too early for the May Fly season already.—D. AND W. H. FOSTER.

Esk (Whitby).—This river has run much too low for salmon fishing, so that during the past week there has been very little doing; before we have anything like good sport a flood will be needed to enable some more fresh run fish to get up the stream. The catches are: Mr. Baker, two salmon, 5lb. and 7½lb.; Dr. Dreaper, one of 5lb. These were all landed with fly in the association waters. A few anglers have been trying trout fishing with the following results: Mr. Rhodes, six brace; Mr. Marks, five and a half brace; and Mr. J. W. Nicholson, five brace; whilst several others have had small catches.—J. JACKSON.

Exe and Canal (Exeter).—Heavy rain fell here throughout Wednesday last week, and on Thursday the river was up about 2ft., and much discoloured. Those who are not above using the common garden bait made good baskets, but for ordinary work the river was out of

ply until the Saturday. On that day the Rev. Coleridge killed a brace of salmon on the fly, near Bickleigh; and anglers on the Lower and Upper Exe Associations had moderate sport among the trout, flies doing best being the Blne and Olive Duns, Iron Blue, and Blne Upright. Sport has been generally retarded by the easterly winds, which have proved veritable "stayers" with us this season.—RED PALMER.

Fen District (South Lincs. and Cambs.).—At last we seem to have got a real change in the weather. Whitsuntide finished with a drenching, but the bright sunshine of this week will soon make a great alteration in the habits of both insects and fish. Fly fishing prospects are now brighter, and the May Fly should be coming to the front. Other flies will also be out in force.—LIMPET.

Idle District (North Notts.).—Fly fishermen now seem likely to have an opportunity. Hitherto none but bottom fishers had any chance. The bright sunshine will make all the difference. Forest foliage is very backward. Oak Apple Day is passed with the oaks in some cases bare of leaves. Odd instances of the May Fly have been reported, but if the sunshine lasts they will be out in force by the end of the week. Last week was such a "frost" that there is absolutely nothing to report.—L.

Lake Vyrnwy (N. Wales).—At last there has been a decided improvement in the weather, and the cold and wet which have hung over the country for so long have given place to nice bright and warm weather, and the fishing now is sure to be what it ought. During the week 213 fish were taken out of the lake, the total weight being 131lb. On the 24th ult., seventy-one fish scaled 41lb. 9oz. Mr. Crowther made the best basket with twelve fish, 7lb. 6oz.; Mr. Malpass killed eleven, 6lb. 2oz.; Mr. Bradbury-Taylor, eight, 4lb. 9oz.; Mr. Davison, nine, 5lb. 1oz.; Mr. Townshend, eight, 4lb. 6oz.; Mr. Henty, seven, 4lb. 5oz.; Mr. Wright, five, 2lb. 10oz.; Mr. Jackson, four, 2lb. 8oz.; Col. Doncaster, three, 1lb. 9oz. The remaining baskets contained two each or under. On the 25th, sixty fish, weighed 35lb. 14oz. Mr. Malpass's fourteen fish scaled 7lb. 4oz. Mr. Townshend, nine, 6lb. 2oz.; Capt. Garnett, seven, 3lb. 5oz.; Mr. Jackson, six, 3lb. 9oz.; Col. Doncaster, five, 3lb. 1oz.; Messrs. Cadman and Scott, five, 3lb. 2oz.; Mr. Davison, four, 3lb. 2oz.; Mr. Crowther, three, 1lb. 14oz.; Mr. Wright, three, 2lb. 10oz. On the 26th, Capt. Garnett killed five fish, 3lb. 12oz.; Mr. Malpass, five, 3lb. 13oz.; Mr. Davison, four, 2lb. 14oz.; Mr. Townshend, four, 3lb. 1oz.; and Mr. Crowther, three, 2lb. 4oz. On the 27th, Mr. Malpass killed six fish, 3lb. 14oz.; Mr. Jackson, four, 2lb. 11oz.; Mr. Townshend, two, 1lb. 8oz.; and Mr. Tickell, two, 1lb. 4oz. On the 29th, Mr. Townshend brought home fourteen fish, 7lb. 10oz.; Mr. Malpass, eight, 4lb. 14oz. The other baskets were small ones. On the 30th, Mr. Malpass killed seven, 4lb. 7oz.; Mr. Townshend, five, 3lb. 1oz.; Mr. Melly, five, 2lb. 8oz.; and Rev. Feathers, three, 1lb. 10oz. Sport on the rivers has been fair, the best basket being seventeen fish. The following flies are now on the water: Alder, Hawthorn, and Gnat.—LONG DRIFT (May 31).

Lea and Tributaries.—The delightful weather of the last few days should result in greatly improved sport among the trout, which during the past week had been kept down by the cold winds and unreasonable weather. The best times for trouting now should be the early morning and between 6 p.m. and 9 p.m., and I cannot recommend my readers better places to fish than Hoddesdon (Dobbs Weir), Rye House, St. Margaret's, Ware, and Hertford. There are plenty of good fish in these districts. Below Hertford Lock a very big trout has been seen feeding; some anglers aver that it goes quite 12lb. The warm weather has brought the small fry to the surface, and shoals of fine roach have also been seen. Dace fishing opens on the 16th inst. There has been little sport among the trout again, and I can hear of no captures worth recording. Sport has also been quiet on the Beane and Rih, but prospects are promising now. The Stort tributary streams should yield a few trout now.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams have now gone down and cleared, and are running in good order for fishing. The weather has now changed beautiful and warm, and has greatly improved the prospects of angling, and there has been a good few rods out this week. The rain greatly improved the rivers, and since it has turned warm May Fly has been coming on the rivers, but the fish have not been taking them well, and to-day (Wednesday) they were beginning to rise at them, and there should be good sport by the end of the week. The flies used are the Alder, Coch-y-bondhn, Yellow Dnn, Spinners, and Iron Blue, and a few nice fish have been landed. The prospects for sport are good at present. The Pineley is in good order, and sport should be good.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—The state of rivers is all that could be wished; weather the reverse; each night a frost, which chills the water and retards the rise of insect. The May Fly is coming up as anticipated—patchy. A pool here with a fair collection, half a mile and not one to be seen. The last two days' sun has been very hot; wind N.E., and cold. Prospects on the whole can scarcely be called bright.—R. T. WILLIAMS.

North Staffordshire Rivers.—May Fly hatching slightly on the Blythe; weather and water fine, but the latter copious enough for good sport. Alder and Hare's Ear Dnn killed good bags.—F. W. DALE.

Plymouth.—All the rivers are still in good order—plenty of water, and not too clear. The Dart has taken the cake this week for trout—three baskets, viz., eight dozen, six dozen, four dozen and eight are amongst the number; and one gentleman had nineteen fish, none under 1lb. This was near Dartmoor. The peal are still running up, and the estuary is pretty full of them. They are being caught by the compass nets, and also by the drift net in

the Sound. A nice salmon was caught on the Tavy, which weighed 18lb.; it was caught on a fly.—WILLIAM HEARDER.

Sussex Rivers and Chichester Canal.—The weather of the week has been fine and summerlike, but frost has again visited us, playing havoc with gardens. Dace are feeding better in the Onse, rising well to Coachman and Wickham's Fancy. But few trout have been taken in the main river. Some small fish are reported from the Buxted and Sheffield Park district. Bream and carp are spawning in the Horse Shoe, and roach are cleaning themselves in the shallows. The Rother is now in good order, and the scenery perfection. With two miles of fishing, and the water well stocked, it is an angler's paradise. Trout up to 1lb. 2oz. have been taken during the week. Pike appear numerous, and roach are spawning, and all anglers well for the opening next month. Repairs to the lock gates at Chichester Canal has necessitated letting the water off from the lower reach; but as few fish have been seen in the salt water, carp and bream have evidently muddled or are in the few pools left. Harbour fishing has not been prolific. Flat fish, eels, and a few huss have been taken. With warmer weather we are looking for the arrival of the larger huss, when a day at Pilsea Piles is generally remunerative.—GEORGE F. SALTER.

Taw (North Devon).—The rivers were perfection last week, and the various streams crowded. A worm fisherman, who has made it his trade, is doing havoc, killing as many as 100 big and small trout, especially on strictly preserved waters. On the Bray, I have been told, fifty dozen trout were taken during the week. At the Fortescue (Arms Hotel), South Molton Road, a gentleman tells me he found good sport and accommodation fishing the Double waters. Fishing at the Chalk water, near Lynmouth, a trout over 2½lb. was killed this week. I saw some trout over ½lb. killed in the Taw, near Barnstaple. Salmon are very scarce, one only being taken last night (May 30) by the scores of nets. Wind E.; water fining down fast.—RUSTY GAME.

Teme (Ludlow).—The Teme in this part is now running clear and a nice level, and in splendid order for fishing. The heavy rains of last week left a stain on the water, but it did not interfere with fishing, and the weather having turned beautiful and fine, and real summer, the fish have begun to move well at the fly. There has been a good number of real flies on the water, and fish have taken them well. A good few anglers have been out, and have used Iron Blue, Yellow Dnn, Alder, Coeh-y-bondhu, Hardy Brown, and Spinners, and some fair lots of fish have been landed. The May Fly has begun to show itself this week, but the fish have not been feeding on it as yet, but by Saturday they may be expected to be on thickly, and the fish will then be taking them freely, and good dishes of trout will be landed. Bottom fishing with worm has been good, and some fine trout taken. Minnow has been tried with fair success. On Saturday a nice dish of fish were landed with the Iron Blue and Orl. Fishing on Monday with fly eight nice trout were taken. The water near Ludford was fished on Tuesday, and a few good fish taken. The Ony, Corve, Clnn, and Ledwyche are all running clear and in good order, and May Fly is coming on them, and good sport will be had in them this week.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is now gone down and cleared, and is running in capital order for fishing. The weather has changed round from nasty cold winds to warm sunshine, which has greatly improved the prospect of fishing. The late rain improved the river, and the fish are now rising well at the fly. A good few anglers have been out, and have used fly and bottom baits with success. May Fly has now begun to come up, but the fish are not taking them well as yet. By the end of the week May Fly fishing should be good, and good baskets of large fish taken in this part. The prospects for sport are now greatly improved, and fishing should go well next week. The Rea, Kyre, and Ledwyche are all in order.—WORCESTER.

Usk (Abergavenny).—River at present low and clear. The wisdom of the Usk and Ebbw Board of Conservators in buying up and doing away with the stop nets in the lower reaches of the river is being manifested by the large number of salmon that have passed up during the past week. On Monday Mr. Powlett killed one, 14lb., in the Penyorwater, on the same day Mr. Evans had one of 18lb. at the Park. Mr. Attwood, Glaslyn, had two good fish; Col. Parkinson, Sunny Bank, one, 8lb.; Mrs. Herbert, Clytha, one, 18lb. The prospects of salmon fishing are very good.—ERNE DE LA FELD.

Witham, &c. (Mid-Lincolnshire).—Warmer weather will put heart into the angler. Flies are more plentiful, and prospects are much better for the few days of sunshine. The Alder and the Hawthorn Flies are out in limited numbers, and so are some of the Dnns. The Black Gnat is also to be seen, and so is the March Brown and the Cowdung Fly. Another fortnight and the coarse fishers will have a chance of commencing operations. Prospects, as reported, have a rosy aspect, but I fear the spawning fish, like the rest of things, will be found late in season. The flushes in the drains will also be against the hatching and the young fish. It is expected that there will be competition among the railway companies for the patronage of the visiting angler next season.—LUCI.

Wye and Derwent (Derbyshire).—The above rivers are now in order for fly fishing. The catches during the past week have been very uncertain. A few that have fished the Wye have taken some nice fish. The May Fly is showing itself on this river, and it is thought by Saturday trout will be taking them. The Chatsworth, Hathersage, and upper reaches of the Derwent have been fairly well patronised, and some nice baskets of trout have been landed; also Rowsley and Darley Dale reaches of

this river. Two gentlemen on Monday, on this portion of the Derwent, obtained several nice fish; and those that have fished about Matlock Bridge, both on free and private water, have landed some good trout, mostly by using ante eggs for bait. The Matlock Dale water has produced a few good fish, taken with minnow. C. H. Maule, Esq., has obtained some good ones fishing from a boat at Matlock Bath, one 2½lb., and a few others smaller. This association's water below Cromford has also yielded a few nice fish. The Green Drake is now showing itself nicely, and the hot weather we are now having should bring it up properly in the early part of next week; therefore the prospect is encouraging for the next few days, and the following should be useful: Green Drake (ought to take first place), Yellow Dun, Ash Dnn, Cooper's Fancy, Olive Dnn, Furace Fly, Sand Fly, and Claret Bumble.—DOTTEREL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—It is marvellous what a few days sunshine can do, and since the weather has been in accordance with what should prevail during the last days of May and beginning of June, the face of the country presents quite a different appearance to what it did even a week ago, and our woods are now carpeted in brilliant colours, and are a perfect picture of loveliness. To-day I never saw the banks of the Yore more beautiful or the weather more perfect, although, perhaps, too bright from an angling point of view. Nearly all the trees have put on their vernal clothes, if I except the ash, which is still bare, but a few more days will alter all that; and the sunshine and higher temperature has already hatched out the May Fly and the Stone Fly, but the latter is not yet on in any quantity, and it will be the beginning of next week before it will become the bait *par excellence*, for during an experience of many years I never knew the trout to take the Stone Fly voraciously until it has been on the water for a few days. When they have once had a taste they go for it with a vengeance, and while it lasts will not have anything else. It is wonderful how quickly our rivers run down; a few days ago they were high, now the upper waters are low and clear, and careful up-stream fishing is a *sine qua non*, and if the present brilliant weather continues the early risers will stand a better chance of killing fish than the angler who is content enough to wait until after breakfast. Sport in the Yore and its tributaries was very good last week-end, and some fine sport was had up to Saturday. Since then fewer anglers have been out, and sport has not been so good; but for all that some nice dishes have been caught up the Yore, Wharfe, Nidd, Dove, &c. I looked in the Cover Bridge Inn to-day, and found the house full of sportsmen, Mr. Wilkinson's pack of otter hounds being in evidence. They had a hank day on Tuesday up the Yore in the neighbourhood of Askrigg, up the Bain, and round Lake Semerwater. They hunt the Yore from Aysgarth down to Cover Bridge to-morrow, and the neighbourhood of Middleham on Saturday, as I found the remains of a large chub in the Bat Islands this afternoon, and on Monday saw the "print" and "foil" of an otter up Gelpool. I think they are certain to have a good hunt. I send you my same post some male and female Stone Flies, mature Creepers (just hatching out), shells of the Creeper, &c., I gathered in the Yore to-day. You will find some alive and others in spirits. I hope you will receive them in good condition.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAPH.—Yorkshire.—All our rivers are running much lower in the upper reaches. The Stone Fly and May Fly are hatching out fast, and will be the most killing lure to use as long as it lasts. Weather summer-like and bright, and early morning or late evening is the best time to fish now.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Altnaharra Hotel Waters.—May 24, Mr. Kirkbride, on Loch Meaddie, had 5lb. trout; Mr. Day, on Loch Meaddie, had 6lb.; Mr. and Mrs. Straker, on Loch Badgallag, had fifty, 12lb.; Masters E. and A. Straker, on Loch Naver, had one salmon, 10lb., one grilse, 2½lb. 25th, Mr. Straker, on Loch Ellanach, forty-three trout, 13lb. 26th, Mr. Day, on Loch Tarvie, eight, 5½lb.; Mr. and Mrs. Straker, on Loch Hallam, twenty-nine, 16lb. 27th, Mr. Day, on Loch Meaddie, 8lb.; Mr. Kirkbride, on Loch Meaddie, 9lb. 29th, Mr. and Mrs. Straker, on Loch Hallam, forty, 20½lb.; Mr. Day, on Loch Tarvie, twelve, 4½lb. 30th, Mr. and Mrs. Straker, on Loch Badgallag, fifty-nine, 15lb.; Mr. Kirkbride, on Loch Hallam, twenty-six, 11lb.; Mr. Day, on Loch Break Bui, ten, 5lb.—W. D. AWE.—Fishing from Taynait Hotel on May 23, Mr. C. J. W. Gardner had a salmon, 15lb. On the 26th, Mr. McNiven had one of 21lb. On the 29th, Mr. Harris had one, 18lb.; Mr. Muir, one of 15lb.; Mr. Scott, one 15lb. Four salmon were hooked and lost during last week. River in good order.—P. MACDONALD.

Border Esk and Liddle.—Bright sunshine once more at intervals floods the hillsides and valleys of Eskdale and Liddlesdale, and the woods and dells are dressing in lovely green. The cuckoo is again heard on the slopes of Whita Hill, and the flowering heather will soon wave on the tops of Warbla and Timis Hills. At least, so says Provost Tomson, of Langholm, and I believe the douce and worthy provost. The recent floods have encouraged a run of sea trout from the Solway, and these fish have ascended far up the river. In the lower reaches sport is not good, as the fish are making for the upper waters. In the Canonbie water some fair baskets have been had, and some good takes were made in the Liddle at Penton Linn. During the past week there has been a scarcity of salmon in the Solway Firth. Very few salmon were taken in the stake nets, and only an odd fish was caught in the drift or poke nets, whilst the run of sea trout was much less than that of the previous week. Fishing in the Langholm water, Mr. W. Bell had one sea trout; and Mr. A.

McMillan caught one, 1½lb. Mr. James Telford, Langholm, caught a sea trout weighing 1½lb. near the distillery. Yellow trout are now being caught in the Langholm water in copious numbers, and in splendid condition. Mr. R. Graham had a basket of 14lb. of beautiful trout in the Reserved water above Langholm. Master T. Borthwick, Langholm, had five yellow trout, including a beauty weighing 1½lb., near Wauchope-foot, which is in the middle of the town. Mr. W. Ballantyne and others had yellow trout, both in the Esk and Ewes, weighing up to 3½lb. In the mid reaches of the Esk, Dr. Moon, London, had a sea trout in the Willow Pool; Dr. Anderson, Eskbank, Canonbie, secured a fine sea trout, weighing 2lb., in the Hush Pool, close to Knottyholm. Mr. David Calvert, Canonbie, killed one in Jock's Pool. Mr. D. Murray, Rowanburn, had two sea trout, 3lb. Mr. Robert Steel, Canonbie, had two sea trout with bait in the Hush Pool. Mr. W. Byers, Thornywhats, Canonbie, landed a fine sea trout below Gilnockie Bridge. Some good takes have been made in the Byrehurn-foot water. Mr. T. Davidson had two sea trout and some yellow trout. Mr. W. Murray, Canonbie, caught three sea trout; while others have been fairly successful. Mr. Beattie, Wigan, had a basket of yellow trout and two sea trout in the Canonbie water; Mr. Wm. Law, Canonbie, had a sea trout in the mid reaches; and a visitor had a sea trout in Prior Pool, and one in the Long Pool. Fishing in the lower reaches, Mr. J. Musgrove, Longtown, caught two sea trout over 1lb. each. Mr. H. Foster, Longtown, had one, weighing over 2lb. On Saturday, Mr. Baden-Powell had one weighing fully 2lb. Mr. Masou caught two at a fishing, and Mr. Scott, Longtown, had one in the Metal Bridge water. Some fair sport has been had in the Liddle with both sea trout and yellow trout. Mr. Jas. Graham, Canonbie, has had five sea trout. Mr. H. Law, Rowanburn, killed two, 1½lb. each, and some yellow trout. Mr. W. Murray, Canonbie, had two sea trout below Penton. Good takes of yellow trout have been made in the upper reaches, and also in the Hermitage. The waters are in better order for the fly than they have been for some previous weeks.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—Owing to drought and other causes sport has dwindled away, and so have sportsmen, most of whom have now left for the south. Although several rods, both from Balnagowan Arms Hotel and from Lodges, have been out, the only fish since last reported was a nice salmon, caught on Tuesday this week by Mr. George Ross, Braealagwell, on Mr. J. A. Young's rod. On Wednesday there were indications of approaching rain.—B.

Cassley, Rosshall (Sutherland).—Mr. A. Ross, Leicester, and Capt. McTaggart, of Glenrossall, have been fishing with fair success. Salmon range from 8lb. to 14lb., the average weight for each being close on 11½lb.—B.

Deveron (Banffshire).—This river is becoming very small in volume and clear, so that anglers have had only fair sport. Notwithstanding the cold weather last week, fair baskets of trout were getting in the Huntly and several other districts. In the lower waters little has been done of late. On the Corniehangh section, Mr. S. G. Balfour had, last week, a salmon of 5½lb.; and Mr. W. H. Goschen a grilse of 4½lb., and a salmon of 10lb. On the Netherdale section, Lord Ribblesdale and Mr. Buxton, M.P., have had fairly good sport in trout fishing, and they killed two salmon, one of 5lb. and one of 13lb. On the Edinglassie section of the river, on the 25th ult., the keeper, Mr. George Smith, had a salmon of 10½lb. There has been a falling off this week in the net salmon fishing in the Deveron and district, compared with the previous week. Towards the close of last week the number of fish taken from the nets on the coast was very small. Grilse continue backward, and only a few have as yet been got in the bag nets, and only one by the nets on the river. The grilse are healthy in condition, and average 3½lb. Salmon average about 10lb., and the heaviest a little over 20lb. For the first half of this week only two small boxes were consigned to the market. On the coast of Gardenstown the fishermen are experiencing similar conditions—want of fish, and although the weather of late has not been so cold, rain is greatly to be desired for both river and sea.—H. W.

Inchnadamph Hotel (Sutherland).—May 16, Mr. Wallace, Loch Awe, thirteen trout, 5lb.; Mr. Wallace, Loch Gillaroe, one trout, 1lb. (dead salmon). May 23, Messrs. Bartholomew and Frost, Loch Awe, twenty-one trout, 6½lb. May 24, Messrs. Bartholomew and Frost, Inver, six trout, 5½lb. May 25, Messrs. Bartholomew and Frost, Head of Assynt, seven trout, 6lb. May 26, Messrs. Bartholomew and Frost, Head of Awe, twenty-two trout, 7lb. May 27, Messrs. Bartholomew and Frost, Inver, seventeen trout, 9½lb. This month has been very cold and unfavorable for fishing, but trout in good condition. Weather much warmer now. Prospects good.—W. WALLACE.

Loch Katrine (Stronachlachar Hotel).—On Monday, Mr. Neale Thomson caught nineteen trout; Mr. King, eight trout. On Tuesday, Mr. Neale Thomson, twenty-six trout; Mr. Saton Thomson, nine trout; Messrs. Yarium had a fine basket of forty-two trout; and Mr. F. Roger, six trout, weighing 4lb.—H. M.

Lochleven (Kinross).—Following the continuous cold and moist weather the conditions have improved greatly during the past few days. The sun has been shining from an all but cloudless sky, and the loch, which was in a very flooded state last week, is subsiding rapidly, and trout are again feeding freely on the surface. There has been rather much light, however, for good sport, though pretty fair baskets have been made with fly-caught fish. All the boats have been again out daily. The following were the first prize winners at the various club competitions: Mr. J. Buchanan, Callander Club, seven trout, 4lb. 8oz.; Mr. J. Kirkland, Glasgow Clydesdale

Club, ten, 6lb. 6oz.; Mr. G. Hogg, Glasgow Wanderers Club, six, 4lb. 12oz.; Mr. J. Macleod, Glasgow Bohemian Club, five, 3lb. 6oz.; Mr. Macconnell, Bothwell and Blantyre Club, seven, 6lb. 3oz.; Mr. Stevenson, Bridge of Allan Club, nine, 6lb. 14oz.; Mr. Cochran, Rowbank Club, eight, 5lb. 9oz.; Mr. Allan, Glasgow Western Club, sixteen, 8lb. 3oz. Of private parties the following were the most successful: Rev. J. C. Hood, Kirkby Fleetham, had, in three days, sixty-three trout, 45lb. 8oz. Sir George Elliot had also fairly good sport during the past week. Mr. O'Hanlon, Manchester (three days), forty-two trout, 31lb. 4oz.; Judge Short and Mr. Earl Hodgson, London, ten, 9lb.; Mr. MacKay, Edinburgh, eighteen, 12lb.; Mr. Russel, Falkirk, fourteen, 12lb.; Mr. James, London, sixteen, 11lb.; Mr. J. M. Ross, Glasgow, fifteen, 14lb.; Mr. Horsfield, Leeds, and Mr. Adair, Edinburgh, twenty-six, 17lb. The National competition will take place on Wednesday first (June 7).—ROBERT LAING.

Lochmaddy.—Fishing from Lochmaddy Hotel, on Strumore, Messrs. Buxton and Challinor, eight trout, 43lb., heaviest 1lb., on May 22. On same loch, Messrs. Buxton and Challinor, twelve sea trout, 4lb., heaviest 13lb., on May 25. On Loch Formosat, by same party, thirty-four sea and brown trout, 133lb., heaviest 14lb. On Loch Huna, twelve sea and brown trout, 51lb., heaviest 2lb.—M. MACC.

Loch Ness (Foyers Hotel), N.B.—Fishing Loch Mhor on Thursday last, 25th ult., Mr. Burstal had a nice basket of ten trout, weighing 8lb.; and Mr. McKay, eight trout, 43lb. On Friday, Mr. Burstal again had five trout, 43lb. On Saturday, Capt. Elliot and Capt. Cowans had a basket of twenty-seven very fine trout, 173lb.; Mr. Shaw, seventeen trout, 63lb.; Mr. Burstal, three trout, 2lb.; Mr. Morgan and Capt. Walsh, fourteen trout, 11lb.—S. TILSTON.

Naver (Bettyhill, via Thurso, N.B.).—Since it reported the river was for a time in bad order, but matters are now improving. During the week ending 20th ult., the two rods from Dalvina Lodge landed four salmon; the two Syre Lodge rods, three salmon and two grilse; and the two Skelpick Lodge rods, three salmon, one of them a beauty of 23lb. During the past week sport was as follows: On 22nd, Major Burnell Milnes, Dalvina Lodge, landed four salmon on Beat No. 1, the two weighing 103lb. and 83lb. On 23rd, Mr. Gill, Syre Lodge, caught one salmon on Beat No. 3; and Col. Fryer, Dalvina Lodge, one on No. 1. On 24th, Dr. Turner, Syre Lodge, had a 4lb. grilse on No. 4; and Major Burnell Milnes, one of 4lb. on No. 3. On 25th, Mr. Gill caught a 5lb. grilse, besides a salmon of 133lb. on No. 6; and Mrs. Smith, Skelpick Lodge, one salmon on No. 2. On 26th, Mr. Gill landed a salmon on No. 1; Mr. Smith, Skelpick Lodge, one on No. 2; and Mrs. Smith a 19-pounder on No. 3. On 27th, Mr. Gill had a salmon on No. 2; and Mr. Smith, one on No. 3.—B.

North-East of Scotland.—A great improvement has taken place in the weather conditions generally, and as a result sport has revived considerably. Fish are coming on the coast more freely, and the falling prices indicate that the supplies for April have this year been deferred for June. The fact is that owing to the series of adverse winds, low temperature, and other unfavourable conditions, the fish which are usually met with in April are only just beginning to put in an appearance with the advent of June. On the Fife Arms Hotel water, Braemar, Mr. A. Wybergh creeled one of 8lb., one of 7lb., and two, of 6lb. and 63lb.; Mr. Thos. Leadbetter had one of 53lb., one of 6lb., and some fine baskets of trout; while Capt. Heartley had one of 63lb. On the Balmoral waters, Mr. Mather creeled one of 8lb. on Saturday. Other members of Her Majesty's Court have been equally successful. On the Birkhall section, Capt. Lumsden creeled one on Monday, 9.b.; and Lundy (keeper), two, of 6lb. and 8lb., on previous occasions. On the Ballater reaches a new race of anglers took possession on the 26th ult., when Mr. McGregor's tenancy came to an end. On the Huntly Arms water, Aboyne, Dr. Stephenson creeled two fine fish, of 7lb. and 10lb.; Mr. Lewers, four, of 6lb., 11lb., 5lb., and 7lb.; and several others, one or two each of average weights. On the Dess water, Harper had two, of 8lb. and 11lb. On Kincardine water, Mrs. Pickering creeled one, 10lb., and Miss Pickering, one, 7lb.; while Mr. James G. Orr, of Glasgow, had seven fish, scaling from 6lb. to 13lb. On Carlisle water, Mr. J. C. Haslam had a beauty of 7lb.; and Mr. Lewis Haslam, another of 8lb.; both to the fly. On the Borrowstone section, Lord Garrioch creeled three, of 6lb., 63lb., and 73lb.; and Mr. Beck, two, of 63lb. and 10lb. On the Ballogie water, Capt. Levett Scrivenor had two, of 73lb. and 18lb.; and Mr. Wm. Levett, four, of 7lb., 93lb., 10lb., and 23lb. On the Comonty, Mr. Joseph Petrie had a fine fish of 8lb.; and Ross, gillie, three, of 6lb., 6lb., and 7lb. On the Sluie water, Charlie Gill creeled one of 12lb. On Woodend, John Mortimer is having from two to four and five daily of average weights. On Saturday he had three, of 8lb., 10lb., and 12lb. On the Cairnton, Mr. Farley has had a splendid season up to date. On the Kinneskie section, Mr. A. Gray had one of 12lb.; and Mr. J. Berry, one of 8lb. last week. This section is now open to weekly ticket holders or otherwise for June and July. On the Upper Blackhall water, Mr. D. Smith had two on Saturday. Accommodation can be had at Feughside Inn. On the Durris water, Mr. Baird and party have run up a total of about eighty for the season. On the Don trouters are making heavy baskets to the fly. Streams all big, and water fine and clear of weeds as yet. On the Ythan tidal anglers have been waiting the migration of the smolts, which is now about over. On the Deveron, Smith, keeper, had one of 6lb. Good trouting has been had for past fortnight on Ugie.—G. M.

Overscaig Hotel Waters (via Lairg, N.B.).—Notwithstanding the unfavourable weather of this season,

angling on the lochs has now opened under favourable auspices. On Friday last Dr. and Mrs. Nesham, Newcastle-on-Tyne, tried Loch Shin, and caught one dozen trout, 6lb.; and Mr. J. Mackay, on Loch Grian, eight trout, 4lb. On Monday, this week, Dr. and Mrs. Nesham, on Loch Grian, had two and a quarter dozen trout aggregating 11lb. Immediate prospects good.—B.

Shin (Inveran, N.B.).—The following excellent sport has been got since last reported: On 22nd, Sir John D. Ferguson-Davie, Bart., of Creedy, Devonshire, had to his own rod four salmon, weighing 11lb., 12lb., 13lb., and 17lb. On 23rd, Mr. H. Ferguson-Davie landed two, of 10lb. and 11lb. On 24th, Sir John Ferguson-Davie caught a 10-pounder; and Mr. H. Ferguson-Davie, one of 11lb. On 25th, the former had one of 16lb., and the latter a 12-pounder. On 26th, Sir John landed two, weighing 11lb. and 13lb.; and on 27th, two, of 16lb. and 12lb. Total for the week, fifteen salmon, aggregating 200lb., an average of exactly 133lb. each.—B.

South of Scotland.—We are now experiencing fine summer weather in this district, and a continuance of the mild temperature for another week will give good sport to night fishers. The run of sea trout from the Solway has not been as strong as that recently reported, but a fine show of trout is certain to come on should the hot weather last for a fortnight. The trout are increasing in weight this week, and although the average is slightly under 2lb., many fine ones have been taken in the nets of double that weight. The rivers are getting low again, and are pretty clear to-day. The bright sunshine is against extra heavy baskets, but mild summer breezes for the past few days have helped anglers to lure some good fish to the fly. A number of rods have had fair sport with fine tackle and small sized Greenwell's Glory. Our district weather prophet foretells a storm of wind and rain for Friday. To-day (Wednesday) there are no indications of the predicted storm. The following are the reports from the rivers of this wide district: **THE ANNAN.**—Sea trout are ascending this river in fair numbers, but they have not begun to rest in the lower reaches yet. With the waters being in fine order, trout are running on the uppermost reaches of the river. In the Mount Annan water, on Friday, Mr. Pasley-Dirom's keeper killed four sea trout with fly, and several others have been taken in the same portion of the Annan. Professor Stansfield, Edinburgh, killed, with fly, a basket of 33lb. of yellow trout in the waters below Moffat, on Saturday. In Hoddum Castle water a number of sea trout have been accounted for with fly. One was taken in the Wamphray water with the clear water worm. A number of rods have had moderate baskets of yellow trout in all the different stretches. One rod took thirteen yellow trout below the Caul, at Annan Bridge, on Saturday, with worm. In the higher reaches some fair sport among burn trout is reported. **THE NITH.**—This river has been in fair ply. Sea trout are still shy in rising during the daytime, but several have been caught with the night fly. A moderate amount of sport has been obtained in the middle reaches. In the Mid-Nithsdale portion, at Thornhill, and lower down, several rods had fair baskets of yellow trout last week. The Cluden and Cairn are getting too low for day fishing, except with very small fly. The worm fished in the clear water style has given fair results. There are no notes from the Sanguhar portion this week. **THE GALLOWAY RIVERS.**—Fishing in the Urr of Dalbeattie last week, Mr. Gordon-Coutts killed a trout of 13lb.; Colonel Alexis, Firth Head, landed a very fine sea trout of 24lb. A number of other rods had small catches of yellow trout. Several visitors have been out on the lochs of the district. Dr. Paterson, Edinburgh, had a number of yellow trout on Lochinvar Loch. Mr. Sauer and two friends fished the same loch, and caught upwards of twenty. A good number of visitors are in the district fishing the streams and lochs. Mr. Bruce, Old Garroch, killed nine trout, weighing 3lb., on Loch Harrow. Mr. John Walls caught two dozen trout on the river Ken. The trout ran from 4lb. to 23lb. each. Two rods, fishing with worm on the Deuch, had three dozen, weighing 14lb. Mr. Walls killed a clean run spring salmon of 7lb. on the Deuch; and on Wednesday of last week Mr. J. Martin was successful in killing two spring salmon, scaling 6lb. each. These were taken in the Ken river above Allangibbon. Loch Ken, below New Galloway, has not, so far, afforded much sport to the rods. Not much has been done on the Gatehouse Fleet or the Kirkcudbrightshire Dee. **AYRSHIRE LOCHS AND RIVERS.**—With the prevailing fine weather the prospects of sport on the lochs are improving. Several rods have been out on Loch Doon. Mr. Graham, of Manchester, out in the Eglinton Hotel boat, killed eighteen trout on Loch Doon on Thursday; and on Saturday the same angler had twenty-four, all with fly. May is generally the best month for this loch, but the weather was far too bleak and cold. June is expected to give good sport on this free loch. The rivers of Ayrshire are not affording much sport this week, but some fair baskets were had during the floods on the Stinchar, the Garnoch, and some of the other waters about Kilmirrie. In the upper waters of the Clyde, Mr. J. Jackson, fly dresser, Dumfries, killed a basket of 13lb. of yellow trout the other day.—HEATHERBELL.

Spey.—Angling conditions, although improved meantime, would be much enhanced with a rainfall, as river is again becoming low. From the Knockando House water, on Monday, Mr. Shand, fisherman, landed a salmon of 16lb., and on Thursday, one of 12lb.; while, on the Laggan water, Col. Grant killed one of 7lb. on Monday. On the Carron House water, Sir Ford North killed one of 7lb. on Thursday; and from the Aberlour water, on Friday, Major Ashby had one of 143lb.—J. M.

Stromness (Mason's Arms Hotel).—From the Standing Stones Hotel, Stenness, Orkney, Mr. Putman fished the Loch of Stenness. May 23, had six trout,

6lb., heaviest 13lb.; on the 29th, had six trout, 7lb., heaviest 2lb.—J. M.

Tay.—The Tay is still in good ply, but getting a little low. The weather is now much warmer, and more suitable for fishing. Out from Stanley Hotel, on the 26th ult., Mr. Hoyt and Mr. G. Hoyt, New York, had two salmon, of 19lb. and 17lb. Several baskets of good trout have been taken on the Stanley Hotel water. Fishing on Cloichfoldich water, on 25th ult., Mr. McPherson had twelve trout, 83lb.; and on 27th ult., a salmon of 11lb. Mr. Dow, fishing the Free water at Perth, had 53lb. trout on Saturday.—A. A.

Tweed, Teviot, and other Border Streams.—All the rivers in the Border district have been running fair good volume during the past week, although they are now getting very low and clear, owing to the genial, summerlike weather we have had since the end of last week. Fly fishers are, therefore, now in their element, and many of the disciples of the gentle art have been out on all the streams around Kelso district. Varied results have, as a natural consequence, been the outcome of their endeavours; but, on the whole, takes have been very fair with fly, while not a few dishes have also been killed with the worm—clear water worm fishing. I may here state—and I do it with great regret—that one of the cleverest and most expert of our clear water worm and minnow anglers (Mr. John Thompson) head of the fishing tackle and rod making establishment of Redpath and Co., Kelso, died somewhat suddenly while away on a business journey to Edinburgh. His death took place this (Wednesday) morning. For many years he was the chosen representative of the Kelso Angling Association to the championship competition on Loch Leven, and was this year again unanimously reappointed to fill that position. Of those who have been most successful in getting baskets of trout since my last notes are the following: Mr. George Robson, 5lb.; Mr. J. Robertson, 8lb.; Mr. Robert Robertson, 6lb.; Mr. Wm. Shiell, 63lb.; Mr. Thos. Cairns, 43lb.; Mr. Charles Farquharson, 5lb., 6lb., 63lb., and 8lb. (all with fly); Mr. George Lees, jun., 33lb.; Mr. Adam Denholm, a similar weight; Mr. J. Hardy, 43lb. and 7lb.; and Mr. E. Bond, 53lb. and 63lb. All these baskets were got on the Tweed. A few takes were killed on the Teviot ranging from 2lb. up to 5lb. The trout are now getting into splendid condition, owing to being able to enjoy their natural food—the fly. So far as salmon angling is concerned there is little to report about. I believe that last week Capt. Key had a nice fish, and on one of the lower waters I am informed that Major Hunter, Anton's Hill, had three fish on one day to his own rod, all fresh run fish, and of good weight. On the Whitadder and other streams sport has been fair.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Waters, and Gortnorabney Hotel, Lough Conn).

—At last we are having good sport. Mr. J. Wetherell, of Northampton, killed twenty-eight trout during the week, the four largest averaged between 2lb. and 3lb.; on the 28th ult., he killed two salmon, one weighing 10lb. and the other 8lb. Mr. Terry had very bad luck, as he lost three salmon when almost ready for the net. Mr. Little made a few nice baskets of trout; the largest weighed 4lb. Mr. Henn, on the 31st, killed one salmon weighing 12lb. I can safely recommend anglers to pay us a visit, either at river or loch, as there is every prospect of sport.—MANAGER.

Ballina (Moy Hotel, Private Waters).—Weather fine, southerly winds, water in good order, plenty of fish in the river. Mr. W. C. Wilson got, on the 28th ult., one 14lb. on the private waters of the Moy. Mr. Schroop played three and lost them. On the whole, there were several fish taken, which shows a great improvement in the fishing since last report. Trout fishing on the lough has improved greatly; some nice baskets were got at Runagry.—JOHN DEVERES.

Bann.—This river has now cleared after the late floods, and has also fallen a few inches. Some capital sport has been had among the large trout for the past few days that are now rising at the Sedges close to the banks. The Kilrea reach is now well stocked with salmon, the high water having brought up all the spring fish from the Caronroe reach. On 28th ult. Mr. Ardale, Belfast, took the first two salmon of the season under the weir. These fish scaled 12lb. and 13lb. each.—DANIEL O'FEE.

Belfast.—The dams are in fair order at present, but the bright weather makes evening imperative on Wolf Hill dam, a private water. A local man had several fine trout, including a 33lb. fish. On Woodburn middle dam Capt. E. K. O. Ludlow, D.A.A.G., had considerable success, killing two dozen fish on one day. On Hyde Park dam, Mr. W. Hunter, Mr. Taylor, Dr. Law (Demerara), Mr. A. M. D. Caldwell, and other local gentlemen were out several evenings, killing from six to eight fish per rod. The weather is very warm.—J. A. B.

Blackwater (co. Cork).—Up till a few weeks ago the salmon fishing was the worst experienced for many years. The recent improvement will not compensate for previous bad fishing. One of the remedies suggested to improve the fishing is to grate off the smaller unprotected spawning rivers, so as to confine the salmon to the main river, which can be more effectually preserved. The upper water proprietors attribute the decline of the fisheries to over-netting at Lismore.—J. A. B.

Caragh Lake (Kerry).—There is again substantial proof that this lake holds some good trout. A fine specimen taken by Mr. Reid, on May 29, who is staying at the Southern Hotel, the fish weighed nearly 6lb.; also one of 13lb., and some smaller ones, same day. On May 25, Shade Dyer, a local boatman, caught two dozen and four. May 26, Mr. Busted caught one of 2lb. Owing to the brightness and heat trout are not rising

freely to the fly. Grilse are now seen running up the lower Caragh.—G. C.

Cork Rivers.—Sport has fallen away on all the above waters, owing chiefly to bright weather and clear and falling waters. In the late evenings, however, some average baskets of trout were had. Only a few salmon, even on the principal rivers, were got by anglers, and the prospects of better sport are not reassuring at time of writing. On the West Cork rivers trouting has seldom been better at this time.—T. J. D.

Corrib (Galway).—The river is settling down into fair order. Since last report the weather has become almost tropical, and fairly favourable to salmon angling. The first peal of the season was killed on the 20th ult. by Mr. Ritchie, and since then a couple of dozen were killed. Amongst the successful anglers were Commander Law, Mr. A. Jesson, Mr. Nathaniel Cohen, Mr. Lees-Knowles, M.P., Mr. Stowell, Mr. G. Mildon, and Mr. Goddard, all of whom had several fish. A lot of salmon passed through to Lough Corrib during the recent flood. The May Fly is rising steadily on Lough Corrib.—J. A. B.

Erne (Ballyshannon and Belleek).—The following are the particulars for the past week:—Capt. Curzon, 18th Hussars, took one salmon of 15lb. on 24th ult., and another of 14½lb. on 26th ult. Mr. J. Thomson took one salmon of 13lb. on 27th ult.; and Sir William Williams took three salmon on 25th, 27th, and 30th ult., of 15lb., 14lb., and 10½lb. respectively. A lot of fine trout were again taken by Mr. E. A. Ralli during the past week. Weights: on 24th ult. four trout, of 5lb., 4lb., 3½lb., and 2lb.; on 25th ult., two trout, of 6½lb. and 4lb.; on 26th ult., four trout, of 5½lb., 4lb., 2½lb., and 2½lb.; and on 27th ult. two trout, 2½lb. and 1½lb. The above were all splendid trout, and in fine condition. Mr. C. C. Ralli took one magnificent trout weighing 4lb. on 27th ult., and Mr. W. H. Wood took another of 5½lb., and Mr. James Condon, one of 4lb. Mr. T. M. Pike and Mr. G. Antonini also took a number of trout since last report. Capt. Leo Moore and Capt. Wilding, and Mr. Frank Crawford and Mr. A. Crawford, took several trout during the past week, weighing from 1½lb. to 2lb. Up to time of writing, trout on Loughs Erne and Melvin have not begun to take the May Fly well, although the fly is up in quantities since 27th ult. Intending visitors will be in time for the best of the May Fly fishing from about 4th inst. A good time is anticipated with the May Fly, as the weather is favourable for it at present.—M. ROGAN AND SONS.

Kerry Rivers.—There has been a general falling off in sport since last report. Salmon have not risen well to the fly. In fact, on most it was quite useless to fish for them at any time. Trouting, as far as brown trout are concerned, has been fair all round, but the details of the sea trout fishing show very poor sport.—T. J. D.

Killarney.—Sport has been fairly good on the lakes at brown trout, but poor at salmon on lake and river. The prospects for the next few days are not reassuring, as the weather is getting hotter and the waters falling rapidly. On the mountain lakes sport at small brown trout continues fair.—T. J. D.

Lough Currane (Waterville, co. Kerry).—Sport has been very good among brown trout since last report, the best baskets being had in the late evenings. Only a few sea trout have been had, and no salmon; but the weather has not been favourable, and only a few anglers have been out either after salmon or sea trout.—T. J. D.

Lough Mask and Corrib.—The following anglers have been fishing from Mount Gable Hotel, Clonbur, and are having excellent sport: Major and Mrs. Ferguson, Messrs. Alington, McCausland, McNab, Houghton, Corder, Drake, and Hopkins. On the 29th ult., the party landed sixty-nine trout, weighing together over 80lb., or 1½lb. average each, all taken on the fly. On 30th ult., same party landed fifty-two trout, weighing 63lb. (largest 3½lb.). Lakes in grand order for fishing. May Fly in full swing on Lough Mask.—J. A. J.

Lough Melvin.—The following are the particulars for the past week: Mr. K. W. took one salmon of 7½lb. on May 25; Mr. H. Gallager took a trout (*Salmo ferax*) of 6lb. on same day; Mr. James Knox took one salmon of 8lb. on 26th; Mr. E. Mulhern took a grilse of 5½lb. on 29th; Mr. J. G. Henderson took one salmon of 10lb. on same day; Mr. M. C. Mullen took two trout (*Salmo ferax*), of 4½lb. and 2½lb., on 30th. Trout fishing was rather poor on this lake during the past week, and trout did not rise well to the fly on any day since last report in consequence of north-east wind, which has prevailed most of the time. Still, some baskets of brown trout were taken and some gillaroos by the anglers out from Scott's Hotel, Garrison, and from Belleek, Bndoran, Ballyshannon, &c.; heaviest basket of trout taken weighing 9½lb., and containing sixteen fish, by Mr. J. Wright.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—Bright, warm weather, with north-easterly winds, prevailed during past week. Amongst the trout, the catches of fly anglers averaged about one and half dozen per rod per day. Some nice trout were also had troling, from 1lb. to 3lb., by Mr. Loverock and Mr. Crofton, Dublin. Fair sport was had by salmon anglers. Mr. Martin, England, had one of 8lb.; Mr. Armstrong, one of 9½lb.; Mr. Palmer landed one of 11lb. Mr. Crofton, after thirty minutes' play, lost a very weighty fish on 24th ult. Some rain is needed to improve sport.—P. GALLAGHER.

Lough Neagh.—Pollen fishing continues good; also trout netting. Since the weather improved trout fishing has greatly improved on the tributaries.—J. A. B.

Lough Sheelin.—The fly is rising well on Lough Sheelin, and dapping will be in full swing ere these lines are in print. This famous water lies principally in County Cavan, which forms its north-east and western shores, whilst Westmeath forms its southern boundary. The

lough measures eight miles in length by four and a half in width, and, from its position, is well sheltered. Fishing is all done from boats, and the rod commonly used is a 16ft. one. The trout, which are good risers and very game on the line, run from 3lb. to 8lb. and 9lb., and heavier fish are not uncommon. Mountnugent on the Cavan side, and Finae on the Westmeath shore, are the favourite stations. Heavy pike, perch, and bream also frequent its waters. "Dappers" will find Lough Sheelin worth a visit.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport at brown trout has fallen away on the above waters, but still fair baskets have been had. The outlook for the next few days is not good on any of the above waters, as all are falling, and now require refreshing.—T. J. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Summer weather at last here. Sport has improved a little. Mr. Hellis and son, one salmon, 13½lb., in the Rock Pool; Dr. Westing, one salmon, 11lb., in the Ash Tree Pool; Capt. Powden, two salmon, 9lb., 10½lb., in the Ridge Pool; Mr. G. Fenlen lost three in the Spring Well Pool. A good number of boats on the lough daily, but sport poor. Few salmon were taken trolling. Mr. C. Simmons took an 8lb. trout on a Black Goshawk salmon fly. Few jack were taken by Mr. and Mrs. Standfield, largest 19½lb. May Flies in small quantities on the loughs.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—The lake fishing has been greatly knocked about by high water, dead calms, and bright sun. Still, a good many very fine trout have been landed this week, notably four, weighing 12lb., taken by an English visitor. Mr. A. P. Thornley, of Birmingham, has creeled several brown trout up to 2½lb. and 3lb. To-day (Wednesday) he killed before lunch, on the river, a bright grilse of 6½lb. This morning another English rod got two grilse; and yesterday a salmon of 14lb. and two grilse were captured. We shall certainly have a good grilse season, as the recent high water will have brought up quantities of the shining beauties.—S. J. HURLEY.

Shannon (Castleconnell).—Weather very bright and hot, water pretty high; the peal have already begun to arrive, but the main body of these fish have not yet left the salt water. On Doonas, Mr. G. C. Williams killed one salmon, 12lb., on 25th ult. On Prospect, the fisherman killed one salmon, 10lb., on 26th. On Newgarden, Mr. Astley, Craswick, killed one salmon, 15½lb., on 25th, and one salmon, 7lb., on 27th. On Hermitage, Lord Massy killed one salmon, 10lb., on 23rd; one salmon, 9½lb., on 24th; and one salmon, 7½lb., on 25th. On the Castle fishery, Mrs. Ingham killed one peal, 6½lb., on 23rd. On the same fishery, Mr. J. L. Ingham killed one salmon, 37½lb., on 29th; and Mr. T. Brooke one salmon, 14½lb., on 29th.—JOHN ENRIGHT AND SON.

Tyrone Rivers.—The Blackwater and Ballinderry have toned down into excellent form for fly fishing. On the latter stream, Kempton, Mancelly, Mr. MacKenzie, &c., picked up several good trout. The natural fly fishing will soon be on. From the Mourne I hear of fair success by trout fishers.—J. A. B.

Upper Lakes (Waterville, co. Kerry).—Only a few anglers have been out, and sport was far behind the usual standard at brown trout, and no sea trout were taken. Sea trout fishing rarely gives any sport before June is well advanced.—T. J. D.

Westmeath Lakes (Mullingar).—In my recollections of dapping seasons on these lakes I have never experienced the weather so uncertain and unsatisfactory, and so will say the host of anglers who have visited them this season. Storms of hail, rain, &c., thunder and lightning of unusual severity, frosts at night sometimes, and all followed now—when the three great lakes are at their best—by a succession of almost perfectly calm bright days, is enough to try the temper of the veriest saint on earth. Some anglers were fairly lucky; most others singularly unfortunate, the best basket seen being eight fish, weighing 25lb. (two rods), my own best being four fish, 12lb. (two rods). The dapping is at its best just now, and we only require good fresh breezes to ensure sport. The lakes, it is admitted on all sides, teem with fish, and many tourist anglers are patiently waiting for the turn of the tide.—T. J. W.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The renting and preservation committee meeting will take place on Monday evening, June 5, at 8.30, at the Cripplegate Institute, Golden-lane, Barbican.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 18s. 1d. from the (late) Sociable Brothers' donation box per W. H. Shead, £12s. 3d. Dalston donation box, and 10s. G. H. Field, annual subscription for 1898-9. At the last committee meeting two applications were entertained, and £10 voted. The next committee meeting will take place on Friday, June 9, at 8.30.—R. GHURNEY.

Anglers' Association (No. 1 EASTERN DISTRICT) Visiting List.—The next return visit will be to the Good Intent, the Crown, Church-street, Shoreditch, on Monday next, June 5, when I hope to see a good attendance from all clubs on the above-named district.—G. MANNING.

Albion Brothers' Angling Society. The Frampton Arms, Well-street, Hackney.—We had a very well-attended meeting on May 31. We are making new members fast, three being made and two more nominated this week, making fourteen within the month. Our secretary drew up the balance-sheet for this quarter, which shows the club to be in a good financial position. Members please note prizes are to be paid in next week.—C. J. K.

Allason United Brothers' Angling Society. Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The business transacted on May 30 was kept up till 11.45 p.m. Our pegged-down match on June 25 was gone into and prizes arranged. J. Abbott, the member who has the silver challenge cup in hand, made the usual conditions, which G. Baker helped. Onr A.B. grand smoking concert, which takes place on June 7, promises to be a gigantic success; J. W. Harris, Western district visiting officer, occupies the chair. All brother anglers will receive a hearty welcome. Our prize list promises to be a record. Mr. E. Buxton, Nead, offers 20s. worth of tackle; he also transfers from hon. to working member; Mr. C. Wells, 10s. 6d. for specimen bream; and 21s. per G. Barlow; G. Pronen, an aquarium; over fifty prizes. Two more workers added, viz., A. Osborne and H. Green.—BEN ABRAHAM.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On May 30 a general meeting was held, to revise the rules and other important business. Messrs. J. Drew, jun., Brandon, and Gardner have been elected working members. I should like to hear from all members requiring privilege tickets.—J. CHAMBERS.

Amicable Waltonian Angling Society. The Fox and French Horn, Clerkenwell Green.—At the weekly meeting of the above, on May 31, the adjourned meeting was resumed, and some important business proceeded with, and final arrangements made for the annual dinner. The election of officers next took place, and the whole of the officers, being good and tried servants, were unanimously elected.—G. MERRY.

Battersea Friendly Angling Society. Queen's Hotel, Queen's-road, Battersea, S.W.—Our first match of the season takes place on June 25, at Amberley, from the park gates to Timberley Bridge; tow-path only. To go down on the morning; trains, 8.27 Clapham Junction; return by 7.14 from Amberley. Will members send their names in at once for privilege tickets?—A. JENKINS.

Bermondsey Brothers' Angling Society. Woolpack Bermondsey-street, S.E.—The twenty-third annual dinner and distribution of prizes of the above society took place on May 30, at the clubhouse, Mr. H. O. Hinton (president) in the chair. Upwards of forty members and friends sat down to a capital repast, placed on the table by host Mr. G. H. Shepherd in his usual bountiful style. Nearly every member of the society had proved themselves successful during the past season, and received their usual reward in prizes, the first three being as follows: Mr. J. Hobbs, first gross weight 252lb. 14½oz., gross weight of 11lb. roach and upwards, and three monthly prizes, he having called the scales into requisition twenty-two times, with an average of 11lb. 15oz. for each time of using them; Host G. H. Shepherd, second gross weight of all fish 238lb. 4oz., and three specimen prizes, pike 14lb., chub 3½lb., and perch 1½lb., he having only weighed in nine times, with an average of 25½lb. for each time. Mr. J. Martin third gross weight, 99½lb., and two monthly prizes, his average for each weigh-in being 5½lb. Thirteen other members also won prizes, from six monthly and one specimen, by Mr. J. Wigley, down to one by Mr. J. Walker, the total gross weight of fish weighed-in during the season being just under 1000lb., including several good specimens, amongst them being 53lb. of roach of over 1lb. each, the best being taken by Mr. J. Smith from Amberley, 11lb. 14½oz. A most enjoyable evening was spent, some capital songs being rendered by Messrs. W. Musgrave, jun., G. Roberts, J. Horton, J. Heath, W. Morton, J. Hobbs, and others. Upwards of £30 was promised in prizes for the coming season. This society has a vacancy for a few new members.—ALF CONN.

Blackfriars Angling Society. The Imperial, Southwark-street, S.E.—Our club meeting on Wednesday was well represented by nearly all members. Mr. Lincoln was unanimously elected a working member. The members of the Blackfriars wish to thank the Bermondsey Brothers' for their kind and generous invite to their dinner, of which they speak volumes. Everyone enjoyed themselves thoroughly, and had a capital dinner. I should like all members to know that we have a minute on our book that all members and intending candidates to our society will be expected to be enrolled on the Anglers' Benevolent. I may say we have already twenty names down.—J. WHEELHOUSE.

Brunswick Brothers' Angling Society. Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—Our annual dinner and prize distribution takes place on Tuesday next, when I hope all members will show up in full force, and bring their friends. The musical arrangements will be good.—F. RANDALL.

Bungay Chancer Angling Society.—The annual general meeting of the above society was held on Friday, May 26, at the headquarters, Cherry Tree Inn, Bungay. The balance-sheet showed that the society is in a fairly flourishing condition, and, with an increase in number of members, should have a very successful season. The length of pike was dropped from 22in. to 20in.; roach remaining the same, 5in.; perch, 7in.; dace, 6in. Several prizes were offered for specimen fish.—F. PRESTON.

Cambridge Heath Brothers' Angling Society. The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On May 28 Mr. R. J. Anderson scored again with trout from the Lea, but of a smaller growth than the last one, this one weighing 11lb. 12½oz. The

annual general meeting will take place on June 13, when all members are summoned to attend.—P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—Members are reminded that we fall in at 7.30 on the 7th. Mr. Burton showed a few flat fish on 28th ult.—R. M.

Central Association of London Angling Clubs.—The usual monthly meeting will take place at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday evening, 5th inst., at 8.30 p.m.

Clapham Junction Angling Society. The Clarence, Winstanley-road, Clapham Junction, S.W.—Our first day's outing will take place at Amberley on June 18, for club prizes. Messrs. Wm. Montagu, H. Pegg, and H. Runnagar have added prizes to our new list. I shall esteem it a favour if members will forward on their names, &c., for new privilege tickets, as the list must be sent in as soon as possible. We have made three more new members.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our prize distribution took place on May 30, and a goodly attendance witnessed some very handsome prizes distributed. Mr. F. Monks and Mr. W. Wallis headed the list with four prizes each, whilst amongst numerous other winners were H. Crowther (who has weighed in the heaviest barbel), E. A. Down, Ben Lawrence, J. Pasmore, W. Sandle, J. Pratt, A. Cave, &c. New members are being elected fast, and I shall be glad to see a big attendance next Tuesday, to finally arrange special business.—S. VIOLET.

Cobden Angling Society, Kensal-road, W.—Will members kindly oblige by giving in their names for the new privilege tickets, as the time is drawing very close now? Next Tuesday night will be the latest for the opening season.—T. TWYMAN.

Cosy Angling Society, The Plough, Rochester-row, Westminster.—The annual concert and distribution took place on May 31, when several good songs were rendered. The prize winners were as follows: C. Eves, J. Wyatt, J. White, A. Benham, W. Payne, A. George, and H. Sheekey. Several prizes that were not taken will be fished for during the ensuing season.—J. WHITE.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—Our concert and distribution took place on May 31, and was a great success; Mr. J. Knight took the chair. The principal winners were Messrs. H. Haines, eight, including the gross weight 185lb.; W. Long was a good second with

158lb., taking seven, including Mr. Elsmore's prize for the largest roach with a fine specimen of 2lb. 3oz.; Norris, six; Leadbeater, five; C. Walter, four; G. Franklin, B. Richardson, C. Glover, and H. Wright were also in the swim. We start the ensuing season with a very good list, which, no doubt, will be considerably added to at our annual dinner on June 11. During the evening the A.B. box was passed round, and a bit more collected to swell the funds of that grand institution. W. J. Long's two specimen roach have been added to our collection, and a splendid addition they make.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On May 30 we had a very good attendance; some important business was transacted. One new member was proposed. The final arrangements were made for our outing on June 4. Members please attend next Tuesday to arrange season's prizes.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday's meeting very quiet; nothing of any great importance done except to make some more members join the A.B.S.—JOHNNY EDWARDS.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting-hill, W.—We made two new members at our last meeting—Mr. W. Day and Mr. S. Down. Our first outing of the season is to Rickmansworth, by brakes, on June 25. Brakes to start from clubhouse twelve o'clock Saturday midnight. A money prize is offered to any visitor taking the most fish, and as the water at Rickmansworth is public, non-club members can compete. Will visitors give their names in by Tuesday next, June 6?—G. KING.

Globe Angling Society, Earl Russell, Isledon-road, N.—June 5 will be quarter night. All members are requested to attend and clear up arrears in contributions.—W. LAWRENCE.

BE KIND TO THE LITTLE ONES.—There is no tyranny so hard to bear as the tyranny of parents who, without meaning to be cruel, do not understand their children. How continually do we find a child punished simply because it is fretful. It does not seem to occur to some parents that in nine cases out of ten a child's fretfulness arises from ill-health or from some temporary ailment. But this is assuredly true, and, instead of punishing their children, parents will do well to take steps to keep them healthy and strong. They will not find this difficult if they take care to keep Holloway's Pills and Ointment always by them. These are remedies which never fail.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—Will members requiring privilege tickets attend next Tuesday and order same, as we send the list in, also A.B. tickets? We made two new members, also booked several more prizes. *Fishing Gazette* can be seen Friday night, as Mr. King is having it sent direct, as an inducement for members to come and see him sometimes.—A. W. ELLINS.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Our return visit (No 1 Eastern District) takes place on Monday next, June 5, and our prizes will be given up on Tuesday, June 13.—R. MURPHY.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—The next Clerkenwell and District visit will be paid to the above society on Monday, June 12.—J. A. FITCH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a very good meeting on Monday last, when we made another member. There is several more to come yet, I believe. I hope the secretaries of the angling societies will take notice of our change of meeting night from Monday to Thursday, on and after June 8. I hope our snapper next Monday night will be a great success, and we shall be pleased to see any friends after the supper.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green.—Our annual snapper was held at the above house on May 29, and Mr. W. Wright, of the Greengate Coffee-rooms, Bethnal Green Road, was caterer for the supper, and gave very great satisfaction, and a most enjoyable evening was spent. The following gentlemen contributed towards the harmony of the evening: Mr. S. Grisle, Mr. J. Durell, Mr. E. Willis, Mr. H. Bagshaw, Mr. Callent, Mr. B. Jones, Mr. W. Ford, Mr. C. Russell, Mr. Moore, Mr. Jeffries, Mr. S. Robinson, Mr. C. Lee, Mrs. Proster, Mr. Smith, Mr. Edwards. On Monday, June 5, our distribution of prizes takes place.—C. SMITH.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—The annual dinner of the above society will take place on June 11, at the Bull Inn, Ware. Two new members were proposed on the 25th ult.—Messrs. Cohen and Read.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—Our distribution of prizes on May 30 went off very well. Our worthy host distributed the prizes to the various winners. The following ladies and gentlemen contributed to the harmony: Mr. Wade

GREAT EASTERN RAILWAY. SEASIDE.

sang three songs, W. Stretch, Mrs. Adie, Mr. and Mrs. Hilton (duet), Mr. C. Hilton, Mr. Moore, Mr. A. Burwash, Mr. J. Burwash, Mr. T. Bolter (clarinet solo), Mr. W. Belter (song), Mr. Wilcockson, A. Gardner, chairman, A. Mills; vice, Mr. Croker; pianist, Mr. T. Lancaster; and a host of others. The new privilege tickets are ready.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's-road, Mansfield-street, Kingsland-road.—The distribution of annual and special prizes will take place on June 7, on which occasion the members will have a supper. Those who intend being present at the supper kindly send in their names not later than June 4. Supper will be served at 8.30 precisely. A series of special prizes will be competed for on June 18th inst and Wednesday 21st. Particulars will be announced later.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—I hope members will note that our distribution and concert for the benefit of the A.B.S. takes place on Monday next, June 5. Will members who have kindly promised prizes leave them at the clubhouse on the evening of 4th inst. if possible?—G. BENEC.

Leyton-tone Piscatorial Society, 76, Devonshire-road, Stratford, E.—Will members in arrears kindly clear the books at once, as no privilege tickets will be issued to those who have not done so by the 15th inst. We have appointed two new working members in Messrs. Leiner and Hellberg.—UNCLE BILL.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville-road, N.—On Wednesday last we had a good muster of members. A lot of business was got through. Mr. Nelson was re-elected chairman for season; W. Watling, secretary; Messrs. Johnson and Richards, auditors; Messrs. Manly and Watling, delegates to the Central Association; Mr. Johnson, scullerman. Our first outing of the season will take place at Pulborough on June 18; particulars later.—W. WATLING.

Liverpool Angling Association, Bee Hive, Queen-square.—There has been a marvellous change in the weather, and the angler can now go forth and wander by the side of his favorite stream and enjoy nature at her very best. Trout have been sporting better, and some fine takes have been had from the Dee, Carrogway. The Rivington reservoirs have also been yielding some very fair fish, and a few taken from Pen-y-Cae. We should soon hear something of the May Fly. Most likely in about a fortnight, and then, of course, for a week or so matters will be lively, and we may expect to hear of some exceptionally heavy fish being creeled.—RD. WOOLFALL.

Lychnobite Angling Society, Ben Jouson, Shoe-lane, E.C.—From Champion concert receipts sums have been voted to Printers' Pension Fund and Caxton Convalescent Home. Remainder will be included in proceeds of a printer's benefit concert, to take place at headquarters on June 24. Will ticket-holders please settle by that date? Next competition, Leigh-on-Sea, June 10 and 11. Summer dinner and competition, Hertford, July 15.—SID RANSOM.

North East Brothers' Angling Society, Star and Garter, Green-street, Bethnal Green.—Our first meeting took place on May 31, and we had a very good attendance, but not so well as it should be, and it would be better if members attended a little more often. All members wishing for their privilege tickets kindly call next week and give in their address to the sec. Our annual dinner was a great success, there being about eighty at dinner. There was Mr. J. Thornton one end of the table and Mr. C. Lamb, sen., at the other, and between the two we landed some very nice prizes to fish for.—G. TAYLOR.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Our dinner takes place on June 4, at Burnham-on-Crouch. A saloon carriage will be provided for members; train leaves Bethnal Green Junction at 9.31 a.m.—G. BARRS.

Ormonde Angling Society, The Rose, Saville-place, Lambeth-road, S.E.—Notice.—This society having removed to their new abode on Tuesday, May 30, the occasion was marked by a concert on behalf of the T.A.P.S., and was most heartily responded to. The harmony was ably assisted by members of the Camden, Collingwood, Walworth Waltonians, Jolly Butchers, and our old friends Bert Smith and Lu Maxwell, comedians and dancers, and a host of others. Mr. W. Ford, of the Collingwood, spoke admirably in favour of the T.A.P.S. After a most enjoyable evening the harmony closed with Host W. King proposing a vote of thanks to the entertainers. In future please address all communications to above address. Will all members attend next Tuesday, as we have important business to settle?—A. HOLBROW.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—The annual supper and distribution of prizes of the above society will take place on June 10. Mr. H. Hancock will take the chair on this occasion.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On May 31 we made two new members, Messrs. Meyer and Hartridge. As the season is drawing near, will members please turn up strong next week to name their association ticket, book seats for brake outing, &c., which is on June 25, to King's Langley?—R. C.

Royal George Angling Society, Queen's Arms, Bateman-street.—At our last meeting we were fairly represented, and got through a deal of business. Mr. F. J. Pain was proposed as a working member, and will be balloted for next meeting night. Will members please note that a general meeting is called for June 7, and we hope to see every member present? At our last meeting a hearty vote of thanks was passed to all past officers.—J. GIBSON.

St. Thomas's Angling Society, Spread Eagle, Stangate-street, Lambeth, S.E.—We take our annual outing and dinner on June 4, at the White Hart Hotel, Arundel. Will members and friends meet at London

Bridge 7.45? Mr. Wink has rejoined as working member. Will gentlemen who have promised prizes send on same to club.—G. GEORGE.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—Our annual dinner and distribution of prizes took place at the Hop Pole, Wardour-street, and was a great success. Mr. Abrahams took first club prize; Mr. R. Smith, the Emden cup; Messrs. Williams, Woolhou, Clark, Duckworth, and Fletcher took two prizes each. Messrs. Lovejoy, Williams, Pettit, and Clark contributed to the musical success. June 6 is quarterly night and election of officers. A good muster is requested. Hon. members' subscriptions are now due, and the new privilege tickets are ready.—PELICAN.

South Bermondsey Piscatorials Institute, Rotherhithe New-road, S.E.—I beg to remind the members of the above that on June 4 next we have to meet at Mr. W. Fawcett's house, 82, Lower-road, Rotherhithe, at 12.30 sharp, for the group photo. Also the time is drawing near for the renewal of central tickets. I may also inform them I have some competition tickets for June 18, which takes place at Pulborough, and should any member neglect to take up his privilege before that date he will not be entitled to participate in the competition.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Members are requested to take notice that next Tuesday, June 6, will be a special general meeting to consider recommendation from committee to alter rules of the society.—G. E. LOCK.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—We had a good meeting at our last meeting (Mr. Daffield in the chair). We made two new members—Messrs. Fieldhouse and Spenger. I hope all who can will attend next week and give in their names for their privilege tickets. We have had the misfortune to lose by death our old member Frank Dixon, known to all London anglers as a true sportsman. He was buried on Tuesday last in Fulham Cemetery.—TIDLER.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—We had a very successful smoking concert this evening, although several stayed away on account of the Derby. Our old friend, "Sir Billee Taylor," presided, and our best thanks are due to him and the long list of friends who contributed towards the success of the evening.—W. WRAY.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—I hope our members will not forget our match on June 18, at Hatfield Peverel, for five prizes. All to go down with the last train on the Saturday night; that leaves Stratford Station at 12 p.m.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—At our annual general meeting Mr. W. H. Elmore was unanimously re-elected president of the club, the retiring officers being also re-elected. Members and friends are requested to attend the clubhouse at 7.36 sharp at our dinner on June 8. Our host has promised a first class menu, and a good programme has been arranged for the evening's entertainment.—J. J. HUNTER.

White Hart Angling Society, The White Hart, Tottenham Hale, N.—On May 31 we held our annual general committee meeting. The following officers were re-elected and elected for the ensuing season: Chairman, W. Butler; vice-chairman, A. Langton; hon. sec. and treasurer, W. E. Beaumont; clerk of sales, W. F. Bastock; committee, F. H. Beaumont, W. Bragg, H. Walton, and D. Knights. Will members kindly attend next meeting night on important business.—W. F. BEAUMONT.

Wimbledon Piscatorials, 28, Alexandra-road.—At the last meeting of this society it was decided to offer a silver cup, and three sums of money for second, third, and fourth prizes to be competed for this season, the highest score in three competitions to decide the winner. Former winners are handicapped to the extent of one-third of their takes. Several new members have joined already this season, and the special prize list bids fair to exceed even the large dimensions it assumed in 1898.—S. PESKETT.

Woolwich Invicta Angling Society, Golden Marine, Francis-street, Woolwich.—The above club held their annual meeting on May 25, when there was a good attendance. There were several new members made, and we are going on in a flourishing condition. The following officers were elected: President, Mr. W. Woodford; chairman, G. Rowleson; secretary, W. Goldsworthy. The first outing will take place to Yalding on June 18. Members please note summoned meeting on Thursday, June 8, at 7.30.—W. GOLDSWORTHY.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—Many thanks to Mr. Wade's lantern lecture, it having woke Clapham anglers up, as we have several more applications to become members. As our annual supper and distribution takes place on June 6, to follow supper, we have a select concert, and, having secured some good talent, we hope to see a full room.—N. LINDEN.

LONGLEY'S HOLIDAY GUIDES FOR 1899 are, if possible, better than ever. Written from the publisher's actual observation, beautifully illustrated (many with maps or plans), and thoroughly up to date, they are, indeed, wonderful value for a penny, and as George Augustus Sala (no mean authority) justly wrote, notwithstanding their cheapness, "could scarcely be equalled in their handiness and conciseness." They are sixty-seven in number, and cover most parts of the Three Kingdoms, besides several Continental resorts, and a specimen copy, with full list, will be sent on receipt of three half-penny stamps, by Mr. Longley, 39, Warwick-lane, E.C.

CLAPHAM STROLLERS' ANNUAL DINNER.

THE annual dinner of this progressive society took place recently, an account of which was received, but unfortunately appears to have gone astray. Mr. Violet, the indefatigable hon. sec., kindly sends us the following short *resumé* of the proceedings:

The fourth annual dinner and concert of the above society took place at the Alexandra Hotel, Clapham, Common, when over fifty members and friends sat round the festive board. The chair was most genialy filled by Mr. Welch, faced by Mr. W. Baldwin as vice. B. G. Boddy, with marked ability, accompanied on the piano-forte the many songs; whilst Mr. Alfred Cave, as musical conductor and stage-manager, introduced in rapid succession the various *artistes* appearing on the lengthy, interesting programme. The hon. treasurer, Mr. E. A. Downs, his handsome features wreathed with smiles, was busy receiving donations towards the season's prize list; and the hard-worked secretary, Mr. S. Violet, was "all there," looking after the comfort of his numerous guests. Mr. A. W. Crow, jun., the energetic son of the Alexandra's host, threw his whole heart into catering for the evening's entertainment, with the happy result that a capital spread, under his immediate supervision, was thoroughly enjoyed, and a very pleasant and long evening was spent. At the outset the chairman announced that "speeches few in number, brief, and to the point" was the order of the evening. The usual loyal toasts having been duly honoured, Mr. Tover, in a telling speech, proposed the toast of the evening, "The success of the Clapham Strollers' Angling Society."

Mr. S. Violet responding said that at the present time they numbered thirty active and six honorary members. The past year had been the most successful year of their existence, both as to the value of the prizes and the quantity of fish weighed-in, and he anticipated a very promising future for the society. He would at all times be delighted to give would-be members every information respecting the working of the society. He wound up a capital speech by announcing that a sum of over £20 had been promised by the company towards the prizes to be won during the ensuing year.

Mr. Wade, secretary of the Central Association, in proposing the health of the vice-chairman, highly eulogised the *Clapham Observer* for the interest it took in all that affects the pleasures of the public. He was proud of the Clapham Strolling Anglers—they were true sportsmen and whilst successful in their catches they were also most liberal in their subscriptions to the parent society to enable them to stock the waters in which they fished. He had no doubt whatever but that the society would go on and prosper.

Doings by the Way.

"DEAR 'DRAG,'—Is the May Fly up? None have yet appeared on the Shoebury Spit or the Low Way buoy, my favourite fishing grounds. Flat fish are scarce and small, perhaps they are waiting for our ephemeral friend. What do you think?—TRUTHFUL TOMMY."

[What do I think? Well, perhaps, the sooner T. T. learns a little bit about fishing and natural history, and grasps the fact that the May Fly does not patronise salt water, the better for all concerned.]

THE gramophone has been laid on to "Drag" Mansion, and I can now lay (or lie) on my couch and listen to the dulcet strains of music and brilliant speeches made at the many jovial foregatherings of brother anglers, now in full swing all over the country, and which my indisposition precludes my attending. I had had a nap of about two hours' duration yesterday when I suddenly heard the "grama" shrieking, and, leaping from my couch, heard: Up! up!!! The May Fly is up! Up! up!!! up!!! Hooray!—Now, one for the Major and the A.A., Up! up!!! Hooray! Now one for the fish as well as the fly! Up! up!!! up!!! Hooroo!

The May Fly is up! The May Fly is up!
No wonder I blink and frown,
The May Fly is up! The May Fly is up!
And I'm up too—in town.

The May Fly is up! The May Fly is up!
But a time will come—and shall
On June 16—the fish will be up—
On the banks of the Regent's Canal.

Oh where is the joy of the joyful news?
To a fellow that's left in town,
When he's chained to the desk, with a fit of the blues
The May Fly is up!—I feel down.

IN an illustrated article in the *Daily Chronicle*, on May 11, the proposed tampering with the fine Gothic tower of St. Dunstan's Church was fully explained. This serious interference with one of the most striking architectural features in Fleet-street was yesterday the subject of an application to the Consistory Court, presided over by Dr. Tristram. It is proposed to extend the Law Life Assurance Society's premises by utilising the vacant forecourt on the west side of the church, and to build a rectory on the open space on the east side with the £4500 offered for the site to be acquired by the insurance company. This plan will hem in the beautiful tower with buildings on both sides, and will involve the removal and re-erection of the Izaak Walton tablet and fountain in front of the church.

ORIGINALLY considerable objection was made to the proposition of the rector and churchwardens, but Mr. L. T. Dibdin, who appeared for the petitioners, stated that all opposition had been withdrawn. Counsel explained that there would be no difficulty about the removal of human remains. The Law Life Assurance Company had agreed not to use the land for any purposes likely to cause annoyance to the worshippers of the church, such as a public-house; and also to artificially light a splendid window given several years ago by the Worshipful Company of Cordwainers. After hearing evidence in favour of the petition, the Chancellor said he would reserve judgment, but intimated that he would grant the faculty. The case had been made out, but he wanted to look through the documents and visit the church.

I ALSO notice that our angling poet has noticed also—
Oh! who'd have thought that the world could dare?
Oh! the cheeks of we anglers burn.
Oh! treat it gently. Oh! guard it with care,
Lest the bones of the Master turn.
His scholars will all stand trembling by,
And quake lest that relic fall;
With an honest tear in each glistening eye,
For the good old Father of all. MOSNAR DIS.

THE annual general meeting of the Kingston Piscatorial Society was held on Monday, when the altered rules were agreed to, and the meeting was adjourned till the 12th inst., at 8 p.m., for the election of officers, &c. The meetings following the one on the 12th inst. will be held at nine o'clock instead of eight during the summer.

WHILE fishing with some gentlemen, on Monday last, in some private water belonging to Sir J. F. Zeng, in Devon, Cornwall, Mr. James Harris, the well-known sportsman, of the Sausage Grill Restaurant, St. John's-street-road, Islington, hooked a fine bream, scaling nearly 3lb., which, strange to say, on being landed was found to possess two complete heads. The fish, it is understood, will be preserved.

I NOTE from the Bungay "Chaucer" A.S. the executive have reduced their standard for jack from 22in. to 20in. I am sorry for that; but no matter, they are still 2in. above the Thames and Lea standard. Of course these Norfolk boys know best, but I should like to hear of the "Chaucers" running up the perch to 8in. I may be old-fashioned, but 7in. perch are not much credit to anybody. They will do much better if left to grow larger.

MR. VERNON, of Ilfracombe, says: "Since writing of ling taken off pier on May 24, on May 25 two were taken

by Mr. Aked, 22lb. and 14lb.; and two by Mr. Newberry, 14lb. and 14lb.; and on May 25 one ling, and 27th one ling (weight unknown)—all off the pier."

I HAD a grand invite to go and see the 'orse race at Epsom last Wednesday from "Straw Hat," who is a denizen of them parts. I could not go. I told him so. Sure enough, as I'm a sinner—I asked him to send on the winner. This is his reply: "Sorry can't send winner. Back the first to win; and the second and third for places. Lay against all the rest." Now, if this stabeley information had come just a little sooner, there would have been hundreds of thousands who would have had nothing whatever to do with it.

THERE are many funny places which birds (fathers and mothers) select for the safe rearing of their progeny. Letter boxes—well, I can't just think of them all. But when "Straw Hat" (of Epsom) got quite cross with me because the doctor would not let me go to the Derby, he wound up his plaintive letter with the following: "If you would only come, I could send you bird nesting in the front garden. There's a robin's nest in the lilac tree, and a 'sparrer's' over the front door in the Jap honey-suckle, and there's a big blue bottle shouting the odds on 'Flying Fox' all round the room." [Let him fly his fox—or kite! I was on the Frenchman. Sorry he went down.]

ON Thursday evening next (June 8) the New Albion Piscatorial will celebrate their annual dinner at the Bridge House Hotel, London Bridge, S.E. Mr. J. Wood will occupy the chair, and covers will be lifted at 6.30. The hon. sec. (Mr. A. E. Baldwin) will feel obliged if gentlemen will make returns of unsold tickets not later than Monday, June 5.

OUR F. G. ALBUM OF ANGLERS.

No. 42 (New Series).

MR. J. J. HOBBS

Is a member of the Bermondsey Brothers Angling Society. Host G. H. Shepherd is one of the very best in London (or out of it) for keeping a club together. The B.B.'s are all sportsmen. Mr. Hobbs is one of the best, and a recent interview with him elicited the following: "I am no relation to the Liberator Hobbs. A working member of the Bermondsey Bros. A.S. First learned the gentle art in Lincolnshire, using Nottinghamshire rods and tackle. Soon altered my tactics when I joined the Bermondsey Brothers. I find the 'pole' far in advance for roaching. I get nearly all my fish from the bank. Have won the first gross prize this last season, having weighed in 253lb.; heaviest one day's catch, 66lb. of bream, from the river Ouse, in company with Mr. W. J. Crisp, of the New Albions (44lb. bream same place); heaviest one day's catch of roach, 25lb. Also three roach from one swim at Amberley, the three weighing 4lb. 4oz. Seldom ever jack fish; prefer roaching and bream fishing. Known to many anglers as the 'shrimp man,' because when I get among the 'cats' or small fry I usually shont along the bank 'fine large shrimps.' I generally make myself at home in any company; can sing a song or tell a good tale, like all other anglers—but nearly always tell the truth (?)."

A LARGE and distinguished company assembled in the gardens of the Old Crown Hotel, Slough, on May 24, to celebrate the Queen's 80th birthday. Mr. and Mrs. Ball, the genial host and hostess, spared no expense to make the gathering in every way a pleasant one. Marquees were erected round the lawn, and the grounds were beautifully decorated with hundreds of green lamps. The effect was most pleasing, and called forth expressions of admiration on all sides. A string band was in attendance, and dancing was kept up to a late hour. Hearty cheers were given for Her Majesty, and we hope that the energetic proprietor of the Old Crown will, during the season, repeat the display.

"BEAUTY draws us with a single hair," and it may be dyed hair at that.

MR. ROLT writes: "Dear 'Drag,'—I think it is such an unusual, if not extraordinary, occurrence for a half-grown rabbit to take to the water to escape its would-be captors, that I send you the following account of what two of the members of our Wimbledon Society saw in Richmond Park the other day. I may add that the two gentlemen in question, although they are anglers, are absolute truth tellers. They were making a tour round the Penn ponds, probably with the view of locating some of the big carp there for future guidance, and seeing a commotion amongst the sedges, went close to the water to ascertain the cause of the disturbance. They had a small terrier with them, and the harking of this and the noise of the anglers aforesaid, drove the rabbit from its shelter. It at once, to the astonishment of the onlookers, took to the water, and swam off in 'jumps,' as one of my informants put it, towards the middle of the lake. After proceeding for a hundred yards it became exhausted, and sank to rise no more. The rabbit was not an old hand, otherwise it would have known better than to have leapt from out of the frying-pan into the fire. If any further confirmation is required of the adventure, a gentleman, not a fisherman, who also witnessed the occurrence can testify an oath to the correctness of all I have written."

MESSRS. EVERARD RIPLEY, and Co., of Richmond, writes; "Mr. D. Matthews, of Richmond, while fishing with George Rosewell, near Chertsey, on Saturday last, landed a fine trout of 5½lb., which has been entrusted to us for preservation."

THE monthly delegate meeting of the Central Association will take place on Monday evening next, at the Bedford Head Hotel, Maiden-lane, Covent-garden.

THE Royal Aquarium attractions have received a powerful addition in Alvantee. His unique "Slide for life," i.e., from the roof to the stage, is a very daring feat, and his climbing the wire set at an angle of 65 degrees would make any steeplejack envious. The chess congress in St. Stephen's Great Hall continues daily until July. All the champions are competing, and the event is the most important gathering in the chess world for a generation.

DON'T blame me, it's them comps. again. In last week's F. G. the name of the Derby winner was omitted (crowded out), but still, I can only make up the omission by publishing my copper bottomed tip to-day, Flying Fox, and at the same time venture to express my sympathy, and, I am sure, that of all my readers, to M. Jaques de Brémont for the misfortune that befell his good horse Holocaste. The more friendly international struggles of this kind we have, the better, and no good sportsman will fail to share with M. de Brémont the regret his cruel ill-luck must have caused him and his country "La Belle France."

THE sea serpent is rampant. That is, it is on the rampage. Is it the big gooseberry season, or silly season? "Dear 'Drag,'—Can you tell me whether the recent sea serpent, Morocco Bonnd, was a cetacean or crustacean?" Send it on, friend; send it on. Or cut a piece out of the middle, and put it in paraffin. I can then tell you if it will burn. Fact is, what has been mistaken for the "serpent" was the big liner which had run aground. It appears that during the night an extraordinarily high tide floated the ship; and having no pilot on board, it just "rolled" at its own sweet will, and was duly announced as the sea serpent! See?

"THE Dried 'un" (I mean Hon. Sec. Dryden of the Greenwich A. S.) and "City Marshall" have summoned "Drag" to appear at the festive board on the occasion of the 15th annual dinner at the Morden Arms on June 7. President G. H. Dowsett will take the chair. Would that I could say: "Yes; I will taste your Greenwich blend of whitebait!" But no; my doctor is inexorable. He says: "You just wait until I have done with you; then you can go where you like." All the same, I wish the Greenwich sportsmen a happy and pleasant evening!

HAVING a little business to transact with Mr. Ritchie (managing director of the Royal Aquarium), I strolled in one evening just in time to see the "Great Fight" between Tom Sharkey and Kid McCoy. That is to say, by the aid of the cinematograph, we "fought our battles over again." Without a doubt it is a sight worth seeing. I think it is called the "noble" art; not the peaceful art. Yet some people persist in using the words "noble" and "peaceful" with regard to angling! Perhaps they are right; angling is both noble and peaceful.

THE doctor says: "If the weather continues as at present—warm and balmy—I may attend the annual dinner of the Nottingham Wellington A.S. on Monday, June 5. But," he continues, "I am coming with you!" Dear, dear; can I not go out without a keeper? Get the soup ready, an' all, an' all; for I'm gone on soup!

THAT veteran B.S.A. (W. Bennett, of the Cock Tavern) was telling me that he had recently been trying to catch fish off the Goodwin Sands. Having no luck, he weighed anchor and sailed to other quarters, where he caught "lots of Bass." "Where did you catch them?" I inquired. "Why, in the refreshment buffet at the railway station!" DRAGNET.

WESTMEATH LAKES AND RIVERS. LIMERICK DISTRICT.

EXTRACTS from fourteenth annual report by the assistant secretary on the Fish Preservation Society's efforts in connection with Loughs Derravaragh, Owel, and Ennell, rivers Inny and Brosna, and their several tributaries, in the counties of Westmeath and Longford, during the season of 1898-9.

"Fourteen years of existence is some indication of the continued vitality of the Westmeath Lakes Fish Preservation Society. Before it was a year old, it was grudgingly promised only a year to live, but, strange to say, all the prophecies about it in this direction have proved unreliable, to say the least of them, and I will only add that if I could spare more time from my ordinary duties, it would be in much more vigorous health to-day.

"Having regard to most unpropitious weather for the past three or four years, the fishing on the Westmeath Lakes has proved anything but satisfactory. Many people ascribe it to other causes—notably to scarcity of trout. This, I contend, cannot possibly be the case, as the rush of spawning fish into the rivers in the close time is more abundant than ever. Again, one has only to watch the surface of any of the lakes on a calm evening to see that they teem with fish, while most of the lake tributaries contain thousands and thousands of fry and yearling trout, as well as others of an older type. I make these statements from my own experience and actual observation.

"Last summer your committee, hearing a good deal said in favour of rainbow trout (*Salmo irideus*), came to the conclusion of introducing them into the lakes as an experiment, independent of the general fund. I was enabled, with some difficulty, to collect sufficient to purchase 1000 yearling fry, and your committee considered it advisable to turn them all into Lough Owel, and as these fish are supposed to be of a migratory nature, this lake was selected as the most suitable for them.

"Accordingly, on Oct. 12 last, the fish arrived by train from the hatcheries in the County Louth, under the charge of Mr. W. H. Armistead, from whom they were purchased, and we put them into the lake in the best and most suitable places, and as far away from the usual known haunts of pike as possible. They were splendid lively little fellows, with their beautiful iridescent hues, and not a single one died on the journey.

"Mr. Brinsley Marlay, D.L., of Belvedere, most generously sent me a cheque to purchase 500 similar fry for Lough Ennell, and these I had put into the lake on same day (Oct. 12) by his manager, Mr. Hay, who also reported not one lost in transit.

"If these fish become naturalised to the lakes, as Mr. Armistead assures me they will, they will, it appears, grow rapidly and rise freely. They are reported to be very sportive fish and capital for table. It is requested that if any are taken this season they will be immediately returned to the water, and the matter reported either to Major Grant or myself, and for which we will be extremely thankful.

"The names of the subscribers to the fund for introducing rainbow trout will be found in the appendix to the report, as also a statement of the receipts and expenditure. Special thanks are due to Mr. Robert Gardner (of the firm of Craig, Gardner, and Co.) for his liberal support in the matter.

"I am much afraid that so long as nets are tolerated on Lough Ennell, so long also will our efforts to improve the fishing be seriously hampered. I do not refer in this instance to the short shallow nets, which are invariably set in the light water for pike during the months of February and March, and which would hardly take one trout every ten years, but I refer expressly to those immense long nets made of the strongest and finest twine, and which in the hands of skilful and experienced poachers must be very destructive to the lake trout.

"On March 31 last I saw one of these nets drying on an island. It was carefully wound round the trunks of some trees, and if there was only one band cord on net, it must have been over 200 yds. in length. All the bays in which trout are particularly fond of feeding previous to and during the Green Drake time, can be cleanly swept of their contents by such a net as this.

"You will naturally say—Why not apply to the inspectors of Irish Fisheries to prohibit the use of nets on Lough Ennell and Derravaragh as well as Lough Owel? To which I reply that in memorialising for an inquiry you must be prepared with evidence of an expert nature in order to prove your case, and the parties who are most interested are very slow to render any assistance when the time comes. Not one of the professional fishermen would give the slightest help, and apart from all this there is much expense attached to these functions. There is very little public spirit ever manifested in carrying such things to a successful issue; it is invariably expected that everything of the kind should be of spontaneous growth, or come as a matter of course. Fish are wanted in plenty, but they cannot visibly increase when poachers are about, and therefore trouble and expense must necessarily be incurred if they are to be protected or preserved.

"I visited many of the spawning streams during the past close season and found them thoroughly well stocked with trout and beds—notably the Dyart river (Lough Ennell), the Moneen and Gaine rivers (Lough Derravaragh), all the tributaries of Lough Owel, and the Clonmore river, in the Faoat district of the Inny; and if, after all the trout which ascend these streams year after year, and the enormous quantity of ova deposited, if, I say, after all this we have not an abundant supply, it is then not in the power of man to improve matters. But I assert that the fish are there, only you need not expect to make baskets while you have easterly breezes and dazzling sun; neither can you look for success in very stormy weather or

in comparative calm, and you all very well know that of late years we have experienced a large share of each and all of these jarring elements so disastrous to successful angling.

"Most anglers do not know that there are splendid char in Lough Owel, but the time they take best is in the months of July and August; they can be taken on spoons and artificial baits such as Devons, phantoms, minnows, &c. Lough Owel literally swarms with char, and they can often be seen in shoals feeding or rippling the surface, but they do not take any bait freely as a rule, and in fact very little attention is paid to this class of angling.

"Since our annual general meeting on May 11, 1898, we have only had one other, namely, that convened for the consideration of the question of introducing rainbow trout into the lakes, and at which only five members attended. The society happily saddles nearly all its work on the shoulders of its hon. secretaries, and it is, therefore, to be confidently hoped, should we not succeed in giving uniform satisfaction in the carrying out of our duties, that we will not be too severely criticised, as we can safely say we did our best.

"There is certainly no use in going to the trouble and expense of calling meetings at which the members will not put in an appearance.

"I must not omit to mention that as usual the Royal Irish Constabulary gave us splendid assistance, both by night and day, during the past season, but I am forced to admit that there are a few fish poachers who appear to be able to baffle the combined vigilance of both police and water bailiffs. However, we may be able to come to close quarters with these gentry before the current season passes over.

"I wish to bring under the notice of the society that the two boats which were purchased second-hand for the water bailiffs on Loughs Owel and Ennell have broken up, and I have been obliged for the past year to supply them with the use of my own boats. Some years ago, owing to the generosity of Miss E. T. Raynell, of Killynnon, I was enabled to buy a new boat for the Derravaragh water bailiff, but it has also worn out, and I have again been in a position, through Miss Raynell's kindness, and ably helped by Mr. Meredith Johnston's assistance, to have a very fine new boat built for this service.

"I cannot close my report without referring in the most regretful terms to the demise of one of our most respected members (the late Major Aubrey Vere O'Brien, R.M.). I am quite certain that every member of the society who knew him experienced the most sincere grief at the sad intelligence, and the deepest sympathy for Mrs. Vere O'Brien in her bereavement.—I have the honour to be your obedient servant,

"Mullingar, May 11, 1899."

PISCATORIAL SOCIETY.

THE LATE MR. EDWARD FOREMAN.

THE piscatorial *salon* on Monday evening was turned into a house of mourning, for, far overshadowing all else of import, came the sorrowful and somewhat unexpected news that the society's hon. treasurer, Mr. Edward Foreman, had passed away on the previous Saturday evening. For several months past the deceased gentleman had been ailing with kidney and heart trouble, but when in the beginning of January he took his accustomed place at the last meeting of the society he was able to attend, it was confidently hoped that with the approach of spring and summer he would be fully restored to his former health and vigour. But it was willed otherwise. On Friday morning he suffered a relapse, became unconscious, and died peacefully on Saturday.

The late Mr. Foreman was one of the oldest members of the Piscatorial Society. As long ago as September, 1879, Dr. Coates and Mr. E. J. Walker (still happily amongst us) proposed and seconded his name for membership. He speedily made friends, and from the time he first identified himself with the society he has ever taken the warmest interest in its success and prosperity. His naturally cheerful disposition always stood him in good stead. He was a great favourite with all with whom he came into contact, and as a genial companion (using the word in its best and highest sense) he had few equals. In his capacity of hon. treasurer he exercised consummate tact and discretion, whilst as a chairman he had the capability of combining the *suaviter in modo* with the *fortiter in re* in a manner many might well envy. His very presence was a guarantee that business would be rapidly and pleasantly carried through, and that the best of order would be maintained. Almost his very last official act was to sign the lease of the new water at Uxbridge, in the procurement of which he, with Mr. Robt. C. Blundell, took such an active part. He was, in very truth, a man of men, and every member who knew him (and few there were who did not) will sadly miss his bright companionship and the invariable courtesy and affability displayed to all. Those who were acquainted with and respected him as a member only have lost a true and staunch angling comrade; whilst the majority, who were proud to be able to call him their friend, will long grieve for one for whom they had an almost brotherly affection. The society's museum bears ample testimony of the late gentleman's skill as an angler. The cast of a 37lb. salmon from the Tay, preserved bream of 6lb. 4oz., and Itchen grayling of 2lb. 12oz., show that he was as successful with the rod and line as he was in making friends. He loved fishing for its own sake, and none the less for the opportunities it afforded him of spending happy days with those who were privileged to be his companions upon the fishing expeditions he was wont to make during the season. His face will be seen no more at the weekly meetings, but as long as the Piscatorial Society exists his memory will remain green, and his name be

revered and honoured by the large body of members who feel that by his unfortunate demise they have had taken from their ranks a rare sportsman, and, above all, a thorough English gentleman.

Mr. Horace H. Brown took the chair at Monday's meeting, and stated that it was his sorrowful duty to announce the death of their dear old friend, Mr. Edward Foreman. He mentioned that an unanimous decision had been arrived at to forward a handsome wreath to the funeral, which had been fixed for Thursday, and at the same time to have a painting in oil made of him, to place in the *salon*, this latter in memory of one who had done so much for the society during the long period of twenty years he had been connected with it. Mr. Brown went on to say that the deceased was so well known to them all, and his qualities were so highly appreciated and valued, that few words were needed from him to emphasise the almost irreparable loss one and all had sustained. He (the speaker) took possession of the chair that evening because he was the oldest member in the room. He had seen many men come and go in the Piscatorial Society, but he certainly never knew any official hold the post of hon. treasurer for so many years Mr. Foreman had done with such kindness, good nature, and geniality. When their late comrade had taken the chair, sometimes in periods of considerable difficulty, the minority could always count upon getting just as kind a "nay" from him as the majority a courteous "yea." He was always the same, and he (Mr. Brown) took it that they never wanted anything better from Edward Foreman than that he should be Edward Foreman himself. He was, in short, the most kindly, generous, and well disposed gentleman he had ever met in the course of his life. Mr. H. Harden also spoke a few feeling words, saying, that in Mr. Foreman he, personally, had to mourn the loss of one of the dearest friends he had ever had. During the last twenty years they had had together many pleasant excursions, and none could feel more keenly than the speaker the keen grief his death had caused. Mr. H. Neville Campbell, who was unable to be present, wrote conveying his sympathy and condolences with Mrs. E. Foreman and the family in their bereavement. It was decided that Mr. H. Harden and Mr. Frank Ward should attend the funeral as representing the society. The meeting then adjourned, no business being transacted, out of respect for the deceased gentleman.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting of the society was held at the Holborn Restaurant on Wednesday, May 31, at 8 p.m. Mr. H. Edwards in the chair. Two interesting letters were read from Mr. A. W. Parker (Eastbourne) and Mr. G. Read Clarke (Brighton). Mr. Handley reported a phenomenal capture of green crabs and a few plaice off Southend.

The hon. secretary reported the death of Mr. Edward Foreman, one of our members, and by the proposition of the chair a very hearty and deep felt vote of condolence was passed, and the hon. sec. was requested to convey the same to his widow.

Mr. G. Saville reported the likelihood of sport at Walton-on-the-Naze.

Mr. Handley spoke on the subject of bass fishing off Clacton Pier. Mr. Saville suggested that the bass at this station refused to take any bait of which he was aware. Mr. Saville spoke of paraffin wax as a dressing for lines, and mentioned that he had a plaited silk line over four years' old, which he had used constantly without washing, and it was still as good as the day as that upon which he rolled it on the winch. Mr. Handley spoke in favour of the same dressing. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON
(Hon. Sec.).

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

THE committee beg to announce that a competition has been arranged for members, in the Central waters only, at Pulborough, on June 18, for the 20-ginea cup, kindly presented by Walter Emden, Esq., J.P., L.C.C., and a large number of other prizes will be offered in addition. It is hoped that societies will if possible arrange a club outing on this date, and endeavour to persuade every member to purchase a ticket. Entrance fee, 1s., proceeds of which will be handed to the Queen's Jubilee Nurses' Fund in recognition of their noble work in assisting the deserving poor during sickness, and in accordance with the wish of the donor of the cup. The possession of the cup is to be decided by two competitions, and in connection with the second one, W. H. Elsmore, Esq., vice-president, has presented a valuable cup as a special prize. The winners in the first and second matches to compete in a third for the actual possession of the two cups. The first winner may exhibit the cup at his clubhouse if so desired, providing a satisfactory guarantee is given to the committee for its safe return when asked for.

G. Pritter-road, S.E. W. J. WADE, Secretary.

The following is a preliminary list of prizes: Mr. Walter Emden, J.P., L.C.C., silver cup; Mr. W. H. Elsmore, silver cup; Mr. G. H. Thurston, prize, value £1 11s. 6d.; Mr. F. W. Simpson, three prizes, £1 1s. each; Mr. W. Fordree, framed picture (Pegged-down Match); Messrs. Greenlees Brothers, case Claymore whiskey; Mr. J. Vian, case Scotch whiskey; Mr. A. Eldridge, roach rod, value £2 2s.; ditto, three bottles Scotch whiskey; Messrs. F. J. Williams and Co., roach rod; Messrs. A. Carter and Co., £1 1s. jock rod; Mr. J. Poole, 10s. 6d.; Mr. J. Gold, prize; Messrs. J. Peek and Son, winch; Blackfriars Angling Society, £1 1s.; St. Albans Angling Society, £1 1s.; Mr. G. H. Jennings, £1 1s.; Mr. Stillwell, half gallon of whiskey; Mrs. Sturgess, 10s. 6d.; Mr. Nash, a prize;

I. Levien, pair of vases; W. Stone, 10s. 6d.; J. Nunn, 10s. 6d.; West London A.C., 10s. 6d.; South Bermondsey Recreational, 10s. 6d.; Ye Olde Clapham Rovers A.S., 10s. 6d.; Peckham Bros. A.S., 10s. 6d.; Amicable Bros., 10s. 6d.; Great Northern Bros. A.S., roach 101; Amicable Waltonians A.S., marble clock; Mr. W. Stafford, a prize; Mr. F. Sorge, a prize; Mr. J. Smith, a prize; Mr. G. Greg, a prize; Mr. C. A. Medcalf, a prize; Mr. W. J. Wade, a prize; Mr. H. Holder, a prize; Mr. C. Fletcher, a prize; Mr. J. Kervell, a prize; Mr. Burkett, 10lb. joint of beef; Clapham Strollers A.S., guinea rod; Mr. E. A. Down, 10s. 6d.; Mr. H. Crowther, 5s.; Mr. H. Stanley, 5s.

GORTNORABBEY HOTEL.

MR. GEORGE FLYNN, proprietor of the Imperial and Royal Hotels, Ballina, has made a very successful business stroke in the acquisition of the above hotel, and one which, from the tourist point of view especially, cannot help bringing him, we anticipate, many additional patrons. It would be impossible to conceive a more picturesque or sequestered spot than where the hotel—in olden days the residence of the Ormsby family—stands. Situate on the shore of Lough Conn, and nestling amid a wealth of ancient timber now giving forth its many shaded foliage, it may be truly said that nature has endowed it with all the charms that contribute to give us one of her fairest settings; and what is wanting in other respects the enterprise of Mr. Flynn may be trusted to supply. Even within the short time he has become, on lease, the tenant of the place he has done wonders. He has renovated the house from floor to attic, introduced a splendid water supply of the finest spring, and re-modelled the sanitary arrangements to bring them in touch with the most modern principals. The bedrooms, eleven in number, are furnished with ash suites, and what is of more importance, are swept by a current of the purest air, while the dining-room and the drawing-room are two nobly proportioned apartments, and command magnificent views of lake and mountain scenery. They have been fitted up in luxurious style, regardless of cost. Those who wish and have the means to escape for a brief period from the toil and worry inseparable from the restless age in which we live, could do no better than pay Gortnorabbeey a visit. They will find there all the comforts of a first-class hotel, combined with every courtesy and attention. The hotel is within a stone's throw of one of the best fishing casts in the lake, and for the pleasures of those who follow the "gentle art," Mr. Flynn has had a number of boats specially made to his order by Ryan, the famous boat builder, of Moyné, which are let to visitors on exceptionally reasonable terms. Then, too, excellent pheasant, woodcock, and rabbit shooting (specially reserved) are to be had, and to fill up the sum of human happiness in this lovely region, golf links have been laid down, and a fine tennis ground is in course of completion. The hotel has very good postal and telegraphic facilities, being within seven or eight minutes reach of Crossmolina post office, from which there are two deliveries of the mails each day, and free delivery of telegrams. We have indicated merely in a rough way the many attractions which cannot fail to commend the hotel to the notice of tourists, who, we may add, will have also the exclusive privilege of fishing on the non-tidal portions of the river Moy which Mr. Flynn has rented from the Moy Fishery Company.—From the *Western People*.

Notes from the North.

June is not a brisk salmon angling month, but this year promises to belie its character in this respect. In fact, the fish which should have been in the pools in April are only now coming into the streams in force, and this season June and probably July will in a measure redeem many blanks made by the late spring—the worst spring on record.

The temperature of the water has been all along too low. It is still very cold wading, and patches of snow are quite common on the near hills.

There will be salmon fishing *galore* on the Dee, Don (not to be much depended on), the Spey, Deveron, Ness, and kindred streams all the summer through, and which may be picked up for an old song, as salmon fishings go nowadays. We could not have given the same advice for June, at least, with anything like the same assurance of sport during the past decade.

Berry (Banchory), Smith (Fenghside, Banchory), Sandison (Aboyne), McDonald (Braemar), have all really good salmon and grise waters at their disposal, and will make easy arrangements with anyone on the look out for a cast on the Dee.

Mr. Mather, who is attached to the Munshi Abdnl Karim, Her Majesty's Indian Secretary, is an ardent angler. Within an hour of his arrival at the Castle, on Saturday, he had out his rod, and was fast into a beauty of 8lb.

One of Mr. Drummond's guests lost a very fine fish at the Bridge of Potarch, on Saturday, on the Ballogie Dee water, after thirty minutes' close and exciting play. This is by no means a unique experience just now, under existing conditions. The light casts necessary in the clear waters and bright sunshine, and the small double irons, reduce the breaking strain to the lowest minimum, so that the finest yet finest of play is necessary in landing the fish.

Mr. McDonald's guests at the Fife Arms, Braemar, are getting excellent sport now on the head waters of the Dee. Fish have been very slow in getting up into these parts, but a good beginning has now been made. They had twelve fish to three rods last week.

The Duchess of Fife's water will be in grand form by the time she gets north this autumn, owing to the very late spring.

The Mar Lodge, the Silver and Blue, Jeannie, and Logie, of the smallest three-quarter and half-inch irons, have been the most popular lures on the Dee.

All the rivers and side streams are in good volume, but clear. Seldom at this season have we seen them so free of weeds, but then there has been no growth. It is a perfect treat wading just now, compared with what it will be in July, when the algae and slime choke up everything. Probably the low temperature of the water will keep things sweeter this July than would otherwise have been the case in an average season.

Disease, if it exists at all, is always sure to be in evidence towards the end of May. Hitherto it has this year been conspicuous by its absence, but during the past two weeks a considerable number of affected fish have been met with on the Dee.

The salmon supplies on the coast are steadily on the increase, and prices falling rapidly. Grilse are not yet over abundant, and nowhere on the Dee have we heard of any being got to the fly or other lure as yet. A good few are being got on the Don, Deveron, and Moray Firth coast districts, but they are not taking to the rivers freely at all. Probably the low temperature is the drawback.

An esteemed angling lessee on the Don writes me: "I and an angling friend, on our way to the river on Saturday morning (4 a.m.), met two poachers staggering under the weight of a bag of trout, which they were taking by turns into town. It was very galling to see this, and not be able to say, 'What doest thou?' We might have followed them, and so forfeited a morning's sport; but what use? Unless they are caught red-handed there would be no conviction. The law must be altered to put a stop to this wholesale netting of our waters."

The Cruden Bay Hotel accessories have been enhanced by the addition of an excellent bowling-green, which was formally opened on Saturday with an exceedingly pleasant ceremony, which was crowned by a match between two of the leading Aberdeen clubs. The bowling-green is said to be the finest in Scotland.

Many Dee anglers, such as Mr. W. E. Nicol and Mr. J. C. Haslam, permit no lure on their waters outside the orthodox fly, not even by their guests. They are true disciples of the old school, and pride themselves in the distinction.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

There are very few angling associations in England that have made the rapid growth that the Birmingham Association has made. The association was formed some twelve years ago with some half a dozen clubs, who did not rent water, but depended upon the free and open waters in the Midlands to obtain their sport. But these few clubs worked with a will to improve their position with the railway companies, who had intimated that if the clubs did not combine together the concessions as granted them would be withdrawn, owing to the privilege being abused. At this time there were also some four or five clubs who did rent water, and when a meeting was called for the purpose of forming an association the water-renting clubs, for some reason or other, would not join in the movement; but here the Midland Railway Company stepped in and they were compelled to come under the banner, which was much against their will, but I am pleased to say that they have never had any cause to complain of the management since they were affiliated, as a rule was framed so that the internal arrangements of these clubs could not be interfered with as long as they conformed to the rules of the association. The first balance-sheet brought out showed that 430 members were identified with the association, and that there was, on the first half year's working, a deficiency of 16s. 9d. to make both ends meet. Still, nothing daunted, the officers and small committee worked on to overcome the difficulty, and in the end succeeded, and since then the association has gone on by leaps and bounds until it has reached its present sound position. We have now upwards of eighty clubs, with others forming to become affiliated, our numerical strength at the present time being close upon 5600 members. The growth of the association has been more than ever was anticipated. From 1896 to 1897 we made over 800 members, and now—from March, 1898 to the present time—we have made sixteen new clubs, which average fifty-five members each. It is hard to say when we shall cease to add new clubs, or how many members we shall make this year, so great is the hold that angling has upon the people in Birmingham, who, by joining a society, have the benefit of being taught how to angle, and

also to find a change from the polluted atmosphere of our city and the bustle of every day life. At the rate our association is making members we shall have to do something to provide them, if possible, with new fishing grounds; this will no doubt be one of the important matters that will engage the attention of the committee in the near future. The May Fly is up on our local trout streams, and no time should be lost by the fly fishermen in the Midlands to visit their favourite streams. Mr. A. Randall of the Hearts of Oak Society, had four brace of trout from a private portion of the Teme on 28th inst., which weighed a little over 10lb.; the fish were taken spinning, and were in grand condition. A number of our clubs are arranging contests at the opening of the season at Alrewas, but as the canal is being emptied here, I would advise them to find another place, to prevent disappointment.

FROM DERBYSHIRE.

The genial weather which we are now having has wrought a very great improvement in angling on Derbyshire streams, and anglers, whom the late rains and cold had driven away, are now, with many others, returning to the various waters. The fish are as a rule rising pretty freely, the streams are in good condition, and both fly and bottom anglers are having very fair sport in most places. On the upper waters of the Derwent, in the Derwent Dale and Ashopton districts, several nice lots of fish have been taken; and the tributary stream, the Ashop, has, on several of its lengths furnished a few respectable creels to fishermen there, mostly from the neighbourhood of Sheffield. Lower down, on the Bamford reaches, both fly and bottom anglers have had satisfactory sport, and some good baskets have been made there, and also on the adjoining Sickleholm lengths. The Hathersage Association waters have been well patronised during the week, and numerous creels, small and fairly large, have been made, and on most of the other reaches in the Derwent valley satisfactory sport has been had. There has been a goodly number of visitors to the Baslow and Chatsworth waters, and some very fair baskets of fine fish have been killed, principally in the Park lengths, but good sport has also been met with on the adjoining lower reaches between Beely Bridge, Calton Woods, and Rowsley. Both fly and bottom anglers have done tolerably well, as a rule, on the upper and lower waters of Darley, and in the Matlock district there has been a great improvement in angling of all kinds. Several nice lots of fish have been killed with the fly on the lengths between Cromford and Lea Hurst Woods; and both fly and bottom fishers and trollers have had considerable success, and made good baskets on the Holmesford, Watstanwell, Ambergate, and Belper reaches of the river. On the various lengths of the Dove there have been numerous fishermen of most kinds, and sport has, in general, been satisfactory. The Dovedale waters have yielded several good creels to fly anglers, who now muster pretty strongly there; and higher up, on the Mill Dale, Beresford Dale, and Hartington lengths some nice baskets have been made. Several anglers on the neighbouring Manifold have had enjoyable sport, but no very large creels have been made on any part of that charming little river during the week. The other tributary, the Bentley, has had several visitors, and a few of them have taken decent lots of fish. Fly fishing on the Wye has vastly improved within the last few days. Between Ashwood Dale and Blackwell Mill (the Buxton district) there has been some very fair sport had; and on the Miller's Dale lengths, both open and private, several excellent baskets have been made.

FROM HULL AND DISTRICT.

We have had an agreeable change in the weather in this district since my last report, in fact, for the past few days it has been simply splendid, causing our local anglers to be out in considerable force; but, although the river Hull and tributary becks are in grand condition, only a few trout have been taken, and those chiefly with worm. The best fish of the season, so far, is the one mentioned in my last. It weighed 4lb. 10z., and is in the hands of one of our local taxidermists for preservation. It was caught in the tidal waters below Beverley Beck-end by Mr. R. H. Barlow, a member of the North Myton Angling Society. On the top stretches of the river, and confluent streams, there is quite an influx of insect life, and some grand fish are on the rise, so that the fly fishers should soon have a fair time of it, especially in the Driffield district. Some very good takes of flounders and eels have been made in the lower portion of the river below Beverley. At Weelferry, Minto Flatts, and Wawne, and from Cicey down to Gibraltar, some fair samples of these fish have been taken. A nice sized trout was also taken on Monday with worm near Burton Hall. Several matches have been fished on the lower stretches, amongst which the North Myton A.S. held their first match on the Minto Flatts stretch, Mr. T. Smith heading the prize list with 1lb. 10½oz. of fish. The County A.S. fished their second match above Beverley, on Swinemoor, but did not do so well as those who fished below. The Starr A.S., of Stoneferry, fished their second match on the river at Hull Bridge, but only had very moderate sport. The Horns Angling and Recreation Society, and the Duke of York A.S., both fished a match on the river to-day (Saturday), the former at Weelferry, and the latter at Wawneferry; and on Saturday next Messrs. Reckitts A.S. fish their second match at Weel. At a special meeting of the new society, the Hull City A.S., Mr. J. Ashwell was elected president, Mr. William P. J. J. vice; Mr. Robert Turner, treasurer; and Mr. J. West, hon. sec. Another new angling society has also been formed at the Golden Cup Hotel, in Brook-street, called the Hull Roach A.S. The officials elected for the new society are as follows: President, Mr. Alfred Chappell; vice-president, Mr. Mark Darby; treasurer, Mr. T. Sharpe; and secretary, Mr. G. W. Schofield.

TRADE MARK (Regd.).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Alumi-
nium. The greatest boon to anglers yet invent-
ed for Salmon, Mabsseer, and Trout, and all kinds
of coarse fishing; unsurpassed for long distance
casting; simple, and easy to learn. Rods and
lines specially suited for these reels.

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is
easily operated by the hand, whereby the check
can be regulated at will by simply turning the
milled disc on spindle. This should prove a
great advantage to anglers, as the check can be
regulated without having to take the reel to
pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies
of all sizes. Handy and compact, each fly
secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Cocus Wood. Made in 18 different sizes.

FROM THE LAKE DISTRICT.

There has been a very decided and general improvement in fishing in this district during the past week, and reports from all quarters speak of good sport and hopeful prospects for a few weeks to come. Bright, genial weather has come at last, and as a result there has been a great hatching out of insect life. Fish seem greedy to take any form of natural or dressed fly, and as nearly all rivers are carrying a greater volume of water than is usual at this time of year, June is likely to prove a better month for anglers than has often been the case. The lakes are also affording good sport, nice takes being obtained on Bassenthwaite, Derwentwater, Crummock water, Windermere, Esthwaite, &c. It would be impossible to enumerate the catches at present to hand, but a few may be recorded, namely, seventeen trout to the rod of Capt. Thompson, Pooley Bridge, in the Keswick waters; Mr. R. W. Mayson, three, one of which scaled 3lb.; Mr. C. Birkett, eleven, from 1lb. to 3lb. each; Mr. J. Kirley, four, two of which were 2½lb. each; Mr. T. Brown, four, from 1lb. to 2½lb.; Messrs. Collier and Bandle, trout from 1½lb. to 2½lb.; other successful anglers being Messrs. Denwood, Cotts, Newton, Storey, Musgrave, Hodgson, and others; and, in St. John's Beck, Messrs. M. and J. Stanley. Amongst the more fortunate Eden anglers may be mentioned Mr. E. A. Heelis, who has had thirty and twenty-seven trout, one being a 2-pounder; Mr. T. Ellwood, thirty-nine; Mr. T. Howe, thirty-two. Two splendid fish of 9lb. and 10lb. have fallen to the lot of Messrs. Collins and McIver (Liverpool) on Crummock water, where sport is said to be improving daily. The best take we have heard of on the Eamont was twenty-seven trout, to the rod of Mr. Mallinson. There are now a good many angling visitors in the Lake District, which has put on its early summer garb, and is lovely beyond description.

FROM LANCASHIRE.

The new organisation at Chorley is still doing its utmost to acquire waters suitable for their members. One of their members, fishing the Lower Rivington Lake, landed on a single hair line a trout of 1½lb. At Warrington a new departure is the construction of an aquarium in the public park, to be situated in a line with the aviary, which will consist of ten tanks. The fish hatchery in the same park is a never failing source of pleasure to crowds of inhabitants, who flock to see the young fish fed at 6.30 each evening. Since the hatchery was first established about three years ago some 10,000 trout have been turned into the large lake and various ponds. Mr. McCrerrick and party have returned from a visit to the Nith, Dumfriesshire, during Whit week, and report sport above the average. A salmon of 12lb. was taken a few days since in a part very seldom visited by these fish. During the holidays the Ribble has fished well, and better baskets obtained than for the last twenty years so early on in the season. This remark applies to the upper reaches. The Lune and tributaries have fished remarkably well, yielding baskets from seven to twenty brace. The Wenning was the best stream, and a large portion free water. The Wyre is not fishing so well; more rods out, but catches only poor. Llanymynech is a place always well patronised by our men, but during the recent holidays sport was bad all round.

FROM LINCOLNSHIRE.

Although the weather has been fine, on the whole the conditions have not been at all favourable for trout fishing. A cold north-east wind has, for the most part, prevailed, and sharp night frosts have done much towards keeping the fish down. Added to this, the streams have been temporarily agitated in consequence of the tremendous rainstorm of the 24th ult., when, in some parts of the district, 75 parts of an inch of rain fell in twelve minutes. It is many years since there was such a heavy downpour in so short a time, and reports that have reached me show that the floods have had a prejudicial effect upon the spawning process amongst the coarse fish in the Fen rivers and drains. The few who have been out after trout this week have almost exclusively confined their operations to bottom fishing, but as a rule their efforts have not been attended with any great amount of success. With one or two exceptions the trouting season has—owing to the adverse weather—been a miserable failure, and unless we get some warm weather quickly, the opening of the coarse fishing season will be here before fly fishing has really begun.

FROM MANCHESTER.

The next meeting of the Moss Side Social Angling Society is called for June 5, for most important business. The Welcomb Angling Society have been removing, and are now comfortably settled with Mr. W. Arnold, Peabody Arms, in River-street. At the next meeting arrangements will be made for the opening match on June 18. Our citizen anglers who visit Matlock note with great pleasure the recent stocking operations in that district. Some idea can be formed of the demand for bait in this city during Whitsuntide, when maggots were selling at a penny per score, and finally at a penny per dozen. Several of our locals put in the holidays in the Bala district, and secured some really good sport, the daily average was ten to twelve brace of trout, averaging 6oz. to 12oz. each. A few days since several magnificent lake trout were taken, including one of 6lb., and varying down to 2lb. Another local resort, somewhat neglected of late, has been fishing well this Whitsuntide, viz., Poynton Pool. Several fair baskets have been made, including two, of 15lb. and 10lb. respectively. Several very encouraging reports are to hand of the fishing in Pickmere. Our men consider it is fast recovering its old reputation as a good coarse fishing water. The County Palatine Angling Association, whose headquarters are in this city, and who quite recently acquired the sole privileges of the Poynton Canal from Marple to Maclefield, have every reason to be proud of their new venture.

FROM NOTTINGHAM.

The Trent is running down rapidly, and dace and chub are rising eagerly to the Stone Fly, which is out in strong force. Report says that the May Fly has appeared on the Greet and Dover Beck, and that on the former well-stocked trout stream good bags of choice fish were made on Tuesday and Wednesday. Salmon have been showing on the Trent at King's Mills, and the subscribers have now a chance of getting a fish or two. Mr. Harry Spray, the hard-working hon. secretary of the Welling-on Society, writes me: "We made a start with the trout stocking yesterday. We turned fifty splendid four-year-old fish of the *Salmo fario* breed into our fishery at Shardlow, and the majority, deposited in the beautiful rest of Roach Island, soon began to gobble down the natural flies coming down stream. The fish varied in weight from 1½lb. to 3lb. each. We hope to turn in many more before long. You might say in your notes that our executive invite assistance from gentlemen (sportsmen) and others interested in our efforts to raise the standard of game fish in the river." The society celebrate their twenty-fourth annual banquet at headquarters next Monday night, when a large and influential gathering of anglers is expected. The Beeston Society held their annual meeting at the Victoria Hotel on the night of May 25, when the ordinary prizes won during the year were distributed. Those for barbel, chub, bream, roach, dace, and pike were carried off by Messrs. G. Tutin, A. Metheringham, J. Luntley, W. Gregory, F. J. Lindley, and S. R. Dugmore. The "specials" were won by Messrs. F. J. Lindley, A. Metheringham, J. Riley (hon. sec.), C. J. Walker, S. R. Dugmore, G. Tutin, J. Luntley, W. Kirkland, and H. Gaudy. The society, thanks to the kindness of their president, Mr. S. Watson, of Beeston, have the fishery to themselves.

FROM SHEFFIELD.

Now that the holiday season is at an end the fine weather has set in, and during the past week brilliant and warm sunshine has prevailed, making outdoor pursuits enjoyable in the extreme. There will, however, be very little fly fishing for a bit, as up to a week ago the rain fell in such torrents that the rivers have been very full, with greatly discoloured waters. These are now rapidly clearing, and fly fishing will soon be entered upon with great zest, after anglers have been debarred so long from following their favorite pursuit. The upper reaches of the Derwent are already being attended to by fly fishers, and during the week, if the fine weather continues, fly fishing will become general all the length of the Derwent and Wye. The conditions for bottom fishing have been very gratifying, and anglers have put in full time. In the neighbourhood of Darley Dale both local anglers and rodders from a distance have found some satisfactory sport, whilst the waters near Matlock Bridge, Bath, and Bank have yielded some very nice trout. Bottom anglers took full advantage of the opportunities afforded them, and now fly anglers are beginning to take their turn. In the waters at Low Bradfield a goodly number of nice fish have been caught, some anglers having accounted for five or six brace each. Anglers who enjoy the pleasure of catching decent-sized fish are very fond of the Damflask Reservoir, where trout of 1lb. each are commonly caught, whilst many big beauties have also been recently taken from the same sheet of water. The private waters rented by the Sheffield Trout Anglers' Society in the Amber, near Wingfield, have provided a good deal of sport during the past week, a lot of nice fish having been caught.

FROM WORCESTER AND DISTRICT.

The heavy rains at the end of last week caused a considerable rise and discolouration of our rivers and streams, the Tems being most affected, and for some days was unfishable, except for eels. A cold wind has been blowing, veering from N.E. to S.E., and we have had sharp frosts at night, which has played sad havoc in the gardens among the early vegetables and fruit. Potatoes, kidney beans, and marrows have suffered terribly. Since Sunday there has been considerable improvement in the weather; the sun has made itself felt, and at last we feel that it is May. To-day the waters are dropping down and clearing nicely, and many anglers have been out, and trout have risen well at the fly and taken the worm well, and some very creditable dishes of fish have been brought home. There have been no big takes of trout during the week. About the best were five brace, taken by Mr. Thrift, and four and a half brace by Mr. Martin Perks, both of the City Club. Anglers have had rare sport among the eels lately, which have been feeding voraciously. Two members of the York House Club one day took 35lb., one taken by H. Allen weighed 3lb. 3oz.; and the secretary of that club brought home from the Hawford brook a portion of an eel that must have been close upon 6lb., which an otter was comfortably feeding on when it was disturbed. On visiting the York House Club we were pleased to see the progress it was making in the numbers and standing of their members, and in important additions to their hon. members. They have arranged their first competition of the season for June 18, at Holt, in the river Severn. The other clubs in the district are also preparing for their competitions, and the water in all directions will be well occupied when the close season for coarse fish ends. We are glad to hear that the Severn Fishery Board has been successful in prosecuting two men for taking coarse fish during the close season; unfortunately there are hundreds of this pot-hunting fraternity at it day by day, and taking a great quantity of spawning coarse fish and samlets without let or hindrance, and I am afraid these convictions will come too late in the season to do any good in preventing the great slaughter of the breeding stock of the Severn. A great deal of interest is taken by members of the various clubs in the result of the revision of the rules of the Worcester and District Angling Association, which will take place at the Turk's Head, Lowesmore, Worcester, on Saturday next.

ANSWERS TO CORRESPONDENTS.

W. B.—Write for particulars to Secretary, Thames Conservancy, Victoria Embankment.

WM. FISHBOURNE.—Many thanks for the flies. One of the smaller Sedges will be named with others later on.

T. T.—You gave no address to answer the questions you sent us. Fuller information than that supplied must be given before we could decide what prizes you were entitled to.

W. M.—Tickets for fishing in the Onse at Barcombe Mills can be obtained at Lewes, Barcombe, Irfield, and Short Bridge, as follows: Annual, 10s. 6d.; weekly, 2s. 6d.; daily, 1s. The Onse contains jack, carp, bream, roach, chub, perch, and eels. No angling is allowed during the fence months.

J. C. W.—Brading-on-Yare: Roach, dace, trout; season ticket 10s. 6d., daily tickets 1s., at the Angler's Inn. Coves: Mullet may be caught with a small fly on the ebb tide. Newport: Here are some large ponds, near Carisbrook, holding very fine trout, and leave may sometimes be had. Ryde: There is very good pont and whiting here, and very fair fishing from the jetty. Sandown: Brading is one mile north; trout, roach, preserved by Lady Oglander. Free fishing below the bridge, dace and roach. There is also a reservoir here holding roach, fishing free. Ventnor: Fair fishing when the tide is up from pier, and there are plenty of rock tench and flounders. There is very little chance to catch pike, perch, tench, chub, barbel, or bream in the island, i.e., free fishing.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

DUCKS AND DRAKES.

SIR.—It seems I have been making ducks and drakes of this May Fly business after all. This is strange enough, for if a man is at once ignorant and modest (as I am), he seldom blunders, at least very badly.

"Oirmuhan" tells me I have been saying certain things; but if my memory serves me right, I only said other men said so-and-so in my hearing, and I should be very sorry to make all I hear in this way my own. After all, May Fly, Stone Fly, Wall Fly, and so on, are merely popular and local names, and if a man chooses to apply such terms to butterflies and bluebottles he violates no canon, scientific or otherwise, and is perfectly at liberty to do so without hindrance or reproach. He may even succeed in making out a strong case against "Oirmuhan" or myself for adopting a contrary practice. However that may be, I can assure your Nenagh correspondent that the fly which is called the "Wall Fly" by the anglers of Athlone, is known to some, at least, of the Killaloe people as the "May Fly," for I have personal experience of it. I never heard the terms Sedge or Rail applied to any flies on the Shannon, but the name Cinnamon Wall Fly has been given in my hearing to those beautiful flies which I spoke of as so abounding on the islets in Lough Ree. Yes, it was, and is, my impression that the Wall Fly and Stone Fly had similarly shaped wings, but I shall now attend to your correspondent's correction on this point. They are certainly both flat-winged insects to the man in the street. Then I am told the Stone Fly is never called the Mullah, and finally, that there is no such fly at all as the Mullah. All right; I have not the slightest objection to this as a contribution to local entomological names, but I must be permitted to add my own little contribution. It amounts to this: Some Athlone anglers have many a time and oft in my sight and hearing called a certain very large and dark flat-winged fly the Stone Fly, and occasionally the Mullah. Doubtless they meant Murrigh, and I am thankful for this correction, as the etymology of the word is interesting. This big, "mhor," insect will rise from the bulrushes in Lough Ree in the evening in considerable numbers if one poles one's boat through them, and dash off in a straight, low flight which seems to quickly exhaust the insect, for on the slightest pretence it will drop like a shot. If there be no pretence, it will drop very soon on its own account. It will be found of mornings on any half-submerged post or railings, or half concealed under the gunwales or elsewhere on yachts and boats. I never saw one under a stone. It appears on Lough Ree late in the Green Drake season, and a few can always be procured in the morning by carefully searching such hiding places as I have indicated. I am afraid there is a confusion of terms somewhere in this matter between your correspondent and myself. By the way, I should be much obliged to "Oirmuhan" if he would kindly let me know what he thinks of Nenagh as a fishing centre for one permanently residing there. I have heard the river Nenagh highly spoken of, and Lough Derg is, I suppose, within sufficiently easy distance. Is there ever a shot to be had in the winter? "Hi-Regau" speaks very well of the Ballyfinboy river also.—Yours,
MONA.

WEIGHT AND LENGTH OF FISH.

DEAR SIR.—The following may be interesting to your readers. In the *Fishing Gazette* for Sept. 22, 1894, I find that a bream 5lb. 6oz. in weight was 20½ in. in length, whilst on the same date another bream, taken in the Onse, weighing 6lb. 4½ oz., was 20½ in. in length, the extra half inch making a difference of 12½ oz.; but, on comparing the length and weight of other fish mentioned in the same date with a printed scale, a barbel, chub, and roach that weighed 6lb. 3oz., 6lb. 3½ oz., and 2lb. respectively, according to the scale, should weigh 4lb. 4½ oz., 4lb. 12½ oz., and 1lb. 8½ oz. respectively. The difference in the length of

the two barbel was only half an inch, whilst that of the weight was nearly 2lb. The difference in the two chub of the same length, 21in., was 1lb. 5½oz., and the difference in the two roach, each 13in. in length, 7½oz. Bnt, sticking to the length and weight of the various fish in the *Fishing Gazette*, three roach, all 13in. in length, weighed 1lb. 8oz., 1lb. 8oz., and 1lb. 8½oz.; and three tench, all 18in. in length, weighed 4lb., 4lb., and 4lb. ½oz., all female fish. Again, in a second list, dated Oct. 6, 1894, a bream taken in the Lea, length 21½in., weighed 6lb. 3oz., or 1½oz. less than the bream taken in the Ouse, 20½in. in length. On the other hand, a perch taken in private water, length 14½in., weighed 2lb.; whilst one taken in the Lea, 15½in. in length, weighed 3 lb.; and of two pike, each 32in. in length, one weighed 9lb. 12oz. and the other 11lb. 12oz., both from private waters; lastly, a bream, 5lb. 8oz., taken in the Ouse (see *Fishing Gazette*, Oct. 27, 1894, page 426), was 19½in. in length. A nice fish. Singular to relate, according to the *Fishing Gazette* for Sept. 8, 1894, another bream, weighing 5lb. 8oz., was taken in the Wey, the length of which was the same as the one taken in the Ouse; but on Oct. 6, 1894, still another bream, weighing 5 lb. 8oz., taken in the Lea, was 20½in. in length, or a difference of 1in. from those taken in the Wey and Ouse.—Yours truly, MARK.

WHY DO SALMON TAKE THE FLY?

DEAR SIR,—“E. E. H.’s” amusing letter gives food for reflection, as was to be expected from a writer who uses the word *parts* instead of the fashionable French jargon *roles*, with a beastly accent which is quite un-English. He asks, Why do salmon take a fly which they are not hungering after? Why do dogs rush at a wheel in motion, which they have no desire to eat? Inherited propensity, probably. In the case of salmon, he suggests anger at or attraction by the bright colours, which reminds me of a fact well known to all anglers for huchen, i.e., Danube salmon (*Salmo lucho*). Herein Mr. Sachs will doubtless bear me out. This fish is taken by spinning; rarely by live baiting. The young ones are said to take a fly, though I never tried for them so. Now, it sometimes happened that we were float fishing in the side streams or backwaters of the Danube about Tulln for pike or zander (*Lucioperca sandia*), called schill in Austria; if a huchen chanced to come along, more often than not he went for the gaudy float, frequently skipping over the line or playing other antics, disdainful the live bait a few feet below. On being pulled in the float would bear the marks of his teeth. Now this salmon, unlike the British and Irish variety, is always on the feed, very much so while in fresh water; so why does not he savage the bait in preference? So much for what I can vouch for. While on the subject, I may cite another case somewhat similar, related to me by a long-time fishing chum, not more given to romance than others. He had been on the Lower Danube, in Carinthia or Carniola, I forget exactly where, and he told me that the fishermen down there were in the habit of taking sturgeon by surface spinning with a large plate of bright white metal, with a big hook attached. According to him, the fish beat furiously at the shining object with their tails, until they get caught in the act. Touching the colours of flies, wet and dry, did you ever notice in an aquarium how sober clad most fish appear in the water compared to what they are in the air? Most colours, except red, merge into a sort of neutral tint, drab, &c. It may be so of flies.—Yours truly, BARKINS OF BRUSSELS.

BASS AND GREY MULLET FISHING.

DEAR SIR,—Would your correspondent “Mullet” be kind enough to tell me the name and address of anyone who will send me salted chervie. I tried to procure some a few years ago, but was unsuccessful. Has “Mullet” tried wray’s liver for bass? A piece about half the size of the palm of your hand should be used.—Yours faithfully, A. P. W.

FISHING AT WAREHAM OR WIMBORNE WANTED.

DEAR SIR,—Could you oblige an old reader of the *Fishing Gazette* with any information as to the fishing at Wareham and Wimborne (Dorset)? If the fishing is good and free, or if preserved?—Yours truly, C. E. H.

TROUT WITH MUDDY FLAVOUR.

DEAR SIR,—Would you or any of your readers kindly inform me how to remove the muddy flavour of trout?—Yours faithfully, W. CLEMENTS.
[If alive, keep them in fresh water for a few days. If dead, saturate well with salt inside before cooking].

FISHING IN THE ISLAND OF SARK.

DEAR SIR,—I intend spending a holiday this year at the Island of Sark, near Guernsey. Can you or any of your readers tell me if there is any good rod and line fishing to be had there (sea fishing)? Perhaps someone who has been there can give me the required information, and possibly recommend apartments also.—Yours truly, C. S. B.

THE AMERICAN “CUT THROAT” TROUT.

DEAR MR. ARMISTEAD,—I have long been desirous of getting the cut throat trout (*Salmo purpuratus* or *mykiss*) over to Europe, and I am glad to say I have now a quantity of healthy fry of them here. The fish has been highly reported upon from the States, and also by Mr. Armistead, as you see from inclosed card, but the literature on the subject is so meagre that I should be very much obliged to you if you could point out to me any well authenticated facts about this fish.

Of the other fish, Mr. Armistead mentions—our old friend and enemy the rainbow is of course well known to you—the “namagansh,” I have raised here, and have full grown specimens of it now. It is not a desirable fish—a deep lake dweller *par excellence* and a robber of the first class (very pikey!). Our native *Salvelinus* is far preferable to it.

I still continue sending every fall a box or two of ova to the Sussex Piscatorialists you kindly recommended some years ago, and I am glad they find them of some use. I sent them some *Irideus shasta* (McCloud) this year.

If you have at any time occasion to place a box or two of ova (gratis, of course) in good hands, I shall be always glad to help. Apologising for the trouble.—Yours very truly, S. JAFFÉ.

Rittergut Sandfort, Osnabrück.

The following account of *Salmo purpuratus* is from Professor Brown Goode’s work “American Fishes,” p. 457:

“The black spotted trout, the *Salmo purpuratus* of Pallas, is universally distributed through the Rocky Mountain region, chiefly east of the Sierra southward, but reaching the sea from Mount Shasta, northward. It occurs in every lake in New Mexico, Utah, Western Colorado, Wyoming, Montana, Idaho, Oregon, and Washington. All the streams in this district are filled with them, and in Puget Sound the young of every size occur in abundance in the salt water. Individuals are occasionally taken along the California coast.

“This fish is known as the ‘trout,’ ‘mountain trout,’ ‘spotted trout,’ ‘black trout,’ and ‘silver trout,’ in the mountains, but when in the ocean, full grown, as ‘salmon trout’ or ‘steel-head.’” Hallock and other recent writers have applied to it the horrible name ‘cut throat trout,’ which it is hoped will never be sanctioned in literature. The Indian name ‘preestl’ is also ascribed to it on the Upper Columbia. It reaches a weight of thirty pounds under the most favourable circumstances, but may be found in any stream or lake of its habitat of lengths varying from two inches to two or three feet.

“It feeds on any living thing it finds near it. In the mountain lakes it spawns in the spring, running into the rivers for that purpose. Unlike *S. Gairdneri*, its young are very common, and it probably breeds in mountain streams at a length of less than a foot. Local variations occur in abundance. Specimens from Seattle have the scales notably larger than those from Victoria and Astoria, which agree with Utah Lake specimens in this respect. Those that live in the depths of shady lakes are almost black, while others are pale. Those in the sea are silvery and only faintly spotted. In the opinion of Prof. Jordan this species is likely to prove much more valuable for introduction into eastern waters than the rainbow trout. It is more active, more gamy, reaches a larger size, and thrives in a greater variety of waters.”

FISHING AT SOUTHBEND.

SIR,—On visiting Southend on May 26 for my usual fishing, I was surprised and disgusted to find the pier extension closed against anglers, although there were no London boats running. During the five hours I was on the old pier not twelve people paid to go on the extension, so that it could not be on the ground of interference with traffic. I am not so unreasonable as to expect in the season, with the great mass of people to deal with, anglers of all sorts and sizes should be permitted to fish; but I think it a great hardship to the dozens who, like myself, fish from the pier extension and pay their 2d. all through the winter months, during which period visitors (other than anglers) are conspicuous by their absence. Fishing could well be permitted, except, perhaps, on Sundays, for at least another month without inconveniencing any one. Boats stop at other piers, but we are not interfered with. Real anglers seldom give trouble to officials. It is only the selfish class, who cast a line with dozens of hooks, and put their bait, fish, and offal on the clean seats and shelters—whose sole object is to fill their larder and save their butcher’s bills—who are a nuisance all round. If the Southend Corporation would make a small charge per rod or line, many anglers who fish for the pleasure and sport would cheerfully pay for the privilege. As a member of the British Sea Anglers’ Society, I am sure I am giving expression to the feelings of many fellow members, and others also. We deserve some little consideration, as our shillings mount up, and are very useful as tolls when the days are short, and the pier-head otherwise deserted. But when the annual visitation of the East-end aristocracy is imminent new print is the order of things, and we are shelved till next November.—Yours faithfully, R. C. GRAHAM, C.E. (B.S.A.S.)

THE MAY FLY ON THE AVON, NEAR MALMESBURY.

DEAR SIR,—My father was out fishing yesterday, and found the May Fly was up strong, and had been for over a week. This was on the Wiltshire Avon, near Malmesbury. But the fish were taking very badly; in fact, what flies were taken took generally four or five rises, and even then not one in twenty was touched. This probably was the result of low temperature, as there was a sharp frost the night before. Amongst other flies, father caught a very large curious specimen, with a big circular sac of green eggs attached to it; and never having seen the fly before, he is inclosing it for your opinion, along with several May Flies, which you will note vary very much both in size and colour. If you are able to find time to send a reply, will you kindly add a little information about what flies are produced from our two sorts of common caddis? All our streams and brooks, and even ponds, swarm chiefly with the sort that lives in a case, between two bits of stick or small rush. Another sort

lives in a case without the two bits of stick, but has the outside of the case covered with tiny bits of dark and white stuff, almost like lichen. Both kinds appear to be inhabited by almost the same grub or larvae, and they are found still living in the cases quite late in the summer. The Alder is also well up in this district.—Yours truly, W. D. ROBBINS.

[The big fly sent is a large sedge, one of the numerous Phryganidae, of which we shall give some illustrated particulars as soon as this May Fly fever is over safely.—Ed.]

THE “SAIGON” LINE.

DEAR SIR,—We thank you for your courtesy in giving the name of our firm to your correspondent as dealers in the “Saigon” line, in your issue of May 27.

We wish, however, to inform your readers that we in no case supply our goods direct to anglers, but only through dealers in fishing tackle.—Yours truly, WM. BARTLETT AND SONS.

Abbey Mills, Redditch, Worcestershire.

“COOPER’S FANCY.”

DEAR SIR,—What a number of fishing tackle dealers are, as a correspondent puts it, rising at this fly. I see in last week’s issue of your valuable paper that Posters of Ashbourne, are having a shy at it, and have the assurance to say that if anglers will order their Black Gnat they will get “Cooper’s Fancy;” but I can tell would-be purchasers, in the most emphatic manner, they will not.

My fly is not a Black Gnat in any form, neither wings or hackle being black, and the body is not the body of a Black Gnat, as you, sir, can testify; but it is a good all-the-year-round fly, taking both trout, grayling, dace, and roach from spring to late autumn. It seems to me a pity that Posters cannot find better occupation in looking after their own productions, than by interfering with and misrepresenting “Cooper’s Fancy.”—Yours faithfully, HENRY COOPER.

BASS AND GREY MULLET FISHING.

DEAR SIR,—In reply to “Mullet,” a take of 20lb. of bass at Exmouth, Devon, was reported lately in the *Fishing Gazette*, and in the *Field* of Saturday last bass were mentioned as occurring at several places. School bass have been taken by angling at Plymouth at intervals throughout the winter and spring. These school bass do not exceed 2lb. in weight, and many are taken of only a few ounces.

Any London maker will send salmon collars of prime single, double, or treble salmon gut, when desired. I have taken most of my adult bass on two lengths of double salmon gut, but if the gut is rather short I use three lengths.

I lived ten years in Guernsey, from 1859 to 1869, and occasionally visited Alderney, Sark, and Jersey. I once fished in the “Little Swinge” passage, taking some whiting pollack. The first edition of my work, “The Sea Fisherman,” was published in Guernsey, and at p. 28 of the 4th edition I have specially mentioned Guernsey, Jersey, and Alderney, and the taking of bass under sail in the “Little Swinge.”

A horn of *le piovre* (octopus) is sometimes used with success, and the indianubber spinning eels, in a breezy day, will answer with an Alderney pilot on board.—Yours, &c., J. C. WILCOCKS.
(Address can be had from *Fishing Gazette* office.)

TESTIMONIAL TO BEN ABRÁHAMS.

DEAR SIR,—We are pleased to acknowledge the following sums with thanks:

	£	s.	d.
Amounts previously received	2	11	6
Mr. W. H. Brougham (late secretary T.A.P.S.)	0	2	6
Mr. J. J. U. Clarke (Allason United Brothers)	0	2	6
E. Buxton	0	2	6
Mr. G. Gill	0	0	6

Trustees: J. W. Harris (Western District Visiting Officer); G. Bence (secretary Jubilee A.S.). Secretary: E. Jackson (chairman Allason United Brothers’ A.S.), 2, Bulmer-place, Notting-hill Gate, W., where all communications are to be addressed.

THAT BIG TROUT.

DEAR SIR,—I notice your amusing Killaloe reporter states that a trout 8½lb. was captured last week. I see he does not mention the name of the person that caught it. As he states that he was present when the monster was landed, I should justly consider that the worthy gentleman was often troubled with nightmare.

Yesterday evening (May 29) I was in Killaloe, and inquired about this 8½ lb. trout. Most of the fishermen were surprised to hear about it.

The dapping has not been so good this year owing to rise of water, although I have had my share of sport, I and a friend having killed thirty-one fish, total weight amounting to 72lb. Largest fish weighing 6½lb.—Yours faithfully, W. R. KEMP, B.A., L.S.A.

FLY FISHING NEAR IPSWICH.

DEAR SIR,—Can you or any of your readers tell me if there is any trout fishing (with fly) to be had within about twenty-five miles of Ipswich, by day ticket or otherwise? I should be grateful for any information.—Yours faithfully, ALPHA.

Several letters unavoidably held over,

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Book-stalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One year, post free to any part of Great Britain and Ireland	10s. 6d.
Six Months	5s. 4d.
Three Months	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

SATURDAY, JUNE 10TH, 1899.

THE FIRST BRACE OF THE SEASON.

MARCH winds and April showers visited us frequently that May day. From the banks of a certain favourite trout stream the flowers that are wont to spring in the merry month were absent. Throughout the day there was no rise of fly to speak of; and I can still feel the nipping cold when evening fell, and I put up my rod in disgust. Yet on that inclement day I caught my first brace of the season, and I propose to tell now how I did it. On this particular water the seasons opens on May 1, but it was not until the end of the second week in the month that I availed myself of the privilege to fish which I held. The journey down was cold, and at the end of it the same bitter north-east wind was blowing which I had flattered myself I should leave behind. Otherwise, the conditions were not unfavourable for angling. The water was in splendid trim, and the weeds had not attained to the rank growth which they do not fail to develop later on. Arrayed in hope, I donned my waders, mounted a Blue Dun, lit my pipe, and started on the warpath.

In favourable weather I should not have had to pass with a barren creel beyond many an

alluring spot where I knew trout were lurking. But now, though I stalked them carefully, not a trout was to be seen, but only here and there the dark shadow of one disappearing into the green depths of pool and eddy. The river ran over the shallows, singing its old song that carries from the ear to the heart of the angler—but without the delightful accompaniment of the Plash! of rising fish. The Blue Dun sailed over the deep haunt of trout again and again, and was chucked for a chance in the laughing shallows. All to no purpose. Once, below a noisy cascade, there was a gleam of a golden side, and for an instant I dared to hope that a fish had turned at my fly; but seemingly it was not so, and the Blue Dun, caught in the rush of water, was hurried some yards towards me before I picked it off the surface and sent it once more right under the cascade.

This time there was no response. Nevertheless, I had the knowledge that there was a fish in the pool, and that it had turned—perhaps not at my fly, but it had turned. In the depressing conditions of the day the mere sight of a golden flash was an encouragement, and I was prepared to spend some time over that fish. So, in the intervals of resting, the Blue Dun was sent once more into the broken water, and the dun was changed for an Iron Blue and a March Brown, and a rough Dark Olive. It was all of no avail. Then I mounted a rather large Red Tag, and sent it to where the fish had showed. It had travelled a yard or two only when once again that golden gleam, and this time the trout had fastened on. But whether it was that I was not prepared for the rise, and I fancy that that was the reason, at any rate, the fish made a rush downstream, and ere I could tighten on it the hook came away, and I was left lamenting.

At this moment the sun burst from a bank of cumulus cloud, and for a space seemed to quicken all the river into life. Too soon it was followed by a sharp rain, and from where I was taking indifferent shelter under a scantily clothed tree, I fancied that I saw a fish rising some 15yds. away. Yes, it was a rise. Presently, among the dapples of the falling rain, the black snout of a trout appeared, and the ever welcome rings widened, and were lost in the current. Of a surety, a rise at last!

I may remark here that in such conditions as those in which I was now, on a day of wind and rain, and of chopping and changing of lures, one is apt to forget the particular fly that is on the cast at a given moment; and it falls out that in your haste you present an indiscreet lure to a fish that, very possibly, is the only rising fish of the day. I am very certain that had the Red Tag been sent over my fish that day he would never have been caught. In the pouring rain, to attach a likely fly to the cast was a difficult and unpleasant business. So far as I could see, the rising fish was feeding upon something; but what that something was it was impossible to discover, watch the rain-dappled surface as carefully as you might. Later on in the season the old rule, "When in doubt try a Wickham," might have been a good guide; but to follow it now would have been folly. I have observed over and over again that early in the season, if the day is rainy and the wind is cold, the Iron Blue is a most trustworthy fly. Generally it is tied far too small, as, indeed, are almost all the floating flies of the present time. The Editor has asked for the correct dressing of the Iron Blue, and I have pleasure in offering him one that, to my knowledge, is very successful: Body, blue fur from a mole, spun upon reddish brown silk; legs, small yellow dun hackle; tail, two whisks from the same; wings, small feather from the breast of a waterhen. Hook, No. 1. It was an Iron Blue Dun of this pattern that I tried now.

It came floating down, with wings nicely erect, over the spot where the black snout had shown, and the trout ought to have taken it. It might have been taken, I believe it would have been, only just then the boisterous nor'-easter caught the heavy portion of the tapered line and sent the Iron Blue scudding across the stream in a manner that might have discovered to the silliest fish the art of the fly dresser instead of the hand of Nature. Five minutes' rest; then again the fly was sent up to the rising fish. This time the nor'-easter did not wait for it to alight, but caught and whirled it in the air; so that when

the fish broke the surface once more, cast and fly turned in the teeth of the wind and looked me in the face. And then it came on to rain again.

There are anglers who hold that a shower, or even a succession of showers, is an aid to sport. It is not my experience. But, certainly, on this day, while the rain fell that fish kept on rising with abominable persistence. Nothing is more unpleasant in angling than to have the line, sodden with the wet, cling to the rod, and the water trickle down over winch and fingers, making the grip less firm and the handling anything but a pleasure. The line clings so, as everyone must have experienced, that to free it for a cast requires the use of increased force. So it was now, as the Iron Blue was sent upon still another journey over the same fish. Somehow—more by luck than good guidance, shall I say?—it floated as it ought, precisely over the desired spot. The surface was broken once more; the black snout appeared and the Iron Blue disappeared; and in an instant the first fish of the season was plunging hither and thither in a spirited fight for freedom. This time, however, the wrist instinctively followed each plunge, and the bent rod told a tale that could only have one conclusion. Is it necessary to say that the speckled sides of the fish, as it floated helplessly into the landing-net, were a welcome sight!

I was still admiring my first fish when the splash of another reached my ears above the murmur of the river at my side. In a trice the Iron Blue was over this fellow also, who, strange to relate, took it at the first offer. And so, within little more than a minute, the first brace of the season was attained.

With most men, assuredly with most anglers, success begets success. It is seldom that the confidence that springs from it fails to lead to further triumphs. So, with that brace of fish thus rapidly made, the disappointments earlier in the day were forgotten, and I looked forward to a well-filled basket. Vain hope! Shower followed shower, and no rising fish came to modify the discomfort they brought. I tried change after change—duns, gnats, spinners (large and small), and fancy flies with reputations that ought to have been equal to a basket, at the least. All in vain. Here and there a lure, that at ordinary times I should have considered absurd, was taken by some troutling which, of course, was returned, to grow into a wiser and wider fish. Damp as the day was, and clouded the sun, my first brace stiffened in the basket for lack of company. And at length, as I have said, evening fell with the north-east wind colder than ever—so bitterly cold, indeed, that my fingers were too benumbed to fasten a change of fly. When that is the case it is time to give up; at any rate, so I thought.

There is no day's sport that does not contain for the keen angler some measure of instruction. And so there is a moral to this story. There are two morals, indeed; for this rough day had its lesson of patience and perseverance. But chiefly it taught this: When the weathers of March and April and May are conjoined, try that fly, much belauded now, but not so long ago as generally scorned—the Iron Blue Dun. IBIS TAG.

ON THE LAMBOURNE.

Few trout streams are more prolific than the lovely little Lambourne in Berkshire, and although one does not get leviathans like unto those for which the swiftly running Kennet is justly renowned, yet rare fun is generally had amongst the comparatively smaller fry in the pretty streamlet mentioned.

From April 1 onwards trouting in the Thames, Colne, Darent, and other waters which might be named, has been very much at a discount, owing to the execrable weather which has obtained. It was cold enough indeed to enjoy sitting round a roaring fire, instead of fruitlessly, in too many instances, promenading the banks of a river, rod in hand, endeavouring to entice fish which refused to budge an inch at any fly presented to their notice. It is no wonder, therefore, that most anglers declined to venture out; no wonder either is it that fish remained quiescent, and that what fly hatched out was speedily killed by the biting winds which were so much in evidence for weeks previous to the end of May. Even small

"Dusties" and "poachers" of that ilk have only been partially successful, and on many streams the skilled rodster has had absolutely nothing to show for a hard and patient day's work save the benefit derived from a health point of view from a trip into the country and a welcome break in business cares and worries.

But if it was cold in May almost tropical heat ushered in the month of June. I had resolved to have a turn on the first opportunity on the Lambourne, and on the eve of the anniversary of the birth of our most Gracious Majesty I was being whirled along by the G.W. Railway to a Berkshire town. As the train sped by Slough one caught a glimpse of Turner's lovely rhododendrons in full bloom, and further on there was nothing but admiration for the beauty of the spring flowers of various hues in the trial grounds of the famous firm of Reading florists—Sutton and Sons, to wit. A short stay at the latter place, and the journey was resumed. At Thatcham myriads of May Flies literally invaded the railway station, presaging good sport on the morrow. My trip by train soon came to an end, and after a drive of a quarter of an hour I alighted at a quiet unpretentious inn on the banks of the Lambourne itself. The fly was well up, and the fish were taking them, though, so greedily as they would do after they had become accustomed to the winged delicacies.

I must confess that my attempts at wooing Morpheus were not particularly successful. The heat and excitement combined militated against my entering into the land of dreams; but even the longest night will have an end, and at last the time for action came.

Saturday was terribly hot, but I had the forethought to carry with me a large flask of liquid refreshment, the desirability of so doing having been forcibly impressed upon me by the relation to me by a brother angler of the agonies of thirst he had suffered on the previous day. He was wading the Kennet, and would have given anything for a long pull at even a lemon squash; but as he was some distance from his inn, and the fish were rising fairly well, he braved the thirst and stuck to his guns. Looking, however, by chance towards his right bank, he espied a bottle bobbing about in the stream. To the neck of the bottle was a long piece of cord, one end of the latter being fastened securely to a stump on the bank. The thought immediately flashed across my friend's mind that some of his companions (at least, he fervently hoped so) had adopted this not uncommon method of keeping their drink cool. With eagerness he made for the prize, clutched hold of the bottle in a half frantic manner, and found it—empty! What he said is better left to one's imagination than described.

But to return to the Lambourne. The fly did not hatch out until five o'clock, but pending its advent I selected a small Red Quill for my initial attack. I hooked the first rising fish I saw, but it was off as soon as it was on. Four times in the course of an hour I rose other fish, but missed every one in a most incomprehensible manner. If I had only examined the Red Quill after the first trout was lost, I should have discovered that the hook had broken at the bend, that part having doubtless been left in trout number one.

A good supply of big Alders was coming down, and by way of a change I tried one of Mr. C. E. Walker's patterns dressed by Mrs. Richardson. It was not long before I came across a heavy-looking rise. The fly was taken, and for a moment I imagined I had hold of a pound trout, but found that my reward was only a grayling of a little over the weight. I had, however, two or three brace of trout on the same fly of the minimum size allowed, but returned them, feeling sure that when the May Fly came up in the evening I should get hold of larger fish. A somewhat extended lunch, a solacing cigar, and a chat with some genial spirits, caused the best part of two hours to pass pleasantly by.

At five o'clock a fly was seen here and there, but it was well after 6 p.m. before it was up in real earnest. The fish were bulging a good deal, and not coming strongly to it. Still, in an hour and a half I had something like eight brace; the majority were takeable, but only one of 1lb. found its way into my creel. Then I saw feeding in its well-known haunt the "big 'un" of the stretch. I cast carefully over him, the fly cocked like a haystack, the fish rose, was hooked,

leaped into the air, showing me his grand size, but the line came back intact, minus the fish, the hook having come unstuck. May it live until the autumn, and may I get hold of it on a big Brown Sedge or Moth, and stick to it.

At half-past seven the fly was on in great force, but now occurred one of those annoying and irritating events which happen so frequently on streams feeding mills. The miller above the water opened his gates, and the result was that with the rush of water came down weeds, grass, and other abominations for the space of half an hour, putting every trout down, and spoiling the fishing in the very best part of the day. Yet one had to grin and bear it all the same. When the water had cleared somewhat, the fly still being strongly in evidence, the fish began again to rise, and fish after fish was landed. My total take for the day was something like twelve brace, the usual size of the Lambourne trout, the two biggest brace going 3lb. 8oz. together. At 9 p.m. all fishing ceased, and as I lit my last cigar with my only match, and returned to the inn, I felt satisfied in my own mind that I had had a not altogether bad day's sport on one of the prettiest and most charmingly situated pieces of dry-fly water it has ever been my privilege to visit.

H. A. ROLT.

A NEW GOLF TEE.

WE have received from Messrs. Anderson, Anderson, and Anderson a new golf tee, which consists of a long French nail, with a small rubber cup at the top (*vide illustration*). To those who

want a tee which is simple, cheap, and durable, we can recommend this. In the sample box sent to us the rubber cups are all the same height, but we suppose different sizes can be obtained, the one before us at the present time being too high for the average golf player.

A DAY IN ROACHLAND.

To me there is no memory sweeter than the dream of the rush-fringed brook where the eddy coiled in in sluggish twists, and the bead-eyed water voles paddled down noiselessly when I sat in silence watching the swaying float. Since then, at times, I have triumphed mightily, thrilled at the first wild burst of a clean run fish and charmed lusty trout, wary giants those, from the dim sanctity of their fastnesses under the pendant bushes of the chalk streams. But for one of the old time hours among the roach, with the old sweet scent of water and air, with the same old comrade, and the same old rod, I could forget all my fights with lordly salmon, all my fat creels of speckled trout, all the war songs the reel has sung with a 20lb. weight of plunging silver straining the line. But those days are gone.

A smear of deepening crimson lay low in the eastern sky as we trudged in towards the slumbering town. A cutting east wind sprawled the clouds upwards menacingly in jagged fingers, and sang shrilly among the grass and browning hedge-rows. It sang of dole to the angler's heart, of mighty billows instead of placid sheen where the roach lay, of empty creels, of wildly tossing floats and belling lines.

As we neared the town the sun slid up luridly red, and threw our shadows lengthily beside us. The wind came stronger, spattering the bronzed leaves along the road, till we welcomed the scanty shelter of the curved park wall, and drew our caps down low as a barrier against the whirling dust. But in the lulls the air was sweet with the mellow scent of September, and the golden beauty of the

year's decay lay richly on meadow, hedge, and branch.

A few drowsy labourers and mechanics, sons of the morning all, clustered the slumbering station. In the aristocratic sanctity of a first-class carriage—a veritable patrician among the grimy plebeians of the workman's train—we steamed from the hazy dimness of the domed station into the blaze of the brightening day. Then, with pipes alight and the blue smoke curling soothingly upward, we discussed the chances of the battle and the ungenerous hostility of the weather with complacent resignation.

Presently the light hazed and a whip of rain splashed against the window. A web of mist blurred out the meadowland, and the racing clouds hung low and black. We sighed, and lay back hopelessly among the cushions, for luck seemed rigidly against us. Then the welcome sun flashed out, smoothing away the gloom, and the glamour of the day's first pipe was sweeter with lightening hopes.

The train crawled on with tedious slowness, limping into the stations half-heartedly to discharge its freight of toilers, and limping out again with manifest reluctance. The worn, dog-eared tackle books—treasures more precious than rubies for the sake of the past—were overhauled with scrupulous care, tackles were tested delicately against the window strap, and the cherished three-inch quill, with its cap of black wax that had signalled the death of many a lusty roach, was laid ready to hand in the pocket of the creel.

A twelve mile drive through a wonderland of bronze-leaved forest and gorse-spangled common brought the spire of the village church looming above the hill. At the quaint village inn, bright geraniums flaring through its polished windows, we reined in, and drank a mug of foaming ale, while the tiny pinafores waitress stared up at us in big-eyed curiosity. Then we drove on between scented fields of sheafed wheat, where linnets twittered and fluttered, and the hedges flared red with haws, and white with trailing wild convolvuli.

At length the swish of wheels through the dust gave place to the crisp crunching of gravel, and we had entered the park. The breeze had fallen a little, but our eager eyes scanned the white patch of lake, and saw the waves tumbling disastrously across it, and rocking the clustered wildfowl like miniature boats. Then we topped the bridge, and looked upstream towards the straggling hamlet. The brook slid placidly towards the lake, furred here and there with ripples, but dark and glassy, and glorious under the shelter of the bushes. A wide ring circled in, and broke against either bank as a grayling rose at a fly, and a shoal of silvery fry glistened brightly, hurrying madly from some prowling perch.

In a moment we were out of the trap, untying the tapes of our rod bags with feverish haste. A stately swan sailed in under the bridge, darting his sinuous neck among the sedge, but he floated lakeward hastily and ignominiously at the sight of our hostile gestures. The old rod went up in all its tapering beauty—scarred it was, but full of life, and responsive to the gentlest twitch—the light wooden reel clicked into its socket, the thin silk line slid through the rings, and float and hair tackle were added dexterously. Then, with a quick plunge among the moss-nested cockspurs, we neared the bushes with stealthy tread.

There was little need to plumb the depth, for a scant six feet between float ring and bait laid the lowest shot, and a good nine inches of hair along the bottom. As the float fell noiselessly, a sprinkle of light breadcrumbs drifted past, telling me that Harold was using the treasured paste of his own making, mysterious of ingredient, and a deadly lure.

At the head of the curling eddy a tiny weir, fringed with fluttering weed, shot the water down with a frill of foam and a drowsy tinkling. Suddenly, as I filled my pipe, the float dipped warningly aslant, poised itself sharply upright, and vanished with dazzling speed. It was a clumsy stroke as I clapped the pipe between my teeth, but the old cane veteran responded valiantly to the jerk of my wrist, curved from lower socket to tip, and I was fast in a fighting fish.

Only a roach, I knew, but a pounder at least, and no mean foe on a slim thread of hair, with

buried snags below and beyond, and piled boulders crammed with lurking places at the tail of the weir. Gallantly he fought, and well, but I played him kneeling. Then I heard a quick twitch, and, glancing up, saw Harold's line cutting the water briskly with the No. 10 well home in a second fish.

Both were grassed—two trim pounders—clean of scale and brilliant of fin, but underfed and underweight for their breadth of beam. A grayling rose at a floating alder as I rubbed on a second bait, and curling out twenty yards of line I sent the float skimming across into mid stream, the wind favouring the cast. It drifted down to where a jutting log sent a rippling trail of water inshore, and hung motionless for an instant, lying flat upon the stream. Then very slowly it righted and bobbed out of sight.

It was a perch this time, a mere eight-ouncer, and I gave him scant law, for I knew and loved the old grey pony whose tail I had so often robbed for hair tackles, and trusted him not to play me false. But as I withdrew the hook I felt a little pang of envy as Harold's modulated "Cheer-o!" made me look upstream. He was fast in a giant this time, a giant as roach went in that drowsy stream, and he played it craftily and reverently as befitted its age and dignity.

Up and down it plunged, sometimes sounding nobly to the very bed ooze like a baby whale, sometimes heading strongly towards the hidden snags that would have earned it freedom, but always with that gentle wearing strain upon it that brought it at last floundering under the bank, where the ready net hooked it beyond recall. To a lad, fishing with light silk and tapering hair, a 2lb. roach killed skilfully is a feat not easily to be forgotten. Old roach anglers, I know, veterans of the art, think nothing of it, and once I saw a bearded, tanned water dog of the upper Trent wage a battle royal with a 4lb. chub, and defeat the fish disastrously on a thread of brown horse-hair. But we gazed at the broad-scaled roach with victorious pride as we laid it tenderly in the shadow of the damp grass, knowing that we had fought for it in all fairness, and that the battle was not wholly to the strong.

And then our tyrant of the weather sent a hissing gale of rain across the parkland, blurring the water with a thousand bubbles, and huddling the browsing cattle together in resigned melancholy. A lordly oak with flapping leaves gave us shelter, and buffeted the wind from his scarred bole and from our tweed-clothed backs. For a while we squatted there, smoking and talking as we waited for the storm to pass. I had laid down my rod, sheltering the reel securely from the rain, and placed the float and straightened tackle on the bank beside it. But the wind came in heavy gusts, and must, unseen, have whipped both float and tackle bodily from the bank, and whirled them into the ruffled stream, for suddenly I spied a suggestive twitch of the rod's wrapped lance-wood top, and faced the downpour boldly.

A 6oz. perch came out protestingly as I reeled up the kinked line, and I cursed his striped knaveship heartily, though not aloud, for he had gorged the bait with all the proverbial greed of his race, and I loathed surgical operations with a bitter loathing. But presently the sun rode through the clouds, blinking dimly at the tail of the storm, and smoothed the wrinkles from the face of the stream. Then we set to work again, this time my hook hidden in a pea of snow-white paste, and found the dwellers in the eddy rarely good-humoured, to the sad discountenancing of the weather-wise angler.

Again and again at identical moments we were each playing a fish, till a long double row of silver and red streaked the grass under the thin shadow of the fence. A brawny keeper came swinging through the bracken, gun on shoulder, and eyed our tactics for a good half hour with gratifying approval, and some few compliments delivered in a broad, but not mystifying, dialect.

The lake below held monster pike then, but none thought of tempting them with live bait or troll until the frosts had bleached the reeds, and shrivelled the bracken. Still, one impudent youngster, who tipped the scale at 8lb. or more, brought disaster upon himself by his own amazing audacity and impudent recklessness. Harold had hooked a plump roach, when his impudence leapt up from his fastness under the shelving bank, seized the struggling roach cross-

wise in his pointed jaws, and hung there a bare two feet below the water, staring up at the angler glassily with bewildering *sang froid*.

Then majestically he moved away, snapped the hair with an unexpected plunge, and spat the mangled roach disdainfully to the surface as he dwindled from our astonished sight. But such a slight, and such broad-day robbery as that, could not go unavenged. Quickly tackle books were opened, but all were innocent of any fit weapon with which to assassinate this nonchalant thief. Three eel hooks wrapped to salmon gut, the relics of some ancient poaching night-line, came to light at last, and out of them a crude live-baiting tackle was deftly manufactured. A 4oz. roach, caught in the shallower water below, was let roam where he listed till the line called him to order, and urged him to do his duty with added energy.

And by and bye his audacity, spying the squirming oval of silver, fanned himself upward, with whetted appetite, and seized the bait. Full time Harold gave him, too, either to discard the doubtful morsel or to pounce it sufficiently to give the hooks a grip when the strike came, and then the rod tip leapt upward, driving the barbs well home. The fight was brief and lacking in excitement, and in a short five minutes my fingers slid into his pulsing gills, and, with my left hand tucked under his slimy belly, I lifted him to the bank, an enemy easily conquered. He was an 8-pounder, clean skinned and full-eyed, but woefully thin, as if the *table d'hôte* of his native stream disagreed with him thoroughly.

The roach had drifted downstream, but a judicious sprinkling of ground-bait and some patience wooed them back to the tail of the weir. Fishing went on apace till long shadows moving westward draped the brackened parkland in gauzy haze. The sun sank red and promising, flinging shafts of yellow fanwise across the sky. And all too soon the drone of wheels told of the nearing trap, and we packed our rods in regretful silence. Four rows of lusty roach jostled each other beneath the fence—ninety-four in all—and a few perch kept company with his audacity, the pike, farther away. All, save his audacity, killed on hair in water where snags abounded and the landing was difficult. The weight of the catch was 85lb., not counting the attenuated pike.

Bigger bags by far I have had a dozen times, but no day that paints me sweeter memories than that, in spite of the gale and chilling rain. An ocean divides me now from that young comrade of rod and line. The roach still lie thick and hungry in the depths of that glassy eddy, for it is seldom that a line is wetted in my hallowed stream except below the lake, where the trout are lusty and fat. But I never go there now, for fear of sadness, dreading that it might seemed changed. Nor will I tell you where Roachland is

E. JOYCE MURRAY.

THE PARSON.

BY "KRYPTOS."

TROUT fishing was his hobby; he cast the lightsome fly, His hat behind his polished pate, his spectacles awry, A large red handkerchief peeped forth from 'neath his dragged tails, Whilst o'er his coat and vest were spots which looked like fishes' scales; And as he cast he would rehearse, with thoughtful pause and frown, Next Sunday's sermon in the rough; then stop and jot it down, So oft-times when he paused in church, and turned his notes in doubt, The village lads would grin and say: "That's where 'e caught a trout!"

DEVONSHIRE would seem unduly blessed with sporting parsons, and amongst them all there is no finer bulwark of Church and State than the fishing cleric, who knows every inch of the streams around him, and dispenses his knowledge freely to all brothers in the art who are fortunate enough to come into his little world.

A simple, whole-hearted man is he, without a touch of bigotry in his nature; old fashioned in his ways may be, yet with a shrewdly humorous manner that makes him a companion to be sought out, a friend to be kept. "Thanks be that I am not cooped up in a town!" said he once, "bazaars and sales of work are entirely out of my

province!" for in his parish the farms are isolated, and the village can only boast an inn and five houses, including the forge. He is unmarried, as he is wont to say, "by force and not by fault," yet whatever that hidden page of his life may contain, he never complains, but cheerily advises others to abstain from following his example, and never is the parson more jovial and sunny faced than when he ties two blushing, flushing, stammering rustics in the bonds of matrimony.

The rector of the next parish once had cause to complain that his fowl-run was visited by two-legged poachers, and suspicion fell upon one of the parson's flock, a man named Smith. Suspicion was changed into accusation, and the rector came to our old friend with his tale of woe.

"My dear sir," said the parson, "think before you hand this man over to the law! He has a wife and family, who would suffer far more than he by his imprisonment. Give the man another chance to amend his ways?" With such merciful argument did the parson prevail, and as soon as his visitor had gone he sought a stick—and Smith, when having shown the latter the power of the former, he said, "You rascal! Don't ever let me hear of your misdeeds again, and remember that had you not been coming to show me that trout pool to-morrow, you would have been in jail!"

Although rapidly nearing the three score years and ten allotted by the Psalmist, yet the parson is as sound in wind and limb as most of his younger friends, the only sign of aged infirmity being his short memory and occasional absent-mindedness.

The results were sometimes amusing; once when I was with him we were coaching through a most beautiful valley, and the driver by accident hitched the thong of the whip in the trace of one of the "leaders." Parson was indulging in a reverie, but started up on seeing the man jerking at his whip, and, leaning towards him, cried: "Gently man! gently! or you'll lose the fish."

His bishop had a great admiration for his straightforward manliness, and as often as circumstances would permit went down to the quiet parsonage. Once whilst seated in the snug, little parlour, chatting over the villagers, the bishop asked him whether he had any very bad characters in his flock.

"Only one," answered he, "and he's dead now."

"I suppose drink was at the bottom of it?" queried the bishop.

"Probably drink had something to do with it, but wickedness was ingrained there, I fear. Why, the murders that brute committed would astound you!"

"You shock me!" cried his visitor. "What a fearful thing these spirits are!" and the bishop frowned at his glass of grog.

"He never touched spirits, my lord; he only drank water!"

"What was he?" asked the puzzled dignitary.

"A pike, and there he is" (pointing to the stuffed malefactor hanging over the door). "He's the worst character we ever had in T—. No one would believe the number of trout he has killed."

Only a few years ago his length and strength of limb rescued him from a most awkward predicament. He had taken his rod, bound riverwards, and was crossing the last meadow which stood between him and his pleasure, when a large black bull sighted his red bandana handkerchief, and, being no respecter of persons, came full tilt at the parson, who, hearing the ominous bellow, took to his heels, and made for the river and safety. It was a long run; they reached the bank, the parson leading by only a few yards, and, without waiting to ascertain the depth, he made its acquaintance at once. "That was the most unhappy looking bull I ever saw," he told me afterwards; "but, at the same time, I should not have cared to have made him happy!" Then down in the quiet glen he laid his clothes upon the boulders to dry, and whipped the stream like a second Adam.

Controversy vexes him not, and of arguments he will have none. "I hold my view, you hold yours; hold it tight, and I shall like you the better for it."

His teachings were simply superb in their conciseness and utility, very few of his boys forgetting what they owe to their kind-hearted pastor.

Some years back one of these same boys enlisted, and soon afterwards the regiment was sent abroad. Lately they returned, and the bronzed soldier came back to the quiet village, where as a fat-cheeked boy he had lived his uneventful years. Parson and soldier met.

"Jim," said the former, his eyes bright with pride, "what is your duty?"

And like a shot the answer came:

"Tell the truth, never steal, and put back under-sized fish!"

There's a teaching for you!

SOUTH-WESTERN DONEGAL.

In my short article on the Fjords of Kerry (June 3) I mentioned the great improvement which the establishment of a new line brings about in a hitherto almost inaccessible district, and the same remark applies with even greater force to the south-western portion of the county of Donegal. The Donegal railway, which starts from the Great Northern (Ireland) main line at Strabane, fourteen miles south of Londonderry, opens up a wide area until a few years back all but unknown. This district offers not only inland and sea-coast scenery of great diversity and beauty, but affords a fruitful field of interest to the botanist, geologist, and student of Irish history, whilst the angler will find in all directions lakes and rivers, many free, and others fishable on very moderate terms. "Hi-Regan" is enthusiastic on the potentialities of the neighbourhood, and I will trespass but a little on his preserves, referring my readers for full details to his classic, "How and where to fish in Ireland."

Just a few words, however, as to the district itself, of which the accompanying specially-engraved map will give a fair idea.

The line runs along the Finn valley for about fourteen miles, and at one point of its journey, Lough Mourne, is 600ft. above the sea. It then descends through the grand Gap of Barnesmore (of which a reproduction of a specially-taken photograph, by W. Lawrence, Dublin, is here given) to the island-studded Lough Eske. From the Lough to the sea runs the Eske river, which "holds salmon and plenty of white trout in and after autumn spates. The lake itself gives sometimes very fair sport, not before July, but the grilse are small. The white trout fishing is excellent, and the brown trout (*feroces*, too) very numerous and game; charr abound here, and not fished for." There are good lodgings and hotel accommodation at Donegal.

Further along the line we reach Mountcharles, with "a few salmon and many white trout. Indeed, when these are full, no better little rivers can be found." The proprietor, Lord Conyngham, is very liberal with permission, *but it must be asked*. Soon we reach Inver, at the head of beautiful Inver Bay, from which runs north-westward towards Ardara the Inver river, in which there is fine autumn sport.

A grand coast ride brings us to the southern terminus of the line at Killybegs, which "Hi-Regan" says is the best for headquarters. I would, however, venture to suggest Carrick, ten miles westward. There are a regular car service and a first-class hotel, and the town is situated at the mouth of the Glen river, which "Hi-Regan" himself tells us is "the best" in the district. The little town is in the centre of some of the grandest scenery in the county, including Teelin Bay, with its stupendous cliffs of Bunglass and Slieve League, and fine sea fishing; the precipitous One Man's Pass, 1800ft. high, with its grand colouring; and the splendid Salmon Leap at Carrick, of which I am able to give a beautiful illustration, from "An Unknown Country," by the courtesy of Messrs. Macmillan, the publishers.

From Carrick there may be had a grand twenty mile drive across the mountains to Glenties, the northern terminus of the line, but angling readers would do well to take matters slowly, as many rivers are passed or crossed, all of them fishable. On the way we traverse the lovely Pass of Glengesh, a veritable Alpine pass, running for about two miles between rugged mountains 1300ft. and 1700ft. high, and on emerging we soon reach Ardara, "the most picturesque village in all Donegal." Here there is a nice little inn, and abundance of lakelets at hand, and we follow the Owentucker and then the Owenea rivers, both

most fishable, up to Glenties. "About nine miles off," says "Hi-Regan," "is Dungloe, the *Ultima Thule* of anglers in Ireland, and surrounded with lakes full of fish and practically uncounted." I humbly agree with his description, but beg to differ as to the distance. I have been over the ground many times, and by three routes: *via* Ballynecarrick Ferry (very dull)—*via* Doochary Bridge—

TROUT ANGLING IN NORWAY.

ALTHOUGH, practically, all country-bred Norwegians, as well as a considerable proportion of towns folk, are sportsmen, their predilections lie distinctly in the direction of the rifle and the gun, comparatively few caring for, or, at any rate, devoting much time to the rod. Considering the

and *via* Fintown—and make the distances fourteen, eighteen, and twenty-two miles respectively. If there be a nearer route I should like to know it. However, having arrived at Glenties, inexorable editorial commands warn me that I must wind up my reel, and I can only conclude by regretting that half my story has not been told.

F. E. LONGLEY.

character of the country, abounding as it does in lakes and rivers, this seems somewhat singular; but the fact nevertheless remains that in many districts the inhabitants, even now, have little or no conception of the actual requirements of the angler—beyond the presence of water and fish; and it is this ignorance of the A, B, C, so to speak, which accounts for there being so little

BURBERRYS' GABARDINE SLIP-ON COAT

Proof against **RAIN, SLEET, SNOW,
HOT and COLD WINDS,
THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

CURIOUS AND INTERESTING FACT CONCERNING AN

ITCHEN TROUT AND THE MAY FLY

The "Fishing Gazette," April 16, 1898.

"The Major caught a brace of trout and several trouble-some grayling; the largest trout was about 1½lb., and by this trout there hangs a tale.

"When I was fishing in the same meadow last June I lost many a trout and many a May Fly; now it so happens that in the gill of this trout was found, firmly hooked, a very perfect May Fly—the G.O.M.—with 6in. of gnt. He has worn and no doubt been proud of this distinctive decoration ever since. It seems to me to be a very remarkable thing that fly and hook should have been in that fish for more than nine months and now as perfect and fresh as if it had been in my pocket-book all the time; the gnt is rather rotten. The gold tinsel round the body is as bright as ever it was, one wing is slightly mangled, as if other envious trout had tried to nibble it. I fully believe that fly is mine, that I lost that fish on that particular spot last May; the only doubt I have about it is that I then estimated the fish I lost as at least 1½lb.,

whereas this one, after nine months' growth, now weighs only 1½lb.; on the other hand, you know how much larger are always the fish you lose than those you take! I find there are other claimants for this fly. The Professor, who

is not here now, has certainly a claim. I can only say, 'Palmar qui meruit ferat,' if it can only be proved. It is distinctly a G.O.M. of Mrs. Ogden Smith's make."

THE AMATEUR ANGLER.

The "Fishing Gazette," April 30, 1898.

"Here is a picture of the G.O.M. May Fly imitation, after it had been worn in the gill of a trout for about eleven months, as described by me in the *Fishing Gazette* of April 16. Of course there is no novelty in finding a fly in a trout's mouth; but it is somewhat of a novelty to be able to identify the fly, and also to find it in such a perfect state of preservation after so long a time of wear and tear."—AMATEUR ANGLER.

THE "GLADSTONE" MAY FLIES,

The invention of Mrs. OGDEN SMITH, were the most successful flies used last season, proving more killing than any other pattern, especially on the Hampshire streams. They float remarkably well, dry very quickly, and can be had in twenty varieties of shade, both in the body and wings. Price 4s. per dozen. To be obtained only at OGDEN SMITH, 6, Park Side, Hyde Park Corner, S.W.; and 34, St. John's-hill, Clapham Junction, London, S.W.

done to encourage the presence of the foreign fisherman in places where there are no special scenic attractions.

In rural England, Scotland, and Ireland, there are innumerable inns and houses for the reception of guests, whose owners contrive to make very satisfactory additions to their incomes out of the wandering angler. As long as that worthy individual gets fair sport, peace, and quiet, he will stand a good deal in the way of homely fare and accommodation; taking him all round, he is a distinctly more desirable and less exigent guest than the professional tourist, who, armed with a set of coupons purchased in England, hurries through the land, grumbling at everything, and for whose accommodation scores of huge wooden barracks are run up in all directions. The rod fisherman, moreover, besides being a sociable individual and given to friendly converse, is conservative in his tastes; he loves to identify himself and the various episodes of his favourite occupation with the natural features of the landscape, and if well treated will return year after year, with praiseworthy regularity, to any spot for which he may take a liking, rather than go further afield. A friendly look of familiarity on the countenance of Dame Nature is as pleasant to him as the smile of a welcoming host, and the pools of foaming water from which he last year filled his basket possess more interest for him than do all the unexplored lakes and tarns among the high-fjelds.

Whereas, moreover, few regular tourists make their appearance before July, and nearly all are gone by the beginning of September, many an English fisherman would be only too glad to cross the North Sea as soon as the spring flood had commenced, were he to receive any encouragement. But such is not usually extended, and should a member of the fraternity venture over early in June, he is looked upon as more or less of a lunatic. He is told that there is no use in attempting to catch trout until at least a month later, when the snow water has run off, unless by trolling, an occupation which he is pretty sure to detest; at the places of entertainment which he finds open thus early in the year, he is fed upon trout which, his host naively informs him, are netted fresh daily upon the very lakes he has come to fish, or which were captured during the previous spawning season and salted down; and of an evening he is refreshed by the appearance of some local personages endeavouring to secure a meal or two by means of the "otter."

Now, no angler, however patient and long suffering he may be, will stand such a reception as this; people who slaughter trout in the spawning season, and take them in spring with the net and the "otter," are, according to his creed, Goths and Vandals, and he returns forthwith to his old haunts in Scotland or Ireland, never to repeat the experiment.

Throughout Norway the universal complaint is the shortness of the summer season during which foreigners visit the country; but here is an opportunity for lengthening it which necessitates no elaborate preparations. To say that there is no trout fishing worth having until July, or until the snow flood has run off, is absurd. The writer has made excellent baskets with the fly during the first days of June in Thelemarken, and with the same lure he last year caught fish in good condition at a height of 3000ft. above the sea, in lakes where the water was composed entirely of freshly melted snow, and on whose shores the drifts still lay deep.

Because the climatic conditions throughout June are not usually such as to induce professional tourists to visit Norway so early in the year, there is no earthly reason why anglers should not be encouraged to do so. The extent of water in which, during that month, trout may be taken with the fly is enormous, and were systematic efforts made to inform angling communities abroad of the fact, we venture to think that the results would be more satisfactory than attempting to induce Englishmen to face the North Sea and the fogs of the Christiania Fjord in search of a winter climate, when an equally good one can be reached from London in twenty-four hours or less, the entire journey, except the Channel, being performed by train.

But, as already remarked, no angler will stand the net and the "otter"; at places where those contrivances are in use nothing will induce him

to remain, and the sooner the hosts of hotels, sanatoriums, and such like establishments throughout rural Norway realise this the better will it be for their pockets. To tell a man that by putting up at a certain house he can enjoy good fishing, and after his arrival to feed him upon trout taken with nets from the very lakes advertised as the scene of his prospective sport, is altogether too ridiculous, and hardly calculated to induce either a return of the guest or future visits from his friends.

And so with regard to July and August. During these months the area of possible sport is vastly increased, and the lakes and streams on whose shores the angler might enjoy himself are innumerable; but in the great majority of instances the inhabitants do their best to destroy the stock by netting, preferring a few barrels of salted trout to the much more satisfactory harvest they might reap from the presence of the rod fisherman.

RUGDE.

MARKET DEEPING AS AN ANGLING RESORT.

MARKET DEEPING is a small market town in Lincolnshire, pleasantly situated on the banks of the Welland. Practically, it is connected to Deeping St. James, the two forming one extended district; but, theoretically, they are quite distinct, their institutions and everything connected with either place being peculiar to each town. Years ago the fishery rights on the Welland, from some little distance above Market Deeping Bridge to the Kenulph Stone, Deeping St. James—a distance of about five miles—were bought by a number of noblemen and gentlemen, and generously thrown open to the angling public on the annual payment of a merely nominal fee. For some years the subscriptions failed to balance the expenditure; but now that this pleasant stretch of water is becoming more largely patronised, the financial aspect has considerably improved. The annual subscription is 5s. to residents within ten miles of the boundaries of the fishery; labourers and journeymen, 2s. 6d. each. The annual subscription for all persons residing ten miles beyond the boundary is one guinea. A daily ticket can be obtained for 1s., and a weekly ticket for 2s. 6d.

The statutory close season is in force, pike fishing commencing on Aug. 1, the minimum size allowed to be taken being 18in. between the eye and the fork of the tail.

Any angler who visits Market Deeping with the anticipation of finding deep, quiet swims, such as are the delight of numbers of London anglers, will be disappointed. Nottingham fishing, fine and far off, is the style to be adopted, as, with the exception of a few deep holes, the water is very shallow. If the angling reader will accompany me, I will, in imagination, stroll downstream, pointing out the likeliest holes, and enumerating some of the best methods to be adopted in each. Commencing at Market Deeping Bridge, and glancing over into the water, fine chub will be noticed swimming about. This bridge consists of three arches, the middle and southern ones being the best to fish.

Undoubtedly the best bait is a minnow, mounted on a hook, chub size. Let the line float gently through the arch, and when it reaches the other end you will probably be rewarded with a bite from a chub, or, perhaps, a perch.

I once took four fish in four swims under the south arch, standing in a field where I could see my float. The fish taken were a 2½lb. jack, a ½lb. perch, and two chub, weighing respectively 1½lb. and 2½lb., the hook being mounted on fine gut. Some little time should be allowed before the fish is struck.

With regard to minnows, they are plentiful enough—too plentiful in fact. Many a time have they stripped a hook of its covering of wasp grubs, which, I may mention, are the best all-round bait for this water, just as a large chub was thinking of sampling them.

If the middle arch is fished a boat is necessary, but caution is essential, as the wash of the boat will scare the fish.

I once saw a fine trout scaling 3½lb. that was captured here by a comparative novice. The bait used was a large lob worm, and the fortunate captor brought his prize round to me, when we weighed the fish.

Such a capture in the Welland is certainly unique. Trout were placed in some years ago, but no doubt they became toothsome morsels for the pike with which the river abounds, and which afford splendid sport, as I can testify from experience. Leaving the bridge, the angler passes downstream till he reaches the gasworks. Here the water is about 5ft. deep, and is a good spot for pike. It is useless trying for other fish, as the opening of the locks nearly empties the river, and fish never settle here for any length of time. In the Welland, and in this upper reach especially, the position of the pike varies with the state of the water, and an angler may catch pike one day where some little while before hardly a fish was to be seen. In the hot weather, when the water is low, pike work their way upstream in considerable quantities, finally settling in a large mill head, which is private property.

Pike fishing in the upper reaches is then almost a waste of time. The first flood, however, brings the pike down again, and the angler may expect good sport as soon as the water has sufficiently cleared. The fish have been buffeted about by the strong current, which has probably prevented them from obtaining their accustomed supply of food, and are madly on the feed. If the lock gates are wide open the fish will be carried through, and may be angled for in the lock hole. If the water is escaping over the overflow, the fish will remain in the upper reach. The best pike fishing is always obtained after a heavy flood, and the observant angler who watches the water will be rewarded by some fine catches.

Some few years ago large baskets were made, but nowadays, as anglers have increased, the number of fish per rod is relatively smaller.

For years the Welland was fished by two or three enthusiasts, and the captures at times were something to be remembered. But the day of great things is past, and the angler patronising this well-known angling resort must expect ever-increasing competition.

The usual method of pike fishing adopted is a live bait on a Jardine snap.

From five to ten seconds should be allowed before striking, the time varying with the season and the appetite of the fish, whether madly on the feed or only moderately hungry.

A snap on which I have landed some good fish consisted of a Jardine snap, with an extra triangle hanging the opposite side of the bait, after the manner of a "Bickerdike" snap. The tackle thus consists of three triangles, most certain in hooking. Any angler can make them up himself, and friends of mine have ordered them from Carter's at a cost of 4d. each.

The largest pike I ever took in the Welland—a 12-pounder—was captured on one of these snaps.

Between the gasworks and Deeping St. James' Lock good sport may sometimes be obtained with an artificial bait, and an ordinary spoon is as good as anything; but I should only adopt this method when baits were not at hand. The bank is fringed with trees, which prevent the angler from covering all the water when spinning. Of course, when the water is in flood, spinning is worse than useless.

Just below the lock the water runs rather shallow, and pike can often be seen basking in the sun's rays. Imagine a pike of, say, 5lb. lying on these shallows. The angler's tackle should be light, with a small lead, and a float no larger than is absolutely necessary. A small bottle cork, with a cut in its side, is as good as anything. Carefully letting out the necessary line, the angler throws well over and above the fish. This is necessary; first, to prevent the pike being scared by a heavy splash; and, secondly, to work the bait to the spot with the assistance of the current.

This is often more difficult of accomplishment than it seems. However, in five cases out of six the pike will take the bait painfully floundering in front of him. Sometimes, when he is not on the feed, he can often be deluded into sampling the bait by a slight jerk of the line. This trick, well known to pike fishermen, throws the bait on its side, and the light causes it to appear a sheen of glittering silver, often proving an irresistible temptation to a pike. Many a wary fish have I captured by this method. If the roach is too lively, a slight blow on the head will partially stun him. The great thing to be remembered is that a bait should be presented to a pike in such a manner that it appears disabled.

Bottom fishing does not account for many fish in the lock hole. I have often fished it, but never captured anything worth having, and the experiences of other fishermen are somewhat similar. Good sport can, however, be had lower down among the roach with the artificial fly, and decent baskets are often made. This branch of the sport is practised mostly by visitors. The local anglers as a rule, make a speciality of pike fishing. I have taken decent roach in the upper reach by floating live bluebottles downstream.

I used to keep the gentles in a large cardboard box until they turned into flies. This box had a little hole at the top, with a sliding arrangement to let them out one at a time. One day I managed to drop the box, the lid came off, and the air became thick with escaping insects. It was a kind of plague of flies in miniature. They swarmed into my landlord's pantry, and simply filled the place.

He was puzzled to know where they all came from, and I am afraid he remained so, for I did not think it necessary or wise to enlighten him. I can imagine him now, frantically beating the air with a duster, and making energetic sweeps at the offending insects.

A. H. LAW.

(To be continued.)

WELLINGTON ANGLING SOCIETY.

THE twenty-fourth annual dinner, arranged under the auspices of the premier fishing organisation in Nottingham, the Wellington Society, was held at the Spread Eagle Hotel, Goldsmith-street, on June 5, and in every sense it was a highly successful gathering. The society had the pleasure of having Sir Henry Bromley, Bart., the hon. president, in the chair, Mr. F. Wareop, always prominently associated with the Wellington Club meetings, officiating as vice-chairman. There was a numerous assembly, including the Hon. R. Bromley, the Rev. Canon Ferris, Mr. W. Gaskell (president), Mr. G. H. Howard (*Fishing Gazette*), Mr. A. Henry (Wyresdale Fishery, Scorton, Lancashire), Mr. P. S. Clay, Mr. J. T. Hodson (vice-president), Mr. J. Baines, Mr. F. Hobson, Messrs. E. Hooton, H. B. Hoe, J. K. Irwin, J. Lewis, J. Greaves, J. Taylor, H. Lewis, F. Baker, H. Daykin, J. Cooper, F. Lindley, T. Luge, C. Hickling, J. W. Foster, W. Bass, J. W. Jones, J. C. Slasher, W. Marshall, A. Johnstone, A. Collishaw, W. Hewson, A. C. Johnstone, R. Bailey, W. Blore, J. Clayton, H. Birks, F. Flewitt, George Gilbert, W. Gregory (hon. treasurer), and Harry Smith (the genial and enthusiastic hon. secretary).

Following a capital dinner, served in characteristic style by Mr. Charles Smith, the CHAIRMAN submitted the loyal toast, which was honoured with the customary cordiality.

At a subsequent stage in the proceedings Sir HENRY BROMLEY submitted the toast of the evening, "The Wellington Angling Society." He spoke of the pleasure he had in attending, and his appreciation of the opportunity to propose success to the Wellington Society. He was glad they had secured the presence of the rector of the parish (the Rev. Canon Ferris), an experienced and scientific angler, of the Chief Constable (Mr. P. S. Clay), who, unfortunately, had to leave rather early, but who is the head of the most civil and obliging force he knew, of Mr. Howard, their old friend of the *Fishing Gazette*, and also of a representative of the Wyresdale Fishery, so admirably administered. In relation to the society itself, Sir Henry said he was gratified to learn that it was in such a flourishing condition and accomplishing so much for the development of the best and truest interests of angling. It was a grand thing to unite at an annual social function and exchange views upon various branches of the art and their respective experiences. After all there was nothing so beneficial to health as the popular pastime in which they were all interested. When at the riverside they drowned all their cares and little troubles.

The CHAIRMAN spoke encouragingly of the attempt on the part of the Wellington Club to promote trout fishing, and urged the members to develop the more scientific branch of the art, namely, fly fishing. There were some beautiful shallows at Fiskerton, and quantities of fish. They were all reputed expert bottom fishermen, but he wanted them to become equally skillful anglers with the fly rod. By doing so they would have countless opportunities of stimulating interest in natural history, both as regarded flies and animals. Sir Henry spoke of the necessity of an increase in membership, the importance of maintaining their position as the premier angling association, not only of the county of Nottingham but of a very extensive area. Coupled with the toast were the names of Mr. Gaskell and Mr. Howard. (Loud applause.)

Mr. HOWARD addressed a few observations to the members, expressing the hope that the club would continue to prosper as it had since its establishment. It was the duty of the members, now an endeavour was being made to promote trout fishing, to support it heartily by subscribing and popularising fly fishing in the Trent. (Applause.)

In returning thanks on behalf of the association, Mr. Gaskell acknowledged the sincerity and cordiality characterising the acceptance of the toast. They felt greatly honoured that Sir Henry Bromley had accepted the invitation of the society to preside at its annual dinner. He (Mr. Gaskell) was gratified to be able to endorse all that had been said about the prosperity of the association up to the

present. From time to time he had had some reluctance in accepting the presidency, but he should be miserable had he not accepted the position. He loved it and the members very dearly, having been connected with sport all his life. He admired the hearty goodwill and spirit of harmony which existed between all associated with the club. It was really a society of brotherhood. There were no bickerings or little differences to settle between the members, and his position as president was an exceedingly happy one. He only hoped that as they made advancement they would enlarge the roll of membership and possibilities of accomplishing greater things. The speaker went on to refer to the subject of the pollution of the Trent, and said he pleaded the cause of great tribes—of the finny tribes, whose inherent right to breathe a pure air was equal to our own, of the feathered tribe, of the cattle, of the human tribe, of those who sought recreation upon its surface, and to stiffen the sinews of youth by aquatic exercise, of the hundreds who used the water as a highway for commerce, of the thousands of anglers who threw in the tempting bait, fearful lest the turbid water should obscure the dainty morsel, and of the many households whose domestic wells were fed by its precolating and would-be filtered water, that they might become wells of life, and not remain cesspools of fever and diphtheria. Such, as the president of the Wellington Club, was his brief. They fully recognised on the part of the city officials a sincere desire to remedy the state of things existing in the river below Nottingham, but did not the prospect of a cleaner river impose new duties upon fishermen? Yes. It would be for them to devise means for doing their share for the betterment of sport. Up to the present anglers had thought only of taking fish from the river. For the future the question of re-stocking should occupy a prominent place in the yearly programme. Their society had already taken the initiative, and through the generosity of a few of the members, fifty large breeding trout had been turned into the Shardlow stretch. That was only a start, and the society solicited the interest, sympathy, and practical support of all sportsmen in its endeavour to complete the experiment. Such was their position at the present time, and he had very great pleasure in announcing that Sir Henry had promised a donation of £5 towards the consummation of the object in view. Mr. Gaskell also referred to the kindness of Sir Henry in using his influence to obtain a certain trout stream for the club under reasonable conditions. (Applause.)

The health of the chairman was cordially and musically honoured, as also were toasts to "The Hon. Secretary" and "The Host." Both Mr. Spray and Mr. Smith returned thanks, the last named gentleman speaking at length upon the efforts of the Nottingham Corporation to prevent pollution.

During the evening an excellent musical programme was presented. Messrs. Arthur Lakin, W. Downing, and T. J. Turner sang with conspicuous success; Mr. A. U. Smith contributed entertaining musical sketches; whilst the members of the Wellington Band individually and collectively rendered several very acceptable selections. Mr. Gregory supplied the pianoforte accompaniments.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—In another few days the river will be open to the great body of anglers, and it is just possible in another week one may be able to report their presence on the Thames. I can remember years ago there were then living anglers who always made a point of being out as early as they could to first wet their lines, and to go to their daily duties in London with the record they had taken their first fish of the season, and this was particularly the case with some devoted anglers in the neighbourhood of Hampton. It is very gratifying to me to hear of the continual changes in the angling clubs in regard to gross weight competitions being abolished, and prizes only given for specimen fish. In the early days of the *Fishing Gazette* I started the movement in that direction, and it was not received without considerable opposition, the particular ground of objection being it would materially destroy the interest and attraction of the clubroom on the meeting night in not making a good show of fish, and, until the establishment of the Anglers' Association, many of the clubs had a very low standard of sizes of fish, and some of them none at all. I can well remember in one instance, in the neighbourhood of Staines, examining the takes of the bank fishers. I found a very large quantity of miserably small fish in the possession of one of the anglers, and on calling his attention to the illegality of retaining fish under the Thames standard, he said: "My club allows us to weigh-in all sizes of fish in the prizes for gross weights; and as others do it, I am only doing the same." I did not take any action against him, and contented myself in advising him not to repeat the offence or the law would have to be vindicated, and nothing would save him from the consequences. It was from instances such as this that pointed out to me the necessity of making a movement against gross weight competitions; and the results which have been achieved since are very gratifying to me. There were several of the leading angling clubs at the time offering prizes only for specimen fish, and notably my old society—the Piscatorial Society; and in speaking of that society I would here express my deep regret at the death of my good friend, Mr. E. Foreman.—B.

(Datchet).—The water is very low at present. I have not been out trout fishing for some time, but am going with a gentleman this afternoon (Wednesday). Not much chance till late in the evening, I am thinking.

There have been two fish caught here since I wrote last. Mr. Skelton had a nice one on May 19, 5lb.; I caught one, 3lb., on May 26.—G. LUMSDEN.

(Hampton Court).—William Milbourne, who had nothing to write about last week, writes: "There has not been anything done in the way of trout catching since I last wrote to you, as for want of rain the water is getting a dirty brown colour through the great heat. There is still a quantity of large barbel being caught at the weir. The roach have now done spawning, and are dropping down in the deep water. There is a great show of coarse fish, which look well for the opening day of the season if we can only get some rain."—B.

(Hampton Wick).—Head river keeper W. Douglas, in his official report from all portions of the river, says he has not heard of any trout being taken, and the water everywhere is low and bright.—B.

(Lechlade, Cricklade).—Thames is low now here, and some good rains will be wanted for the opening of the season on Friday, the 16th inst. There is a splendid show of big chub throughout these districts, which should show good sport for the fly fisher, as well as the caddis, cheese, paste, or gentle fishers. They are about in shoals. There is also a good supply of roach, perch, dace, and pike. Several pike have been caught by trout fishers when spinning or live baiting. One brace I saw at St. John's Bridge weighing 12lb. A few small trout have been taken on the May Fly and large Brown Alder with gold ribs.—RAMBLER.

(Weybridge).—The only report from this neighbourhood is that a small otter, weighing 8lb., has been shot by a gardener.—B.

Ancholme District.—It is now too hot for successful trout fishing during the middle of the day. The only chance then is by dapping the Green Drake or Bloa Fly in the shady places. Fish, however, rise pretty well after five or six o'clock in the evenings, and as the waters are very low and bright, the smallest flies are best. There must be something specially sweet about the Dotterel Dun, for trout are very fond of it. It should be made on No. 0 or 1 Kendal hook with a bright yellow body and simple twisted feather from the shoulder of wing. This and Black Gnat now kill as well as anything I know. Prospects for coarse fishing are very good. The Ancholme teems with fish, amongst them are some large trout and king carp.—THOMAS FORD (Caistor).

Coln, Leach, &c., East Gloucestershire.—During the past fortnight, whilst the May Fly has been on, there has been some splendid sport had on many of the Gloucestershire streams and tributaries. One splendid creel taken on the upper Coln, in the Bibury Court waters, by the Rev. Francis Carbonell, vicar of Fairford (one of the best dry fly men of the day), on Saturday, amounted to no less than ten brace, weighing nearly 21lb., or a good 1lb. average, on the Grey Drake. Other anglers, on their unique waters, have taken their five and six brace per day. Mr. Carbonell returned all fish under 1lb. each, amounting to some ten brace. Mr. Crowley put in a pretty bit of work on the Bull Hotel waters on Friday, with three brace of average pounders. Messrs. Hooker, Powell, and Bloxsome have also done well on this water, some fine trout being creeled in splendid condition. Mr. Edward Chard on the Quenington waters, killed a magnificent *fario* on the Grey Drake, its weight being 3lb. 10oz., a grand fish for the Coln. The Duke of Leeds has been putting in some good work on the Williamstrip Park waters with good creels and heavy trout. A number of trout fishers have been out on the Hatherop Castle waters, amongst others Mr. Berry having some nice sport. Mr. Arnold Gibbs has been having capital sport on the Ablington Manor waters; Messrs. Yeates and Galpin have been out on the Bibury Court water with sport, and several rods have been out at Winsor and Willington. Col. Porter's house party at Fairford Park, including the Honourable Greville, Mr. and Mrs. A. Hall, and other rods, have been having excellent sport on the famous Park waters, heavy creels being the order of the day, some of the trout being very fine ones of 2lb. and 3lb. each. A number of other rods have been out on this water. Dr. Lockwood and friends have been having capital sport on the Little Faringdon and Lechlade Mill waters; and Capt. Wylde, Messrs. John and Chas. Barton, Mr. Assington Smith, Mr. Cunniffe, Mr. A. Iles, and several others, have also been out, with nice sport, on this well stocked water.—PAN.

Darent (Horton Kirby, Farningham, &c.)—Conditions have entirely changed this afternoon, and in place of the brilliant weather, prevalent for the last week or more, heavy clouds have overspread the sky, and a chilly east wind is blowing. No May Fly, and very little other fly is about. Some small Olives were floating down, but the fish scarcely noticed them; the only fly I saw taken being a brown one, probably an Alder. Most of the trout seem to have retreated in the sulks, apparently expecting rain, which would do good, though the water is not low at present.—J. P. T.

Dart (Totnes and District).—Although fishing generally has been somewhat quiet, some very fair baskets have been made during the past week with the caterpillar, but the fish have now gone off this bait; in fact, it is difficult to attract them in consequence of the pest of maggots. Mr. T. Browne and Mr. Crichton, of Whimple, killed twenty-eight between them one day, and had a couple of dozen on another occasion, and on Thursday Mr. E. Distin killed twenty-seven, getting twenty of these by about an hour's fishing in the evening. Mr. Bowden creeled thirteen nice fish in Hempton Leat; and Mr. E. Ackrell and other Totnes rods have had a few brace each; and Mr. H. Ackrell, jun., killed a few on the Harbourne; and Mr. H. Wright and others are getting small lots near Buckfastleigh. The men at Totnes Weir continue to get some big hauls of salmon, and I hear they netted over three

dozen on Friday, whilst the boats at Stoke are also doing well. A number of fish have also run up to the moorland waters, where fishermen above Dartmeet have had capital sport. Recent takes include: Mr. H. Martin, three, 13lb., 10lb., 7½lb.; Mr. W. Leaman, one, 8lb.; Rev. C. Rickard, one, 7lb.; Mr. Angel, one, 7lb. At Holne Chase, the Rev. C. Forster killed a nine-pounder, and Mr. Edbrook landed another of 11lb. at Buckfast Weir.—DEVONIAN.

Devonshire Streams.—The days this week have been very hot, and day fishing has only resulted in small baskets. On the southern streams, although there have been a few exceptional takes, catches have not run above a couple of dozen. On both the Avon and Dart others are still prevalent, and trout are by no means plentiful on the latter river. On Monday, Mr. W. G. S. Morrish killed a 2-pounder on the Teign, but sport this season has been very quiet, although some very fair baskets have been made on the higher waters. Several Devonshire gentlemen, viz., Sir John Ferguson Davie, Bart., Sir John Shelley, Bart., Gen. Sir Redvers Buller, and Mr. H. Ferguson Davie, have been salmon fishing at Inveran, N.B., and were rewarded with some excellent sport.—DEVONIAN.

Eden (Carlisle).—The Creeper has been the most killing bait during the last week, being about a month later than in ordinary years. Mr. John Hills had twenty-six trout, weighing 12lb., on June 3, in the Corby water, and several others from 7lb. to 10lb. They are now getting scarce, having turned into Stone Flies. These latter and the small worm can now be depended upon whilst the fine weather lasts. Some good baskets have also been made by the night fishers, old Bob McAlister having brought in about 16lb. last Sunday morning. On Jan. 1, Mr. Heywood Thompson killed a salmon of 15½lb. in the Nunwick Hall water, above Armathwaite. There is at last a good run of sea trout in the Solway, and the river nets are having good catches. Messrs. Osman got a sea trout of 13½lb. on Monday night below Carlisle. Grilse are very scarce.—SILVER GREY.

Esk (Whithy).—Only moderate sport has been had on this river during the past week, the water being much too low and clear for salmon fishing. Most of the anglers who have been out have gone in for trout fishing, and have had fair baskets, the principal bait used being minnow. The catches to hand are: Mr. R. Hay, fifteen brace of trout; Mr. J. W. Nicholson, nine; Mr. W. H. Rhodes, eight; Capt. J. Leng, five; Mr. Graham, one brace.—J. JACKSON.

Exe and Canal (Exeter).—Lovely summer weather has prevailed during past week, and fair sport has been had with the trout early mornings and late evenings. Among the most successful Mr. J. A. Kelley takes premier position with a lovely Exe trout of close on 2lb. weight, which is somewhat of a *rara avis* for rod and line men in this district. I had the pleasure of seeing this beauty soon after its capture, and found it a perfect specimen both in condition and marking. Other anglers who have scored on Lower Exe are: Messrs. Pike, French, Snell, Taylor, Pitts, Fox, Milton, Bastard, Harris, and Roberts. Water is now running somewhat low and clear, and a few showers would tend to improve matters. Flies doing well for present are Blue and Yellow Duns, Governor, and Red Spinner.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Magnificent weather has come with the May Fly, and the trouting season, which hitherto had proved poor and profitless, will, after all, have its redeeming qualities. Some good catches, I believe, have been made lately by the fly fishers, particularly in the evening. We have got so near to the opening of the coarse fishing season that it is beginning to rouse special attention. The rainy season finished up with a heavy downfall, but its effects are not so bad as anticipated. Shoals of bream have been noticed during last week sunning themselves during the heat of the day.—LIMPET.

Idle District (North Notts.).—Better reports come from this Nottinghamshire district. The waters south of the forest have been yielding some good bags on the club waters. The waters on the north side are chiefly in private hands. It may be interesting to coarse fish anglers to learn that a party was recently out on the drains about the Isle of Axholme, where they had special facilities. They were mostly after bream. Some good baskets up to 40lb. each, and specimen fish were landed up to 4½lb. This is something like a *rosy* prospect for the season, which opens next week.—L.

Lake Vyrnwy (N. Wales).—Tropical weather has prevailed throughout the week—bright sun, great heat, and no breeze. Two hundred and eleven fish were killed during the week, the total weight being 135lb. 11oz. Chubbing operations were also begun yesterday, the haul for the first day being 940 fish, weighing 1175lb. On the 31st, twenty-seven trout were taken, the weight being 16lb. 8oz. Mr. Townshend made the best basket with ten fish, 5lb. 12oz.; Mr. Feathers had five, 2lb. 9oz.; Mr. Jackson, four, 2lb. 10oz.; Mr. Malpass, three, 2lb. 1oz. The remaining baskets held two each or less. On the 1st, twenty-six fish weighed 15lb. 5oz. Mr. Malpass made the best basket with nine fish, 4lb. 11oz.; Mr. Melly made six, 3lb. 9oz.; Mr. Townshend, five, 3lb. 1oz.; Mr. Jackson, four, 2lb. 9oz.; Mr. Feathers, two, 1lb. 7oz. On the 2nd, twenty-seven fish weighed 17lb. 1oz. Mr. Townshend's basket was the best with eleven fish, 6lb. 8oz.; Mr. Chance killed seven fish, 4lb. 14oz.; Mr. Malpass, seven, 4lb. 5oz.; and Mr. Feathers, two, 1lb. 6oz. On the 3rd, thirty-one fish scaled 19lb. 5oz. Mr. Garside made the best basket, with seven fish, 4lb. 7oz.; Mr. Moss killed seven, 4lb. 2oz.; and Mr. and Miss Newton, seven, 4lb. 1oz. Mr. Malpass, four, 2lb. 15oz.; Mr. Jackson, three, 1lb. 14oz.; and Mr. Townshend, three, 1lb. 14oz. On the 5th, fifty-five fish scaled 34lb. 5oz. Mr. Garside made the best basket, with eighteen fish, 10lb. 9oz.; Mr. Newton killed nine, 5lb. 4oz.; Mr. Moss, eight, 4lb. 12oz.; Mr.

Townshend, eight, 5lb. 2oz.; Mr. Malpass, five, 3lb. 3oz.; and Mr. Jackson, five, 3lb. 2oz. On the 6th, forty-five fish weighed 33lb. 3oz. Mr. Garside killed ten, 6lb. 1oz.; Mr. Townshend, eight, 6lb. 5oz.; Mr. Malpass, eight, 6lb. 3oz.; Mr. Moss, seven, 6lb. 1oz.; and Mr. Jackson, six, 4lb. 14oz. On the river the best basket was made by Mr. Jackson, with eleven fish. Some very fine specimens of chub were killed, weighing from 2½lb. to 3lb. each. Coch-y-bondhu has been the best fly this week.—LONG DRIFT.

Lea and Tributaries.—Trout anglers have been doing very little in the Lea, but better results have been obtained on some of the tributaries. The Lea, owing to the hot weather, has become rather stale, and a good thunderstorm would be welcome, as it requires freshening up badly. The perch have spawned, and some of those taken and returned by trout anglers have been in splendid condition. The dace should be found in good order by next Friday, when the Lea fishery bye-laws again permit them to be taken. At Ware (the Boom) and below Hertford Lock very heavy dace have been seen, and they should be attracted by "cads" and the fly when the season opens. I would remind anglers that no roach can be retailed until July 1. There has been a fair rise of May Fly at times on the Lea and Beane. In the latter tributary Mr. J. Green has taken a trout of 1½lb.; Mr. Tebbuth, one, 1½lb.; Mr. Stocker, several brace; and Mr. Connellan, one and a half brace, taken with the May Fly. Another angler took a grayling of about 1lb. These fish also come into season in the Lea on Friday next, together with dace, as before stated, gudgeon, popper, bleak, &c.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams continue to run clear and a nice level, and in good order for fishing. The water is in perfect state, but the excessive hot weather has been against good sport during the day except in the shaded spots. The fish have been well on the feed, and have been rising at fly well. The May Fly is still coming up, and the trout are taking them better, but not so well as was expected. Some very good lots of trout have been landed this week, the evening sport being best. The flies used are the Ork, May Fly, Coch-y-bondhu, Wickham, and Yellow Dun. The prospects for sport are good, especially in evening and early morning. The Pinsley is running clear and in order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in capital order, yet sport on the whole disappointing. The May Fly is still up, some places in quantities; other varieties scarce; but the trout do not seem to have been eager for them. Have heard of no heavy baskets made with it. Alder, Yellow Dun, and Spinners have proved more successful. Weather is anything but favourable; very hot and bright days, with wind for the most part north-east. Glass high and fair; no present indications of a change.

Nene (Peterborough).—The weather experienced here for the past week has been really splendid, creating a feeling of pleasure among our anglers at the near approach of the end of the close season, so that they may once again participate in their favourite pastime. The water now is in fairly good condition for the opening of the season, although if the tropical weather we are now having continues much longer, and we get no rainfall, our river will very soon experience a change to low water. With the promised clearance of the weeds, and a reported plentiful supply of fish (some good baskets of roach having lately been taken), and granted suitable weather, there are indications of an excellent season's sport fairly in evidence.—E. A. S.

Otter (Budleigh Salterton).—For the past week fishing has been very poor, and even the best rods on the river have found a difficulty about getting a brace of fish. In the daytime of the last three or four burning days fish have not moved at fly at all, but at dusk there is a small rise which should be taken advantage of. The small Red Spinner and Flit's Fancy are likely flies.—HERON.

Ouse (Holywell Ferry).—Everything points to a good start on the 16th inst. Immense shoals of bream have been disporting themselves in the sunshine here, the river being literally alive with them, and roach also are in abundance. The weeds are not nearly so numerous as they were last year, and the swims that are cleared out look most inviting to the anxious angler.—A. SCARD.

Plymouth.—River fishing pretty much the same as last week. Some nice dishes of trout have been reported. A gentleman fishing in the Erme from eleven o'clock until 3.30 had fifty-nine fish; and another, fishing in the Meavy, had nineteen one day last week. I have heard also of some nice baskets on the Cad and Tavy. I notice some fine peal in the lower waters of the Meavy, and also on the Tavy. A few have been taken, but it is rather early yet for this class of fishing. During this hot weather good sport can be obtained in the wooded parts of the rivers dapping with a natural Blow Fly, grasshopper, maggot, or any of their imitations; and, as a rule, the biggest fish are taken by this method.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—At present the weather in this neighbourhood is simply delightful, and has been so for some time past. These rivers are now in the best possible condition, and anglers are quite recompensed for the unseasonable weather which prevailed for so long, and which rendered angling occasionally quite impossible. The May Fly has now made its appearance on all these rivers, and the trout are rising very freely to it, and also to the Dun flies, which have been exceedingly numerous for some time past. Trout anglers are having excellent sport, and the recent floods have taken all the samlets down the rivers and out of the neighbourhood, so that anglers are not troubled with them in the least, as they cause a great loss of time when too numerous, as anglers have to return them all to the rivers again. Some very nice trout have been taken

from the Vyrnwy, Tanat, and Cain. Sport in the Severn has been chiefly confined to trolling for pike, of which many are captured. One fine trout of 3lb. was recently taken from this river above Shrewsbury, and from a lake near that town an angler took a large pike 45in. in length, and which weighed upwards of 20lb., but was not in very good condition. Mr. Buckley's otter hounds had a capital day's sport in the Vyrnwy, from Meifod upwards, on Tuesday last. They found at once a very large otter, which they hunted in tropical weather for nearly three hours, and he eventually took refuge in the large and deep pool above Glasgoed Weir.—VYRNWY.

Sussex Rivers and Chichester Canal.—The weather has been a shade too warm and bright, and water too clear for successful sport. Dace on the Ouse have taken May Fly, but there is no record of trout worth noting. A brace of trout were taken from the Rother on Monday evening with minnow; the heaviest fish weighed 1½lb. Three perch were also captured, one of which had spawned, but they were returned to the water. Fish are spawning on the Ouse shallows, and eels are busy among the spawn. Myriads of fish may be seen in the Chichester Canal—carp up to 14lb., and some fine perch. At present all augurs well for the opening in June. A few small bass, eels, and flatfish have been taken from the harbour.—GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—The river is in fairly good order, but not much sport with trout during the past week. The net fishermen are doing fairly well with salmon in the estuary.—H.

T-w (North Devon).—Fishing not over good. Rivers bright and getting low. Mr. Woodgate and friend last week took four dozen trout, but it was just after a thunderstorm, with the minnow at the Mole, South Molton Road. Mr. Jorlan has also the same luck, twenty-three trout in the Molland stream; whilst the hot thunder weather is on not much hope by day. One person took half a dozen nice trout about ten o'clock Saturday, night fishing. Many people are fishing in the shady Lynn. Just now there is good bass fishing; one gent told me of many being taken, and he took four over 4lb. each, losing a very heavy one. Salmon fishing a deal better.—RUSTY GAME.

Teifi (Llandyssil, South Wales).—Water rather low, and rain wanted again for good sport. Trout rise well in early mornings and evenings. Good baskets taken, from 3lb. to 12lb., principally with the minnow, during last fortnight; also three salmon taken from 9lb. to 12lb. Alder and Stone Fly now on.—A. E. S.

Teme (Ludlow).—The Teme in this part is still running clear and a nice level, and in capital order for fishing. The weather has been very hot, and the sun has been too bright for much sport during the daytime; the best time for angling at present is in the evening. The May Fly has been coming up, but not thickly, and the fish on the Teme have not been taking them so freely. A good few anglers have been out of late, which is usual during the May Fly season, and some very nice-sized trout have been landed, but no large baskets have been taken. The flies used are the Ork, Wickham, Coch-y-bondhu, Yellow Dun, and Iron Blue for evening fishing; and some nice fish have been taken. A few have tried worm in early morning and late in evening; and trout, perch, eels, and chub have been taken. The fishing up Oakley Park has been tried of late, but during the day the fish have not moved well; during the evening some good lots of fish have been landed. On Saturday one angler landed twelve good fish. In the Ashford water, with the May Fly, a trout 1lb. 6oz. was taken on Tuesday. By the end of the week sport will be good with May Fly. Minnow fishing has accounted for some good trout. The Ony, Corve, Clun, and Ledwyche are all running in good order. The May Fly is out on them thickly, and the fish move well at them, and some good lots of trout have been taken this week.—S. LUDLOW.

Teme (Tenbury).—The water in this district is running in capital order for fishing, being clear and a nice level; but the weather has been so very hot during the daytime that angling has been very slow until the evening or the early morning. The fish are now rising well, and the May Fly has come up in good numbers. The fish have been taking them fairly well, but not so well as expected. Good sport has been had in the evening with Ork, Yellow Dun, Wickham's Fancy, Coch-y-bondhu, and Iron Blue, and good sized fish taken. Worm fishing has been tried, but sport slow. On Monday a nice lot of trout were taken with the May Fly. Prospects for sport are now good. The Rea, Kyre, and Ledwyche are now in order.—WORCESTER.

Upper Yore.—During the last week sport has been good on this part of the Yore. Some good trout have been caught. Pedley had two brace in three hours, two of them weighing over 27oz. The best lures have been fly, worm, and minnow fished upstream, which is a favourite mode of fishing this part of the Yore. The best flies are Orange and Blue Partridge and Knotted Midge. The Green Drake is making its appearance. Anglers should not lose this opportunity. Also Bantard fishing is good now, viz., the brown and white, with cinnamon body; best time, from 10.30 p.m. to 1.30 a.m.—JIM FAWCETT.

Urk and Tributaries (Senny Bridge).—Rivers at present rather low and clear, and with the bright sun fly fishing during the daytime is nearly useless. The trout rise freely to the fly during the evening, and several good baskets have been caught lately with the fly in the evening.—PONTSENNY.

Witham, &c. (Mid-Lincolnshire).—During the last few days fly fishers have had a turn. We heard of a couple of anglers getting eight brace in an afternoon in the Wold district. Others have been successful on waters nearer Sleaford and Grantham. Public attention is turning to the prospect of sport among bream, roach, &c., in the Lower Witham, which commences next week. I hear

the angling visitor for the Fen district of Lincolnshire this year is to be an object of solicitude on the part of the railway companies. The G.N.R. and the G.C.R. used formerly to take the talk of them down the Witham by joint agreement. Since the latter has opened up their London traffic a hitch has come over the arrangements of these companies. Both are now trying for the traffic separately; the G.E.R. is sailing in the same boat.—**LUCI.**

Wye and Derwent (Derbyshire).—These rivers are now in good order for fly fishing, and reports from the various districts are much more cheering. Gentlemen that have fished the Wye have obtained baskets ranging from two to six brace each, and better sized fish than heretofore, and in the pink of condition. The May Fly has hatched out better this week, and is out now in greater numbers than has been seen this season, and this week will be the record for this fly, and trout are showing up well. On the upper reaches of the Derwent, Ashopton, Bamford, Calver Bridge, Hatherage, and Chatsworth fisheries, as far down as Rowsley, reports are that gentlemen that have fished this portion of the river when some nice trout have been creel, both with fly and other modes of fishing. The Darley Dale Club's water has been better patronised with much better success, members of this club obtaining several brace each. The free and private water about Matlock Bridge has also yielded some very good fish. The Matlock and Cromford Angling Association water has produced a nice lot of trout. Mr. Keeling has taken some very good ones, mostly from Matlock Dale. E. H. Maule, Esq., fishing from a boat, has taken some good trout, the evening being the best time. Mr. Newton, below Cromford, three brace; and on two other occasions one and a half brace each time. The Homesford and Whatstandwell reaches of the Derwent have also accounted for a few good fish, and the prospect for the next few days is very good. Useful flies: May Fly, Yellow Dnn, Cooper's Fancy, Dotterel, Ash Dun, Sand Fly, and Bumble for evening.—**DOTTEREL.**

Wye (Bulth Wells).—River low and clear; no salmon taken. Salmon anglers complain of the poor run of fish this season; and no wonder, when in one week over 300 salmon were taken in the nets between Ross and Symond's Yat—hard lines for owners of fishing on the upper reaches of the river. Good baskets of trout have been had; and the most successful were Messrs. Hussey and friend, A. G. Vanghan, L. Price, and E. Lord. Baskets from 6lb. to 13½lb.; evening fishing best; fly, Coachman; bait, natural minnow. Correspondents of local papers please don't copy.—**W. B. ROBERTS.**

Yore, Swale, Wharfe, Nidd, Dove, &c. (Yorkshire).—The tropical weather and low water, particularly in the upper reaches of our rivers, has of course been against angling, and few piscators have been out, and there has been a falling off, in spite of the fact that those killing lures the Stone Fly and the Green and Grey Drakes have been on. The Yore on Saturday was in good trim for other hunting, and Mr. Wilkinson finished up his visit with a kill, as I anticipated he would. The meet was at Ushaw Bridge, and after a good hunt (past Jervaulx Abbey, Kilgrim Bridge, and Ellington) of three hours' duration a bitch otter was killed. The pack hunted the Beale Beck down to its junction with the Swale on Monday, but had no sport. The Stone Fly has been the favourite lure during the week up the Yore, and expert anglers have done well with it morning and evenings, but sport in the middle of the day has been moderate, and few anglers have ventured out, the heat being excessive up till to-day (Wednesday), when the wind got round to the north-east, and the atmosphere was clouded. Mr. Collinson, on Monday, got a good dish of fourteen. Similar dishes have been caught by other anglers, but all complain of the heat and a scarcity of water. Considering these drawbacks, sport of an evening has not been bad in the Swale and its tributaries, both the Stone Fly and the Drakes being on. Very little has been done up the Nidd, but I hear of several good takes on the Wharfe with the Stone Fly, one angler getting twenty-three, seventeen, and twenty-five on three successive days. Other gentlemen have done quite as well with the "up stream worm," and up to Saturday last some good baskets were made with the Dark Watchet, Stone Midge, and Knotted Midge. Since then the Stone Fly and the Alder Fly in the evening have been better than the smaller flies. Until we have a freshet the trout will require a lot of catching now, and the best time to angle is in the evening or early in the morning. The Dove has been in good trim. Mr. J. Crack, Dr. Jackson, Mr. Stoor, Mr. M. Snowden, and others have had good sport. The Green Drake is on this stream and the Hodge. Several foot bridges have recently been erected for the benefit of anglers fishing these streams.—**J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.**

By TELEGRAPH.—The weather is much cooler now, and, in spite of low water, sport is very fair indeed. Some very good baskets have been caught in the upper Yore with the "up stream worm," minnow, and Stone Fly. The Green Drake is on to-day, and there should be some good sport with this fly for some days to come. I got a very good dish of fish yesterday with the natural minnow, fished on Ariel tackle.—**J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.**

SCOTCH REPORTS.

Altnacealgach Hotel Waters (via Lairg, N.B.).—On 1st inst., Mr. Campbell-Gibson, Edinburgh, fished Loch Cam, and landed two dozen trout 10lb. On 2nd, Mr. Campbell-Gibson and Mr. Bell, Edinburgh, on same loch, had thirty-eight trout, 13lb. The weather for some time has been most adverse, but this week it has improved.—**B.**

Awe.—On the Taynuilt Hotel waters on May 31, Mr. C. J. W. Gardner had a salmon of 13lb. On June 2, Mr. Harris had one of 16lb. On the 3rd, Mr. Cox had one of

17lb. Grilse and sea trout are now beginning to run.—**D. McDONALD.**

Bona bridge (Sutherland).—On Monday this week, Mr. Wm. Bethune fished the Kyle of Sutherland, and made a fine basket of sea trout, several of which weighed from 3lb. to 2lb. each.—**B.**

Border Esk and Liddle.—The fine summer weather which now prevails in Eskdale and Liddesdale is most favourable to night fishers. The waters are running very clear and a trifle low, and although a storm was foretold there are no indications of the predicted flood that was to be the result thereof. The sea trout migration in the Solway is now proving a much better one than the season promised a few weeks ago. The nets made some fair hauls last week. Trout are now of heavier weight, and some fine ones have been caught in splendid condition, the average weight being about 2lb. Salmon are still very scarce in the Firth, only an odd one or two being caught at a number of the principal fishing stations. The first grilse of the season was caught last week, and one or two others have since been taken. Sport in the lower reaches of the Esk has not been very good during the past week, and catches of sea trout have not been large, although there were several expert anglers out from Carlisle and Longtown in the Metal Bridge water. Sport has been fairly good in the Canonbie division of the Esk. Dr. Anderson, Eskbank, took five sea trout at evening fishings with fly, a very successful lure at the present time being silver body and thrush wing. The trout were in fine condition, and the weights were 3½lb., 3lb., 2lb., and two of 1½lb. Mr. Stronach, staying at that famous old angling resort, the Cross Keys Hotel, Canonbie, had two sea trout in the Long Pool, with fly. Mr. H. Law, Canonbie, caught a couple of sea trout with fly in the stream of Jock's Pool. Mr. J. Johnstone, Edinburgh, had a sea trout in the Byreburn foot water; and Mr. Little, Claygate, and John Davidson, Canonbie, had each a sea trout in the same water. Sport is principally confined to evening fishing. Although a good number of trout are in the pools in the middle and higher reaches, yet, owing to the bright sunshine and the low condition of the river, they are shy and difficult to lure. Some good baskets of yellow trout have been got, the best of the season being obtained by Mr. C. Elliot, Langholm, in the Ewes. His basket contained 15½lb. of fine trout. Fishing in the same water, Mrs. Anderson, Langholm, had a dozen nice trout. The Tarras is also yielding fair sport. In the Liddle water at Penton Linns, Mr. W. Murray, Canonbie, had two sea trout with worm. Mr. Renwick Calvert, Rowanburn, had a couple in the same river, weighing 1½lb. each. The Hermitage has been well patronised during the past fortnight, and some fair hauls of yellow trout have been made, principally in the Thirty-shilling Haugh Pool, near Hermitage Castle. Mr. Graham, Canonbie, had two sea trout near Liddle foot. Other anglers have been fairly successful with yellow trout in the lower reaches of the Liddle. In order to vary the sport on the Esk, an otter, in making its way from Irvine Burn to the Island Pool, in the Esk, got confused at some wire fence obstruction, and was caught by a man and a boy, who passed a box over the animal. The same evening it was liberated and put in the Esk near to Tarras foot, no doubt in order to be in readiness to afford a morning's sport to the Carlisle or Dumfriesshire otterhounds. It weighed 12lb.—**GILNOCKIE.**

Breadalbane Arms Hotel (Aberfeldy).—Mr. Kidd, fishing Loch-na-Craig, caught, on June 5, twenty-five trout, 4½lb.; on the 6th, seventeen trout, 5lb.; on the 7th, twenty-one trout, 6lb. 10oz.

Carron (Easter Ross, Ardgay, N.B.).—On Thursday last week, Mr. Crawshaw Ralston, Balmagown Arms Hotel, fished the lower waters, and landed three salmon, the heaviest of which weighed 16lb. Since then up to Wednesday this week not a fish caught, though several rods have been out.—**B.**

Deveron (Banffshire).—For the past week the river Deveron has been extremely low. Light showers of rain have fallen, but they had no effect on the stream, which is naturally small, and in consequence fish refuse to enter. A flood is greatly required to open up a free passage for salmon and grilse. The bright sunshine also affected the rod fishing. On the Carnoustie section a fine salmon of 15lb. was landed on the 2nd inst., and on the Netherdale section, on the 29th ult., Mr. Burton, M.P., killed one of 18½lb. The net fishermen met with a little difficulty in working their nets on certain parts of the river owing to the thin volume of water. On the lower pools below the bridge a number of trout were taken of an average weight of 1½lb.; very few salmon were got, and no grilse. On the coast there was also a falling off, and only one small box was consigned in the end of last week, and one on Tuesday last, weighing 2½cwt. The few grilse got from the nets on the coast averaged 4½lb., and the salmon from 10lb. to 12lb.—**H. W.**

Inchnadamph Hotel (Sutherland).—May 29, Mr. Hurst, Head Assynt, nine trout, 5lb.; Mr. Cookson, Loch Awe, thirty-four, 12lb.; Messrs. Bortholomew and Frost, Loch Gillaroo, ten, 9lb. 30th, Messrs. Bortholomew and Frost, river Inver, six, 4lb.; Mr. Cookson, Loch Letteressa, thirty, 8lb. 31st, Mr. Cookson, Loch Awe, twenty-nine, 10lb.; Mr. Frost, Loch Gillaroo, four, 4lb.; Mr. Hurst, Loch Assynt, nineteen, 3½lb. June 1, Messrs. Bird and Morgan, Loch Awe, twenty-four, 8lb.; Mr. Hurst, Loch Letteressa, twenty-six, 8lb.; Mr. Cookson, Skiag, thirteen, 8lb. (heaviest 4lb.); Messrs. Bortholomew and Frost, river Inver, twelve, 7lb. 2nd, Messrs. Bortholomew and Frost, Loch Letteressa, twenty-six, 7½lb.; Mr. Cookson, Mid-Assynt, twenty-four, 8lb.; Messrs. Bird and Morgan, Skiag, thirteen, 4½lb. 3rd, Messrs. Bortholomew and Frost, Loch Awe, seventy-six, 23lb.; Mr. Hurst, Head Assynt, thirteen, 5lb.; Messrs. Bird and Morgan, Skiag, twelve, 4½lb.; Mr. Cookson, Mid-Assynt, fourteen, 7lb.—**WILLIAM WALLACE.**

Lairg (Altnaharra Hotel).—Angling on hotel waters, May 31, Mr. Day, on Loch Hallam, had twenty-four trout, 9lb.; Mr. and Mrs. Straker, on Loch Break Bine, had seventeen trout, 9½lb. June 1, Mr. and Mrs. Straker, on Loch Hallam, had fifty-two trout, 27lb.; Mr. Kirkbride, on Loch Tarvie, had nine trout, 4lb. 2nd, Mr. Deverall and party, on Loch Meaddie, had sixty-eight trout, 19lb.; Mr. and Mrs. Straker, on Loch Hallam, had twenty-six trout, 11½lb.; Mr. Day, on Loch Tarvie, had eight trout, 4½lb.; Mr. Kirkbride, on Loch Naver, had one ferret, 5½lb., and seven trout, 3lb. 3rd, Mr. Deverall and party, on Loch Meaddie, had 26lb. trout; Mr. and Mrs. Straker, on Break Bine, had forty-one trout, 12lb.; Mr. Kirkbride, on Loch Hallam, had twenty-five trout, 8lb.; Mr. Day, on Loch Loyal, had three trout, 4½lb. 5th, Messrs. Deverall and Stedall, on Loch Meaddie, 13lb. trout; Mr. Kirkbride, on Loch Naver, had one salmon, 8lb.; Mr. and Mrs. Straker, on Hallam, had thirty-nine trout, 21lb. 6th, Miss H. Straker, on Loch Naver, one salmon, 8lb., two grilse, 5lb. each; Mr. Steele, on Loch Meaddie, had 15lb. trout; Mr. Deverall and party, on Hallam, sixty-six trout, 20lb.—**W. D. M.**

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel on Wednesday, Mr. Jacques caught twelve trout, Mr. King caught six, and Mr. Seton Thompson caught seven. On Thursday, Mr. Jacques caught eight trout, Mr. Allen caught six, and Mr. King seven trout. On Friday, Mr. Jacques caught twelve, and Mr. Sam Sinclair fifteen trout, the heaviest weighing 2lb. On Saturday, Mr. Sam Sinclair caught eighteen trout, and Major White twelve. On Monday, Mr. Phillips caught eight trout, and Mr. Allen thirteen, the heaviest weighing 1½lb. Sir David Richmond, fishing from the Royal Cottage, caught thirteen trout. Owing to the cold weather of the last week the takes were not so good.—**H. M.**

Lochleven (Kinross).—The weather has been bright and oppressive with a gusty wind from the south-west during the week, and the catches up to Tuesday were fair. On that day, however, a dullness which continued for a few hours enabled anglers to obtain capital sport with fly. Mr. R. D. Croall, Edinburgh, had thirty trout, 21lb.; Mr. Dixon, Glasgow, eighteen, 10lb. Several anglers who came from England to engage in the national competition on the loch on Wednesday had fair creels, viz.—Messrs. Wright and Woodruff, London, eleven trout, 6lb.; Mr. D. Slater, Newark, twenty-one, 10lb. 8oz.; and an angler from Northumberland, seventeen, 10lb. Other anglers out were Mr. Cargie, Edinburgh, seventeen trout, 14½lb.; Mr. J. Gordon Mason, Edinburgh, twenty-five, 13lb.; Mr. Young, Glasgow, eighteen, 12lb.; Messrs. Clarke, London, fourteen, 6lb. 8oz.; Mr. O'Hanlon, Manchester, eighteen, 11lb.; Mr. Wilson, Falkirk, fifteen, 12lb.; Mr. C. Stewart, Edinburgh, seventeen, 11lb.; Mr. T. B. Bennet, Edinburgh, twenty-three, 12lb. 8oz.; Mr. Spencer Shelley, Ceylon, twenty-one, 13lb. The two most successful angling clubs out during the week were Glasgow Buckland (nine rods), sixty-three trout, 41lb. (first, Mr. A. Brown, seventeen trout, 9lb. 9oz.; second, Mr. N. Thomson, nine, 9lb. 2oz.); West of Scotland Club (sixteen rods), ninety-nine trout, 51lb. 14oz. (first, Dr. Clark, eleven trout, 6lb.; second, Mr. J. M. Ross, nine, 4lb. 12oz.). The number of trout captured last month was 5448, which weighed 3785½lb., or 1292 less than in May last year. Their average weight was only 11oz, compared with 11½oz. in 1898, which also produced smaller fish in May than usual.

TELEGRAM.—Thursday Morning, June 8.—The twentieth annual competition of the National Angling Clubs was held on Loch Leven on Wednesday, June 7, in favourable weather; and good sport was got by the forty-three club representatives who took part. The championship was gained by Mr. Lewis Spence, Edinburgh, for the second time, with a catch of twenty-eight trout, 16lb. 8oz. He represented the Ellem Fishing Club. Fuller details in next issue.—**ROBERT LAING.**

Loch Ness (Foyers Hotel, N.B.).—Fishing on Loch Mhor has been satisfactory on the whole during the past week, very good baskets having been taken. On Monday, Mr. W. J. Maclean, Inverness, had a nice basket of nine trout, weighing 7lb.; Mr. Burstall, of London, seventeen trout, 11lb.; Mr. J. C. Shaw, Cheltenham, three trout, 1½lb.; Capt. Cowans, Fort George, nine trout, 6lb.; Capt. Walsh and Mr. Morgan, of Cheltenham, ten trout, 7lb. On Wednesday, Capt. Walsh and Mr. Morgan got sixteen trout, 8½lb.; and Mr. Shaw, nine trout, 5½lb. On Thursday, Mr. Shaw and Mr. Morgan got five trout, 5lb.; Capt. Walsh, twenty-three trout, 11lb.; and Mr. Pemberton, five trout, 2½lb. On Friday, Capt. Walsh and Mr. Morgan got twenty-one trout, 11½lb.; Mr. Parsons, of Brighton, and Mr. Pemberton, eleven trout, 5lb.; Mr. Shaw, fourteen trout, 9lb. On Saturday, Mr. Morgan and Capt. Walsh got twenty trout, 11½lb.; and Mr. Shaw, nine trout, 8½lb. The heaviest trout for the week was killed by Mr. Shaw, and weighed 2½lb.—**S. TILSTON.**

Melviech (Sutherlandshire).—On May 31, Mr. Fraser had fifty trout, 16lb.; Messrs. Howden and Drysdale, twenty-five, 13½lb.; Messrs. W. Fraser and Fisher, thirty-three, 12lb.; Mr. W. Randall, thirty, 12lb.; Mr. A. Morrison, three, 2½lb.; Mr. Pritchard, twenty-nine, 19lb.; Mr. C. Randall, sea fishing, 100lb. cod. On June 1, Messrs. Fisher and W. Fraser, twenty-eight trout, 13lb.; Mr. Deas, thirty, 11½lb.; Messrs. Fraser and Drysdale, thirteen, 8lb.; Mr. Pritchard, three, 4lb.; Mr. W. Randall, twelve, 8lb.; Mr. C. Randall, eighteen, 8lb.; Messrs. Glass and Heywood, eleven, 5lb. On June 2, Mr. Pritchard had eight, 6lb.; Mr. Nicholson, twelve, 6lb.; Mr. W. Randall, twelve, 6lb.; Messrs. W. Fraser and Drysdale, sixteen, 8½lb.; Messrs. Glass and Greig, fifteen, 8½lb.; Messrs. C. Fraser and Heywood, sixteen, 7lb.; Messrs. Howden and Deas, thirty-three, 12½lb. On June 3, Mr. Tom Morrison had a salmon of 10lb. on the

Halladale; Mr. W. Randall, five trout, 4lb.; Messrs. Howden and Heywood, twenty-two, 11lb.; Mr. Pritchard, thirteen, 4lb.; Messrs. Fraser and Deas, thirteen, 6lb.; Messrs. Glass and Fisher, twenty-four, 9lb. On June 8, Messrs. Glass and Fraser had thirteen, 7lb.; Mr. W. Randall, seven, 5lb.; Messrs. Greig and Fisher, seventeen, 9lb.; Mr. Heywood, twenty-eight, 13lb.; Messrs. Drysdale and Howden, thirty-five, 17lb.; Mr. Pritchard, one, 1lb. 11oz. (first fish off this loch, stocked April, 1895); Mr. Deas, twenty, 9lb.; Mr. Nicholson, eighteen, 8lb.—A. MACINTOSH.

Naver (Bettyhill, via Thurso, N.B.).—During the past week very little salmon angling has been attempted, owing to unfavourable conditions. Most of the anglers betook themselves to trout fishing on the lochs. Mr. Gill, Syre Lodge, had only three salmon for the whole week; Major Burnell-Milnes, Dalvina Lodge, had only two; and Mr. and Mrs. Smith, Skelpick Lodge, one each. Mr. Smith's fish was a beauty of 18lb. On 1st inst. two gentlemen from Bettyhill Hotel made a lovely basket of trout, one of which weighed 3lb., and two others, 2lb. each, and the whole 10lb. On 2nd, one angler was out for about an hour, and got a fine basket of 6lb.—B.

North-East of Scotland.—The advent of real summer weather at last has sent down the level of the streams with a vengeance, and angling, difficult before, is doubly more so now. The only sport a-going is with morning or evening angling. The supplies of salmon are but light as yet, and grilse are so scarce that they are sometimes not quoted, so that there are really few fresh fish entering the river, and what are getting away during the Sundays are running right through. On the Braemar waters Mr. McDonald's guests are having very fair sport. On the Balmoral waters, Viscount Cross, Lord Privy Seal, has been out daily, and along with Mr. Mather, the Munsie, and others, have creeled a considerable number of fish. On the Crathie section of the Dee, Mr. Nicol had one of 10lb., one of 5lb., one of 16lb. on different occasions last week; while Mr. Ferguson caught two, of 6lb. and 7lb., and Col. Hickson, one of 5½ lb., on same beat. On the Fife water, McHardy, gillie, creeled one of 6½ lb. and one of 6lb.; while Mr. Webster had one of 10lb. On the Ballater and Cambus O'May reaches a shower is much needed to freshen up the pools. Sport fairly good. On the Birkhall section, Capt. Lumsden creeled one of 8lb., one of 6½ lb., and one of 7lb.; while Lundie, keeper, had one or two of similar weights. On the Glentana water, Mr. Buntel creeled two, of 8lb. and 9lb., three, of 7lb., 7lb., and 14lb., and one of 8lb.; while Mr. Farrer had one of 18lb., two, of 9lb. and 14lb.; Mr. Baily, three, of 8lb., 8lb., and 8lb.; and Mr. Style, three, of similar weights; and Campbell, two, of 8lb. and 11lb. On the Huntly Arms water, Dr. Stephenson and others creeled ten fish, ranging from 6lb. to 23lb. On the Dess water, Harper and others had five fish, scaling 6lb., 9lb., 10lb., 11lb., and 19lb., making over a hundred for the season up to date. On the Kincairdine Lodge section, Mr. J. G. Orr creeled three, of 6lb., 6lb., and 6½ lb. On the Borrowstone water, Mr. Beck had one of 6lb.; and Nicoll, keeper, four, of 6½ lb., 7lb., 11lb., and 12lb. On Carlisle, Mr. J. C. Haslam landed a beauty of 8lb.; while Capt. L. Scrivener had one, 8lb., W. Levett one, 6lb., and Mr. Crawford Logan two, of 7lb. and 8lb., on the Balligoe water. On the Woodend section, John Mortimer creeled three, of 7lb., 9lb., and 9lb. On the Cairnton water, Mr. T. Turner Farley had to do with thirty fish in three days of last week, seventeen of which he landed, all ranging from 6lb. to 18lb. On the Kinneskie and lower waters an occasional fish is being got. On the Ugie, Mr. Blankert, Leicester, and friend had a week's fishing later with but fair results. The Ythan tidal is now open, and good baskets of finnock and sea trout are being made. **WEDNESDAY NIGHT.**—The dull weather of past few days has been very favourable to sport, and prospects are of the brightest, although the pools are of the smallest and clearest, and daily getting more so. On the Braemar waters, Mr. Illingworth had two, of 7lb. and 8lb., on Monday; and four, from 6lb. to 9lb., on Tuesday; while Mrs. Illingworth creeled two, of 7lb. and 9lb. On Upper Invercauld water, Col. Morland landed three, of 6lb., 7lb., and 7½ lb.—G. M.

Overscaig Hotel Waters (via Lairg, N.B.).—Dr. and Mrs. Nesham, Newcastle-on-Tyne, were out Loch Grian on 29th, and got two and a quarter trout, 11lb.; on 30th, on same loch, three dozen, 12lb.; on 1st inst., on Loch Shin, one and three-quarter dozen, 11lb.; on 2nd, on Loch Grian, twenty-five trout, 11lb. On 3rd, Dr. Nesham, on Loch Shin, made a splendid basket of thirty-one trout, 16lb., an average of over ½ lb. each; and Mr. Dodgson, Keston, Kent, on Loch Grian, seventeen trout, 5½ lb. On Monday, this week, Dr. Paradox, Newcastle-on-Tyne, fishing Upper Flag Beat, Loch Shin, landed two and a half dozen trout, 19lb., or an average of close on ½ lb. each; and Mr. Dodgson, on Top Shin Beat, nineteen trout, 6lb. The weather has been unfavourable, but this week there is a change for the better.—B.

Rhiconich Hotel Waters (via Lairg, N.B.).—The weather has been thundery and otherwise adverse to angling. Mr. R. G. London, Kettering, has had the following sport: On 31st ult., on Loch No. 1, twenty trout, 8lb. On 1st inst., on Loch-na-Fechial, thirteen trout, 6lb. On 2nd, on Loch Skirra, fifteen trout, 8lb. On 3rd, on Loch No. 3, thirty trout, averaging about ½ lb. each; and on Monday this week, on Loch Paterson, twenty trout, 12lb.—B.

Scourie Hotel Waters (via Lairg, N.B.).—Although climatic conditions have been adverse to successful angling, there is now a change for the better, and the prospects are excellent. Out for a few hours on Tuesday last week, Dr. Anderson, Perth, had four trout averaging 1lb. each; on Wednesday, fifteen trout, 10lb.; and on Thursday eight trout, 10lb., or an average of 1½ lb. each.—B.

South of Scotland.—Very fine summer weather prevails over the south of Scotland this week. The whole of the streams in this district are down to mid-summer level, and fly fishing during the daytime is about at a standstill. A fair head of sea trout are in the rivers, but, with the low waters, they take some catching, even with the night fly. On several days nice breezes have been on the waters, and some catches of yellow trout have been reported from the different waters. Sea trout, however, have, on the other hand, been very shy. The Stewart tackle should now prove deadly in the hands of those who know how to fish the clear water worm. The Creeper bait is hardly ever fished in the rivers on the Scotch side of the Border. On the Eden of Solway it is a favourite lure for brown trout. Loch fishing is giving better sport, and some fair baskets have been caught on windy days with fly. For the lochs nothing has killed better than the Black and Silver, the Black Spider and Silver Body. The Hare Lug and Woodcock, the Quill Body, and Blae Wing has also done well. One angler had a fair basket with a small fly of Jungle Cook Wing and Silver Body, and for a dropper a Black Gnat. The first grilse of the Solway for the season was caught in the nets on the evening of Wednesday of last week, and several others have been captured since that date. Salmon have been very scarce for a fortnight. The Solway was at one time noted for its grilse migration, but for nine or ten years the annual run of these fish have been exceedingly poor, and the lessees and fishermen now rely more upon sea trout and salmon to square accounts. The following is a note of the angling from the different rivers of this district. **THE ANNAN.**—This river is very low and clear, and angling has been of little good during the daytime with fly. In the Mount Annan water Mr. Pasley-Dirom's keeper killed sixteen sea trout during odd outings in May, and he has had several since. Other rods on the same water are killing an odd sea trout with the Night Fly. In the higher waters the streams are low, and not much sport is going just now. Mr. Learmont had two or three sea trout in the Hoddum Castle water by fishing after dark with Night Fly. The sport in the tidal reaches is of very little account just now. Two anglers had a few yellow trout on Friday night, as also on Saturday evening. A fine brown trout was hooked off the quay wall by a lad on Friday with worm. Some fishermen went to assist, but in hauling the trout up the wall the line broke. The trout was put down at 5lb. **THE NITH.**—This river is too low for sport. Mr. Dick landed a yellow trout of 5½ lb. on the Maxwellton side between the two bridges on Friday. An odd trout or two have been caught, but generally the angling is of little account near Dumfries. In the Mid-Nithsdale portion at Thorhill fishing is confined to the Night Fly, and an occasional sea trout has been landed. Nothing doing on the tributaries. **GALLOWAY LOCHS.**—The lochs are giving better baskets now. On Loch Dungeon, Mr. Walls and Mr. Stewart had fair baskets. A number of visitors out from the Lochinvar Hotel, of Dalry, have had fairly good sport with fly. On the Ken, above Allangibbon, two local anglers killed four dozen yellow trout at two outings. The trout averaged three to the lb. The Deuch, the Polharrow, and Blackwater have done fairly well. **AYRSHIRE LOCHS.**—About a dozen anglers were out on Loch Doon on Saturday. There was too much wind on for heavy baskets, but a number of rods did pretty well. Mr. John McGugan killed a basket of yellow trout weighing 6lb. 8oz.; Mr. D. Fisher, 3lb. 12oz.; Mr. P. Pringle, 3lb.; Mr. R. Craig, 2lb. 9oz.; Mr. McLennan and friend landed twenty-four trout. All the above catches were made with fly. Moderate sport was had on Loch Finlas by members of the angling club and friends. **THE SOLWAY DERWENT.**—Some good sport is to be had on this river among yellow trout by fishing late in the evening. Sea trout are beginning to ascend the Derwent, and after the next flood sport is sure to be first-class. Among the most successful of the Cockermouth and district rods mention may be made of Messrs. J. Wilson, J. Soulsby, J. Thompson, J. Plasket, W. Hetherington, and J. Muller, all of whom have had good catches during the past week in the river and lakes. Brown trout up to 1½ lb. each have been taken in the Cocker. Much heavier trout have fallen to the rods on the lakes. Crummock has afforded some fine fish. The best baskets have been made by Messrs. J. Dixon, J. Beck, G. Falcon, and R. Mitchell. Visitors have had large lake trout by spinning. Mr. and Mrs. Collins and Mr. Melvor, and several others, have done well. Mr. J. Armstrong killed over 100 trout on Wasdale lake last week. There is little sport this week on Ehen, Calder, Irt, &c., owing to the waters being low and the weather against big catches. At the time of writing there are no signs of rain, and not much sport is expected until the rivers are freshened up with a spate. With the first flood after the middle of June, the herling—which affords such rare sport in July—should appear. They always give the best baskets about the middle of July, and on into August. The tidal reaches are the best stretches for these trout.—HEATHERBEEL.

Tweed, Teviot, and other Border Rivers.—During the past week the weather has been all in favour of the fly fisher, glorious sunshine having brought out the natural fly in countless myriads; thus, the trout are now getting into splendid condition. I am sorry to have to chronicle the death of Mr. John Mechie, sen., Kelso, one of the originators of the Kelso Angling Association, and for many years one of its leading members in committee. His demise took place last week, after a very short illness of three days, he being in his eightieth year. None knew better where to get a few nice trout at the time of day or year, and no one knew better how to lure the salmon to his fly. We have seen him many times on the Teviot with his 20ft. bamboo rod, throwing a line from bank to bank, and taking a fish out when the place had been thrashed over by four or five anglers before. There

has not been much doing in the way of big baskets of trout being got during the past week, but on the whole takes have been very fair. Mr. George Robson, on the Tweed, on Monday, had 4½ lb.; Mr. Wm. Sbiell, on the same stream, had 3½ lb.; Mr. James Thompson had also 4lb.; and Mr. A. Simpson 4lb., including one trout of 1lb. weight. On the Teviot some fairly good baskets have also been killed. On Friday, Mr. Robert Affleck, Heiton, had 3½ lb.; his son, Robert, jun., had a similar take. On Saturday, Mr. James Affleck had 5½ lb., of which there were five grayling of nearly ½ lb. each. On the Tweed on Monday morning, Mr. Jas. Steele had a nice dish of two dozen, weighing 7½ lb.; and yesterday he had again a nice lot of fourteen trout weighing 5½ lb., all caught with clear-water worm fishing. Angling competitions amongst the various district clubs have been in evidence during the past week. Evening fishing is now in full swing, and takes are fairly good. Salmon angling on the Tweed and Teviot is just about over for the season on the various waters, but as a rule rod fishing is now done until the back-end. On the Tweed at Tillmouth, Mr. Wm. Stoddart, the keeper, has had one of 6½ lb.; while he had one of the same weight on the Till. On the Rutherford water two salmon have been got, one of 10lb. and one of 11lb. The Tweed net salmon fishings do not improve.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Waters, and Gortnorrabey Hotel, Lough Conn).—Weather very bright; morning and evening best time for angling. Trout anglers are doing fairly well. The best basket was had by Mr. C. Fletcher, getting nine fish, the largest weighing 5lb. Mr. J. Willis Quigley, on the 4th, took a splendid trout, weighing 7lb., with a salmon fly, namely, Lord Kitchener; Messrs. Little and MacNulty also had some good takes of trout. Mr. Jackson had two grilse, 8lb.; Mr. Houghton, one salmon, 11lb.; Dr. Davis, one grilse, 5½ lb. The river is now well stocked with grilse and salmon, and if the weather becomes a little more cloudy anglers may expect good sport.—THE MANAGER.

Ballina (Moy Hotel, Private Waters).—Since last report we are having very fine weather here; water in good order; fish getting more numerous, all the pools being well stocked with grilse, but rising badly owing to bright sunshine. Mr. J. Browne rose several fish during the week. Trout fishers at Rannagar are doing very well, having had some nice baskets during the week, largest scaling 5lb.—JOHN DEVERES.

Ballinderry (Coagh, co. Tyrone).—The water is lowering fast, but this does not so much matter, as angling is only practicable during the evening rise, or natural fly fishing in well timbered portions of the water. An odd salmon has been seen below Ballinderry Bridge, but none killed yet by rod fishers. Up till this week some fair trout bags were made on these and the Ardrea sections.—J. A. B.

Belfast.—The bright weather and clear water have reduced angling almost to a minimum, for scarcely anything has been done on the rivers in the past week. Except in the evenings, on Woodburn dams, few anglers have been out. The recent disturbances also prevented many of the military officers from fishing. These disturbances, bad as they were, were greatly exaggerated, and are now over. Tomist anglers who have to pass through Belfast need have no fear of doing so.—J. A. B.

Blackwater (Benburb, co. Tyrone).—The river is rather low, but in perfect order for evening fishing, which sets in next week as a rule. During the last spate some good baskets of trout were taken by bait fishers, and at the same time the first run of salmon occurred, which was exceptionally early and due to the heavy floods. Mr. John Mills, on the 2nd inst., killed a grilse of 6½ lb. and lost two others.—J. A. B.

Boyle.—As I anticipated more than twelve months ago, the May Fly season of 1899 would be a record one here if the weather had given us only half a chance; as it was, Lough Gard has done exceedingly well, and by the Fish Preservation Society giving it the same attention for another year or so, it is bound to be the greatest trout lake in the three kingdoms. As it is a very large lake, fourteen miles in circumference, I can only give in this report a very small idea of the fish killed there this May Fly season; but I hope to give an accurate account of the full result a little later on. Col. Echazal, on Gara, latter part of season, killed thirty-four trout, largest 3½ lb.; best day, ten fish. Mr. Dickie, in ten days, two rods, in boat, killed ninety-seven trout, largest fish 5½ lb.; best day, sixteen fish. Mr. F. Monson, who fished Gara every day during May Fly season, which was from May 18 to June 4, killed the grand total of 132 trout, largest 6½ lb., total weight 260lb., himself and son only fishing, and during his best day he broke five casting lines in heavy fish. Mr. Fenwick had very fair sport on Gara for the few days he fished it, his best day being eight fish, weighing 19½ lb., largest fish 5lb. Messrs. Lockwood and Shield, of London, had very nice fishing during their stay at Boyle. They fished the three lakes—Gara, Key, and Arrow—but Gara gave their best day, fourteen fish, to boat, Arrow doing next with seven nice fish, largest 5lb. Capt. Watkins killed between Loughs Key and Arrow twenty-three trout, 53½ lb., largest 4½ lb. Mr. and Mrs. Holland, London, were not so fortunate as to numbers; but Mrs. Holland was very fortunate in capturing her largest trout, which scaled 7½ lb., and is now in the hands of Mr. Williams, Dublin, to be set up. Mr. and Mrs. McKenna, Conway, Wales, had nice sport on Arrow, but were a bit late, as the dry, hot weather that set in just as fishing was at its best made each succeeding day worse for the Green Drake fishing. They killed eleven trout, which weighed 30lb., their three largest being 6lb., 5½ lb., and 5lb. each, the laurels in this case also falling to a lady, as Mrs. McKenna

was fortunate in killing the best fish. Mr. Venour from same place, got twenty-four trout, 50½lb., largest 6lb. This fish was a perfect beauty. Mr. Jones, Ardern, Boyle, was fortunate in killing largest fish of season, a beauty of 10lb. It was killed on Lough Key; and Col. Butler, London, got next best fish on Arrow. I have not his exact weight, nor the Colonel's list of fish. The last three days has completely finished our season—broiling hot sun, no wind, and fish completely off. It is such a pity, as up to Sunday, June 4, Gara was keeping good, Messrs. Cahill and O'Connor getting eight trout, which weighed 20lb., but no fishing since. P.S.—Since writing above I got from Col. Butler result of his fishing for this season: Thirty-two trout, largest 7½lb.; most for one day, five fish.—GEORGE TAYLOR.

Cork Rivers.—On the whole sport has been of a poor description on all waters, though on a few favourable days some average takes were had. Salmon and (on those waters that hold them) sea trout are numerous, but it is quite useless to angle for them in the present state of the weather. The waters are running low and the weather is getting hotter, so that prospects are bad for the next few days all round.—T. J. D.

Corrib and Lough Corrib.—Since the present spell of bright, glaring weather set in, morning and evening fishing has been the rule. The river is in fair trim, and seems to be exceptionally well stocked with peal and salmon.—J. A. B.

Erne (Ballyshannon and Belleek).—The following are the particulars: Mr. John Thomson took one salmon of 12lb. on 1st inst.; Sir H. B. Robertson took one salmon of 9lb. on 5th, and one of same weight on 6th; Mr. W. Johnston took one grilse of 5lb. on same day. Trout angling was not so keenly followed up as in the previous week, still the following gentlemen took a good many fair sized trout in the late evenings since last report: Mr. E. A. Ralli, Mr. C. G. Ralli, Mr. T. M. Pike, Mr. G. Antonini, Mr. W. H. Wood, Dr. F. Condon, and others. On Lough Erne a fair number of decent baskets of trout were taken during the past week, but the May Fly has not proved a success up to time of writing in consequence of the bright, hot weather which has continued all the time since the fly came on the water. Amongst the most successful anglers were Mr. Hobson, Mr. Wells, Mr. W. Johnson, Mr. A. Artindale, &c. The weather at present looks anything but prosperous for angling, not the sign of a cloud in the sky, very hot, and north-east wind.—M. ROGAN AND SONS.

Kerry Rivers.—On the whole sport has been decidedly very poor on all the Kerry rivers owing to the very hot weather of the past week.—T. J. D.

Lough Currane (Waterville, co. Kerry).—Sea trout are beginning to give sport at last. A dozen sea trout were had last week, averaging about 2lb. each, and only a few anglers were out. Salmon, peal, and sea trout are now coming up in increased numbers, and should a change to rain take place good sport will follow in all departments. In the tidal waters large shoals of peal and sea trout are awaiting a "fresh" before ascending.

Lough Mask.—Major Ferguson and Mr. Alington's take of fish on above lake, from Mount Gable Hotel, Clonbr: Major Ferguson, in twenty-seven days, caught 324 trout, ranging from ½lb. to 6lb., average weight 1lb. 4oz. Mr. Alington, in fourteen days, caught 164 trout, average 1lb. 3oz., all taken on the fly. I defy any other lake in Ireland to show such a record; other anglers making also large baskets. While trolling on June 5, Mr. Hopkins caught two large trout, 12lb. Weather favourable.

Lough Melvin.—The very bright hot weather during the past week spoiled to a great extent the chances of successful angling for both trout and salmon in this neighbourhood. The following are the particulars: Mr. Chas. Rogers took one salmon of 8lb., on June 1; Mr. James Ellis took one grilse of 5½lb., on same day; and Mr. A. Henderson took another grilse, 5lb., on June 2; Mr. E. Mulhern took one trout (*Salmo ferox*) of 5lb., on June 1, and one of 3½lb. on June 4. Trout fishing was poor during the past week, although late in the evenings a few fair-sized baskets of gillaroos and brown trout were taken.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—Sport was rather dull in all departments in the early part of the past week, owing to bright weather; a change to rain in the latter part has greatly improved matters, and good baskets are had daily by fly anglers. The May Fly is out in good numbers, and trout are taking the artificial well on some days. Mr. Martin lost his cast in a nice salmon on the 2nd (the artificial Drake). A few salmon are reported to be had trolling. Messrs. Crofton, Loverock, Stinford, and Martin were amongst the successful anglers, trolling with natural minnow, on the 23rd. Mrs. Crofton had rather a curious experience. Hooked a nice trout, about 3lb., and when coming to the net, after some minutes' play, the hold gave way; the same fish made a second bound for the bait, still dangling in the water. Weather at present is very favourable for angling purposes.—P. GALLAGHER.

Lough Neagh.—The pollen fisheries are in a flourishing state, and not for some time has trout netting been so good on the lough as in the past fortnight. I learn that some attempts at fly fishing over the sand flats off the Antrim shores were successful. A few salmon are in the lough, but the nets have not yet taken any. Trolling on the tributaries has fallen away greatly.—J. A. B.

Moy (Coghlan's Hotel Waters, Foxford).—Fishing here for the last few days, Major Watkins landed two springers, one 10lb., one 8½lb.; Mr. Scargill, two, one 5lb., one 7½lb. A lot of fish up on the pools. Weather very bright. Some very nice baskets of trout caught. Very good prospects of sport.—ANGLER.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Weather bright and hot; morning and evening

best time for angling. A good many grilse and salmon are showing on the lower pools of the river, but somehow not taking well. Mr. Sampson and friend, four grilse, 19lb.; Mr. Perks, three grilse, 13lb., one salmon, 11lb.; Dr. Franks, two grilse, 7½lb. Trout anglers on the lough are doing fairly well; best take in one day Mr. Cook, seven trout, 5½lb. I have heard of some salmon and grilse being taken on the lough.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—It is all "up" with the Green Drake fishing on the lake for the present, anyhow. It would occupy too much space to give a list of all the baskets made during the last two or three weeks, so I will content myself with mentioning a few of the best. Mr. W. Malsbury Cotham and his son, Mr. Bertram Cotham, have, as usual, had the largest catches. In three days they got ten trout, ten trout, and six trout, weighing 23lb., 22lb., and 16lb., amongst which there were several fish, scaling 3lb., 4lb., and 6lb. Mr. G. Rush's best day was seven trout, largest a gillaroo, 4lb. Mr. A. P. Thornley, of Birmingham, has accounted for a good many creels of big brown and gillaroo trout, and on the river he has had some nice sport among the salmon and grilse. On Friday he landed one salmon 17lb. and two grilse, 6½lb. and 6lb.; on Saturday, one salmon, 14lb., and one grilse, 7lb. Mr. Thornley has been coming to Killaloe for the salmon and trout fishing for twenty-three consecutive years, and those of us here who have known him through all those seasons hold him in the highest regard and esteem. Mr. W. Malsbury Cotham killed, on June 5, on river, two grilse, 7½lb. and 6½lb. Grilse are ascending in vast quantities, and are taking freely on the preserved and free beats. Several have been landed this week, both by visitors and local anglers. We had a fearful thunder, hail, and rain storm yesterday (Tuesday), with the pleasing result that the river has risen considerably, which will induce the salmon and grilse to keep on running.—S. J. HURLEY.

Shannon (Castleconnell).—The river is now in very nice order, but during the past week the sun has been far too brilliant for anglers to have much chance of sport. On Doonass, Mr. G. C. Williams killed one salmon, 24lb., on 30th ult., and one peal, 5lb., on 31st ult. On Prospect, the fishermen killed one peal, 2½lb., on June 1, and one salmon, 16lb., on June 2. On Newgarden, Mr. Astley Creswick killed, May 31, one peal, 5lb.; June 1, one peal, 5lb.; June 2, one peal, 3½lb.; June 3, one peal, 4lb.; June 5, two peal, 4½lb., 5½lb.; June 6, two peal, 3lb., 6½lb. On Hermitage, Lord Massy killed one salmon, 13lb., on May 29. On Woodlands, Mr. G. W. Greenhill killed one peal, 7lb., on June 6. On the Castle fishery, Mrs. Ingham killed one salmon, 8lb., on May 31.—J. ENRIGHT AND SON.

Westmeath Lakes (Mullingar).—Two causes have arisen to put an extinguisher on dapping with the Green Drake, at least for the present, upon these lakes. Since Sunday morning last intensely hot and calm weather has set in, which, No. 1, effectually blocks the sport, and No. 2, the perch fry are now being hatched out, and all the attention of the trout is devoted solely to this diet. Even on Saturday, the 3rd inst.—a perfect day—the fish would simply rise lazily to the fly, but no more. Friday I could not go out. Fair sport was had on the preceding Thursday. Not being in luck I only got two, weighing 6lb., the largest I saw killed on that day being a trout of 7lb., on Lough Owel. A lady informed me to-day that in portions of fifteen days on Lough Ennell she took (two rods) thirty-one trout, weight 54lb. Not so bad for very bad weather.—T. J. W.

Angling Fixtures.

June 11.

Crown and Buckland: Annual dinner.
Hoxton Brothers: Annual dinner.
Lychnobite: Leigh-on-Sea competition.

June 12.

Great Northern Brothers: Visit.

June 13.

Good Intent: Distribution.
Gresham: Lantern lecture by "Straw Hat."

June 14.

" 25.—Elgin: Brake outing.

" 25.—Ormonde: Outing and dinner to Hastings.

" 25.—Phoenix: Brake outing.

" 28.—Walthamstow Brothers: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly finance committee and trustees meeting will take place on Monday evening next, at the Cripplegate Institute, Golden Lane, at eight o'clock, and the general committee at nine.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 10s. from Mr. F. G. Cottrell (South London A.S.) as annual subscription for 1898-9.—R. GHURNEY.

Albion Brothers' Angling Society. The Frampton Arms, Well-street, Hackney.—Wednesday, the 7th, brought us a very good attendance. During the evening the prize money was paid out to successful competitors. We should like to see a good muster on June 14, when, with a little harmony, the prizes will be distributed. I hope that donors of prizes will kindly bring them up to time, nine o'clock. On June 22 we have our supper at the club-room, and June 25 we have a brake outing to Stamford Rivers. All members intending to come to the supper kindly send in names to the secretary.—C. J. K.

Allason United Brothers' Angling Society. Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—Our A.B.S. concert on June 7 was a gigantic success. Mr. J. W. Harris was chairman and Mr. E. Baxter vice, and a good round sum was added to our A.B. box. The chairman and vice and also all kind angling brethren of the neighbouring societies were thanked, also Phil. Phillips, pianist, and all visitors. We made three more members. Will members attend on June 14?—BEN.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On June 6 the meeting was poorly attended, and as there is a lot of business to be transacted before the fishing season commences, I hope to see all members present on June 11.—J. CHAMBERS.

Amicable Waltonian Angling Society. The Fox and French Horn, Clerkenwell Green.—At the last meeting of the above, on June 7, the delegate gave his report of the Central Association, and a vote of thanks was passed for same. Most of the members signified their intentions of taking part in the great Central competition, and it was also arranged that the first competition of the club should take place at Watlingtonbury on June 25 for six good prizes.—G. MERRY.

Anchor and Hope Angling Society. Duke of Kent, Old Kent-road, S.E.—A large number of members assembled on Wednesday evening, when a lot of important business was gone through. Mr. Wyatt was elected an hon. member. Will members who have not already done so kindly attend and clear books, when they can receive their privilege tickets? Our first monthly competition will be held in July. I have still a few tickets left for the Central Association competition on June 18.—F. W. MARTIN.

Anglers' Pride Angling Society. Duke of Suffolk, Brandon-street, Walworth.—Will all members, old and new, attend on Wednesday next for important business and privilege tickets? Club open at nine o'clock. This society is out for new members every Wednesday evening. Rules can be seen at the above house.—A. A. C.

Battersea Friendly Angling Society. Queen's Hotel, Queen's-road, Battersea, S.W.—On June 6 Messrs. Hines, Griffiths, Clephane, Newman, Stafford, and Loudon were elected members, and Messrs. Harris and Gillingham were proposed. The prospects of the coming season are very encouraging. Our delegate presented a satisfactory report of Central Association meeting, and a prize was forwarded for the coming competition at Pulborough.—A. JENKINS.

Battersea Piscatorials. Lord Ranelagh, Verona-street, Battersea.—Since last report we have nominated another new member. Will members who require privilege tickets kindly let me have their subscription for same? We have had three more prizes added to our list—Mr. Hart, two, of 10s. 6d., and Mr. Stratton, 7s. 6d., for largest perch.—T. TRINGHAM.

Blackfriars Angling Society. The Imperial, Southwark-street, S.E.—Will members turn up in force next Wednesday, as I expect to have privilege tickets and prize list in hand? Any gentlemen, honorary or working, kindly let me know whether they require privilege ticket or silver cup competition tickets.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society. Rose and Crown, Broad-street, Bloomsbury.—On May 31 Mr. G. Gill was elected a working member. On June 7 a hearty vote of thanks was accorded to Mr. J. Yong on his retirement from the post of salesman, which he has ably filled for many years. Mr. J. Taylor was elected his successor for the coming season. Mr. J. Neale was elected a working member.—T. PATERNOSTER.

Brompton Angling Society. Doyley Arms, Marlborough-road, Chelsea, S.W.—The annual dinner takes place on 21st instant, and as the prizes are to be distributed on that occasion it is to be hoped that they will be to hand at least a week before. The influence of the approaching season has already made itself felt, and good attendance is now the order of the day. I am pleased to say that we have made several new members, and have hopes of more. Old members will be sorry to hear that Mr. Moody, who was a member for so many years, is in a very bad state of health, &c., and in this connection I shall be glad to hear from any old friends who can remember their old comrade.—C. ASHBY.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—Our annual dinner on the 6th was a great success. The spread provided by our worthy host, Harry Jackson, did him credit. Mr. Powell West occupied the chair, and kindly presented the prizes won last season to the various winners. After honouring the usual toasts, a pleasant musical evening was spent. We have a long prize list, and I beg to thank those donors who have kindly contributed to same.—F. RANDALL.

Cambridge Heath Frothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—We hold our first prize outing at Dagenham Lake on June 18, for eleven prizes to the value of £7. Members can go down on the 17th by signing the book at the clubhouse after 2 p.m. Start fishing at day-break, cease at 5 p.m. Show fish at the Chequers not later than 6 p.m. Stewards, H. Deverill and C. Wicks. Annual general meeting, June 13, for election of officers, &c. The prize committee's report was accepted with thanks on June 6, when thirty-four members were present, and the membership increased by the election of one working and three honorary members.—P. LOTT.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our first day's outing will take place at Amberley on June 18, for six club prizes; boundary from Park Gates to Timberley Bridge; train from Clapham Junction 8.27, return by the 7.14 from Amberley. We have made three more new members; also seven more prizes have been added to our list.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—We fish a match for three prizes on June 18, at Pulbore; in addition to this, nearly all members will compete in the big competition in aid of the "Jubilee Nurses Fund." Should like to see all our members next Tuesday to receive privileges, and any who have not taken them up kindly communicate to me at once.—S. VIOLET.

Clerkenwell and District United Visiting List.—The concert in connection with the above was a great success, in spite of the hot weather. The arrangements were well carried out by Messrs. Franklin, Pavitt, Parrott, and G. Watling. Mr. Thorling in the chair; Mr. Lummes, vice; and Mr. Eallett, pianist. Plenty of good talent. The committee meet on Tuesday next, at the Empress, to settle up. All returns for programmes to be sent on by that date. The next return visit on this list will be to the Great Northern Brothers, Robin Hood, Southampton-street, King's Cross, on June 12.—F. CASTELL.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Wednesday committee met and arranged prizes for the first outing. On the second Monday in July we have a smoker in aid of A.B.S. and open our box. All friends cordially welcome. Members who require A.B.S. and privilege cards renewed please let me know without delay.—T. FAULKNER.

Collingwood Angling Society, Lord Nelson, Nelson-square, Blackfriars-road, S.E.—All members who wish to enter the Central competition please apply at once for tickets. Those who have not given in their names for privilege tickets please do so at once, in order to make sure of getting them in time. Will members please attend next Wednesday, in order to run over proof of prize list? New rule-book has been given to printer this week.—W. H. STAFFORD.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On June 4 the members and friends had their annual outing to Arundel, where they partook of dinner, served in a very satisfactory manner by Mr. Lee, of the Black Rabbit. A most enjoyable day was spent, all being perfectly satisfied with the arrangements made. On Tuesday, the 6th, a very fair meeting. Some important business was got through, including the arrangements of the season. I am pleased to state that our prize list is up to the usual standard. Will members kindly attend on Tuesday, June 13, to arrange our first outing?—S. MALBY.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Our first match of the season takes place on June 25, at Uxbridge.—W. JENKINS.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—At our general meeting, held last Tuesday, the following office bearers were elected for the ensuing year: Chairman, Mr. S. Gathercole; vice-chairman, Mr. F. Mathews; treasurer, Mr. Rotherham; auditors, Messrs. Mathews and J. R. Smith; hon. sec., Mr. A. Traquair. An outing has been arranged for June 18; particulars will be found in next week's *Fishing Gazette*.—A. T.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—Those wishing to join a club for the coming season would do well by calling at the clubhouse on Thursday next. We shall be pleased to enrol a few good working members. We have a substantial prize list to start with. Anyone joining by June 14 will have free access to all prizes.—C. ROSSER.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—We had a fair muster on Tuesday night; several more prizes given. Will members come on Sunday or Tuesday? There are some prizes to allot so as to have the list printed before the opening of season. We have room for a few more working members. Any gentleman wishing to join can see rules at the bar.—A. W. ELLINS.

Good Intent Angling Society, The Crown, Chunch-street, Shoreditch.—Through unforeseen circumstances our return visit had to be postponed; thanking all those that took the trouble to come. Our distribution of prizes takes place on Tuesday, the 13th inst. The secre-

tary will be at the club-house on Saturday and Monday evenings to receive and pay out.—R. MURPHY.

Great Northern Brothers' Angling Society, Robin Hood, Southampton-street, Pentonville.—The next Clerkenwell and district visit will be paid to the above society on Monday next, June 12, when we hope to receive the hearty support of our brother anglers.—J. A. FITCH.

Greenwich Angling Society, Morden Arms, Circus-street, Greenwich.—Our annual dinner took place last evening at the clubhouse, Mr. G. H. Dowsett, our president, in the chair, when about forty sat down to an excellent repast provided by Mr. Wilson, of 50, Cleveland-street. Mr. Church was in the vice-chair, and the following members and friends attended: Messrs. W. Marshall, E. and A. Lewis, H. Long, J. Dupere, W. Vernon, W. Lambert, Dr. Whitewood, A. T. Waring, J. Steer, J. K. Orsman, H. Scott, A. Slater, M. H. Smith, A. and H. Burgess, T. Thurston, G. Allen, A. R. Mathews, W. Gorton, Harvey, Hodgson, Jones, McManns, McMiller, &c. A capital programme, under the direction of Mr. Gorton, musical director, was arranged, the artistes being Mr. Frost Lambert, Mr. Rutter, Harry Knight, J. F. Crowley, Fred Putner, Harry Boorman, and a recitation by Dr. Whitewood, our oldest hon. member. During an interval the secretary read the list of prize-winners for last season, as follows: Mr. Church, 1st gross weight; Mr. Robinson, 2nd ditto; best perch, Mr. Freak; best roach, Mr. Dryden; best pike, Mr. Church; best barbel, Mr. Robinson; best roach, public water only, Mr. Harvey; best bream, Mr. Dryden; best chub, Mr. Robinson; best dace, Mr. Steer; best trout, Mr. Young; best fish at outing, Mr. Dupere, with whiting, 2½lb. Our prize list for the ensuing season was opened and £16 16s. promises in the room.—J. DRYDEN.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had our annual supper and distribution of prizes on Monday last, and I am pleased to say it was a distinct success. We booked over £20 private prizes. To-morrow night will be the first night of the change, and I hope to see all members present.—A. E. PAYNE.

Highbury Angling Society, Globe Hotel, Upper TOLLINGTON-road, Holloway, N.—Taking advantage of the May Fly season several members have met with success, the best result being a 4lb 2oz. and a 1lb 10½oz. fish to Mr. C. Briggs, scoring four points in the challenge cup competition. Three new members were elected on Wednesday, when we also completed the prize list for the coming season.—E. W.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—On Wednesday evening last the first annual meeting of the above society was held, at which the officers were appointed for the ensuing year, and the balance-sheet, which was a very satisfactory one, with a good balance in hand, was passed. The members attended in force, and we have every prospect of a successful year.—A. CLAYTON.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—The above met on Tuesday, 6th inst., when the minutes of the last meeting were read and confirmed. Mr. H. Gates in the chair. The privilege tickets are ready, so that members who intend competing in the cup competition may obtain them from the secretary. Mr. Bolser was proposed as a working member.—J. H. HERBERT.

Isaak Walton Angling Society, Old King John's-road, Mansfield-street, Kingsland-road.—The distribution of annual and special prizes took place on June 7. To celebrate the event the members had a supper, which was served up in a very nice manner by our worthy hostess, Mrs. W. Brown, and was much enjoyed by all present. Mr. G. Nunn presided; vice, Mr. C. Hayward. The prizes were presented by the president, who congratulated each recipient upon their success, and a good list was offered for competition during the coming season. During the evening some capital songs were rendered, and a very pleasant time was brought to a close by according the usual hearty votes of thanks to president, vice-president, secretary, hostess, and pianists. The members will compete for two special prizes on June 18, at Harlow, also for two prizes on Wednesday, 21st inst., at the same place.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Our concert on the 5th was very successful and our room well filled. Our A.B. box was well patronised. Mr. B. Abrahams was in the chair, and his brother officer, Mr. J. Harris, vice. A very enjoyable evening was spent. We return our sincere thanks to the various clubs that gave us their kind support on that occasion.—G. BENEC.

Limehouse Piscatorial Society, 12, Stratfield-street, Limehouse, E.—Our next meeting will be held on Friday, June 16. Will all members wishing to join the outing on the opening day send notice to one of the secretaries not later than Wednesday, 14th inst.? Since our last meeting several valuable prizes have been offered for specimen fish.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville-road, N.—I must request

FOREIGN COMPETITION is often declared to be the cause of much of the suffering in this country, and we are told that the number of foreigners in England make it very difficult for the Englishman to get a living. However this may be, it is certainly true that the presence of foreign matter in the blood endangers the health of the whole system. To purify the blood and to correct disorders of the liver and stomach, the only certain, safe, and agreeable medicine is Holloway's Pills. If you suffer from gout, rheumatism, or lumbago, scalds, burns, or similar evils, you must use, with the least possible delay, Holloway's Ointment. For over half-a-century these famous remedies have been the faithful friend of man.

members in arrears to turn up on Wednesday next to make themselves eligible for our outing at Pulbore on the 18th, on which occasion we have six good prizes. At our last meeting Messrs. E. Bryant, T. Evans, J. Moffat, W. Symes, and J. Field were proposed as working members, and will be balloted for next week; Messrs. G. Green and F. Alger, honorary members. Members that wish to go by the conveyance from the club on the 18th must give their names in next week.—W. WATLING.

Liverpool Angling Association, Bee Hive, Queen-square.—The splendid weather now prevailing, and which appears to have come to stay, has made angling the pleasantest of recreations, and many fish have made acquaintance with strange quarters. Several members of this association have done well with trout and grayling, but I am not allowed to mention names or waters. It is too calm and bright for our Pen-y-Cae fishery to do well, as a hard, windy (fairly) day is the weather which appears to bring them on. Anglers are very chary in telling where they have had sport, which may be the right thing nowadays, when permission in good water is difficult to obtain, but it used not to be so. The Rivington reservoirs are now providing very fair trout fishing, being almost a sure find, and not dear. It was a "happy" thought—readers kindly excuse my saying so—when it occurred to me to approach the water committee, to ascertain if the right of fishing which was originally vested in the landholders could be bought back. After some correspondence and interviews with the late town clerk and the water engineer, it was conceded that in the next Act of Parliament compulsory powers should be sought to enable the rights to be bought back. The Act was passed, and the corporation became possessed of the "spoiling" rights, fishing, and shooting. Only one gentleman refused to sell, but, as the result of an action at law, he was compelled to do so. Thus the fishing became the property of the ratepayers through the corporation, and they and others are permitted to angle at 1s. 6d. and 3s. per day, and under a code of conditions. I then went in for stocking with trout, and finally induced the water committee to place 1000 two-year-olds in the upper reservoirs. I asked for 2000, and I believe the other 1000 will be put chased. I am now endeavouring to induce the committee to put on punts or boats for the comfort and convenience of fishermen.—R. WOOLFALL.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—A meeting of this society will be held on Tuesday evening next, at nine o'clock sharp; and as this is the first one held since the beginning of the close season I hope to see a good attendance of members.—A. E. HENDON.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Our dinner at the Railway Hotel, Brixham-on-Crouch, was a grand success. Will honorary members please remit payment for their privilege tickets? Our meeting nights are now Wednesday and Sunday, at the Crown and Anchor, Cheshire-street, Bethnal Green; C. Friedlander, proprietor.—G. BARRS.

Ormonde Angling Society, The Rose, Saville-place, Lambeth-road, S.E.—We have an outing to Pulbore on June 18. On June 25 we have an outing and dinner at Hastings. There was a good muster on our meeting night, June 6, when two more honorary members were made.—A. HOLBROW.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham.—A special meeting will be held on June 16. Members who want privilege and benevolent tickets must let me know at once. I have the tickets for the competition at Pulbore on the 18th; I hope every member will take care. Mr. W. J. Luff has promised to photo the club members at Pulbore on that date.—G. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—Will members please show up next week to arrange prizes for brake outing to King's Langley, on June 25?—R. C.

Queen's Piscatorial Society, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On June 6 we had a fairly good meeting, making four new members. Will members please call for privilege tickets; all those who have not yet paid for ticket are requested to do so at once.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—At our last meeting we were very well attended, and got through a vast amount of business. Mr. F. Pain was elected a working member. We also added four new prizes to our list, which bids fair to exceed all previous seasons. We have some important business to transact next meeting, and should like to see all members present.—J. GIBBONS.

St. John's Wood Piscatorial Society.—Several of our members were out on the 4th inst., among those weighing in Mr. Ashley having a nice trout of 4lb., which is the largest up to the present.—H. B.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—At our last meeting Mr. G. Richards was elected a member, and Mr. G. Newcomb was proposed a member. Mr. W. Bignell was elected secretary in place of W. Anstey, who, owing to removing to the country, has resigned the post.—W. ANSTAY.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—The above club held their annual general meeting on Tuesday last, when there was a good attendance, and the following officers were re-elected and elected for the ensuing season: President, Mr. Fletcher; vice-president, Mr. Williams; secretary, R. Smith; committee, Messrs. Thurston, Abrahams, Dent, Clark, Jacobs, Woollen, Williams, Fletcher, and Tree. Hon. members' subscriptions are now due, and the privilege tickets are ready. Will members kindly meet at nine o'clock on Tuesday next?—R. SMITH.

South Bermondsey Piscatorial Institute. Rotherhithe New-road, S.E.—Eighteen members met at Mr. Fawcett's house on June 4 to form the group photo, and I am sure it is worth a vote of thanks to our old friend for the manner in which he supplied us with refreshments and cordial greeting. Mr. Fred Viner, of Southwark Park-road, was punctual to his promise, and was very pleased the weather permitted without delay. The following are the names of members that were present: Messrs. Fawcett, Giddy, Sutherland, Read, Mills, Pascoe, Beasley, Smith, Clark, Castin, Byers Bros., Thomas, Farmer, Whiclow, Moore, sen., Moore, jun., and your humble servant. I have further to inform the members that I intend sending off for Central tickets on Friday next, so any member requiring same please attend on Friday, nine o'clock sharp.—J. H. DAVIES.

Stockwell Angling Society. Old Queen's Head, Stockwell-road, S.W.—A special meeting of the above took place on Thursday last, the secretary producing balance sheet showing a satisfactory amount in treasurer's hands. Two new members were enrolled and five prizes presented by members, in addition to those already on the list. The previous acting officials were re-elected, and a vote of thanks tendered to them for their services. A brake will leave the White Horse, Brixton, on June 18 to enable members to catch the early train.—THOS. LUCAS.

Sundial Angling Society. Plough and Harrow, King-street, Hammersmith.—I wish to remind members that next meeting night is the last before the opening of the season, and members requiring privilege tickets and A.B.S. tickets to give their names in on that night.—C. E. LOCK.

Wagoners' Angling Society. White Lion, Albert Embankment.—We had a good attendance on the 6th, Mr. H. Walton in the chair. Some very important business was got through. Eight more prizes have been added to our list, and we have a grand one to start upon. Members please notice the arrangements take place on Tuesday next for our first match.—H. C.

Walham Green and Chelsea Angling Society. Black Bull, Fulham-road, S.W.—We had a full attendance of members on Tuesday night, and several members made application for tickets for the A.B.S. competition for the opening Sunday, when we hope to fully represent the society. Arrangements will be made for a brake to convey our members to London Bridge on the morning, and members are requested to attend next week and give in their names if they wish to go in the brake.—TIDDLER.

Walthamstow Brothers' Angling Society. Essex Arms, Forest-road, Walthamstow.—Will members please note change of secretary? Our annual dinner takes place on June 23, at above address, at which they hope to see a good muster. A special meeting takes place on Wednesday next, 14th inst., and all members are requested to attend.—W. PAPWORTH.

Walworth Waltonians Angling Society. St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—I want every member to turn up on Wednesday next, as we have to elect several new members, and also officers for the ensuing season.—W. WRAY.

Wellington Angling Society. Prince George, Hillingdon-street, S.E.—Our distribution of prizes took place on Tuesday, May 30. Our host offered a substantial prize to fish for. After the distribution the rest of the evening was spent in harmony. Mr. Cook being specially to the front with his merriment. Our quarterly night is on Tuesday night, June 13. I hope all members will attend.—F. WESTOBY.

Wenlock Angling Society. Rydon Arms, New North-road.—On the 1st inst. we had a good number of members present when some important business was done. Hoping those absent members will now show up early to arrange prize list for the ensuing season; we had two new members proposed, and still have room for more.—W. HARDEN.

Western Piscatorials. Berwick Arms, Berners-street, W.—We held our annual supper and concert on June 7, when, with the united efforts of members and friends, a most enjoyable evening was spent.—ED. L. STOWEY.

West Ham Brothers' Angling Society. Coach and Horses, The Grove, Stratford.—I wish to remind our members that it is our quarterly night on Wednesday next, June 14; and I hope our members will not forget our peg-down match on June 18, at Hatfield Peverel; all to go down by the train that leaves Stratford at 12.9 a.m. on Saturday night, and leaves Forest Gate Station at 12.21 a.m.—R. LOWTHER.

Woolwich Brothers' Angling Society. Railway Tavern, Plumstead-road, Plumstead.—The annual dinner and distribution of prizes took place at above on the 18th ult. After doing justice to the excellent spread put on by our host, Mr. H. Garland, the numerous prizes were presented to the prize winners by the chairman, Mr. A. Sanders, of the Lord Howick. During the course of the evening a good prize list was compiled for the ensuing season, and a most enjoyable night came only too soon to a close. The prize winners were: Messrs. F. Cresswell, J. Hicks, J. R. Howcroft, W. G. Northam, F. D. Caywood, G. Bird, W. A. Jeff, J. Sharp, P. Smith, J. Wensley. Artists: Messrs. J. Howes, W. Everett, J. Cramp, G. Rowlerson, F. Cresswell, and G. Wilson (pianist). Will members please turn up in force on Wednesday next to finish the adjourned meeting before the season opens; also let me know which association ticket they require.—P. SMITH.

Ye Olde Clapham Rovers' Angling Club. The Windmill, Clapham Park-road.—The annual supper and distribution of prizes, followed by a select smoking concert, took place at the Windmill, Clapham Park-road, on Tuesday evening. The supper was excellently served by Messrs. Chivers Bros., and after the guests had duly enjoyed the excellent bill of fare, harmony was the order

of the evening. Amongst the artists who contributed in no mean manner to the enjoyable vocal talent was Mr. Harry Edwards (mine host), Mr. J. Wyatt, Mr. Whiting, Mr. Nat. Linden, Mr. A. Cook, Mr. E. Clarke, and Masters F. and J. Edwards played a pianoforte and violin duet in excellent style. Mr. T. Gloster, one of the oldest anglers in South Lambeth, also gave "Hopping in Kent." Mr. C. Edwards and Arthur Gibbards likewise proved excellent entertainers, Mr. C. Clarke efficiently accompanying. A presentation of prizes was made to Mr. T. Gloster, Mr. Harry Gloster, Mr. F. Taylor, and Mr. J. Johnson, it being mentioned that the heaviest weight of fish for the year being also prized to Mr. T. Gloster. The prizes next year are to be for articles, and not money, and a large prize list was immediately promised, Mr. Wyatt, Mr. Piper, Mr. Nat. Linden, Mr. Wheeling, set of fireirons; Mr. J. Jones, Mr. Chivers, Harry Edwards, G. Gloster, T. Gloster, all offering prizes from 5s. upwards. The secretary mentioned the great saving effected by the privilege tickets, and asked for new members to come into the society. It was resolved that each prize should be fished for separately. After the usual toasts and votes of thanks, the evening passed very pleasantly away.

LONGLEY'S HOLIDAY GUIDES FOR 1899 are, if possible, better than ever. Written from the publisher's actual observation, bountifully illustrated (many with maps or plans), and thoroughly up to date, they are, indeed, wonderful value for a penny, and as George Augustus Sala (no mean authority) justly wrote, notwithstanding their cheapness, "could scarcely be equalled in their handiness and conciseness." They are sixty-seven in number, and cover most parts of the Three Kingdoms, besides several Continental resorts, and a specimen copy, with full list, will be sent on receipt of three half-penny stamps, by Mr. Longley, 39, Warwick-lane, E.C.

Doatings by the Way.

THIS was on the back of the very pretty menu of the Nottingham Wellington A.S. My friend, Harry Spray, "culled" it from "Nottingham Bailey":

Of all the rivers in the land,
Thou most I love, fair Trent,
For in thy stream and by thy banks
My happiest hours I've spent.
'Twas here, hard by, I first drew breath,
There hope to end my days,
And everywhere I'll tell till death,
My native river's praise.
O Shannon hath a wilder shore,
And Thames a richer freight,
And silver-linked Forth is banked
By more baronial state;
But neither hath a purer wave,
Nor deeper, stiller stream;
'Tis quiet as a grassy grave,
Or a saint's dying dream.
Let me, in sunshine or in storm,
Still linger by her side;
I'll always look on her with love,
And speak of her with pride.
By rock and mead, and grove and isle,
She goes from deep to deep;
I love her in her dawning smile,
And in her sunset sleep.
And when she riseth with the rain,
And bringeth forth her flood,
And sweeps up to the high town's foot
Her spoil of field and wood,—
I love her more than ever then,
For then she hath her will;
And over mounds, and herds, and men,
She bears the victory still.

May such a calm triumphant course
To sacred souls be given,
That, river-like, though born on earth,
They image only Heaven;
And tending ever towards the light,
In this their earthly race,
Meet, mixing with eternity,
In joy, their Maker's face.

THE *Daily Mail* says: "Llanfblodwell Church is without an incumbent, and through some oversight no arrangements were made for the conducting of the service at a funeral last Saturday. The mourners waited half an hour, and then requested the Mayor and Town Clerk of Oswestry, who were present, to read the service. Then somebody recollected seeing a strange clergyman fishing in the river, and ran off to beg his help. The rev. gentleman soon arrived on the scene, and, although not in quite suitable attire for a burying, performed the service." [May the day be far distant when I shall have to run about to find someone to bury me "dacent"! Was there not an epitaph to the following effect? "Sure, if I live till I die (which I hope I never shall), that I'll never be buried in Whittlesea Churchyard, to be drowned all the days of my life."]

NOTWITHSTANDING the intense heat of the past week, the Royal Aquarium has been kept delightfully cool. This is due in part to the construction of the building, and for the remainder to the capital ventilation. A continuous entertainment is kept going throughout the day, which for

all-round variety and general excellence it would be impossible to beat. The Chess Congress continues daily in St. Stephen's Hall.

"YE Olde Ben Jonson," in Shoe-lane, besides being noted as the headquarters of the Lychnobites Angling Society, is one of the most ancient of the old London taverns, its history being associated with such men as Dr. Johnson, Boswell, Goldsmith, and goodness knows who besides. The news reached me the other day that the entire business has now been transferred to Mr. L. Chaplais, and I was pleased to hear it. No one wishes Mr. Chaplais more success than I do, as during his long connection with the old house he has proved himself a most genial manager, and above all a good friend to anglers, as the Lychnobites can testify. His brother, Mr. C. Chaplais, also presides at the Elenheim Arms, Notting Hill, the headquarters of the Elgin Angling Society.

WHAT a pity it is that we cannot have more than seven days in one week. Just imagine the advantages of fourteen. There would be two Mondays for languishing, two Tuesdays for thinking about starting business, two Wednesdays for work, five Thursdays, two Fridays for contemplation and anticipation of the double screw on Saturdays, and two—who said anything about fishing? Surely in this age of progress the dream is not quite without hope of realization?

"TROUT CULTURE ON THE ITCHEN" forms an attractive article, beautifully illustrated, in the *Illustrated Sporting and Dramatic News* of the 3rd inst. Mr. Corrie's fishery, which is described in the article, has been again and again referred to in these columns. It is most interesting to note that at last the theory of years seems to have been practically put into operation, and the hatching of fly larvae and its transfer to foreign waters is an accomplished fact. It would appear that Mr. Corrie has worked out a method for raising fat Olive Duns, May Flies, &c., literally by the million. The value of this cannot be over-rated; given swarms of fly larvae, shrimps, snails, &c., and trout will always multiply and pay for stocking. It is on water which is barren of natural food that money is so often thrown away on re-stocking with trout, whether it be two-year-olds, yearlings, or fry.

WITH the issue of No. 1, the proprietors of *The Penny Pictorial Magazine* have most certainly "gone one better." The new pennyworth is full from cover to cover with bright and cleverly written articles exceptionally well illustrated. "Snapshots of celebrated people" form a most attractive page; "How animals are trained to do tricks" is indeed an eye opener; "A fleetlet in being" makes one hunger to know the proprietor and the locale of this miniature navy; "How I photographed Eve's tomb" is quite up-to-date magazine work; "The language of perfumes" is a charming disclosure, and the other "specials," far too numerous to be detailed, contained in the fifty-six pages under review are of exceptional excellence.

THE adjourned annual meeting of the Kingston Piscatorial Society will be held on Monday evening next, at 8 o'clock. Subsequent meetings during the summer at 9 o'clock.

A CORRESPONDENT sends me a cutting from a Limerick paper, in which is propounded a poser: "When is a trout not a trout?" I have have had this sort of worry before.—"When is a man not a man?" "When he's a shaving." "When is a child not a child?" "When it's (forgive the neutral, ye mothers of British boys and girls) a-teething" (tea-thing, see?), and so forth, and so on; but it would appear from the serious decision of Mr. Hickson and his brother magistrates, sitting in all solemnity at the Limerick Petty Sessions, that a trout ceases to be a trout when it is white! or, in other words, when it's a sea-trout. Certainly! Why not?

SERIOUSLY speaking, in the eye of the law, I believe that migratory salmonidae come under the jurisdiction of the Salmon Fisheries Act, and therefore—though still remaining trout from Dame Nature's point of view—are actually salmon when viewed in a legal aspect. It did not require a Hibernian decision to make evident the fact that the law still continues "a haas." Here is the report referred to:

"Mr. Hickson and his brother magistrates were engaged at to-day's Petty Sessions in deciding the momentous question, 'When is a trout not a trout?' The answer, as settled for them by that great authority on Natural History, an Act of Parliament, was, 'When it's a sea trout.' This valuable information was conveyed through the medium of a prosecution instituted by the Fishery Conservators against Mr. Michael O'Shaughnessy, who apparently laboured under the mistaken impression that a trout is always a trout and not a salmon. The 5 & 6 Vict. c. 106, and half a dozen other acts quoted by Mr. Connihan, solicitor, conclusively proved that there was a case in which a trout was not a trout. A brown trout is a trout, undeniably; but a white sea trout is not a trout, but a salmon. The magistrates thought that Mr. O'Shaughnessy's mistake that a trout was always a trout was an excusable one, and that if he went fishing for trout it was reasonable that he should assume a sea trout was a trout. By Act of Parliament, of course, a sea trout is a species of salmon, and the angler requires a salmon license to fish for it, and, by virtue of this doctrine, Mr. Connihan pressed for the minimum penalty of double the amount of a salmon license. The bench, who had no doubt profited with the defendant by the information that a trout might

not be a trout, dismissed the case without prejudices. It is stated that the prosecutors, shocked by this flouting of the Act of Parliament, will appeal."

ON Thursday, June 1, the remains of the late lamented Mr. E. Foreman, formerly chairman of the Piscatorial Society, were laid to rest in Brompton Cemetery. The attendance was very large, comprising not only the relatives and personal friends of the family, but the employees of the firm of which he was the head, together with their wives and families, who came to show the last respect they could to their excellent and kind employer. Several members of the Piscatorial Society were present, including Mr. O'Dowd and Dr. Coaks, who came from Margate to attend the funeral. There were also present Mr. Brown, of the Brompton A.S., and Mr. W. H. Elsmore, who attended on behalf of the Central Association, by special request.

THE coarse fishing in the river Stour, at Grove Ferry, under the care of the Canterbury Preservation Society, will open on 16th inst. The river keeper (Mr. J. Kirby) reports that immense quantities of roach, &c., have been noticed on the spawning beds, in larger numbers than have been seen for many years, and have safely returned to the deeps, there being every prospect of an exceptionally good season. One member, during the winter months, captured 127 pike, all of fair size.

It is not often that fifty tench weigh 1cwt., yet this number and weight were sent away from the Manor Fishery, Caistor, Lincolnshire, this week, and safely reached their destination. Mr. Ford also recently took from one of his ponds six carp, of only four years old, that weighed 48lb. He has probably the largest Loch Leven trout in the British Isles. They are monsters of 12lb. to 16lb., and about a yard in length. Mr. Ford has had a record season.

THE Central Association of London Angling Clubs announce a roving angling competition, to take place in the Central's fishery, at Pulborough, on June 18, for the Walter Emden 20-guinea cup, the vice-president's 5-guinea cup, and several other valuable prizes. Additional prizes will be thankfully received. Complete list of prizes and conditions of match will be distributed on the morning. Tickets to be stamped and weighing of fish will take place at the Arun Hotel. Tickets, 1s. each, to be obtained of Mr. C. A. Medcalf (chairman), 13, Holywell-row, E.C.; Mr. Eldridge, "Rose and Crown," Goswell-road; or of the secretary, Mr. W. J. Wade, 6, Priter-road, London, S.E.

THE particulars of the capture of a large trout from the Thames are not to hand, but the fish is said to weigh 17lb. 3oz., and was taken at Radcot! We shall see!

It is not often that the *Daily Mail* spreads itself prematurely. The angling doves were fluttered on the 5th inst. by the mighty voice of the Harmsworth h'porth proclaiming to the world that a regiment of 150 or 170 men went forth on the previous Sunday to kill fish. "Angling Trippers," is a capital lift to our genial and deserving friend Eldridge, of 110 miles for 2s. 6d. renown; but had it not better have been pigeon-holed until after the 16th inst.? The Mundella Act surely applies to the Arun. Here is the report:

"ANGLING TRIPPERS. Sunday Morning Scene at London Bridge. London Bridge station was the scene of a strangely interesting gathering and departure in the early hours of yesterday. In the main hall of the famous terminus there assembled a company of men whose looks denoted an errand of grave issue. From the north they came, and from the south, possibly from the east also, and from the west. Over London Bridge they strode with swinging step, for there was no traffic at that hour and no cross-current of humanity to bar their way. Up High-street, Borough, they swept on the wings of the morning. In twos and threes they appeared in rapid succession between twenty minutes to seven and five minutes off seven o'clock, and when the last man to bustle on to the platform had arrived there was a regiment of 150 or 170 men, who, it was plain to see, were going forth to kill. Each man carried over his shoulder a weapon of death, neither rifle nor blade, and each in tin can of curious shape his ammunition for the day. The more sanguine had empty baskets slung about them, with a slit in the lid, and spoke airily of the dead these baskets would hold before night. During the few minutes before the train started eager men tested their weapons to see that all was well. From long canvas coverings they slipped lengths of slender cane, with which they swished at the air. Satisfied that the canes would stand some expected strain, they tied them up again, and then busied themselves with reels of gut and spider twine, which they took from their pockets.

"EVEN at seven o'clock the morning was warm, and some of these early risers wiped their brows after their exertions, and talked in snatches of the grim business of the day. 'It will be warm when we get there,' said one, 'but we'll catch them nicely in the shade.' 'Well, I hope to have a few myself,' replied another, 'and eat 'em, too.' To capture and devour was the desire of those 150 men. And while London still vainly strove to shut out the morning sun, while milkmen were a-yodeling in the Borough, and the hot-roll merchants were creeping from their lairs, those 150 men steamed out of London on Sunday angling bent. They were having half a crown's worth each—a hundred and some odd miles there and back

by rail, and nine and a half hours to prow about at the other end. They were bound for Pulborough and Amberley, on the Arun, in Sussex, and they hoped to capture anything from perch and roach to grayling.

"EVERY Sunday in summer they go forth to fish the waters of the south, or to nod in the sunshine by the river's brim. In August they number sometimes 500 or 600, and some of them go on Saturday night and stay until Monday morning. They are anglers of the most pronounced and most amiable type, and they exert themselves in this manner every week-end, month after month, in scorching sunshine or soaking rain, simply for fun. They have been doing it for years, and, being anglers, will probably never lose their curious habit." [Dear! dear!]

THE fourteenth annual dinner of the New Albion Piscatorial Society was held at Bridge House Hotel on June 8, when Mr. Selwyn J. Willie, in the absence of Mr. J. Bailey, M.P., proposed the toast of the evening. W. F. Grimmert very ably responded, Mr. Joseph Wood presided. The preservation and angling societies were toasted with enthusiasm, and a great future was prophesied for the club, the members of which were reported to have caught a record number of big fish. This up-to-date club numbers nearly one hundred.

A CORRESPONDENT, at present on a visit to Llanymynech, writes: "This pretty neighbourhood is now seen at its best, as, in addition to the chestnut trees, which are now at their best, the white and purple lilacs are in full bloom, the laburnum is showing a wealth of bright yellow blossom, and the hawthorn—red and white—will in a few days arrive at perfection. At this season of the year a more delightful stroll could not possibly be enjoyed than a walk up the north side of the river Vyrnwy, from the bridge at Llanymynech to the aqueduct at Newbridge, on the road to Llansantffraid, as the whole of these fields are full of beautiful hawthorn, nearly all now in full bloom."

THE following account of a peg-down fishing match is from the *Toronto Evening News*, dated May 1: "One of the greatest events in modern piscatorial annals took place on Saturday afternoon at Center Island, when the first peg-down fishing match in Canada took place under the auspices of the Toronto Rod and Gun Club. The scene was the entrance to the Long Pond. The shores of historical Mugs' Landing were visible in the distance on one hand, and on the other could be seen the bridge with the Alpine ramp, which is one of Ald. Hallam's 'foot-prints in the sands of time.' The voices of the Australian swans, whose detention by the Customs caused an international difficulty between the said alderman and the Dominion authorities, lent their glories to the surrounding beauties. It was a great match. The fish heard of it in the morning from some corporation labourers who were out of the foreman's sight on a dock smoking at the rate of fifteen cents an hour. Thereupon the fish gathered up their household goods and emigrated to Ashbridge's Bay. The corporation labourers saw them go, and grinned, and when the members of the club arrived later and took up their allotted stations the enterprising patrons of the public taxes proceeded to haul a mud scow along the front of the fishing station. Then the fishermen rose in wrath and went away to another spot.

"HERE once again they lined out and took up positions. The rules of the sport were that each man must finish with the boundaries of his station on the shore, but there was no limit to the length of his rod or line, or quantity of bait. Only one hook per man allowed. Secretary Page started the match. 'Are you ready?' he yelled. 'We are,' replied the members. 'Then let her rip!' shouted the secretary. Fifteen lines ripped the surface of the lake, and fifteen pairs of eyes watched fifteen floats bobbing about in the water. The sun shone peacefully on the Hallam monument, and all was calm and still for a time. There came a yell from the extreme left, and Bro. Pearsall was seen working vigorously as he manned the capstan of his rod. After an interval of excitement he landed a cat-fish about four inches long. Then Bro. Domelle gave a shout which widened the break of day, and flicked a gasping perch from the water with much grace and sang froid.

"ALL this roused Brother Ellis to action. He had been sitting in a box with a rail across it, but for once this well-known device had failed to bring him luck. He got out of his box, got into a canoe, and, heaving up a flock of fish with his raddle, proceeded to drive them over to his fishing station. He succeeded in this, but the unforeseen intervened. Another member got into Mr. Ellis's box and took up his rod and line. Just as the fish came within sight of the bait the angler in the box saw them. He was so filled with admiration of Brother Ellis's ingenuity that he lost his balance and fell out of the box. This frightened the fish, which broke and scattered in all directions. One of them took along the shore, and as it passed Vice-President Howarth the latter saw it. With a quick and adroit movement he hooked, but the speed of the fish was too great and it got away. It was a big fish.

"BUT it was not the big fish of the day. That one got away, too, after giving Brother Morgan an awful time. Having caught two perch he felt he was away in the lead, and crossed to the other side of the pond. He was fishing away with great energy and vigour when he felt a jerk which almost pulled the boat from which he was fishing under the water. He struck hard and played out the line;

there was a rush and swirl, and a huge pike rose out of the eddies caused by its tail, and then shot under. Brother Morgan felt that this pike was 3ft. 6in. long. He played with the fish, and the fish played with him, and again it rose to the surface. Brother Morgan saw half of it out of water. He declared it was 4ft. long. It dived and darted and plunged and came to the top again. This time the angler saw all but its tail. He vowed it was 4ft. 6in. long.

"AND then the creature went through its final manoeuvre. It turned a double-back/somersault, swallowed itself, turned itself inside out and spit itself up again. By this simple trick it disengaged itself from the hook. Then it came to the surface, and Brother Morgan saw its full length. He declared it was 5ft. long. It turned over on its back, fanned itself with its fins, rolled over and winked at Brother Morgan. 'If I had caught you I would hold a greater empire than has been,' said the fisherman. And the pike beat twice on the water with his tail, and swam away into the red eye of the setting sun. As Brother Morgan saw him go, he was quite positive that the fish looked 6ft. long. And he reeled up his line and declared that his enthusiasm had gone from him. The history of that fish and its marked length will be preserved in the archives of the club."

THE "Angler's Record" (No. 23) is to hand, and right worthily does it sustain its reputation. Amongst the good things it contains is an article on barbel fishing, from Messrs. Hardy Brothers' catalogue; "An Angling Tour in Norway," by W. A. Cummins; a lot of chatty news connected with the Leeds clubs, &c. In answer to several correspondents, the "Angler's Record" will be sent post free for 1s. on application to Mr. F. A. Redding, publisher, Wellington-road, Leeds.

I HEAR from a Deal friend that six days ago a certain well-known sea fisherman took his annual dip, "since which time only two fish have been taken from the pier!" Was the gentleman's name Squid?

THE excursions to Pulborough and Amberley, engineered by Mr. A. A. Eldridge, are now in full swing, leaving London Bridge station at the usual time. Mr. Eldridge always has a monster competition once a year, and it will take place on July 2. Entrance fee 6d., added to the prizes. Full particulars on application to Mr. Eldridge, Rose and Crown, 21, Goswell-road, E.C.

A SPLENDID specimen of the South African eagle was shot on Tuesday afternoon at Warren Farm Paddock, Suffolk, by Mr. James Harris, of the Sausage Grill Restaurant, St. John-street-road, Islington, while shooting with some gentlemen. The bird was in excellent condition, and measured, from tip of tail to end of its beak, 4ft. 2½in. in length. Last week the capture of a double-headed bream was announced by this skilful Nim-rod. ("Nim" stands for "gun," and "rod"—well, for "rod.") I must certainly try and get half a day off to accompany Mr. Harris, in the hope of securing a few more curiosities to fill up my menagerie.

A RECENT visit to Brandon naturally found me on the banks of the Little Ouse. In company with Mr. Eels, of Newmarket, we were "towed" up the stream (too hot to row), and saw countless thousands of fish only waiting the 16th inst. I may say that there is no close time on this river, but Mr. Rolph, of the Ram Hotel, does his level best to cater for anglers during the legitimate season. I saw a nice chub of 5½lb., and a dace of 10oz. taken by Mr. W. C. Mathews.

I MAY mention that the dining car is a great boon. A fellow who has to leave home before his appetite for breakfast comes round can have a nice little "snack" en route. The attendant and conductor on this Sunday morning train do their work admirably, and it is a big feather in the cap of the G.E.R. for thus catering for their numerous passengers.

THERE is no necessity to remind London or any other coarse fish anglers that before another issue of the *Fishing Gazette* appears the season will be open. A list of stations to which privilege tickets are issued by the various railway companies is given, and next week it is intended to commence a series of short articles on the fishing to be obtained.

THE Gresham A.S. will have "Straw Hat" (of Epsom) on Tuesday next, when he will deliver his lantern lecture on "The Thames." This will be a treat for those who have not heard it, and those who have will go again. His songs (especially the one which sends you all to sleep) are very funny. Instruction as well as amusement will be doled out on Tuesday. All are welcome; come at 8.30 sharp, to Masons' Hall Tavern, Masons'-avenue, Basinghall-street, City, and you will meet as jolly a lot of *bona fide* anglers as are to be met with.

IN another part of the paper will be found a short account of the Nottingham Wellington annual dinner. I journeyed to the Lace Town on Monday, and was fêted, feasted, and treated—well, like a lord. I was very ill, and Mr. W. Gaskell, Harry Spray, and other good boys (not forgetting Mr. Henry, of the Wyresdale Fishery) did their level best to get me to the banquet. I must wait till next week for a full description of my Nottingham visit. DRAGNET.

NO MORE BULKY FISHING BOOKS. PALEY'S TACKLE AND FLY POUCH.

CLOSED.

Length 5 inches, Width 4 inches.

Has nine compartments for keeping Casts, Flies, and Hooks, and, though holding a large quantity of tackle, takes up very little room in the pocket, and, having turned down leather flaps, always keeps closed. It has solid leather backs and waterproof vegetable leaves.

Price—No. 1 size, 1s. 7d.; No. 2 size, 2s. 6d., post free, from all Fishing Tackle Dealers, or

WILLIAM BIRKET, Lord Street, PRESTON.
Wholesale Agents: **S. ALLCOCK & CO., REDDITCH.**

The Best Weekly Paper for the Family Circle is the

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d., by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from
The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

PISCATORIAL SOCIETY.

THERE was a large attendance at Monday's meeting (Mr. E. McFee in the chair), and members had the pleasure of admiring a very handsome Thames trout of 6lb. 12oz., taken by Mr. J. E. Evans. The fortunate captor, in responding for the toast of the successful angler, mentioned that the fish took a tiny bleak, the size of a minnow, and gave most excellent sport. Mr. J. W. Zaehnsdorf and Mr. C. H. Bywaters, who, with Major Graham Gordon and Mr. H. Harden, had made a fishing excursion to Lough Derg, gave a graphic account of their Irish trip. They explained the method of capping followed on the lake, and gave most valuable information to intending visitors there. Considering that the four Piscatorials had rain and hail nearly every day they were out, and that they were too early for the May Fly, they had good sport amongst trout, the heaviest fish taken being one of 4lb. 8oz. The scenery was said to be lovely, the country delightful, the fishing excellent, and the hotel charges most moderate. The May Fly was reported to have been up on the Kennet, but trout had not been taking them freely on the society's waters at Newbury. Mr. W. G. Fletcher had a big fish on, but failed to land it; Mr. C. Stallibrass had a fair trout, and on adjoining private water Mr. Frank Ward creel'd a brace and a half, the largest going 2lb. Dr. Paterson stated that he had had the unique experience of catching trout with the May Fly when there was no fly up, and of being unable to rise a fish when the fly was coming down. Mr. H. H. Brown had six brace of trout from the Lambourne, and one of 2lb. 12oz. from other water, and Mr. H. A. Rolt had several brace (also from the Lambourne) over the size limit. Mr. R. C. Blundell, at Uxbridge, took a brace of fish (returned), and Mr. M. G. E. de Courcy hooked and lost a very large fish in the same water. It was mentioned that chub and dace were taking the fly well, and, as coarse fishing opens on Friday next, the 16th inst., the outlook is most favourable and promising on the society's water there. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Holborn Restaurant on Wednesday, June 7, at 8 p.m., Mr. E. H. Biamley in the chair. Mr. Lane gave some interesting experiences from Walton, where he had seen large quantities of garfish and a large skate about 5ft. long. The water was rather clear for good sport, but a few smelts were taken. Mr. Bates stated that he had been fishing at Torquay, but had not had great sport, which he attributed to the use of long hauling lines, over two to three hundred fathoms in length, and from eight to ten fathoms in depth. Mr. Parker reported good sport from the Royal Sovereign Rocks off Eastbourne, taking plenty of pouting up to 2lb. in weight. Mr. Wood reported fishing off the Five Mile Rough at Southwick, taking plenty of pouting and a sea bream of 2½lb., and further reported that the local fishermen had been taking up to fifty sea bream per day up to 4lb. weight. He further reported that a linesman fishing at the entrance of the harbour took on a small hook a 17lb. bass on soft crab bait. Further, he reported that the Sussex Sea Fisheries Committee had given the netsmen two years for use of present nets without restriction of mesh, and therefore our members would be able in future to obtain living sandeels for bait, the lure so greatly advocated by our veteran, Mr. J. C. Wilcocks, who also spoke on the subject. Mr. Linfoot asked for information regarding August fishing in the Channel Islands, and received information from Mr. Wilcocks, who highly recommended Ferguson, of the fish market, St. Peter's Port, Guernsey, as a reliable man from whom to obtain local information. Mr. Parker showed a chart of the coast near the Sovereign Rocks, and explained the best method of determining one's position by the chart. In reply to a query from Mr. Lane, Mr. Wilcocks explained the best method of taking garfish, or, as they are commonly called, long noses. Speaking of sea bream fishing, the hon. sec. said how gratified he was to hear that these fish were again being taken in quantities off Southwick, and pointed out that the best success was to be obtained by the use of long snoods of at least 4ft. or 5ft. in length. Mr. Minchin spoke in praise of the good sport now to be obtained at Dungeness; members should book to Lydd, and notice should be given to Tom Mills. He also spoke as to the necessity of using wire lines, owing to the heavy tides. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON (Hon. Sec.).

GRESHAM ANGLING SOCIETY.

At the committee and ordinary meetings of this society, held at the Mason's Hall Tavern, Mason's Avenue, Coleman-street, E.C., on Tuesday last, Mr. W. Marshall occupied the chair. There was not a particularly large attendance, so many members having taken advantage of the May Fly season to have a few days' fishing. Reports from various districts showed that the May Fly was still "up," and providing opportunities for good sport with the trout. Still, the May Fly is not so great a favourite with all anglers, even during a very heavy rise, as many remain faithful to the smaller flies, such as the Yellow Dun and the Alder, and claim to do equally well, and, in some cases, infinitely better with these flies. The society's water at Chesham is still yielding good trout, Mr. Wright taking a nice fish of 13in.; Mr. Budgen, several good trout; Mr. Eldred, three, two of which were returned. Mr. Lund secured three brace, but unfortunately found them to be just under the standard, so they were returned for improvement. Mr. Connellan also had some small trout, and from Hertford three trout with the May Fly, besides some dace. Mr. Emery had some fair sport with the May

Fly, including a couple of fine dace (returned, of course). Messrs. Close and Woodruff some fine trout from the Kennet. Mr. Hesse good sport on the Roding, taking some very fine chub with the fly, all returned. Mr. Parker had been away sea fishing at Eastbourne, and did fairly well, considering the time of year, with pouting, flat fish, and ling. Flat fish have been taken up to 1lb. weight at Southend and Leigh, but they were not found to be in good condition. A telegram was read from two members fishing at Loch Leven, but they only captured some 6lb. or 7lb. of trout, the weather not being favourable. Three gentlemen were nominated for membership. A vote of thanks to the chair terminated the meeting. On Tuesday next, the 13th, Mr. J. Jeffrey will read a paper entitled "The Thames," illustrated by the lantern. There will be several songs, too, rendered by Mr. Jeffrey and his son, and we look forward to a very entertaining and instructive evening. Members are requested to bring their friends, and others who do not happen to be friends of the members will be welcome all the same.

HON. SEC.

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

THE adjourned delegate meeting was held at the Bedford Head Hotel, Maiden-lane, W.C., on Monday last, with a crowded attendance of delegates to support the chairman, Mr. Medcalf, and the vice-chairman, Mr. W. H. Elsmore. Several important letters were read concerning railway matters, and referred to the committee. The secretary reported the past season's working of the association had been the most satisfactory of any, and the issue of tickets the largest on record. The private waters, rented for the exclusive use of members, had yielded exceptionally good sport, and the fifteen miles of fishing, without exception the best to be found within sixty miles, had again been rented. Receipts for same were laid on the table for inspection, it being the unanimous opinion of the delegates present that the members had received good value for their subscriptions in the past, and everything pointed to an exceptionally prosperous year. Privilege tickets and guide books for ensuing season were in readiness, and being rapidly distributed to the members. The general committee had performed their laborious duties during the year with signal success, perfect harmony reigning throughout all their deliberations, and a unanimous vote of thanks was accorded them and all officers for their services. The election of officers was proceeded with, and the following were re-elected: President, Mr. C. A. Medcalf; vice-president and T.A.P.S. representative, Mr. W. H. Elsmore; honorary solicitor, Mr. Arthur Price; trustees, Messrs. Thos. Crumplen and W. J. Wade; visiting officer, Mr. C. Watling Tyler, Mr. J. Smith; general committee, Messrs. R. Clark, H. Holder, W. Lawes, J. Levien, G. Merry, R. Marshall, J. Poole, J. Smith, C. Watling, F. J. Williams, and J. Wheelhouse; auditors, Messrs. T. Crumplen and W. H. Elsmore; auditor to the A.B.S., Mr. Elsmore; Anglers' Benevolent Committee, Messrs. C. Watling, J. Levien, G. Haynes, G. Merry, F. Vanbegan, and J. Smith.

The visiting officer reported successful visits to the Royal George, Seymour Brothers, and Victoria Brothers; also that the visiting list would be suspended during the summer months until the end of September. Mr. Elsmore gave an interesting report of the work of the T.A.P.S., giving details of the success and cost of the housing of the barren swans and ducks during the spawning season.

A new society, to be known as the Wandsworth Piscatorial, applied for enrolment; their address is the Winning Post, South-street, Wandsworth, secretary Mr. C. Beale, with eighteen members; also the Merry Anglers, meeting at the Sun, Great Sutton-street, Goswell-road, secretary Mr. G. Merry; and an old established society, the Clapham Junction A.S., requested to be enrolled. In each case their rules were found satisfactory, and they were duly accepted.

On the motion of the president, seconded by Mr. Levien, a letter of condolences and sincere sympathy from the delegates was ordered to be sent to the widow and family of the late Harry Patman. The secretary gave particulars of the arrangements made by the committee in reference to the forthcoming competition at Pulborough on the 18th inst., when the cup presented by Mr. Walter Emden, also one by Mr. W. H. Elsmore, and about fifty valuable prizes will be offered for competition, the following being received since the last list was published: Massive silver Albert from Mr. W. Musgrave, senr.; spinning rod from the Walham Green A.S.; half-guinea from the Battersea Friendly A.S.; a most useful patent briar pipe, "Ours," by the inventor, Mr. A. Clarke. In response to a request from the delegate of the Richmond A.S., the committee have decided to permit any members whose clubhouse is over eight miles from London Bridge the option of going down by the last train on the Saturday evening, providing they have their railway ticket initialed by the president and stay at the Arun Hotel. The host has arranged a special tariff for the members, particulars of which can be obtained from the secretary. All letters should be addressed to W. J. Wade, 6, Priter-road, London, S.E.

THE Thames Yacht Agency, 50, Pall Mall, S.W., have just issued Andrew Thomson's Yachting Guide and Time Tables for 1899. They charge 1s. for it, and it is good value; the tide tables alone are worth more to a sea fisherman, and as many of our readers are yachtsmen as well as fishermen, we make no apology for drawing their attention to this handy little guide, which is easily slipped into a side pocket ready for reference.

RE-STOCKING SUTHERLAND WATERS WITH SALMON AND TROUT.

THE SHIN.—At the instance of Dr. Almond, Edinburgh, 2000 salmon fry from the Duke of Sutherland's hatchery at Brora have been deposited in tributaries of the river Shin. We understand that his grace gave the fish free, and that Dr. Almond bore all the expenses in connection with the conveyance of the fry from Brora to Shin, where the youngsters recently arrived all safe. What result upon the Shin angling this experiment may have remains to be seen, but it will be watched with interest.

THE SKIBO WATERS.—Mr. Andrew Carnegie, Skibo Castle, Sutherland, seldom handles a rifle, but is an ardent votary of the rod. Besides enlarging the castle and making other improvements on his estate, he is also endeavouring to improve the angling sport on the various lochs and streams with which it abounds. Including fry, one year olds, two year olds, and selected large ones of 10in. in length upwards, some 65,000 fish in all are introduced. Into a large pond within the policies of the castle 15,000 *Levenensis*, besides 450 selected fish, have been introduced. Loch Migdale gets 10,000, Loch Gour, Loch Buir, and Loch Laggan, 10,000 each. The remainder are distributed over minor lochs and streams. The bulk of the fish are Loch Levens, the other varieties being rainbows and Sutherland loch trout. Almost all, except the large selected fish, have been taken from the hatcheries of Mr. Arns Sutherland, of the Reay and Melvich Hotels, and the whole have been deposited in the various waters under Mr. Morrison's personal superintendence. The selected large fish and some others were supplied by the Howietoun Fishery Company, Stirling. It is somewhat remarkable that from their homes to their destinations by rail and road no fatalities occurred. After long journeys by rail, carts, and other means the various fish have been successfully lodged by Mr. Morrison in their new homes.

W. T. B.

EARLY MORNING ANGLING ON THE BURE.

KEEN and enthusiastic anglers as many of us are, it takes a great deal to induce us to forsake our beds for a few hours early morning fishing. Although at this time of the day, nine times out of ten, fish are well on the feed, yet few of us, even in summer, care to risk the chilly night and early morning air, notwithstanding the fact that good sport is almost always assured us. Many anglers, however, can look back at "bags" taken in an hour or two at daybreak that would make those who had fished all day envious indeed.

My initial experience of early morning angling took place in some of the lower reaches of the Bure, about a couple of years back. A great friend of mine, George W—, who, by the way, is also a most enthusiastic fisherman, pinned for a day's angling. We had been companions in many a successful expedition to the well-known rivers and broads of Norfolk and Suffolk, until the excursions in question had become very common place and routine. We felt that a new departure was absolutely necessary, and when one of us suddenly thought of an early morning raid upon the stream we eagerly took up the idea, and it was not very long before we were able to put it to a practical test.

Living as we did in that well-known watering-place famous for its bloaters, we were of course in close proximity to several excellent swims; but the greatest difficulty we had to contend against was how to get to them at the proper time. We had made up our minds to fish the Bure, and the first railway station from Yarmouth, near it, is Acle, nine or ten miles away by road or rail, and about twelve by water. Now, we knew of several good swims nothing near so far up the river as that, and consequently it meant either taking a late train to Acle, walking back and hanging about the river bank until day-break, or rowing up from Yarmouth. As I was fortunate in having a small skiff, we decided upon the latter alternative, for it had this advantage, that we could fish on either side of the river.

We agreed that our rendezvous should be a spot near Stracey Arms, a lonely riverside hostelry, which is designated by the wherry-men and others on the river as the seven-mile house. Stracey is a place well known to all local anglers, but, unfortunately, no boats are to be obtained, so, perforce, anglers have to conduct their operations from the banks. Perhaps the greatest difficulty which votariss of the gentle art experience at this spot is the tides. During the spring tides the water comes up from the harbour at Yarmouth in great volume; so much so that salt water can be found several miles through Acle Bridge, and, as a matter of course, angling is entirely out of the question in all the lower reaches of the river. Quite the opposite, however, occurs during the neap tides, when roach have been taken as low down as the Suspension Bridge at Yarmouth.

We had thus to take into consideration the tides in planning our excursion, and this we did. Accordingly, about midnight one Saturday in July, George W—, Toby Blake, and myself embarked in my little skiff for a seven or eight mile row. Our craft was, indeed, pretty full, what with crew, baskets, rods, ground-bait, &c., and there was but little room to move about.

A word about Toby Blake might not be out of place, for, in his way, Toby was a local character. He was a most enthusiastic angler, and his favourite swim was undoubtedly Stracey Arms. It was here that many a grandfather bream has been grased by him. His gear was of the most crude description, his rod, for instance, being a species of a linen prop, whilst his top joint was composed of three umbrellia wires tied together. He used to assert that he had more play with this apology of a rod than we had with ours, costing a guinea or two. Anyhow,

as a proof of Toby's capabilities, he could hold his own with any of us. He was much appreciated by anglers in Yarmouth, for he has on many occasions gone up to his knees in water to help us. His precarious mode of life had its effect, for he died a few months back; but those who knew him best will always reverse his memory.

Such was the man that completed our crew; and, as Toby was an expert oarsman, I think he paid for his keep that day. As I have said, the town clocks had just chimed midnight when we entered from Breydon water the rather insignificant entrance to the Bure. We found we had somewhat miscalculated the tide, for instead of having the benefit of the flood we had to pull against the last drainings down of the ebb. So our progression was but slow. It was very dark, and we had to be very careful of the sloping mud banks on either side of us. Gradually we left the lights of Yarmouth behind, and when out in the open country, with nothing but marshes all round us, it seemed dreary indeed. We each took turns at the oars, whilst Toby now and then would cheer us with some of his favourite ditties. When we had gone a mile or two a ghostly fog came from off the marshes, and the slight breeze sent it scudding in banks to meet us. It chilled us to the marrow, and left us as wet as if we had passed through a shower. The only person we met on the journey was an eel catcher, who, sitting in his punt, loomed out of the fog like a spectre. Soon we began to feel the effects of the flood tide, and the heavily-laden boat made better headway.

When we had gone about five miles Toby tasted the water, and as he asserted it was quite fresh, and all of us having had quite enough of rowing, we decided to stop and try our luck. There was just a suspicion of a streak of light in the east—the fog had lifted, and revealed to us an old water-mill on the left bank. Opposite to this we made the boat fast to the bank, and then put our gear together. I lent Toby a rod and line, with which he clambered ashore, whilst George W— and I fished from the boat. The only ground-bait we had brought with us was creed wheat, and having put a good sprinkling all round us we made a start.

The water was not more than 6ft. deep at this point, and there was a remarkably lazy flood tide—remarkable because hereabouts it nearly always runs like a millrace, and floating is generally out of the question. On this occasion we were able to use a well-shotted goosequill float. Although the light was improving every minute we could only just discern the tops of our quills. George hardly had his line over a minute before I saw him make a grab at his landing net, and into the boat came a bream of about a pound. His very next swim produced another of about the same weight, whilst a cry from Toby heralded the fact that he also was busy. This went on until they both had secured several nice fish, whilst I had not yet had a look in. I was conceited enough to think my reputation as an angler was at stake, and as they appeared to be fishing well on the bottom, I altered my float accordingly, with the result that the very next swim I landed a large bream, and in ten minutes had landed five more, all averaging between one and two pounds.

For two hours or thereabouts, while the tide remained flood, George W— and I were busy landing fish. Toby got so excited at our success that he soon laid his rod down and came to our assistance. On an average, in nearly every other swim, we landed bream of various sizes until our wrists ached. All sorts of baits we used, but the most successful were brandlings; very few of these, however, we had taken with us, for just at that time they were rather difficult to obtain. We economised as much as possible, but the fish were so ravenous that they were satisfied with pieces of worms or the mangled brandling taken out of the previous fish landed.

As I have said, for nearly two hours this went on, but then a great change came o'er the scene. The tide slackened, was stationary a few minutes, and then down came the ebb, and with it away went our good sport. Although the spot was now well ground-baited, and notwithstanding that we tried both ledgering and floating, not the sign of another fish did we see. Soon my patience was exhausted, and then I suggested a move further up the river to our original destination—Stracey Arms, and this we proceeded to do. At Stracey we found a number of anglers who had experienced but poor luck, and we somewhat surprised them by the magnitude of our catch.

After trying several spots with very indifferent success we decided to row back home. The seven miles scull was indeed a toil in the hottest part of the day, but we managed it rather expeditiously by keeping Toby well oiled, or rather by keeping his throat well moist.

Of course the first thing to do upon reaching home was to weigh the catch, and this we found just turned the scale at 5st. We had only taken half a dozen unsizeable fish, and these were at once returned to the water. The "bag" consisted of nothing but bream, and was not a bad one considering the short period it took to obtain it. Besides, only two of us were really responsible for it, as Toby had contributed but two or three fish when he came to watch and assist us. About 3lb. was the weight of the heaviest fish, but more than half the catch was probably under 1lb.

My first trial of early morning fishing was thus a decided success. Many a time since my friend and I have tried our luck at similar expeditions, but we have never beaten in so short a time the catch taken at our initial attempt.

E. W. BUCKLE.

THERE are four short stories in the June *Scribner's*, suitable for the season when the summer travel has just begun. Two of the best known American writers, Henry James and Joel Chandler Harris, will be represented, and two new writers, William Allen White (famous for his editorial, "What's the Matter with Kansas?") and Robert Shackleton, a New York journalist.

Notes from the North.

THUNDER has been frequent during the past week, and some heavy accompanying showers which were welcomed by the hill stream trout, where the water has been getting somewhat thin and clear.

No grilse have as yet reported fallen to the rod of any angler on the Dee. This is somewhat strange, as they are usually seen about a week or so after they are got in the nets, and sometimes even before then. On the other hand, an angler on the Deveron is reported to have creel'd one, and the Deveron is not particularly an early grilse stream, while the Dee undoubtedly is.

The smelt season is now over, and anglers are again in force on the tidal reaches. The Ythan tidal has been yielding some heavy fish, and good average baskets during the past week.

Major Davidson and friends have killed 100 fish on the little water of Dees up to date. It is not half a mile in extent, and on only one bank; but the right one for the fish, although it is the other way about, as the geography would say, being on the north side of the Dee. Harper, the famous salmon slayer, has no doubt accounted for a good few of these. John's favourite moment is just as it is getting dusk.

Mr. Farley had to do with thirty fish in three days on the Dee Cairnton water last week, seventeen of which he landed. One gentleman had thirteen fish to his own rod on the Cambus O'May Dee water the week before last. This is the top score of the season anywhere.

Fresh fish have been running right on from the sea to Aboyne, where they have been got with sea lice on them, thirty miles inland as the crow flies.

Fresh fish are very scarce in the lower pools of the Dee. They are still scarce on the coast, and what fish do get away with the Sunday's slap are running right through to the mud reaches without resting. Hence the phenomenal takes on some beats, while both above and below them blanks are the usual order of the day. Such is luck.

Mr. George Bankart, of Westwalk, Leicester, has been trouting on the Ugie, Aberdeen, and Loch Awe, Argyle. He and a friend came north to the Ugie by way of experiment, but, unfortunately, the weather conditions were dead against them most of the time. Their average was only twenty fish, scaling about 4lb. each, for five days out of ten on which they could fish.

He thinks the Ugie will make an excellent finnock stream in early spring and a sea trout reach in autumn, and we are glad to have our own private opinion endorsed by such an authority. This is all we claim for it.

William Birnie Dewar was mulcted in the Aberdeen Sheriff Court last week in the sum of £44 3s. 10d. for aiding and abetting poachers to dispose of their fish. He had thirty-nine salmon in his possession at different periods during the close time, and disposed of most of them in Edinburgh at about 1s. per lb.

He pleaded guilty; so some very interesting particulars, and some as interested witnesses, were accordingly suppressed. It's a pity, for we revel and gloat over details of this description. It is the lifting of the corner of the curtain revealing a life—the poacher's—the world knows little of. Mr. Duncan, of the Dee Fishery Board, and Mr. Morris, of the Fishmongers' Company, have been working up the evidence for months past.

Anderson, another of the same kidney as Dewar, was mulcted in the sum of £7 11s. 8d. for being in possession of two salmon, which he was trying to send off by parcel post.

Now is the time for lady anglers being abroad if they want sport. They come by the round dozen in September, when there is actually nothing to kill, and they are gone before the October floods prevail. If they would put in an appearance just now they would have the best chance of the season under normal climatic conditions. Mr. and Mrs. Pickering have been killing fish daily on their Dee water scaling up to 12lb.

Mr. Ingram, Inverurie, had a basket of 25lb. one day last week on the Ugie. He is the champion trout angler in these parts. A gentleman writing me thus describes him: "Mr. Ingram (the lessee) was out every day, and basketed a lot of trout. He is the most active man I ever saw on a water—here, there, and everywhere—all over the shop in a few hours. He knows every stream and eddy where a trout might lurk, and, putting his flies over them, would for a certainty make his kill, and then off; always on the move."

Mr. James Berry, Banchory, has let the Kinneskie water for June, but has July yet to dispose of, by day, week, or month. July is the best grilse month, and the

Kinneskie and immediate vicinity is just the place to get them.

"Pheasant Tail's" paper in last week's issue on the otter was so interesting that I scarcely care to intrude any awkward questions. Is it not a fact, however, that where an otter is known to work salmon angling may be suspended, for not a single fish will rest in the pool, however tempting the "lie" may be otherwise? This is a personal observation on the Dee. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A committee meeting of the Birmingham Association was held on Thursday evening last, June 1, at the headquarters. Mr. T. Coles presided, and Mr. L. A. Dance occupied the vice-chair. The meeting was well attended. The minutes of the past meeting were read and adopted, after which the reports of the visiting committee were received. The report of the visit to the Harborne Club was first taken. The report went to show that the club was properly constituted, and that they had a membership of over sixty fully paid-up members. The club had gone in for private water for their members, and had succeeded in renting a trout stream, and also a pool at Bartley-green, and that the whole of the subscriptions would be devoted to renting water and re-stocking. The report was adopted, and the club was accepted. The report of the visit to the Gun Club was also of a satisfactory nature. This club also had about sixty fully paid-up members on their books. No objections were raised by any of the neighbouring clubs, and as the report was in every way satisfactory the club was accepted. The visit to the White Hart club was also satisfactory. The membership of this society was about forty paid-up members. This club was accepted, and the travelling cards were ordered to be issued forthwith. A report was also presented by the committee of the visit to the Baltic Society, who wished to remove from the Baltic Inn, Sherlock Street, to the Albion Inn, Hope Street; the removal was sanctioned. The secretary presented a balance sheet of the late annual dinner, which was received and adopted, after which the committee took into consideration the preliminary matter relating to the annual contest. Three places were named for the approval of the general body of delegates, namely: the Avon, at Wyre; the Severn, Tewkesbury; and the Thames, at Abingdon; the committee being of the opinion that the latter place would be the most suitable. A recommendation was also made that the sum of £55 be granted for prizes. A member of the committee brought a charge against two members of one of the societies of taking a large number of undersized fish from the canal at Kingsbury; the matter was referred to the club to which the members belonged. A number of our clubs that do not rent water have made arrangements to fish their opening contests in the canal at Alrewas; but owing to the locks having to undergo repairs, the canal for some miles has been emptied, and it will be useless for fishing for some considerable time. The part below the Spring Planks has not been interfered with. The length of water here is only sufficient for a small number of members to fish, so large clubs will have to arrange to fish their contests elsewhere. The large Rose and Crown Club have decided to fish their opening contest on June 25 next, in the river Avon, at Bredon. The Lamp Society have decided to fish their opening contest on July 2, in the canal at Droitwich. The members of the St. George's and Birmingham Heath clubs have allowed their members to fish for eels during the close time on the river Anker, the result being that a large number have been taken, some of them close upon 3lb. each. The fine weather has induced a good few of the members to leave Birmingham by the 11.20 p.m. train, and commence to fish before daylight. All those who have adopted this plan have been very successful. The half-yearly subscription of 2d. per member will become due to the Birmingham Association on Saturday, June 17, when the general secretary will attend at the headquarters to receive the same. All clubs not paying on or before this date will be fined 2s. 6d.

FROM DERBYSHIRE.

The glorious summer weather which has at last come to us has brought with it a great improvement in fly angling on the streams of the Peak country. With it also has come the welcome May Fly—the Green Drake—to spend its transient existence on the waters. Other flies, too, are out in countless numbers on the various streams. The changed weather has brought a large increase of angling visitors into the fishing districts, and many of them appear to have met with satisfactory sport. Fish are rising pretty freely in the morning and evening, as late as nine o'clock. The middle part of the day is too hot, and the waters are too bright for successful angling; but dibbing in the shade under trees and bushes has afforded some very fair sport, fish up to 2lb. having been taken by that method. Angling is much better on all parts of the Wye, and both on the open and private waters fly fishers have been numerous and fairly successful as a rule. The Ashwood Dale, Blackwell Mill, Miller's Dale, and Cressbrook lengths have afforded good sport, and several good-sized creels have been made on the private reaches of Monsal Dale, and on the lengths between that place and Ashford and Bakewell. There has, on most days, been the full number of allowed rods on the Bakewell, Haddon Hall, and Rowsley waters, and several good baskets of fine fish have been killed there. The Marquis of Granby, with a party of friends, is staying at the Peacock Inn, Rowsley, for the drake season on the Bradford, Lathkill, and Wye, his father's waters. Several anglers have been out on the two first mentioned of these well-preserved streams, and

TRADE MARK (Regd.).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-. 28/-. 34/-.
11ft., " " 28/-. 30/-. 36/-.
12ft., " " 30/-. 32/-. 38/-.
With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

The diagram shows the hand reversing
the drum.

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Alumi-
nium. The greatest boon to anglers yet invented
for Salmon, Mahaseer, and Trout, and all kinds
of coarse fishing; unsurpassed for long distance
casting; simple, and easy to learn. Rods and
lines specially suited for these reels.

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is
easily operated by the hand, whereby the check
can be regulated at will by simply turning the
milled disc on spindle. This should prove a
great advantage to anglers, as the check can be
regulated without having to take the reel to
pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies
of all sizes. Handy and compact, each fly
secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebony, and
Cocus Wood. Made in 18 different sizes.

ILLUSTRATED PRICE LIST FREE.

Map shows the 18 new stations.

good sport has been had on most of their lengths. Angling of most kinds has been satisfactory on most of the reaches of the Dove; and the lower waters, both private and open, have yielded some capital lots of fish; and the fishing has been equally good on the middle lengths south of Dovedale. Fly anglers have, as a rule, done well on the Dovedale waters, where the visitors are fairly numerous, and several excellent baskets have been made there during the week. Higher up, on the lengths of Mill Dale, Load Mill, and Wolfscote, nice lots of fish have been killed; and very fair sport has been had on the Beresford Dale and Harlington reaches. Some fairly good creels have been made by a few anglers on the neighbouring Manifold; and angling has been satisfactory on the other tributaries of the Dove. Angling on the Derwent has been generally good throughout the week. On the upper reaches in the neighbourhood of Ashopton, Yorkshire Bridge, and Bamford, both fly and bottom fishers, dibbers, and trollers have done well, and some very decent creels have been made; and the Sickleholme, Hathersage, and Grindleford lengths have yielded a goodly number of fine fish to members, and ticket holders of the Hathersage Angling Association. Other lengths of the Derwent valley waters, in the Stoke, Froggatt, and Calver districts, have furnished some excellent sport; and several large baskets have been made there.

FROM HULL AND DISTRICT.

The weather in this district still continues splendid for angling pursuits, and the river Hull and tributary streams being in first-class condition for trout fishing has caused quite an influx of anglers on the banks. A few brace of nice trout have been taken in the streams, and odd fish of fair size have been met with in the top stretches of the river. On the shallows, and at the several backends, there are shoals of roach, dace, and perch scouring themselves, and several good heavy chub have been noticed moving in and out of the weeds near Hempholme, so that there is every prospect of a good season on this river amongst coarse fish when it opens on June 16. Worm fishing for flounders and eels in the tidal waters has been pursued with good success during the past week or so, and at Grove-hill, Weelferry, Wawne, and Danswell several catches of twenty-five to thirty fish each have been made, some of the fish reaching $\frac{1}{2}$ lb. each. The Sandringham Angling Society fished a match on the river at Hull Bridge, and did fairly well, Mr. H. Cooper taking the first prize with 2lb. 5oz., Messrs. A. Mearns and W. H. Ward having a little over 1lb. each for second and third prizes. The fishing on the Market Weighton Canal is advertised to be let by tender, but as both the Hull Amalgamated Anglers' Association and the Hull Preservation Society have meetings during the week no doubt something will be done in respect thereof, for it would be a great pity for the Hull anglers to miss this excellent fishing ground. On the 17th inst. the Globe A.S. and the Royal Oak A.S. each fished a match on this canal at Newport. A few good-sized pike have been taken during the past week by our local anglers from various waters, amongst which Mr. W. Hull had a catch of six fish that scaled in the aggregate a little over 18lb. Worm fishers are also having a good time of it, at tide times, in the havens and drains on both sides of the Humber, amongst flounders and eels, the black-headed worm and shrimps being the best baits, using the latter for ground-bait; and from the Lincolnshire side a few nice sized trout have been shown. On June 17 the Alexandra Angling Association fished their second match this season on the river Ludd, at Thoresby Bridge; and on the same day the River Hull and the Hull Excelsior Angling Societies will hold a joint match on the river Ancholme, at Ferryby Sluice, open to all comers, and as the prizes are numerous no doubt there will be a good force of our local anglers, this being the first steamboat trip down the Humber this season.

FROM THE LAKE DISTRICT.

River fishing during the daytime is not just now a profitable employment or sport-productive. The brilliant weather of the past ten or twelve days, however welcome in other respects, has told upon the baskets now being obtained, and some of our rapid streams already show the effects of a suspended rainfall. It is somewhat early, too, for night fishing, although a few have made a start. With the first heavy fall of rain, sea fish may be looked for. Fair sport has been obtained among the lake trout, especially in Keswick Lake, where, during the past week, a number of splendid specimens have been secured by visitors and local anglers, the best fish being a 4-pounder, which fell a victim to the Green Drake. Amongst the successful ones may be mentioned Messrs. Denwood and Lowther, who have had nearly two dozen trout; Mr. H. Dixon, a score, one of which weighed 3 $\frac{1}{2}$ lb. Other nice fish, some of which scaled 2 $\frac{1}{2}$ lb. and 3 lb. have fallen to the lot of Messrs. G. Lowthian, T. and T. Hodgson, T. Mayson, Hill (Liverpool), A. Wilkinson, J. Spark, T. Hindspith, &c. In the St. John's Beck the Messrs. Stanley have taken their weekly quota.

FROM LANCASHIRE.

Our rivers are now yielding sport of a satisfactory character. The Ribble, with favourable weather, is fishing better all round; more rods get out, and with better results. The fish are in better condition, and rise freely. The most killing flies have been Duns, Dotterel, Dark Snipe, and Purple. The water in the Wyre, although in splendid condition, has not fished up to reputation, and few rods were out in the Garstang district. In the lower reaches sport has been better, but mostly in the evening. Both the fly and minnow have killed good fish, but the tributaries have fished the best. From the Lune we hear of continued good baskets; one from Sedburgh of eleven brace; from the Wenning, two or three over nine brace; from Halton, one rod with the fly,

eleven brace, in the lower reaches. Salmon and sea trout are on the move, and eel and codling fishing at Sunderland Point, near Morecambe, is good. The recent prosecution by the conservators should do a lot of good towards putting down poaching. It is always a pleasure to write of the doings of our friends at Warrington. At their last meeting they elected twenty-seven new members, fourteen senior, and thirteen junior. The next meeting will be a summoned one, to deal with an exceptionally important resolution relating to the River Gowy. Your correspondent was in Warrington on the 1st, and enjoyed his visit immensely; anything more thorough than the way things are worked in that town cannot be imagined. Even the efforts to interest and educate in the public park are worthy of imitation by every corporation. Great Scot! fancy hundreds of trout in a public park in the very heart of a smoky town, 10 in. to 12 in. long, thousands smaller, and all in the best condition. Good old Warrington, may your happiness and prosperity never diminish. The season at Leigh is opened on the 17th by an open event from the Stanley Arms Club, 1s. each entrance, to be added to cash prizes given by Mr. Dawson.

FROM LINCOLNSHIRE.

We have got a spell of warm weather at last, and trout anglers are now busy with the fly. It has been too bright in the middle of the day to do much good; in fact, the fish have shown very little inclination to rise until evening, when they have come up freely, and experienced rodsters have done remarkably well. On some waters as many as five and six brace per rod have been captured as the result of a couple of hours' fishing. Really this has been the best week's sport trout anglers have had since the season began. Bottom fishermen also continue to obtain good sport, especially those operating in the evening with maggot. The waters are in capital condition, and there is every prospect of the sport continuing.

FROM MANCHESTER.

In one short week from the time these notes are in print we shall be free from all legal restrictions as to the taking of coarse fish, and left to our own conscience as to condition. No sooner does the season proper open than we are plunged forthwith into quite a long list of open events and opening matches. On the 17th the following societies fished matches: Buckland, Ardwick; and Victoria, Longsight. On the 18th, Old Standard, Hulme; and Welcome, Hulme; together with others; and then follows in rapid succession one match after another to Oct. 31. The Horseshoe Angling Society, Pendleton, the present holders of the Bridgewater challenge shield, are fishing two contests in the canal at Worsley and Boothstown, and will spare no pains to keep possession of the trophy. The Brookfield Angling Society has joined the County Palatine Angling Association, and the secretary of the parent association informs the writer that their new water is fishing satisfactorily. Some fine perch up to 1 $\frac{1}{2}$ lb. plenty of roach averaging $\frac{3}{4}$ lb., and several pike 5 lb., 4 $\frac{1}{2}$ lb., 4 lb., 3 lb., and smaller are also recorded. The Moss Side Socials have decided to fish their first match at Roynton, on the 24th, 25th, and 26th. Messrs. D. Latimer, J. Lund, J. Birch, W. Tarr, W. Taylor, J. Fisher, J. Bartley, and W. A. Leigh, visiting the Chapel-en-le-Frith reservoir last week-end, report some fair sport. The catch included a pike of 4 lb. and some fair trout. One Manchester rod visiting Toom Bridge took, on fine gut with the Black Gnat, a lovely trout of 4 lb. 10 oz. Several others visiting Pickmere have done well with potato bait; still others at the "Flashes," Winsford, have done well when sampling the water for information as to the condition of the fish. They are convinced, when these waters are opened on the 16th, that good sport will be had with roach, perch, pike, and bream.

FROM NOTTINGHAM.

The coarse fish angling season opens on Friday next, and indications point to roach, chub, dace, and barbel being in forward condition. Recently the sultry weather has had a most beneficial effect in the scouring ordeal of the fish named, and they should provide sport as soon as the Act enables anglers to pursue their favourite pastime. Caddis grubs—the best bait for early season use—are most difficult to obtain, and yearly the supply seems to grow more scarce. No salmon have so far been caught in the river, and not much sport of late has been enjoyed on the tributaries with the various kinds of bottom bait. The Wellington Society's annual banquet was, as usual, a great success. A full report, I take it, appears elsewhere.

FROM SHEFFIELD.

The weather during the past week has been of the finest possible description, and, as a natural result, anglers have been out in large numbers. The best sport has been obtained early in the mornings and during the evenings, the latter portion of the day having been very popular and successful. In the Derwent anglers have obtained a good deal of satisfactory sport, the Darley Dale Club waters having been patronised by fly fishers in great numbers. Some capital fish have been secured, principally by means of the Yellow and Ash Dnn flies. In the Matlock Bridge district, too, the sport has been of a gratifying character. Bottom anglers have not fared so well since the Derwent and the Wye lost their discolouration, but still, some really good fish have been caught by means of worms. At Cromford bottom fishers have fared better during the evenings. The lower reaches of the Derwent have fished much better than formerly, and pond anglers have also done very well during the evenings, fly fishers accounting for a lot of heavy fish. The Amber has been fished by large numbers of Sheffielders, &c., who have accounted for some excellent fish at Wingfield. Locally the reservoir anglers have obtained the best results, the reservoir at Damflask having yielded some big fish, which

succumbed to the allurements of maggots. At Storr's Bridge and Bradfield fishing has been fully up to expectations, a lot of heavy fish having been killed. The upper reaches of the Sheaf have come in for considerable attention, with the result that some fairly satisfactory takes have been made above Beauchief, the river between that beautiful village and Sheffield hardly being worth the trouble of fishing this season. The vast numbers of Sheffield anglers are looking forward with a good deal of pleasurable anticipation to the opening of the coarse fishing season, and the two associations are busy completing the arrangements for the season. Both societies have secured valuable fishing rights in Lincolnshire and other places, but, unfortunately, there is some dispute between them with regard to the rights of a portion of the North Level Drain, Tydd, and another piece of water in the Idle, near Thorne. It is sincerely to be hoped that some means will be found of amicably settling the differences, as they will find it rather expensive if they take the matter into the law courts, which they seem disposed to do. I am glad to see that both societies are going to endeavour to stop the wholesale slaughter of small fish, which has been a bad blot on the fair name of Sheffield anglers for several years.

FROM WORCESTER AND DISTRICT.

The weather has been excessively hot this week, and has produced a marked effect on vegetation. Flies are hatching out in large quantities. The Orle and the Hawthorne are on the water very thickly, and since Monday there has been a good show of Drakes in some districts, in others not one to be seen. I have seen two dishes of fine trout taken from a well-known stream with the Green Drake, but the fish wouldn't look at the artificial fly. On the Teme the Silver Twist, Yellow Dnn, Orle, and Spinners have been killing, and the fish have come at them better, but I have heard of no big takes; five and a half brace is the most I know of, but, no doubt, heavier takes have been had higher up the stream. A brace or two of grayling were hooked, I am told, and they are said to be in wonderful condition for the time of year. I presume they were returned to the water. Several gentlemen have been fishing club waters, and have had excellent sport with fly and maggot. No game fish taken in the Severn in this district, but hundreds have been fishing for coarse fish, and the slaughter has been great. Most of the club members are looking forward to the 16th inst., and are anxious to have some sport. Several clubs have arranged their several contests, which will be more numerous than usual; Severn, Teme, and the Avon will be well patronised, and we trust sport will be good. The Worcester and District United Angling Association held a very important committee meeting on Saturday evening last at the Turk's Head Inn, Lowesmore. In the absence through illness of the president, Mr. L. F. Higgs, the vice-president, Mr. W. Bridges, occupied the chair. The meeting was for the purpose of revising the rules of the association, which were objected to by some as not being definite enough and binding on any club that liked to take coarse fish during the close season, two of the clubs, who look upon themselves as the most aristocratic clubs of the city, wishing to retain that privilege. The matter was hotly debated, but a new rule proposed by Mr. A. Glover, providing for the thorough protection of game fish and coarse fish during their respective close seasons, and also against the taking of immature fish, was put to the meeting and carried by a large majority. Other important alterations and additions were made to the rules which we trust will tend to the better working of the association. Two new clubs are about joining the district association.

FROM YORK AND DISTRICT.

The reports from the riverside stations at the end of last week were more encouraging than they had been for some time, for the wintry conditions which so sadly marred the prospects at Whitsunide had given way under the genial warmth of early summer. The rivers were rapidly running down, and fly fishers had every reason to indulge their brightest hopes and anticipations. Favourite angling resorts have yielded gratifying sport. Some record experiences are reported from the Rye and Riccall, in the Helmsley district. On the Severn, round about Sinnington, trout have risen to the fly in all directions, and good baskets have been taken by skilled anglers. On the Nidd waters fly fishing has been more successful in the evening. Minnow on up-stream fishing has been fairly satisfactory. The Wharfe has continued in capital condition for fly fishing, and good baskets of trout have been secured, the fish including several very fine specimens. Maggots and the worm have taken fairly well on the Otley lengths. The Ure has yielded some nice paniers of trout. On the Ripon lengths the water has been in good order for the Creeper, and as the hot weather advanced the Stone Fly became available. In the lower reaches at Hawes good fish have been hooked. Both here and at Leyburn fly fishers have had the best sport in the early morning and in the evening. Trout fishers have landed a good number of fish, though mostly small in size. The river has run low and somewhat stagnant, and anglers have been hoping for rain. Several fresh inn salmon and salmon trout have been awaiting flood in order to ascend the upper reaches. Coarse fishing opens shortly, and it may be remarked that several Yorkshire rivers provide excellent sport with bait. Grayling promise good sport; both this fish and trout have done well this year on the Wharfe and the Ure.

ORIENTAL BOOKS formerly issued by W. H. Allen and Co.) now published by Sampson Low, Marston and Co., Limited, St. Dunstan's House, Fetter-lane, London, Publishers to the India Office.—A CATALOGUE of these Text Books, Class Books, Histories, and Indian Government Publications can be had on application.

ANSWERS TO CORRESPONDENTS.

H. P. SATLOCK.—The fly sent with the May Fly is an Alder.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

THE RIVER WANDLE.

DEAR SIR,—Wandle fishermen will be grateful to you for drawing public attention to the lamentable destruction of fish which is going on.

I sent you, on Monday, two nice fish found on Saturday evening, done to death by the noxious poison which is being sent down the river. The first, a 7oz. fish, I took out with my landing net, at Hackbridge, about 300 yards below the junction of the Croydon and Carshalton branches, and I saw two others about the same size lying a few yards away. The other fish, of 6oz., was taken from Mr. Denyer's water, the lessee of the third mill on the Carshalton branch, which locates the pollution to within, say, 350 yards of the ponds in the centre of the village. This should materially assist the Carshalton Urban District Council in fixing the responsibility for the pollution in the right quarter.

Mr. Frost, the owner of the next mill below Mr. Denyer's, told me last evening that he had a large fish of between 3lb. and 4lb. lying dead in his mill-head, which proves that the pollution is worse than was thought at first, and I hear reports of many other smaller fish having been seen in various parts of the stream further down.—Yours faithfully,

T. BOWATER VERNON.

The Fly Fishers' Club,
8, Arundel-street, Strand.

TO CATCH SQUIDS, CRAYFISH, AND DORIES.

DEAR SIR,—In answer to your correspondent Francis Howse. When bothered with squids, or requiring them for bait, proceed as follows:

Get a stick, from a yard long upwards, according to the freeboard of boat one is fishing from. A fairly stout willow wand is as good as anything. To the small end of this lash three hooks, about whiting size, back to hack, forming a rough triangle, points outward. Haul up your squid carefully, having your hook arrangement all ready for him, and just as or before the squid lets go make a sudden snatch upwards from below the squid, and you generally hook him. Do not attempt to lift him into the boat at once, for the indignant squid is a most expert marksman and will send a shower of ink into your face, but keep dipping him in and out of the water, when he will soon exhaust his ink-bag. Then lift him aboard.

Another plan is to have two short bits of line, say, a foot long, with smallish triangles attached, hitched on to the main line, to hang about a foot below the baited hook. When the squid lets go of the upper baited hook he generally falls foul of the lower ones.

Either plan is very good, but I prefer the stick and hook one. The Cornishmen call it a cuttle drag. The second, however, is the best if you come across a big crayfish. These chaps are very like a large lobster, only have no big claws, but long sprawling legs. The crayfish holds on to the bait much as the squid does, and lets go in the same manner, when he generally gets the lower hooks twisted round his long legs and rather shabby claws. A crayfish is worth having, for there are pounds of meat in a big one, and though not quite so good as a lobster, the flesh being coarser and harder, he makes a rare curry.

Again, you may get aware of a dory cruising round the boat. If he won't take your bait, a small chad will be sure to do the trick. You take a piece of line and hitch it round just above the chad's tail, using no hook whatever, but lead enough to sink him. The dory promptly swallows the chad—anyhow, gets him well into his throat. Up goes the chad's perch-like back fin, and this sticks in master dory's throat. Hauling steadily on the line, as soon as the dory is within reach, stand by with the gaff or landing net, and welcome him aboard. These few hints are from practical experience in Cornwall.—Yours truly,

W. S. BUDDICOM.

CAMPING OUT IN IRELAND.

DEAR SIR,—Can you or any of your readers oblige me by giving me a little information about a camping-out fishing excursion, which a friend and I are contemplating this summer? For preference we would go to Ireland, if a fairly cheap passage could be got. Sea trout and brown trout fishing in an exceedingly thinly populated district—"far from the madding crowd." We would like to pitch our tent near a farmhouse, and be supplied with such plain fare as we need by the farmer. We would not be fastidious with regard to the provisions, providing everything was clean. A moderate cost would be a *sine qua non*. The fishing would have to be free, or obtainable at a small charge.—Yours truly,

R. BOWEN ROBERTS.

FISHING AT SOUTHEEND.

DEAR SIR,—Your correspondent, R. C. Graham, C.E. (B.S.A.S.), in your last issue protests against the Southend pier extension being closed to anglers. That is a matter for the pier authorities, and his protest would have been equally effectual and in better taste had his caustic remarks regarding the other visitors to the pier been omitted. He might have allowed the pier authorities to have been the best judges of "what he styles" a nuisance. He says that members of the B.S.A.S. deserve some consideration? Where do their especial claims come in? They ought not to fare better than other

anglers, but have the same consideration meted out to them as they recently gave to the working-men anglers.

What lucky Southend Pier anglers they must be who are fortunate enough to fill their larders, and so save their butchers' bills? The pier authorities would have a bad time financially if they had to depend upon B.S.A.S. members.

I am sure the "East End aristocracy" he mentions so unkindly will not mind his absence, and he can avoid contact by taking a boat. It is said that some people fancy the world was made for them alone. Cannot "R. C. G." find a little pleasure in seeing others happy?—Yours faithfully,

CHARLES NUTKINS
(Good Intent A.S.)

FISHING AT TEIGNMOUTH.

DEAR SIR,—I have been a subscriber to your valuable paper for some years, and the unflinching courtesy of yourself and readers in supplying any information is fully recognised and appreciated amongst fishermen.

I am going to Teignmouth the last two weeks in August, and should be glad to find out if there is any decent fishing to be obtained from the shore and pier (including bass). At the same time any information as to respectable lodgings (which must be moderate) for wife and self would be much appreciated.

If you are a stranger to the part, no doubt some of your numerous contributors could supply me with particulars.—Yours truly,

J. B. REED.

FISHING AT NEWQUAY, CORNWALL.

DEAR SIR,—I shall esteem it a great kindness if you, or any of your numerous readers, can give me any information concerning the pollack, bass, and mackerel fishing, during the summer months, at this station.

I much prefer rod fishing with artificial or natural bait, from rocks, jetties, &c., than from a boat.—Yours truly,

ROD AND LINE.

FISHING AT Co. DONEGAL.

DEAR SIR,—Will anyone who has fished in Co. Donegal be good enough to answer the following questions:

1. Can one obtain really good white and brown trout fishing in August in stream and lake?
2. Are plain, but clean, quarters (board and lodging) obtainable at really moderate rates?
3. Is the fishing free; if leave is necessary, from whom is it obtainable?
4. Is a bicycle of any use as a means of getting about?

I shall be grateful for any other information.—Yours faithfully,

SUBALTERN.

KILLARNEY LAKES.

DEAR SIR,—I notice Mr. W. Graham's letter *re* the best killing flies. I inclose you two dozen patterns on eyed hooks. The hackle flies I find most killing when the Green Drake makes its appearance on or about the first week in June, sometimes a little earlier, according to state of weather. The other patterns are the usual standard flies, and are made by Mr. McCarthy, the practical angler, of thirty years' experience on the Killarney Lakes and rivers. No. 1, Orange Grönse; 2, Green Grönse; 3, Green Partridge; 4, Black and Orange; 5, March Brown; 6, Claret; 7, Zulu; 8, Alder; 9, Coch-y-Bondu, Red Tag; 10, Blue Black; 11, Black Palmer; 12, Blue and Yellow Tag, which is also a very killing pattern on Caragh and Waterville, more especially on the Waterville river.

You can judge for yourself, Mr. Editor, whether these flies are well made or not. However, I have killed more trout, accompanying gentlemen fishing on Killarney Lakes, than any other angler who fished there. I kept an account of one year's take for seventy days' fishing, and I find it amounts to 1888 trout. They were all brown trout. Perhaps a few of the largest would only weigh 2lb., as most of the larger trout are taken with spoon or Devon minnow or the natural minnow. I have read Mr. Mark Bench's account of the fishing and his killing flies, made by Mr. W. Haynes, of Cork. No doubt they are good flies, and from a most reliable tackle maker. One would do worse than give Mr. Haynes a trial when coming to Killarney or Waterville; but, kind reader, I want you to know Tim McCarthy is not dead yet, and he continues to hold his own against any other who may use any other flies for Killarney or Waterville.

If the Killarney Association would take up the question of Lord Howth, and agitate for a Royal Commission, and see that they get it, and do away with the net fishing on the lakes during the months of June and July, it would prevent the killing of the goose that laid the golden egg. The fish taken, more especially in July, are brown salmon, and are not fit for market, as they only fetch a few pence per lb. Now is the time to approach Lord Kenmare and the other proprietors of the upper waters and ask them to give up netting during these two months, and they will improve the fishing very soon, and unless that is done the fishing will be worse every year. We want a Royal Commission to have a sworn inquiry into each district, and see how the fishings are managed, more especially on the Killarney No. 7 district, which is netted to death, and not a spawning fish left to run the river in winter months owing to the late fishing by those nets, of 190yds. long, with 200ds. of rope at each side, more or less, according to the different hauling grounds, which are thirty-six in number on the Killarney Lakes.

I ask you, sir, do we want our fishery looked after? I say we do, and I am prepared to give correct evidence of the different modes of netting, as I have ten years' experience on the lakes during my time, also many years at the different other kinds of fishing; and the proprietors of the upper waters are to blame for the great failure of Killarney Lakes and its fishing. I must say that the Messrs. H. A. Herbert, of Muckross, were the only proprietors who ever made the slightest move to

improve the Killarney fishing, but I am sorry to say they are not there now to improve it, worse luck for the inhabitants of Killarney, where over seventy fishermen and boatmen, who got a respectable living in days gone by, are now idle for want of employment, although we still hold the mountains and lakes, but the fish are all gone. I am sorry to see my native town so much neglected by way of depriving the inhabitants of from £200 to £300 a year, which would be gladly spent by the English angler, who spends his money freely when he is encouraged by a little sport; but it is really too bad to have the far-famed Lakes of Killarney so much neglected as they are owing to the over-netting, although several inquiries were held into the matter, and all wound up in the usual bottle of smoke. Hoping, kind readers, to see the hon. gentleman, Lord Howth, at the head of affairs, and his kind inquiry towards helping the fishing of Ireland, which may soon take place. Wishing him every success, and more power to his arm,—I remain, yours sincerely,

T. MCCARTHY

(Practical Angler, late of Killarney, now at Waterville, Kerry).

[The flies sent by Tim McCarthy are lake flies on eyed hooks (Pennell pattern), and are very good patterns. Among them we notice the Worm Fly, which the late Mr. Wm. Black considered very killing for trout.—Ed.]

FISHING AT LIMERICK.

SIR,—I have recently spent a very pleasant trouting holiday in Limerick, and as many of your readers are about this time wondering where they will wet their lines this season, I thought a few hints might be acceptable to such as have not yet made up their minds.

I have often mentally wondered why Limerick as a fishing centre is not better known to the English angling fraternity, and have come to the conclusion that the fault lies with hotel proprietors and other caterers who neglect to advertise the incomparable advantages of their city in your columns, as is done in places not having a tithe of the attractions, from a fisherman's point of view, which Limerick enjoys.

Leaving aside the Shannon, which needs no advertisement, but which it may be said in passing should be fished from a boat, there are numerous streams which contain abundance of trout, are within easy reach of the city by rail or road, and quite free to the man who does not care to sit in a boat all day on a lake, but wants to enjoy his holiday in the true Waltonian sense.

Of these streams the Hincuire is perhaps the best, although I have done much better on less pretentious rivers in the neighborhood. In nearly all the dry fly enthusiast will find ample scope for his skill, and the clear water worm fisher will be delighted with some of them, particularly the Newport river.

The grise run is now on in the Shannon tributaries, but a licence of £1 is necessary.

The Waterford, Limerick, and Western Railway are in touch with most of the streams, and I am in a position to state that they will grant special facilities to anglers making Limerick their headquarters. This railway is also in touch with the many beauty spots and health resorts of the S.W. and W. of Ireland, and any inquiry addressed to the courteous manager at Limerick, or the London agent at 2, Charing Cross, will elicit a prompt reply and full information.

Hotel accommodation is cheap and good. At Mrs. McCarthy's, Upper Cecil-street, the charges are 6s. 6d. a day, or 35s. a week; and at Geary's Hotel, Thomas-street, 30s. to 35s. weekly.

Another place I visited was Listowel, beautifully situated on the Feale, a grand salmon, grise, and trout river, in addition to which the Gale and the Inverlagh are famous for their trouting capabilities. The tariff for anglers at the Listowel Arms Hotel is 55s. a week, or 50s. if stopping for four weeks.

Should any brother angler desire further information, I shall be glad to do all in my power to enable him to enjoy a thoroughly good time in the city of the violated treaty and neighborhood.—Yours truly,

J. B.

SEATON (DEVONS).

DEAR SIR,—I shall be glad if you or any of your readers acquainted with this place would kindly say what fly fishing is to be had by a visitor, and if not free, can weekly tickets be purchased?—Yours truly,

H. E.

TROUT WITH MUDDY FLAVOUR.

DEAR SIR,—Re Mr. W. Clements, in your last week's paper, and how to remove muddy flavour in trout. Split open and take the backbone out, and fry the fish as you would a sole, but dr-dge them slightly with brown sugar, and salt when partly done.—Yours truly,

HERTFORD.

TESTIMONIAL TO BEN ABRAHAMS.

DEAR SIR,—We are pleased to acknowledge the following sums with thanks:

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Book-stalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One year, post free to any part of Great Britain and Ireland	10s. 6d.
Six Months ditto	5s. 4d.
Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	27 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The life of every Advertiser and Subscriber is insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

Telegraphic Address—"RIVSAM, London."
TELEPHONE, No. 83 Holborn.

WITH WHICH IS INCORPORATED

ANGLING AND CLUB GOSSIP.

SATURDAY, JUNE 17TH, 1899.

SOME REMARKS ON THE ARTICLE ENTITLED "RESTORATION OF SALMON RIVERS."

The *Fishing Gazette* of April 29 last contained an article by "J. W. W.," prompted by Mr. R. B. Marston's article of "The Thames as a Salmon River," which appeared in the *Nineteenth Century Magazine*, also of April last.

"J. W. W.," referring to "many of the successful attempts to deal with salmonless rivers in past years," cites as a case in point the introduction of salmon into the streams entering Loch Shin, described by "Ephemera," on p. 172 *et seq.* in his "Book of the Salmon," and which "J. W. W." says "was written by Mr. Andrew Young, of Invershin, at that time manager of the Duke of Sutherland's fishings" there.

In order to be exact, I am afraid this is not, for more reasons than one, literally correct.

"J. W. W.'s" second paragraph of his article, from "Loch Shin, a piece of water," &c., to the end, although nearly *verbatim*, is not "quoted," I presume because he has made one or two corrections of the text from "Ephemera." One of these clearly, I think, stamps the authorship upon Mr. Fitzgibbon, especially where he describes Loch Shin as about twenty-one

miles "by fourteen." "J. W. W." corrects this to "about twenty-one miles by a half to four miles broad." Lyall's "Sportsman's Guide" says the loch is "some sixteen miles long by about a mile broad." It would be more correct, I think, to say eighteen miles long by less than the average of a mile broad. No part, indeed, of the loch is more than a mile broad, and for a considerable distance towards its northern end it narrows very considerably. But a further reason against Mr. Andrew Young's authorship of the paragraph is that the language is not only the language of "Ephemera," but that Mr. Andrew Young had never been able to put his observations and experiments in regard to the salmon in writing. This was done for him by Mr. William Young, parish schoolmaster at Lairg at the time (whether a relative or not cannot be said); and well, I think it should be said, did he perform his task, as the copious extracts from Mr. Andrew Young's pamphlet show throughout "Ephemera's" "Book of the Salmon." No doubt, however, the information in regard to this paragraph had been given by Mr. Andrew Young to Mr. Fitzgibbon on the occasion of his month's stay at Invershin, in the summer of 1849, of which "Ephemera" tells his readers.

The amazing part, however, of this altogether amazing par is that wherein "Ephemera" says: "The loch itself has four feeders, middling-sized rivers, viz., the Terry, Fiack (should be Fiag), Garvie, and Curry, in which, previously to the year 1836, not a salmon was ever seen." Of the conveyance, think, in that year before the spawning season of salmon from the river Shin, of the success attending their introduction, and then we are told in "Ephemera's" most picturesque style in the last sentence of the par, that, "Being nubile to perform the nuptial rights, which they do where their forefathers begot them, and so they go on increasing and multiplying in colonies heretofore tenantless of salmon, ever since volcanic action called from the 'vasty deep' the mountains and rivers of Northern Caledonia."

Well, all this is, to say the least, interesting reading. But is it true? There's the rub! "J. W. W." evidently believes it is, because immediately after he says: "The influence from the above is that salmon, although they enter a lake, will not go further into the streams beyond, unless they have been reared there, but drop back to spawn in the main river."

Well, this completely upsets all preconceived knowledge of the prevailing instinctive proclivities, no less than the marvellous powers, possessed by the *Salmonidae* in surmounting difficulties well nigh incredible in order to ascend for procreative purposes to the utmost bounds of the waters inhabited by them. I will, with your kind permission, revert to this part of the subject further on.

It may here now be stated that none of the streams referred to possess any barrier to the free access of these migratory fish to their utmost sources. That, however, there was a dearth of these fish therein at the period above indicated was undoubtedly too true.

In this regard there hangs a tale which is no less interesting than true.

The burden of Mr. Marston's able article, already referred to, about the exclusion of salmon from the Thames carries with it the story of rank pollution.

It is difficult to realise that many of the streams frequented by the *Salmo* migratory species in the far off county of Sutherland should have been subjected to a like catastrophe, both before and after the periods referred to by "Ephemera," and, therefore, by no means to the reasons adduced by him that the Terry, Fiag, &c., salmon were introduced there by Mr. Andrew Young, which had been, in the picturesque language of "Ephemera," "heretofore tenantless of salmon, ever since volcanic action called from the 'vasty deep' the mountains and rivers of Northern Caledonia."

The story of this pollution needs now to be recorded; and it will not, I think, be without interest as a chapter, for the time being, of the life history upon innumerable streams throughout the county of the Sutherland *Salmonidae*.

About the year 1818 a great economic change had been brought into operation in the depopulation of the various straths throughout the county of Sutherland, of the cottars who had occupied

them from time immemorial, in order to make way for the introduction of sheep. These straths, with their contiguous high lands, were then parcelled out into large sheep farms, which then became the staple industry of the county. Though for many years all this brought great prosperity to the county, and large fortunes to those more immediately identified therewith, unfortunately, in the interests and well-being of the *Salmonidae*, this new order of things had a very disastrous effect.

In order the better to withstand the rigours of winter, each sheep had to be "smeared" with all sorts of vile and evil-smelling and, at the same time, poisonous ingredients. At first grease and Stockholm tar formed the principal substances used, but as time went on patented articles of all descriptions came to be used, each more evil smelling and poisonous than the other. In the early summer, before the sheep were fleeced they were washed at convenient spots in the various streams upon the farm. Generally the water was impounded, in order to form a dam, the better to facilitate the work of the shepherds in the cleansing of the sheep. But unfortunately the cleansing of them but added to the pollution of the other, and with such effect—each farm having its thousands of sheep—that every living thing in each stream so used, below where the operation had been conducted, was killed outright. The early summer being the time when the "sheep washing," as it is termed, is carried on, is the period of all others the very worst for the young fish inhabiting the streams, as the latter are then at their smallest dimensions and the former—a few months old—the more susceptible to injury and irreparable damage. The Terry, running as it did through the large sheep farm of Shiness, was from year to year used for the above purpose. So also, I believe, was the Fiag. Is it, therefore, to be wondered that these streams were, while those operations were conducted upon them, "tenantless of salmon," although certainly not "ever since volcanic action called from the 'vasty deep' the mountains and rivers of Northern Caledonia?"

The Garvie referred to is the connecting link between Loch Shin and Loch Giam; and Loch Morkland is in communication with the latter by another stream. This chain of lochs extends to within a few miles of Loch More, whose waters, with Loch Stack, empty through the river Laxford into the Atlantic. The Curry runs into Loch Shin at its north-western end.

The period of the visit of Mr. Fitzgibbon to Mr. Andrew Young, at Invershin, in the summer of 1849, registered the high water mark of Sutherland sheep farming production and success. Begun about the year 1820, it was prosecuted with great success up to the year 1870, that is, for a period of about fifty years. But about then commenced the importation of mutton and wool from our Australasian colonies and other countries, which has gone on increasing to such an extent that sheep farming in Sutherland became no longer the paying business of its previous years of prosperity. That class of farming had, therefore, to be, to a very large extent, abandoned.

Possibly it might therefore be inferred that the comparative cessation of the sheep farming interests in the county would have proved disastrous both to landlord as well as tenant. This expectation, however, as regards the landlord has, so far as his interests are concerned, not only not been realised, but it is a fact that at the present moment rents greatly in excess of anything that has ever been received in respect of sheep farms are now obtained for the fish of its waters and the grouse and deer of its lands.

I would now again revert to "J. W. W.'s" inference that "salmon, although they enter a lake, will not go further into the streams beyond unless they have been reared there, but drop back to spawn in the main river."

With all respect, I would state my belief that, given pure water and not insurmountable obstacles, there is no réverine system in the kingdom frequented by the *Salmonidae* throughout which, from exit to source, they will not in their due season be found. Given, further, the above conditions, I would therefore state my belief that "heretofore tenantless of salmon" is entirely without the range of practical application. The marvellous attributes of the genus *Salmo* the more excite our wonder at the holes and corners to which they will penetrate when

the claims of the propagation of their species acutely fall upon them.

As to the salmon which "drop back to spawn in the main river," I am afraid that in regard to those salmon that would embark upon such a cause in the great majority of the Sutherland main rivers rather than into the feeders of their lochs, it would be largely equivalent to their performance of "The Hari-kari; or, the Happy Dispatch."

The majority of the main rivers are not only unique as regards their falls, but also for the impetuosity and shortness of their runs—from three to five miles—from their great lacustrine sources to their salt water exits. The Brora, Shin, Cassley, Oykel, Inver, and Kirkaig have all got their falls, the last are insurmountable. It is in the feeders of those great lakes from which every one of the Sutherland main rivers proceed, which are, I think, the true breeding grounds of the *Salmonidæ*. W. B.

RESTORATION OF SALMON RIVERS.

THE late Mr. Francis Francis, in his excellent work on "Fish Culture," gives several instances of the successful restoration or development of salmon fisheries. Here is what he says in regard to the development of the Galway Fishery. "The first of any note in Ireland, perhaps, was at Outerard, near Galway, in 1852. The Galway river is the channel through which Loughs Mask and Corrib, two enormous lakes containing a vast area of water, discharge themselves into the sea. The fishery of this river belongs to Mr. Ashworth. In 1852, finding the stock had been terribly reduced from a variety of causes, he established a breeding place at Outerard, in a small tributary stream. Here twenty boxes were laid down, after the plan subsequently adopted at Stormontfield. The plan was carried out by Mr. Ramsbottom. These boxes were stocked with about 40,000 ova, which in due time came to perfection. Subsequently, owing partly to the opening of a wide Queen's-gap in the weir, Mr. Ashworth's fishery multiplied itself in value manifold, and he cast about, adding a still larger area to the field of his operations. Lough Mask, which discharges into Lough Corrib, is separated from it by a very rugged channel and a lofty, impassable fall; consequently, although Lough Corrib abounded in salmon, none had ever been seen in Lough Mask. Moreover, the many gravelly tributaries, which salmon love to spawn in, rather discharged themselves into the upper part of Lough Mask, which again receives the waters of one or two smaller lakes, than into Lough Corrib; and as the capabilities of production of a fishery are bounded by the area of its spawning beds, this proved a serious check to the further increase of productiveness in the fishery. Undaunted by difficulties, however, Mr. Ashworth set to work, ameliorated the stream, put salmon stairs to the impassable fall, and stocked the head of Lough Mask with half a million of salmon ova." These operations were attended with great success, and a largely increased return gathered from the outlay. It is worth noting that Mr. Ashworth did not wait for salmon to some day find their way up the new pass and through the upper lake to the spawning grounds, but planted a stock in those upper, heretofore, barren acres of gravelly rearing ground, just as was done in the case of the feeders of Loch Shin, before mentioned.

STORMONTFIELD ON THE TAY.

Mr. Francis's description: "The operations here were commenced in 1853, at the instance of Dr. Esdaile and Mr. Ashworth. A slope from a mill lake, parallel with, and 16ft. above the Tay, was chosen. Three hundred boxes were laid down in twenty-five rows, each box partly filled with clean gravel, protected at each end by perforated zinc. Filtering beds were formed at the head and foot of each row, and the boxes charged with 300,000 ova by Dec. 23. On March 31, 1854, the first ova were hatched. A pond had been provided for the fry. This pond was 223ft. long by 112ft. in the broadest part. It was subsequently found to be far too small. By June most of the fry were in the pond, and about 1½ in. long. There they were fed with boiled liver daily. The year following, on May 24, a large portion of them, having

assumed the smolt scale, left the pond for the sea, an equally large number remaining behind, and showing no disposition to assume the migratory dress of the smolt. Many of the smolts which then migrated were marked by cutting off the adipose fin, and a large number of them were retaken, ascending the river again, at various periods up to August, in the form of grilse and varying in weight from 6lb. to 9lb.* according to the time they had remained in salt water. It was thought that the singular fact of some fry remaining in the river for two or three, and others only one year, might be the result of some carelessness in conducting the experiment, by using grilse and salmon indiscriminately; but subsequent attempts have shown that it was not so, as during the last season the spawn was taken only from the best and healthiest full-grown salmon, no grilse being used, and the result has been precisely the same as formerly, so that this curious problem in the natural history of the salmon still remains to be solved. From 1853 to 1862 the boxes were stocked five separate times. One of these (1854) proved a failure. It was found better to stock the boxes only alternate years, owing to the limited accommodation for the fry." Much benefit must have ensued from these operations to the Tay fisheries generally. The Stormontfield pond, and others that were subsequently constructed, are now annually stocked with fry, for rearing purposes, from the excellent Dupplin Hatchery, on the Earn. The capacity of that hatchery is 570,000, and it is annually filled (floods permitting) mainly with ova from Tay fish netted at the Almond Mouth Pool, about a mile above Perth; sometimes a few thousands from the Earn, near Dupplin Dam. We believe that much good would be done to the Tay district if it were made a rule to, at any rate, half fill this hatchery with ova taken from the early running breed of fish, which will not be found in October and November in the Almond Mouth Pool, but in the pools of the Dochart, Lyon, and other head waters of Loch Tay. That would be about 250,000, filling up all available space from the later fish. Certainly someone in authority on the Aberdeenshire Dee must hold the same opinion, as a good lot of ova were got from the far-up waters of the Dee this last season to stock their hatchery. Mr. James Grant, of Glen Grant, in his answers to the questions sent by the Inspector of Fisheries, Scotland, published in Ninth Annual Report, Salmon Fisheries, Scotland, pp. 37-38, states, "that heavy autumn fish only produce their own kind;" again, in speaking of the Duke of Richmond's hatchery near the sea, he says, "He will breed from the late run fish. This is a mistake. They will breed fish of like habits to themselves." Capt. Dunbar Brander, owner and lessee of the Lossie and coast fishings, agrees with Mr. Grant about the mistake of breeding from autumn fish. He says, "I think we make a mistake in killing every fish we can till the end of August, and trusting that an autumn fish, whose migratory instincts does not bring him into the river till September or October, will breed the fish we want, namely, spring and summer fish. Like begets like. I have a letter from Darwin, and also Dr. Gunther, British Museum, both saying that, reasoning from analogy, it is most unlikely that a salmon would breed young ones with a different migratory instinct from itself. So far as our rivers are concerned, if this held true, all the autumn fish are useless. They might breed fish that would coast along and be caught in the sea, but not fish to enter the rivers in spring or summer" (save in the grilse stage).

About the end of August, 1890, an inquiry was held at Newcastle-on-Tyne into the state of affairs on the Tyne by the then Chief Inspector of Fisheries, Mr. A. D. Berrington. This inquiry arose from a petition by the net men for an extension of the netting season till Sept. 15. The evidence given went to prove that in about twenty years the yield of the river and coast netting had fallen from 129,000 to 23,000 fish. The length of coast in the Tyne district is only about twenty miles. The season begins on Feb. 1, and licenses used to be taken out freely in that month and March; now hardly any are taken till May and June. J. W. WHELDON.

(To be continued.)

* Query, might not various fishery owners have similarly marked smolts in previous years?

OPENING OF THE COARSE FISHING SEASON.

DESPITE the important consideration given just now to the stocking of our rivers and lakes with game fish; in spite of the undoubted increase in the number of fishers for salmon and trout; and as a conclusive answer to those who would wish to oust coarse fish in favour of game fish wherever possible, coarse fishing remains as popular as ever, and the advent of June 16 finds the great and ever increasing army of coarse fishermen eager and ready for the fray. Rods, reels, lines, tackle boxes, boxes, and baskets have all been overhauled, and, with the approval of the skilled owner, are declared to be fit and ready to respond to the plunge of aldermanic roach, big bream, or barbel, and the numerous other species of fish dear to the heart of the coarse fisherman.

The great love the coarse fisherman has for his sport is as remarkable as it is instructive. With the opportunity at hand for the pursuit of the lordly salmon, the bright spotted trout, or the queenly grayling, he prefers the more humble quarry, and in many cases cannot realise wherein lies the attraction of angling for the former fish. It is not for want of skill that he abstains from indulging in the pursuit of game fish, neither is it incidence of locale. Skill—remarkable skill—he has to a certainty, and often in game fish districts he will travel farther afield in pursuit of his favourite quarry. The coarse fisherman is born even as is the artist, the sculptor, or the musician.

With the advanced education of coarse fish, the enormous increase in the number of anglers, the closing of some waters, and the restrictions on others, to say nothing of the vagaries of water companies and other authorities who seem delighted only when they are "tapping" or polluting rivers and streams most unmercifully, the coarse fisherman's chance of success would seem to become year by year smaller and beautifully less. But he has risen to the occasion in a most praiseworthy manner, and his basket is still quite sufficiently heavy when the season's average is considered. Finer tackle and more skilful manipulation of it assist him materially, while formidable difficulties are successfully combated by the extension, through the kindness and enterprise of the several railway companies, of the privilege ticket system, by which means fresh fields and pastures new may be economically visited. These privileges are obtained through the several associations at such centres as London, Manchester, and Birmingham, and to the excellent organisation of these associations is due the existing facilities for sport, no less than the stock of fish available to the angler. The increased skill in his art has done the rest, and so, for the twenty-second year, the *Fishing Gazette* has to announce that, taken all round, prospects of sport in the world of coarse fishing are favourable for the opening season.

Dealing first with the extensive and important waters, reached by means of the Great Eastern Railway Company, which company has certainly shown great consideration for the requirements of the angler, and whose series of privilege tickets covers an enormous variety of most excellent fishing quarters, it may be remarked that the map published in the *Fishing Gazette* last week, and reproduced this week, gives at a glance the easiest and best methods of reaching the new stations in the district of famous broads and rivers of Norfolk, and the prolific waters of Cambridgeshire, Huntingdonshire, Essex, and Suffolk. Accompanying the map is a list of the whole of the stations available to London anglers by privilege tickets, together with the fares, distances, &c.

SOME ANGLING STATIONS ON THE GREAT EASTERN RAILWAY.

St. Neots.—An omnibus plying from the Cross Keys Hotel meets the trains. Fare 6d. The two principal inns patronised by anglers are the Half Moon and the Angel. Mr. Nash, of the former inn, will give every information necessary to anglers *re* swims, baits, &c., and they cannot do better than put up at his hostelry. The water is free from Eaton Mills to the mouth of the pretty sinuous little Kym or Weston river, which flows into the Ouse about one mile below St. Neots. I believe that Mr. Nash has permission to fish from several fields, where the general public can only fish from a boat. I mention this in passing,

because after walking along the Ouse for miles, I have no hesitation in saying that, apart from mill pools, backwaters, locks, staunches, &c., weeds are so thick near the side a novice would have considerable difficulty in finding swims to enable him to fish from the bank in many places with much chance of success. Under these circumstances I recommend anglers, and more particularly strangers, to call on Mr. Nash, and if he happens to be absent or engaged, then the next best thing is to hire a boat and fish as quietly and as far off as possible, with a float and tackle, in the clear runs between the weeds, or allow the bait to float just above the weeds, where they are not too thick or too near the surface. I think before ground-baiting with so many grains and lobs one should be certain that the bream are there, or from one to three pecks of fresh grains may be thrown in by the thoughtless angler, and there allowed to turn bad, rot, and become a fetid mass which no fish in its senses, I should imagine, would approach. There is a good swim for bream by the brewery wall; the angler will see a ring to which he can tie his boat, and on the opposite or left side the "Warren" swim, situated just before one gets to the first clump of trees growing close to the water's edge, downstream. Anglers preferring to fish from the bank for roach and bream, &c., can do so at various places in the three miles of free water.

Great Paxton.—This charming village is only three miles north from St. Neots, on the main road to Godmanchester and Huntingdon. On arriving at Offord, on the Great Northern Railway, one can either be taken back to Great Paxton by a conveyance specially sent by that well-known angler, Mr. W. Ducker, who resides at Great Paxton; or, if the angler prefers to walk, he must go through Offord Cluny and Offord D'Arcy, two remarkable, old-fashioned, straggling, yet clean-looking villages, into the high road running between St. Neots and Huntingdon, and so on, a distance of two and a quarter miles, to Great Paxton. It is open, pleasant, and singularly hilly for Huntingdonshire. Letters addressed to Mr. W. Ducker, Great Paxton, Hunts., will receive attention. Little Paxton is about a quarter of a mile on the other side of the river, exactly opposite Wray House Island and the picturesque Wray House Ferry. Mr. Ducker has permission to fish in the river a distance of three miles, a splendid fishery little fished, and pike, perch, bream, chub, and roach abound, also rudd. Mr. Ducker can direct the angler to numerous swims, and one can find a variety of swims for either boat or bank fishing, many of which are not only free from weeds but possess a clean, gravelly, or rocky bottom, which chub much affect. Good chub are often taken under the thick overhanging willows of the old rushy island; in fact, the bottom is so hard in places that it is impossible to make the slightest impression upon it with a rypeck. Fine rudd may sometimes be caught with a brandling worm by allowing the boat to glide down very gently, securing it quickly, sitting as still as a statue, and allowing the float to glide down, say, 4yds. or 5yds., for the simple reason that some anglers will not understand fish take little notice of a boat; in fact, my experience is several fish, perch in particular, rather like to shelter near it. Ducker's Pool is just above Mr. Mackrill's Pool, and the angler should give them both a trial, and not forget that when bream are on the feed in the Ouse they often prefer either the tails or heads of big lob worms to brandlings. All comers can fish in the two fields from the reeds, and good roach and bream are often taken in these secluded and still swims ground-baiting as quietly as possible. Anglers patronising Mr. Ducker will find him an angler of great and varied experience, who knows every foot of water and when and where fish are most likely to be caught. I may just add that in a low, clear, bright water it is only a waste of time to use anything but the finest tackle for pike downwards in the Ouse. Baits, creed wheat and white paste for roach, lobs and small brandlings for bream. Anglers should write and find out if the fish they are after are on the feed before going to the Ouse. DRAGNET.

[Next week the fishing at Holywell Ferry, Huntingdon and St. Ives, will be briefly touched upon. Also other stations on various railways which grant privilege tickets].

PROSPECTING.

On the day set apart for the official celebration of her Majesty's birthday, in company with two friends, it was my good fortune to traverse three miles of the Colne, at Rickmansworth, to enjoy the sights and sounds of the riverside at its best, and to note the prospects of sport at the reopening of the general angling season.

One of my companions had been born and reared on the banks of the Wiltshire Avon, where he had been well grounded in the more elementary stages of angling, and where, by the way, he had frequently seen the great W. G. Grace ardently following the sport of gentle Izaak during the season when temporarily released from the sway of King Willow.

This Wiltshire friend of mine, at any rate, looked upon all he saw in our walk with the eye of an angler, and, therefore, understood my own enthusiasm. My other friend, although quite appreciating, as he could hardly fail to do, the numberless natural beauties of field and river disclosed during the day, was not an angler, and consequently his enjoyment was not so full as ours, and his views on angling were strangely at variance with the generally accepted canons of the craft, as exemplified in somewhat humorous fashion by the following incident:

We had leisurely surveyed the whole of the long length of society water to which we had access, and, in the afternoon, rested on a rustic seat beneath a spreading oak by the side of a weir pool, in which a fellow-member endeavoured to entice a trout to accept his delicately fashioned and dexterously cast fly.

The trout were there, and could be seen in goodly numbers; but with characteristic perversity they did not choose to rise to order, and the angler's careful casting was so long continued without reward that my non-angling friend began to regard the patient man's efforts as some sort of gymnastics or drill for the benefit of health, and we other two had abandoned hope of seeing a fish taken, when, whirr! rang out from the angler's reel, and we awoke to the fact that the unexpected had happened in the hooking of a good fish. Then followed as pretty a piece of work as could possibly have been witnessed. The fish was strong and plucky, and for a long time, without showing himself, took advantage of the many eddies of the weir pool in determined efforts to free himself, calling into play all the angler's skill, and giving many a graceful curve to the slender fly rod. At last, after many nervous rushes away from the net, he is landed at our feet—a brilliantly spangled, well-fed trout, well over a pound in weight, but not up to the society's standard of sixteen inches in length; and therefore he is carefully unhooked and replaced in the pool—much to the astonishment of my friend who had never fished for anything.

"Well," said he, "you anglers puzzle me. Here a man has spent the whole afternoon in trying to get a fish, and at last he gets a good one—just such a one as I could eat for breakfast, and—then he actually puts its back again in the river!" Those were his words, but they cannot convey the bewilderment expressed in his countenance as he uttered them. Yet he is a man not by any means insensible to the ethics of many other forms of sport. He understands why foxes are not hunted all the year round; and why partridge or pheasant shooting is deferred or wholly refrained from after a bad breeding season. But there on Colne-side he could only see the good angler's toil wasted, and the good eatable fish lost. I realised that before he could be made to understand our precautionary measures to obtain a good head of trout, he would have to be made an angler; and that would have been too heavy an undertaking on that gloriously sunny, drowsy afternoon.

Now, as to the prospects of sport at the reopening of the general angling season. Judging from observation on that holiday jaunt, I doubt whether any fish but trout and dace will be really fit to take; for other fly-fishing friends of mine, on the same day, caught chub which were very rough and limp; and I and my two friends, in our long walk, commencing at the weedy, but well-stocked canal, past the point where it is joined by the Colne, and where "Stead the Cure," a music hall and angling celebrity of former days,

made many heavy bags of roach—past shallows and deeps, until reaching the extreme boundary of the society's water, and back again on the opposite side—we saw bream that were grey from lack of condition, and roach that had not spawned. The Colne, I admit, is a somewhat late river; but in spite of sunny days, the excessively cold nights of the last few weeks are sure to have retarded the spawning and recovery of fish in many other waters.

Before the Mundella Acts were thought of, and when angling was practically permitted all the year round, it was the rule with many good anglers I have heard of to make experimental excursions about this season to various fishing stations, and to bring back just enough fish to decide on their forwardness or otherwise, and thus to judge when it would be sportsmanlike to commence fishing in earnest. But the great increase in the number of anglers since those days has necessitated a Parliamentary and arbitrary enforcement of fence months, which has mainly served to illustrate the vanity of any human efforts to treat Dame Nature as a cast iron automaton. One good solution of the difficulty would be to parcel out the country into separate fishery districts under boards holding power to fix and enforce close times suitable to each district and each season; acting, in fact, upon the principles which guided the old time anglers just referred to.

At present the law says that on June 16 we may go out and fish; and, conveniently disregarding Mr. Bumble's opinion of the law, we shall all go out on that day, or very soon after. I know I shall. And then arises the question—Where to go, and what to fish for? Well, after looking at that long list of stations available to anglers by privilege ticket, and the accompanying Great Eastern map, which appeared in last week's *Fishing Gazette*, I confess to some doubt and hesitation, for all the places mentioned are so good, and, whichever I may decide upon, I shall most likely think afterwards I might have done better at another. Anglers of the old times had no such doubts or regrets, their choice was too limited to be embarrassing.

Taking into account the recent spell of cold nights, still water fishing for such fish as bream, carp, or tench should be deferred for some weeks; for those fish are likely to be more backward than usual this season. On more freely moving waters, such as the rivers Arun and Rother, a few better-conditioned fish of those classes are likely to be met with, and the sight of the West Sussex scenery alone will make amends for many an empty bag.

Next to the more exclusively trout fishing waters, such as the Test, Chess, Darent and Kennett—the Lark, the Cam, and the Little Ouse are all likely rivers for sport just now; and all the stations nearest to them have been rendered accessible to anglers by the enterprise of the Great Eastern Railway.

In the tidal water of the Kentish Stour about Grove Ferry, to which station the South Eastern Railway now issue angling tickets, and the Sussex Ouse from Lewes to Barcombe Mills, by London Brighton and S.C. privilege tickets, the angler will find that life and movement in the water most affected just now by the fish. Whether the angler be successful or not will depend largely on the skill and judgment he employs, and more still on mere luck in happening on the spot suitable to the tide. For these rivers, the bottom baits most likely to be of service are bright brandlings, marsh worms, and gentles, in about the order given, and 4ft. of sharply moving or eddying water about the right depth to fish. I should have mentioned that very respectable fly fishing for both dace and chub is to be obtained on the Sussex Ouse from Hamsey to Barcombe Mills, and that the whole of that river from a point above Lewes upwards is in the care of an association that very properly makes a charge for the fishing. The dace of the Western Rother, from Midhurst downwards, are famous for size and gameness, and its trout, if not plentiful, are of good size and quality.

I have found an hour or so past high water generally the best in tidal waters, irrespective of season; but away from influence of tide, there is little doubt that early morning and from sunset to dark are the most pleasant and productive to the early summer angler, and caddis, either

floated or sunk and drawn, his most reliable bait in bright water.

That is certainly the lure I hope to employ on my opening essay, and, if prevented from starting at daybreak, I shall take care to choose a spot near enough to town to enable me to fish until darkness stops my pleasure. There is photographed in my mind's eye the very spot I expect to occupy. It is situated on a corner of an osier bed on a Thames tributary. The 3ft. depth of stream runs sharply past for about 10yds. over hard gravel, and quite close to the bank, until obstructed by a half sunken willow, which forms an eddy much favoured by all sorts of fish, especially large dace and chub. The rough, unhealthy cheven are not invited to my feast, but the fine, bright, plump dace will be very welcome to the caddis or other dainties that I may convey to them by means of Nottingham tackle. They are very independent, and will disdain to accept any such gifts from me if they become aware of my presence. Therefore, I must not approach within yards of their willow-shaded fastness, nor allow my shadow once to fall on the water near.

Whether I capture any of those dace or no, I am looking forward at least to be well sun baked during the day, and hope, as fervently for the sake of my brother anglers as for myself, that no sneaking east wind may mar the last hour or two of our fishing. CLAYR KENWAL.

POND FISHING.

OH, for a quiet place to fish in, is the cry of the boat-troubled angler in the summer, but how many ever give a thought to trying a day's pond fishing, where the boats cease from troubling and the angler is at peace.

Now that another season approaches a few remarks on pond fishing may prove acceptable.

Those anglers who cycle are, in my opinion, better off than those who always train to their destination, as they have more opportunities of discovering new fishing places, but how many when passing a pond by the wayside ever give one thought as to it containing the long-looked-for specimen, or at least some very good fish.

The reader will no doubt see from the foregoing remarks that I am a cyclist, and many new and good places have I found when cycling.

I remember one day riding from town to fish up the Thames, when in passing a pond I observed a slight disturbance on the surface of the water, as though a pike had just seized a small fish, so, dismounting, I sat down and watched awhile. Presently, quite close by, there was a tremendous splash, as a large carp rose to the surface. This was quite sufficient for me, so putting my rod together I commenced fishing, having baited my hook with a nice red worm, which I cast well out towards the middle of the pond. Presently the float began to give unmistakable signs of some fish nibbling at the bait. Round and round it went, then bob, bob. Suddenly like a flash of lightning it shot under the water, and striking hard, as I had a good length of line out, I was pleased to find I had hooked a nice fish. Up and down he went, making a good fight and trying to get into some weeds, but he soon had to give in, and on banking him I found he was a fine tench of 4lb. Well, to cut a long story short, I had no less than twenty-three of them in five hours, but they were none of them so large as the first one, although some nearly came up to his weight.

I always use a rod of about 11ft., as I find this length very serviceable, and plenty long enough.

In pond fishing always carry a small weed-drag, as some ponds will require it in making a clearing to fish in. The baits to be used, and which I find most taking, are worms, paste, beetles, new potatoes, sweetened by soaking in treacle after being partly boiled, cubes of bread, and sometimes gentles. The fish usually to be found in ponds are carp, tench, roach, carp-bream, perch, pike, and eels.

The tackle should be of the lightest description, as there is no stream to help the fish. I generally use a float requiring no more than four or five shot. The gut bottom should be fine, but at the same time very strong, as most ponds are clear, but very weedy. It should be borne in mind that a good light running line is very necessary,

especially if a large fish is hooked, such as a carp, when, if you do not let him run, it is ten to one you are smashed up, which is most vexatious. It is a bad plan to sit too near the water, or to move about, as the fish are rather shy, and see you long before you perceive them. In ground-baiting I do not throw large balls in, as in Thames fishing, but place a small pellet round the shot before casting, and find this method a great assistance when getting out my bait, as, the tackle being so light, I should otherwise never get far enough out; and I also think the gradual dropping of the ground-bait attracts the fish better than throwing in handfuls, and ensures the hook being near the bait.

Now, as to the fish. I will first deal with the tench, which appear to thrive best in muddy ponds. They are distinguished by the diminutive size of the scales, the body is short and thick, the head large, with thick lips, length generally less than a foot. They are sometimes taken weighing from 4lb. to 6lb., but a 3½lb. fish should be preserved. They bite very much like a bream. Bait with worms, paste, and sometimes gentles, according to circumstances.

The carp is a splendid fish, and grows to a great size, reaching 20lb. It is the most cautious of any fish I know, and requires the greatest patience in catching, and when angling for them it is necessary to be very quiet, or you will never get one. Bait with sweetened paste, grasshopper, new potatoes, and they are occasionally taken with floating bread. Use a triangle hook. The bream I will not say much about, as nearly every one who angles has caught some; but as regards the hooking of this fish, I should like to point out that a great many anglers often are too hasty in striking; they should always gather in their slack line and wait till the float disappears before they strike, then raise the point of the rod sharply, but not too high, and you will find that this way is most effective. Bait with worms, paste, or gentles. Of the latter I prefer five on the hook, as it makes more show. Roach and rudd are found in some ponds, and can be taken with the same baits as in bream fishing.

Pike grow to a good size in ponds well supplied with small fish, but I have taken some which had the appearance of soda water bottles, so starved were they, there being only tench in the pond.

Perch are occasionally met with, and are not so numerous as the above-mentioned fish, but if there should be any in the pond you are fishing you will be nearly certain to capture one when using a worm for bait.

Now, if there is a boat or punt on any lake or pond, use it, and when plumbing the depth place a piece of paste around the plummet; by this means you are enabled to know what sort of bottom you are fishing on. It was in this way once that I discovered a fine gravelly swim, in which I took several fine bream and roach, whereas before I was getting nothing but small fry, and the bottom was mud, and thick mud, too.

I trust that the reader of this article will, if he has not tried pond fishing, do so this summer; and may he be as successful as I have been.

KINGFISHER.

MARKET DEEPING AS AN ANGLING RESORT.

(Concluded from page 407.)

AFTER leaving the locks the water flows over a long series of shallows, which make any fishing but with the fly impossible. In dry weather the mud appears in places above the surface. This state of affairs continues till some distance past Deeping St. James' bridge.

Opposite Waterton Hall the river is choked during the summer by mud and weeds. Unfortunately the boundary line between Lincolnshire and Northamptonshire follows the centre of the river, and the various authorities have never been able to come to terms as regards cost of work. So while they hesitate the river is gradually silting, until there is as fine a collection of mud and weed as can be seen for miles round. From this point to a bend known as "Feneley's Hole," is a favourite resort for pike; but it is of little use trying for them till the weeds have commenced to decay, but about October good sport may be expected. My 12-pounder, previously mentioned,

was captured here. I rose early for four successive mornings, and the fourth morning I captured him, after an exciting struggle of nearly twenty minutes, with a rotten line and a jammed reel, both borrowed. Quite a crowd gathered to watch the fun.

Suddenly he made a big rush, and fairly stranded himself on a mud bank. I thought he would get off the tackle, but he wriggled into deep water again, with the hooks still attached. When I got him to the side, I was puzzled to know how to land him, for a barrier of mud ran parallel with the wall—I was fishing from the road—with deeper water inside. I towed him along until I found an opening large enough to get him through, and with a bit of easing managed to negotiate him into the water behind the bank, where he threw mud and water about in his struggles.

From that day certain anglers, whose imaginations had never before extended beyond a pound roach or an occasional perch, became ardent, and, judging from results, successful pike fishers.

But pike are, or at least were, captured by methods other than sportsmanlike. A boat, a large triangle, and a piece of stout cord comprised the paraphernalia of the poacher. Floating downstream the pike could be seen at the bottom, and were easily extracted by means of the cord and triangle.

It is fairly easy to poach pike in the Welland from a boat as they lie with their heads in the weeds. I have before now stirred them up with a "sprit." In one hole I once counted nearly twenty fish, and, with a few exceptions, they utterly refused to move until stirred. I dangled a bait against the jaws of some, and not one of them would touch it. I managed, however, to capture four just before dusk; but in the middle of the day they would not look at a bait. From here to the Low Lock, a distance of about a mile, the only sport obtainable is fly fishing for roach, good bags being often made. The Low Lock, however, is, without doubt, the best position in the river for the all-round angler. Roach, pike, eels, bream, and chub are all to be captured. At this point the river passes through two locks—one very large, with an overflow, and the other considerably smaller, the confluence of the two streams taking place some little distance down. Although fish are plentiful, yet the angler should ground-bait if he wants to make a good catch. It does not, to any great extent, bring the fish together, for they are there already, but it seems to bring them well on the feed. Whatever the reason, I have found from experience that ground-bait is essential to success. A little bran and wheat, or barley meal, thrown in the night before is sufficient. The large lock, with the overflow, is much the deeper, and is the best to ground-bait. A long rod is an advantage, as the fish lie well out into the middle.

A slider float is useful, as the water here is about 12ft. deep. I have frequently fished without a float. If the current is gentle, the best position to stand is by the left side of the lock gate, from which the baited spot can be most easily reached. The hook should be baited with a well scoured lob or brandling, and the angler will probably soon be rewarded with a bite from a bream. The bream do not run large, the heaviest scaling about 2½lb. If the angler affects roach fishing, good sport will be obtained with wasp grub. Other good baits are paste and boiled wheat.

I once saw the roach rolling over here by hundreds. I had baited for bream, and had managed to secure a few, but they were not properly on the feed. Noticing a few roach about, I dropped some ground-bait close to the gates, with the object of enticing them to a more convenient spot, and succeeded beyond my expectations. They simply swarmed up, and I stood at the side of the lock in full view of the fish, and commenced to haul them out. There was no poking their lips against the bait, they opened their mouths and sucked it in before it reached the bottom. I kept them there by an occasional handful of ground-bait. Then my wasp grubs ran out, quickly followed by a small piece of paste—worms they would not look at—and I was forced to pinch pieces of ground-bait on the hook.

This continued for a little over an hour, when I left off with something like thirty good roach,

BURBERRYS' GABARDINE SLIP-ON COAT

Proof against **RAIN, SLEET, SNOW,
HOT and COLD WINDS,
THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

OUTSIDE GABARDINE, INSIDE WOOL. Both Fabrics WEATHERPROOF.

Price - - 63s.

BURBERRYS, 30, HAYMARKET, LONDON,
AND BASINGSTOKE.

Experts in WEATHERPROOF KIT.
Patentees of "Gabardine" and "Urber,"
Combines, The Equi-Pede,
Burberry Coats, &c.
Specialists for Shooting, Fishing, Golfing,
Polo, Yachting, Cycling and
Racing Garments.

OGDEN SMITH,

6, Park Side,

HYDE PARK CORNER, S.W.,

And at 34, St. John's Hill, Clapham Junction, London, S.W.

ranging from $\frac{3}{4}$ lb. to $1\frac{1}{4}$ lb., besides throwing numbers of smaller ones in again.

I, however, reluctantly had to leave them, but before going I threw in part of the ground-bait, treating the smaller lock to the remainder. In the evening I went down again, in company with a friend. He fished one lock while I took the other, with the result that the morning's catch was nearly doubled. The largest fish, taken by myself, weighed a good 2 lb., while several others ran it very close. The total catch during the day amounted to between eighty and ninety good fish. Some few years ago perch were fairly plentiful here, but they are now too well looked after by boys, who catch them with worms. I remember seeing about a dozen of them among the stones below the overflow, with their backs out of the water. Strange as it may seem, I caught two of them with my hand, and laid hold of others by the tail, but failed to hold them. In the small lock, if the angler does not object over much to slime, and has a few hooks which he does not mind spoiling, good fun can be obtained with eels. I can imagine the scientific angler thinking such sport beneath him, but, after all, eel fishing is not to be despised, and affords sport when other fish are off the feed. I have made splendid baskets of fish in the Welland, and one secret of my success was always carrying tackle and baits suitable for any fish I came across. If one kind of fish would not bite, I often obtained good sport with another.

Last summer, before the roach had come on the feed, my brother and myself took twenty-one eels here, the largest weighing 1 lb., and were smashed two or three times by larger ones. It was a choice between eels and a blank, and, after all, twenty-one eels were better than an empty basket. If an angler were to lay out his pike rod about dark, using for bait a lump of bacon, a small fish, or a fledgeless sparrow (commonly known as a "bare bobbler"), he would probably capture at least one good-sized eel. At any rate, I had a hook nearly straightened by one, and my brother got a large one to the side, which then broke the gut. Of course, it was his own fault, as he was using 4x gut. This hole is also a resort of chub, but they are fearfully shy, and it requires much manoeuvring to capture them. A good bait is a bunch of wasp grubs, crammed on a hook so that not a particle of steel is showing.

Pike also abound here, and a 12-pounder was captured some two years ago. But this hole has by no means a monopoly of pike. The best spots are the larger lock and some little distance down, just above the confluence of the two streams. This latter favourite resort for pike, and, indeed, other fish as well, is known by the euphonious title of "Nick's Hole."

Why it obtained such a name I do not know. At any rate, it is a fine place for fish, which run very large. After the confluence of the two streams, the Welland flows in a long series of shallows past numberless willow holts that line one bank to the water's edge, the surface of the water being only disturbed by an occasional eel fisher as he works slowly upstream to fix his eel traps or "leps," till it passes under the railway bridge. From here to the staunch, about two miles lower down, every inch of water should be tried. A live snap will be found as good as anything, but a dace mounted on a Francis flight runs it very close. Artificial baits are of little use, as they sink too quickly, and foul the bottom.

The time to commence pike fishing here is about the end of September. In the summer good sport may be had among the roach with the fly. The association water extends to the Kenulph Stone, some little distance below the staunch, but the fishing practically finishes at the latter place.

A. H. LAW.

CAPTURE OF SQUID.

MR. FRANCIS HOWSE suggests that the "Automatic Spring Hook" might be turned to account for the capture of squid, and that the squid are often troublesome. I have fished along the South Devon coast from the age of five and a half years, when I took my first three mackerel in Teignmouth Bay, until the last two years, and was always rather than not pleased with their visits, except in Shoreham Harbour, in Sussex, where they sometimes bothered me by robbing the hook

of the living sand-eel when I was drift-line fishing for bass on the flood-tide. Depend on it, the landing net is not the best implement for capturing squid, as the squid is timid as well as bold, and the landing net makes far too much show, the squid being easily alarmed by it. I use what I term the *Quocunque Gaff*, made out of four No. 7 Exeter round bend hooks lashed on to a rod the length of an ordinary billiard cue, which makes much less show than a landing net; and I took the idea from the three legs of the Isle of Man coat of arms, preferring four hooks to the three legs, as "*quocunque jecris stabit*" (whichever way you turn it) this gaff is very likely to hook Mr. Squid if you strike him at all fair. I file off the barbs of the hooks before lashing them on to the rod end, the flesh of squid being so very tough that if the hooks are not deprived of their barbs it is very difficult to unhook them—vide p. 194 and p. 213 of my "Sea Fisherman," letter "C." Fully sixty years since I practised this method of catching squid for bait, taking from six to a dozen in the dusk of the evening, when you might not always be able to see which way the point of a single hook gaff was directed.

If a clove hitch be taken close to the flattened tops of each of the four hooks before lashing them to the rod, it will be found quite practicable to fold the hooks together, like closing a book. A small leather bag should be provided to receive these hooks, when the hooks are closed on each other. All fishermen will agree with Mr. Francis Howse as to the importance of squid for bait. I therefore have given special attention to squid capture at pp. 194, 195, and 213, also noticing the "sucker or poupe" (*Octopus vulgaris*), a good bait, although not equal to the squid or cuttle. Off B. Salterton, Devon, I often put out a conger line when the "blains" (whiting pout) had finished supper, and when the squid fastened on the conger bait generally caught a fine squid to tempt conger or a big pollack; besides which, if a fresh S.W. breeze came up next day, I was well prepared for bass at Ottermouth Haven, at the east end of the beach, where I used the leger line. The squid will soon appear along the south coast if the weather continues warm, and I advise all sea anglers to follow my lead in this matter of squid capture. I have taken numbers at Plymouth, abreast Smeaton's Lighthouse, and on the Cornish coast. Cornish fishermen use what they term a "quiddle" or "cuttle rod"—a Y-forked stick, a hook, minus the barb, lashed on to each horn of the fork.

Longmans, Green, and Co. publish "The Sea Fisherman," price 6s., containing more than the two editions at 12s. 6d. previously published.

J. C. WILCOCKS.

TROUT FISHING.

(FROM THE TROUT'S POINT OF VIEW).

So much has been written on the several methods of trout fishing from the standpoint of the angler on the bank that it may not be uninteresting (as it is certainly not unseasonable) to consider them from that of the fish *under water*, to whom things are not nearly so straightforward as at first sight they might appear.

The natural food of (or the bait or line used for) the trout may be presented to the fish in one of three different ways:

- (a) Entirely submerged;
- (b) Above the surface of the water, as in the case of a flying insect; or
- (c) Partly submerged, as with a floating insect, or artificial fly.

Under condition (a) matters are simple enough. The fish sees the object through the water just as we should do through the rarer medium "air," but more or less distinctly as the water is clear or coloured.

Under (b) things are very different, and it will be shown how very restricted is a fish's vision of objects which are above the surface and not touching the water. Everyone knows that a stick held in water appears to be bent, and that this is due to "refraction." Rays of light passing from air into water are bent *towards* the vertical, and conversely, those from objects in the water into air are bent *from* the vertical. The "index of refraction" between air and water is $\frac{4}{3}$, and the so-called "limiting angle" $48^{\circ} 35'$; that is to say, any rays striking the surface of water from *below*

at an angle of about 49° with the vertical and upwards, do not pass into the air *at all*, but are vertically reflected, at an equal angle, downwards.

Without going deeper into the subject the nett result of the optical laws is that any object which a fish sees above the surface of the water must necessarily appear to that fish to be somewhere within an angle of $48^{\circ} 35'$ with the vertical. In other words, and in round figures, a fish 1 ft. deep in still water can only see objects above water within the circumference of a circle of about 2 ft. diameter on the surface level, of which the centre is vertically over the eye of the fish.

It also necessarily follows that there is only one direction in which a fish sees an object above the surface in its actual position, namely, when it is vertically above the eye of that fish. This seems to explain those leaps of apparently unnecessary vigour which fish make when rising at passing insects. No doubt they have learnt by sad experience and frequent disappointments that in that position only can they be certain of securing their prey, since the moment it passes the vertical it becomes, in fact, a "mirage" (though not inverted), and useless for satisfying the "keen demands of appetite."

Possibly this, too, is the reason why fish are so readily frightened when a person appears on the bank, since, to the fish, the intruder appears more nearly above him than he really is.

Every angler must have noticed how very difficult, and even impossible, it is to take fish above a light coloured river-bed, and I venture to think that this is due to the much greater illumination of the bait, and the consequent greater facility for detecting imposture, rather than to any extra acuteness ascribed to chalk stream trout.

Let the reader take a clean glass tumbler, nearly filled with water, hold it up and look upwards at the surface. It is absolutely opaque, with an apparently metallic surface. Any object (even a lighted match) held above the water is quite invisible. Let him now pierce the surface with any small object, such as a spoon handle, and it is surprising with what unexpected distinctness the submerged portion can be seen.

We are now studying the appearance of an object presented to the fish under the third condition (c.). If the tumbler be placed near the edge of a table on a sheet of white paper and the experiment be repeated the object is still more clearly defined, as would be the case above a chalky or light rock bottom.

Again, if a piece of cork or wood be placed, floating, on the water, it will be found that only that part which is below the surface can be seen at all, and since (from the way they are dressed) artificial flies will float with the barbs *downwards*, the fish have a fine opportunity of inspecting half the dressing and a very well defined fish hook.

The obvious inference is that artificial flies should be so made that the barbed end of the hook floats *above* the surface; or, at any rate, is so well concealed in the dressing as not to be so conspicuous. The former result does not seem difficult of attainment, but a consideration of the "form" of artificial flies is out of place in these notes.

Up to the present we have only studied rays of light passing from above downwards, and there is yet remaining a consideration of circumstances doubtless rather bewildering to the fish.

Reference has been made to the "limiting angle," and it so happens that objects on the bed of a stream (light-coloured stones and rocks especially) will all be seen by the fish perfectly reflected in that mirror-like under surface; and any insect or artificial fly floating downstream will appear to be moving over the inverted bed of the stream, and midway between the real and the ideal.

There will still, however, fortunately for the fish, be a limited area which, owing to the "limiting angle," is clear of such reflections.

Recognising the fact that a line should appear to its possible victim as nearly as possible like the genuine article, I cannot conclude these notes without reference to the absurd practice of painting artificial minnows with eyes, fins, and tail. The fact that the moment an artificial minnow "spins" these artistic decorations disappear seems to be entirely lost sight of. Indeed, it seems probable that a fish does not go for the imitation body at all, but for the more or less transparent

moving figure produced in the water by the rapid revolution of the projecting triangles.

"Contemplation" is supposed to be an attribute of anglers. I have, therefore, the less hesitation in submitting these somewhat incomplete researches to the craft, feeling assured that, failing entire agreement, they will at least receive fair criticism.

CHARLES RIGG.

THAMES SALMON ASSOCIATION.

A PUBLIC meeting was advertised as to be held at St. Martin's Town Hall, Charing Cross, at 3 p.m. last Monday, called by the Thames Salmon Association.

Those who attended waited from three until half-past, up to which time there was no one present on the platform to represent the association, and we learn that the committee had decided to alter the date and place of the meeting. Surely the secretary might have telegraphed to the authorities at St. Martin's Town Hall to say that the meeting was postponed.

It will be seen from an advertisement in our columns that the association now announces a public meeting, to be held at 3.30 p.m. on Friday, June 30, at the Mansion House, under the presidency of the Lord Mayor.

THE NEW NORWEGIAN GAME LAW.

So closely associated are angling and ryper shooting in Norway that anything affecting the one form of sport applies more or less to the other. It is well, therefore, that readers of the *Fishing Gazette* should be made acquainted with the fact that in accordance with the law just passed by the Storting shooting game birds will not be permitted in the realm whose fortune it is to have its affairs regulated by that august assembly of wise men until Sept. 15—in other words, after the trout fishing season is over. When the bad weather may legitimately be expected to set in; when it is absolutely useless to use setters or pointers; when, in fact, life on the fjelds becomes a very doubtful pleasure, ryper, capercaillie, and blackgame shooting will be allowed. But to obtain the privilege of indulging in such sport the foreigner will have to take out a license, which will cost him one hundred kroner (say £5 10s.); and even then he will not be permitted to shoot at all upon "Stats Almene," the hitherto favourite resort of the English ryper-shooting angler.

Whatever other elements may strike the casual observer as present in this truly remarkable enactment, common sense can hardly be said to be conspicuously apparent, and it may safely be asserted that no such blow has ever been struck at Norwegian sport as is contained in the peevish piece of legislation perpetrated this spring by the National Assembly—by courtesy termed a game law. That the Bønder dislike English and town sportsmen, and prefer their absence to their money; that it is better to get seven or eight öre for each ryper snared in winter than, say, from three to 500 öre for the bird shot in autumn; and that it is more just to deprive the hardworking and well-to-do professional classes from the towns of the opportunity of indulging in their favourite sport rather than that the "ryperfanger" should capture a few birds the less would seem to be the opinion of the majority of the present Storting. Eventually it may be brought home to their minds that these are fallacies. The Bønde is very fond of his freedom, and likes to exercise it; but he is by no means averse to turning the honest penny, and when he discovers that the sporting rights upon his property—with which he has been so recently invested, have been rendered valueless and unmarketable by the action of his Parliamentary representatives, his feelings toward the latter are likely to be the reverse of amicable, and he may express them by the familiar process known as chucking out. Certainly the Norwegian landowners will lose largely by the adoption of the date in question, which is simply ludicrous.

What the legal position will be of those who hold leases of shootings in Norway I cannot say, although I have been told by a well-known lawyer that rents would probably be liable to a reduction corresponding to the curtailment of the shooting season (in which case they would be reduced to

vanishing point); but many foreigners, at any rate, under such treatment will probably take the law into their own hands, and simply refuse to pay for a right which the law forbids them to exercise. Shootings (?) in Norway next year will be at a liberal discount, and "smell dogs" will probably be cheap.

It has been suggested by some thorough-going admirer of the Norwegian legislators that the latter were anxious to display their friendly feelings towards France (as another great power), that they wished to avoid the risk of seriously diminishing the attendance at the World's Fair in Paris by exhibiting to sportsmen generally any overwhelming counter attractions in Scandinavia. There may be something in this, as (apparently) in the same spirit of (vicarious) unselfishness they have decreed that all "Traek fugl" (birds of passage), i.e., woodcock, snipe, duck, &c., shall be protected during their residence in Norway. Such an exhibition of disinterested feeling would merit all praise no doubt, but the manner of its expression is likely to prove a costly affair to their constituents. Although highly unpopular everywhere throughout the country, the new law must apply at any rate to 1900, whatever may be done to alter or amend it afterwards; and by the end of that year nearly all foreign and a great many native sportsmen will have established their summer quarters in countries where their convenience and their legitimate rights are not likely to be interfered with by the action of a body of men whose political opinions (!) and necessities may at any time lead them to commit legislative indiscretions similar to the one under discussion; and they will be in no hurry to return. The rents of salmon fisheries will probably also be injuriously affected, for many salmon (as well as trout) anglers look upon game bird shooting as a necessary corollary to the fishing season; and the tourist traffic is sure to suffer diminution. For these and other mercies of a like nature may the Norwegian Storting, as assembled in conclave this year of grace, be praised.

RUGDE.

REPORTS FROM RIVERS, LOCHS, &c.

Lower Thames—GENERAL REMARKS.—There reported capture of a Thames trout over 17lb. at Radcot, near Oxford, by a working man, is regarded as making a record of being the largest specimen taken in the Thames. I do not, however, think the anglers will be fully satisfied without more particulars as to its capture. One of my practical correspondents writes: "Anglers will, of course, require positive proof of the supposed capture of the large trout in the upper Thames." I can remember some years back there was a report of one having been taken that weighed 18lb., and, as far as my memory serves me, it was said to be from the neighbourhood of Reading, but I do not think it was ever satisfactorily cleared up as being a Thames fish. I always understood the great Jubilee trout of 1887 weighed close upon 18lb., and this we know was caught in one of the nets of the netsmen in the portion of the lower Thames where they possess the privilege to use them, and was, therefore, not illegally captured. I have written to Mr. Alfred Nuthall respecting the exact weight of this fish, and in his kind reply he tells me he has "misaid the particulars, but can vouch for the genuine weight to be from 17lb. to 18lb. when turned in at Kingston." There was a large trout taken at Chertsey, which weighed 14lb. 9oz., which has been regarded as the champion fish taken in angling, and at the time was clearly reported as having been taken by Mr. James Forbes on spinning tackle. I consider in the Jubilee trout the lower Thames can yet boast of the largest fish having been captured in its waters. There have been many reports as to it being still in existence, and one last year was that it had been seen in the neighbourhood of Hampton Court. Unless there is some rain before Friday, as I am writing this on Wednesday, I am afraid the angling for coarse fish will not be attended with much success. There can be no doubt as to the river being full of fish, and all depends on the condition of the water as to results.—B.

—(Eton).—Sport with the trout up to the present has been most disappointing, and anglers will welcome the opening of the coarse fishing season on the 16th, the prospects of which are most favourable, although forty-eight hours' downpour would make sport more certain; but, with judicious baiting, good takes of barbel should be accounted for. I have seen large numbers during the past fortnight, and intend to try them on Friday in a spot that I have been feeding them up during the last few days. I was sorry to see, one evening this week, while trouting on the Windsor Weir, no less than a dozen roach, all about 1lb. each, laying up against the weir gates, all dead. After examining them, they all appeared to have been pinched in some way across the back.—CECIL HOWLETT.

—(Hampton Court).—William Milhorne, on Tuesday, writes: "Mr. Woods, on Friday last, at the weir, took a trout of 3lb.; and on Sunday evening Mr. Matthews, one of 4lb. I am afraid if we do not get some

rain before Friday the opening season will commence very bad, as there is no stream whatever—the weirs are all shut in and scarcely any water running through them. It will not be because we are short of coarse fish, as the barbel, roach, and chub lay at the weir in great quantities. This has been one of the finest spawning seasons I have ever known, there not having been any floods all through the spawning season; and the warm weather has brought the fry into life, and they can be seen in shoals."—B.

—(Shepperton).—George Rosewell, writing on Wednesday evening, says: "The river is in bad condition for fishing prospects, and looks very bad for the opening of the season. The fish have not all spawned yet. They are late this season, and there will be no fishing of any account until we have had a good rain. I have had two more trout with Mr. William Reid—both fish had lice on them—one was a nice fish of 6lb., which he kept, and the other one (3lb.) he returned, as he never takes one under 5lb."—B.

—(Streatley).—About three weeks ago, as Mr. Wm. Pearce, of Gatehampton Farm, Goring-on-Thames, was walking in his meadow leading to Hart's Wood, he saw a barn rat going from the river towards the wood, carrying something in its mouth. Just before it reached the wood, and about forty yards away, he shot and killed the rat, which had a nice perch, still alive, in its mouth.—H. J. GARDNER.

Anchorlme District.—Both farmers and fishermen now want rain. There is, however, a fair volume of water in the becks, as the springs continue to flow freely. The Hawthorn Fly is now well high over, and the Alder is less numerous. Ant flies and moths are beginning to appear, and, used at the proper time, do good execution. The Red Dnn, the master fly of the Dnn class, is usually rather late, but have seen a few. This fly is quite easy to cultivate, and I rear it in thousands. The Freckled Dan is a splendid fly just now. It is made from the Moorcock, and with red hackle and orange body. We do not get many Fern Flies. I have been heretwenty-five years now, and have not seen above twenty-five.—THOMAS FORD (Caistor).

Arun (Pulborough).—During the close season fish have been spawning well, and there are plenty of fish to be seen in the river, which is now somewhat low and bright, owing to the continued drought. The final arrangements for the Central's monster competition on the opening Sunday, June 18, have been made; all members to start from and weigh-in at the Arun Hotel.—W. G. HOLLMAN.

Cornish Streams.—Peal are now running fairly freely in the Camel and Fowey. The former river is usually a little later than the Fowey, but by the middle of June, without the streams are exceptionally low, there are always peal about. Catching them in such brilliant hot weather is another thing. Trout fishing has been fairly good, the best baskets being about thirty. Professional fishers are doing well with fern fly and tab fly, both excellent killing natural baits. It has been decided to restock the Camel with trout, and if possible, salmon. The conservators are taking most commendable means to improve the river.—BODMIN.

Darent (Horton Kirby, Farningham, &c.).—The May Fly seems to be practically over, and has been the usual disappointment on this river, though some fish certainly have yielded to this lure. There are much fewer flies of any sort than usual now on the water. I could only see an occasional Olive Dun and one or two small wild bees coming down. For these last the "Governor" is the pattern. Several good fish from 1lb. to 2½lb. were on the look-out, but seldom got a chance to rise. The largest of the trout seem still in poor condition, and no wonder! Plenty of water at present.—J. P. T.

Dart (Totnes and District).—A number of salmon continue to be taken by the nets at Totnes Weir, so that it cannot be said of the Dart that salmon are particularly scarce. There are a lot of salmon and also trout lying in the pools up to Staverton; but little sport falls to the lot of anglers, although the fish rise very freely at night. On the moor a few have been killed. Trouting is very quiet in the lower waters just now. The Black Midge, Silver Horn, and Half Stone are used by day, and the larger flies in the evenings, which is about the only time fish can be attracted. Mr. E. Distin (who creels fifteen on Thursday), Messrs. M. Revell, E. Ackrell, H. Fall, H. T. Distin, T. Browne, and other rods have had a few brace by evening fishing; whilst Mr. Furneaux has killed a few with the fly at Staverton.—DEVONIAN.

Devonshire Streams.—Only moderate sport has been obtained this week, and the takes which are made are the results of fishing after sunset. The days are very hot and bright, and many of the streams have run very low. Salmon fishing gives little or no sport, and a take of five by one of the Teign boats (two fish weighing 36lb. together) was considered something unusual. The Dart, however, contains plenty of salmon, but these do not fall to the rods. Trout fishing is decidedly dull and baskets are small, three or four brace being a good average. Visitors must find angling exceptionally quiet just now. Some good showers should brighten the prospects. Trout are reported fairly plentiful in the Upper Lyd and Tavy Cleave district, where the Black Dnn, Coachy-bondhu, and Bishop's Fancy are used successfully.—DEVONIAN.

Esk (Whitby).—This river continues in a low and clear condition, and angling operations are practically at a standstill. A good fall of rain is much needed to improve matters. The only catches I hear of are Dr. English, eleven and a half brace of trout; and Mr. J. Baker, four and a half brace.—J. JACKSON.

Ere and Canal (Exeter).—Fine warm weather still prevails, and trout fishing by day is of a disappointing order. The river has now run low and gin-clear, and the little sport met with has been principally in the evening time. Among those who have scored on the Brampford water, are Messrs. Snell, Taylor, Harris,

Litts, Roberts, etc.; and on the Thorverton water, Messrs. Kelley and Jones have had fair sport; the first-named is now keen on beating his champion 2-pounder of a fortnight ago. On the Creedy, Messrs. Snell and French had very good bags; and Messrs. Wilde and Son, Rowden, and Caseley have also taken a few brace of decent trout from this water. Flies which are killing fairly well just now are, by day, Blue Dun, Black Gnat, and Wickham; and for evening cast Red Spinner, Governor, and Coachman. —RED PALMER.

Fen District (South Lincs. and Cambs.).—The reports from the trout waters have now been satisfactory for awhile, but complaints are heard about the heat. However, when baskets run up to six or eight brace they are not so bad. Fishing begins this week on the drains, but prospects are not over bright. Fish are thought to be backward owing to the cold weather in the spring. I hear the Sheffield anglers have a dispute about the waters around Tydd. —LIMPET.

Idle District (North Notts.).—Sport will again be on the move in the Idle district at the end of the present week. Somehow the trouting season has been altogether a frost. I have already noticed fairly good prospects among the bream in the lower district. Dace are also very lively, and these two fish, irrespective of others, should be well worth looking after. It is stated that this season Sheffield anglers will have difficulties raised to fishing in the neighbourhood of Thorne. It is to be hoped that the differences will be settled without resort to law. —L.

Lake Cwellyn (Snowdon Ranger Hotel, near Carnarvon).—Nothing very extensive has been done in consequence of the very hot weather. There seems now an improvement for the better, and hope for a gentle rain to fill up the streams. —W. E. WEBSTER.

Lake Vyrnwy (N. Wales).—As everywhere else, the weather here for the last week has been excessively hot and bright, and it was only occasionally that there was even a decent ripple on the water. The fishing has been decidedly good, and the average take per rod has been about the best this year. The catch of the week (out of the lake only) has been 293 fish, weighing 181lb. 5oz.; and the average take per rod has been six fish a day. On the 7th, there were forty-five trout weighed at 25lb. 10oz. Mr. Malpass made the best basket with fourteen fish, 7lb. 2oz.; Mr. Townshend killed seven, 3lb. 12oz.; Messrs. Davies and Brown, six, 4lb. 2oz.; Mr. Gunther six, 3lb. 12oz.; Mr. Moss, five, 3lb. 1oz.; Mr. Garside, five, 2lb. 8oz. On the 8th (the best day of the week), eighty-nine fish weighed 51lb. 12oz. Mr. Garside killed twenty, 11lb. 4oz.; Mr. Moss and the Rev. Fortman, nineteen, 11lb. 4oz.; Mr. Malpass, eighteen, 10lb. 2oz.; Messrs. Davies and Brown, seven, 4lb. 5oz.; Mr. Jackson, four, 2lb. 8oz.; Mr. Gunther, four, 3lb. 2oz.; and Mr. Williamson, three, 2lb. 1oz. On the 9th, fifty-four fish weighed 34lb. 12oz. Mr. Garside was again first with thirteen fish, 8lb. 1oz.; Mr. Moss killed twelve, 7lb. 1oz.; Messrs. Davies and Brown, seven, 5lb. 2oz.; Mr. Malpass, six, 3lb. 9oz.; Mr. Gunther, five, 5lb. 2oz.; Mr. Williamson, three, 2lb. 10oz.; Mr. Townshend, three, 1lb. 2oz. On the 10th, thirty-five fish weighed 21lb. 6oz. Mr. Garside killed nine, 5lb. 3oz.; Messrs. Davies and Brown, eight, 5lb. 1oz.; Mr. Moss, six, 3lb. 8oz.; Mr. Jackson, five, 2lb. 9oz.; and Mr. Townshend, four, 2lb. 12oz. On the 12th, forty-three fish weighed 29lb. 14oz. Mr. Garside killed fifteen, 8lb. 12oz.; Messrs. Davies and Brown, nine fish, 6lb. 6oz.; Mr. Moss, eight, 5lb. 8oz.; Mr. Fortman, six, 4lb. 1oz.; Mr. Jackson, three, 2lb. 11oz. River fishing has not been good, as the water is very low, owing to the want of rain. —LONGDRIFT.

Lea and Tributaries.—Yesterday (Friday), the season for taking dace, gudgeon, and grayling re-opened up the Lea, but the water was not in condition for the occasion, the result of the drought. Dace will be principally tried for this week end, the grayling in the river not being numerous enough to warrant special operations on the part of the angler. The dace are likely to be found in streamy bits of water, and below Hertford and St. Margaret's Locks, the "Boom" at Ware, and the Dobb's Weir stream, Hoddesdon, should yield most sport. Some of the back streams lower down the river ought also to be tried for dace. Attractive baits should be the caddis grub and the fly, the Black Gnat, Red Ant, and May Fly. No trout are reported captured this week, and no good results are notified from the tributary Beane. A few eels have been caught in the Lea, but the cold winds have been against much success among the slippery ones. The Lea would be all the better for a good night's rain, and so would the Stort and Rib. In the Stort the roach have not finished spawning yet at Bishops Stortford. The water there is in very fair order, but does not favour anglers in the Harlow and Sawbridgeworth reaches. It is very satisfactory to hear that roach have been seen in large numbers in the Stort this spawning season. —J. A. K. WALTON.

Lugg and Arrow (Leominster).—Both these streams are running clear and a nice level, and in capital order for fishing. The weather has been beautiful and fine, and very hot, with the wind in the east, and angling cannot be said to be as good as expected. May Fly is still rising in patches, and the trout do not take them freely, and the season may be called a poor one. The best flies to use are the Yellow Dun, Orl, Wickham, Red and Grey Spinners, and Moths, which have been successful in the evening. Worm fishing has been tried. On Monday some nice trout were landed with fly in the Lugg; and on Tuesday fair sport was had in the Arrow. The Pinsley is running clear and in fishing order. —GWYNNE.

Nene (Peterborough).—Although we have been looking forward to the prospect of a refreshing downfall of rain, which is so much needed to improve the condition of things for the opening of the season, up to the present (Wednesday), albeit appearances have favoured it, there is

no alteration in our atmospheric circumstances, and we are afraid, as the water in the river has become so very low through lack of rain, that the season will not open here so auspiciously as was expected, and that we shall have to bide a wee until the necessary change takes place. —E. A. S.

North Staffordshire Rivers.—The May Fly has been a most peculiar time in this district. The fly has hatched up in a dribbling fashion, and fish do not seem to have taken the Green Drake well at all off the surface. Most of the bags taken have come to the Sunk Drake and Alder, but the Black Gnat has been fished fairly successfully. Streams low and clear, and fly still hatching out. The evening fishing proves best, when the Grey Drake makes for the streams. —F. W. DALE.

Otter (Budleigh Salterton).—No improvement in the fishing has taken place since last report. The fish do not move to fly at all during the day, and in the evening, about 8 p.m., they take to "tailing" in the streams and pools, and except a tiny Midge occasionally, refuse the artificial fly. Just at dusk, however, a little sport may be had, the Silver Sedge and Flight's Fancy being good flies. A good freshet is needed. —HERON.

Ouse (Holywell Ferry).—River very bright but plenty of fish, and by the time this is published no doubt there will have been some decent fish taken, as several anglers are intent on taking first dish. Some rain would greatly improve the colour of the water. —A. SCARD.

Plymouth.—On account of the bright weather not much has been done, except early mornings and evenings. Very few peal have been caught, except in the Dart and Tamar. The only chance for taking trout is in the valleys dapping, the water being so clear in the open that they can see you nearly half a mile off. I have heard of one or two nice dishes from the Meavy and upper waters of the Tavy. —WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—The weather still continues unchanged, and the heat during the day is something more than tropical, which makes angling at the time quite impracticable, but very good sport is had by early risers, and anglers in the cool of the evening have had capital sport. The Severn is now in the best possible condition for the fly, and between Llandrinio Bridge and the town of Shrewsbury some very nice trout have been taken with the fly and other baits. The Vyrnwy is now rather low, but in very fair condition; but anglers still complain of a scarcity of flies on this river, and the May Fly has been very scarce this season. The Tanat is very bright and clear, but some good baskets of trout are taken from it, especially during the evening. The Cain continues in the very best condition, but is rather low in some places. Some very nice trout have been secured from it in the neighbourhood of Llanfechan. The prospects for coarse fishing in the Severn and Vyrnwy are very promising. —VYRNWY.

Sussex Rivers and Chichester Canal.—Rain has fallen in a few districts, but as a rule rivers are much too clear and weeds far too thick for successful sport. Ere these lines reach our readers the long-looked-for season will have commenced. The Adur will fish best during the first few weeks of the opening. Some fine dace and roach may be met with in the Steyning district, and carp in the upper water. A few trout are occasionally met with. The Cuckmere, in the tidal waters, fishes best on a big tide; there are plenty of all kinds of fish, especially large bream and carp. Dace, for the present, will be the principal sport in the tidal waters with fly. A few good chub are often taken, but the roach are not in condition, and feed much better towards the middle of July. The Rother will repay a visit, as the river holds a few trout, carp, roach, gudgeon, perch, and pike. The canal at Chichester is in good order. Heavy bream and carp may be seen, and perch up to 3lb. Tench are on the increase, and pike numerous. Some big bass are in the harbour. Soft crab is the leading bait, and the best spot Pilsea Piles. —GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—Trout anglers have had poor sport during the past week, and only small baskets taken. The salmon net fishermen are making good catches in the estuary. —H.

Teifi (Lampeter, Cardiganshire).—Fishing not very good just now. Water low, and not many trout caught until late in the evening. —H.

Temel (Ludlow).—The Temel in this part is still running clear and a nice level, and in good order for fishing. The weather has been very hot, with wind in the north and north-east, and sport has not been so good as would have been expected. Angling has been useless during the middle of the day, and the best time has been early morning and late in evening. There has been a good few rods out of late, and some good-sized fish have been caught, but no heavy lots. May Fly still continue to come up on patches, but trout do not appear to take them, and the season may be said to have been a poor one as regards sport. The best flies to use are the Blues, Red and Grey Spinners, Orl, Wickham, and Yellow Dun, with May Fly. Bottom fishing with worm has been very successful, and large trout landed. Minnow fishing slow this week. An angler fishing near Ludford with minnow, landed an eel about 3lb. which had gorged three of his baits. In the water below Ludford several very nice trout have been landed with May Fly and Orl, one scaling 1lb. 6oz. On Monday some nice fish were landed on Castle Pound with worm. Near Ashford some good fish have been taken bobbing with Orl and May Fly. The Ony, Corve, Clun, and Ledwyche are all running in good order. In the Corve trout 1lb. and 1½lb. each have been taken with May Fly, Orl, and bottom baits. With a flush of water sport would be good. —S. LUDLOW.

Temel (Tenbury).—In this part the water is running clear and a nice level, and in good order for fishing. The weather has been beautiful and fine and very hot, and angling has been rather slow during the day, and the best

sport has been had during the evening and morning. A fair number of rods have been out, and have used Yellow Dun, Orl, Spinners, Wickham, and May Fly. The latter fly is still coming up, but trout are not very eager after them. White and brown moths have accounted for some good trout. Several good lots of trout have been landed this week, and a good fall of rain is wanted to refresh the river, and then sport would be good. The Rea, Kyre, and Ledwyche are all clear, and nice trout taken in them with fly. —WORCESTER.

Trent (Newark).—The river is low and in good order for bottom fishing. Flounder and eel fishing, with worms, will be found the most profitable pursuit for the next two or three weeks, the flounder beds being clean, the result of the late heavy waters. Roach are numerous, and barbel and chub are showing in immense numbers on all the suitable scouring grounds. These may be taken with the cad bait, but are not yet in condition, so best left alone. Chub fishermen generally obtain plenty of sport during the early portion of the season in the Muskham fishery, most of which, however, are only landed to be returned again to the river. Taken all round, I should say prospects are good. —TRENTSIDER.

Uak (Abergavenny).—Water low and clear; good for the up-worm trout fishing. Salmon fishermen, speaking generally, have enjoyed good sport. Gentlemen visiting the Ondu, near here, have been having good sport with the trout there. Anyone requiring to fish that water can get all information from Mr. Hughes, Queen's Head Inn, Cromroy, near Abergavenny. —ERNELE DELAFIELD.

Wandle (Carshalton, &c.).—A little bit of this river bordering the road, about half a mile from Carshalton, seems to be free, but the angler I saw, though throwing a capital fly, got nothing while I was there. I had a brace and a half (best fish 1lb.) on a Ginger Quill; one of the smaller ones took a Red Quill Goat. This was in private water, but the fish were very shy. The water is not very low, and there was plenty of fly, which was being taken freely by the fish when no gnt was attached. As soon as the artificial came down, ever so lightly, it was detected in a moment as a rule, and my best fish stood a siege of over an hour before he made a mistake. Nothing but dry fly is of any use. —J. P. T.

Witham, &c. (Mid-Lincolnshire).—From the Witham district we hear that some of the fish sought by the coarse anglers are this year in a poor condition, roach especially being very backward. Bream, however, are reported to be available, and so also will be perch and dace. Chub also may be worth seeking in the upper lengths. Many anglers are not sorry that the time has come round again when they can enjoy the sport. Fly fishing is very well, but too precarious in this district to be very attractive. Several special trains are advertised for the week-end, and provision is made for visitors as far as Boston. —LUCI.

Wye and Derwent (Derbyshire).—A great number of anglers have visited these rivers during the past week, and some very good baskets of trout have been taken from both streams. The May Fly has been very numerous on the Wye, but trout have not taken them so freely as on some previous years. It appears as if trout have been feeding on the grub of this fly previous to its hatching out. This remark also applies to the Derwent as well. The catches on the Wye have been fairly satisfactory. A nice lot of fish have been landed from these portions of this river; creels ranging from four to seven and eight brace each have been obtained. A party of gentlemen fishing the Lathkill (private water) landed fifteen brace on one occasion. The Darley Dale club's water has yielded some very nice baskets. Mr. Wilkinson, on two consecutive days, took seven brace each day; also several others a nice lot of trout. Grayling have been rather troublesome, frequently taking the May Fly. The Matlock and Cromford Angling Association's water, Matlock Dale, has yielded some good fish. E. H. Maule, Esq., two and a half brace, on Monday; also Messrs. Cooper, Buxton, Newton, and others have obtained several good fish. The Rev. Richard Arkwright, fishing near Masson Mill, caught a splendid trout, length 18in., girth 1½in., weight 3lb., taken with a small dun; he having no landing net had to wade in to secure it by hand. The Homesford and Whatsteadwell reaches of the Derwent have produced some good trout, mostly by dibbling under the bushes with natural flies. The following will be found useful: Green Drake or May Fly, Yellow Dun, Dotterel Hackle, Ash Dun, Throstle Wing, Cooper's Fancy, Black Gnat, and Sand Fly. —DOTTEREL.

Yore, Swale, Wharfe, Nidd, Dove, &c. (Yorkshire).—The drought continues, and all our rivers are very low and clear, consequently not many anglers have taken advantage of the Stone Fly and May Fly season. I find the Stone Fly gets scarcer every year; but, on the other hand, the Green Drake increases in numbers. Both have been very killing carefully fished early in the morning or of an evening; and James Blades, the water bailiff for the Hawes Angling Association, tells me sport in the waters has been good, nice baskets having been made both in the Yore and Lake Semmerwater. The favourite flies have been the Stone Fly, Green Drake, Blue Partridge, and Knotted Midge. Visitors staying at that well-known anglers' resort, the Crown Inn, have had no cause to complain of lack of sport, particularly if they got up early in the morning. The sun has been very bright in the middle of the day, and the experts have confined themselves to early morning or evening fishing; but so far the above named flies have been more killing than the Bustard. Some nice dishes have been caught at Aysgarth and Redmire, and below Wensley Mr. C. Dixon, of Leyburn, caught a grand dish of trout with the Stone Fly on Monday morning. Very little has been done up the Swale, owing to the bright weather and lack of water; but in the tributaries sport has been very fair. The Green Drake, fished naturally, has been the favourite lure on the

Bedale Beck. There is plenty of fine trout in the Codbeck, but they are bad to get at now it is so very low; but Mr. Frank Newbold caught a brace of beauties the other day weighing 2½lb., and one of 17oz. Mr. Fred Wright has also done well with the maggot. "Up-stream worm" has been the principal lure on the Wharfe, but some good baskets have been made with Stone Fly, and with Stone Midge, Blue Partridge, and Light Watchet in the evenings. Mr. Crow secured several good trout during the day, fishing Cooper's Fancy dry. Several anglers have been tempted to try hinstard fishing, but so far with little result. At Ilkley, Mr. Leech, four good trout, fly, on Friday; Mr. Fenwick secured five handsome trout with up stream worm. I have little news, up to closing this letter, from the Nidd, but the May Fly has been on well on the Crimble; Mr. Mitchell secured eight grand trout with the Spent Gnat and Golden Dnn Midge; and Messrs. O. Dwyer and Wood caught respectively three and two good fish. The Dove has perhaps been in better trim than any other of the Yorkshire streams. Mr. Storr, the well-known angler, writes me that the catches this week have been good. June 8, E. Hill, eighteen; Mr. McCartney, eighteen; D. Hill, four, one weighed 1½lb.; D. Storr, ten; M. Snowden, twenty; J. C. Frank, Esq., June 7 and 8, seventeen brace; a gentleman friend, eight brace; Mr. Widdicombe, six brace; Mr. Robinson Newton, nine brace. At Fawston reservoir, Mr. Richardson, Mr. Chippendale, and others have caught from four to six nice trout each on an evening. The Stone Fly and Green Drake all about off now; the Spent Gnat, Blue Partridge, Cooper's Fancy, Stone Midge, Knotted Midge, Poul Bloa, Bracken Clock, and Brown Owl are good when there is water to fish in. Until rain falls the outlook for the bottom fishermen is very moderate, and the maggot is the best bait they can open the season with for roach, dace, chub, etc.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAPH.—There is no prospect for any rain at present unless it comes with thunder, and our rivers are at the lowest level. There is very little trout fishing in the upper waters, and the prospects for the opening of the coarse fishing season in the lower waters to-morrow are not good for sport; the best bait under present conditions for roach, dace, chub, etc., is the maggot.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Altnacealgach Hotel Waters (via Lairg, N.B.).—On 3rd inst., Mr. Campbell-Gibson and Mr. Bell, Edinburgh, on Loch Veyatie, sixteen trout, 6½lb. On 5th, the same anglers, on Loch Boarlan, had fifty-two, 16½lb. On 6th, the foregoing, on Loch Veyatie, two and a half dozen, 10lb.; and Mr. Boyd, Edinburgh, on Loch Boarlan, fifty-one, 15½lb.; Dr. Chalmers and Mr. J. Chalmers, Aberdeen, fished Loch Cama, and got eighty, 24lb. On 7th, Mr. Boyd, on Urigill, 115, 28lb.; Messrs. Gibson and Bell, on same loch, 110, 27lb. On 8th, Mr. Boyd, on Loch Cama, one and a half dozen, 18lb.; Messrs. Gibson and Bell, on Loch Veyatie, one and three-quarter dozen, 8lb.; and Messrs. Chalmers, on Loch Urigill, 100, 30lb. On 9th, Rev. Blomfield and Mrs. Blomfield, Devon, on Loch Boarlan, forty-three, 11lb.; Mr. Boyd, on Loch Urigill, 100, 30lb.; Mr. Gibson Bell, on Loch Cama, five dozen, 19lb.; Dr. and Mr. J. Chalmers, on Loch Veyatie, eighty, 23lb.; and Mr. and Mrs. Muir, on Loch Urigill, fifty-two, 15lb. Total for the day, 335, 98lb.—B.

Awe.—Fishing from Taynult Hotel, on the 7th, Dr. Johnston had a salmon of 17lb., and lost another. On the 10th, the same gentleman had a grilse of 8lb. On the 12th, he had a salmon of 18lb., and Dr. Adamson, a grilse, 6lb. Mr. Shaw had two sea trout, 2lb. The sea trout are getting up now, and good sport is expected soon.—D. MACDONALD.

Carron (Easter Ross, Ardgay, N.B.).—River very low, and weather bright. On 7th, Mr. Crawshaw Ralston, Balmagown Arms Hotel, landed a 10-pounder; on 7th, an 8lb. salmon; and on 10th, a clean run grilse, weighing 4lb.—B.

Deveron (Banffshire).—In the river Deveron fish are very scarce. The long continued drought has reduced the stream to summer level, and the undergrowth is appearing above water. A heavy flood is necessary to clear away the debris, which for some time has been accumulating, and open up a free passage for fish. At the entrance to the river the thin volume has not been able to keep the pebbles, which the sea cast up, from obstructing the channel, and the water is very shallow, so much so, indeed, that fish would find difficulty in entering. The sun is very bright during the day, and there is light frost throughout the night. On the Beldorney section of the river, on June 9, Mr. Watson had a nice salmon of 7½lb.; and on the 10th, Mr. Boase had one of 6½lb. Trout fishing is very backward, and very few are getting. The net fishermen on the river are finding the water at different points too low for working the nets, and for the past week operations have been mostly conducted below the Banff Bridge. We understand that some fine trout of 1lb. to 3lb. have been caught, but few salmon and no grilse. On the coast the yield was fair compared with last year, and on Tuesday a large box of 2½cwt. was consigned to the market. Salmon are of splendid quality, and of good weight, the average being about 12lb. The grilse got in the nets on the coast are of an average weight of 4lb.—H. W.

Inchadamph Hotel (Sutherland).—June 5, Mr. Cookson, Loch Awe, forty-nine trout, 16lb.; Rev. Mr. Watson, Skiag, eighteen trout, 6lb.; Messrs. Bird and Morgan, Loch Lettressa, eighteen trout, 6lb. June 6, very stormy; boats not out. June 8, Mr. Cookson, Loch Lettressa, twenty-six trout, 6lb.; Mr. Corstorphine, Loch Awe, twenty-four trout, 8lb.; Mr. Hurst, Skiag, twenty trout, 7lb.; Mr. Underbay, Inver, four, 3lb. (heaviest,

1½lb.). June 9, Mr. Corstorphine, Castle Bay, twenty-four trout, 8lb.; Mr. Hurst, Head Assynt, twenty-four trout, 9lb.; Mr. Underhay, Loch Awe, thirty-two trout, 10lb.; Messrs. Bird and Morgan, Loch Gillaroo, ten trout, 5lb.; Mr. Cookson, Mid-Assynt, thirty-two trout, 10lb.; Mr. Bindloss, Skiag, eighteen trout, 6lb. June 10, Mr. Bindloss, Loch Gillaroo, two, 1½lb.; Mr. Cookson, Loch Awe, thirty-three trout, 11lb.; Mr. Corstorphine, Mid-Assynt, thirty trout, 10lb.; Mr. Hurst, Castle Bay, ten trout, 5lb.; Mr. Oakdene, Head Assynt, five trout, 2½lb.; Messrs. Bird and Morgan, Kyleskin, five sea trout, 12lb.—WILLIAM WALLACE.

Lairg (Altnaharra Hotel).—June 7, Messrs. Upcher and Stedall, on Meaddie, fifty-one trout, 17lb.; Mr. Steel, on Loch Loyal, eight trout, 9lb.; Messrs. Deverall and Kirkbride, on Hallam, thirty trout, 14lb. 8th, Mr. Steel, on Meaddie, fifty-three trout, 13lb.; Mr. and Mrs. Brown, on Meaddie, twelve trout, 4lb.; Messrs. Stedall and Kirkbride, on Hallam, thirty-one trout, 12lb. 9th, Mr. Steel, on Loch Loyal, one feroc, 7lb., thirteen trout, 6lb.; Messrs. Upcher and Deverall, on Meaddie, eighty-one trout, 27lb.; Messrs. Stedall and Kirkbride, on Hallam, twenty-eight trout, 8½lb. 10th, Mr. Kirkbride, on Meaddie, eighteen trout, 6lb.; Mr. and Mrs. Brown, on Meaddie, thirty-one trout, 9lb. 12th, Mr. Steel, on Meaddie, sixty-three trout, 18lb.; Mr. and Mrs. Brown, on Meaddie, twenty-four trout, 8lb. 13th, Mr. and Mrs. Skirving, on Meaddie, thirty trout, 8½lb.; Mr. Steel, on Loyal, nine trout, 9lb.—W. D. M.

Loch Katrine (Stronachlachar Hotel).—On Saturday, Mr. Stirling caught fifteen trout; Mr. Gunter, ten trout; Mr. R. A. Turnbull, fifteen trout; and Major-General Campbell, six trout. On Monday, Mr. R. A. Turnbull caught nine trout; and Mr. Stirling seven trout. On Tuesday, Mr. Turnbull caught fourteen trout; Mr. Gunter, ten trout; Mr. Stirling, twenty trout; and Mr. Robert Henderson, twenty-two trout.—H. M.

Lochleven (Kinross).—A week of unclouded sunshine, with light easterly winds, have not kept fish from rising as might have been expected. They have been coming uncommonly well to the fly, but were hooking very lightly, and it has been a general complaint among anglers of their hooking fish after fish before one could be netted, while it has been the experience of a number who have frequently fished the loch that they never rose so many fish. Baskets, however, have only been fairly well filled. The most successful angling clubs were Perthshire (sixteen rods), who captured eighty trout, 49lb. 10oz.; first prize, Mr. R. Dunsmore, nine trout, 5lb. 8oz. The Bridge of Allan Club killed, with nine rods, forty-six trout, 30lb. 5oz.; first prize, Mr. H. W. H. Dunsmore, ten trout, 8lb. 8oz. Private parties: Major Ussher, twenty-two trout, 11lb.; Mr. J. L. Hamilton, nineteen, 13lb. 8oz.; Mr. Pyfe Moffat and Mr. Goldie, Edinburgh, captured, in two days, forty-four, 29lb.; Mr. Thomson, London, was out most of the week, and had fair creels; Mr. Clarke, London, had catches ranging to twenty-eight, 21lb. 8oz., which was the heaviest brought in by any angler this month. In two days Capt. and Mr. R. L. Garnett, Lancaster, had thirty trout, 17lb. 4oz.; Dr. Robertson, Perth, twenty-seven, 13lb. 8oz.; Mr. Smith, East Linton, fifteen, 13lb.; Mr. J. Donaldson, Glasgow, ten, 10lb.; Mr. Ednie and Mr. Young, Edinburgh, twenty, 13lb. 8oz.; Mr. J. Gordon, Glasgow, twenty-six, 12lb.; Mr. Sheach, Newport, and Mr. Kimmond, Dundee, nineteen, 10lb. 4oz.; Mr. R. P. Wilson, Markinch, and Mr. McLeod, Bengal, twenty, 11lb.; Mr. Young, Aberdeen, thirteen, 10lb. The catches by other anglers averaged about 8lb. per boat.—ROBERT LAING.

Loch Ness (Foyers Hotel), N.B.—Trout fishing on Loch Mhor has been good during the past week, and notwithstanding the bright sunshine and easterly wind, good baskets have been taken. Fishing from Foyers Hotel, on Monday, Mr. Guild, of Inverness, killed nineteen trout, weighing 10lb., and Mr. King, on Loch Ness, got four trout, 3½lb. On Tuesday, Mr. Hawkins, of Downham, Norfolk, got a good basket of exceedingly fine trout, thirty in number, and weighing 17½lb., while Mr. Guild was again successful in getting thirty-one trout, 15½lb., and Capt. Featherstonehaugh, nine trout, 6lb. On Wednesday, Mr. Hawkins got fifteen trout, 9½lb.; Mr. Parsons, fourteen trout, 7lb.; Capt. Featherstonehaugh, six trout, 3lb.; and Mr. Guild, thirty-five trout, 13lb. On Saturday, Mr. Hawkins got seventeen trout, 9½lb., and Mr. Parsons, twelve trout, 6½lb.—S. TILSTON.

Melville Hotel (Sutherlandshire).—On June 6, Mr. Pritchard had three trout, 3lb.; Mr. Drysdale, thirteen, 7lb.; Mr. W. Randall, sixteen, 7lb.; Mr. C. Randall, two, 4lb.; Mr. Nicholson, seventeen, 8lb. 7th, Mr. W. Randall, eighteen, 7½lb.; Mr. C. Randall, twenty-three, 15lb.; Mr. Nicholson, twenty-seven, 12lb.; Mr. Morrison, twelve, 8lb. 8th, Mr. W. Randall, twenty-eight, 10½lb.; Mr. Lucas, four, 3lb. 9th, Mr. Pritchard, one, 4lb. (loch stocked with Loch Leven trout April, 1894); Mr. W. Randall, twenty-five, 11½lb.; Mr. Lucas, jun., fifteen, 7lb.; Mr. C. Randall, one, 2lb.; Mr. Nicholson, sixteen, 7½lb. 10th, Mr. C. Randall, three, 1½lb.; Mr. W. Randall, thirty-three, 10½lb.; Mr. Pritchard, fifteen, 7½lb.; Mr. Lucas, jun., fifteen, 10½lb. 12th, Mr. W. Randall, sixteen.

Naver (Bettyhill, via Thurso, N.B.).—Both rod and net fishings are being prosecuted with very poor results. On 5th, Col. Fryer, Dalvina Lodge, had two salmon on Beat No. 1; Mr. Gill, Syre Lodge, one of 11lb., on No. 2; and Mr. Smith, Skelpick Lodge, one on No. 4. On 6th, Major Burnell-Milnes, Dalvina Lodge, had two salmon on No. 1; and Mr. Gill, one on No. 3. Mrs. Smith, Skelpick Lodge, caught a salmon on Beat No. 1 on 7th, and another on No. 3 on 9th. On 8th, three gentlemen out on neighbouring lochs from Bettyhill Hotel made a fine basket of trout, ranging up to 4lb. each. On

9th, a gentleman fishing the Naver estuary had a good haul of sea trout. On 10th, a lady and gentleman fishing Loch More made a fine basket of 8lb. brown trout.—B.

North-East of Scotland.—The cry is for rain. Every side stream is becoming a white streak of shingle, and even the main streams are showing too white a margin for wholesome sport. On the upper parts of the Dee sport continues fairly good; on the middle and lower waters again angling is nearly, if not altogether, suspended. The supplies of salmon on the coast continue very light from day to day; grilse ditto. Sea trout, on the other hand, are more plentiful than they have been for the past decade, and are affording good evening and morning sport to estuary fishers and anglers immediately above. The yellow fin are also strongly in evidence this season, but too light in weight and small in size for being freely basketed as yet. On the Lower Invercauld section, Mr. Illingworth creeled a fish of 8lb. and another of 7lb.; while Mr. Ferguson had a magnificent fish of 19lb. and another of 8lb. on the Crathie section. The members of the Court party at Balmoral are having an occasional fish, seldom a day passing without one or two being banked, Mr. Mather, the Right Honourable Viscount Cross, and others being the most successful. On the Cambus O'May water, Mr. Bailey creeled four, of 6lb., 6lb., 8lb., and 10lb. last week, while Mr. Styl had three of average weights. On the Glentana section, Mr. Bunteel had two; Mr. Farrer, six; and Campbell, three, all of average weights, during the last few days. On the Aboyne Hotel water, Dr. Stephenson and others creeled a good few fish ranging from 6lb. to 18lb. The Aberdeen Harbour Board has dropped £514 on the season's sales of salmon up to date, as compared with last year's returns, the deficiency being equal to about 8092lb., and last year was itself one of the poorest on record.

WEDNESDAY NIGHT.—The drought still continues without a break in the cloudless sky, and sport more difficult than ever. A very heavy catch of salmon and grilse was made at the mouth of the Dee on Tuesday morning, more than 200 grilse being got at one tide. This is cheering if a bit of spate came away to let them up, as they are evidently on the coast in force. Capt. Mackay had four fine sea trout at one tide, and six at another, all over 1½lb., two days last week; while other anglers were equally successful—on the Dess waters, two; on Ballogie, three; and on Woodend, three fish. All average weights were got yesterday (Tuesday). Mr. Haslam has had one or two on Carlogie. On a great many reaches angling has been entirely suspended owing to the excessive drought.—G. M.

Overcaig Hotel Waters (via Lairg, N.B.).—On Tuesday, last week, Dr. Nesham, Newcastle-on-Tyne, on Loch Giam, thirty-one trout, 13lb.; and Mr. Dodgson, Keston, Kent, on Fiag Beat, Loch Shin, twenty-two, 10lb. On Wednesday, Dr. Paradox, Newcastle, on Fiag, twenty-one trout, 12lb.; Mr. Dodgson, on Loch Merland, nineteen, 9lb.; Major Dixon, London, on Fiag, nineteen, 12lb.; Rev. Canon Faber, Doncaster, on Top Shin, fourteen, 7½lb.; Rev. Mr. Beard, Glasgow, on Loch Merland (one and a half hours), twenty-three, 10lb.; and Messrs. Cumming and Mitchell, Edinburgh, on Loch Shin (two hours), twenty-three, 12lb. On 8th, baskets ranged up to twenty trout, 9lb. On 9th, Dr. Paradox, Newcastle, on Mid-Shin, twenty-one trout, 14lb., and a feroc of 6lb.; Major and Miss Dixon, on Top Shin, eighteen trout, 6lb., and a feroc of 7lb.; Mr. Dodgson, on Fiag, seventy trout, 22lb.; Rev. Mr. Jackson and Mrs. Jackson, Wakefield, on Merland, twenty, 9lb.; Mr. Mitchell, Australia, fourteen, 8lb.; and Rev. Canon Faber, on Loch Giam, seventeen, 7½lb. On Saturday and also at the beginning of this week sport was equally good, but full details cannot here be given.—B.

South of Scotland.—The weather of the past week has been excessively warm, and to-day (Wednesday) it is almost of tropical intensity. Day fishing under the present conditions is hopeless, and no anglers have been out during the past three or four days. The whole of the rivers in the Border district are down to summer level. I do not remember the waters being so low in the second week in June as they are now, and there is not the slightest indication of a change to rain. Last week-end a few rods were out fishing the clear water worm, and a number of small catches of yellow trout were reported. This lure has been more successful in the early hours of the morning, but many anglers object staying out all night, or rising in the small hours of the morning for the chance of securing a sea trout and a few burn trout. Those who have been out after dark with the night fly report fair sport among trout. The small Bustard Fly is taking best, and some good sea trout were killed with that fly during the week. The trout made a fairly good show in the Solway nets on Thursday night, more especially in the higher parts of the Firth, and some large ones were taken. One lessee had one sea trout of 13½lb. The general run of sea trout, however, are now scaling from 2lb. to 4½lb. One of the Annan haaf net men killed a baker's dozen on Monday morning, weighing from 2lb. to 4lb. each. This is an exceptionally good catch for a tide, but is not equal to what used to be the case twenty-five or thirty years ago. Grilse are not making any show so far, but the grilse in the Solway do not run in any numbers until July. The herling of the Solway rivers are not due yet, and it may be fully a fortnight before we get the first of these trout in the rivers. As a rule the Annan gets the first of the herling run. Referring to my diary, I notice that we did not get the first herling last year until July 11. If the present fine weather holds, we may have them this year by the end of the month. The following notes refer to the sport had during the week on the different rivers. **THE ANNAN.**—Angling has been very poor on this river, and all day fishing has been at a standstill owing to the excessive heat, bright sunshine, and low waters. A few small

baskets of yellow trout have been caught in the middle reaches with small pink worm on Stewart tackle. On Monday night, Mr. Thomas Shortridge-Tweedie killed a splendid sea trout of 4½lb., in the Howes Pool, with fly. Mr. Pasley Dirom's keeper landed several sea trout in the Mount Annan water with the night fly; and a few fair-sized yellow trout have also been caught. Similar sport is reported from the Hoddon Castle water, but few rods are fishing now. A lad took a fine yellow trout in the lower tidal waters with a shrimp bait. The sea trout are to be seen nightly running up the river as soon as dusk comes on. **THE NITH.**—No sport worth reporting is taking place this week on the Nith and its tributaries. The Cluden and Cairn waters are far too low for any sport now. In the Duke of Buccleuch's portion, in Mid-Nithsdale, a few yellow trout and one sea trout was caught. No improvement is expected until after a flood comes. **THE GALLOWAY LOCHS AND RIVERS.**—The pike appear to be increasing in the lower waters of the Ken, where it falls into the loch. Last week upwards of a dozen pike, varying in weight from 2½lb. to 10lb., were killed. Of course, there are many finer ones in Loch Ken, but the pike are only fished for in the slack season. Loch fishing has been fairly good, but the catches would be better with a good south-west breeze on the lochs, and a fall of rain would further improve the catches. A good number of anglers have been out from Lochinvar Hotel on the lochs of the neighbourhood, and some pretty fair trout have been caught. Messrs. Barker and party had moderate sport last week on Lochinvar, and also on Knockman Loch. The above party had six yellow trout one day last week, weighing 8lb. Dr. Murray and Mr. Shipley fished Loch Harrow on Wednesday, and killed fourteen yellow trout. A local rod had a capital catch on Loch Mossroddick. Nothing is being done on the rivers, owing to the low waters and bright sunshine. **AYRSHIRE DISTRICT.**—A number of rods have been out on the Dalmellington Loch Doon since last week. It has been most difficult to secure a basket of trout under the conditions of bright and calm weather. Mr. Baird, a visitor, killed thirty yellow trout on this loch on Friday. Other rods moderate sport. Rain is greatly wanted to improve the waters. All fishing on the streams of Ayrshire is at a standstill this week. **THE SOLWAY DERWENT.**—Among the more successful anglers out on the Cockermouth Derwent mention may be made of the following: Messrs. J. Soulsby, R. V. Cooper, R. F. Brown, and J. Tiffen. Mr. Varty, of Broughton, killed a trout of 4½lb. Mr. Cockton and Mr. J. Plaskett had fairly good sport during the past week on the Derwent and Cocker. Sea trout are beginning to run, and two or three have been got on the "coops." Mr. J. Thompson ("Matty") had a fine yellow trout on Saturday night, which weighed 2½lb., and he had a number of other good fish. Yellow trout fishing is good in this district, but few of the local anglers go out, preferring to wait for the run of sea trout. Good fish are being caught on Crummock and the other lakes. Bassenthwaite is in capital order, as also Wastdale, &c. Rain is very much wanted to improve the angling.—**HEATHER-BELL.**

Tweed, Teviot, and other Border Rivers.—The glorious weather we have been experiencing during the past ten days has caused both Tweed and Teviot to run down to small dimensions. Salmon angling is, of course, nil, but trout anglers, both with fly and worm, are doing fairly well. On the Tweed, Mr. Robt. Robertson, Kelso, had 6lb. of fine trout, one specimen being just on 2lb.; on the same river, Mr. Malcolm had 4lb., both baskets clear water worm fishing. On the Teviot, Mr. Jas. Reid had 4½lb.; Mr. Andrew Thompson, 6lb.; Mr. James Steel, 7lb. (including a trout of 2½lb.). On the Tweed, Mr. James Hogg had baskets of 2½lb., 4lb., and 6½lb. during the week, and to-day, on the Eden, Mr. Arch Steel, jun., had 5lb. of very fine trout, all killed with fly. Mr. Wm. Shiel has had three baskets of trout, weighing from 2½lb. up to 6lb.; Mr. A. Thompson, 9lb.; Mr. G. Stewart, 2½lb., 4½lb., 6b., and 3lb., all on Tweed with worm in the morning. Mr. Charles Farquharson has had some nice takes of trout, varying from 3lb. up to 6lb.; while Mr. G. Thomson has had three baskets of 3lb., 5lb., and 4½lb., all with worm clear water worm fishing. On the Teviot, Mr. James Affleck, Heiton, had 6lb. of trout; Mr. James Mather, 4½lb.; Mr. Thos. Johnston, 5lb.; and Mr. George Grey, 2½lb. A great many of very heavy grayling have also been killed during the past week by various anglers, some of the fish running up to from 1lb. to 1½lb., while one was got on Teviot which scaled 2lb. The pike season is now on again here, and several captures have been made. Mr. Frank Stephani, on Monday, had half a dozen of these fish, which weighed in all 40lb.; Mr. R. Affleck, tailor and clothier, Heiton, two pike, 6lb. and 7lb.; Mr. R. Hogarth, Heiton Mill, two pike, of 6lb. and 4lb.; Mr. James Gilson, Earlston, three fish, of 6lb., 4lb., and 8lb.; all killed on Teviot but Mr. Stephani's, which were got partly on Tweed and partly on Teviot, but all in one day. Evening fishing for trout is now in full swing, and fairly good baskets are being made ranging from 2½lb. up to 4lb. Competitions are still going on in the Border district, and on Wednesday last the thirty-second annual competition of the Berwick Anglers' Club took place on the Whitadder, which was not in good order for fishing. The gold medal was won by Mr. J. M. Watson, Maryold, for heaviest basket, which weighed 3lb. 9oz., and contained fourteen fish. The next best basket was awarded to Mr. R. Weddell, Berwick, with 3lb. The twenty-third competition of the Allanton Club took place on June 8 in splendid weather, and waters in grand trim. Ten members weighed-in. Results: Challenge bowl, Mr. James Calder, 15lb. 3oz.; club rod, Mr. A. Martin Calder, 12lb. 1oz.; third, Mr. W. A. Robson, 10lb. 15oz.; 4th (heaviest dozen), Mr. James Calder, 3lb. 5oz. The net salmon fishing in the Tweed has some-

what improved during the week, there being a slight improvement both in the takes of trout and salmon, while one or two more grilse are being got. The catches, however, on the whole are poor. Prices are: Salmon, 2s. 1d.; trout, 1s. 3d. to 2s. per lb.—**MAXWHEEL.**

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Waters, and Gortnorabbey Hotel, Lough Conn).—The fishing for the past week has been very good on the loch. Mr. Solomon killed six salmon in the week, the largest weighing 9lb. Mr. King, in four days, killed seven salmon, the largest weighing 8lb. and the smallest 5lb., and lost three ready for the net. Mr. J. Willis Quigley killed two salmon in the week, and made several good baskets of trout, the largest weighing 8lb. Mr. Little also had some good baskets, the largest weighing 3lb. If the weather turns favourable for fishing—as at present it is too bright—we will have good sport. I may also add that most of the above salmon were killed on the minnow.—**THE MANAGER.**

Ballina (Private Waters of the Moy Hotel).—Weather getting cloudy; water in splendid order; all the pools of the private water well stocked with fish; nets taking up to seventy per day. One nice fish got on the fly on 11th inst. (7lb.), the only rod being out. Mr. Kempsey and friends, stopping at Runagry Lodge, made some very nice baskets of trout, scaling 18lb. and 20lb., for a few hours per day, largest weighing 6b.—**JOHN DEVERS.**

Bann.—There has not been much done on this river for the past week as the weather has been all against the anglers—east wind, with a cloudless sky all day and frost at night—the latter preventing the trout from rising after sunset to the few sedges that come on the water. There is a run of grilse so far up as Kilrea, three of which have been landed. Mr. W. H. Wilson took, on the Movanager reach, one salmon, 10lb.; and Mr. H. Lyle, two grilse, and one salmon, 15lb. Mr. Walter H. Wilson is back on the Bann, after having been on the Boyne for the month of May. He landed on Monday last a fish of 10lb., on the Judge, under Movanager Weir. He had grand sport on the Blackcastle reach, which he rented from Sir T. Ley for a month. He landed twenty-five salmon, the largest scaled 30lb. Only one of these fish was landed on the local patterns of flies, which Sir Thomas provided for him, the Bann patterns having taken the others. He was flooded off the river for three days, after which the fish would look at no fly but an improved Dunkeld.—**DANIEL O'FEE.**

Bann (Toomebridge, Co. Antrim).—On these sections evening fishing is now in full swing, and some good takes of trout were made since last report. Major S. A. M. Bruce, J.P., killed several nice fish up to 1½lb.; Capt. Ludlow, D.A.A.G., Belfast, had a nice dish on Saturday morning before sunrise, including a brace 1lb. and 2lb. respectively—dry fly fishing. Several grilse were also taken this week, heaviest 5½lb. At Kilrea, Mr. Davies, Glenmore, Belfast, had some success trouting, his takes including a fine 2½lb. fish. I understand that the lease of the Kilrea-Movanager reach, held by the Bann Angling Club, expires in September, the close of the season. Nothing definitely has yet been settled as to the future of that piece of water.—**J. A. B.**

Belfast.—There is scarcely anything piscatorial to report from here. Trouting is practically over on the Dams till rain falls, whilst the Clady, Crossgar, and Six Mile water are mere threads.—**J. A. B.**

Cork Rivers.—Sport has been fair at trout on the principal waters since last, but slack, generally speaking, at salmon. The weather, however, has been very sultry and bright, and it was quite useless, of course, to fish during the heat of the day. After 8 p.m. the best sport was obtained.—**T. J. D.**

Corrib (Galway).—The long drought is telling on sport on this river, though a decent number of peal and an odd springer were killed lately. Amongst those out were Capt. Bowman, Mr. Nathaniel Cohen, Mr. W. Townsend, Lieut.-General Dashwood, Capt. Curzon, Sir W. R. Williams, Bart., Col. Parker, and Commander Law, R.N., all of whom killed from a couple of fish to half a dozen per day. During the past month over 150 peal were killed. Not much is being done on Lough Corrib.—**J. A. B.**

East Tyrone Rivers.—Owing to the almost tropical heat evening fishing alone is permissible on these waters. On the Blackwater about Benburb a few good trout were killed recently and one or two grilse. On the Torrent tributary, Tuesday evening, a local angler killed five trout; and, before the water lowered, Benson and Mr. J. M. Hamilton had some successes. The Ballinderry is running down fast, and except during the evening and morning rise nothing was done in the past fortnight. Mr. Frederick Grier on his Tullylagan preserves, Mr. Charles Gausson on Loughry preserves, and Mr. Samuel Magree are credited with good sport. Coarse fishing on Roan Lake this week was productive of good bags of perch and pike.—**J. A. B.**

Brne (Ballyshanvon and Belleek).—The following are the particulars: Sir H. B. Robertson took one grilse of 6lb. on 8th inst., and two salmon, of 8lb. and 15lb., on

9th and 10th inst.; Major-General Dickins took one salmon of 7lb. on 13th inst., and Dr. E. Aiken took one grilse of 5lb. on same day; Mr. John Thomson took another grilse of 5lb. on 8th inst. Mr. W. Johnston and others took a few trout in the late evenings during the past week—largest, 4lb. weight. Rain is very much needed before an improvement can take place in trout or salmon fishing.—**M. ROGAN AND SONS.**

Kerry Rivers.—Sport has been dull on even the best of the Kerry rivers, owing to the abnormally hot weather for the season. On the Feale, Gale, Smerlagb, and Cashen, in North Kerry, fair sport was had at sea and brown trout in the late evenings; but on the Inney, Curran, Cumberagh, and Reenroe, in the South Kerry district, very little was done, though a few salmon were had on the Cara, Laune, and Flesk on a couple of days.—**T. J. D.**

Lee (co. Cork).—Salmon fishing on this river is practically at a standstill until we get some rain. The river is dead low, and the weather so bright, that only those who are up in the morning early have any chance. A large quantity of very fine grilse and salmon have congregated at the waterworks (in the tidal part of river), waiting for a rise of water to take them to the upper reaches. Mr. S. Haynes, one, 10lb.; Mr. J. Caulfield, one grilse, 4lb.—**W. HAYNES AND SON.**

Lough Conn (Cloghans).—Mr. White, one salmon and some handsome trout; Dr. Collins, three salmon in one day; Mr. Tracy, three salmon in two days, together with a dozen of trout, averaging 1lb.; Mrs. Tracy, two salmon and some handsome trout, weighing 2½lb.; Mr. Tickle, in seven days, eight salmon, with some nice baskets of trout; Mr. Conolly, fifty trout in ten days, from 3lb. to 4lb.; Mr. Rouslan, seventy trout, averaging 1½lb. Good prospects of sport for coming week.—**TOM CLARKE.**

Lough Curran (Waterville, co. Kerry).—Sport has been slack in all departments, owing to the tropical weather of the past week. In the late evenings a few sea trout have been had, and at those times the brown trout rose freely enough on many of the fishing grounds along the southern shores. Salmon and sea trout are still numerous in the tidal waters, awaiting a fresh before ascending. Peal are coming in in good numbers, but they do not show the least inclination to rise to flies.—**T. J. D.**

Lough Mask, Corrib, and Lough Na Fough.—The following anglers are fishing from Mount Gable Hotel, Clonbur: Major and Mrs. Ferguson, Mr. and Mrs. Smith, Mr. and Mrs. Booth, Dr. Grey, Capt. Watkins, Lieut. Bartholomew, also Messrs. Grey, Cock, and Smith. Weather warm and bright; fishing not so good as last report, still fair baskets are creelred, Mr. Smith getting the largest trout, a gillaroo, 4lb. (sent off to Williams', Dublin, to be set up), and a pike, 18lb.—**J. A. J.**

Lough Melvin.—Fishing was almost hopeless during the past week for either salmon or trout owing to the very bright weather. Still, the following fish were taken trolling: Mr. J. Hughes took a trout (*Salmo ferax*) of 4lb. on 8th inst.; Mr. K. Moloney took one grilse of 6½lb. on 9th inst.; Mr. A. Davis took another grilse of 5½lb. on 10th inst.; Mr. McMullen took a trout (*Salmo ferax*), 5lb., on 12th inst. Trouting was again poor during the day since last report, but some decent baskets of gillaroo and brown trout were taken in the evenings. The May Fly is now practically over, and would have been a good season with it, as some good fish were taken, but the weather unfortunately was most unfavourable all the time.—**M. ROGAN AND SONS.**

Lough Melvin (Lower Reaches, Kinlough End).—Owing to the prevailing drought fly angling was not a success. During the past week some nice catches were had trolling. Fair baskets were made by fly anglers in the early mornings and late evenings. Rain is badly needed to improve angling.—**P. GALLAGHER.**

Mountain Lakes (Waterville, co. Kerry).—Sport has been good at brown trout in the late evenings on the above waters, the best baskets being had on Lough Cumberavanig, Drenane, and Coppal. On Filealougha, on Monday, Mr. Smyrne caught three dozen brown trout, heaviest, 2lb.; average weight, 4lb.—**T. J. D.**

Mourne (Newtonstewart, co. Tyrone).—The water is running low but in fair order for evening upstream fishing. Up to date anglers from England who patronised this river have been well satisfied with the sport it affords. Tom McColgan had several nice bags of trout, including a fish of over 4lb.; and Mr. Jones had another of 3lb. The first flood will bring up salmon from the Foyle. There is plenty of salmon in the tideway, and I hear that those taken in the nets are exceptionally large. Unfortunately there is no imminent change in the weather.—**J. A. B.**

Moy (Coghlan's Hotel Waters, Foxford).—Fishing here the last week, Major Watkins, three salmon, 7lb., 6lb., 6½lb.; Col. Ewing, one 6lb. Some of the local fishers got a good many trout. The weather at present is against angling, it is so bright, and the days so hot. Very good prospect of sport if there is a change, as there is a lot of fresh fish in the pools.—**ANGLER.**

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—North-east wind and bright sunshine has made angling dull here. Mr. Pitts, two grilse, 7½lb.; Mr. C. Foster, three, 14lb.; Mr. Slaven, one salmon, 13lb. Trout fishing on the lough very poor. Quite a number of anglers trolling on the lough, few only being rewarded by an odd grilse.—**PAT HEARNES.**

Shannon (Castleconnell).—On Dooness, Mr. Hodges killed one peal, 4lb., on 12th; and one peal, 5lb., on 13th. On Prospect, Mr. A. T. Cobbold killed, 7th, one salmon, 17½lb.; 8th, two peal, 5lb., 6lb.; 9th, two peal, 5lb., 7½lb.; 12th, one peal, 6lb.; 13th, one peal, 6lb. On Newgard, Mr. Astley Creswick killed, 7th, one peal, 5½lb.; 9th, one peal, 5lb.; 10th, one salmon, 8lb.; 12th, six peal, 5lb., 5lb., 5lb., 6lb., 6lb., 7lb.; 13th,

SECRET SOCIETIES, both of a harmless and of a harmful kind, are more numerous in this country than most people believe. Some are merely foolish, and may be safely left alone, but others are a real danger to the community. The members of these latter societies are mostly foreigners, outlaws from their own land, the riff-raff of the Continent. Now, if we are to enjoy a healthy national life, these foreign impurities must be cleared out of our social system. It stands to reason that this is so, and what is true of the nation is true of the individual. Half the illness to which man is subject is due to the foreign impurities in the blood; by the use of Holloway's Pills these can be cleared away and health restored with certainty, safety, and rapidity.

two peal, 5lb., 5lb. On Hermitage, Lord Massy got one peal, 5lb., on 12th. On Woodlands, Mr. G. W. Greenhill killed one peal, 7lb., on 13th. On the Castle Fishery, Major A. D. Bulpitt killed one peal, 4lb., on 13th. We regret having to report that a large number of trout were found on Tuesday dead in the river, and we await the result of a post-mortem examination as to the cause of such a disaster.—J. ENRIGHT AND SON.

Upper Laks (Waterville, co. Kerry).—Sport is still confined to brown trout, as the outlets are too low to induce the sea trout to come up from the lower waters.—T. J. D.

Waterville River.—Sport has been backward, though salmon, peal, and sea trout are very numerous in the lower or preserved portion. The weather, however, continues quite tropical, and the only chances of sport are had in the late evenings. On Saturday Col.-Surgeon Barry had a salmon of 6lb. from the bridge.—T. J. D.

Angling Fixtures.

June 18.

Bermondsey Brothers: Match at Pulborough.
Cambridge Heath Brothers: Onting to Dagenham.
Clapham Junction: Onting to Amberley.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly delegate meeting will take place on Monday evening next, June 19, at 8.30. Will secretaries of societies please inform their delegates that Rule 8 will be strictly enforced?—R. GURNEY.

Anglers' Association (WESTERN DISTRICT) Visiting List.—Anglers please take note that the next return visit will take place on Thursday, June 29, at the Sundial Angling Society, held at Plough and Harrow, King-street, Hammersmith.—J. HARRIS.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £1, Good Intent, £2 7s., Hounslow Otters Angling Societies' donation boxes. At the last meeting two applications were entertained, and £12 was granted. The next committee meeting will take place on Friday, June 23, at 8.30.—R. GURNEY.

Albion Brothers' Angling Society. The Frampton Arms, Well-street, Hackney.—On June 11 we had a good muster of members. Being distribution night, very little business was done; we made another new member. On June 22 we have our supper, our secretary having consented to take the chair, with Mr. A. Carey in the vice; supper on table at 8.30. All financial members are eligible to come to our supper, and we hope to see every member present.—C. J. KING.

Allison United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—We had a crowded meeting on June 14, and we added six new members and several prizes. The A.A. privileges were taken by most members, and also A.B. tickets. Our match (pegged down) takes place on June 25, Veitch's

Pound, meadow side, Langley. I hope nothing will clash with this arrangement; as we have given notice previously in the *Fishing Gazette*, &c.; and I will thank other than members if they will not occupy any of our swims where the pegs are put. Messrs. E. Jackson and G. Prouten are the stewards to see where the pegs are most suitable to be placed. Every member to be present on June 21, quarter night, and to clear up, and have prizes ready.—BEN ABRAHAMS.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On June 13 (Mr. Drew in the chair) a deal of business was carried through. I hope to see a good muster of members at Pulborough on the 18th, as I have on hand some Central Competition tickets.—J. CHAMBERS.

Amicable Brothers' Angling Society, Bald-faced Stag, Worship-street, Finsbury.—Our annual distribution of prizes took place on June 14, when a good muster of members were present. Messrs. Harding, Moir, Calvert, Long, and Reeves were the principal winners. We have a large amount of prizes promised for next season; and a very enjoyable evening was spent.—S. HAYNES.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—I wish to inform members and friends that, on account of the illness of our secretary, our distribution of prizes will not take place until July 12, when I hope all those that have promised prizes will let me have them as soon as possible. Last Wednesday was the first meeting we have had for a long time, when we made a new member.—J. R.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—At the weekly meeting of the above, on June 14, some important business was transacted, and final arrangements made for the match at Waterbury on June 25. Most of the members will be at Pulborough on the 18th, in the Central Competition.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—We had a large muster of members on Wednesday last, when the privilege tickets were given out. Will all members who have not already done so attend and clear the books, and also take up privilege tickets. On Tuesday, Capt. H. G. Nichols weighed in a nice trout of 2lb.—F. W. MARTIN.

Anglers' Pride Angling Society, Duke of Suffolk, Brandon-street, Walworth.—We held our meeting on Wednesday last, and had a fair attendance of members, old and new ones together. We also have some new members to make on Wednesday next, and hope all members will rally up to this society.—A. A. C.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Members are reminded of first match at Amberley on the 25th inst. Go down on the morning by 8.27 (Clapham Junction); return by 7.14 (Amberley). Also note that the altered rules now come into operation, notably the increased standard. Several new members proposed at last meeting, and more are welcome.—A. JENKINS.

Battersea Piscatorialists, Lord Ranelagh, Verona-street, Battersea.—Since my last report we have made another new member, Mr. McEachan, and have still room for more. I am pleased to announce that the three prizes outstanding on distribution night have been paid in and given to the winners. Will members kindly attend next Wednesday for important business?—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The members of the above will fish a competition for the June series of prizes at Pulborough on June 18, under the same conditions as the Central Association competition.—ALF. COHN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Our meeting was well patronised on Wednesday evening, several new members being elected, and several more for election. Shall be pleased to see all members at cup competition on June 18; sorry to say we have lost our old host Bindoff for a time.—WHEELHOUSE.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—We had a very well-attended meeting on Tuesday last for the benefit of "Old Uncle" (G. Foster), and I thank all friends who so kindly assisted him on this occasion; we also enrolled three new members during the evening.—F. RANDALL.

Brompton Angling Society, Doyley Arms, Marlborough-road, Chelsea, S.W.—It is expected that the annual dinner on the 21st will prove a great success. We have a splendid list of artists who have promised to come. The chair will be taken by John H. Richardson, Esq., faced by W. H. Elsmore.—C. ASHBY.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On June 6 we had our thirty-fifth annual distribution of prizes won during last season. Upwards of forty-four were distributed among the successful members. Among them were a case of champagne, given by Mr. Burr, of Theale; our old friend, T. Goodchild, of the Florence, Islington, a case of whisky; Mr. Mills, a splendid jack rod; Mr. Gardner, a very pretty toilet set. A. Field was top weight of roach with 15lb. Our two gold medals for Sunday and Wednesdays were won by H. C. Canton and F. Lewis. Total weight of fish weighed-in during the season was 703lb. 4oz.—HY. TAME.

Cambridge Heavn Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On June 11 Mr. Elsworth, sen., weighed in a trout from the Lea; weight, 4lb. Our first prize outting this season takes place at Dagenham Lake on the 18th, for ten prizes. Members can go down on Saturday night, 17th, by signing the book at clubhouse after 2 p.m. All to meet at The Chequers at 2.30 a.m., to sign stewards' book. Start fishing at daybreak; cease at 5 p.m.; show fish at The Chequers not later than 6 p.m. Stewards, H. Deverill and C. Wicks. The annual general meeting

was held on the 13th, when fifty members were present. Letters were read from members unable to attend. Mr. B. Williams was unanimously re-elected treasurer for the next twelve months, and it was decided to add another officer to our list, viz., assistant-secretary. Mr. W. Yonog was elected for the office, and the secretary remains P. Loft. It was also carried that members can weigh-in on Bank Holidays, and the best resolution was that no member who has not paid for his A.B.S. membership ticket by June 27 shall be allowed to weigh-in fish, which was unanimously carried. Another working member was proposed (Mr. Stead).—P. E. LOFT.

Camden Angling Society, The Locomotive, Jamez-street, High-street, Camden Town, N.W.—The fourteenth annual supper of this club took place on Wednesday last, Mr. W. Andrews in the chair, faced by Mr. Fuller in the vice. The principal winners were Messrs. White, Taylor, Cook, Franks, Fuller, Fowler, Marshall, W. and J. Andrews, &c. The secretary announced that during the season 872 of fish had been in: Mr. White, with top weight of 276lb. 10oz., first; Mr. Cook, with 156lb., second; and Mr. Fuller, 79lb., third. The balance, after paying all expenses, shows that we have nearly £11 to begin the season with. The evening was then devoted to harmony, terminating with a hearty vote of thanks to our worthy host and hostess for the able manner in which supper was served.—R. M.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Our first day's outting will take place on June 18, at Amberley; tow-path only; boundary, from Park gate to Timberley Bridge. Train from Clapham Junction 8.27; return from Amberley 7.14. We have nominated another new member, Mr. Walter Hines.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—On June 18 we fish our first match of the season for three prizes (open roving) at Pulborough; one rod only, and punts barred. Members will also compete in the Central Competition in aid of Jubilee Nurses' Fund. A brake will start from the clubhouse at 6.0 a.m., to enable members to catch early train from London Bridge. Mr. E. C. Stanley was unanimously elected chairman for ensuing season, and sixteen new members have been enrolled during the past three weeks.—S. VIOLET.

Clerkenwell and District United Visiting List.—A visit of the above was paid to the Great Northern Brothers on Monday evening, Mr. C. Watling in the chair. A good entertainment was provided, and fifteen societies sent representatives, viz., Great Northern Brothers, Lincoln, Crown and Buckland, Eastonian, Amicable Waltonians, Bloomsbury Brothers, Alma, North London, Camden, Phoenix, Royal George, Dibdin, Original Clerkenwell, Collingwood, Walton, and Cotton. The next visit will be to the Lincoln A.S. Date later. Several societies have not sent in returns for programmes. P.O.'s for them to be sent to me at the Empress, St. John-street-road, at an early date, as the competition will take place at Amberley, on July 9.—F. CASTELL.

Clissold Angling Society. The Cricketers, Northwold-road, Stoke Newington, N.—On Tuesday had a good muster, and enrolled several more members. I hope to see a good show on June 18. Members please note date of concert.—T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—I hope members will attend on Tuesday next, as the conditions and place for the first match of the season will have to be made. The match will take place on July 9.—T. TWYMAN.

Collingwood Angling Society, Lord Nelson, Nelson-square, Blackfriars-road, S.E.—We made a new working member, Mr. Wm. White. Mr. Jarrett resigned chairmanship. The club has made a new prize of £1 1s., for most weighs-in. All fish to be in. over Thames measure, except Crucian carp, which will be club measure, which has been made an inch longer than before. We received further prizes from Mr. Deplige, £1 1s.; Mr. J. Donaldson, Alma A.S., a prize; Mr. G. F. Montgomery, 10s. 6d.; Mr. Virgo, a prize. All members who want competition tickets apply to Mr. Poole.—W. STAFFORD AND F. SORGE.

Convivial Angling Society, City of London, Sidney-street, City-road, N.—On June 14 a good muster of members. Dinner decided for June 25, at the Stag Hotel, Buckhurst Hill. Members kindly note: Outting arranged for July 2, to Byfleet, four prizes; also kindly note, a prize for gross weight on June 18; anywhere.—W. H. CARPENTER.

Cosy Angling Society, The Pine Apple, Wilfred-street, Buckingham Gate, S.W.—On June 14 several important items were arranged for the coming season, including election of officers; Messrs. H. Sheekey and E. Starr were elected working members. Will secretaries please note change of club address?—J. WHITE.

Crown and Buckland Piscatorial Society, Middleser Arms, 35, Clerkenwell-green, E.C.—Our annual dinner was a success, a most enjoyable day being spent by the forty members and friends who made the journey by road to Chertsey. We had a good attendance on the 4th, when Messrs. Cleaver and Pleasance were elected hon. members, and Mr. C. Glover, jnn., proposed as a working member, and will come on Wednesday next for election. A special general meeting will take place on Wednesday next at 9.30. I hope all members will do their best to be present. The committee will meet at 8.30, to arrange prize list and other business.—G. H. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On June 13 there was a very fair attendance, when it was decided that the first outting should take place on June 25. Full particulars at the clubhouse. Members please note that the new privileges are ready.—S. MALBY.

The Best Weekly Paper for the Family Circle is the

WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from
The WESTMINSTER GAZETTE Office: TUDOR ST., E.C.

240 TROUT

Were taken in 1897 on one of our Special TAPERED SINGLE GUT CASTS, such as we are now selling at 1/- each, 10/- per dozen (3 yards).

SALMON and TROUT RODS, FLIES, and CASTS of the HIGHEST QUALITY.

OGDEN & SCOTFORD, 19, LEICESTER SQUARE, LONDON, W.C.;
and at PITTVILLE, CHELTENHAM.
CATALOGUES GRATIS.

Dibdin Trout Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday's meeting, very good muster. Privilege tickets to hand. I am sorry to say I forgot one of our members when sending for same, but by the time this is in print it will be rectified. Our outing on June 18 is to Slough, for three prizes; members to meet at Paddington to catch 9 o'clock train. Trusting to have a better report next week, with good prospects of sport, but with the elements as at present it will be rough, at least, so thinks—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Since last report nothing very special to report. A few small trout have been taken from the Thames and Lea by two members. On the 15th inst. committee met and decided that, on the expiration of the six months' notice they have given, we move to the Half Moon Hotel, Holloway-road, N., where all communications should, after this date, be addressed.—GREG.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Our first match takes place on June 25 at Uxbridge; usual conditions.—W. JENKINS.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—We had a strong muster of members at our weekly meeting, with the president (Mr. T. Gathercole) in the chair. Our outing, on June 18, takes place at Hampton Court (bank, punt, or boat), to fish for Mr. Fulton's rod and three other prizes; all fish to weigh. Train leaves Clapham Junction at 8.25 a.m., returning from Hampton Court at 8.50 p.m.—A. T.

Globe Angling Society, Earl Russell, Isledon-road, N.—Our first outing will take place at Amberley on the 18th inst., when we compete for five prizes. A brake will start from the clubhouse for London Bridge at 5.45. We had two cases of roach from Messrs. Gitsen on Monday last, one case containing four fish weighing 8lb. 2oz. All members competing for above prizes must start from London on the morning.—W. LAWRENCE.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Midsex Hospital.—A fairly good muster on Tuesday last. Many more prizes given. The list we have sent to the printers. Members requiring a prize list please come up. We start weighing-in on June 18. Any friends who would like to see the fish are heartily invited on our meeting nights.—H. W. ELLINS.

Grange Angling Society, The Earl of Derby, Grange-road, S.E.—At the last fortnightly meeting the annual outing and dinner was fixed to take place at Watlington, on Tuesday, the 27th inst. Full particulars will be announced by circular. The five new members who were nominated by Mr. Wm. Rich, jun., at the previous meeting were balloted for and unanimously elected. A vote of thanks was passed for Mr. W. J. Wade for presiding, and the proceedings terminated.—W. K.

Great Northern Brothers' Angling Society, Robin Hood, Southampton-street, Pentonville.—The Clerkenwell and District Visit paid to the above society on the 12th inst. was well attended. Chairman, C. Watling. The following talented friends contributed to the harmony: Messrs. Colman, T. Hilton, Sam and Tom Fuller, Will Brighton, H. Hinchings, sen. and jun., and C. Watling. Fifteen clubs responded. Next visit to the Lincoln A.S.—J. A. FITCH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had our first meeting on Thursday last after the change, when we started the business by making two new members, and there are two more to be proposed. After paying all expenses of the past season, snapper included, we have a very substantial balance in hand to commence the new season with. We fish a match at Langley on June 25 for several valuable prizes, when I hope to see all members turn up.—A. E. PAYNE.

Highbury Angling Society, Globe Hotel, Upper Tooting-road, Holloway, N.—Mr. J. B. Close has had a nice trout of 2lb. 8oz. on the fly from the Kennet Fishery. Will members absent last Wednesday attend in force next week, as several important matters are down for discussion.—E. W.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—We met on Tuesday last, when the minutes of the last meeting were read and confirmed. Mr. J. Howard in the chair, when Mr. Boulton was elected a member. We have room for a few more members, working or honorary. The privilege tickets are ready.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's-road, Mansfield-street, Kingsland-road.—We compete for a series of special prizes on the Stort on June 18, all competitors to alight at Harlow station. There are also a series to be fished for on Wednesday next, June 21, same place and same conditions.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had very good meetings and also enrolled four new working members. We have arranged to fish our first match of the season at the Welsh Harp, on June 22, for season ticket and four unconditional prizes; from fence to fence around the head; one rod only; all fish to weigh.—G. BENCE.

Lady of the Lake Angling Society, Swakeley Hotel, Shepherd's Bush, W.—A club competition for two prizes will take place on June 18; Slough Canal; two rods; train 9.3 a.m. from Westbourne-park.—W. J. J.

Liverpool Angling Association, Bee Hive, Queen-square.—Glorious weather has prevailed during the last few weeks, and anglers have enjoyed their recreation under the pleasantest of surroundings. The next cry will be no water. Fishing in the Dee, Mr. R. Wilson saw a large pike basking. He had no regular bait or tackle, but put a minnow on his ordinary hook, and allowed it to swim past where the fish lay basking. Twice the bait was taken no notice of, but the third time Mr. Pike snapped it up,

and a most exciting struggle of perhaps ten minutes' duration took place, only to be terminated, as was natural, by the fish getting away. Thank goodness that plague of an angler's existence, close time, expires to-morrow (Thursday) night. I notice that in Parliament last week, Mr. Ritchie introduced a Bill, headed "Under-sized Fish." I suppose this only applies to salt-water fish, and most certainly is a step in the right direction. That eccentric M.P., Mr. Gibson Bowley, opposed the measure because, he said, "Little fish were sweet." Surely obstruction could no further go. It would not be bad legislation for Government to put through a Bill fixing a schedule of limit weights for fresh-water fish, too, below which it would be illegal to retain or have them in possession unless for bait. If this were so, many anglers' creels would be much lighter if the babies were left in the water to grow to a fair maturity.—R. WOOLFALL.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville-road, N.—We fish at Pulborough on June 18, for six prizes; all to start first train from London Bridge on the morning. We shall have a conveyance leaving clubhouse at six o'clock in the morning. Members wishing to go by same must give their names in by nine o'clock on Saturday night. Tickets for Central competition can be obtained at clubhouse. Messrs. Bryant, Evens, Moffatt, Symes, and Field were elected working members at our last meeting.—W. WATLING.

Lychnobite Angling Society, Ben Jonson, Shoe-lane, E.C.—June 10 competition postponed. Summer dinner and competition takes place at Hertford on July 15. Printers' benefit concert at headquarters June 24; "Champion" ticket holders please settle by that date. Meeting on Tuesday next; members please note.—SID RANSOM.

North East Brothers' Angling Society, Star and Garter, Green-street, Bethnal Green.—A meeting took place on Wednesday, June 14, and a very good muster we had. A special meeting will take place on June 21, hoping that all members will attend, as business very important. We wish to state that our president was back again with us after the voyage he has had for the benefit of his health.—G. TAYLOR.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Our annual supper and distribution of prizes, which took place on the 10th, was a success. Thirty-four members and friends sat down to do justice to a grand spread provided by our worthy host. After supper, harmony was the order, the chair being taken by Mr. A. Hubbard and Mr. H. Hancock. Mr. B. Rowe, pianist. The following gentlemen rendered some good songs: Messrs. G. Curtis, A. Pemberton, J. Reitz, W. Allen, Coldwell, Hill, Lewis, Stretch, and Craine. The principal winners were Messrs. J. Hopton, jun., six prizes, and gross weight of the club for the season; J. Reitz, five prizes; G. Thompson, four prizes; Carter, four prizes; G. Tracy, four prizes; Louch, Hopton, sen., and Coldwell also took prizes. A good list of prizes was given for the coming season. Harmony was indulged in until a late hour, when the usual toasts were proposed and drank to visitors, &c., who spent a pleasant evening. Amongst the visitors were the host, Mr. Perry, King's Arms, Waltham Abbey, and Mr. Stretch, of the North London Angling Society. Will members attend next Tuesday evening on important business?—W. SKEGGS.

Phoenix Angling Society, The Tavistock, Stibbington-street, N.W.—The list for our brake outing to King's Langley on June 25 closes on the 18th. Arrangements have been made at the Bell for luncheon and tea. We start off at 7.45 sharp. There are three prizes to be fished for, in canal only—one club's, and two by Host Tinson of half-a-guinea each.—R. C.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 13th inst. we had a very good muster of members present, and plenty of business got through. We made four new members on the above date. Any member who has not yet had his privilege ticket can obtain same at any time on payment at the clubhouse.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—We were very well attended last meeting night, and got through a deal of business; also had the pleasure of adding two gentlemen to our list of members. Will members kindly make it convenient to attend next meeting, as there is still a deal of business to transact that should have been done previously?—J. GIBBONS.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—A well-attended meeting was held on Tuesday last, when the following were elected members of the above: Mr. Carter, working member; and Messrs. Hallows and King, honorary members. Will members please note we meet on Tuesdays in future, at nine o'clock sharp.—R. SMITH.

South Bermondsey Piscatorials Institute, Rotherhithe New-road, S.E.—I beg to inform the members of the above that I have tickets for disposal for the competition which takes place at Pulborough on June 18.—J. H. DAVIES.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—The eleventh annual dinner and distribution of prizes was held at the above on June 7. There was a good attendance of members, hon. members, and friends. Host Searl placed a tempting spread before his guests. Mr. H. Dawkins presided. After the distribution, prizes to the amount of £10 were offered for the ensuing season. We fish our first match at Hatfield Peverel on the 18th; to go down overnight.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On June 13 it was proposed that our first outing, which takes place on June 25, should be a brake outing; final conditions next meeting night. During the evening a visitor, Mr. Abrahams, showed a nice

trout, 2½lb., which was much admired by members.—C. E. LOCK.

Waltham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—A grand muster of members on Wednesday, and we had the pleasure of electing two new members—Messrs. Painter and Hillier. We had a host of applications for seats in the brake for June 18, and shall quite fill the vehicle. The prize list is a record one, and we commence the season under most auspicious circumstances.—TIDDLER.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—I hope our members will not forget our match at Hatfield Peverel, on the 18th; all to go down with the last train on Saturday night that leaves Stratford at 12.9 p.m., and Forest Gate at 12.21 p.m.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—The eighteenth annual dinner of this club was held at the Dartmouth Castle Hotel on the 8th inst., Mr. W. H. Elsmore presiding, who was supported by Mr. T. Crumpley, of the Thames Angling Preservation Society. Mr. H. H. Afford occupied the vice-chair. A capital menu was provided by the host, and a very enjoyable evening was spent by the company present. Mr. Afford stated that he would be pleased to present another silver cup for competition this season. Mr. Dean promised his usual donation of two guineas, and an extra guinea for the best number of attendances on club nights. Mr. W. H. Elsmore's donation was two and a half guineas; Mr. Berry, one guinea; Mr. C. G. Carter, one guinea; and several other members and friends, 10s. 6d. each. The usual toasts were duly honored, and a good selection of harmony provided.—J. J. HUNTER.

Wimbledon Piscatorials, 28, Alexandra-road.—There was a large attendance at Tuesday's meeting, when the hon. secretary read the list of special prizes offered up to the present time for competition during the coming season. In all forty-four prizes in money and kind are promised, including a handsome silver cup. The first outing takes place on the 18th inst., on club water. All who propose to take part in the contest must be at Wimbledon Station by 8.45 a.m. Special compartments will be reserved for the trip, and cheap railway tickets will be procured. Members requiring privilege tickets should let the hon. secretary know as soon as possible.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good attendance at club on Tuesday, when some good business was transacted by clearing our books of all liabilities of the past year, so that now we start entirely clear of all expenses, leaving a fair balance in hand. In addition to taking part at Pulborough in the great competition on the 18th, we ourselves compete for three prizes. A brake will leave our headquarters at six o'clock to catch early train at London Bridge, having room for two or three more should any angler wish to go with us.—NAT LINDEN.

Dollings by the Day.

THE Central News says: It is stated that on credible authority that an offer has been made to the Southend Town Council by a London capitalist to construct a huge sluice sea-wall at a cost of £600,000, in return for which he asked permission to construct an extensive generating plant and use the tidal force for its working, with the idea of supplying the metropolis with electric motive power. He guarantees that there shall be never less than 3ft. 6in. of water on the beach, which is dry for a long distance now at low water. In fact, it will be a huge marine lake. The proposal is under consideration.

ACCORDING to the *Evening News*, Monkey Island and the hotel have been taken on a ninety-nine years' lease from the owner, Mr. W. V. B. Van de Weyer, of New Lodge, by the Eton College authorities, who have let it to a tenant, with a number of restrictions. This charming islet on the Thames above Windsor is well known to river frequenters. The hotel was built by the third Duke of Marlborough as a hunting-box in the reign of Queen Anne. The ceiling in the Monkey Room was originally painted by Sir Joshua Reynolds, and occupied four years, at a cost of £4000. The island has been in the past a favourite camping-ground for river men. [But what interests many old anglers most is the fact that dear old "Bob" Plummer used to cater for anglers in a princely style.]

MR. S. J. HURLEY, of Abbey View, Killaloe, Ireland, writes: "Dear Drag,—As we are bound to have a very brilliant season here, kindly tell your angling friends who may be on the look-out for good salmon, grilse, trout, and pike fishing, on river and lake, either on reserved or free water, to hasten hither, and they will not be disappointed. The free beats are yielding excellent sport at present. One or two capital preserved waters to let. If you should be able to run over yourself for a few days, it would be a great pleasure to me to take you out on one of the best reaches of water on the Shannon." [Wish I could—but they'd have to "call me early, mother dear!"]

A CORRESPONDENT, at present on a visit in the neighbourhood of Llanymynech, writes as follows: "This pretty place is now seen to the greatest advantage, as, in addition to the chestnut trees, now at their best, the lilac, purple and white, is in full bloom, the laburnum is showing a wealth of bright yellow blossom, and the red and white hawthorn will, in a few days, arrive at perfection. At this time of year a more delightful stroll

could not be enjoyed than a walk up the north side of the Vyrnwy from Llanymynech bridge to the aqueduct at Newbridge. The weather at present is simply delightful, and does much to recompense those angling visitors to the neighbourhood who remain here, and who, during the past few days, have had excellent sport angling in the Vyrnwy and Tanat, both of which rivers are now in good condition for the sport. Tickets are now issued to Oswestry (about five miles from Llanymynech) for 16s. each, on every Wednesday, available for eight or fifteen days, from either Paddington or Euston. They are very cheap, as the ordinary third class fare, one way, is 14s. 8d. Llanymynech is on the Cambrian railways, and about five hours' ride from London, through a lovely country.

If you want a trip from "Cairo to the Cape" visit the Royal Aquarium, where an historical war tableaux, depicting the valour and gallant deeds of British heroes in Africa, will commence on Monday and onwards, about 3.30 and 8.30 daily. Many other interesting items will be added to the programme. The Chess Congress is drawing distinguished audiences in St. Stephen's Hall, among them the Lord Chief Justice of England, who has paid two visits.

MR. W. ELSMORE, of the Central Association, writing from The Lodge, Brundall, Norwich, on June 13, says: "In spite of the north and east winds, fish are now on, although, like other Londoners, I don't go after them. On Sunday, a Norwich man had 21lb. bream, close to Brundall Station, and another ingenious individual is reported to have caught the marvellous quantity of 172lb., at Buckenham Ferry. I understand he angles with a net, which is carried in a bait can. Capital dodge, this. Just the sort of move to make the subscribers to the Yare and Bure Preservation Society feel a little deeper in their pockets. Probably, however, this report, like some of those we hear of from the Thames, is put in the papers as a bait to catch anglers. Grand weather here if the N. and N.E. winds would clear off."

I HAVE received a pressing invite to be present at the grand competition to be held at Pulborough on June 18. Will go if well enough. All the same, one or, perhaps, two trains will leave London Bridge by Eldridge's excursions at 6.50 a.m., to fish for the twenty-guinea cup kindly presented by Mr. Walter Emden, J.P., L.C.C., and a large number of other prizes. Entrance fee, 1s., proceeds of which will be handed to the Queen's Jubilee Nurses' Fund, in recognition of their noble work in assisting the deserving poor during sickness, and in accordance with the wish of the donor of the cup. It is to be hoped that the day will be fine and the entries large! The river is a bit low, owing to the long absence of rain, but I am quite prepared to hear of some good fish being captured.

SPACE precludes giving a full account of the open roving contest being organised by Mr. A. A. Eldridge, to Amberley, on July 2. About £10 in money, and various other prizes will be fished for. This match is open to all comers, but they must be armed with the usual privilege ticket (6d. for the season), and early application for them should be made to Mr. Eldridge, Rose and Crown, 21, Goswell-road.

SINCE "Squid's" annual bath at Deal, I hear he has been taking a second—most unusual for him—at Dawlish. I am told that the sea was so rough he was the only, or nearly the "only" one who bathed. There was no occasion for soap, the foam answering all purposes.

DURING the recent lambing season, a ewe, the property of Mr. Jones, of Glanrafon farm, in the parish of Llanyblodwell, gave birth to a lamb which had two perfectly formed bodies, joined together at the neck. It had a single head, but four eyes, and also four ears. The ewe died in giving birth to this monstrosity, and the offspring did not long survive the parent.

A SHORT time ago, a hen, the property of Mr. Watkin, Penybryn, Llansantffraid, near Oswestry, laid two eggs, which were joined together at the smaller end by a sort of tough ligament. The greater part of each egg had hard shell as covering, but where they were joined together the shell on each was quite soft.

MR. W. HOWLETT, writing in the *Bury Free Press*, says: "A meeting of the Lark Angling Society was held recently at the White Hart Hotel, Mildenhall, under the presidency of Mr. O. F. Read, chairman. The general secretary and superintendent of the river stated to the meeting the society was going well, better than ever in fact, thanks to the energy of the local secretaries. I might here state the Tuddenham stream is private property, both the water and the river bank, and any person found thereon will be trespassing. They have no right there. The Lark stream is the water rented to the society, and it is hoped members of the angling society and others will not use the Tuddenham stream to cause any annoyance to the gentlemen who are kind enough to allow angling in the River Lark."

ACCORDING to the *Man of the World*, every information and assistance will be given to those wishing to fish the Lark, on application to the general secretary, Mr. W. Howlett, 40, High-street, Newmarket. He says: "Don't attempt to fish without a ticket, as the water bailiffs are up and down the river, and it is their duty to examine tickets of persons fishing." [The subscription is 5s. per

year. I am not quite clear as to the price of daily or weekly tickets (if any), but will give definite information next week.

ALTHOUGH still suffering from the flu and chest on the lungs I drove up to the Gresham on Tuesday evening to hear and see "Straw Hat" in his lantern entertainment entitled "The Thames." The large club-room was used to the best advantage, and the lantern was skilfully manipulated. Members and friends mustered strongly, and were highly entertained. The chair was taken by Mr. A. W. Parker. It goes without saying that a most pleasant evening was spent.

THE "Thames Angling News" for June is to hand, and crammed full of interesting and chatty news of the Thames. The subject of the "interview" for this number is Mr. A. R. Matthews, who relates his experiences with his usual bashfulness. A capital portrait is given. A very interesting article on Thames trout and salmon also appears. Altogether, the June number sustains the reputation of the brightly-written T.A.N.

I HEAR that the gigantic Jubilee Jumper has grown to 20lb. The bashful capturer has not sent on the full particulars, so I will not record them. Here is an authentic account of the capture of two respectable fish, vouchered for by the Rev. Dr. Arnold, of Emsworth: "Mr. J. Anderson, curator of the Chichester Museum, kindly sends me the following note: 'Two immense trout were recently caught in Alesford Pond with live bait. One weighed 8lb., the other 12½lb. It took nearly half an hour to land the larger fish, the net having been previously destroyed in attempting to land a jack weighing about 15lb. The larger trout measured 2ft. 5in. in length, and was nearly 20in. in girth.'"

THE *Architectural Review* for June is a sumptuously printed and particularly interesting number. The plates of "Disappearing London" represent "Milford-lane, Strand," "Booksellers' Row." Such pictures are worth preserving, as quaint bits of old London are disappearing. There is a special Art and Crafts supplement, a charming paper on "The Architecture of Guildford," and a delightful chapter on "A Lincolnshire Stream," written and illustrated by Mr. R. B. Lodge. The number is altogether full of art, and has many pictures appealing direct to the lover of nature.

ACCORDING to the Cambridge Heath Brothers' report, one of their members (Mr. Elsworth)—more than seventy years of age) captured a 4lb. trout from the Lea. About a quarter of an hour before his capture the angler "dropped in." Was it to find out whether any of his finny friends were at home? No matter: he is none the worse for his immersion. I wonder whether, if a prize is hanging to this nice trout, the captor will be prevented from taking it by some kind brother member suggesting that he went into the water expressly to hook the fish—and then pull it out? I hope not!

I LOOKED in, quite promiscuous-like, at the Bridge House Hotel the other evening, on the occasion of the N.A.P.S. annual banquet. As usual, I was not quite up to the mark. I had been warned by my doctor to beware of fogs. This was a summer's evening; the air was balmy; but on entering the room I was completely befogged. My friend, "Peter Pickup," of the *South London Press*, was present. I knew he would have something to say, in his usual genial vein, respecting the artificially-manufactured clouds which pervaded the banquetting room. I looked over his shoulder just as he was finishing his ice pudding, cool as a cucumber, calm and collected, and I "shorthanded" the following, which will no doubt appear in Peter's column of the *South London Press* this week. Serve him right. His shoulder ought to have been bigger; but, in truth, it is big enough, as his friends can testify. Here goes.

"THE angler is not the kind of man to confess himself taken by surprise. The members of the New Albion Piscatorial Society, who dined together the other night at the Bridge House Hotel, London Bridge, are now, however, talking over their singular experiences at the dinner, and admit that not only were they surprised, but some of them suffered from a feeling closely akin to terror. It happened thus: The secretary, or some other prominent official, rightly guessed that posterity would like to possess a memento of what may be regarded as quite a historic gathering, and so it was arranged that a photographer should take a picture of the 'swim' while on the 'feed.'"

"THE photographer knew that anglers were not ordinary mortals, and that some special and novel process must be used for instantaneously catching that fleeting expression of joy which is the chief charm of every angler's countenance. The ground-bait had been plentifully spread to engross attention, and the photographer came with some new patented arrangement of the flashlight character. There are differences of opinion as to whether he used gentles or paste—I mean liquid air or magnesium—but certain it is that when he thought the company were wearing their most seraphic expressions he allowed his rod—I mean his camera—to go off with a bang.

"INSTANTLY the room was filled with a greyish black vapour, occasionally illumined with fitful flashes of forked lightning, and a few minutes afterwards, with such celerity do they act in Southwark, the clatter of the fire-

men was heard outside. The secretary, with marvellous presence of mind, rushed to the table, on which there was a choice collection of vintages, thinking there was a conspiracy to rob the anglers of their harmless necessary beverages in the extemporised and artificially-produced fog. Everything was found all right, and I am told the photograph produced so scientifically has turned out a beautiful work of art. The alarm created in the anglers' bosoms, however, did not quickly subside; and when some of them reached home in the small hours of the next morning, they were glad to pour into sympathetic ears the story. 'Late, is it? Lucky, my dear, I got home at all. What's the matter with me? Not whisky, my dear, I assure you. Nearer eschape. I've been in a sort of a kind of a splozion.' [Thanks, Peter; we were in want of some fresh excuse for coming home in a cab rather late.]

THE "season" is open. Go on ahead, boys, and get fish. Don't forget to put some in as well as take them out! Don't send your club reports written on both sides of the paper. Don't send them on Friday morning when the machines are banging away in order to publish by five o'clock on Friday evening. Don't omit the name of your club and leave it to be discovered by the name of the secretary in a former issue. Don't talk about "ultra," and "insts.," and "proximos." Say June 18—or July 25—it will prevent the possibility of a dinner being announced in the fixture list (which took place a month ago) as about to take place!

"SIX-POUNDER" is the pro-pounder of the following in the *Dundee Courier*: "The following table, compiled from Loch Leven statistics, calculated on the average over a series of years, may be of interest, as showing how uniform on the whole the results are on that famous sheet of water:—Forty casts, equal to one rise; twenty rises, equal to one trout; two trout, equal to 1lb. The fractions are omitted. It is also noteworthy that every trout caught of ½lb. or over is immediately followed by another half—but this good practice is common to other lochs in Scotland."

A "Mick," in a car, with a pipe in his hand, Was accused by the 'ductor of smoking; Said "Mick," "Now, bejabbers, that's awfully grand, But really, me boy, ye are joking. For argument's sake we'll jst go to the root, You spake, and although you are talking, Take notice, bejabbers, me foot's in me boot, But you musn't suppose that I'm walking."

"A FEW nights ago," says a correspondent, "in going round the house the last thing for the purpose of locking up, I opened the pantry door, when my attention was attracted to a phosphorescent light which appeared to arise from the shelf. A closer examination showed me it was being given off by a mackerel which the cook had left there, intending to cook it for the morrow's breakfast. The light sprang from the fish's head, which was quite blazing. My cook states she has often noticed the same thing, and the fishmonger, when we told him, laughed at our fears, and stated it was only an indication of great freshness. Otherwise, amongst my friends, opinions appear to be pretty equally divided, as to whether the glow arose from freshness or putridity." I cannot enlighten my friend, but I don't mind telling him that on one occasion I came home when Mrs. Drag had gone to bed, and, feeling hungry (?), found myself in the pantry. The gas, of course, had been turned out. Guess my surprise when the match had burned out to find the place illuminated. This is Mrs. D.'s version of the phenomenon: "You see, cook left half a nice Scotch haddock for your breakfast, and as you have not eaten anything for a week, she thought it might tempt you after it had been hung for a few days." Thanks; save your gas, and light up with half haddocks.

A CHINESE philosopher was once discovered fishing by the side of a stream, and when he pulled up his line it was found that his hook was nearly a straight piece of iron, with a round knob at the end, like a pin. Being asked why he fished with a hook like that, he replied "Because I only wish to catch such fish as wish to be caught." There was method in this sage's philosophy, for it was evident that his fishing was merely an excuse for sitting still and meditating. But nowadays philosophy is held up to ridicule—if I am to judge from a case that recently came under my notice. An absent-minded individual was discovered by some boys, sitting on the bank of a river, with his eyes rivetted (figuratively, of course) to a well created F. G. His fishing rod was in his hand, but the butt was in the water, and the thin end, with the line and bait attached, was hanging on the bank. One of the cheekiest of the boys went up and asked "Caught anything, sir?" "Not yet," was the mild reply; "I've been fishing here for three hours, and haven't had a single bite." And the unfortunate angler went on his way, reading "Straw Hat's" safe advice on how to enjoy fishing—first catch your fish.

IN ORDER to "pull myself together," Harry Spray, W. Gaskell, and several other Nottingham boys are arranging an outing for me on their dear old Trent. I shall try and accept—I will 'an all! Then I shall be better able to narrate the princely manner in which I was treated at the banquet—how I lost my bag—how it was taken from the Constitutional Club to another club—how, well, how, at last I arrived home to London all the better for my outing. DRAGNET.

PISCATORIAL SOCIETY.

MR. H. HARDEN presided over Monday's meeting of this society, and with regard to May Fly fishing on the Kennet, at Newbury, at any rate, there was a consensus of opinion that it had been most unsatisfactory. There had been the biggest rise ever seen, but hardly a fish was to be got. This upward state of matters was doubtless due to the hot weather coming on so suddenly as it did, bringing the fly up with a burst. The rise was all over, indeed, before the trout woke up. The following reports were received of captures of trout since last meeting: Mr. E. M. Mayes, three brace with the May Fly at Midgham; Mr. R. C. Blundell, one of 2lb. at Newbury; Mr. H. H. Brown, two brace on the Lambourne; Mr. W. Edmonds, a leash on private water; Mr. H. Marks, one fish at Uxbridge; and Mr. H. A. Rolt, one fish from the same place. The chairman rose and hooked his old friend the 7-pounder on the society's water at Newbury, but was broken. Mr. E. M. Mayes gave a descriptive account of his visit to the Loch Leven competition last week. He had exceptionally bad luck, however, only coming out thirty-fifth amongst forty-four competitors. His score was six fish, weighing 3lb. 9oz. Mr. Mayes mentioned that he was received most kindly by the northerners. Many of them remembered the society's late dear friend and hon. treasurer, Mr. Edward Foreman, and expressed their deep sympathy not only with the family, but with the Piscatorial Society itself, in the great loss they had sustained. Being a stranger amongst them, the speaker was most touched to hear that one endeared to every member of the society was so highly esteemed and respected by so many Scotch friends as Mr. Foreman was. Mr. J. J. Hardy forwarded for the library Halford's new book on "Dry-Fly Fishing," and was cordially thanked for his kind present. The half-yearly meeting has been fixed for Monday, July 17 next, and members who desire to give notice of alterations in the rules must bear in mind that they should do so twenty-eight days previous to this date. It has also been decided to hold the summer dinner at Newbury, as usual. This interesting event will take place on Saturday, the 22nd prox., and members will be duly informed of all particulars as to trains, &c., in connection with this pleasant function in due course. Coarse fishing (except for pike) opened on the Uxbridge water on the 16th inst., but it may be pointed out that only those members who have remitted their current year's subscription, and hold the special permits, are entitled to fish the new water. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Holborn Restaurant on Wednesday, June 14, Mr. G. R. Clarke in the chair.

Mr. R. H. Wood reported the capture of sea bream, pouting, and conger, and hooked but failed to land a mackerel while railing. He fished Loo Gate. The boatman took two sea bream 3b. apiece. Next day he took a pollack just under 5lb. with a small pouting as bait. The other fish were taken with lugworm and mackerel, although mussel bait took the best fish.

The hon. sec. reported for Mr. J. N. Hearn that he had been fishing at Southwick with Peacock, and had taken off the Billy Bury two congers (8lb. and 2lb.), six sea bream (best 1lb.), and a score of large pouting.

The chairman reported that he had arranged to fish for pollack at Dawlish, but was prevented from fishing by the stormy weather.

Mr. Croft Handley reported that he had been fishing with one man at Dover, but had not good sport, only taking a few pouting.

Mr. Handley further suggested that a tide table for the next twelve months for London Bridge be included in the pocket-book, as he thought it would be of great value to members if used with our plus and minus signs as given in the list of stations.

Attention was drawn to the nuisance caused by sea anglers cutting up bait on the seats of the piers at sea fishing resorts.

The usual vote of thanks to the chair closed the meeting. CHARLES S. PATTERSON (Hon. Sec.).

FISHERIES EXHIBITION AT LEEDS.

AN interesting exhibition was opened on the 8th inst., at the White Swan Hotel, Call-lane, Leeds, the headquarters of the Leeds and District Amalgamated Society of Anglers, in connection with that body, and great credit is due to the exertions of the active members in getting together so interesting a collection of specimens. Among the most interesting cases are those lent by Capt. Ormrod, of the Wyresdale Fishery, and one, entitled "Fish Enemies," showing a swarm of rats devouring a very fine trout, is greatly admired. A large three-year-old male rainbow trout makes most anglers regret that this class of fish has not proved a greater success in this country. The rainbow, Capt. Ormrod strongly asserts, will thrive well in England if suitable waters are properly stocked, but so far there is little proof of their breeding in open waters. A five-year-old king carp, from Wyresdale, weighing 13½lb., is a handsome specimen. There are few specimens trout, the best case being one lent by the Northern Anglers' Depot, a fish of 2½lb., caught by Mr. Frank. This exhibit is interesting from the fact that a small trout having been caught on a fly, was on the point of being landed when it was seized by the larger fish, and did not release its hold till after both were netted; and it is with the small trout in its mouth that it has been mounted. A Ure trout of 2lb. 4oz., caught by Mr. Walbran at Tanfield, and one of 2lb. by Mr. Parkinson,

are the only others worthy of mention. The grayling is well represented, the largest being one of 3lb. 9oz. from the Test, and a case of three from the same water caught by Mr. Walbran, and lent by the Northern Anglers' Depot. There are also several good Yorkshire grayling, but being spoiled in the setting up, comparison is impossible. Mr. J. Pickersgill is easily first in the roach class, his case containing fine specimens of 1lb. 14oz. and 1lb. 6oz., and also the only good dace shown, but of this latter no weight is given. The perch class is disappointing, not one good specimen being shown. A Windermere char receives a deal of attention but greater interest is taken in the pike class, in which several good specimens are shown. The largest is one 35lb., lent by the Northern Anglers' Depot, but it is not a pretty specimen, and case No. 126, one lent by Mr. George Helliwell, is generally voted first place for beauty. Mr. C. P. Parkinson shows one of 20½lb. Several good bream are shown, the largest being one of 7½lb., caught by Capt. Warner and lent by the Northern Anglers' Depot. Barbel are in strong force, case No. 20 being the best shown, viz., a fish 6lb. 5½oz., caught by Mr. W. G. Royston, president of the society. Tench are also in good force, and the one caught by Rev. J. W. Peppinstall, 4lb. 12oz., being the best specimen. A large eel is shown by the Leeds and County Club, and several cases of "baby" fish, representing the first catches of some enthusiastic anglers. Among the curios a case of turtle eggs and newly-hatched turtles is greatly admired; the jaws of an alligator; a collection of shells also receives attention; and a line-winder (over a hundred years old), which formerly belonged to an old Wensleydale Anglers' Depot, causes many to regret that such cannot be made to sell at a moderate price nowadays. Several handsome cases of birds are shown, and on the whole it is a capital exhibition, and I hope to see it made an annual affair, for when I dropped in on Monday morning Mr. E. P. Royston informed me that the attendance, &c., had exceeded the society's most sanguine expectations.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

KINGSTON PISCATORIAL SOCIETY.

THE adjourned annual meeting of the Kingston Piscatorial Society was held on Monday, Mr. J. R. Richardson presiding. The new rules were ordered to be printed, and the following officers were elected: President, Mr. A. W. Homersham, J.P.; vice-presidents, Mr. R. B. Marston, Mr. W. Senior, Mr. G. D. Deuchar, Mr. T. Lyne, and Mr. A. Drinkwater. The committee will be as follows: Messrs. F. Arthur, W. H. Cate, F. Littlewood, C. Littlewood, T. Denniford, G. A. Cooper, G. Sinibaldi, Percival Turner, H. Pincoff Hill, W. A. Smelt, D. Hayer, and J. R. Richardson. Messrs. D. Denniford and L. H. Greig were elected hon. auditors; and Mr. F. Sands hon. treasurer; Mr. J. R. Richardson was appointed the official weighmaster; and Mr. T. Barnes is the new hon. assistant-secretary, Mr. Arnfield having resigned; and Mr. F. H. Amphlett was re-elected hon. secretary. The balance-sheet and prize accounts were duly passed, and it was decided to hold a committee meeting on June 26, at 8 p.m. (one hour prior to the next ordinary meeting), to arrange the prize list for the season. After this has been settled the society will endeavour to secure some private water.

NATIONAL ANGLING CLUB'S COMPETITION.

THE most important angling contest of the year in Scotland took place on Wednesday last week on Lochleven. Thirty-eight angling clubs sent each a representative, while four members of the committee also competed, making the total number of rods forty-three. Among the competitors were four previous winners of the National Championship, and it was to one of these that the honour again fell. The English clubs represented were: Junior Fly Fishers, London, R. G. Woodruff; Newark Piscatorial Association, D. Slater; Northumberland Angling Club, James Rea; Gresham Angling Society, London, A. Wright; and Piscatorial Society, London, E. M. Mayes.

The annual business meeting was held in the Green Hotel, Kinross, on Tuesday evening, when office bearers were elected for the ensuing year as follows:—Mr. Wm. Gillies, West of Scotland Angling Club, president; Dr. Allum, Bridge of Allan Fishing Club, vice-president; Mr. J. S. Dixon, Glasgow Western Club, and Mr. J. T. Rea, Northumberland Club, members of committee.

A letter was read from the directors of the Lochleven Angling Association, who had been communicated with by the National Angling Club's Association, asking them to prohibit anglers trolling with minnow within certain limits on the shallows. The letter stated that, while the directors sympathised in the work to discontinue minnow trolling, and would desire to do everything in their power to carry out the wishes of the club, they felt it was beyond their power to prohibit the practice of minnow fishing on the parts of the loch indicated, and all that they could do would be to recommend anglers to keep as free from those parts as possible. Mr. H. W. H. Duns-mure, the chairman, said he thought the Lochleven Association might be again communicated with and asked to prohibit trolling inside the buoys at the shallows during May and June, when fly fishing was at its best. This was agreed to. The other business was routine.

The weather before and after the competition was bright and far from favourable, but the sky was clouded over all Wednesday, and the breeze steady from the south-east, which is the most favourable direction for angling on the loch. Trout rose well, and good sport was got. The number of trout killed was 416, which weighed 261lb. 3½oz.

The championship was won by Mr. Lewis Spence, Edinburgh, who also won the same position in 1886 with a much smaller basket. The prizes were gained by:

Trout lb. oz.		
1st, championship, gold medal, and £12, Ellem Fishing Club, Lewis S. Spence	28	16 8
2nd, £10, Edinburgh Walton Club, F. G. D. Gibson	20	13 3
3rd, £6, Dundee Angling Club, D. McIntyre	15	10 0½
4th, £4, Bothwell and Blantyre Club, A. McKercher	11	8 15½
5th, £3, Glasgow Wanderers' Club, J. Gordon	13	8 15
6th, £2, Perth Club, P. D. Malloch	13	8 15

A prize for the heaviest trout was carried off by Mr. McKercher with one which weighed 2lb. 1½oz.

The following shows the unsuccessful representatives from other clubs, with their catches arranged in order of merit:

Kelvingside Academical Club, J. Murray Wingate, thirteen trout, 8lb. 9oz.; Committee (Bridge of Allan F.C.), Dr. C. E. Allum, thirteen, 8lb. 7oz.; Bridge of Allan F.C., Frank J. Pullar, thirteen, 7lb. 10oz.; Uddingston Waltonian Club, G. A. Shanks, twelve, 7lb. 9oz.; Junior Flyfishers (London), R. G. Woodruff, thirteen, 7lb. 8oz.; Buckland A.C., Neale Thomson, nine, 7lb. 7½oz.; Newark Piscatorial Association, David Slater, ten, 7lb. 7oz.; Stirling F.C., J. A. Millar, fifteen, 7lb. 6oz.; Edinburgh A.C., Martin L. Martin, eleven, 7lb. 2oz.; St. Mungo A.C., James Buloch, twelve, 7lb. 2oz.; West of Scotland A.C., James Wilson, jun., nine, 6lb. 15oz.; Dunfermlin A.C., James Fortune, fourteen, 6lb. 12oz.; Lochleven A.A., Alex. P. Haig, ten, 6lb. 11oz.; Clackmannanshire F.C., John McDonald, thirteen, 6lb. 6oz.; Committee (Edinburgh A.C.), J. Lyon Hamilton, seven, 6lb.; Northumberland A.C., James Rea, eight, 6lb.; Western A.C., James S. Dixon, ten, 5lb. 6oz.; Pollokshields A.C., John McGugan, eight, 5lb. 1oz.; Rowbank A.C. (Paisley), Alex. Morrison, seven, 5lb.; Committee (Buckland A.C.), H. W. H. Duns-mure, nine, 4lb. 12oz.; Dundee West End A.C., Wm. Irvine, nine, 4lb. 12oz.; Committee (West of Scotland A.C.), Wm. Gillies, eight, 4lb. 11oz.; Edinburgh Breadalbane A.C., A. Menzies, eight, 4lb. 11oz.; Gresham A.S. (London), Alex. Wright, nine, 4lb. 8oz.; Perthshire F.C., Robert Duns-mure, eight, 4lb. 7oz.; St. Mirren A.C. (Paisley), Thomas Russell, eight, 4lb. 5oz.; Falkirk F.C., J. A. G. Kirk, seven, 4lb. 4oz.; Waverley A.C. (Edinburgh), W. D. Niven, seven, 4lb.; Piscatorial Society (London), E. M. Mayes, six, 3lb. 9oz.; Kinross-shire F.C., James J. Harris, five, 3lb.; St. Andrew A.C., Donald A. Gow, four, 3lb.; Eek (Midlothian) A.I.A., J. S. St. Clair, four, 2lb. 14oz.; Callander A.C., Wm. Imrie, four, 2lb. 8oz.; Edinburgh Amateur A.C., Hugh G. Rose, five, 2lb. 8oz.; Coatbridge A.C., Joseph A. Thomson, three, 2lb. 4oz.; Fifeshire A.C., Dr. A. E. Watson, three, 2lb. 3oz.; Glasgow Clydesdale A.C., R. S. Kent, two, 1lb. 6oz.

THE LEGEND OF KILTENNEL.

THE LAMPER-EEL.

I WAS fishing the burn flowing down from Mount Lunster, up at Kiltennel old church reach, and at last knocked off with two or three sprats in my creel. Seeing an old, old man sitting under a gorse bush (for it was a holy day), I thought I might angle for a yarn such as an Irish countryman alone can indulge you with.

O. M.: "Any luck, yer honour?"
"Not a trout! So I will light my pipe and sit down with you."

O. M.: "Yer welcome, yer riverence; did yer riverence ever seen a big eel in the river?"

"Indeed I did, many a time; the big rocks are full of them, and they lie out on the bottom in the hot weather."

O. M.: "Begorra! they do so; an' in the big floods they come up to the mouth of the drains and feed. More nor that, they come out into the middows to greyshe (graze). I seen wan years back. I were walking across the middow and I met a big eel—a lamp-reel. He wor longer than yerself, yer riverence, an' his belly wor thicker nor yer thigh; he wor a lamp-reel, and he wor a hundred yards up greysheing! He wor a big lamp-reel, and I made off wid myself and said neer a word to him at all, at all; but I sees Mickey Finlan an' his woman cutting turf in the bog beyant, an' I ran and hailed him. Siz I, 'For the love of God hurry up, and bring the turf fack wid yez, I seen the biggest lamp-reel I ever met.' So Mickey an' the woman comes running, an' we come up wid him, an' Mickey cut him in three halves. His backbone wor thicker nor my blackthorn shtick (holding it up—a formidable weapon), and Mickey wasn't able for to cut through the bone. 'So Biddy,' siz he, 'fetch the big shtone,' an' Biddy fetched the big shtone an' sot it on his head, an' Mickey cut him in three halves, an' his head weighed 2½lb., an' he wor the biggest lamp-reel I ever seen, an' he wor greysheing up the middow when I first seen him."

T. H.

LONGLEY'S HOLIDAY GUIDES FOR 1899 are, if possible, better than ever. Written from the publisher's actual observation, beautifully illustrated (many with maps or plans), and thoroughly up to date, they are, indeed, wonderful value for a penny, and as George Augustus Sala (no mean authority) justly wrote, notwithstanding their cheapness, "could scarcely be equalled in their handiness and conciseness." They are sixty-seven in number, and cover most parts of the Three Kingdoms, besides several Continental resorts, and a specimen copy, with full list, will be sent on receipt of three half-penny stamps, by Mr. Longley, 39, Warwick-lane, E.C.

Notes from the North.

SEA trout are more in evidence on the lower waters of the Dee than has been the case for many years back. They are a scarce commodity at the best; but it augurs well for the season that they are forward in such gratifying numbers, especially in this year of lateness all round.

The heat wave is now being severely felt by anglers at the waterside. In fact, angling during the height of the day has been practically suspended, and confined to a few hours in the morning, and from about 7 p.m. till dark.

The streams are getting miserably small and clear, but for all that, a considerable amount of sport is being got on the deeper pools, and chiefly on the far inland reaches.

Loch angling is now in full swing, and very respectable baskets are being got. On the Sutherlandshire lochs the average daily basket numbers about twenty-five fish, scaling from 10½ lb. to 12 lb. The best taking flies are March Brown, Hare's Ear (lug), Lord Salton, Greenwell's Glory, The Zulu, Bumble. Mr. Malloch, of Perth, has a special selection for almost every loch.

Mr. Duncan, inspector to the Dee Fishery Board, has had his year's stock of salmon fry in the nursing pond for some time. His filtering arrangements failed inside the hatchery, and so he resolved to turn the whole lot into the pond adjoining, where they have done exceedingly well. He intends liberating about half a million in the course of the next two weeks or so, and the balance later on.

The Duchess of Fife is coming north to Duff House in the course of a few weeks. She has some excellent pools on the Deveron at her command, containing some leviathan brown trout, but they don't care to rise to the fly, and so the Duchess makes little of her opportunities. She prefers salmon angling on the Dee.

Mrs. Illingworth has been angling on the Crathie section of the Dee with much acceptance, and the other day creeled two beauties of 7 lb. and 9 lb. respectively. Mr. Illingworth is also running up a fair score.

Her Majesty the Queen has a penchant for old faces. Some fifty years ago she witnessed a circus performance, when Miss Ord, a very young *artiste* was the then child attraction. The other day Mrs. Pinder (*née* Miss Helen Ord) was passing Balmoral with her travelling establishment when she received her third command to entertain the Queen and the Royal Family, and was the recipient of a diamond brooch at Her Majesty's hands.

"Yellow fin" are now appearing in the tides, but as yet they are somewhat small. In another fortnight they will be worth killing, and then the tidal anglers will have the first of his "summer innings."

The salmon supply is not showing very great signs of improvement, and as a consequence many of the higher stations on the Don and such like rivers are being closed down for the season, and the men paid off. Had there been any prospect of a good grilse season they would have fished these stations on certain days of the week at any rate.

The Duchess of Fife has her own special patterns of flies dressed to her order by Garden, Aberdeen.

Rock fishers have had a very good season as yet. The exceedingly bright sunshine, however, of the last few days has made the baskets lighter than they would otherwise have been in more cloudy weather. A bit of cloud is as welcome to the rock as it is to the river angler.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The quarterly general meeting of the Birmingham Angling Association was held on Thursday evening, June 8, at the headquarters. Mr. T. Coles presided, and Mr. J. A. Dance occupied the vice-chair. The meeting was the best attended on record, as about 150 delegates were present, which represented some eighty-three societies. After the roll call, the minutes of the previous general meeting were confirmed, after which the committee's work for the past three months was placed before the meeting, when the minutes of April 6 and 14 were received and adopted. The balance-sheet and auditors' report were also received and adopted, together with the annual dinner account, the expenses of which were surcharged to the association. The minutes of the committee meeting held on May 5 were adopted after the minutes of the committee meeting held on June 1 were read, when the whole of the minutes were adopted, with the exception of the minutes dealing with the annual excursion and contest. The places recommended by the committee were put before

the meeting, when Abingdon or Cnlham, on the Thames, was carried by a large majority. It was also recommended that the sum of £55 be granted for prizes, but the delegates decided to increase this sum to £60. The Thames scale of measurement was adopted to rule the weighing-in of the fish. It was decided to leave the final arrangements in the hands of the committee, who will give in a report at a special general meeting to be held in the near future, when it will be considered whether the coupon system or the giving of prizes will be adopted this year. The matter of certain members depleting the canal at Kingsbury during the close season was referred back to the committee. The Dudley Angling Association held a grand smoking concert at the Crown Hotel, Dudley, on Friday evening, June 9. A first-class array of talent put in an appearance, and a splendid programme, which gave credit to the committee, was got through to the satisfaction of all present. The proceeds of the concert will go to augment the club's water renting fund. The large Highgate Park Society, which for years past have fished their annual contest in the river Avon, have decided to give the Severn a turn this year. With this in view, they will go to Stourport on Aug. 20 next. The Vine Unity have also decided to fish their contest on the Severn on July 16 next, for a valuable array of prizes, the first prize being a 18-carat gold English lever watch. No fish under 20z. will be weighed-in, and Mr. E. Mounds, the noted Kidderminster angler, will act as referee. The Queen's Head Club have decided to go to Pershore on June 25, to fish their opening contest for prizes above the average. Already fifty members have given in their names. A large number of our members will be going out to their favourite places, and I am pleased to say that the fish have got over their spawning, and that roach, dace, chub, and bream are in very fair condition. I have heard some very flattering reports of the canal at Wilmore. A large quantity of fish has been seen all the way from Brearley up to Stratford-on-Avon. Now that the canal at Alrewas and Kingsbury has been emptied, I should advise canal fishermen to pay a visit to the places mentioned. Owing to the mowing grass not being cut, a large portion of the Avon will not be able to be fished for some time yet. I have heard that the Shropshire Canal, near to Upton Magna, contains a large number of fish of a good size.

FROM DERBYSHIRE.

Angling in Derbyshire streams has during the week been good. The May Fly—Green Drake—has been out in great numbers, and has been well taken. Fish have risen freely in the early morning and late evening, and both weather and water have been favourable for fly angling. Bottom fishers have not as a rule done much, and then principally in the evening. Most of the lengths of the Dove have furnished fair sport, and both on the middle and lower lengths a goodly number of decent creels have been made. On the Dovedale waters some excellent sport has been had, and numerous nice lots of fish have been taken there, and also on the higher reaches of Beresford and Hartington, and on Lord Hindlip's waters, in the neighbourhood of Load Mill and Milledale. A few good creels have also been made on the neighbouring Manifold, but the water in that stream is in places very low. Amongst other flies used on the Dove, Foster's Little Gem and Haekle Green have done excellent service. On the Wye there has been very fair sport had on the Rowsley and Bakewell lengths, and several excellent baskets have been made there; and numerous fish have been killed on the reaches between Bakewell, Holme, Ashford, and New Bridge. The private waters of Monsdale have yielded several large baskets of fine fish to the lessee and his friends; and both on the open and private reaches of Cressbrook and Millersdale good creels have been made. Some nice lots of fish have been captured in the private waters of the romantic Cheedale by privileged anglers there; and on the adjoining higher lengths of Bakewell Mill and Ashwood-dale there has been satisfactory sport. Several anglers have been out on that charming mountain stream the Goyt, in the neighbourhood of Buxton, and in the Erwood Hall, Fernilee, and Taxal districts, on the respective waters of the Duke of Devonshire, Capt. Grimshaw, and Col. Cotton-Jodrell, very satisfactory sport has been had. The fish, however, do not run very large in that stream. Some nice lots of trout have also been taken on the river Nowe, both on the Edale and the Hope lengths; and the neighbouring stream, the Ashop, has in places yielded a few decent creels. On the upper reaches of the Derwent, between the hamlet of Derwent Chapel, Crookbridge, Ladybower Brook, Woodlane, and Bamford fly anglers have done well as a rule, and some very fair baskets have been made on those waters. Equally good sport has been had on the Hathersage Association reaches, and the angling generally has been good throughout the whole of the Derwent valley. Several excellent baskets have been made on the open waters near Calver, and also on the private lengths of Mr. Leslie, of Hassop Hall; and the adjoining reaches up to Baslow have furnished very satisfactory sport. Fly anglers have been out in full force on the Chatsworth waters, and some excellent baskets have been made there, and also on the lower lengths by Beely and Calton. The May Fly fishing on the Bradford and Lathkill has been very good, and some heavy creels have been made, particularly on the lower Lathkill. The Marquis of Granby, Lord Romney, and other friends have enjoyed capital sport, and on several days they have each made good creels up to eight, nine, ten, and eleven brace of nice sized fish. Angling prospects still good.

FROM HULL AND DISTRICT.

Our local river, the Hull, is in grand condition for all-round angling, and our local anglers are eagerly looking forward to the opening day for coarse fish angling; but, no doubt, by the time these notes appear in print some good fish will have been recorded, for both the river and

its contributaries are literally alive with large fish, and on the upper waters there is now a quantity of flies, so that the fly fisher should have a fair time of it, for above Top Lock there are several good trout on the rise. In the tidal waters several matches have been fished by our local societies during the past week or so, but they have not met with near such good sport as those who were privately fishing. The Osborne Angling Society fished their second match on the river at Hull Bridge, resulting in Messrs. A. Friend and C. Buxton taking the first two prizes with about 14½ lb. of fish each, Messrs. G. Bibbey and O. Matthews taking the next two with only about 1 lb. each. The City Employees' Angling Society also fished a match near to Beverley Beck-end, Messrs. T. Whitehead, W. Whitehead, and W. Jacques being the first three prize winners. The Sheffield Arms A.S. opened their season on the celebrated Minto Flatts stretch, but only did moderately, Mr. W. Pedder topping the prize list with 11 lb. 6oz., and Messrs. T. Bardsley and Fred. Matthews having about 1 lb. each for second and third places. The Foresters' A.S. of Beverley selected Weelferry for their second match, Messrs. G. Armstrong and J. Thompson taking the first two prizes with about 1 lb. of fish each. Some very good catches of eels and flounders continue to be made at Wawne and Dunswell, and from the latter place on Thursday last Mr. J. Cheeseman had twenty-five fish, the three heaviest, eels, scaling 14½ oz., 8½ oz., and 8½ oz. each, and other anglers have had takes of twenty to forty fish, several running ½ lb. each. Several matches will be fished on the river to-day (Saturday), and these being the first in the open season, they should have fair sport, for the fish seem to have got fairly over their spawning operations. The Central Hull A.S. fish a match to-day at Thoresby Bridge, on the river Ludd, which river is also reported in first-class condition, and to be swarming with fish. The river Ancholme will also have a share of our local societies' patronage, for the River Hull and Excelsior Angling Societies hold a joint open match to-day at Ferryby Station; and on Saturday next, the 24th, the North Myton Association will also hold an open match at the same place, the steamboat, *Her Majesty*, being engaged for the occasion. On the 19th inst. both the Tigris A.S. and Newington St. George's A.S. fish a match on the Market Weighton Canal, at Newport; whilst on the 22nd the Holderness Anglers will leave Hull by the 1.25 p.m. train from Cannon-street Station for the same place.

FROM THE LAKE DISTRICT.

Rivers have run down very low during the past week, and are, besides, in a dirty condition. This and the extreme brightness of the weather has almost put a stop to fishing, except after sundown, when a few good trout may be taken. A couple of days' rain would be welcomed by anglers and agriculturists alike. Although there is little restraint on the taking of coarse fish—pike, perch, &c.—in this district at any time, there is now a recognised close time, and the legal opening fell on Thursday, the 15th inst. Windermere and some of our other lakes literally teem with perch, and pike in lesser numbers, so that good sport may now be looked for by those who care for this class of fishing, and there are many who enjoy it immensely. Visitors with children and ladies in their train will find a day thus spent both healthful and entertaining. As to the doings of anglers during the past few days there is not much worthy of record, perhaps the feature of the week being the size and quality rather than the quantity of trout brought to bank. In the Keswick waters, Mr. H. Dixon had eight running up to 2½ lb.; Messrs. Denwood, Lowther, Mayson, Birkett, Elliott, Hill, Cowperthwaite, Conlson, and Lowthian each a number of very good fish, the last named gentleman heading the list with a splendid trout of 3 lb. Mr. John Watson (Kendal) comes a good second with a handsome fish of 2 lb. 9½ oz., taken from Loweswater. Mr. M. Towers in the Greta, Messrs. Stanley in St. John's Beck, Mr. H. Mann on the Kent, and a number of Derwent anglers have also secured a few nice fish. Sea trout are already showing in the last named river, Mr. Varty having taken one of 4½ lb., and two or three have also been landed on the lower part of the Kent. On the Eamont and the upper waters of the Eden fair baskets have been taken in the evening with the hussard, creeper, and worm. Angling in the rivers, however, will be "off" unless rain comes soon. The West Cumberland Fishery Board, despite a want of sympathy on the part of the County Council, are determined to keep pegging away in their opposition to the protection of sea gulls, which they allege are great enemies to fish in their various stages of life.

FROM LANCASHIRE.

Next Saturday is the first big event of the season, and will be an All-England match, promoted by the Northern Anglers' Association, for £30, and several gold and silver medals. Arrangements have been made for the conveyance and convenience of both competitors and visitors by the executive committee, and the same circulated to all interested centres and towns. It should be carefully noted that entries close on Monday, the 19th, and it will greatly help the officials if the entries are sent in at once. The Ribbles has been rather low and clear, so that only evening fishing has been successful. The fish have risen freely to the Black Gnat. The same may be said of the Wyre, with the addition of perhaps a larger volume of water, which has assisted bottom fishing. The Lune and its tributaries has fallen off a little, and, perhaps, a good thing. Trout are reported as feeding on eel fry, and rising badly. Not so many pike are noticed, and a few salmon are getting into the nets. The St. Helens anglers are paying a two days' visit to a private Cheshire mere next week. This is always a popular outing, and highly appreciated by the members. Next week the Levenshulme Angling Society, on one evening, will decide the first of their six championship competitions; the event takes place in

TRADE MARK (Regd.).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-, 28/-, 34/-.
11ft., " " 28/-, 30/-, 36/-.
12ft., " " 30/-, 32/-, 38/-.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

The diagram shows the hand reversing
the drum.

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Alumi-
nium. The greatest boon to anglers yet invented
for Salmon, Mahseer, and Trout, and all kinds
of coarse fishing; unsurpassed for long distance
casting; simple, and easy to learn. Rods and
lines specially suited for these reels

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is
easily operated by the hand, whereby the check
can be regulated at will by simply turning the
milled disc on spindle. This should prove a
great advantage to anglers, as the check can be
regulated without having to take the reel to
pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies
of all sizes. Handy and compact, each fly
secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Cocoon Wood. Made in 18 different sizes.

ILLUSTRATED PRICE LIST FREE.

their own waters. Some gratification will be felt at the news of the death of a second dog otter in the river Bullin; there are still two to be dealt with. To-morrow, the Pride of Bolton Angling Society will fish a match at Boothstown, in the Worsley Canal, and in the same canal at Leigh the open event promoted by Mr. Dawson will be decided. The Buckley Arms Angling Society, Swindon, are due at Westwood, in the same canal, on June 24; this is their annual visit to this water. The Liverpool Anglers are discussing the question of establishing a trophy to be fished for by local clubs. The Nelson Angling Society announced an alteration in the hours for their match on June 18, from 12 noon to 4, to from 4 to 7 p.m., draw at 3.30. The East End Association (also Liverpool) are going strong in every department, headquarters, branches, and numerically and financially. The Central Association is making good progress, and now numbers close on one hundred members; they have arranged rather an attractive programme, and intend being heard from in 1899.

FROM LINCOLNSHIRE.

The conditions just now are all that could be desired for trout fishing, and anglers who have, up to recently, had a most disappointing season, are making most of the opportunity. Fly fishermen who have operated in the evenings have done exceedingly well with such flies as the Yellow Dun and Black Gnat, the latter for preference, and several baskets containing five and six brace are mentioned as having been captured in the course of a couple of hours' sport. Bottom fishing is still being followed with success by those who are not expert at manipulating the fly. Reports to hand from the fen waters show that the coarse fishing season promises to be inaugurated this week under satisfactory conditions, so far as the waters are concerned. The fish were favoured with a good spawning time; but it is feared that the heavy flood in May did some damage, although this has not yet been definitely ascertained.

FROM MANCHESTER.

More is now being heard from our city clubs. This is no doubt caused by the opening of the coarse fishing season, which has stirred up our men to a sense of the enjoyment in store for them for the next few months. To-day (June 17) the Buckland open in their own waters, the Victorias at Poynton, the Derby at Boothstown; to-morrow (the 18th) the old Standard at Chester; on the 21st, the Shakespeare at Chester; and next Saturday, the 24th, the Moss Side Socials are to visit Poynton, and the Horse Shoe, Worsley, so that a very busy match-fishing season is clearly indicated. At their next meeting the South-West Manchester A.S. will make final arrangements for the opening match, and discuss other important business. The Hanging Gate A.S. have arranged to visit Poynton Canal for their first match on July 2; they have a good prize list. The Salford Friendly A.S. have fixed Aug. 19 as the date of their annual visit to the Moss Reach length of the Bridgewater Canal. Some locals fishing the Weaver report good bags from Vale Royal and Northwich. The Welcom Angling Society, Hulme, on the 13th had the best meeting since the club was formed, the club-room being packed. Owing to the change in headquarters the match arranged for to-morrow has fallen through, but they have arranged another, to take place at Poynton on July 16, which will be the first club match. The May Fly is now fairly with us, and one local with the natural secured ten brace of fine trout. The Duke of Cambridge Angling Society open the season on the 25th, at Althorpe, and the Openshaw Central on the same date, at Torksey. Several of our locals report a rather extraordinary rise of trout in reservoirs. They describe the fish as mad on, but not hooking. Can any of our experts give a reason for this? It happens in the evening; the fish are not playing, something disturbs them, but it does not appear that any hatch out is responsible. The Kingfishers' held a meeting on the 13th, and amongst other items decided to have an outing to Cheshire, where some good fishing is to be had.

FROM NORFOLK.

The fishing season now commenced bids fair to be a very good one. Immense quantities of fish have been seen during the spawning season on Rockland and Surlingham broads, on the Yare, and in the reaches of the river Bure, from Wroxham, down as far as South Walsham. Bream have already begun to feed on the Yare. On Sunday, at Buckenham, a Norwich angler took over 1½ cwt. to his own rod. It is too early to commence yet, and the fish will be all the better for being left for another week at least. Since the close of last season there have been several changes in the occupants of the riverside hostleries, and also in the hostleries themselves. Buckenham Ferry House is being rebuilt, and other houses are being considerably enlarged and improved. Better accommodation will thus be had; and this was badly needed, especially during the months of July and August.

FROM NOTTINGHAM.

The Trent at the period of writing was low and clear, and anglers seemed unusually eager for the opening of the season yesterday (Friday). Most coarse fish are still located in rapid water, and intending fishermen will find it to their advantage to employ the lightest possible tackle, consistent, of course, with durability. Caddis grubs—the best of baits for early season use—are most difficult to obtain, and there is a great scarcity of lobworms. These, in fact, will be scarce until rain descends, and so affords the men engaged in catching them at night a chance of replenishing the empty boxes of the dealers. A few eels have been taken since last week, but nothing appears to have been passing amongst salmon. On the tributaries trout have afforded a moderate amount of sport.

FROM SHEFFIELD.

The weather has been all that could be desired for fishing, and during the last week sportsmen have put in full time, and on the whole satisfactory sport has been obtained. Amongst the many visitors to Derbyshire during the past week has been the Marquis of Granby, who has obtained some good sport on the upper Lathkill. The May Fly season is now fairly on, and is considered to be a fairly good one. Fly fishers have fared very well on the upper reaches of the Derwent, the early morning and late in the afternoon having been found to be the best times. In the district of the Matlocks a lot of good fish have been obtained, whilst in the deep pools on the Whatstandwell stretches down to Ambergate a lot of heavy fish have been killed, especially late at night, the fish rising well until quite nine o'clock. Bottom anglers have not done so well, but maggots and worms have accounted for a few good takes, but, generally speaking, bottom anglers have not had a very good time. Locally, the upper reaches of the Sheaf have been providing some splendid sport, and in the evenings several local anglers have been doing very well. In the stretch near Totley Station a lot of decent-sized fish have been secured, some weighing 1½ lb. each. Unfortunately for Sheffielders it would appear that in the near future the chance of obtaining sport in the Sheaf will become more difficult. The Midland Railway runs close by the side of the river, and as the railway is being widened a fruitful stretch close to Totley Station has to be diverted, and other alterations will make the task of preserving the stream much more difficult. In the Damflask Reservoir bottom anglers have come off best, single maggots having proved very effective, with the result that a lot of nice fish have been taken. The Hollow Meadows dams have been well fished, but the takes have been on the small side. Coarse fishing opens this week, much to the satisfaction of thousands of Sheffield working men. The early portion of the breeding season was very cold, but it is hoped that the recent warm weather will have assisted in the development of the fish.

FROM WORCESTER AND DISTRICT.

We have had a week of hot sunny days tempered by east winds which has made the nights very cold, and the trout have not been sporting so well as they might have done; still, in the evenings they have come fairly well at the fly—Iron Blue, Stone Fly, Silver Dun, and Yellow Dun all killing on the Teme, and some sport was had with the maggot; but the best baskets have been taken in private water with the maggot; Mr. Martin Perks and a friend, ten and a half brace and eight brace of beauties; and others four to six brace each. After this Friday all the clubs will be fishing for coarse fish, and the Severn will be extensively patronised; but the fish are not in condition yet, and many of the roach have not spawned, but as nothing under 3oz. is allowed to be taken, we trust but little injury will be done. Chub has been taken in quantities in the Severn and Teme during the week for the mere sake of sport; they are out of condition and unfit for food; still, as many think they are better out of the water, they will be much fished for when the close season ends. Salmon fishing is almost nil in this neighbourhood, but price is much lower, no doubt owing to the quantity of Scotch fish that are on sale. There is little news from the clubs this week; next week things will be different.

ANSWERS TO CORRESPONDENTS.

T. H. VERNON.—Send one shilling in stamps to Messrs. Sampson Low, Marston, and Co., St. Dunstan's House, Fetter-lane, E.C.; you will receive by return a copy of Mr. F. H. Amplett's hook, entitled "The Lower and Mid-Thames."

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

THE OTTER.

DEAR SIR,—Allow me through you to thank "Special Scotch" for his kind appreciation of my effusion about the otter in his notes of Saturday last. I will say at once I do not see anything "awkward" in his question.

It is just the sort of thing that I had hoped would come, as by this means a subject so interesting gets full ventilation, and the good and bad side of an animal's life is properly thrashed out. I only speak, or rather write, as I find, and my experience with reference to salmon clearing out of a river because it is visited by otters is exactly in the reverse of his.

I will give an instance from which I take my stand. In the year '94 (I am not quite certain of the year though, it may have been '93, foolishly I did not make a memo. of it in my fishing diary), in November, the water hailf and myself went one day on a "voyage of discovery" for some eight miles along the bank of the river Avon (Devonshire), and during our journey we saw some twelve or fourteen pairs of salmon on the redds. Now I knew from signs which were in evidence, on this very day an otter was working that river, as we distinctly noticed a fresh "spur" at the Hazelwood boat-house, on our journey upward, and within half a mile below we had seen two pairs of fish at work. Further than this, in the same year, I saw, one Sunday morning, nine salmon in the pool below Topsham bridge, which is on the same river.

I do not contend but that otters do sometimes interfere with both trout and salmon, but what I wish to bring before the public is that they do more good than harm, and therefore should be fostered rather than slain indiscriminately.—Yours truly,

PHEASANT TAIL.

BLACK GNAT OR "COOPER'S FANCY"?

DEAR SIR,—If a fly with a black body, dun wing, and either black or dun legs is not a Black Gnat, well we do not know a Black Gnat when we see it! Of one thing we are certain, however, and that is that Mr. Cooper does not if he really believes what he writes. There is, however, one consolation; he will be likely to get nobody else to believe that he has any mortal right to appropriate an old time Derbyshire dressing of the Black Gnat as his own invention.

Let us turn to the authorities.

Ronalds, who studied and fished and wrote his important work on the Blythe, a few miles away from this place, namely, that standard work, "The Fly Fisher's Entomology," describes the Black Gnat dressing thus:

Wings.—The dark part of a feather from the starling;

Legs.—A black hackle;

Body.—Black ostrich herl;

and, he adds, to make it buzz a light dun hackle tinged with brown may be wound upon the above body.

David Foster, in "The Scientific Angler," another standard (also written in this vicinity), gives almost the same dressing, viz.:

Wings.—From a starling's wing feather.

Legs.—A dark blue dun or black hackle.

Body.—Ostrich herl.

We have received two consignments of flies through the kindness of two correspondents, who have obtained them direct from Mr. Cooper in response to their orders for "Cooper's Fancy."

Here is a description of them.

First correspondent's consignment consists of a fly dressed thus:

Body.—Black silk.

Legs.—A rusty black.

Wings.—Starling.

Second correspondent received three different patterns from Mr. Cooper in response to his order for one dozen "Cooper's Fancy."

Description:

1ST DRESSING.

Wings.—Starling.

Legs.—Black hackle.

Body.—Black silk.

2ND DRESSING.

Wings.—Starling.

Legs.—Dark dun hackle.

Body.—Black silk.

3RD DRESSING.

Wings.—Starling.

Legs.—Medium dun hackle.

Body.—Black silk.

QUERY: Is not Mr. C. rising short? Which of these flies is his "fancy"?

We may here state that our customers have been receiving Black Gnats with body of black silk, wings starling, legs black hackle, and also with legs of dun hackle as an alternative dressing, for the past quarter of a century and more, and that therefore "Cooper's Fancy" is Foster's Black Gnat.

The dressings given by Ronalds, and in "The Scientific Angler," prescribe ostrich herl for the body, and this makes what is termed a thick bodied Black Gnat; but the more modern thin black silk bodied one has been stocked by us exclusively in the time of the present writer, and he has been in the trade now for more than a decade. Therefore it comes to this, that Mr. Cooper has not a leg to stand upon in claiming this pattern as his invention.

If anyone is still sceptical we can bring evidence galore in proof of our having made and sold this fly as the Black Gnat for a generation.

Mr. C. suggests in your issue of June 3 that we should find better occupation in looking after our own productions. Well, that is precisely what we are doing. We hold Mr. C.'s own fancies, several versions of them, and we hold the Black Gnat, and we will send both to any first-rate authority and will abide by the said first-rate authority's decision in the matter, having every confidence in the result. If we do not know our business we do not think Mr. C. is sufficiently qualified to teach us. A man who says a "fly is not a Black Gnat in any form" because "neither wings or hackle are black," is writing like a — well, we will leave your intelligent readers to fill in the blank, as all may readily do after the quotations we have given from the works of standard authorities of the district, seeing that neither gives black wings as a dressing, but both the starling wing Mr. C.'s fly has, and both mention dun legs (which also Mr. C.'s fly has), as an alternative dressing to the black for the Black Gnat.—Yours truly,

W. H. FOSTER

(Manager to D. and W. H. Foster).

Ashbourne, June 5, 1899.

FORMALIN.

DEAR SIR,—Will some of your readers kindly inform me whether formalin does as a preservative for prawns for salmon fishing, or whether the smell of it in any way detracts from the killing properties of the bait, and, if so, how much should be used in proportion to water?—Yours faithfully,

SALMO.

BASS AND POLLACK FISHING.

DEAR SIR,—Can you or any of your readers kindly inform me where to go for large bass, pollack, and conger fishing? Some very quiet village not more than 250 miles or thereabouts from London. All the more agreeable if a little rough shooting from shore, &c., could be obtained.—Yours truly,

J. H. D.

TO TOUGHEN WASP GRUBS.

DEAR SIR,—Having made several inquiries (not in your esteemed paper) how to toughen wasp grubs, and not meeting with the required information, I venture to send the following extract I have just copied from an old number of the *Field*, Sept. 28, 1855, in "Answers to Correspondents," as it may be of use to some angler, viz.:

"WASP GRUBS.—Let 'W. B. M.' pick the grubs out of the comb and put them into a cullender inside a large

basin, and then pour boiling water from a large saucepan over them and stir with a spoon till, by the touch, they feel firm. Then instantly drain and pitch them into a little bran and shake them until quite dry (for on this success depends). He will find them very firm and very dead (for trout especially). If they are placed on a plate or slab and kept very cool and coated with honey they will keep well for weeks."

Yours, &c., JOE.

P. S.—I should feel grateful if you could tell me how to keep gentles during hot weather. I tried burying, but they were all smothered. An article on earthworms in the *Fishing Gazette* would be acceptable to several of us—how they breed, rate of growth, &c. What inexpensive book could I get on the subject?

[Get "Darwin's Book on the Earth Worm."—Ed.]

BLACK BASS.

DEAR SIR,—In your issue of May 27 the introduction of the black bass into such English waters as are suitable for pike is brought forward by Dr. Henshall with the remark that the fish has done well in Germany and the Netherlands.

The fish has indeed been well acclimatised here, and Dr. Henshall might have added in the big Bohemian fisheries, too, where great hopes were based on its introduction, but on the whole it has not stood the test well.

It feeds here principally on small fish, and its appetite is something phenomenal, whilst its growth by no means compensates for the amount of food consumed.

If in very good quarters three-year-old fish will weigh 1½ lb. to 1 lb., and it is something very rare to find a four-year-old weighing 2 lb.

A great drawback is their early sexual ripeness. Quite small fish of two years of age will sometimes already spawn and stock the water with such a host of small fry that food for the bigger fish soon gets rare.

The black bass was introduced into the big Bohemian carp ponds at Wittingau, with the express purpose of keeping down roach and rudd like plant-feeding fish, and did this very effectually, but in spite of the big range and full supply of food in the ponds (the ponds are lakelike stretches of water of 1000 acres each and more), the growth of the

black bass was not even quite as good as the one given above from my experience of the fish.

Fry and yearling of this fish are now quite easily procurable here, and could, I think, be quite well got to England alive, but it would be easier to introduce the fish than to get rid of it.

Our European perch quite fills the place which the black bass would be likely to usurp, and if any fresh predatory fish is required to clear off a surplus amount of food, I think the pike-perch (*Lucioperca sandra*) a much more desirable introduction.

The fish—a fine sporting and a good table fish—will thrive where pike thrive, excepting in very peaty waters. It prefers, however, waters with a clean, sandy, or stony bottom, and a slight run. It has this advantage over the pike, that its mouth and stomach are much smaller, and that it is thus restricted to smaller sized food.

The growth of the pike-perch is much better than that of the black bass under similar conditions. Three-year-olds will weigh 2 lb. to 4½ lb., and four-year-olds 5 lb. to 6 lb. The fish spawns from April to June, the female making a sort of nest in a clean sandy place, and producing 2,300,000 eggs per fish.

The eggs could, I think, be safely got to England. They require no sort of hatching apparatus, and will hatch out in two or three days if kept on a sandy bottom with no more than 6 in. of water over them. A big pond full of small roach and rudd, and with no pike nor perch, would be the best to try it in.

The fish has done very well over here, and where there is no chance of driving out better fish we stock it largely in the public interests, particularly in slow-running rivers unsuitable for *Salmonidae*.—Yours truly, S. JAFFÉ.
Sandfort Trout Fishery, Osnabrück.

FISHING AT SEATON (DEVON).

SIR,—There is no free fishing to be obtained. Tickets, however, can be obtained for the Shute Estate waters from A. V. Kyrke, Esq., Estate Office, Shute, Axminster.

The terms are: Weekly tickets, 10s.; monthly, 21s.; season, £2 2s.; four days a week; Wednesdays and Thursdays are the days excepted. Fly only. No fish under 9 in. to be retained.

The waters extend over some five miles, perhaps more, consisting of about three miles on the Coly and two miles on the Axe. They are easily reached from Seaton, Colyton, and Colyford, being the stations on the Coly, and Seaton Junction for the Axe. Part of the fishing on the Axe is near Colyford. There are some peal in the Axe, also salmon, but these are practically all netted. A licence must be taken out from the Axe Fishery Board (clerk, W. Forward, Axminster). Trout, 2s. 6d.; salmon and trout, 10s.—Yours, &c., W. E.

FISHING AT KESWICK.

DEAR SIR,—Would any of your numerous readers oblige me with information as to the fishing at Keswick in July and August, with names of waters to be fished, charges or licences required, and best lures? Is the coarse fishing any good at that time?—Yours truly, TYRO.

BASS AND GREY MULLET FISHING.

DEAR SIR,—In answer to "A. P. W.," I am afraid he will not be able to procure any chervie from these islands this year, as I am informed a law has been passed in Jersey prohibiting the exportation of same. Some of the fishermen in St. Mello catch and sell it, but they do not preserve it nearly as well as the Jersey men. Thanks for information regarding bait for bass. I have not tried it, but will do so, that kind of bait being plentiful.—Yours truly, MULLET.

FISHING WANTED.

DEAR SIR,—I am desirous of taking my two boys for a fortnight's fishing in some still or slow running water, or a combination of lake and stream would be preferred. We should like rooms at a farm or private house near to the water, with use of boat if possible, in a bracing locality anywhere within 150 miles of York. If any reader, knowing of such a paradise, will kindly communicate with me direct or through this paper, I should be greatly obliged. If he adopts the former course any confidence will not be abused.—Yours very truly, C. W. R.

CAMPING OUT IN IRELAND.

DEAR SIR,—If R. Bowen Roberts will communicate with me, I will inform him of a quasi paradise for camping beside the tranquil shores of Lough Melvin. He can have the required attendance and provisions to his satisfaction; also good fishing. English parties often camp at this place.—Yours truly, P. GALLAGHER.
Rossfriar, Kinlough, co. Leitrim.

FISHING IN LANCASHIRE.

DEAR SIR,—I have two friends staying at Grange-over-Sand, Lancashire, from July 1 to July 7, who wish to obtain some fishing if possible.

Can any reader give information as to what coarse fishing (mention kinds of fish and baits) is obtainable,

whether free or otherwise, and charges—if any; also if good sea fishing is to be had, and tackle to use?—Yours faithfully, ALFRED H. LAW.

FISHING NEAR LONDON WANTED.

DEAR SIR,—Can you inform me where, within forty or fifty miles of London, I can get a week's fly and bottom fishing, with quiet, inexpensive inn accommodation or lodgings.—Yours truly, J. ROWE CHASE.

PIKE IN THE RIVER CLWYD, N. W.

SIR,—I think it will interest some of your readers to learn that *esox lucius* has made its appearance in the river Clwyd, North Wales, and that, until this season, its presence there was unknown.

On the 13th inst. I hooked a pike in the Clwyd, which was deftly gaffed for me by my companion, Mr. O. Conran, and proved to be a pike of 8 lb. weight. The questions interesting us now are: "Where did this pike come from, and are there many others?"

To those of your readers who know the Clwyd, it may be of further interest to know that this pike was killed a short way above the junction of the Clwyd and Elwy rivers.—Yours truly, F. M. LESLIE.

FISHING QUARTERS RECOMMENDED.

DEAR SIR,—In answer to your correspondent "Subaltern" in your issue of June 10, may I recommend the hotel from which I am writing, viz., Church Hill Hotel, Letterkenny. I am here with a bicycle which I find very useful. I biked here from Letterkenny, ten miles, leaving my luggage to come on by mail car. Roads are much rougher than in England, but quite serviceable. The quarters here are what "Subaltern" desires—plain, clean and moderate, 35s. a week for board and lodging. Fishing is free, except for a small charge of 1s. 6d. a day; on part of the river it is quite free. There are two lakes full of brown trout, rather small. Last year, in one day's fishing, less than six hours, I had a basket of seven and a half dozen. Charge for boat and boatman on lake is 2s. 6d. a day. There are no white trout, but there are salmon, free for fishing equally with the trout. Salmon are hardly up yet; but in August I understand it is good fishing.

I may add that the proprietor, Mr. Wilkin, is very obliging, and makes his visitors very comfortable.—Yours faithfully, H. A. HAINES.

WATERVILLE, CO. KERRY.

DEAR SIR,—Would you kindly allow me to have the following inserted in your far-famed columns of the *Fishing Gazette*, of which many readers visit the free waters of Lough Currane, which once held its own among the free waters of Ireland for salmon, but now is down to its lowest, and this is due to over netting in the month of

July in the estuaries. The sea trout fishing is unequalled in any free waters of our country, and we hope very soon to make it hold its own as in days of old for the salmon. We have started a hatchery here, and began the work on Nov. 9, 1898, and our first consignment of ova was laid down on Jan. 1, 1899, which took fifty-two days to hatch out. The temperature is from 48 to 50 degs. We have forty-two boxes, 6ft. long, 18in. wide, 9in. high, with 3in. of a fall from one to the other. The boxes are filled with 5in. of gravel and about 2in. of water over the ova. These boxes are fed from a filtered tank through a let pipe and tap. We have put 60,000 foreign ova of the salmon, kindly supplied by S. Jaffé, Sandfort Fishery, Germany; 40,600 rainbow trout, which hatched out most successfully, and are doing very well now in our rearing ponds, which are 78ft. long, 4ft. deep, 16ft. wide, divided in three, for the salmon, the rainbow trout, and the Loch Levens, of which we laid down 40,000. Those were not as successful as the rainbows, nor as healthy, but are now improving fast, and seem to get climatized. Whether they will take some of McCarthy's flies or not has yet to be tested; they ought, as he has spent many an hour looking after them, and gathering insects from the different streams and shores of the lakes to stock the ponds, which they now enjoy. His hatchery was started out of private enterprise, thanks to Mr. T. Galven, of Bay View Hotel, who spared neither time or money in making the hatchery what it now is. It would be well for the hotel proprietors of Kerry to study the interest of the English anglers and sportsmen who visit our place, and secure sport for them. They come to spend their money freely, and as long as they get any fair share of sport will come again. There is nothing to improve the fishing quicker than those hatcheries and change the breed of the fish, which, I have no doubt, will thrive in our waters. In addition to this we got 35,000 young fry from the Killogrin Hatchery; some Glencair salmon, Caragh river, Laune, Killarney Lakes. So, with the German Rhine, we will have a nice collection of 95,000 turned out this season. This is very good for the first start, besides securing the netting at the estuary or river mouth, and for some years to come the hotel keepers at Waterville deserve the greatest praise; they have taken steps to improve fishings and encourage sporting gentlemen to visit this locality. If other proprietors did similar to those hotel keepers at Waterville, the English sportsman would find his trip sporting and pleasant and would bring his friends among the old sporting lakes and mountains of Kerry, hoping to be able to give good accounts of the fishing as the season advances. It looks much brighter at present. On Saturday last I counted eighty-four sea trout with several salmon pass to the Waterville lake. Some of those trout were as large as 4 lb. The year's take in the weir is by far the largest for some past years. This is due to the netting being stopped for the past two years, which will improve the lakes very soon. Several large shoals came up on Sunday also, and early on Monday morning before the weir was put down at twelve o'clock. On Saturday I got a nice peal of 6 lb. on a single-handed rod, and fine cast off the bridge with fly, while some of those fish were passing. He fought well for his life, but I have been at the game before, and he could not play his old tricks on—yours truly, TIM MCCARTHY.

REED FLOATS.

DEAR SIR,—Enclosed herewith, I beg to send you a sample of four sizes in Reed floats, which I have made for the coming season, and shall be glad of your opinion of them in the *F. G.* I sell them at 6d., 8d., 10d., and 1s. each, and I think you will say they are well made and finished, and good value. For Norfolk fishermen we leave them as they are; local anglers generally fix their lines to the end ring of the float only, but when we send any away we put a rubber cap on them. A. J. RUDD.
54, London-street, Norwich.

[The Reed Floats are very nicely made; we can recommend them.—Ed.]

A NEW GOLF TEE.

DEAR SIR,—We note the paragraph *re* the new golf tee, which appeared in your issue of the 10th inst., and in reference to the size of the cup, we beg to say that this can be immediately remedied by cutting a little from the top of the I. R. cup with either a pair of scissors or a pocket knife. These are made to the regulation size, but of course any golfer may reduce the size to meet his taste.

If you will kindly name this in your next issue we shall esteem it a favour.—Yours faithfully, ANDERSON, ANDERSON AND ANDERSON, LTD.

TESTIMONIAL TO BEN ABRAHAMS.

DEAR SIR,—We are pleased to acknowledge the following sums with thanks:

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Book-stalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One year, post free to any part of Great Britain and Ireland

SATURDAY, JUNE 24TH, 1899.

THE SALMON PROBLEM.

"AN open confession is good for the soul," and an honest owning up that the present condition of our salmon supply around the coasts baffles all reasonable attempts to account for the continued falling off is much more sensible than hatching theories in one breath, only to be discarded or discredited in the next. There is no use of setting up house after house of cards only to meet the inevitable collapse when the analytical moment arrives to take them in hand. However disagreeable the truth may be, the fact remains that all this season through there has been an alarming scarcity of salmon entering our rivers from the sea, and the significance of the truth is made all the more emphatic when it is frankly confessed by those whose business in life is to deal with salmon problems that, whatever be the cause, it is a mystery meantime which cannot be explained away.

The bad spring of 1895 is pointed to in some quarters, but this is only a contributory cause, not the main one. We do not rely on the produce of one season for our salmon supply. "One swallow does not make a summer," neither do salmon of a certain age make up our salmon supply. We can easily understand a scarcity of four-year-old fish from the effects of the long-

continued frosts of 1895; but, as yet, our "Intelligence Department," so to speak, in the sizes, weights, and approximate ages of the salmon, is not kept with such precision, that it is meantime possible to authoritatively state that there has been any marked falling off of salmon likely to have been hatched out in the very uncongenial spring of 1895, the remembrance of which makes a cold shiver run through our very marrow even at this distant date. That theory must be discarded.

The weather conditions have not been all that could be desired, yet we have often experienced much worse and the supply of fish been above the normal average. The winds have been badly "aired" for the north and east coasts, but otherwise experienced fishermen do not blame the easterly and south-easterly direction of the prevailing winds. They may be also set down as a contributing cause, but they do not explain the mystery of the present scarcity of fish on the coast, nor offer a satisfactory solution of the problem. The temperature of our rivers and streams has been low all the season through, and it is still so for the advanced period of the year; but salmon will run into fresh water, although not freely, in the teeth of snow broth, and so the temperature theory cannot of itself be held sufficient to explain the collapse of the salmon season. And so the various points may be taken up which apologists offer with, of course, the usual egotism, and when weighed in the balance of reason and probability will be found sadly wanting.

What then is the cause? We honestly confess we cannot but hazard the faintest guess, not by way of giving an explanation, but by way of not being able to give one. The herring fishing is a parallel to that of the salmon harvest. There are good seasons and bad seasons, sometimes alternating, sometimes following each other in succession, and once every fifteen years or so there is a series of bad seasons, followed by a sudden "slump," which marks the crisis in the cycle.

Fishermen can no more explain the controlling agencies or forces when there is a sudden failure in the herring supply than salmon fishers can do when the same thing happens with regard to the salmon supply. A year of great plenty may as unaccountably follow the seasons of dearth; and herein the mystery surrounding all fishery problems, and more particularly salmon fishery problems, is doubly intensified.

It is well known that meteorological conditions, atmospheric depressions, climatic changes, &c., have a great controlling influence in inducing the fish to run inshore or otherwise; and this knowledge, coupled with the fact that trawlers and other white fishers have observed salmon leaping in the sea thirty miles off the coast, incline us to the belief that the bulk of this season's crop of salmon have not yet come on the coast.

It may be that there will be an extra good show up in the autumn, and it may be that the scarcity will continue right on till next spring, when the years of plenty, it is hoped, may then commence.

During the month of May 1090 boxes of salmon were sent from Scotland to Billingsgate in 1898. Last May the total was 1050—only forty boxes behind the previous year. This is as good results as we have yet obtained, but it must be strongly borne in mind that last year was also one of the worst salmon seasons on record. However, June promises much better than May did, and, as far as the month has gone, there has been a daily increase in the salmon and grilse supply and a constant fall in the wholesale prices—a sure sign of a plentiful market.

The quality of the salmon and earlier grilse was said to be excellent, but latterly the grilse have not been improving in this respect. We saw upwards of fifteen on Saturday last, all taken north of the Dee, and they were anything but the lithe, plump beauties we care to deal with. Silvery they were, but as thin as eels, and it is hoped that these were exceptions to what the season's crop will be when they come away within the next week or so.

Owing to the bright weather and strong sunshine salmon angling has been somewhat erratic during the past five or six weeks, some anglers being thick in luck, while others, again, have been dead beat to get a rise for days on end, although the pools show good evidences of a fair stock of fish. On the Cambus O'May

Dee water the lessee had thirteen fish in one day to his own rod, and thirty for the week—the top score of the season for Scotland—while others, both above and below him, fished blank for several days on end. On the Cairnton Dee water last week Mr. T. Turner Farley had to do with thirty fish in three days' angling, seventeen of which he landed, all scaling from 6lb. to 22lb; yet on the Inchmarlo waters immediately below, and on the Crathies below that again, scarcely a single fish is being seen, besides being landed. Yet sportsmen, who happen to be disappointed in their own reaches, go away from such rivers as the Dee and give it out broadcast that such reports—phenomenal, we admit—as those given above of the Cairnton or Cambus O'May waters are pure inventions, or at best exaggerations!

Some very fine salmon were caught during the closing days of May on the Tay. One rod had five heavy fish one day, averaging 25lb. each. The river has been in excellent order for angling, and a very large number of anglers have been on the water daily. The Tay Syndicate Improvement Association are beginning to reap the fruits of their labours already, but not very much need be looked for till their system of control has been in working order for a year or two. However, they have hit the nail on the head, and taken a firm grasp of the situation in seeking to buy up the control of the nets. Whatever may be the advantages of artificial propagation—and we would not desire to minimise them by a single hair's breadth—nothing can compare with having the complete control of the netting stations, so as to enhance the sporting prospects of our salmon rivers. In this respect the Dee has been an outstanding example for nigh a quarter of a century now. The South Esk is forging ahead, and the Deveron, although not up to expectations, will soon redeem the initial cost when once it has had a fair chance of a few good average seasons.

The smolt season has been a most prolific one all over. It has been a late one, like most other matters piscicultural, as well as agricultural, but not for years back has there been such a fine show of healthy young fish as was witnessed during the latter weeks of May and early days of June. They are all down now except on the later streams, such as the Ythan, where the other day they were coming to the trout fly more like young finnock than salmon smolts, as far as size was concerned.

The Spey has been fishing better than at any time during the present season, but there is still great room for improvement. Some fine, heavy fish of 30lb. and thereabout were got on the lower reaches; and Mr. McCorquodale, on the Tulchan House water, had six one day to his own rod—the top score for the Spey. Grilse and sea trout are showing up well on the coast, and the prospects of a good summer fishing are on the whole very gratifying. The Beaully, hitherto very poor as the season has gone, has been yielding better results to the rod, and sea trout have, within the past few days, been more plentiful than for some years back. In the far north results are not over bright, and the best basket on the Kyle of Sutherland, up to date, has been four fish for one day. However, the coast fishings are steadily improving.

The fly has been the most successful lure, and just now the tiniest patterns, on $\frac{1}{2}$ in. and $\frac{3}{4}$ in. irons, are all the rage. The Loggie, Mar Lodge, Silver Doctor, Jock Scott, Jeannie, Silver and Claret, Silver and Blue Bumble, and such like on the lightest of salmon casts have been equally successful. Tiers cannot make them small enough so as to keep pace with the demands of anglers. The bright sunshine and the daily diminishing streams need these mite salmon lures, else there is little chance of securing a rise. The small hooks and the light tackle are accountable for not a few breaks and disappointments, and especially so where the heavy spring rods are still being wielded instead of the regular summer set to correspond with the reduced fly.

The yellow trout season is now at its best. Fish are plump and fat, and still rising freely to the fly. On the Don last week some magnificent baskets were creel'd, heavy fish being conspicuous. This is not often the case, but then there have been frequent thunder pelts, and on the whole the rivers are more like March size than June dimensions. On the Ugie, Deveron, Findhorn,

Beaulieu, and such famous yellow trout rivers, the season has all along been a very good one, and the prospects till the end of the month at least are of the brightest. The very smallest of trout flies are being used with best results, and the standard patterns reign supreme as the killing lures.

G. M.

"DRY-FLY FISHING IN THEORY AND PRACTICE."

By MR. FREDERIC M. HALFORD.

THE OBSERVATIONS AND REFLECTIONS OF A WET-FLY FISHER.

THE new and revised edition of this beautifully-written and valuable work lies before me as I venture, "like little wanton boys that swim on bladders," over "a sea of glory" "which may for ever hide me" if Mr. Halford only punctures the aforesaid bladders when I am out of my depth!

I write in no captious mood. I have learned many a wrinkle during the perusal of the book, with which I wish to deal in a sincere and, I hope I may add, a fraternal spirit. Alas! I feel I cannot refrain from commenting upon the self-satisfied complacency with which experts of the "dry" fly view us of the "wet" fly; and, while entering a disclaimer, Mr. Halford is not quite free from this almost patronising tone, especially if one reads between the lines here and there.

It is the one "littleness" in what I must call a great art, and is unworthy of the "school."

As for "chuck and chance it"—that school-boyish heavy piece of wit, wearisome as it is stale, and absolutely false in its misleading tendency—I wish it were tabooed, for it is really childish.

I desire to "compare notes" as I go along, and to show that there is much in accord with our ideas, and much we can now cordially praise, since we cannot imitate.

I met a former vicar of mine a few days ago. He had been in Norway with the bishop of his diocese last summer, and he was going again this year. He said he had only had some trout fishing in a river, but this year they were to have more water, and he thought nothing of the fact that he had killed with the fly two trout of 5lb. each, and a good many from 1lb. to 2½lb., apologising and saying that "he had not fished since he was a boy!" How unlike the bragging one reads occasionally, when a sprat is called a whale.

And then he said to me, "What about this dry fly? What does it mean?" and I told him of this "Work," shook hands, and left him with a puzzled look on his face, as I said that the flies were not only not allowed to sink but must float with their wings cocked at the will of the thrower! Possibly he did not wish me to say much more, lest I might be tempted to tell "more on 'em," and so, like a good man, bolted for my sake.

I now refer to the notes I have made, and I may add that I have deliberately gone through the original edition, and then, finding this new work was published, I ignored my former notes and began afresh.

At least I am painstaking, Mr. Halford!

My first remark is from chap. I., p. 5, where Mr. Halford speaks in favour of a single-handed rod for fly fishing, a remark with which I entirely agree.

I do not follow him in his remarks that greenheart is so brittle, and is "always liable to break off short." I know that this has been said by many other anglers.

It has not been my own—and I have had a large experience—I and my friends with greenheart rods made by Forrest and Sons, of Kelso and London.

Many so-called makers pay no attention to details, and err either through ignorance or wilfully, but when picked and seasoned, and the ferrules are put on properly by a finished workman, I believe that greenheart is a most reliable wood. It has one very bad point as a trout rod. It is too steel-like and hard in action, and when a trout takes to jiggering, the shock of each shake of head or tail is communicated to the angler's hand in a way that suggests a smash if the finest drawn gut is being used.

For this reason the rod that Messrs. Forrest make—called by my name, the "Tod" rod—is composed of a butt and middle joint of hickory; tops, lancewood; and this makes a very "sweet"

and efficient 'rod, free from the objection just stated.

As to split cane, I entirely agree that when well made they are fine weapons, and I most certainly agree with the author that only the best should be purchased. A cheap and good split-cane rod is a moral impossibility. It cannot be done! The two objections to these rods are, it seems to me, (1) their price, and (2) that a broken joint, when far from a good maker, is not easily repaired—not half so easily as in the case of whole wood rods. The latter is a great objection.

I observe, to my surprise, that the "horizontal cast" seems to be most used by the dry-fly school. We of the wet fly most frequently use the "vertical cast."

I am grateful for a good wrinkle—one of many such—the use of paraffin oil when the joints get jammed (see p. 20).

I am not a little pleased to find that many of the best dry-fly men "have recanted," and are again going back to the loose rings instead of the upright. I prefer loose rings save in the butt, and here bridge rings (especially in our clear water worm fishing) are of advantage.

At page 34 the author advises striking from the reel. I cannot say that I consider this of much value. Of course a man who places his whole hand on the line is all wrong. My plan is to feel the line with my forefinger till the trout is hooked, when it comes off instinctively and in a second.

Also, unlike Mr. Halford, I prefer to use the reel with the handle to my right side, and the reel and rings below, and not above, the rod.

I never knew a good rod of my own get "a set" on it by using the rod in the usual way, but if it did, can anything be simpler than its cure? At the end of the season get the rings reversed, and the rod re-varnished, the butt excepted.

At page 36, the hint that plaited silk lines should never be round but square (as round lines mean plaiting round a core—and often of jute) is of real value.

Pages 46 and 47, eyed hooks are preferred for dry fly work, and I am puzzled to find that turned up or turned down eyes make little or no difference in their hooking and holding powers. This is a bit queer to me. As a rule, I prefer hooks tied to gut best. My prejudices are very thin nowadays in this respect, and were I young instead of being somewhat past the prime my prejudice would be thinner still.

If I might express it, I would like an eyed hook where only one hook is used, or for the end fly; but for "droppers" I have an old-fashioned faith in hooks attached to gut.

I have no hesitation in saying that all loch and sea trout flies should be tied on eyed hooks. The weight of the iron (in a large sized fly) so constantly cracks the gut (and thick gut not least) just where the iron is whipped on, that I certainly think all such flies should be dressed on eyed hooks. To follow my reasoning, how long would a salmon fly last if tied on the finest single salmon gut like a trout fly?

So, Mr. H., you see you are making us wet-fly men acknowledge that we are picking up wrinkles from your side as we go along. My "triple gut hinge" is the next best thing, but I confess I prefer the eyed hooks, as it is so hard to get fly dresser to do this "hinge" well. I can do it myself, but I have had some woeful looking things sent to me by some fly dressers, till in despair I gave its use up altogether; as I try to live a quiet life, and don't like to swear!

I see that Mr. Halford advises a basket instead of a bag. My opinion is that a basket fitted like my own, with a close-fitting indiarubber lining hung to the inside of the creel by large-sized hooks (such as ladies' dresses are fastened by), a split cane being first attached to the margin of the creel, inside, of course, and a loose piece of indiarubber added to lay over each fish or layer of fish, is invaluable, and I never use anything else, because I know of nothing so good and so practical. All bags rub the fish together till they are ruined long before they get home. I hate all fishing bags for trout.

And now I get on familiar ground, where Mr. Halford remarks (p. 56): "Thus, wet-fly fishing is often termed 'fishing the water,' in contradistinction to the expression 'fishing the rise,' which is applied to the method of the dry-fly fisherman." And then the author goes on and

deprecates "the presumption of superior scientific knowledge and skill on the part of the dry-fly fisherman," a modesty which is almost transparent.

I wish emphatically to say that no really good wet-fly fisherman "fishes the water, except in the absence of the rise," but the knowledge and skill, and intuitive perception displayed by a really skilful wet-fly fisherman when fishing a river when no sign of rising trout is visible, is a sealed book to those of the dry-fly school, and is also, I may add, only known to the wise and prudent of the wet-fly school itself—i.e., those who are "far ben."

The moment the birth of fly begins to show, and the trout to feed, every man worth his salt fishes "the rise," by necessity as well as by choice, if he wants to kill a good basket of fish. Besides, it is far more sportsmanlike and pleasure-giving. To see those who have none of this intuitive perception, backed by keen observation and crowned by experience, hopelessly fishing useless stretches of water (full of trout as they are), whilst the man "who knows" is filling his basket elsewhere, is a very sufficient answer to the "chance it" ideas of certain men of Mr. Halford's school who have never made the wet fly a study.

Now page 63 goes beyond all my conceptions of legitimate fishing, taking as it does the high standpoint that it is (in club or subscription waters) not sportsmanlike to cast a fly save over a rising fish, and that if a good fish is seen in position for feeding he should be left alone, unless he is rising at the natural insect. How funny and ceremonious! "On private or on exceptionally well-stocked waters" the author thinks that if the angler sees a fish in a likely place he may be justified in casting a fly over it.

Really, I think this is going too far, for it plainly implies that the man who does not do all this is not quite a sportsman. Permit me to remark that such an unwritten law is all very well for the man who has a house or cottage on the banks, and also has the sweet privilege of fishing wherever he chooses; but the hard worker who rushes down from town for a day, or even half a day, surely is not bound by any code of honour, written or unwritten, to adhere to such stringent rules, which, if applied thereto,

Would bring religion's self into disfavour.
—Hood.

Of course, I write only as a wet-fly man, but I find that many good dry-fly fishers (the editor of this journal for one, and Mr. Alfred Jardine for another) do not hold these exclusive and dogmatic ideas. And if I am right, the same opinions are not given by the author himself at page 43 of the old edition of this work as are now given at page 63 of the present one.

Mr. Jardine's article at page 334 of the *Fishing Gazette* of May 20, 1899, is too long to quote here, but is well worthy of perusal and consideration. Again, at pages 64 and 65, the author trots out "the great Scotch fly fisher." Now, I cannot speak for all, but for myself, as a Scotchman and a wet-fly fisherman, I shall simply say that, were I to go to the Test or Itchen with my wet-fly tackle and methods, and fish—not for a day but for a season, the only real test—I should be wholly unable to hold my own, for our system is not suited to such circumstances, just as a purely dry-fly man on a hard thrashed rapid stream suited for wet fly would find that he had some thing to learn.

I am amused to find that highly-educated South of England trout are still contented with whole gut. Mr. Marryat, I am glad to see (p. 81), used "the finest of drawn gut." In Scotland, for a number of years, I have looked on anything but fine drawn gut in river fishing (save in the early spring) as a retrograde step. Of course, we are not often troubled with weeding trout in the north.

At p. 82 I find a remarkable corroboration of of my own ideas, viz. (and here I put it in my own words), I never throw a long line if a short one will suffice.

At p. 86, Mr. Halford speaks of "the ordinary switch cast as used by the wet-fly fisher."

Last year I was honoured by an invitation to give a few lessons in fly casting to some members of a well-known and flourishing angling society in my neighbourhood, and amongst other lessons I showed how to throw a fair amount of line in a river if one could only wade in a yard or two, but where it was impossible to throw behind, owing to a high hedge or fence. I throw the line first close to the very margin of the stream, and then,

having raised my hand, I instantly turn the wrist, and forcibly drive the line across the stream; and if, one on making the cast, can only take a step forward at the same moment, the effectiveness of its delivery is much increased. I had to show all this on the tennis lawn of a popular club, and to demonstrate it I placed myself at the bottom of a sunk fence, with the tennis-net of another lawn on a higher level above and behind me; a tolerably fair test. It would be of no use, I fear, for dry-fly work.

All the same, such places are so seldom fished that the result is—sport to him who can fish them, and not get hung up in the process. It is a wrinkle. At page 89 we are advised, whenever possible, to fish upstream. In moderately broad streams, and in all narrow streams, this is the proper way to fish with the wet fly also. In rivers of large volume, unless when they are very low, up and across “the half drift” is generally the best practice; but whenever circumstances favour it, I say, face the source rather than turn your back on it, unless the sun is on your back the while. Mr. Stewart made this very plain thirty-five years ago in his most excellent work, “The Practical Angler.”

I remember the day when I used firmly to imagine that dry-fly men made a perfect study of the natural fly, and would fish with no understudy, and it comes as an eye-opener to learn that you should not imitate the “cuss,” and that when in doubt you should play trumps, in the form of a Pink Wickham, or a gold-ribbed Hare’s Ear, and a few other such “fancy” flies—all of which makes me content with my own praise of Greenwell’s Glory, and a few such good wet fly patterns.

At page 104 the author refers to “fishing over good places on spec,” and I myself consider it a very sensible thing to do, and in no way derogatory (he does, p. 108). As fishing against the wind has ever been a familiar experience to me, I cordially thank Mr. Halford for the term “glass edge” in this connection. It is admirable! As is also his advice never to hold a fish hard when it is bolting under an arch. His reasoning is excellent here, I consider. Of pages 114 and 115 my pencil notes quote the Psalmist: “Such knowledge is too wonderful for me,” &c., and I dare not even attempt criticism.

“Cheating the wind” when throwing upwards against the wind expresses what it means exactly. Thanks, many!

At page 117 it says: “How strange to us wet-fly men this throwing of a slack line to achieve the best results. I only know of one single instance of this being done by a very old friend in one strong stream on the Tweed, with an eddy on the far side, where the good trout lay, and he could thus catch trout which others only pricked.

But to lay a line in loose coils on the bank of a river to prevent the fly dragging is, indeed, very wonderful to me.

Also, that “we often strike far too quickly” a rising trout. This is to me a new idea. I generally thought that we did not tighten soon enough as a rule, especially in the case of highly educated trout—quick at divining false from true. I am equally surprised to find that during heavy rain, hail, or wind “even unlikely places may be tried with success.” And that during rain “trout go silly.” Now, as a wet-fly fisherman, this has not been my experience, as a rule. Once on a small Highland loch I started fishing at 2 p.m. in a dead calm, with a continuous fall of rain. The trout were boiling like a pot, and as I could not see any flies I presumed that the falling water brought down with it millions of midges (cusses); anyhow, in four or five hours I had basketed 24 lb. of trout with the fly. I quote this as a decided exception, and I never remember of Scottish trout “going silly” during rain, as they did on this occasion.

I may say that I look on dace fishing as a far higher art than trout fishing, since here one should strike instantly, else the fly is ejected in a second, indeed, I was once advised to anticipate the rise of a dace. I need hardly add that I do not wish this taken too seriously, as I seldom waste my time fly fishing for dace. All the same, I have a sincere respect for their cleverness in spitting out the fly, and this in a manner which even a Test trout need not be ashamed of, despite his superiority in birth and education.

Much is made of “the first cast” over a rising

trout, and I must say that to be able to measure distance so as to place the fly always where it is wanted fills me with envy, as well as with honest and genuine admiration; indeed, nothing in the whole book makes me so envious.

When the first cast is made with accuracy, it would seem that even the exact pattern of the fly itself is of secondary importance. This is worth considering.

Page 153 explains the difference of the two terms “tailing” and “bulging” trout, and very valuable are such terms to us all.

I confess I am rather sceptical concerning the theory advanced that in hot weather, and especially in the evening, the fresh water snails come to the surface sometimes, and are then and there pounced on by the trout.

A rise of snails and a show of tails is a thing I will only believe in when I see it. At present it is put forward purely as a suggestion, and to account for certain phenomena otherwise hard to explain.

I find I must hurry up and deal more briefly with the rest of my notes, as space has to be considered.

At p. 169, the author is evidently of opinion that all wet-fly fishing should be prohibited on dry-fly streams, where high rents are paid, &c. As this is a matter for the members of each club (or owner) to deal with, I shall say nothing against it here, save that it seems a little tyrannical at first sight.

Fancy any Scottish angling club forbidding the use of the dry fly; and, indeed, our South of Scotland trout need no new educating process.

I find that the Iron Blue is the favourite fly on most chalk streams, and Greenwell’s Glory is a very fair imitation of this fly; and I maintain that no individual fly is so generally successful on ordinary North of England and Scottish streams as this grand fly.

Thus we find we are shaking hands again in exchanging experiences and notes. Page 190 “I find that during northerly and north-easterly winds a large hatch of flies is frequently seen on the Test. I have seen this again and again on the Deveron and other Scotch rivers, and I have often killed my largest baskets of trout when I could hardly manage to tie a fly on, so bitterly cold was the wind, and yet the flies were hatched in great numbers, and the trout fed on them greedily in the coldest days.

I should like to remark that, being one of the old school, who think “Nature unadorned adorned the most,” I do not care to fish artificial ponds and so forth, and I confess I am inclined to feel that there is a good deal that is rather artificial in this dry-fly business, with all its punctilio! The map at page 100 gives me that idea—I dare say it is necessary—but is it equally poetical, this scientific weed cutting? Is “walking up” or “stalking” game on the same level as having the game driven right on to “the guns?” I think not. To me it is artificial, and the poetry of sport suffers a loss.

There is another thing I would just like to say, and it is this: The dry-fly fisherman rules yards for miles in comparison with the wet-fly fisher, and, while we of the wet fly school gladly acknowledge the skill which has been brought to bear by this advanced section of the fly fishers of the world, we claim that the grandeur and the poetry of angling is the birthright and the inheritance of the wet-fly men, whose rushing waters extend the whole world over! May I ask where is the poetry in angling literature which is the outcome of the enthusiasm of the dry-fly school.

I know of none save that of “Cotswold Isis,” whose cultured “Lyra Piscatoria” are so well and so deservedly known.

As a rule, dry-fly rivers meander by peaceful meadows and through quiet vales, which, though beautiful and full of peace, do not stir the pulse or fire the imagination as do the more mighty and tumultuous rivers which are so frequently fished by the votaries of the wet-fly school.

We have each to learn something from the other, and I have learned much from this splendid work. Only last Easter one of the most famous authorities on dry fishing, in corresponding with me, volunteered the avowal that he could not really succeed as a wet-fly fisherman—just as I could no more imitate him as a dry-fly fisherman (at my time of life) than I could fly.

Although it may seem inconsistent, I shall not close this paper till I have said a few words of the

man to whose memory Mr. Halford has dedicated this work so feelingly. I never knew him personally, but many years ago our mutual friend, Mr. M., of Lazonby Hall, Cumberland (whose lovely stretch of the Eden, extending through the famous Baron Wood, I have fished so often), told me when dining at his house, after enjoying a day’s fishing together, how Mr. Marryat had fished his waters whilst he was his guest, and then he brought out with pride a book which Mr. Marryat had sent to him afterwards. I also remember his showing me some trout flies grandly tied by the same authority. Like Mr. Halford, he would not throw a line unless over a rising trout, even in the Eden, where trout only run three to the lb.!* Let me just add this tribute to his worth, that, had I met him, I should have been content to sit beside him to watch him at work—a real treat, especially on his own pet streams. Of course I should have quizzed him on coming north with his southern prejudices still clinging to him so closely that he could not (or would not) alter his usual methods.

There is in such a rigid adherence to “form” something of human pride. He was the best known authority on dry fly fishing, and hardly dared to sacrifice his dignity, lest in doing so he lost, in some measure, his prestige.

May I give my own opinion of the man, based on all I have heard and read, for I have fished with a good many celebrated fishermen in my time, and have been at times compelled to admit the presence of a “something” beyond the reach of ordinary mortals. I have witnessed it in one or two wet fly fishers, and it is conspicuous in Mr. Marryat’s case. He was not of the type of man of whom we Scotch say “there is naething in him save what the spoon put there.” Such men become leaders in spite of themselves. I mean, I need hardly add, that Mr. Marryat was, in his bold originality and the ease with which he out-distanced others, a man of genius.

E. M. TOD.

THE BEGINNING OF THE SEASON.

MANY anglers visited the Shepperton district on the 16th inst., and the Tumbling Bay had a rare “combing” on the opening day of the coarse fishing season. Herbert Curr baited a barbel swim on the evening of the 15th, and seeing the clay balls being tossed into the water made me wonder what success his clients would meet with; and I fancy they did well, considering the state of the water, as I saw them land a few barbel.

The scene on the evening of the 16th was an animated one; a punt at each corner of the bay, Poulter and Curr with their respective clients, three or four rods on the platform, and sundry others on the banks. I quietly tried the chub during the evening with a little cheese-paste, more to find out where the larger fish were than anything else, getting four fish and losing another by a bit of bad luck. When spinning for trout on the evening of June 15, I landed three small fish in three successive casts—trout, chub, and perch; this all pointed to the probability of the fish feeding on the following day.

A friend from Guildford, Mr. C. B. Sells, who recently landed a magnificent trout, over 7 lb. in weight, at Shepperton, arranged to fish with me on the Saturday; and as I walked to Weybridge station on my way to “the little village,” he came flying down the road on his bicycle, carrying a 16 ft. salmon rod with him for the purpose of giving the chub “beans” on the shallows. When I arrived at the weir in the afternoon he had landed a dozen or more. We have been trying the trout with salmon flies lately, but have only secured chub and perch.

We pottered about during the afternoon, and in one place I got a small perch at almost every cast, spinning with a Devon minnow, and now and then a chub. When the sun got low down we commenced chubbing in earnest, for during most of the time there were so many rods about that it was impossible to fish properly. After a few runs down with Nottingham tackle the fish came on in real earnest; a nice southerly breeze had sprung

* In the Baron Wood water I have caught fine trout up to 2 lb. with wet fly, and equally fine fish in the deep waters above Armathwaite Bridge using the dry fly; but the average is probably as given by Mr. Tod.—R. B. MARSTON, Ed. F. G.

up, and though the fish fed shyly, hardly ever pulling the float boldly down as usual, we got a chub at almost every swim, eight swims in succession producing a fish. Now it is the greatest mistake possible for two rods to fish at once in certain swims, and we fished one rod only, changing after landing a fish.

In about two hours we filled the punt well with big chub; so full was it that they were lying on their sides for want of water-space, and a basket of the larger fish was little short of 30lb. in weight, the best fish going 4½lb.; these, added to the fish we put back and the dozen caught in the morning, represented a catch quite 50lb. in weight of chub, not reckoning the perch. The talk one hears of the "depleted Thames" always strikes me as rather nonsensical; with reasonable knowledge of swims, tackle, baits, etc., very good sport can now and then be enjoyed with the coarse fish. Given the requisite knowledge, it is only a question of patience till the fish come on the feed, as they suddenly did on Saturday last; this I put down to the change in the wind entirely.

Perch are undoubtedly vastly increasing in numbers in the Thames, and with such plentiful feed as they can easily obtain in the shape of minnows, bleak, and the like, it is quite safe to anticipate excellent sport with these beautiful game-fighting fish in a year or two.

In the interests of preservation it does good to keep the larger chub; even at this time of year they are certainly somewhat "kelty" in condition, but for a gluttonous gobbler of small fry I fancy few fish equal chub. All those I have caught on salmon flies during the past week or two have, of course, been scrupulously put back, and my great endeavour, at present, is to land a "bonnie Thames trout," I mean a real "banger," on a fly; this I have not yet succeeded in doing, but have recently come across a customer that may perhaps be "perwailed upon to stop."

Roach are not in condition yet, and the opinion that July 16, or even August 1, is quite early enough to fish for them in the Thames cannot be too forcibly expressed; one day we shall have a revision of the Mundella Act respecting angling for coarse fish, and all sensible anglers must see that proper preservation only tends to their good sport. It is early yet for bream, but I have seen many good fish. The character of some of the best "pitches" has altered considerably, the floods in the winter have "mudded up" the river in several places.

"Never prophesy till you know" is excellent advice; but, judging from what I see of the fish and fishing at the present time, Thames anglers may expect to do well during the season which has just begun.

CHARLES H. WHEELLEY.

"STRAW HAT" PASTE FOR ROACH, &c.

WHAT a capital idea! Mr. J. Jeffrey, the well-known angler and writer under the name of "Straw Hat," has invented what will be a boon to anglers who use paste as a bait for roach, dace, chub, &c., viz., three specially prepared pastes in three colours—"white," "yellow," and "red"—and these pastes are put up in tin boxes and sold retail at 2d. and 3d. by Mr. J. Richardson, of 123, Euston-road, King's Cross, London, who also supplies the trade on special terms.

We shall try these pastes at the first opportunity, but have such faith in "Straw Hat's" skill as an angler that we have no hesitation in recommending his pastes. He would not put them on the market if he had not proved to his own satisfaction that they not only keep well but kill well.

ERRATA.

In the article entitled "Some Remarks on the Article entitled 'Restoration of Salmon Rivers'" last week the following errors unfortunately occur:

Line 34, 2nd col., p. 421, "think" should be "there."
Line 48, 2nd col., p. 421, "influence" should be "inference."

Line 25, 3rd col., p. 421, "them" should be "the one"; and in the 10th line from last in this column "riverine system" should of course have been "riverine system."

In line 6 of col. 1 on p. 422 "cause" should be "course," and in line 17 of same column "are" should be "one."

MR. P. D. MALLOCH'S NEW CATALOGUE.

WE have received from Mr. P. D. Malloch, New Scott-street, Perth, a copy of his new catalogue. It is a very business-like, well produced and well illustrated work, and we have to thank Mr. Malloch for lending us the accompanying very effective illustration from it, drawn by Mr. J. E. Millais.

Next time they are printing the cover we would suggest a line being added along the back with the date, otherwise, when the list is on a shelf with a row of books, the blank back tells nothing, and it is necessary to write in the particulars.

Mr. Malloch is, of course, well known as one of the best salmon and trout anglers in Scotland, and we see from the catalogue that he has won "over one hundred first prizes at angling competitions and casting tournaments;" while at exhibitions of fishing tackle he has carried off the highest awards, and medals and diplomas enough to stock a shop with.

As we said in 1883, "It is always especially

do not get crushed and spoiled as they do in a book. The case being almost air-tight, the tinsel remains bright a much longer time; also, the colours of the flies do not fade so soon. The whole of the flies can be seen in a few seconds, the flies being all exposed to the eyes. The flies do not take up half the room they occupy in a book. Every fly being securely fixed, they cannot get lost as they do out of a book. The case cannot get destroyed with wet. When the case is not in use it can be put aside anywhere, being quite proof against the attack of moths. It is also suitable for holding double flies.

"These cases are made of steel, covered with tin, black japanned outside, and white enamelled inside. The springs are made of German silver, each fly having a spring for itself. Made in different sizes."

Salmon and trout anglers will find very complete lists of flies for salmon and trout, both for river and lake fishing; also special lists of Loch Leven flies, sea trout flies, &c., and no better flies are made.

On p. 38 there is an illustration of Mr. M.'s patent "Automatic Boat Angler." This is a contrivance for holding three rods out over the stern of a boat, and all anglers who care for harling should see the illustration and descrip-

FROM MR. P. D. MALLOCH'S NEW CATALOGUE.

(Drawn by Mr. J. E. Millais.)

pleasing to us to notice the goods of a tackle maker who is himself an expert angler—he is pretty sure to know exactly what anglers want." Anglers going north will find Mr. M.'s new establishment only a few minutes' walk from Perth Station, and he arranges to meet any train with customers' orders, or to receive specimen fish to be cast and painted, for modelling, casting, and painting fish is an important branch of the business, and the results are admirable. In the Fly Fishers' Club there is a painted cast of a grand Loch Stenness trout, which is admired by all who have seen it. These painted casts are most moderate in price; in fact, we see from the price list that they are less than half what we imagined they would be.

One of the best of Mr. Malloch's many excellent patents is his Salmon Fly Case, and, having used one for many years, we can endorse what he claims for it.

"Amongst the advantages of this new case over the old parchment books the following are a few: The flies

tion of this ingenious contrivance, which would also answer well in sea fishing from a boat or yacht with spinning bait.

The Malloch patent casting reel is now made in aluminium, and has been brought to great perfection; the great drawback of the first form of this reel was that the line would kink, but Mr. Malloch got over this difficulty by making the drum on which you wind the line reversible, so that by touching a spring you can at once reverse the drum when you notice any sign of kinking, and this only requires to be done once or twice a day. One great beauty in this reel is that you can cast such a very light bait with it; also almost anybody can cast a bait with it. It is fully illustrated and described in the catalogue, as also are Mr. M.'s other fine reels and his grand rods for salmon and trout fishing, and we are very glad once again to recommend the first-rate goods which have made Mr. Malloch's name so celebrated.

BURBERRYS' GABARDINE SLIP-ON COAT

Proof against **RAIN, SLEET, SNOW, HOT and COLD WINDS, THORNS, and FISH-HOOKS.**

It is impossible to speak too highly of the advantages of the SLIP-ON, its weatherproof qualities are incontestable; it will keep out drenching and continuous rain without adding the slightest unnatural heat, the materials being as porous to the exhalations of the body as ordinary cloth, so that it may be worn in the mildest or coldest, wet or fine weather with equal comfort. Built on a plan that obviates the possibility of any tie, and is equally good over any thickness of clothing.

GABARDINE COMBINATION (PATENT)

OUTSIDE GABARDINE, INSIDE WOOL. Both Fabrics WEATHERPROOF.

Price - - 63s.

BURBERRYS, 30, HAYMARKET, LONDON, AND BASINGSTOKE.

Experts in WEATHERPROOF KIT. of "Gabardine" and "Urber" Combines, The Equi-Pede, Burberry Coats, &c. **Patentees** for Shooting, Fishing, Golfing, Polo, Yachting, Cycling and Racing Garments. **Specialists**

OPENING OF THE COARSE FISHING SEASON.

SOME ANGLING STATIONS ON THE GREAT EASTERN RAILWAY.

(Continued from page 423.)

Huntingdon.—The next important station to Great Paxton is Huntingdon. The river in places in this interesting locality has a broad-like appearance on account of the sedge, rushes, reed beds, &c., and the scenery is delightful. These rush, and sometimes reed-fringed slow running deeps afford good harbour for both jack and perch, and they should be well tried for in the proper season. Godmanchester, with its round, singular, and extensive racecourse, known as the Portholme, is on the opposite side of the river to Huntingdon, and this fishery belongs to the Corporation of Godmanchester, is hired by the Huntingdon Angling Association; the charge for daily tickets is 6d., and I understand this money is all expended in re-stocking the river. Not only a boat, but good information respecting the fish and fishing can be obtained from the landlord of the Woolpack Inn, in close proximity to the bridge. St. Ives is about four and a half miles from Godmanchester by rail, and anglers can make either town their headquarters; but those anglers who prefer to stay at Huntingdon will find the George Hotel an excellent hostelry to patronise. There are so many capital swims, "pits," and backwaters in this district that it would be impossible to refer to a quarter of them except in a cursory manner, but one of the best places for chub is a back run or stream called Lee's Brook, using the natural insect in preference to the artificial. It leaves the river at Brampton Wale and rejoins it at Bleakley's Grove. A stream of sharp shallows and rather deepish holes; in many places the angler will find little difficulty in keeping out of sight, and it is most essential that he should, for Ouse chub are proverbially cautious and cunning; try all I could, it once took me over an hour to capture one out of four or five swimming round and round near the surface in the splendid pool near the paper mill below St. Neots. Who, may I ask, has not heard of the grand rudd that have been taken at Hartford?—not the only place, by the way, where good rudd may be taken in this locality. No matter how one gets out one's bait, it goes without saying that the best way to circumvent these easily frightened fish is to angle from a boat. It is a *sine quâ non* with many Ouse anglers to fish for rudd where it is weedy (no doubt this has something to do with their feeding), but I know one old Ouse angler at all events, who sometimes catches rudd with the worm (red), also gentles, fishing like one would for either roach or dace. Personally I have caught many rudd with the red or cockspur worm, fishing considerably deeper than some anglers in the Ouse, and in this river the best fish are not always taken near the surface. I believe the Huntingdon Angling Association's water ends at a spot called the Four Gate Pit, a splendid pikey, perchy, and chubby-looking pool and backwater which the angler should not forget to try, and try well, more especially if he be staying at Houghton, and also to try the water around the Portholme for jack at the proper period, using a natural bait in his spinning operations. The same baits for both hook and ground as those recommended in the last article of course apply on this occasion, with the exception that a very good bait for rudd is a mixture of King's natural bait and bread paste made from a stale loaf worked up as stiff and adhesive as possible.

St. Ives, Holywell, and Swavesey.—To save time, trouble, and probably annoyance, I recommend anglers visiting St. Ives to call upon the well-known secretary of the St. Ives Angling Society, Mr. Collinson, who, I feel sure, will give *bonâ fide* anglers the best possible information respecting the fishing in this locality. Swims (Hemingford Grey Mill Pool): This delightful tree-sheltered old mill and charming pool is a favourite spot, and much frequented by all classes of anglers; and a little distance upstream there is another splendid pool, called the "six gates," the pool or basin below these gates forming a tremendous eddy, and feeding a pretty little back-water that crosses the meadows and

rejoins the main river just below Hemingford Pool. Walking along the river between the old mill and "six gates" the river was as clear as crystal, and I saw plenty of both roach and rudd, but they were wonderfully shy. The rod to fish from these low grassy banks should be at least 18ft. or 20ft. in length. The water is so bright that the angler should be seated, and the bait should be literally sneaked in to stand a chance of success, and, as there are numerous swims on both side of the "gates," it is not wise to stop too long in one place. From St. Ives Locks to Friend's Corner is about a quarter of a mile, and the river is from 7ft. to 9ft. in depth, and at the "Corner" the river opens out into a miniature broad—a beautiful sheet of water, containing roach, perch, jack, and at certain periods bream. From here to the railway bridge (only a short distance) several good swims can be fished in comparative quiet and seclusion. The well-known Drayton shallows are situated below the railway bridge. Next we come to the celebrated "Church Hole" swim, nearly opposite Holywell Church, and good roach are captured in this swim; the river again becomes shallow until within about 100yds. of Holywell Ferry. At this point the water is often 8ft. or 9ft. in depth, and good perch, as well as large chub, have been taken with both minnow and small gudgeon. Excellent fly fishing can be obtained on the Holywell side of the river, in the shallows extending for about a mile to Swavesey Gravels, for chub, roach, and rudd affect this reach in goodly numbers. On the opposite or Swavesey side of this shallow and splendid thorn hedge the water is deep nearly all the way to Swavesey. Ducker's Hole, a splendid swim for bottom fishing and a good haunt for pike, is opposite the thorn hedge mentioned above, some 20yds. in length and 9ft. or 10ft. in depth; whilst on the Swavesey side of the river several good swims may be fished, either from a boat or the bank, the former for preference, because one has more command over the swims, and the fish can be more easily and safely landed. Some other good spots are the two well-known bank swims just above old Swavesey Drain and the field above Over Staunich, and it is a capital place for pike from Over Ferry to this Staunich. Anglers staying at the inn at Holywell Ferry can obtain not only all home comforts but the very best information from Mr. Scard, who, in the *Fishing Gazette* of June 10, says: "Everything points to a good start on the 16th inst. Immense shoals of bream have been disporting themselves in the sunshine here, the river being literally alive with them, and roach also are in abundance." OUSE ANGLER.

THE RIVER MEDWAY.

The Medway, which winds its sinuous course between verdant banks through hopland and orchard, in the Garden of England, is a deservedly popular river with the London angler, especially as it provides excellent sport in the early days of the opening of the coarse fishing season—is, in fact, essentially a summer river. It is easily get-at-able by an excellent service of trains on the South-Eastern Railway from London Bridge, Charing Cross, &c. The privilege stations on the line are Tonbridge, Paddock Wood, Yalding, Watlington, and East Farleigh, and the river in each case is close by. Dealing just with the district around Tonbridge, it may be said that the fishing has improved very much during the past five years. A favourite swim, with charming surroundings, is reached by proceeding to the Powder Mill Canal, cross the canal by way of Malion's Bridge, continue through the wood until just before you reach the Mount, turn sharp to the right, and there you are. It is an ideal swim, and, if carefully baited up and quietly fished, will well reward the angler for roach and bream. There are several good roach swims between Malion's Bridge and Enfield Bridge. A good spot for perch is where the Powder Mill Canal joins the main river. The canal itself fishes well at times. From the canal down to the Weir Hole is a capital stretch for chub, and in Roger's field is a good swim for roach and bream. The Weir Hole is not by any means an attractive place to fish in, but it holds some very good bream. Another good roach and bream shop is Twelve Post Hole, one of the best, in fact, on this portion of the river. At Stone Lock some good perch may be taken. Lucky the angler who can catch

the pool below the Point at Brightfriers in good ply. Many big baskets of roach and bream have been taken here. At Lucifer Bridge there are a lot of lay-by's well worthy of attention, and the stream which tumbles from the old Powder Mill Lock contains some big chub. The wide water at the back of Messrs. Bartram's Brewery needs no recommendation.

From Tonbridge down to Hartlake Bridge the river offers a variety of fish and fishing. Below the Miller's Bridge is a good bream hole, and below Child's Lock, for some distance down, there are many capital roach swims. The water above Eldridge's Lock is also good, and exactly suited to the requirements of the advocates of the long pole and tight line. At the mouth of the Postern stream is a capital roach swim, and immediately below High Bridge is a grand bream hole, and another will be found in the bay below Porter's Lock; perhaps the best of all, though, is the one below Hartlake Bridge. From Hartlake Bridge right away down to Sluice Weir Lock is a grand stretch of water, but it is away from any railway station too far to offer attraction to the angler who runs down for the day and wishes to fish up to the time of the train starting, or nearly so. For anyone spending a few days in the neighbourhood, or willing to tramp a few miles morning and evening, it is well worthy of attention; there are many good swims amidst delightful surroundings, none the less charming because they are little frequented. Before arriving at the water in the immediate vicinity of Yalding, however, the fishing around East Peckham, which can be reached either from Paddock Woods (for preference) or Yalding, must be referred to. It is one of the best centres for angling on the Medway, its only disadvantage being the distance from the railway stations. Sluice Weir can with every confidence be recommended for all-round fishing, and the first bend below the lock is a sure find for roach. There are two other noticeable bends between this and the village of East Peckham, both good for roach and bream. Proceeding down the river, Branbridge's Weir is reached, and here again is a warm shop. Particular attention should be paid to the tail of the run from the lock into the bay; it holds some good roach and chub. From Branbridge's down to the South-Eastern Railway Bridge are a succession of roach and bream swims with a capital sandy bottom. The next place of note is Stoneham Lock and the river immediately above; and then, passing the Sand Hole, Mouse Bay, Horse Shoe Point, and Curd's Dyke (all good swims), Twyford Bridge (close by Yalding Station) is reached, and here is another happy huntingground. Twyford Bridge has formed the theme of many a poet's lay, the subject for many an artist's brush or pencil. In the bay are many big chub, and the Old River, which flows from it and joins the navigable portion of the Medway close to Yalding Station, can confidently be recommended. Below Hampstead Lock (Yalding) the first swim to be noted is Horse Shoe Hole, famous for its big bags of bream, and then follows a splendid roach swim, adjacent to two ponds, yclept the Twins; next follows a long stretch of willows, and here chub are wont to congregate during the summer and autumn months. There are several other decent swims on the way to Watlington, which is well known to many readers of the *Fishing Gazette* as an excellent fishing centre—so well known, in fact, that it only needs bare reference in these notes.

Still journeying downstream, the Black Hole, immediately above Teston Lock, is reached, and here is a good shop for bream. Directly below Teston Weir is a splendid swim for roach and bream. And then in rapid succession follow Larking's Hole, the Black Fern swim, and the swim nearly opposite Barnjet. Passing Barming Bridge, there are one or two swims before East Farleigh is reached, and from this point right away down to Tovil the angler with ordinary discrimination cannot very well pitch in a wrong spot for either roach or bream, while chub in plenty will be found beneath the bushes and willows. It is yet early for pike in the Medway, or elsewhere for that matter, but carp may visit the angler in any swim, and if they should, look out for squalls.

So far as tackle is concerned, the orthodox Lea outfit is fairly suitable, but it must not be forgotten that the greater bulk of big roach and bream

taken from the Medway are caught *right on the bottom*. The local style may be well described as float ledgering, and it should be resorted to if the Lea style proves unsuccessful. Boiled wheat is a capital bait in the Medway, otherwise the hook baits are of the usual character. The Thames cube of crust of bread has accounted for more than one big basket in the quicker swims. The inn accommodation is quite up to the average, but it is as well to make known your requirements beforehand if you wish to stay a while in any particular district. IBIS TAG.

THE RIVER WEY.

This Surrey stream is open for public fishing from either a boat or on the towpath in many parts of its course, from Weybridge, where it falls into the Thames, to Godalming. A mile and a half from the latter picturesque little town is the village of Eashing, where, by application to the landlord of the Stag Inn, a permit may be had to fish half a mile of the stream from the mill upwards. In this water will be found roach, dace, perch, and chub, principally, of a fairish size, but bream do not make it their home. Getting higher up the Wey still, the water gradually narrows and shallows, and is essentially a trout stream, although dace are met with, and roach here and there. Of course, these upper waters are all strictly private, and permission to angle must be had from the riparian owners. The London angler's favourite pitches on the Wey are in the lower waters at Weybridge, Byfleet, Woking, Send, Guildford, Shalford, and Godalming. At Byfleet several stretches of good bream and roach water may be fished by permission of the farmers, a small daily payment, or by joining one of the clubs renting the same. I believe the Silver Trout Society lease some of the water at Byfleet. By detouring at Woking, a walk of a little over a mile brings the angler to the river at Woking old village, and immediately over the bridge, and through theirongate on the left-hand side of the road the famous "broad meads" are reached. Here there are about two miles of lively running beautiful fishing water winding through the "meads" to the vicinity of the picturesque ruins of Newark Abbey. This portion of the Wey is well stocked with fish of many varieties—bream, roach, dace, chub, perch, carp, pike, and eels.

During the last eight or ten years, however, the river Wey right away from Godalming downwards has lost much of its former prestige as an angling stream owing to sewage and pollutions from mills. This foul contamination has now luckily been put a stop to by the Guildford and Godalming sanitary authorities, and all discharges of deleterious matter now, and for the future, will pass through the filtering beds of the new sewage works.

In consequence of this the angler finds that the fish of the Wey are now feeding much better, and the river should certainly regain its lost popularity as an angling resort. Some ten years ago it was no uncommon thing to secure good bags of bream, particularly from the "broad mead" waters, besides very pretty catches of roach, dace, and chub, with an occasional fine carp.

The bream used to feed much better in the day-time than at night, and were generally taken fishing with float and gentles, or paste, as for roach. In fact, the most successful anglers were those who adopted the roach pole, with whalebone top-piece, and tight line, but a longish strike to enable them to float down near the weeds on the opposite side. Anglers are not interfered with when fishing the "broad meads" water, provided they keep to the beaten tracks when going to or leaving their swims, particularly while the grass is uncut. Some beautiful bends and deep eddies will be found, and one portion of the stream, high up the "meads," is grandly shaded with trees and bushes, where in the early mornings and late evenings carp, properly fished for, should be again taken. Leaving this water, and retracing your steps to the high road, proceed higher up for some 200 yds., and here will be found a bridge crossing the navigation cutting. By taking the towpath Send Lock is reached, from whence the river proper recommences. Higher up still there is some meadow land from which anglers used not to be interfered with, but the farmer on the opposite side will not tolerate the angler for a moment on his land across the rustic wooden bridge; in

fact, it is certain prosecution to venture on his preserve. Just in front of this bridge is the famous bend called the "rollers," where big bream may be seen priming and splashing about every now and then throughout the day. To ledger for them requires a long cast, and there is usually so much stream that nothing but a heavy lead and a light line will keep the bait in position (a lob for preference). Through the heavy lead many fish are missed, and therefore the most successful way to fish this grand bream swim is from a moored boat.

The other public portion of the Wey is a stretch of several miles from Guildford town to Godalming. Here may be found good swims all the way, and Shalford, a village about half way between the two mentioned places, is a favourite spot for the angler.

Big bream are to be found just above the Shalford Bridge (where a stream, the Wey and Arun Canal navigation) joins on the opposite bank. Here also a boat is required to fish the place properly, although an occasional fish may be had ledgering from the towpath, a long cast. Permission is required on the opposite bank.

A long stretch of the Wey, from Stoke Park to Guildford, is now rented by the Guildford Angling Society, to fish which the angler must become a member at, I believe, 10s. 6d. per annum subscription. J. D.

IMPROVEMENTS IN BICYCLES.

To those of our readers who may be thinking of taking to the fascinating bicycle, we can confidently say, try a "Singer" machine, as after more than two years' trial we can find no fault in them.

Among the latest novelties of the Singer Cycle Co., of Coventry and Holborn Viaduct, is the "Free-Wheel Grand Modele de Luxe," and its special feature consists of an arrangement whereby the pedals are thrown out of action at the will of the rider, and become stationary. The riders can then rest their feet on the pedals when coasting. Two powerful brakes are fitted to the standard patterns, one on back wheel applied by foot-action in back-peddalling, the other with hand-lever in the usual form, but acting on the rim instead of on the tyre. (This brake has just been patented.) When the pedals are at rest the chain is also stationary, as the free-wheel action, which is combined with the back hub, throws all the gearing out of action. This saves a large amount of wear and tear on the chain and bearings when riding down hills.

Another machine introduced by this company is "The Military Singer" bicycle, this being exceptionally strong, and with an arrangement for carrying the rifle which can also be used for the rod and for carrying kitbag, &c.; it strikes us as just the machine for the rod and gun sportsman. This "Military Singer" is now used by our Government in the military, postal, telegraph, police, surveying, and other departments.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—It is a splendid privilege for the immense body of anglers living in the great metropolis that there is a river such as the Thames to which they have free access, giving them the sport it does, and that there is such a society as the Thames Angling Preservation Society to look so well after its protection and preservation, as well as to keep up the head of fish it is so well known to contain. It should be regarded by the working class as a special gift to them in providing a healthful recreation in the pure air of the country, and enable them to return home with some wholesome food for their families, for I have frequently been assured by them it is as much enjoyed as others in better circumstances relish the high-priced salmon. There is only one thing against successful angling which is beyond human control, and that is the weather; but if we always got success in angling it would cease to give pleasure and sport. It is from the unfortunate days we enjoy that sport—that which gives the angler something to talk about. I can remember the time when anglers were not so numerous, and it was no uncommon thing to find the roach and dace yielding their twenty and thirty dozen in the day, which, on my visits far away from the river, were regarded as doubtful results, but, with my confirmatory evidence, led to the exclamation, "What a wonderful river your Thames must be!" The weather has been very disappointing for the opening of the present season with such brilliant prospects previously; in the best of evidence, rain

only required. What would the river have been without its T.A.P.S.? is a question which all should ask, and especially those who have the means and are not anglers to contribute to it, and who are so philanthropic in their views as to recognise those movements that give healthful recreation to the people. The angling will be found to have been better than expected, but more rain is desirable, both for the fish and the condition of the river. —B.

Thames (Chertsey).—Lotan Hackett, writing in the early part of this week, says: "I have been out for the last few days and have done very well amongst the roach and dace, and I have had some nice chub sealing from 3lb. to 4lb. each." There are some very good swims in this neighbourhood, and from old experience I can very strongly recommend Hackett as a clever and painstaking fisherman. —B.

(Datchet).—We had a nice rain on the 19th which freshened the water a bit. A lad on Mr. Dent's raft caught a barbel 5lb., and a roach over 2lb. under the raft. I was out on the 15th with Sir Francis Calcott, caught eight chub, returned, and a trout, 2lb. I baited the barbel for the 16th, but the gentleman could not go out. —G. LUMSDEN.

(Eton).—The first week of the coarse season commenced fairly well considering the want of rain. Barbel are feeding fairly well if well baited and fine tackle is used. I have taken about 50lb. from one swim since the opening, most of which were returned. Mr. C. Franklin and friend have also taken a few, piloted by James Bunce. Mr. R. Williams and Mr. C. Hobbs have had some good chub, the latter taking them up to 3½lb., baiting with cherries. Mr. H. Stinton, jun., had a good dish of dace on June 18, topped up with one good barbel. Some good roach have been had, but they are not at present in anything like condition. —CECIL HOWLETT.

(Hampton Court).—William Milbourne writes: "John Smith, on Friday, the first day of the season, landed twenty-four barbel, and Thomas Milbourne had similar sport. These fish were caught very early in the morning as the water is very low and bright, and when the sun gets up hot it is no use trying for them until we get a lot more rain. The bank anglers are getting the best sport at night, and taking a great many barbel, and all the best of them I have seen. On Saturday one of the bank anglers got four barbel, the largest fish about 4lb." —B.

(Henley).—June 21. Several anglers have been out since the opening of the season, and some good sport has been obtained among the chub. The welcome recent rains have freshened the river, and there is a fair stream while the mills are working. The following are among the best takes I have to record: On the 16th, Mr. Leaf, fishing with George Arlett, had a bag of chub weighing nearly 40lb.; and Arlett tells me the best fish scaled close on 5lb. On the 18th, a patron of the same professional, had three chub weighing 12lb., best fish, 4lb. 10oz.; and with Mr. T. Pullen, on the 20th, four chub, averaging 3lb. each. Mr. Norman, out with W. Vaughn on the 21st, had six chub weighing 11lb. 3oz. Most of the above fish were taken whilst worm fishing, whilst some have been secured spinning. —STANLEY MEAD.

(Kingston).—John Johnson, on the opening day, with Mr. Birmingham, seventeen bream, three eels, and one fine perch; another day, with Mr. Cull, twenty-two bream. John Knight, one day, with Mr. and Mrs. Richardson, 100 roach, bream, and barbel; and another day, with Mr. Collins and Mr. Saunders, a nice quantity of roach, dace, and bream. It is worthy of note that in each case nearly the whole of the fish were returned. —B.

(Lechlade).—Some steady rain has improved the fishing hereabouts, and at St. John's Bridge the river is now in very fair order for general fishing. Several rods have been out, amongst them being Messrs. George Moir, Browne, C.P., and others. Things are reported generally as quiet, but I hear of a big pike being taken near Inzesham. Chub rise well in the evening, and can be readily taken with fly as well as with cheese paste and macaroni. Some good roach have been got with caddis, worm, and gentles. Troutling items are quiet. —RAMBLER.

(Richmond).—I am informed there are a good quantity of fine barbel at the new lock and weir if anglers will only try for them. Mr. F. Ogden Smith and Mr. Simonds, fishing there for one hour, landed two barbel and some other fish; and the bank anglers fishing near there had crealed a quantity of bream. The punts have been getting some roach and dace. —B.

(Sunbury).—Messrs. T. and A. Stroud have been well in with roach, dace, and chub since the opening day. —B.

(Shepperton).—Mr. C. Bernard Sells and Mr. C. H. Wheeley had some excellent sport on Saturday with chub, the total weight of fish taken being about 50lb., largest fish 4½lb. —B.

Streathley.—Water in very good condition on Sunday last. Butt, the lock-keeper at Cleve, had his punt moored above the lock. On going to use it he found a fine trout, 8lb. or 9lb., in it. It must have jumped in after a fly. Mr. J. Sams (Friendly Anglers), fishing with Bartholomew, has caught to-day three fine chub, several perch (1lb. to 1½lb.), and returned many small jack. —H. J. GARDNER.

(Teddington).—Mr. F. J. Ogden-Smith, fishing here on early Tuesday morning for three hours, crealed eight barbel. Four of the fish, though sizeable, were returned, and the four retained, which I had the pleasure of seeing, weighed respectively 6½lb., 6½lb., 4lb., and 2½lb. Mr. Sinibaldi, at the same time, landed five good barbel, two of the largest being estimated to weigh together 16lb. This angler on the opening day crealed seventeen barbel, the largest 4lb., and a few chub, the largest 2½lb. W. McBride, out with Mr. A. Hemmingway, Mr. G. Blanchard, and Major Saxby, on the first four days compiled a total of twenty-two barbel, fourteen chub, and

seven dozen of dace. McBride says there is the prospect of one of the finest barbel seasons I ever saw at Teddington this year, as the weir is simply full of big fish.—B.

(Twickenham).—When I was here on Tuesday, Mr. John Spong, the piscatorial host of the Two Sawyers, informed me there had not been many punts out. The roach and dace were very plentiful, but the roach were not very clean and the dace in fine condition. H. Spiers had the best take of two dozen roach. J. Frost, in two half days, six fine barbel. One of the anglers in the Deep creeled a fine pike of 7lb. I called upon Mr. F. W. Ogden Smith who had seen the latter fish. In his shop he had a beautifully set up specimen carp of 17lb., that had been caught in private water, and will be on view for some days, and all who see it will give him credit for the style in which it is preserved.—B.

Ancholme District.—I have been out once this week, and caught in the evening, after tea, four trout and four *fontinalis*. My son also had an afternoon on a private water, and caught a dish of fourteen very nice trout. The three largest weighed just 2lb. One rainbow yearling was taken in the same brook, but returned. The river Idle, at Retford, was inspected last week, with a view to re-stocking with trout. The coarse fishing season opened on the Ancholme on Friday last under the most favourable conditions. Contingents came over from Hull, Sheffield, &c., and found the water in splendid condition. Some nice bream up to 3lb. were taken. Mr. F. North, of Brigg, had fourteen fish on Saturday morning from the Old River, and a Sheffield angler took some nice ones in the New Cut on Monday. Perch, however, have been on the feed the least of all, and a few very fine ones were taken near Broughton Bridge on Saturday. Some very fine eels have been taken during the hot weather, and large shoals of roach and bream have been seen near Brigg. The spawning season was late this year, owing to cold weather, so the roach are not yet in very good condition. The river has recently been re-stocked with 500 very fine tench. This fish thrives well in the water.—THOMAS FORD (Caistor).

Bottisham Locks (Waterbeach, Cambs.).—Rain has come at last, which has improved the condition of the water and has put the fish on a sharper edge for the bait. The opening day of the present season was bright and sunny, but a north wind checked sport. What fish were taken were much admired for their splendid early condition and colour. The fish are now seen by shoals all round the locks. Several perch, up to 3lb. each, in good condition, were secured. Bels are now giving good sport. The river is rather weedy in places, which checks sport. As to the roach and dace, they mostly are in autumn condition, having spawned very early here, and I can assure anglers in confidence as to the numerous quantity of fish in this free water for miles.—J. O. GEORGE, Becke-road, Cambridge.

Bure (Norfolk, Wroxham District).—For many weeks past there has been practically nothing worth reporting from these waters, but local anglers are now commencing to think about coarse fishing in earnest. However, owing to almost unremitting drought, sunshine, and easterly winds, the river is very low and stale, and fish are as yet in very poor condition, being, I consider, quite a month later in order than usual. Although a few small bags of ill-conditioned bream and roach have been made, in general angling has been very slack, and I advise anglers to wait for two or three weeks before coming from a distance, by which time there ought surely to be some good heavy rains to freshen the river and put fish on the feed. There has been some decent trout fishing on private waters in the upland districts, but dace fishing has been very poor as compared with last year.—C. W. TAYLOR.

Coln, Leach, &c., East Gloucestershire.—The Gray Dreke was still up on the Coln on Thursday, 15th inst., and some good trout were killed in the Fairford district on this day, Mr. Alexander Hull and Dr. Wolfendale getting some nice sport in the Fairford Park water. Mr. Perry has also had some good sport in this water, and also on the Hatherop Castle waters. Tbinge have been quiet of late on the hotel waters at Bibury and Fairford, but the trout rise very nicely in the evening at Alders, Spinners, and Gnats. Dr. March and Mr. Ellison have been having good sport on the Lower Coln. Mr. Davis, of Lechlade Mill, reported taking a pound trout from a heron which he had shot.—PAN.

Cornish Streams.—There is a grand improvement in the water, and fish are in full force everywhere. On the Camel, Mr. Gill, who is staying at Pt. Breward, has been getting about thirty a day; and further down, right away to the estuary, very fair sport has been got. Most of the fishers are spending a considerable part of their time with peal, and after the excellent rain we have had there is every chance of success. Salmon and peal are running very well everywhere.—BODMIN.

Darenth (Farningham, Horton Kirby, &c.).—The May Fly is quite over, and though the fish have not taken it freely this season, they seem, nevertheless, to suffer from the depletion which is so common towards the end of June, and sport has consequently been very poor, some of the rods on good stretches of water scoring blanks. The rain has not affected the height of the water, but the warm weather is bringing on the flies, and a few Sedges are to be seen. The best time is late in the evening.—J. P. T.

Dart (Totnes and District).—The rains of Sunday and Monday have done the river an immense amount of benefit, and there should be some capital sport. The caterpillar has been driven off, and trout are not on the feed just at present. Before the rains some good baskets of trout were made on the moorland waters, takes running up to two dozen. Exceptionally fine trout have been creeled, including a beauty of 4lb. 10oz., killed in the Double Dart with the Alexander, by Mr. S. R. Slade. The same rod with his brother on another day took three

scaling 9lb. Fine truff have also been killed by Mr. E. Tucker (Ashburton) and others. Evening fishing on the lower waters has produced small baskets. Mr. E. Ackrell has had some nice catfish; whilst Messrs. Revell and E. Distin killed one and a half dozen at Park Stickle. Small loke have fallen to Messrs. H. T. Dietin, Townsend, and others.—DEVONIAN.

Devonshire Streams.—The streams are now running in fine order after the rain. Previously, however, the rivers were too clear for good fishing, although dapping was freely indulged in. Sport on the Otter has been somewhat dull, but some big fish were taken by one rod a few days since, seven trout totalling 63lb. in weight, two of these each being 15in. long, one weighing 1lb. 5oz. and the other 1lb. 3oz. The streams in the Upper Lyd district are in capital trim, and Bishop's Fancy, the Alder and Black, and Red Palmers, with Silver Twiet, are among the best flies. A recent take of four dozen is reported from the Erme, but sport on the Avon is quiet. Big trout, too, have been creeled on the Dart. Otters are doing a deal of damage to the fishing in many districts. Evening fishing on the Upper Tamar and adjacent streams, last week, gave fair results. Mr. C. Woodley got seventeen, and Mr. Gilbert fifteen, whilst two rods secured two dozen on Saturday. The Coachman, Motte, and Wickham are the best flies. Excellent sport was obtained in the Ashwater district last week. One rod had a lot of twenty-one in two hours, six being killed in one pool with the Coachman. A day's fishing gave a basket of seventy to the same rod, with the Alder and Peacock Blue, fish rising so freely that two were taken with one cast. A lady took a pounder from one of the pools.—DEVONIAN.

Dove and Tributaries.—Mey Fly is still "on" hereabouts, though they are now mostly grey. The following, amongst others, have done well in this district: Messrs. Coxon, W. Nuttall, Grindy, Gossard, Major Tinsley, and Col. Fleming. We have had plenty of rain, and sport prospects are still good. The Quill Gnat has done well on the Dove Dale length of late.—D. AND W. H. FOSTER (Ashbourne).

Esk (Whitby).—This river since last report has not altered in its condition, and continues very low and clear. A few catfish have been effected, but so meagre are they that an accurate record is unobtainable. On Wednesday much interest was evinced by several ladies and gentlemen (local angling enthusiasts principally) in the turning into the Esk of nearly 3000 fish. The fish were reared in the private hatchery of Miss Daisy Walker, a daughter of that ardent angler, Mr. J. C. Walker, J.P., who deserves much credit for the able manner in which they have been handled. The fish were turned down in splendid condition, some of which were from 23in. to 3in. in length, and which will doubtless be an acquisition to the river. The aid of Mr. Luke, the head keeper, was requisitioned, and the operation terminated successfully.—J. JACKSON.

Exe and Canal (Exeter).—The weather has changed considerably during past few days, rain falling briskly on Sunday, Monday, and Tuesday. Although not sufficient to bring the river up, it has nicely freshened it, and has also caused an enjoyable change in temperature. Trout have not fed well recently, and with the exception of some good bags of eels, not much has yet been done with the coarse fish. It is full early for the roach to put on condition, and very few of our roach artists will commence operations for a month or so to come. A lamentable loss of trout has occurred in the river Ockment during the past week, caused, it is feared, from a leakage of some poisonous acid into the stream near Okehampton. Some hundreds of fish turned up, among them many fine specimens from 12lb. to 2lb. each. This is a sad blow to the moor stream rodsters.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The condition of the drains for the opening of the coarse fishing season were not altogether satisfactory. Many of them had run low, from the long drought, and the water was stale and very fine, consequently, the catching of fish was somewhat difficult. Roach were very backward, but bream, on the other hand, were sunning themselves, but indisposed for feeding. Baskets were light, and captures were chiefly confined to perch and dace. Trout fishers are having a good time of it.—LIMPET.

Idle District (North Notts.).—The opening of the fishing season on the Idle was not very promising, and many of those who patronised this district turned their attention to the drains about Haxey and Keadby. Bream in this district promised to provide fairly good sport. Some fair baskets were reported from the old Warping Drain and the Bandspinner's Drain, but, until the rain came on Sunday, they met with poor success. This week the promise is far better. Dace are furnishing some fair sport where they exist in quantity. Prospects will improve with the downfall.—L.

Lea and Tributaries.—Heavy rain has badly wanted to freshen up the Lea, especially in view of the fact that to-day week roach fishing re-opens. There have been a few showers, but they have proved of little benefit. The river is very sluggish and weedy, and the dece anglers have not done much. Good trout have been seen on the move at Ware and Hertford, but I cannot hear of any noteworthy captures this week. Too late to record last week, news reached me that a 4lb. trout had been landed in the Ware district. The fish fell to the rod of Mr. Elsworth while spinning. To-day week, fishing for bream, barbel, tench, chub, and carp re-opens in the Lea. Big dace ought to reward anglers on the tributary Rib now. In the Stort, roach anglers, so far, have had light baskets. The fish have barely got over their spawning, and are not in condition. In the mill pool at Sawbridgeworth a few decent roach have been landed.—J. ZAAK WALTON.

Lugg and Arrow (Leominster).—Both these noted streams are now running stained, and have risen a little owing to the heavy falls of rain in this part at the

beginning of the week, but it is running clear quickly, and should not interfere with sport next week. The rain has refreshed the river, and the fish have been more on the move, and are inclined to sport well, and by Saturday, if there is no more rain, sport should be good. A few rods have been out bottom fishing, and some very nice lots of trout have been landed. The Pinsley is running stained, but clearing quickly, and sport should be good on it.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—After rather more than three weeks' spell of hot, bright days, followed by cold nights (often frosty), and wind almost constantly N.E., the weather broke on Sunday, when rain set in, and since we have experienced some fierce storms, accompanied by thunder and lightning. The rivers have risen some 6in. to 9in. of very dirty water, and, with favourable weather, will not be in good order before the beginning of coming week, when, as far as can be judged, sport should be good.—R. T. WILLIAMS.

Medway (Tonbridge).—Some good takes of chub, bream, and roach in the upper waters of the society above the town since the opening, the hon. secretary securing one chub of 23lb.; and Mr. Gray, a roach of 13lb. Mr. R. Race, on June 16, landed a trout of 13lb. Plenty of fish in the river.—A. BARNES.

Mene (Peterborough).—The rain that was so much needed in this district has fallen, and brought about a decided improvement in the appearance of the river in the parts close to Peterborough, which last week was fast becoming an eyesore from the lowness of the water. Since the rain our anglers have turned out, and some have been repaid with fairly good sport, a decent lot of roach having been taken. Bottom fishing for eels has been good, and some fair specimens have been caught. Higher up the river, nearer Northampton, in consequence of the water being held up by the locks, the river is in better condition, and some good sport should be obtained. At Earl's Barton, Mr. E. Drage, a member of the Angling Association, caught a fine tench weighing over 4lb.—E. A. S.

Ouse (Holywell Ferry).—The rain is putting a much better colour into the water. Dace and chub have been taken here up to 3½lb., and also some good bream, for the start of the season. Mr. Lane, president of the Mildmay's (the gentleman who manipulated the lending net to my 2lb. 12oz. perch last season), was run and smashed up by a large perch. Roach are coming on nicely.—A. SCARD.

Ouse (Huntingdon).—The water is in fair condition in some stretches of the river, in others it is low and stale. We are having some nice showery just now, which should improve prospects considerably. At present very little has been done, except that Mr. Nicholls, of this town, has had fair sport with the perch.—B.

Ouse (St. Ives, Hunts.).—River very weedy, which makes it troublesome to the angler. A nice rain would also improve matters. Perch up to 1½lb., chub up to 3lb. 2½oz., and pike up to 25lb. have been brought in. The latter, though, came by rail from Brighton, and will be remembered as the Holywell pike, taken there twenty-four years ago, and has been presented to us by our much-esteemed friend Mr. S. R. Osborne. Eighteen new members were elected last Tuesday night, and I am ready and willing to enrol more and make them welcome. All things considered, I believe St. Ives and district anglers will do well, and have good sport in seasons 1899-1900.—E. COLLINSON.

Ouse (St. Neots).—The season this year has opened more satisfactorily than for several years past. Very few of the local anglers have yet been out; but the few visitors who have done so have met with very fair sport, and seem quite pleased with themselves. The water is a nice colour, and at its normal height as it generally is, and fish of all sorts and sizes are plentiful. I have myself watched the chub in one of their favourite swims, and seen them in shoals, many being five or six-pounders, and they rise well to any small thing thrown into the water, therefore I am confident that fly fishermen would be well repaid for a visit to this locality. On Monday Mr. Boddy, of Richmond, got some very nice perch up to about 1lb.; and on Tuesday morning, in company with Mr. Hickmott, he caught a large number of roach, many of 3lb., and some exceeding that weight. Later in the day they caught several more, but they were smaller. This (Wednesday) morning he caught a nice roach of 1½lb., besides a number of smaller ones; and a lad, fishing from the bridge, got a jack of 5lb., and an eel of 2lb. Eels seem to be plentiful this year, several up to 3lb. having been taken. It is years since I have been able to report favourably upon Ouse fishing; but I hope we have now reached the turning point. The river in the early morning is, I am told, literally black with bream in some places.—WM. NASH.

Otter (Budleigh Salterton).—Fly fishing has improved during the last week. A good deal of rain has fallen, and little freebets at intervals have greatly benefited the river. A well-known rod killed on Thursday, June 15, on Mr. Rolle's water, eight trout, weighing 63lb. This is phenomenal for the Otter. Your reporter killed on Saturday, June 17, twelve fish at Ottery St. Mary, running two to the pound; and the same day another rod, on Mr. Rolle's water, took a like number. The river to-day, June 21, is in nice condition. The likeliest times are from 8 a.m., or even earlier, to 11 a.m., and from 5 p.m. to 9.30 p.m. The killing flies have been small Blue and Red Upright, Iron Blue, Wickham, and Alder.—HERON.

Plymouth.—Rain, which the farmers and fishermen have been praying for, has come, and the fields, fruit gardens, and the rivers will all benefit by it. Some nice trout over 3lb., and some 4lb., have been taken in the Tavy. There has been no time yet to get reports after the rain, but I expect some few peal will be grassed to-day and to-morrow.—WILLIAM HEARDER.

Ravensbourne and Keston Ponds.—Some fish have been taken lately in the neighbourhood of Bromley both by fly and paste. Among a number of small roach which I had from a private pond (near) on June 17, with a Wickham, was a good sized dace, which fish are not common in these ponds. The large carp can be seen, but not caught.—J. P. T.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—During the early part of this week a long wished-for and most welcome change took place in the weather, which is at present all that can possibly be desired both for anglers and excursionists, as the tropical heat experienced during the greatest part of the past month has been succeeded by most refreshing showers, which have done immense good to the parched-up land and freshened the rivers, which were getting very low and much too clear for angling. Owing to the dust from the highways being so suddenly washed into the rivers, they have been much discoloured during the past few days, but are fast recovering their condition, and at the present time are quite at their best for trolling and worm fishing. The close time for coarse fish having now expired, anglers are busy with all kinds of lures for them, and some very nice chub, roach, perch, and dace are taken daily from the Severn and Vyrnwy, as well as pike, which are very numerous in these rivers, and have increased in numbers so much recently in the Tanat that it is intended shortly to net the lower part of it, to take out as many of these marauders as can be secured, and also the chub, which are also getting too plentiful in the lower reaches of the river, which is also well stocked with very fine dace as well as trout. The largest salmon ever captured in this neighbourhood was taken a few days ago from the Severn, near to where that river is joined by the Vyrnwy, about two miles below Llandinno Bridge. This salmon weighed 51lb., and was in splendid condition. The fortunate individual who secured this prize was an old fisherman, well known in the vicinity, named James Evans.—VYRNWY.

Sussex Rivers and Chichester Canal.—The opening of the coarse fishing has not been up to expectations. Rivers were low and bright, and the weeds a nuisance. The Adur, with the tide flowing, was covered with green weed; and although several roach were taken, there was nothing exceeding 1lb. On the Cuckmere water only small roach and bream were captured; while from the Onse above Lewes dace were taken with fly, and a Lewes angler took nine chub fly fishing. From the tidal waters below the mills roach were secured with wheat, and here the heaviest bags have been made. A few anglers have patronised the Rother, and met with sport among dace and roach. A trout of 1½lb. was taken with gentles while roaching. The canal at Chichester has been well patronised, and the juveniles have had good sport with small roach and bream. An eel of 2½lb. was taken on dead bait, and bream up to 2½lb. with paste and gentles. Bass fishing is now good in the harbours. At Littlehampton good sport has been had. Bass up to 8½lb. have been taken. Soft crab or sand-eel is the leading bait. Rain is badly wanted to clear rivers ere good sport can be obtained.—GEORGE F. SALTER.

Stour (Bures, Suffolk).—The water is very clear, and with no stream running sport is rather slow. No doubt the chief cause is that the fish have not yet got over the spawning operations, as the roach and bream, especially in the deep water, were in full spawn on the 6th of June. A good many anglers were out on the 18th, but little was done, one or two decent roach being taken, chiefly with the eadid bait. On the 20th a local angler had twenty roach in an evening's fishing, the largest 1½lb. 1½oz. We are waiting rain badly to put some colour into the water.—W. T. BAINBRIDGE.

Taw (North Devon).—Mr. Brierly has taken some good trout recently. Another angler had a nice catch of dace; whilst another captured over a hundred bass close to the town. Rain falling, which is much needed. Salmon netmen are doing a little better, but water too low for fish to run up. At Rashleigh Weir a fine dog otter of 21lb. was taken after a three hours' hunt.—RUSTY GAME.

Teifi (Lampeter, Cardiganshire).—Fishing not at all good at present. Water very low, and rain much needed.—H.

Teme (Ludlow).—The Teme in this part was running clear and a nice level up to Monday, when a change came. Heavy rain fell on Sunday, and again on Tuesday, and on Wednesday the water was coloured and had risen about a foot. Thunder was had in the district, and more rain threatens. The rain has greatly refreshed the water, and has improved the prospects of sport, and to-day (Wednesday) the fish were sporting fairly well at the fly, although the water was coloured. There have been a good few anglers out since the rain, and the baits need have been worm and live grub, and some very fine dishes of trout have been landed. Fly fishing has been quiet this week, but if there is no more rain sport should be good by Saturday with the Orl, Yellow Dnn, Marlow Buzz, Wickham, Black Gnat, Brown and White Moths. May Fly has quite disappeared. On Saturday an angler near New Bridge landed a fine trout, over 1½lb., with fly. On Monday six good trout were taken with worm. In the Ashford water a brace of trout were taken.—S. L.

Teme (Tenbury).—The Teme in this part has been visited this week with some heavy falls of rain, and thunder has been had in the district; and the water, which was clear and getting low, has been refreshed, and is now a nice level, and is a little coloured, but it has begun to run clear again, and by Saturday, if we have no more rain, it should be in splendid order for fishing. Since the rain the fish have been well on the feed, and there has been a good few anglers out. Fly fishing has been slow, but worm has accounted for some fine trout. To-day (Wednesday) the fish are beginning to rise, and the prospects for sport are

good if we get no more rain. The Rea, Kyre, and Ledwyche stained.—WORCESTER.

Trent (Newark).—The opening day found chub fishermen to the fore, several good fish being taken from the Muskham waters, both by fly and bottom fishermen. Early in the morning Mr. J. T. Alcock was whipping the shallows and taking and returning chub, the heat of which reached 21b. 15oz. Throughout the day intense heat prevailed, and nothing was accomplished, but towards evening the fish took worms fairly well, and a few harbel also fell to the same lure, Mr. H. Mountney having a nice mixed bag of about 21lb. Saturday and Monday also found them taking worms, Mr. G. Wadding (of Sheffield) bagging over 20lb., and Mr. F. Kirk several, including a harbel 5lb. 2oz. Eels provide plenty of sport, and they are evidently very numerous this season, but few flounders have been secured. Roach are still scouring in the weeds, and hest left alone for a week or two. Bream are not yet feeding, though some fair shoals have been seen. A big sturgeon is roaming about the Muskham waters astonishing those who have not previously seen one.—TRENTSIDER.

Welland (Market Deeping).—The angling season here has opened favourably, and it is generally conceded that good sport should be obtained, as there is a capital stock of roach and dace in the river.—E. A. S.

Witham, So. (Mid-Lincolnshire).—A good many visitors went down the Witham for the opening of the season on Friday and Saturday. Conditions were against them on these days, and the fish took much catching. Various baits were tried, but potato is reported to have been the most successful. Baskets were light on the Witham, but hest work was done on the Mount Pleasant drain. Bream seemed to be the fish in best condition. Prospects improved after the rainfall, and on Monday captures were more numerous. So far baskets worth reporting are few and far between. Roach are very backward.—LUCI.

Wye and Derwent (Derbyshire).—The above rivers are in order for all kinds of angling, and some fairly good baskets of fish have been obtained, chiefly by fly fishing and using the minnow, where this latter is allowed. The upper reaches of the Wye, both private and public water, have yielded some very good baskets of fish. Mr. F. C. Arkwright, J.P., with the fly, took nine and a half brace, all good fish, from private water. Several others also have obtained very nice creels between Bakewell and Lileford Bridge (public water). The Matlock and Cromford Angling Association's water has yielded some very good fish, a member from Manchester, one or two nice fish; Mr. C. H. Maule having been very successful with fly and minnow; Mr. A. E. Lawton, on Saturday, two or three nice trout; also Mr. Newton, below Cromford, having landed a few good fish. Several anglers at Homesford and Whatstandwell have obtained some very nice fish by dibbing under the bushes in the day-time and bottom fishing in the evening. The steady rain we had on Sunday evening and again on Tuesday morning slightly coloured the water, but not enough to interfere with angling pursuits, only an improvement. As grayling is now in season, and these rivers are well-stocked with this sporting fish, with this fresh on the prospect should be very good for the next few days.—DOTTEREL.

Wye (Builth Wells).—Sport has been at a discount the past week. The rains of the last few days may improve the fishing. The Hawkstone Otter Hounds hunted the river, three otters; hest bait, worm.—W. B. ROBERTS.

Yore, Swale, Nidd, Wharfe, Aire, Cuse, &c. (Yorkshire).—The drought gave way to genial showers on Sunday, followed by more on Tuesday, and again to-day, the rain coming in time to make the farmers look a little more pleasant than they have done recently, for they had began to despair for the turnip crop, and if the drought had lasted another week the grass and corn would have suffered very considerably. Up to now the thirsty earth has swallowed it all as it fell, and there is no alteration in the low and clear state of our streams. Consequently the bottom fishermen have only met with moderate sport with but few exceptions. There was a good turn out at the bottom end of the Yore and the upper part of the Ouse on Saturday, maggots being the favourite bait; but the takes of the club men were light. Higher up the Yore at Ripon little had been done except a few pike in the deeps, and trout fishing at Tanfield and Masham has been quiet; this remark will apply to the river right up to Middleham, where in the deeps some pike have been taken live baiting, the largest fish being one of 10lb. Both the Stone Fly and the May Fly have disappeared. The Brown Owl, Blue Partridge, Knotted Midge, Black Midge, Bracken Clock, Orange Partridge, and Stone Midge are now good flies, but Mr. James Blades and Mr. Ellec, of Brierfield, have killed some good baskets of trout with Bradshaw's Fancy and Claret Dun. Other anglers have done well in the Hawes Association water with the Maggot in the evenings, and some good trout have been killed at dusk with the Bustard. Until we have a fresher matters on the Upper Swale will remain quiet. The trout caught during the past week have been taken with the n-stream worm. But few anglers have been out, but from Morton down to its junction with the Ouse it has been well patronised by the coarse fishermen, but the takes of roach, dace, chub, &c., have been moderate, and will continue so until a flood clears the river. As far as the tributaries of the rivers are concerned, the best returns come from the Codbeck, a Northallerton angler having fine sport last Saturday, killing four brace of good trout with the Green Drake; and in the Bedale heck the Rev. M. Giffin (of Harrogate), Mr. John King, Mr. J. Macanley, Mr. F. W. Dohy, and others have also done fairly, the last-named gentleman killing a good pike with the Miller's Thumb Devon, one of the best baits for trout or pike that can be used. In the Cover, close to its junction in the

Yore, I got a fine dish of trout with the natural minnow, fished on fine Ariel tackle. Higher up this stream, Mr. Chaytor has done well with the n-stream worm. The North-Eastern Company have issued a capital guide to the hotels and furnished lodgings in farmhouses and seaside and country villages in the district served by the company, which includes the Yorkshire dales, rivers, and moors, the Lake District, the Yorkshire and Northumberland coasts, the Roman Wall district, and the Scottish Borderland. The guide contains, in addition to information with reference to hotels and furnished lodgings, an illustrated and descriptive introduction, a large map, and several full-page illustrations. The guide can be obtained free from the superintendent of the line, York, or at any North-Eastern station. Intending visitors would do well, before making their summer angling arrangements, to obtain a copy. Good sport has been met with on the Wharfe at Ilkley, one angler securing a good basket dapping with the natural fly. Quite a rish was made for the waters in the Leeds district at the week-end by the Leeds bottom fishermen, and many of the clubs fished "off matches." On the whole, very fair sport was obtained, but no "big hauls" have been recorded. At Roundhay Park, on the opening day, fishermen were to be seen all round the big lake, and in some parts so close together that one could have imagined it to have been a "pegged-down match." The takes, on the whole, were small, and only two or three of the rain-haws were reported caught. On Monday night Mr. Parkinson caught a good dish of rainbows with fly, and Mr. Fenwick has also had good sport. The fishery exhibition at the White Swan Hotel, Call-lane, Leeds, having been so great a success, will remain open a few days longer. Several additional exhibits have been added. Sport at Tadcaster has been good, Messrs. Richmond and Shepherd getting a mixed lot of over a hundred fish.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—A lot of rain has fallen during the past six or eight hours, and there is fresh water running down some of our streams to-day. There is sure to be a freshening all round, and prospects for sport next week could not be better. The maggot is the best bait for bottom fishing, and the Brown Owl, Bracken Clock, Knotted Midge, and Stone Midge are the best flies.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH (Friday).—The little fresh water that ran down the hocks has made no alteration to the main rivers, which are yet as low and clear as ever. We look like having more rain, and prospects for sport for next week are improved.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Altnacealgach (Hotel Waters).—On June 10, Messrs. Campbell Gibson and Bell, Edinburgh, on Loch Urigill, 100 trout, 28h; Rev. Mr. Blomefield and Mrs. Blomefield, Devon, sixty, 18h; Mr. Boyd, Edinburgh, on Loch Cama, thirty-four, 16lb.; Dr. and Mr. Chalmers, Aberdeen, eighty-four, 27h. On 14th, Mr. and Mrs. Blomefield, Devon, on Loch Cama, twenty-eight trout, 8lb.; Mr. and Mrs. Halcro, Sunderland, twenty-six, 8lb.; Dr. J. Chalmers, Aberdeen, on Loch Veyatie, ninety, 30lb.; MacLaren and Cooper, Glasgow, on Loch Cama, twenty-nine, 8½lb.; Gibson and Bell, Edinburgh, on Loch Urigill, sixty, 18½lb.; and Mr. Boyd, ninety, 22h. On 15th, Mr. and Mrs. Halcro, twenty-nine trout, 12lb.; Mr. and Mrs. Blomefield, on Loch Veyatie, twenty-five, 8lb.; Gibson and Bell, on Loch Urigill, sixty, 18lb.; Mr. Boyd, on Loch Cama, twenty-nine, 12h., and three *ferox*. On 16th, Mr. and Mrs. Blomefield, on Loch Cama, twenty-eight trout, 9lb.; Mr. and Mrs. Halcro, twenty-four, 8lb.; Mr. Boyd, on Loch Veyatie, twenty-four, 8½lb.; MacLaren and Cooper, on Loch Cama, fourteen, 19h.; Dr. Chalmers, on Loch Urigill, 135, 39lb.; Messrs. Gibson and Bell, fifty, 15½lb. On 17th, Rev. Mr. Blomefield and Mrs. Blomefield, on Loch Bourlan, sixty trout, 17h.; Dr. Chalmers, on Loch Veyatie, twenty-four, 15h.; Mr. and Mrs. Halcro, on Loch Cama, sixty, 17½lb.; Gibson and Bell, fifty-two, 15h.; Mr. and Miss Brown, Glasgow, on Loch Urigill, seventy, 20h.; MacLaren and Cooper, seventy, 21lb. On 19th, Gibson and Bell, on Loch Veyatie, seventeen trout, 7lb.; Mr. Brown, forty, 11lb.; Mr. and Mrs. Halcro, on Loch Cama, 16lb.; Dr. Chalmers, 103, 33h.; MacLaren and Cooper, 110, 28h.; Mr. Laing, Kelso, on Loch Urigill, eighty, 23lb.; Rev. Mr. Blomefield and Mrs. Blomefield, eighty-six, 23lb.—B.

Altnaharra Hotel Waters.—On 14th inst., Mr. Steel, on Loch Stank, twenty-three trout, 7lb.; Mr. and Mrs. Skirling, on Loch Eilanach, twenty-seven trout, 6lb.; Mr. and Mrs. Brown, on Loch Loyal, eighteen trout, 7lb. 15th, Mr. Brown, on Loch Harald, seventy trout, 18lb.; Mr. Steel, on Loch Loyal, ten trout, 5lb.; Messrs. Tait and Langston, on Loch Stank, fourteen trout, 4½lb. 16th, Mr. Steel, on Stank, sixty trout, 17½lb.; Messrs. Tait and Langston, on Meadie, forty trout, 10½lb.; Mr. and Mrs. Skirling, on Hallam, twenty-six trout, 8½lb.; Mr. and Mrs. Brown, on Meadie, forty-three trout, 14lb. 17th, Mr. and Mrs. Brown, on Loch Harald, seventy-eight trout, 20lb.; Mr. Steel, on Meadie, sixty trout, 14h.; Mr. Skirling, on Stank, twenty-one trout, 6½lb. 19th, Messrs. Tait and Langston, on Meadie, forty trout, 10h.; Mr. and Mrs. Skirling, on Loch Break Bui, thirty-six trout, 10½lb. Mr. Steel, on Loch Loyal, one *ferox*, 6lb., nine trout, 7h.; Mr. D. Munro, on Harald, forty-six trout, 10½lb.; Mr. and Mrs. Brown, on Loch Farvis, thirty trout, 12lb. 20th, Mr. and Mrs. Skirling, on Loch Harald, fifty trout, 11h.; Mr. and Mrs. Brown, on Meadie, fifteen trout, 11h.; Mr. Steel, on Loyal, four trout, 3h.; Messrs. D. M. and D. Munro, on Hallam, eighty-one, 30lb.—W. D. M.

Bracadbane Arms Hotel (Aberfeldy).—Mr. McIntosh, Dundee, fished Loch-na-Craig yesterday, and caught twenty-three trout, 8½lb.

Culag Hotel Waters.—On 10th, Messrs. Lovell fished Loch Lewn, and landed a *ferox* of 2½lb.; Messrs. Waterfield and a Court, on Loch Beannach, two, 8lb. On 14th, Messrs. Lovell, on Badmine, one of 4½lb. On 15th, Messrs. Waterfield and a Court, on Grits Loch, a *ferox* of 4½lb.—B.

Deveron (Banffshire).—Rod fishing on the river Deveron continues very backward, owing, of course, to the long-continued drought having reduced the water so much that fish have refused to enter it. Since the beginning of the present week, however, a change has set in, and copious showers of rain have fallen, which, it is hoped, will continue until the land is thoroughly soaked, and the river put into a spate. In the end of last week a few salmon and trout were got by the net fishermen, but lately the fishing has been almost nil. On the coast towards the end of last week grilse were more numerous, but this week the returns from all the stations have been very poor. However, with a change of weather the fishing may improve, and the time that has yet to go before the season's close may bring the fishing up to the average of former years.—H. W.

Inchnadumph Hotel (Sutherland).—June 10, Mr. Hurst, Castle Bay, ten trout, 5lb.; Mr. Oakden, Head Assynt, five trout, 2½lb. June 12, Messrs. Hurst and Oakden, Loch Awe, sixty trout, 10lb.; Mr. Cookson, Mid Assynt, twenty trout, 6lb.; Mr. Corstorphine, Loch Letteressie, fifteen trout, 5lb.; Mr. Bird, Loch Gillaroo, one trout, 1lb.; Mr. Findlater, Castle Bay, ten trout, 3lb. June 13, Mr. Bindloss, Inver, six trout, 5lb.; Mr. Bindloss, Inver, eighteen trout, 3lb.; Mr. Cookson, Mid Assynt, thirty-two trout, 11lb.; Mr. Bird, Loch Awe, twenty-four trout, 8lb.; Mr. Batchelor, Skieg, thirteen trout, 5lb.; Mr. Corstorphine, Loch Gillaroo, twelve trout, 6lb.; Mr. Findlater, Traligall, eight trout, 3lb.; Messrs. Hurst and Oakden, Castle Bay, ten trout, 5lb. June 14, Mr. Batchelor, Loch Awe, thirteen trout, 6lb.; Mr. Bird, Inver, ten trout, 7lb. June 15, Mr. Oakden, Head Assynt, eight trout, 5lb., and one salmon, 6lb.; Mr. Findlater, Loch Awe, eighteen trout, 6lb.; Mr. Bird, Mid Assynt, ten trout, 5lb., and one *ferox*, 4lb. June 16, Mr. Whitehead, Loch Awe, twelve trout, 4lb.; Mr. Hurst, Loch Letteressie, eighteen trout, 6lb.; Mr. Oakden, Inver, eight trout, 6lb. June 17, Mr. Findlater, Head Assynt, one grilse, 4½lb.; Messrs. Hurst and Oakden, Loch Awe, forty-four trout, 16lb.; Messrs. Bird and Morgan, Castle Bay, six trout, 5lb.—W. WALLACE.

Kyleskie Hotel Waters (Sutherland).—On 6th, Messrs. Bird and Morgan, London, caught five sea trout, 10½lb.; the heaviest 3½lb. On 9th, Mrs. Robertson, Edinburgh, made a basket of three sea trout, 7lb. On 12th, Mr. C. Mackenzie had three sea trout, 10½lb. (one weighed 4½lb.).—B.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, on Wednesday, Mr. R. A. Turnbull caught eight trout; and Dr. Gowing, six. On Thursday, Dr. McGregor and Mr. Stewart had a nice basket of twenty-eight on Loch Chon; Mr. Gunter had eleven. On Friday, Dr. Gowing caught eleven; Mr. Yule, five; and Mr. Dick, Invergyle House, sixteen. On Saturday, Mr. Ewing caught nine; and Dr. Gowing, eight. On Monday, Mr. Yule caught nine; Mr. R. A. Turnbull, fifteen; and Major-Gen. Campbell, ten. On Tuesday, Dr. Gowing caught eleven; Mr. Fergus, sixteen; Mr. R. A. Turnbull, eleven; Mr. Yule, ten; and Major-Gen. Campbell, eleven. The baskets are showing an improvement since the wet weather set in.—H. M.

Loch Maddy Hotel Waters.—On June 12, Messrs. Vallance and Porhouse, fishing Loch Strumore, had ten fish, average weight 1lb. each; and on June 13, on Loch Sheltan, they had fourteen fish weighing 13lb., heaviest fish 2lb.; on the same date Mr. Wood had 14lb. on Loch au Dune. On June 14, Messrs. Vallance and Porhouse had nine fish weighing 11lb., heaviest 2½lb., on Loch au Dune.—T. D. MACGREGOR.

Loch Ness (Foyers Hotel), N.B.—The exceptionally bright weather of the past week has rendered fishing almost useless during the day, and the only time that the trout would rise to the fly was for a few hours during the evening, when anglers have been fairly successful. Fishing Loch Mhor on June 12, Mr. J. Sherriff, of Ceylon, got six trout, weighing 4½lb.; Mr. Carmichael, Miss Low, and Mr. Low, Moniheth, twenty-six, 15lb.; Mr. Hawkins, of Norfolk, twelve, 9lb. On June 13, Messrs. Carmichael and Low got twenty-two, 10½lb.; Messrs. Hawkins and Parsons, ten, 7½lb. On June 14, Messrs. Low and Carmichael got fifteen, 8½lb. On June 16, Messrs. Carmichael and Low got fifteen, 8lb. On June 17, Mr. Sherriff got sixteen, 8½lb.; Messrs. Carmichael and Low, nine, 15½lb.—S. TILSTON.

Melville Hotel (Sutherlandshire).—The past week was a most unsatisfactory one for angling, the beat being intense, with clear, cloudless sky. On June 15, Mr. Nicholson had three trout, 3lb. On 16th, Mr. Lucas, jun., had thirteen trout, 6lb.; Mr. Nicholson, twenty-six, 10lb.; Mr. Adam, twelve, 5lb.; Mr. C. Randall, four, 3½lb.; Mr. W. Randall, four, 2lb.; Mr. Pritchard, thirteen, 7lb. On 19th, Mr. Lucas had one trout, 1½lb.; Mr. Morrison, four, 4lb.; Mr. C. Randall, three, 3lb.; Mr. Harle, eighteen, 5lb.; Mr. Pritchard, twenty, 10½lb.; Mr. W. Randall, two, 1½lb.—A. MACINTOSH.

North-East of Scotland.—Rain at last; but not enough of it as yet to swell the rivers. However, the dull outlook portends more to follow. Sport is practically at a standstill. Anglers have been leaving for the south in numbers even before their leases have expired. Disappointment with the season's results is but a faint way to indicate the feelings of some anglers who are not slack at giving forcible expression to the disgust they undoubtedly feel. Her Majesty moved her court from Balmoral on

Thursday after a net four weeks' stay. Queen's weather and not angler's weather predominated during the whole time, and although the pools in the upper waters are fairly stocked with fish, bags have been very light. Such a bad season has not been experienced during the present decade. On the Cratie section, Mr. Nicol had one of 8lb.; and Mr. Ferguson one of 6lb. On the lower Invercauld water, Mr. Illingworth crealed during the past week one of 7½lb., one of 7lb., two of 8lb. each, and one of 6½lb. On the upper water, Capt. Sanderson had three fish, of 5lb., 6lb., and 7lb. The Ballater and Cambus O'May waters are yielding little or nothing, only an occasional fish being got. During the past spring sport has been very backward, the worst on record, in fact. Salmon and grilse are being got on the coast in fair numbers, but the grilse run is nothing to what it should be at this season. There is a good show of sea trout, comparatively speaking, and if a spate comes it will just be in time to save the summer grilse run from blank failure.—G. M.

Overseaig Hotel Waters (via Lairg, N.B.).—On 9th, Mr. Dodgson, Keston, Kent, fished Upper Flag beat, and caught eighteen trout, 15½lb., and a *Salmo ferox* of 8lb.; Rev. Mr. Jackson and Mr. Jackson, Wakefield, on Mid-Shin, twenty trout, 10lb., and a *Salmo ferox* weighing 10lb.; Major and Miss Dixon, London, on Flag beat, eighteen trout, 9½lb.; Canon and Mrs. Faber, Doncaster, on Loch Merklund, thirteen, 7½lb.; and Dr. Paradox, Newcastle-on-Tyne, on Top Sbin beat, fourteen, 6lb. On 16th, Canon and Mrs. Faber, on Loch Grian, twenty-nine, 10lb.; Rev. Archdeacon Prescott, Carlisle, on Upper Flag, fourteen, 8½lb.; Mr. and Miss Leake, King's Lynn, on Top Shin, eighteen, 8lb.; Mr. and Mrs. Jackson, on Lower Flag, twenty, 8lb.; Major and Miss Dixon, on Mid-Shin, fourteen, 8lb. On 17th, Mr. Clay, Matlock, on Upper Flag, thirty-two, 14lb.; Canon and Mr. Faber, on Top Sbin, fifteen, 6lb.; Rev. Archdeacon Prescott, on Loch Grian, forty-three, 14½lb.; Mr. Leake, on Loch Merklund, thirteen, 6lb.; Major and Miss Dixon, thirty, 10lb.; Mr. and Mrs. Jackson, on Mid-Shin, thirteen, 8½lb., besides two *Salmo ferox*, 11½lb. On 19th, Mr. and Mrs. Walker, Couper Angus, on Flag beat, seventy trout, 24lb.; Mr. and Miss Leake, on lower Mid-Shin, thirty-two, 14lb.; Rev. Archdeacon Prescott, on Loch Merklund, thirty-one, 12lb.; Mr. and Mrs. Jackson, on Loch Grian, twenty, 9lb.; Canon and Mrs. Faber, on Loch Merklund, nineteen, 7½lb.; Major and Miss Dixon, on Mid-Shin, nineteen, 8lb.; and Mr. Clay, on Top Shin, twenty-four, 10lb., and a *ferox* of 6lb.—B.

South of Scotland.—For a period of twenty-five days no rain has fallen in Annandale. On Monday and Tuesday several thunder showers fell, just sufficient to lay the dust on the highways. The showers were general over the South of Scotland yesterday, but the rainfall has made no difference to the rivers; as a matter of fact, the streams are lower than last week. There was some hope last night (Tuesday) that we were going to have a good fall of rain. For three days the barometer fell, but this morning the mercury is rising again, and while we may have showery weather for the remainder of the week, the prospect is decidedly against any near approach of a sufficient downfall of rain to cause the desired spate. There is more bright sunshine to-day, with a light east wind quite unfavourable for sport. From Wednesday to Monday the heat was tropical in this part of the country, and although the air is much cooler it is still warm. Day angling on the rivers has been practically at a standstill since last week's notes. The only sport is with the night fly, or with the clear water worm fished in the small hours of the morning. The waters are so low and slow running that the finest of tackle and small flies have to be used, and even then the sport is scarcely worth the candle. In the Solway nets the run of sea trout still keeps up wonderfully, and some very fine ones have been captured in the stake nets near Annan. Grilse are not making much of a show, owing to the over-fine weather, low state of the rivers, and absence of gales. The water bailiffs have been assisting to clear the pools of "poachers' hanks," in order to thoroughly net the rivers, and clear out the pike and chub, which have increased so much of late years. All the pike and chub are to be killed, and, probably, the most of them buried on the banks. The following is a note of the sport on the different rivers and lochs of this district since last week's report. **THE ANNAN.**—Very little has been done on this river. Day fishing has not been followed, owing to the low water and the excessive sunshine and heat. A few rods have been out with the Night Fly, and odd sea trout have been landed on different stretches. The clear water worm (small pink worm), on fine tackle, has also accounted for a sea trout or two, besides yellow trout. To be successful the angler requires to be on the river in the small hours of the morning. Next week-end may probably bring a herling or two up from the Solway. Last year three trout were late in making their appearance, and it was not until the second week in July (11th) that the first herling was caught. **THE NITH AND TRIBUTARIES.**—Despite the lowness of this river and the brilliant weather prevailing in Upper Nithsdale during the past fortnight some really good baskets of trout are reported. In fact (writes a correspondent), it is many years now since the angling was so good in the upper reaches of the Nith, and the trout caught are just as lusty as they are plentiful. Last week quite a number of sea trout were taken from the pools within the jurisdiction of the Sanguhar Angling Association, and it was no uncommon thing to find two or three burn trout of ½lb. or over in the baskets which were taken. Late at night or early in the morning seem to be the best times. One angler has taken over a dozen sea trout within the past three weeks in the Upper Nith. In the Thornhill Mid-Nithsdale waters a few sea trout and yellow trout have been killed, chiefly after dark, with the night fly. Near

Dumfries the sport has been excessively poor. The Nith is a capital river for sea trout, the best in the Solway for trout. **AYRSHIRE LOCHS AND RIVERS.**—A goodly number of rods have been out on the lochs of this district, and on favourable days the sport has been fairly good on Loch Doon, near Dalmellington. On the rivers all angling has been at a standstill for over a fortnight, owing to the low waters and very bright sunshine. Mr. Keen, out from the Eglinton Hotel on Wednesday and following day, killed forty-four yellow trout with fly (heaviest trout, 1lb.), Messrs. McGarva and Simpson were out on six days, and had a total of 163 yellow trout with fly. On Friday seven rods were out, all members of the Glasgow Wanderers' Angling Club. The total catch numbered 135 yellow trout, weighing 26½lb. Mr. J. C. Douglas, a visitor, killed twenty-two, weighing 6½lb.; Mr. W. Morrison caught twelve, scaling 3lb. 12oz. On Saturday, Messrs. Malcom and Robertson killed thirty-nine with fly. Other rods have had pretty good sport this week.—HEATHERBELL.

Spey.—Owing to the late protracted drought, and consequent low water, angling has been almost a dead letter; as, however, rain has now fallen heavily matters may improve. The spring salmon fishing may be reckoned a failure, and the hope is now entertained that the grilse season may in some measure make up for it. As an example of the scarcity of fish, it is estimated that every fish caught so far from the Tulchan waters, a well-known reach of the Spey, has cost the lessee over £10. Good sport is to be had in the evenings and mornings at present, as there are plenty of large trout in the river. From the Wester Elchies water, on Friday, Mr. Duncan, fisherman, had a salmon of 11lb., while from the Aberlorn House water, Mr. McKenzie, fisherman, had a grilse of 3lb. On the Carron House section, Mr. Grant killed a salmon of 7½lb., and on the Laggan water, Mr. Skinner, a newly run one of 11lb.—J. M.

Tongue Hotel Waters.—On June 7, Mr. Marshall, on the Kyle of Tongue, had seven trout, 12lb. (heaviest, 3½lb.). On June 9, Mr. Webster, on the Kyle, six trout, 8lb. (heaviest, 2½lb.); Mr. Marshall, on the Kyle, sixteen trout, 12½lb.; Mr. Cummins, on the Kyle, four trout, 6lb. (heaviest, 2lb.). On June 10, Mr. Livingstone, on the Kyle, two trout, 3½lb. On June 10, Mr. Cummins, on the Kyle, had two trout, 3½lb.; Mr. Webster, on the Kyle, two trout, 4lb.; Mr. Livingstone, on the Kyle, two trout, 3lb. On June 12, Mr. Parker, on Loch-na-hacon, had eight trout; Mr. Livingstone, on Loch Craggie, twelve trout, 4½lb.; Mr. Marshall, on Loch Loyal, eight trout, 4lb.; Messrs. Cummins and Webster also had good baskets on Loch Craggie. On June 13, Mr. Webster, on the Kyle, had three trout, 3lb.; Mr. Cummins, on Loch Craggie, eleven trout, 4½lb.; Mr. Livingstone, also on Loch Craggie, sixteen trout, 5lb.; Mr. Marshall, on Loch Slam, nineteen trout, 9lb., and one grilse, 3lb. On June 14, Mr. Webster, on Loch-na-hacon, seven trout, 4lb.; Mr. Livingstone, on Kyle, one sea trout, 3lb. On June 15, Mr. Webster, on Loch Craggie, sixteen trout; Mr. Livingstone, on Loch Slam, twenty trout; Mr. Marshall, on Loch Craggie, sixteen trout; Mr. Cummins, on Loch Craggie, twenty-six trout. On June 16, Mr. Webster, on Loch-na-hacon, twenty-nine trout; Mr. Marshall, on Loch Slam, sixteen trout, 6lb. On June 17, Mr. Webster, on Loch Slam, had fifteen trout; Mr. Marshall, on Loch Craggie, twelve trout, 5½lb., one salmon, 5lb.; Mr. Parker, on Loch-na-hacon, ten trout, 3lb.

Tweed, Teviot, and other Border Streams.—All the Border rivers have been running in very small volume during the past ten days, the exceedingly warm weather we have been experiencing being the medium of that cause. Trout anglers, however, have been having fairly good baskets of trout, both with fly and worm, the latter lure, of course, being used during the day, whilst the takes got with the fly have been killed at night. Evening fishing is in full swing now amongst all the fly anglers, while the early birds are out with the worm in the morning. The fine weather, of course, precludes all idea of salmon angling, and this branch of sport is in the meantime absolutely nil. Some of the trout anglers here have been very successful with the "creeper," but the supply is now just about exhausted for the season. Of those who have done best in the trout takes during the week we may mention Mr. Lander Brown, coachmaker, Kelso, who on the Tweed, at Rosebank, near Kelso, killed a fine trout, 2½lb., with fly, besides which he had about a dozen of other trout, weighing in the aggregate about 5lb. Mr. James Steel, fishmonger, Kelso, on Friday morning last had a beautiful clean run trout of 4lb., killed with minnow; while yesterday (Tuesday) he had fourteen trout, which weighed 6½lb. These fish were killed on the Tweed with worm. On the same river on the 19th, Mr. D. Robson had 8lb.; Mr. Jas. Stewart, 4lb.; and on the following day the latter angler had again 4lb. on the Teviot. On the 21st, Mr. G. Robson, on the Tweed, had 8lb. with worm; on the Teviot, Mr. T. Turnbull, 5lb.; Mr. Jas. Walker, 4lb.; Mr. R. Robertson, 6½lb.; and Mr. James Robertson, 3½lb.; Mr. James Affleck, tailor and clothier, Heiton, had 8lb.; and his father, an old veteran angler, had 6½lb. in four hours' fishing. With the fine weather and clear water the presences of the pike in the Tweed and Teviot becomes more apparent every day. At the western end of Kelso Bridge, in the pool at that place, quite a number of these trout gormandisers have recently been seen, and some of these have since paid the penalty of taking a spoon bait.—MAXWHEEL.

IRISH REPORTS.

Ballina (Imperial and Royal Hotels Private Waters, and Gortnorabey Hotel, Lough Conn).—Fishing for the past week has not been very good as we are not having favourable weather, but the prospect for the coming week is good, as we are having a decided change. It is raining at present, and this will bring in a number of fresh fish, both into the river and lough. Mrs. King,

during the past week, killed four salmon, the largest weighing 11lb., and the smallest 5lb. Mr. King killed one salmon weighing 8lb., and made some good baskets of trout along with nine pike, the largest weighing 11lb. The Rev. Canon Daniel killed a few trout, not large. Mr. Terry killed one grilse weighing 6lb. Mr. Dove, two grilse weighing 8lb., and lost one large salmon.—MANAGER.

Ballina (Private Waters, Moy Hotel).—Water in good order; salmon plentiful in the pools. On Sunday Mr. J. Innlon lost a fish after playing some time. Mr. J. Browne hooked and rose several fish. Mr. Schroop got two, one 7lb. and the other 6lb. These were the only reds out. There were several fish taken on the lough. Trout fishers at Rnnagry doing well.—JOHN DEVERS.

Bann (Toomebridge).—The condition of the river is excellent at present, and trout fishing has been well favoured as regards weather, &c. The trout are very numerous in the river, and of a fine quality. A lot of anglers from the O'Neill Arms secured some fine baskets, notably Mr. McKean (Greenock), Mr. White (London), Mr. Stronach (London), Mr. St. Stephen (London), and Mr. Giles (Belfast). These gentlemen secured fish reaching 4lb. in weight, while several others had a fair number of smaller takes.—F. G.

Belfast.—Matters piscatorial were very dull about here in the past week. Few anglers were out on the dams, and the rain did very little to raise the rivers. It would take thirty-six hours' rain to put the Antrim and Down rivers in order. The North-East Ulster Angling Club has arranged for an open pegged-down 10yds. limit competition on Moira Canal, on the 15th prox.—J. A. B.

Border Esk and Liddle.—Owing to the continued dry weather sport is only poor, but during the past few days rain has fallen to a moderate extent, and the fishing has improved a trifle. In the Longtown water, Mr. Read, Arthur, caught a sea trout of 2lb. at an evening fishing; and Mr. Henry Foster, Longtown, had one of 1½lb. Anglers in the lower reaches complain very justly of the vast numbers of chub and dace, and assert they cannot get fish for them. At Damfoot Pool, where the Liddle joins the Esk at the head of the Willow Pool, great numbers of the trout are visible, but owing to the lowness of the water they are taking badly; in fact, the fish are mostly collected in the pools, and until a flood comes, one that will "sweep mills and dams" to the gate, not much sport will be had. Sea trout are making for the upper reaches, and several have been caught in the Langholm water; also good baskets have been made of yellow trout in the upper reaches. In the Canonbie water, Dr. Anderson, of Eskbank, had a sea trout of 2lb. with fly in Tommy's Pool; Mr. A. Murray, Canonbie, had four sea trout with fly, two of them 4lb. each; Mr. J. Graham had one of 2lb. at Level Mouth, Liddle; and Mr. D. McDougall caught four in the Liddle. Several others have had good catches in the same water. Sport can only be had at night fishing. The weather is threatening, and it may improve shortly.—GLENOCKIE.

Cork Rivers.—Since Saturday sport has shown much improvement on all the Cork rivers. Some rain has fallen each day, and salmon have been rising better to flies. Trout are now taking well, and on those waters that hold sea trout fair or average results have been had at those fish during the last few days. The season so far has been, on the whole, a poor one, but the prospects for the next few days at least are very good.—T. J. D.

Corrib (Galway).—The Corrib is running down fast, that well-known water-mark "the Horse-Shoe" being uncovered considerably by the rush of water. The weather is cloudless and not so hot as it was last week. Since last notes over 100 peal were killed, and a few spring fish—equally divided between the fly and prawn. Amongst the peal fishers were: Messrs. W. Townsend, Capt. Curzon, Nathan Cohen, J. Smith, Col. Parker, C. E. Hill, Sir William Williams, and C. F. Hill. Trouting has been resumed after the falling down seawards of the salmon smolts. Very little was done recently on the Lough.—J. A. B.

Cummeragh and Inny.—Sport has shown a decided improvement on the above waters as far as trout are concerned, owing to heavy rain having fallen on a couple of days. No salmon have, however, been had on either water, though those latter fish are reported numerous in both.—T. J. D.

East Tyrone Rivers.—The Ballinderry and Blackwater are low and clear, and consequently sport is dull, evening trouting being the only sport permissible. Salmon are up both rivers.—J. A. B.

Erne (Ballyshannon and Belleek).—The following are the particulars: Sir H. B. Robertson took one salmon of 12lb. on 15th inst., and one of 14lb. on 17th inst., and another of 8lb. on 19th inst.; Mr. F. T. Green took a splendid salmon of 17lb., and one of 8lb. on 19th inst.; Mr. S. V. Thomas took one salmon of 20lb., and one of 8lb. on same day; Mr. George Davies took another of 9lb. on 19th inst.; and Mr. Bentick took one on 19th, and one on 20th inst., weights of same not to hand at time of writing; Mr. J. G. Vokins took one salmon of 13lb. on 20th inst.; Dr. E. Aiken took one salmon of 8lb., and three grilse on 17th, 19th, and 20th insts., weights of the three grilse were 4lb., 4lb., and 5lb.; Mr. S. V. Thomas took one grilse of 6lb. on 20th inst. Mr. T. M. Pike took several fine trout with dry fly since last report, as also did Dr. W. G. Dunwoody, Dr. F. Condon, and Francis Rogan, several of the trout weighing from 4lb. to 6½lb. At time of writing rain has been falling at intervals for the past two days, and sport is improving all round.—M. ROGAN AND SONS.

Kerry Rivers.—Rain has fallen at last, and sport has shown much improvement in consequence, especially on the northern waters. Salmon, peal, and sea trout gave generally fair sport on the Feale, Gale, Smeragh, and Cashen. In the districts of Glenbeigh and Killarney

sport was not as good, and on the southern waters the improvement has not been very marked, though prospects are good for the coming week.—T. J. D.

Lough Conn (Cloghans).—The weather here at present is very unsettled for last few days. Mr. Tracy got two salmon on the 17th and lost one, together with a dozen of trout averaging 1lb. Mr. Gilling got one salmon on the 17th, and a half dozen of trout averaging 1½lb. Mr. Keeling got two salmon on the 19th, and a pike of 14lb. Mr. Preston got five pike in a few hours, largest 22½lb., smallest 5lb.—TOM CLARKE.

Lough Corrib.—The weather has become much cooler after the recent rain, and fish are taking freely. The peal are up in large numbers. Mr. Cooke, on Saturday, got two, weighing 10lb.; and John Loydon, one, 7lb., also six trout, 10lb. In two days the nets got ninety-seven salmon.—T. J. D.

Lough Currane (Waterville, co. Kerry).—Sport is now fairly good in the late evenings at sea and brown trout. The weather has undergone a very favourable change, and the prospects for the coming week are good all round. Salmon, peal, and sea trout are all arriving in good numbers since Saturday, when heavy rain fell for many hours, and the lake is now well stocked with all those fish, which continue to ascend freely, as the climatic conditions are still favourable. Trouting has been pretty good on the river.—T. J. D.

Lough Mask.—Fishing greatly improved. Mr. Bartholomew caught, fly fishing, on Wednesday, forty-two trout.—JOYCE (Clonhury).

Lough Melvin.—Sport was rather poor again on this lake during the past week, owing to the continued bright weather and east and north-east wind. Mr. J. Browne took one salmon of 8lb. on 15th inst.; Mr. H. P. Kelly took a trout (*Salmo ferax*) of 6½lb. on same day; Mr. B. Andrews took a grilse of 5lb. on 16th inst.; and Mr. N. Cassidy took another of 6lb. on 17th inst. Trouting improved somewhat within the last few days, and several good baskets of gillaroos and brown trout were taken. Mr. Alfred Blane, of London, caught twenty trout on Lough Erne, with the May Fly, averaging 3lb. each (largest fish, 5½lb.).—M. ROGAN AND SONS.

Mountain Lakes (Waterville, co. Kerry).—Sport has shown a decided improvement on all the above waters at brown trout, but no fish weighing more than 1lb. were had, and only a few reached that weight. The average weight of the trout had was about ¾lb.—T. J. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—A north-east wind still prevailing here, and fish taking badly. The lower pools on the river are well-stocked with grilse and sea trout. Mr. Pitts, four grilse, 19lb.; Mr. Foster, two grilse, 11lb., one salmon, 10lb.; Dr. Webb, five grilse, 22lb.; Mr. C. Hamilton, in three days, thirty-five sea trout, 29lb.; Master Harry Simpson, in four days, thirty-one sea trout, 25lb.; Mr. W. Paine, in three days, thirty-nine sea trout, 32lb. A few stale grilse have been taken on the lough. Trout won't look at a fly on the Lough until we have a change of wind. Mr. F. Gore had five pike on Cullen, 8lb., 8lb., 13lb., 15lb., 21lb.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—It was rather unfortunate that my river report last week was late for the midday post on the Wednesday, as it contained full details of the disaster which had befallen the trout and other fish here at Killaloe and lower down the stream. Truth is, I had gone down the river in a boat to see for myself the extent of the damage done to the fish, and when I got back to my house I was late for the post. The sight which I saw down there was something too sad. The shores on either side of the river were covered over with hundreds of beautiful trout, ranging in weight from 1lb. to 5lb. On the evening of June 11 the river and the fish in it were all right, but on the following morning quantities of trout, dead and dying, were picked up below the bridge. During Tuesday, Wednesday, and part of Thursday, the valuable fishes continued to succumb, but on Friday I was enabled to wire the Dublin *Irish Times* that we had seen the last of the disaster. It is pleasing to know countless hundreds of fine trout that headed down stream ascended a few of the tributary rivers a short distance below Killaloe, and the constabulary have been watching the fish ever since. During the last few days these have been returning in large numbers to their favourite old feeding grounds in my water under and above the weir wall, and before the week is out there will be plenty of trout in every part of the river. About a dozen salmon came to grief during last week. Some of the dead fish and samples of the water have been forwarded to Sir Charles Cameron for examination, but we have not yet received his report. A sample of the fish was also sent to another Dublin analyst, who has reported that the mischief was caused by chloride of lime. Anyhow, salmon, grilse, and trout are rising freely, and several have been creel'd this week. Yesterday Capt. Gartside-Speight killed a fine grilse and lost another, and a salmon. Col. Longbourne also got a grilse. Mr. R. Hope has arrived from Maidenhead, England, for the fishing.—S. J. HURLEY.

Shannon (Castleconnell).—In contrast to the hot sunshine of the past few weeks we are now having rain and cooler weather, a welcome change for the angler. On Doonass, Mr. Hodges killed, 14th, one peal, 7lb.; 17th, two peal, 5lb., 7lb.; 20th, one peal, 4lb. On Prospect, Mr. A. T. Cohold killed, 14th, one peal, 3½lb.; 15th, one peal, 3lb.; 17th, one peal, 5½lb.; 20th, one peal, 4lb. On Newgarden, Mr. A. Creswick killed, 14th, one peal, 6½lb.; 19th, one peal, 6lb.; 20th, three peal, 4lb., 5½lb., 7lb. On Hermitage, Lord Massy killed, 15th, one peal, 5lb. On Woodlands, Mr. G. W. Greenhill killed, 14th, one peal, 6½lb. On the same water, Mr. Barkworth killed, 20th, one peal, 6lb. On the Castle Fishery, Major A. D. Bulpitt killed, 14th, one salmon, 9½lb. On the Worldseend, Mr. T. S. Richardson killed, 17th, two peal,

3½lb. and 4½lb. On the same water, Mr. Barkworth killed, 18th, one peal, 6½lb.—J. ENRIGHT AND SON.

Upper Bann.—Dapping with the Black Fly about Katesbridge and Ballyhoney was pretty good recently, several nice fish having been taken in this way. Re the discussion some time ago about the re-introduction of salmon into this river, we note with pleasure that a movement is on foot for the purification of the river as the contemplated source of Portadown water supply. The pollution of the water from different towns is so bad that salmon ceased to run up it some years ago. If the water be purified, it will be one step in favour of the re-introduction of salmon.—J. A. B.

Westmeath Lakes (Mullingar).—Some good sport has been had on these lakes since the close of the dapping season by trolling artificial baits and otherwise, and some magnificent pike, perch, and trout have been taken. Mr. J. Harton, of Mullingar, on the 16th inst., on Lough Owl, got two splendid trout, weighing together 9lb. On the 18th he had three trout, weighing respectively 8½lb., 7lb., and 4lb., and lost a large fish after one hour's exciting play. There are some Green Drake still rising on Lough Ennel, but the trout are feeding on the perch fry, and won't notice any lure in the way of flies. The pike and perch fishing on this lake has also been good, and some splendid trout were taken recently.—T. J. W.

Angling Fixtures.

June 25.

Alhion Brothers: Brake outing.
Allason United: Pegged-down match.
Amicable Waltonians: Outing to Wateringbury.
Battersea Friendly: Match at Amherley.
Clapham Strollers: Match at Chichester.
Convivial: Match at Buckhurst Hill.
Duke of Norfolk: Outing to Uxbridge.
Elgin: Brake outing.
Harcourt: Match at Langley.
Ormonde: Outing and dinner to Hastings.
Phoenix: Brake outing.
St. Alban's: Outing to Woking.
Sundial: Brake outing.

June 27.

Grange: Dinner at Wateringbury.

June 28.

Walthamstow Brothers: Annual dinner.

June 29.

Sundial: Visit.

July 1.

Lychnohite: Competition at Staines.

July

2.—Convivial: Outing to Byfleet.
" 2.—Good Intent: Prize outing.
" 2.—Harcourt: Match at Langley.

" 17.—Amicable Waltonians: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—IMPORTANT NOTICE TO ANGLERS.—Upon application by the above association the Metropolitan Railway have agreed to issue anglers' fares from Moorgate-street, Farringdon-street, and King's Cross Stations, viz.: Rickmansworth, 1s. 8d.; Chorley Wood, 1s. 11d.; Chalfont-road, 2s. 1d.; Chesham, 2s. 6d.; Amersham, 2s. 4d.; Great Missenden, 2s. 10d.; Wendover, 3s. 3d.; Stoke Mandeville, 3s. 7d.; Aylesbury, 3s. 9d. The fare from Baker-street is the same as at present.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 10s. 6d. from the School Board Anglers as annual subscription, and £1 0s. 5d. from the Ealing Angling Society's donation box.—R. GHURNEY.

Allason United Brothers' Angling Society. Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—June 25 promises to be a big event. Conditions and boundary are as follows: Two rods allowed; all fish except pike and perch are weighable; sizes of fish, 1in. above Thames measurements. We fish the meadow side, Veitch's pond; pegged-down. Messrs. E. Jackson and G. Prouten are the stewards. Members may travel by the 12 13 a.m. midnight, on 24th, or any subsequent trains on 25th. Not to start before signal from secretary or fish after signal to cease. Members arriving on 25th to

report their names to secretary. On ceasing fishing, to have fish registered. We made more members on the 21st, and received more prizes.—BEN ABRAHAM.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On June 18 Mr. Utting weighed-in bream and roach, 13lb. 10oz., heaviest bream 3lb. 4oz.; Messrs. Butlin and Brandon, roach. Messrs. Smart and Tilbury have been elected working and Messrs. Norton, Perkins, Hill, and De Beriot Greene honorary members.—J. CHAMBERS.

Amicable Waltonian Angling Society. The Fox and French Horn, Clerkenwell Green.—Most of the members of the above took part in the Central competition at Pulborough on the 18th, but only one was successful in getting a weigh-in—J. Nunn, jun. From other waters: Roach, dace, perch, and chub by Mr. Fryatt; roach and dace by Messrs. Millin and Hulme. Good meeting on the 21st; final arrangements made for the outing to Watlington on June 25. The July outing will take place on the 16th by brake; annual dinner on the 17th.—G. MERRY.

Anchor and Hope Angling Society. Duke of Kent, Old Kent-road, S.E.—On June 18 Mr. J. Jones weighed-in bream from Pulboro', having taken third prize in the Central competition. On Wednesday Mr. W. Fowler weighed-in a show of bream from the Thames, 2lb. 5oz. I wish to remind all members that next Wednesday is quarterly night, and hope they will all attend on that evening.—F. W. MARTIN.

Anglers' Pride Angling Society. Duke of Suffolk, Brandon-street, Walworth.—Several of our members were out on June 18, when we had a nice show of fish, including Mr. Cornish's bream, who fished in the competition at Pulboro'; and also Mr. Charles, catching a lamprey at Amberley, weighing 1lb. 13oz., and over 2ft. in length, which he is having preserved. Hope all members will attend clubhouse early on meeting nights.—A. A. C.

Battersea Friendly Angling Society. Queen's Hotel, Queen's-road, Battersea, S.W.—On June 18 some good takes of roach, bream, and chub were weighed-in by Messrs. G. Miller, A. Ansty, G. S. Ireland, A. Dejonge, and G. Mead, the last named having in his take a specimen bream of 3lb. 12oz. Match on June 25, at Amberley; 8.27 Clapham Junction, 7.14 Amberley; reserved compartments arranged for.—A. JENKINS.

Battersea Piscatorialists. Lord Ranelagh, Verona-street, Battersea.—Since my last report several of our members have had fish, but the takes have been small. Will members turn up next week to decide locality of match?—T. TRINGHAM.

Bermondsey Brothers' Angling Society. Woolpack, Bermondsey-street, S.E.—The members of the above fished a competition for their June series of prizes on the 18th inst. at Pulboro, under the same conditions as the Central competition, and only two of them succeeded in getting above the stipulated 4lb. required by rule: Mr. J. Davis, 2lb. 10oz.; and Mr. D. Dodson, sen., 9oz. Mr. W. Taylor won a prize in the competition, although not having enough fish to take a club prize. Mr. Maitsey and Mr. T. Woodhead weighed-in bream from the Medway.—ALE. CONN.

Blackfriars Angling Society. The Imperial, Southwark-street, S.E.—At our meeting on Wednesday evening there was a very good muster. Several new members were elected, and several valuable prizes offered. Mr. Whaley wishes to give notice to alter minute on books, and we wish to have a good muster to assist. We had no fish on June 18 weighed-in, though we all competed at Pulborough.—WHEELHOUSE.

Bloomsbury Brothers' Angling Society. Rose and Crown, Broad-street, Bloomsbury.—A large number of our members were out on June 18, but were unsuccessful. Mr. J. Sinclair only weighed-in roach and dace. All members are requested to note, the new rules came into force with the opening of the season.—T. PATER-NOSTER.

Bomore Angling Society. The Britannia, Clarendon-road, Notting Hill, W.—On June 18 several members competed for our worthy host and treasurer's gift, as a send off to the opening season, consisting of a very nice briarwood and amber mouthpiece pipe, which resulted in a very easy win for Mr. H. Dagworthy. The following members also had fish: Messrs. Weeks, P. Harley, A. Cowen, F. Hall, H. Foreman, and F. Hill. During the evening Mr. G. Love, our delegate, reported he failed to find the new premises of the Anglers' Association, which was accepted. Mr. F. Hall was elected chairman *pro tem*. We made another new working member in Mr. H. Angel.—H. DAGWORTHY.

Brothers Well Met Angling Society. King Edward VI., King Edward-street, Liverpool-road, N.—On June 18 we opened the season with a very good show of roach and bream, weighing 14lb. 10oz., taken by our veteran, H. Canton; H. C. Canton, roach; A. Field, roach; H. Fame, perch.—H. T.

Brunswick Brothers' Angling Society. Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—A few of our members were out on June 18, but met with very poor sport. Mr. H. Kelley weighed-in some chub from the Thames, and so saved us from a blank. Mr. C. Farmer occupied the chair at our meeting on Tuesday last. A lot of business was transacted, also several disputes were settled *re* prizes. Another new member was enrolled.—F. RANDALL.

Cambridge Heath Brothers' Angling Society. The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—Our match at Dagenham on June 18 was a success, all the prizes being won. The delegates' report was passed, and two working members elected. June 27 will be quarterly night, and A.B.S. tickets must be paid for, and hooks cleared, or members cannot weigh-in fish. I have several tickets for sale for H. Patman's Benefit—a very deserving case.—P. E. LOFT.

Camden Angling Society. The Locomotive, James-street, High-street, Camden Town, N.W.—The season opened very quietly with us, Mr. Galloway weighing-in a jack, 5lb.; Mr. Carr a fine bream. Will secs. holding tickets or lists kindly forward same as we are anxious to close the list.—R. M.

Clapham Junction Angling Society. The Clarence, Winstanley-road, Clapham Junction, S.W.—Several members of the above society fished their first competition of the season on June 18, at Amberley, when, I am sorry, they returned with a blank. Messrs. Clark, Thomas, and Batchelor weighed-in a splendid show of fish from other waters. Mr. Clark weighed-in two specimen dace. Our next day's outing will take place on July 16, at Amberley, boundary same as before.—G. T. JAMESON.

Clapham Strollers' Angling Society. Alexandra Hotel, Clapham Common, S.W.—On June 18 most of our members took part in an open roving match at Pulboro' for three prizes, and although two of the Strollers' weighed-in fish for the Jubilee Nurses' Fund competition none were successful in securing sufficient weight of fish to obtain club prizes. We therefore fish a match at Chichester on June 25 for three lapsed prizes, and I shall be pleased to see every member compete. An audit takes place for end of June, and I shall be glad to receive members' subs. up to that date.—S. VIOLET.

Clerkenwell and District United Visiting List.—The quarterly delegate meeting of the above will be held on June 29, at The Empress, St. John-street Road—not at the Middlesex Arms, as formerly. Meet at 9 p.m.—F. CASTELL.

Clissold Angling Society. The Cricketers, Northwold-road, Stoke Newington, N.—On June 18 several members were out, and a good show was the result, all prizes being taken. Mr. Ringrose was to the fore with a good show of roach and bream. The following weighed-in: Messrs. Ringrose, Thompson, Farmer, Pound, Mitchell, Bampton, Eastwood, and Wilkes. On July 10 we hold a smoker in aid of our A.B.S., and will Mr. Ben Abrahams please keep that date for us, as we require his attendance to open our box? All friends and anglers cordially welcome.—T. FAULKNER.

Cobden Angling Society. Kensal-road, W.—On June 18 I hear a great many of our members went out, and I am sorry to see only two members weighed-in—Messrs. J. Barnfather, with 4lb. of roach, and G. Perceval, with one tench, 3lb. 4oz. On July 9 a peg-down match will take place at Uxbridge, from the General Elliott Bridge to Swan and Bottle Bridge; one rod; to go down by first train from Westbourne Park, and return by the 8.25 from Uxbridge. Cease fishing at seven o'clock, and to register at the General Elliott not later than 7.30; to register names on arrival at the General Elliott, and start fishing by signal. T. Collins and C. Walker to peg out swims on the morning.—T. TWYMAN.

Collingwood Angling Society. Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Mr. J. Deplidge in chair. Prize lists are now ready with several additions added. Mr. W. Francis has given a prize of 10s. 6d. to committee. I am very glad to report Mr. J. Dorones winning the central competition on June 18. Messrs. J. Green and G. Boyd also weighed-in at the competition. They weighed-in at the club with several others.—W. H. STAFFORD and F. P. SORGE.

Convivial Angling Society. City of London, Sidney-street, City-road, N.—On June 18 a good muster of members were out. The following weighed-in fish: Messrs. G. Hurrell, roach; C. Parker, perch; C. Crosthwaite, dace. Prize taken by Mr. George Hurrell. Our dinner takes place at the Stag Hotel, Buckhurst Hill, on June 25. Dinner on table 3.30. Trust members who were not present on Wednesday will take note.—W. H. CARPENTER.

Cosy Angling Society. The Pine Apple, Wilfred-street, Buckingham Gate, S.W.—On June 18 Mr. H. Sheeky weighed-in bream, 18lb.; Mr. A. Benham, roach and perch. I am pleased to say we had a good muster at our new headquarters.—J. WHITE.

Dalston Angling Society. Browlow Arms, Browlow-street, Dalston.—On June 18 most of the members were out trying to get the rust off, but I am sorry to say that sport was very indifferent, only a few were able to get any fish, and they arrived too late to weigh-in. On Tuesday, June 20, final arrangements were made for outing to Dagenham; members to travel which way they think best; roll to be called on the bridge at 10.15, and show fish on the bridge by 7.30. Members please note next Tuesday is quarterly night.—S. MALBY.

Dibdin Trout Angling Society. St. Martin's Tavern, Pratt-street, N.W.—The outing on June 18 was a great success; all prizes taken. The winners were: R. Bennet, first; G. Johnson, second; T. Colman, third. Wednesday delegates' report passed with hearty vote of thanks. A.B.S. tickets to hand. I am a strict observer of all rules, so I hope any member, or would-be member, will forgive my not sending for privilege tickets until he be a *bona fide* member of the club.—JOHNNY EDWARDS.

Duke of Norfolk Angling Society. The Apollo, All Saints'-road, Westbourne Park.—On June 18 most of our members were out, and several weighed-in: Mr. Viner, 17lb. of roach, tench, and bream; Mr. Targett, 9lb. roach and bream; Mr. G. Vogan, bream; Mr. Gale, bream. On June 25 our first match takes place at Uxbridge; all start by the 8.45 from Paddington.—W. JENKINS.

Earlsfield Angling Society. Half-way House, Earlsfield, S.W.—At our usual weekly meeting, with Mr. Gathercole in the chair, it was announced that the outing on the 18th inst. resulted in a blank. Although a few barbel and perch were taken, they were all under our club standard. The river was in a very bad condition, and we hope that we shall have a lot of rain before our next

outing, which has been arranged for July 9; time and place to be decided next Tuesday.—A. T.

Elgin Angling Society. Blenheim Arms, Blenheim-crescent, Notting-hill, W.—Several of our members were out on June 18, when some had good shows. Messrs. Carroll and Wilson, roach and tench; Messrs. Barnfather and Drury, chub, roach, and bream; Messrs. King and Bayliss, roach. We made Mr. W. Boxball a working member at our last meeting. I must remind members that the brakes will leave the clubhouse at twelve o'clock sharp on Saturday night. Mr. Chaplain, our host, has added another 10s. for the best roach. Mr. T. Clark, of the Islington Brothers, also gives a prize.—G. KING.

Enterprise Angling Society. City Arms, High Cross-road, Tottenham.—Our members opened this season with very little success, Mr. Wells saving the club from a blank with dace, 4lb. 12oz., winning the first fortnightly prize of the season. Messrs. Pheasy, Keene, and Balar were on the war path, but came home defeated. Will members kindly note that the above club will move from the City Arms to the Prince Arthur, Broad-lane, Tottenham, on Wednesday next, and that we hold a house warm on the following Wednesday in aid of the A.B.S., when I hope all anglers and friends will kindly support us on that occasion.—W. LEFEVRE.

Firm and True Angling Society. Prince Regent, Beresford-street, Walworth.—We had a good muster of members on Thursday night last, when we went through a long agenda. We settled all our prizes satisfactorily. I hope members will attend next week to arrange a prize outing, and to enrol some new members.—C. ROSSER.

Golden Barbel Angling Society. Sir Isaac Newton, Union-street, Middlesex Hospital.—On June 18 the following weighed-in: Messrs. Ellins, roach, dace, chub, and trout; Mitchell, roach; Crom, roach. Mr. King had some fine roach and tench on the 17th, one roach over 2lb. I should like to see more members up on Sunday nights.—A. W. ELLINS.

Good Intent Angling Society. The Crown, Church-street, Shoreditch.—Our distribution of prizes took place on the 13th, and was a great success. Mr. J. Williams was chairman, and proved a very good one. After the prizes were given up he made an appeal for prizes for the coming season, the chairman giving his usual £4 4s., and everyone in the room gave a prize, so there was a grand list at the finish. The members will have the first outing on July 2, for eight prizes, at Cheshunt; all start first train.—R. MURPHY.

Great Yarmouth Sons of Neptune Angling Society. Bowling Green House, North Quay.—This society held its first match of the season last week-end at Potter Heigham, when a score of competitors put in an appearance. The weather was all that could be desired, but sport was very poor. There were seven prizes, and the following were successful:—Messrs. J. S. Bartram, G. Himplem, J. Harris, W. Phillips, W. Plane, H. Grimmer, and J. George. The first named secured chalks towards the society's challenge cup, and also the Nicholls challenge cup. Mr. Bartram receives a medal for his success in winning the society's trophy. Mr. William Plane ably carried out the duties of umpire. Prizes have been received from Messrs. J. S. Bartram, W. Plane, and J. Harris.—E. W. BUCKLE.

Harcourt Angling Society. Harcourt Arms, Harcourt-street, Marylebone.—We did not have a large show of fish on June 18, but eight members weighed-in, so we must not complain. On July 22 we fish a match at Langley, from the tank to hutches, both inclusive, when I hope to see all the members compete. We had four new members proposed last week, and I expect some more this week.—A. E. PAYNE.

Hearts of Oak Angling Society. Ye Olde Crown, Brick-lane.—I hope members will attend next Wednesday to arrange for our prize outing. Mr. Smith had a show of roach and dace. Our first outing takes place on July 16.—C. SMITH.

Highbury Angling Society. Globe Hotel, Upper Tollington-road, Holloway, N.—At our meeting on Wednesday it was enthusiastically decided to include sea fishing in our programme, but not to compete with freshwater fish. Rules and standards for same will be adopted next week. Other important matters were disposed of, and during the evening Mr. F. Berry brought up a grand show of roach, 30lb. 15oz. (largest 1lb. 7oz.), and two tench, 2lb. 9oz. and 2lb. 6oz., total 35lb. 14oz. Mr. S. Stone has also had roach and a trout during the week.—E. W.

Holloway Angling Society. Holloway Station Hotel, 295, Holloway-road, N.—The members of the above society held their usual meeting on Wednesday evening last, when Mr. A. Norman had a good show of chub the heaviest being 3lb. 8oz., 1lb. 14oz., and 1lb. 14oz., total weight 11lb. 6oz. Messrs. G. Johnson and A. Stevens reported a catch of roach and dace on the 16th, and Mr. A. Clayton also had a very fair take of bream and roach on the Norfolk Broads.—A. CLAYTON.

Islington Brothers' Angling Society. Middleton Arms, Canonbury-road.—On June 18 several members entered the competition at Pulborough; the only one successful was Mr. J. Howard, who weighed-in dace at the match, and won a prize. The following also weighed-in: Messrs. J. Howard, dace; J. Burwash, M. Wilkes, M. Bays, all with bream, from other waters. We fish a peg-down match at Chichester on July 2; all to meet at London Bridge and start by the 8.40 train, for several prizes. Mr. Hamilton was proposed as a working member. J. H. HERBERT.

Isaac Walton Angling Society. Old King John's-road, Mansfield-street, Kingsland-road.—The members will compete for two special prizes on July 2, competitors being allowed to choose their own fishing waters (private waters barred). There are also three specials to be fished for on July 5, same conditions as the July 2 prizes.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—On June 18 we had our first fish of the season weighed-in by the following gentlemen: Messrs. Scott, Young, and Reddington. Will members please take notice our match takes place at the Welsh Harp on July 2, not July 23, which appeared in the *Fishing Gazette* last week; also will members please attend next meeting night to arrange for brake.—G. BENCE.

Limhouse Piscatorial Society. Several of our members have been out since the opening, but with very poor results, gin-bright water and weeds being the chief causes of complaint. All members are requested to turn up at meeting on Friday next, when important business has to be brought forward.—R. J. WELLS.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville-road, N.—On June 18 the members of the above fished at Pulborough for six prizes. Not enough weight was taken to win the prizes; they will be fished off at Amberley on July 2. Several of our members fished in the Central Competition. The next return visit on the C.D.V.L. will take place at the above on July 3, on which occasion we hope to have a good muster. Mr. Winters has been proposed for membership. We have tickets in hand for the benefit of Mrs. Patman, widow of the late Mr. H. Patman, to which I hope members will give their best support.—W. WATLING.

Liverpool Angling Association, Bee Hive, Queens-square.—Rain has fallen copiously during the last few days, and the chances of anglers having successful sport is thereby greatly increased. Many are up and at 'em, and several of our members have been on the war-path with a profitable result. These are of the hardy sort, who do not care for a wet coat if they can get a fair muster of fish. The Liverpool Centre of the Northern Anglers' Association, consisting of the above and the Central and West Derby Societies, have decided to hold a contest on Ang. 16 for a challenge trophy, to take the form of a shield costing from £7 to £10. This will be competed for by teams of ten from each of the three clubs, and the team having the six highest weights will hold the shield for their society for twelve months. Six valuable medals will be awarded the successful competitors. A open competition (date not fixed yet) will also be fished by the whole of the members for prizes, which, including Mr. W. H. Wright's gift of £2 2s., at present amounts to close on £5. This will no doubt be considerably increased as time goes on, and a grand and keen competition will result. Entrance fee, 1s. to members only.—RD. WOOLFALL.

Lychnobite Angling Society, Ben Jonson, Shoe-lane, E.C.—Members report poor sport in River Wey on June 18. Printers' benefit concert at headquarters to-day (June 24). Competition at Staines, July 1. Summer dinner and competition at Coldbath Inn, Hertford, July 15; friends cordially invited; particulars of hon. sec.—SID RANSOM.

Nelson Angling Society, Boundary Hotel, 2a, Smithdown-road, Liverpool.—This club's long looked for open competition to Liverpool anglers was fished on June 18, in the Leeds and Liverpool canal at Aintree. This being the first of its kind in Liverpool, great interest was taken in the match. It proved a success; seventy-one anglers turned out, in awful weather, to compete; there would have been close on 100 if the rain had not come. The Liverpool East End Club seems to have been favoured with the best of luck, as the three prizes were won by members of that association: Mr. E. Porter, first, with 8½oz.; Mr. J. Williamson, second, 8oz.; Mr. G. Attwood, third, 6oz. The prizes were presented on Wednesday, 21st, and a pleasant evening was spent, with a little harmony.—F. W. TAYLOR.

North East Brothers' Angling Society, Star and Garter, Green-street, Bethnal Green.—On June 22 we had a good attendance. A special committee meeting is called for June 27, at nine o'clock sharp, so that they can report their work to the members on June 28, when I hope that they will attend in strong force. We made two new members on Wednesday evening, and there are some more standing over. On June 18 Mr. Hart weighed in bream, and W. Richards, jun., bream and roach.—G. TAYLOR.

North Lambeth Angling Society, Newcastle Arms, Hercules-road, Lambeth, S.E.—We fished our first day match at Amberley on June 18, when Mr. R. Cheese was the only prize winner. Will members kindly attend on Wednesday next, 28th, to consider where they will fish for the other prizes left from the 18th?—E. ROWLES.

Original Alexandra Angling Society, Crown and Anchor, Cheshire-street, Bethnal Green.—We were represented at the Pulborough competition, only one member being successful. The committee meet next Wednesday to arrange the prizes for the coming season. Delegates for the Central and Anglers' Associations were selected. Mr. R. Breckett weighed in bream on the 18th. Wednesday next is quarterly night.—G. BARRS.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several of our members were out on the 18th, only one returning with fish, Mr. Hopton, jun., bream. At our usual meeting on the 20th two new members were proposed, Mr. Craine and Mr. Haywood, as working members. Our prize list for the season is a grand one. All members are requested to attend on Tuesday next, as I want to get list for Benevolent tickets.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—There are two four horse brakes for King's Langley on June 25, and three prizes; canal only. No fish have been weighed-in as yet, but we are going strong. Mr. T. A. Smith, late of the Duke of Wellington A.S., has been made a working member.—R. C.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—The following weighed-in on June 18: A. Smith, bream; F. Stanford, roach; J. Breddon, perch; T. Burrows, perch; and W.

Fayers. Members are requested to attend on Thursday next for special business. Our first outing takes place on July 2 at Langley.—W. B. F.

Putney Ramblers' Anglers' Society, Jolly Gardeners, Putney, S.W.—On June 13 the usual fortnightly meeting was held at the clubhouse, several new members were elected, and the usual business transacted. On June 16 five of the members had an enjoyable day's outing at Mr. Lock King's estate, Weybridge, several good bream being taken.—E. H. GIRLING.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 18th inst. the following weighed-in: C. W. Matthie, F. Coates, J. Fowler, A. Beaven, J. Reeve, W. Shepherd, A. Peverall, and W. Brind. On the 20th inst. we had a very fair muster of members present. We made two new members on the same date.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On the 18th inst. several of our members were out, but only Mr. E. Bardot turned up in time to weigh-in, saving us from a blank. On the 21st we were well attended, and got through a good deal of business. Will members turn up next Wednesday to finish our prize list.—J. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow.—On June 18 the following bad fish: E. Perry, roach; G. Williams, roach; F. Gardener, roach; J. Payne, roach; Stanley, roach. Four working members were elected at our last meeting.—F. PIGNATELLI.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington.—We had a good muster out on June 18 in the Central competition at Pulborough. Mr. T. W. Rosser succeeded in taking the second prize; also Messrs. H. Allan, J. Donaldson, sen., and Twine took prizes in the same. Mr. A. Brent had a fine show of bream from the Wey (17lb.). We have an outing to Woking on June 25; start 8.30 Waterloo; all to come home by the 8.35 or be disqualified.—J. T. LEIGHTON.

St. John's Angling Society, The Empress, St. John-street-road, Clerkenwell.—We had a nice show of chub, dace, and roach on 18th, but many of the members returned with blanks. The committee met on the 21st, and arranged that six prizes be fished for during July; full particulars at clubhouse. Six new members and two proposals in a fortnight is the next best take.—F. THORLING.

St. John's Wood Piscatorial Society.—At our annual dinner (Mr. Harris in the chair), thirty-one members and friends sat down to an excellent repast, provided by Mr. and Mrs. Reid. After dinner the evening was spent in harmony, Mr. Moody in the vice-chair, and some excellent songs were given by the following members and friends: Messrs. A. Wassop, C. Harvey, Ladyman, Booker, Mr. Reid (mine host), Burns, Cole, Brown, &c. Special praise must be given to Mrs. Reid for her excellent songs and selections on the piano, also to Messrs. Manning for their solos on piccolo and pianoforte; harmony being kept up till the small hours of the morning, when the usual vote of thanks &c., brought a most enjoyable evening to a close with Auld Lang Syne.—H. B.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—On June 14 there was a fairly well attended meeting. On 18th Mr. Bignell had chub and roach from the Wey.—W. BIGNELL.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—A few of our members were out on June 18, with the following results: Ben Smith, roach, 3lb. 3½oz. (one fish, 1lb. 1½oz.); G. Smith, roach and dace. We have our first outing in July next; particulars to follow.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—June 20 brought us a very good attendance, and more prizes were added to our list, which is a very good one. Mr. Hibbert was proposed as a working member. Will members who have not already done so kindly attend and clear books?—R. SMITH.

Slough Wanderers Angling Society, Red Lion, High-street, Slough, Bucks.—Several of us had fish from the London Anglers' Association Fishery, Slough and Langley; and we are still adding to the list of membership. Two of our members are honorary bailiffs to the A.A. If anyone wishes to join this society they cannot do better, and gentlemen from Windsor, Stoke, Slough, Iver, Langley, Colnbrook, &c., will find this society very convenient. Our host will give every information re rules and subscriptions.—BEN ABRAHAMS.

South Bermondsey Piscatorials Institute, Rotherhithe New-road, S.E.—Mr. A. G. Smith (late secretary) was out on the 16th inst. and had a fair show of barbel, roach, and dace from the Thames; also Mr. R. Thomas, out on the 18th, had a fair show of chub. At Pulborough, on June 18, one of our members, Mr. F. J. Giddy, was among the winners. We have the group photos in hand, and shall be pleased for members to come up next Friday and get them. They are all right, and every credit is due to Mr. F. Viner, of Southwark Park-road. We have also to arrange monthly outing on Friday, which takes place on July 2.—J. H. DAVIES.

Stockwell Angling Society, Old Queen's Head, Stockwell-road, S.W.—At the Pulborough competition

Mr. Tickner was the only member who weighed in fish. Mr. H. Payne, sen., had 2½lb. of roach and dace from a Surrey river the same day. Will members please attend on Thursday next to arrange first prize outing? At our last meeting Mr. J. D. James was proposed and made a member of the society. Any wishing to attend the outing and going by bicycle please meet the train at Weybridge Station 2.15 p.m.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—The members of the above club fished their first match at Hatfield Peveral on the 18th. Owing to the bad state of the water no fish were taken. It was decided to let the prizes stand over for a fortnight, hoping that the waters by that time will improve.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On June 25 we hold our first outing of the season—a brake outing to Uxbridge—from the Swan and Bottle to Denham Lock; towpath only; all fish to weigh; twelve prizes. Mr. King's cup will be fished for; usual conditions. The brake will leave the clubhouse at 7 a.m. on the morning, and leave Swan and Bottle at 7.30 p.m. sharp. Members wishing to go by brake must give their names in at clubhouse by five o'clock on Saturday. The next meeting night will be quarterly night. On June 29 we have our return visit. During the week Mr. Lock weighed in 3lb. 14½oz. of chub, roach, and dace; largest dace, 7½oz.—C. E. LOCK.

Twickenham Piscatorial Society, Black Dog London-road, Twickenham.—At the quarterly meeting on June 20 Mr. F. J. Ogden Smith showed four nice barbel, the two largest going 6½lb. and 6¼lb.; he also had some nice dace. Messrs. Sanders and Holloway reported having taken some nice bream, and Mr. Bringham a barbel and some dace. Five new members were elected, and some prizes offered for competition.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—On June 18 about twenty of our members fished in the competition at Pulborough, but met with no success. Mr. R. Beeson and Mr. E. Skeets weighed in tench, the largest weighing 2lb. 1½oz. This society is making rapid progress. The alteration of meeting night from Saturday to Thursday is a great success. We have made a lot of new members lately, among them being Mr. Arthur Morton, M.P. for Deptford, who has become our president. We have one of the kindest of hosts in Mr. Mackrell, who takes great interest in the society, and Mr. Sam Drage, an excellent chairman. We fish our first club match for the season on July 9, in the Medway.—F. H. BEAK.

Waggoners' Angling Society, White Lion, Albert Embankment.—We had a good meeting on the 20th. Two new members were nominated—Mr. C. Fitts, Mr. A. Williamson; ballot next week. The fishing bad fish on the 18th: Mr. Allan, roach and dace; Mr. Clegg, roach; Mr. Powell, bream; Mr. Kenyon, roach and dace; Mr. Hall, roach and bream; Mr. Norton, roach and dace.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Several of our members had fish on June 18, one member being fortunate enough to be in the list of prize winners. Will donors of prizes kindly send to the secretary any particulars as to conditions attached to their prizes as speedily as possible, as the list is ready for the printer?—TIDDLER.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—I shall be glad to see all members up on Wednesday next (28th), to receive balance-sheet. Messrs. W. Blackmore, W. O. Roebuck, and J. R. Morgan were elected working members of this society.—W. WRAY.

Wenlock Angling Society, Rydon Arms, New North-road.—On June 18 the following weighed some nice takes of roach, bream, and dace: Messrs. Renn, Wood, Dennis, and Stymah. I hope all members will attend meetings early, as we have some important business to do.—W. HARDEN.

Wes. Kensington Park Angling Society, Bird-in-Hand, Mastro-road, West Kensington Park, near Addison-road and Uxbridge-road S.W.R. Stations.—The usual weekly meeting transpired on Tuesday June 20, 1899, under the chairmanship of J. Talbot. The room was well filled by members and also gentlemen, who were added to the list of membership. The new rules were gone into, and the same ordered to be printed. Messrs. Talbot, &c., gave the delegates' report, and stated that the above was enrolled. Six more members were introduced by J. Talbot. The host, A. V. Turnham, and the hostess are doing their best to make all the members comfortable, and also adding to the list of membership. All western and other district societies are notified that our smoking concert and grand opening night takes place on July 6. Mr. J. W. Harris will be chairman, and Ben Abrahams, vice. Phil Phillips will preside at the pianoforte.—BEN ABRAHAMS.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—The quarterly meeting of the above society was held on June 21, when all officers were re-elected, Mr. Goose being elected auditor. The prize list was opened, and at closing of books had reached the total of twenty-two private prizes. It was stated that five new members had been enrolled during the quarter. Two members weighed-in on June 18: Mr. Escarins, bream and roach; and Humphrey, roach and dace. There will be a special meeting next Wednesday to arrange first match.—S. H.

Wimbledon Piscatorials, 28, Alexandra-road.—The first match of the season was held at Weybridge on the 18th inst., twenty members taking part in the contest. The winners were Messrs. W. Bishop (tench and bream), C. McBean (perch and bream), and W. C. Pain (bream and roach), in the order named. Mr. W. C. Pain showed a nice bag of bream and roach, from the Thames, at

SHALL WE EVER BE ABLE TO FLY?—It is now affirmed that a Russian scientist has at length discovered the secret of aerial navigation—a secret which whole generations of inquirers have sought for in vain. If the problem has really been solved, science has, indeed, won a mighty triumph. Such a discovery would tend to change the whole character of man. And yet, if we are to judge a discovery by its probable beneficial influence upon mankind, this cannot be compared to the discovery of the new world-famed remedies—Holloway's Pills and Ointment—which have relieved the sufferings of millions of human beings, and have brought back joy and happiness to thousands of stricken homes.

Tuesday's meeting. A communication has been received from the L. & S. W. Railway Company, offering to issue cheap fishing tickets from Wimbledon to Weybridge to members of the society, on condition that 300 tickets are guaranteed for the season. This important question will be settled at next Tuesday's meeting. A good attendance is particularly asked for.—HON. SEC.

Woolwich Invicta Angling Society, Golden Marite, Francis-street, Woolwich.—The members of the above club held their first prize outing at Yalding on June 18. There was a good attendance, the following being successful: C. Foster, roach and dace; H. Russell, roach; G. Rowlum, roach; A. Bayne, perch.—HON. REPORTER.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good attendance at club on Tuesday, making two new members. Although we were not successful in taking a prize at Pulborough, we thoroughly enjoyed the day's outing, our worthy host having started us off with a sumptuous breakfast. Will all members please attend on Tuesday to arrange for future prize outings, having just received a guinea from a gentleman to add to our numerous prizes.—N. LINDEN.

Bollings by the Way.

THE outing organised by the Central Association on June 18 was a gigantic success. Mr. Eldridge announces another for July 2. It is called an Open Roving Fishing Contest, and will take place at Amberley. Get your tickets early at the Rose and Crown, 21, Goswell-road. The train leaves London Bridge at 6.50 a.m. There are twelve prizes in money, ranging from £2 to 10s., besides other prizes. Entrance fee, 6d., which will also be divided in 7s. and 5s. prizes.

THE new "Red Book" of the Anglers' Association will be issued very shortly.

THE new season's Central Guide Book is to hand, and contains an immense amount of matter in a little space.

ANGLERS will be sorry to hear that Mr. W. J. Wade is seriously indisposed. The fact is he works too hard. No matter; he will soon "pick up," and he knows that his hard work in the cause of angling and benevolence is appreciated.

ON June 18, under the auspices of the Central Association of London Angling Clubs, a competition took place at Pulborough, in aid of the Queen's Jubilee Nurses' Fund. I journeyed to London Bridge, hoping to catch the 6.50 a.m. train, but—just missed it! Saw it go out. There were two heavy trains on this occasion. Mr. Wade tells me I might have caught the 8.30. Will do so next time. Turning out of bed at 5 a.m. knocks a fellow up for the day. A programme (before me) shows a complete list of the conditions and prizes which were to be fished for; and Mr. Greg did good service in disposing of about 400—*all for the benefit of the Nurses' Fund.*

HOWEVER, Mr. Wade has kindly sent me his "official list," and from it I gather that although many hundreds of anglers, with their sweethearts and wives, took the opportunity of visiting Pulborough, only about 330 anglers competed. The start—and finish—was simply perfection. Not a "hitch" in the whole proceedings. The day was an ideal one—not too sunny, nice breeze, but river low and bright. Mr. C. A. Medcalf (president Central Association) was boss of the show, ably assisted by Messrs. C. Watling (at scales), Fred Williams, G. Greg, J. Levison, H. Holder, G. Merry, R. Marshall, J. Poole, R. Clark, W. Burkett, and J. Wheelhouse.

THE host of the Arun Hotel (Mr. Simpson) was most attentive. [He was never any other in my time!] A contingent of anglers came over from Portsmouth in the afternoon to see the weigh-in. There is no room to put in a list of all the prize winners and prizes. Suffice it to say that the three first prizes were taken as follows: Mr. J. Down (Collingwood A.S.), Mr. Rosser (St. Alban's), and Mr. J. Jones (Anchor and Hope). Further particulars as to the final disposition of the "Walter Emden Cup," the "W. H. Elsmore Cup," &c., must be held over until next week.

ON June 17 a goodly number of members of the Serapis Society of Anglers journeyed to Bures, Suffolk, and commenced the season by fishing the river Stour. They spent a pleasant day, had good sport, and among the fish captured were several fine roach and bream. The anglers made this visit the opportunity for holding their annual dinner at the Eight Bells Hotel, Bures, where the landlord, Mr. George Cousins, had prepared an excellent repast, which was thoroughly enjoyed, and voted by the partakers of it not to be surpassed for variety and liberality of *menu* and style. The Serapis Anglers intend making another visit to Bures at an early date. The hon. sec., Mr. Charles Tibbury, tells me I must come down with them next time. We shall see, Mr. Charles. I may possibly be *cousined*.

THE *Daily Mail's* issue of June 19 contains the following: "During the tornado which destroyed the town of New Richmond, Wisconsin, last week, a horse was carried by the wind into a church steeple, and wedged between the bell and the wall and killed." [What oh! Mr. Cook.]

AN angler, returning from his day's outing in last Sunday's sunshine, after calling at various places, found himself wandering in the beautiful stretch of pine forest between Weybridge and Woking, where there are said to be four millions of trees, all as straight as scaffold poles. Happily he rambled along, chanting softly as he went an angler's lullaby (written probably by the Lychnobite laureate), a soft, sweet croon that set him dreaming of things that might have been and of joys to come. Ever and anon he would bump his head against a tree, until, tired out and weary of blundering from trunk to trunk, he sat himself down on a stump and sadly murmured, "Better wait till the crowd goes by."

TWO gentlemen, both afflicted with an impediment in the eye, ran up against each other in the street. "Why don't you look where you're going?" said one. "Why the dickens don't you go where you're looking?" retorted the other.

A SMALL bottle-nosed whale 11ft. long and 5ft. in circumference has been captured off the Essex coast, and says the *Daily Mail*, is now to be seen on the beach at Southend. It was surprised near the shore by some local fishermen, who managed to take it by angling it up in an old shrimpnet. Its vitality was so great that it lived for fifty hours after capture. The idea of tackling a ton of lively whale with a shrimp net does in the least impress its captors, who, says a correspondent, "would go for a sea serpent with a $\frac{1}{2}$ in. rope."

THE other evening I looked in on Mr. Saunders, the genial and courteous manager of the C.D.S., York-road, Battersea, famous for its fine show of stuffed fish, and famous also for its trained dog and pet donkey. "Twister," the dog, is a perfect wonder. He can waltz, pray, feign death, and to see him stand on his eyebrows is enough to raise jealous ire in the breast of any respectable tyke for ten miles round. "Ned," the moke, although a jackass, distinctly shows good sense, or rather, "excellent taste," by his preference for "Scotch and soda" and biscuits to oats and water; and yet one really cannot blame poor imitative Ned, as he is only following the bad examples set him by his more advanced brethren, not even for his attempts at "making eyes" at the young lady behind the bar, to whom he seems greatly devoted. I might add, she has charge of the biscuit box. The fish, most of them caught by Mr. E. Wilson, in company with John Keen, are really a fine lot, and well worth a visit, one case of four bream, weighing 18lb. 12oz., being one of the best lots I have ever seen.

LAST winter, the weed cutters in Fairford Park left a coil of rope hanging from the coping of the "Ivy" bridge. When they came again this summer they found a tomtit had built her nest in it. There are more kingfishers on the Gloucestershire trout streams than have been seen for years, to say nothing of herons and wild duck.

MR. W. H. ELSMORE, writing from Norfolk, says: "A club match came off at Brundall, on Saturday last, on the Yare, about twenty-four members competing. I saw a few of the baskets, and they were very light, and I understand the weight taking the first prize was only just on 2lb. One angler not competing (Mr. Markham) had a fair lot of bream and roach and one eel, in all about 14lb. I went out and had a few roach and one rudd, but they were no class. The gentleman who was reported last week as having taken 172lb. at Buckenham Ferry assures me that he captured them with tackle weighing 7oz. only; so I must withdraw my remarks about the net in his case. It would be an excellent thing if the Mundella Act was in force in Norfolk and Suffolk, as, if such heavy catches are taken out of the rivers in spawning season, we shall be sure to feel the effects by loss of sport in the course of time. It is bad policy to kill fish in the breeding season." [Hear, hear, W. H. E.]

IN spite of lack of rain, &c., some of the knowing ones who made early calls on the fish on June 18 found them at home, and not altogether indisposed to "receive." I hear that Mr. Cecil (Brompton A.S.) had a nice take of bream from the Medway, among them one of 3lb. 4oz.—not a bad opening to the season. Mr. Hills, of the same club, also had some from the same river, while Messrs. Briggs and Dugate, nearer home, showed tench up to 2lb. Their chairman promised me a few words about their dinner, but he tells me this morning he enjoyed himself so much that he is unable to give a coherent description. That's the beauty of extensions till 2 a.m.; some people are satisfied with 12.30.

"A PIKE of unusual size," says 'Straw Hat,' "has been observed in the Avon, near Evesham. The monster may be occasionally seen sailing along to Charlton weir-pool. Several have had a try for him. One man went for him with an anchor, baited with a dead sheep; but he broke one of the flukes, and sailed off again. Another tried with a boat-hook (dry fly fishing) with his wife's new hat, trimmed with scarlet geraniums; but nearly lost his life in swimming back. The *habitat* of this giant is in the narrow part of the river (40yds. wide), and such is the size of the pike, that he has to go to Charlton weir-pool, where the river widens out, before he can find space to turn round. He tried a somersault the other day to get round, and fell across stream, blocking the channel until he got back into the river again." [I'll have this little beauty on my roach pole.]

MR. H. A. ROLT writes: "It may interest those of your readers who fish 'Locke King's' water, at Weybridge, to know that for the future no tickets will, under any circumstances, be issued on Sundays. Anglers wishing to fish on those days must obtain their tickets from Mr. E. M. Synge, Eastlands, Weybridge, three or four days beforehand. Visitors will not be allowed in the grounds, or to accompany an angler, without a ticket, and the only means of access to the water will henceforth be by way of the gate close to the cemetery."

AMONG the fine trout recently taken on the Devonshire streams was a beauty of just over 4lb., landed from the moorland waters of the Dart, by Mr. S. R. Slade, of Croydon. The same rod, in company with his brother, killed three on another occasion, weighing 9lb. together.

LADIES will again be to the fore in the sports competitions at the Aquarium which commence in July. This time the bicycle will be set aside, and the fair competitors will restrict themselves to foot races. With bright costumes, for which special prizes will be given, they should prove attractive. By the way, if you wish to travel from "Cairo to the Cape" in twenty minutes pay a visit to the Abvrium.

I MEAN to follow "Squid" about wherever he goes. My camera obscura saw him at Deal, on June 18; but whether it was my presence, or that his time was so much taken up by the late hon. sec. of the B.S.A.S. he did not get time to bathe I don't know—but he did not renew his natatorial ebullitions.

MR. W. HOWES, of the Bull Hotel, Barton Mills, Mildenhall, writes to the effect that the River Lark "is very full of roach and dace—more so than he remembers for many years. Rain, however, is needed before sport can be considered good. A gentleman staying at the Bull (Mr. Perkins) is having fair sport among the dace with the fly. Next to the fly, caddis is the best bait to use on the Lark. In another fortnight the roach (which were late in spawning) will be in better condition." [Thanks, Mr. Howes; I hope to sample them at an early date.]

WHILE on the subject of the Lark, I may say that I have my new season ticket, without which no person may fish the waters. Mr. Howlett (the general secretary) informs me that season tickets are 5s.; weekly tickets, 2s. 6d.; and day tickets, 1s. 6d. He also says "there are quantities of good fish all along the stream; water rather low." Tickets may be obtained from Mr. Howlett, 40, High-street, Newmarket (general secretary), or of the following branch secretaries: Charles Brown, Mill-street, Mildenhall; A. E. Kemp, 2, Buttermarket, Bury St. Edmund's; W. Howes, Bull Hotel, Barton Mills; J. W. Challice, 40, High-street, Newmarket; G. Hook, Red Lion Hotel, Icklingham; G. Fitch, Plough Inn, Icklingham; C. Crocombe, Crown Inn, Icklingham.

Oh! club reports are my delight.

Oh! secs. take warning strong:

Don't sample the malt before you write,

Or else you'll write right wrong.

And don't—do not put "inst." for "nlt.,"

Or folks will read and grin.

Oh! please take note, or take result—

Your copy won't go in!

MY friend, Mr. E. Hesse (of the Gresham) says he has had a few days with the May Fly, but is "looking forward to the much-abused coarse fishing, and hopes to capture some good dace." He also asks me to note that he has removed from Chisenhale-road, E., and taken more commodious premises at 9, Canal-road, Mile End-road, E. It may not be generally known that Mr. Hesse (fish passerer) is the inventor of the "natural eye" which he uses when mounting fish.

"Carp," says the *Portland Oregonian*, "have become so plentiful in the sloughs along the Columbia that fishermen have offered to supply farmers at Scappoose with any desired quantity for manure at five dollars per ton. No one can with justice call the carp a worthless fish after that. As tending to show how numerous carp are in places, a farmer states that a few days ago he was crossing a slough with a lot of green grass in his cart. The grass slid off into the water, and the carp came around and began eating it. He jumped into the waters with his pitchfork to throw the grass back on his cart, and a regular 'pitched' battle took place between him and the carp for the possession of it. The carp ran against his legs and nearly threw him down, but he worked away like a Trojan and managed to save about half of the grass, and with it pitched about half a ton of carp into the cart. The rest of the grass was eaten by the carp he did not catch. He was on his way to the city, and the grass was intended as a lunch for his horses. When he arrived here the carp among the wet grass were all alive and kicking, and he sold the lot to a Chinese fish-dealer for two dollars and a half. He thinks of repeating the experiment the next time he comes to the city."

"If I'm not home from the club at ten o'clock, don't wait for me, wife." "No, I'll not wait for you. If you're not home I'll go for you." DRAGNET.

NO MORE BULKY FISHING BOOKS. PALEY'S TACKLE AND FLY POUCH.

CLOSED.

WILLIAM BIRKET, Lord Street, PRESTON.
Wholesale Agents: S. ALLCOCK & CO., REDDITCH.

Length 5 inches, Width 4 inches.

Has nine compartments for keeping Casts, Flies, and Hooks, and, though holding a large quantity of tackle, takes up very little room in the pocket, and, having turned down leather flaps, always keeps closed. It has solid leather backs and waterproof vegetable leaves.

Price—No. 1 size, 1s. 7d.; No. 2 size, 2s. 6d., post free, from all Fishing Tackle Dealers, or

The Best Weekly Paper for the Family Circle is the WESTMINSTER BUDGET.

32 Pages of Letterpress and Pictures.

PRICE 3d.. by Post 3½d.

THE WESTMINSTER BUDGET is an Illustrated Weekly Newspaper that can be read and enjoyed by the senior and the younger members of the household.

IN THE WESTMINSTER BUDGET the Week's News is epitomised in a concise and readable form, accompanied with Illustrations.

Special Articles on current topics.

Cartoons by the popular caricaturist "F. C. G." in every issue.

Illustrated Reviews of Books are given weekly.

A page is devoted to Dress.

"Dumb Things All" are dealt with.

Short Stories and Chess are always provided.

The Stage, the Church, and the Law are also regular features.

There is a Page for the Children.

THE WESTMINSTER BUDGET is specially suitable for sending to friends abroad or in the provinces.

PRICE 3d., by Post 3½d.

May be obtained of any Newsagent, Bookseller, at the Railway Bookstalls, or from

TRADE MARK (Regd.).

P. D. MALLOCH, Perth, N.B.,

Manufacturer of every description of

FISHING TACKLE SUITABLE for ALL PARTS of the WORLD.

MALLOCH'S SUPERIOR TROUT RODS.

Unsurpassed for Superiority of Workmanship,
Balance, and Casting Power.

10ft., in 3 pieces, with spare top, 26/-, 28/-, 34/-.
11ft., " 28/-, 30/-, 36/-.
12ft., " 30/-, 32/-, 38/-.

With cork grip, 6/- extra.

11ft. in 2 pieces, with spare top,
snake rings and cork grip ... 40/-.

SUPERIOR GREENHEART SALMON RODS.

18ft. steel snake rings, steel revolving
top rings, double brazed, waterproof fitted,
rubber button, &c. The very best Rod
that can be produced ... 67/-.

16ft. Rod, same as above, 57/-.

Very large assortment of Salmon, Grilse, Sea
Trout, Loch and River Flies, for the Scotch
Lochs and Rivers, all tested patterns and
beautifully tied.

THESE FLIES HAVE OBTAINED HIGHEST AWARDS WHEREVER
EXHIBITED.

MALLOCH'S Patent CASTING REEL

(Improved Pattern).

MALLOCH'S PATENT CASTING REEL.

Improved Pattern, in Gun-metal or Aluminium. The greatest boon to anglers yet invented for Salmon, Mahseer, and Trout, and all kinds of coarse fishing; unsurpassed for long distance casting; simple, and easy to learn. Rods and lines specially suited for these reels

MALLOCH'S

PATENT ADJUSTABLE BRAKE REEL.

In Gun-metal or Aluminium. The brake is easily operated by the hand, whereby the check can be regulated at will by simply turning the milled disc on spindle. This should prove a great advantage to anglers, as the check can be regulated without having to take the reel to pieces, as in the case of the ordinary reel.

MALLOCH'S PATENT FLY CASES.

For salmon, grilse, sea trout, and eyed flies of all sizes. Handy and compact, each fly secured by neat and effective arrangement.

Malloch's Gold Medal Salmon and Trout Reels.
In Gun-metal, Aluminium, Ebonite, and
Cocus Wood. Made in 18 different sizes.
ILLUSTRATED PRICE LIST FREE.

Telegrams: "MALLOCH, PERTH."

PISCATORIAL SOCIETY.

THERE was a big budget of successful angling experiences forthcoming at Monday's meeting, when Mr. Robert C. Blundell took the chair, and genially presided over a large company of members. First and foremost came a report from Mr. Chas. H. Wheelley of a grand take of chub a friend and himself had made in the Thames on one rod, using it alternately. This was on Saturday afternoon, and something like 50lb. weight of the loggerheads went into the well, the heaviest fish being one of 4lb. 2oz. The same member also related his experiences in Ireland (twenty-five miles from Sligo, to be a little more exact), dapping for trout. Despite the calm weather (the worst condition for fishing of the description named), he had had a most enjoyable time, getting a goodly number of fine fish up to 4lb. in weight, the latter with the dry fly. Mr. H. Harden, who as an exponent of dry fly work has few superiors, stated that he had been prevailed upon to take a lesson in Thames trouting, and with so enthusiastic and fortunate a mentor as Mr. J. E. Evans he made a most promising *début*, taking a two-pounder, which was returned. Mr. Harden described the *locus in quo* (Pangbourne) as an "angler's paradise," and expressed his intention of paying the place a second visit at the first opportunity. Mr. J. E. Evans himself took a trout of 3lb., which was also put back to grow in stature if not in wisdom. From the Uxbridge water more trout had been taken; in fact, they were just beginning to come on. Mr. H. Marks had one of 1lb. 15oz.; Mr. Preston Gardner a 2lb. 4oz. fish, in fine condition, and a brace of chub; Dr. Ogier Ward a mixed bag with the fly; Mr. Neville Davis a brace of chub; and other members had coarse fish. The roach, however, have hardly got over spawning operations, and are not fit to take as yet. Mr. H. P. Thompson, who had been on a holiday in Wales, had done well with trout. Dr. Chas. S. Patterson told an amusing tale of his "chasing" the May Fly, wandering hither and thither in search of a spot where there was a rise. First the fly was up and the fish were not taking; then it had been on, and the fish had fed; and lastly, the fly was over, and he was too late. The largest bag the doctor had heard of as being made was one of forty brace in a week with two rods, on the Kennet, all fish being over 1lb. 12oz. Dr. Patterson had, notwithstanding his hurrys, fair sport, and actually hooked a trout, which, when it felt the steel, skimmed across the water and jumped out on to the opposite bank to that from which he was angling. It then broke loose, and wriggled back to its native element again! Mr. H. H. Brown gave an account of his capture with fly of a splendid Colne trout of 5lb. 8oz., on private water above the society's Uxbridge fishery. The same gentleman also had several brace of smaller trout, and numbers of chub. Finally, the chairman gave a general description of the prospects of trout and coarse fishing at Uxbridge, and a most enjoyable evening was brought to a close by the toasts of "Absent Friends" and "The Piscatorial Society" being drunk with the usual enthusiasm. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Holborn Restaurant on Wednesday, June 21, Mr. H. W. Lane in the chair.

Mr. R. H. Wood reported having been fishing at Southwick with Peacock. On June 17, he and Mr. Minchin took, off the Billy Buoy, five score of pout, and one pollack, 3lb., and, further off, some plaice and dabs, a "nuss," and a decent crab; and trailing home, Mr. Minchin took a bass, 1½lb. On June 18, starting in the middle of the night, they started fishing at Loo Gate about 5.30 a.m. The boatman took conger, and Mr. Wood took bream (sixteen, up to 3lb. in weight). The best conger weighed over 32lb. There were nine conger altogether. Mr. Minchin took a nice lobster. In the evening the sea anglers saw a fair quantity of sand eels.

The chairman drew attention to an advertisement: "Wanted, a valet, accustomed to sea fishing, who can bait hooks, with a good character." The hon. sec. drew attention to the first action of the *Galathea*, sent out to Iceland to look after the interests of our trawlers, which vessel had captured three British trawlers fishing within the prescribed area.

Attention was drawn to Lord Heneage's notice to move the rejection of the Trawlers' Certificates Suspension Bill.

Mr. Bates showed a new lead link, which appeared much stronger than those originally shown some weeks back.

The question of protecting iron from the action of sea water was discussed, and the general feeling was that nothing would beat coppering by the cyanide process.

The usual vote of thanks to the chair closed the meeting. CHARLES S. PATTERSON, Hon. Sec.

GRESHAM ANGLING SOCIETY.

At the usual weekly meeting Mr. J. P. Connellan occupied the chair. Messrs. Atkinson and Nelson were unanimously elected members of the society. Two gentlemen were nominated for membership. Mr. Bentley again presented the library with two books, for which he was accorded the heartiest thanks of the meeting. Fishing reports: Mr. Emery, at Chesham, two brace, one brace returned, the fish kept were taken on the Alder, and weighed respectively 2lb. 1½oz., and 3lb.; Mr. J. Tayler ("Red Palmer"), two days in Hampshire, seven trout over ten inches in length with the May Fly, Alder, and Red Palmer; Mr. Chastoney, two brace of trout, Chesham, with the Alder and Grey Quill; Mr. Goodwin, seven trout from private waters, one retained, killing fly, the Cinnamon Quill; Mr. W. Meyers, one trout, private water; Mr. H. Canton, at Buckenham, bream and roach, total bag, 14lb.; Mr. Gibson, at Hertford, trout and dace,

returned; Messrs. Norman, Basten, and Maull, at New-haven, several dabs and wevers up to Gresham standard; Mr. Connellan, at Hertford, five dace, returned. The new book for chronicling the result of day's fishing is now at the Black Horse, at Chesham, and it is hoped that members will enter fully therein the catch, fly, state of water and atmosphere. The lantern lecture last week by Mr. J. Jeffery (known as "Straw Hat") was of a very interesting character. The attendance was very large, even for the Gresham, and the lecture was received with acclamation. Space does not allow of going into details, but every well-known spot from source to London Bridge was shown upon the screen. The lecture was interspersed with anecdotes and songs by the lecturer and his son. At the conclusion, a very cordial vote of thanks to the lecturer was passed. The usual toasts and a hearty vote of thanks to the chair concluded a very pleasant evening. ALEX WRIGHT, Hon. Sec.

ANGLERS' ASSOCIATION.

At the June delegate meeting of this flourishing association, held this week at the Cripplegate Institute, Golden-lane, City, Mr. W. H. Beckett presiding, three new clubs were enrolled. They were the Kensington Park A.S., the Slough Wanderers, and the Ashford (Hoxton) A.S. Representatives from forty-eight affiliated clubs attended the meeting, and in the course of the evening cheques to the amount of £90 were ordered to be drawn to meet current expenses. The secretary (Mr. R. Ghurney) reported that he had issued 500 railway privilege tickets to members in excess of the number sent out at this period last year. Several new hon. water bailiffs were appointed in connection with the association's fisheries, and a deputation was received from the Uxbridge Rovers asking the association to approach the Great Western Railway with a view of privilege tickets being issued from Slough, Uxbridge, and West Drayton. HON. REPORTER.

THE ANGLERS' BENEVOLENT SOCIETY. ANNUAL REPORT.

THE report for the year ending April 30, 1899, is brief but favourable, viz.: "Your committee, in presenting this, the nineteenth annual balance-sheet of the Anglers' Benevolent Society, cannot but congratulate the members of the society upon its continued prosperity. After distributing £268 in grants, there yet remains a balance in hand of nearly £600. It is to be hoped that increased support will be given to the society, to enable an increased amount of assistance to be given in deserving cases."

N.B.—Collecting boxes for the receipt of small donations will be supplied to angling societies desirous of placing such in their club-rooms, and may be had on application to the secretary of the Anglers' Benevolent Society.

The committee meet on the second and fourth Fridays in each month at the committee-room, Club Union Buildings, Clerkenwell-road, E.C.

THAMES ANGLING PRESERVATION SOCIETY.

[Extracts from the Report from the Diamond Jubilee Blue Book of the Society.]

NOTHING very exceptional has occurred in the way of stocking, but the work of preservation and watching has been actively kept up. Unfortunately, the continued apathy of those who should be most interested in supporting the keeping up of a standard head of fish for sporting purposes puts an undesirable limit to the work and efforts of the society, and, consequently, without adequate funds to do better, we must "cut our coat to suit our cloth." An admirable exception to this, however, calls for attention. The committee have the pleasure and gratification of acknowledging the special kindness of the Central Association of London Anglers in organising an angling competition at Amberley, Aug. 28, 1898, whereby an accretion of eighteen guineas was made towards our funds. The committee regret that the Anglers' Association do not make a grant such as they formerly did, and appoint delegates as of yore, seeing that the committee would gladly avail themselves of their co-operation and assistance both financially and advisory, as representing a large number of anglers resorting to the Thames, and participating in the advantages of the society's work.

FISH STOCKING.

No available opportunity for netting has offered during the year, but the committee are fully alive to the matter, and will embrace every reasonable chance of improving the fishery by such means. Owing to the kindness of one of our vice-presidents, Mr. R. B. Marston, a very acceptable gift of twenty large trout, from 3lb. to 6½lb. each, was secured; and under the personal care and attendance of Mr. E. V. Corrie, of Winchester, these fine fish (after being labelled in the dorsal fin) were turned into the river without mishap by the last named gentleman, between Kingston and Hampton Court. The committee have given full consideration to the question of purchasing stock fish, and after making due inquiry from various fish-outfitters, it was decided that the heavy expense, as compared with the proportionate return, would not justify the outlay of the society's moneys in purchasing the quantity of fish offered. The committee on this subject consider it necessary to reiterate the views expressed in the last paragraph of their appeal under the heading of "Objects of the Society."

The committee have been approached by Mr. C. H. Cook, of Elm-lea, South Stoke, Reading, as chairman of the Thames Re-stocking Association (founded at Kingston some two years since), with a view to promising pecuniary support for acquiring a site, erecting, maintaining, and

running a coarse and general fish culture establishment in some neighbourhood adjacent to the river Thames. After full discussion, the committee decided that no portion of the limited funds entrusted to them could in their opinion be properly devoted to the furtherance of such a scheme.

ILLEGAL FISHING, NIGHT FISHING, POLLUTION, UNSIZABLE FISH, &c.

The committee are pleased to report that owing to the excellent and cordial co-operation of the Thames Conservancy's officers with those paid by this society, aided by that of our honorary keepers in watching and preservation work, none but trivial offences have occurred during the past year, with the exception of one offender, who, having been previously warned, was prosecuted, fined, and convicted at Staines. The absence of similar causes of complaint, combined with the undoubted fact of the highly increased purity of the river, owing to the continuous and joint action of the county councils and the Thames Conservancy Board, is highly encouraging to the objects of the society.

PROTECTION OF SPAWN FROM SWANS, DUCKS, &c.

Thanks to the action and substantial assistance of the society's newly-elected president, Mr. H. L. W. Lawson, L.C.C., J.P., &c., the committee are enabled to report that the damage under this heading has fortunately this year been reduced to a minimum. The Lord Chamberlain, through Sir J. Ponsonby Fane, K.C.B., and in conjunction with the Dyers' and Vintners' Companies, has caused the removal of the barren swans (estimated at fifty) during the perch spawning season; and this has been done at a cost to this society of 2s. per swan per week, so long as the society considers necessary. The first birds were removed between Staines and Hampton Court on Monday, April 17, 1899, and the remainder next day (Tuesday), between Hampton Court and Teddington Lock; and it is proposed to keep them off four weeks as being sufficient. But in the event of the season proving cold, &c., the committee hope to confine these birds until such time as the ova shall have hatched out. Of course, this will mean further expense to be charged to our current balance (£154 5s. 7d.).

The committee have much pleasure in reporting that Mr. H. Osborne O'Hagan, of Hampton Court, on the application of the hon. sec., has most courteously and promptly issued instructions to his bailiff to take off the ducks belonging to him from the river during the coarse fish spawning season, and to do anything further that he can to help the society in the protection of the fishery. Mr. O'Hagan regrets his inability to join the committee in their deliberations, but has generously promised five guineas annually to the funds. Some ducks, fed and encouraged by a gentleman at Thames Ditton, are alleged to be wild, and so unable to be caught and honed.

Further precautions have been taken by means of placing wire netting round the perch spawn. This has been done by W. Douglas, the head keeper, assisted by J. Knight, of Kingston; Marsh, of Chertsey Lock, and members of the committee.

PROSPECTS OF THE SOCIETY.

Although not making the headway they would desire, the committee hope that another year's work will enable them to report more cheerfully on the appreciation of their efforts.

JUBILEE DINNER AND RIVER AND LOCK-KEEPERS' DINNER.

The former of these was held at the Holborn Restaurant, and the latter at the Criterion, Piccadilly. As marking an epoch an abbreviated account of the Jubilee dinner appears on page 20 *et sequitur*. At the river and lock-keepers' dinner, which was fully attended by the "guests," a very comfortable and pleasant evening was passed under the genial chairmanship of Mr. Alfred Nuthall, J.P. The expenses connected with the foregoing functions have been defrayed entirely and independently of the society's income, and consequently do not appear in the society's accounts.

OFFICERS OF THE SOCIETY.

The only material alteration during the past year was brought about by the election of Mr. Harry Lawson Webster Lawson, M.A., J.P., L.C.C., of 37, Grosvenor-square, London, as president, under the circumstances disclosed in Mr. Alfred Nuthall's remarks at the Jubilee dinner. The proposition having been submitted after due notice to the members of the committee, Mr. Lawson was unanimously asked by the executive to accept the presidency, and in most kindly terms consented to accept the office, and to do all that he could in future for the best interests of this old society. Mr. Alfred Nuthall, J.P., Mr. T. Crumplen, and Mr. H. W. Higgins, have each consented to continue in their respective offices of chairman of committee, vice-chairman, and hon. secretary and hon. treasurer.

H. WHITMORE HIGGINS,
Hon. Sec. and Hon. Treasurer.

LARGE THAMES TROUT (REAL AND ALLEGED).

"CONCERNING the large Thames trout as to which there is neither doubt nor mystery, viz., the 10½lb. fish caught by Mr. Gwynne Witherington, as stated in the *Field* of last Saturday, I omitted to add that the fish is on view at Rowland Ward's, 166, Piccadilly, where it may be seen by any who would like to study its fine proportions.

"We now come to the mysterious fish of 17lb. 3oz., as to which the dearth of details was deplored in the same number of the *Field*. Mr. Bambridge, of Eton, who has been for many years familiar with the Thames and its fishing, on hearing of this record monster, rushed off to Radoot Bridge to make inquiries, and found that Mr

Temple, of the Swan Hotel, knew absolutely nothing about it. He then pursued his inquiries elsewhere, and thus writes upon the subject:

"I have interviewed Mr. Wilton, the fishmonger, of High-street, Maidenhead, respecting the large trout, and he assures me it was a Thames fish, but the captor did not wish his name known. It was on view at Mr. Wilton's, and attracted considerable attention whilst lying on the slab. It was eventually purchased by Sir B. L., packed up, and sent to London—whether for eating or to be preserved could not be stated. As I wrote you from Radcot Bridge hotel yesterday, the proprietor there knows nothing about it; and, though he has tried to find out, everyone he asks in the neighbourhood is as much in the dark as he is."

"No other communication has reached the *Field* office about this trout, except a letter received yesterday asking whether it is not possible that the fish, after all, was caught at Billingsgate. To what has already been said upon the subject of large Thames trout, I may now add that there was at one time a considerable discussion about a 23½lb. Thames specimen which was shown at one of the exhibitions; but this was, after considerable controversy, generally pronounced to be an old salmon kelt. The newest claimant for high honours appeared in yesterday's *Daily News* as follows:

"Mr. Edmund Foster, Clewer Manor, Windsor, writes: 'In your impression of Saturday last I read the *Record* Thames Trout.' I thought, therefore, the following incident might interest you. About the year 1834, the late Lieut.-General Sir Samuel Hawker was staying here with my father. As he was fond of fishing, he made the acquaintance of a fellow angler, the late Mr. Batchelor, who then rented Black-pots, now in the possession of the Provost of Eton. They went out fishing together in a punt, and Sir Samuel Hawker caught a trout which, on being brought home, was put in the scales, and weighed 22½lb. Sir Samuel Hawker married a daughter of the famous Mrs. Siddons, and was a personal friend of William IV. He sent the trout as a present to the king. Sir Samuel Hawker's fishing rod is still in my possession."—RED SPINNER in the *Field*.

Notes from the North.

ANGLERS on some of the upper sections of the Dee are terribly disappointed with the results of the past season. Barely 200 fish have been got on the Glentana water, which in an average season usually yields 600 or so. Some of the far inland beats have even fared worse in proportion to their size and cost.

If this be the case with Dee anglers, what can it be with others under less advantageous circumstances? It has been the worst season experienced during the past decade, if not on record. Yet on certain sections, such as the Dess, Dnrris, and Woodend waters, anglers have little to complain of in the way of sport, and, on the other hand, have every reason to be gratified at the good things which have come their way.

The cost of the spring season on the Glentana Dee waters is put down at £8 per fish up to the end of May. On the Cambus O'May waters the cost is put down at £11 per fish. Yet both on the Glentana, Cambus O'May, and Ballater waters the cost in an average season is not more than 30s. per fish at most.

The Invercauld private Dee water cost £450 till the end of May; and if thirty fish have been killed in the aggregate since the opening, at least not more than that have been got. This is at the rate of £15 per fish, and is probably the dearest-rented section for its worth on the Dee.

Anglers have themselves to blame for high rentals. It is purely the law of supply and demand, and not a matter of fish. If they will chase the proprietors with big offers, and even blank cheques, the proprietors would be fools to refuse; and yet many do not let to the highest bidder.

The river Lossie is so reduced in size that one can scarcely credit that a fatal accident was possible in any of its pools. Yet James Rogan, a young lad, lost his life last week in the Bruceland Pool near Elgin. He had been angling, and coming to the pool the temptation to bathe induced him to strip and plunge in, when he cramped and sank almost immediately.

A strange salmon case was decided last week by Sheriff Robertson, which will stand as a common-sense judgment at least. John Duncan, Aberdeen, was fined, at the Chester Police Court, £15 10s., including expenses, for having in his possession a salmon during the close time. He bought the salmon from Anderson, who, when the case arose, asked him to plead guilty, saying he would meet all expenses to keep his name out of it, but he had since then refused to do so, and hence the present action.

Sheriff Robertson, in deciding in favour of the defender, said: "It was an illegal transaction to deal in salmon, and it was wrong to impede the course of justice by pleading guilty so as to save Anderson. The court cannot now lend itself to enforce a counterpart."

The inter-university athletic contest between Edinburgh, Glasgow, and Aberdeen Universities was revived at

Aberdeen on Saturday, when the meeting was a brilliant success. It is a quarter of a century since they were last held.

On the Don some excellent baskets of trout have been got during the past season—for the season is now practically over for the fly fisher. Some two or three 6-pounders are among the few and far between heavy fish got in the middle reaches, while quite a number of 2, 3, and 4-pounders have been met with.

The Aberdeen Rock anglers are having a good time of it. On Saturday forty competitors entered for the association's trophy, which goes to the highest aggregate made by teams representing the four fishing districts. Newtonhill scored 83½lb.; Portlethen, 72½lb.; Cove, 62½lb.; and Muchalls, 35½lb.

The supplies of salmon and grilse show a slight improvement along the east coast netting station, but there is a falling off again, on the other hand, on the river and estuary waters, chiefly on account of the drought.

The Shin has received 2000 salmon fry from the Duke of Sutherland's hatchery at Brora. Dr. Almond, Edinburgh, the angling lessee, pays the initial expenses of transport.

The Deveron District Board are to erect a salmon ladder on the burn of Turriff; but, meantime, the final steps in the matter have been deferred till next meeting.

A large school of whales appeared off Thurso sands on Monday morning, all of the bottle-nose species. Great excitement prevailed as the whales were driven ashore on the sands. The sea was red with their blood as they lay floundering, and no less than 104 were captured. Most of them measured 20ft. in length. What value they may bring has not been yet ascertained. The catch lies close to the fisher part of the town, and if no external demand be made for them the authorities are dreading that they will be run into considerable expense by having to remove the carcasses for sanitary reasons. Such a scene was never witnessed in Thurso before. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A special meeting of the committee of the Birmingham Anglers' Benevolent Society was held on Thursday evening last, June 15, at the headquarters, to arrange finally when and where the annual contest should take place in aid of the funds of the society. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The meeting was fully attended. After the minutes of the previous meeting had been passed, the secretary read a number of letters bearing upon them, which went to show that certain of the minutes would have to be rescinded. In the first instance, the railway companies objected to running a half-day excursion on the Saturday. This matter was considered first, when it was unanimously decided to have a day excursion, and hold the contest on Monday, July 10. Letters were read showing that there was no accommodation at Bredon for a large number of contestants, and this year Mr. Mealing, of the Ship Inn, Pershore, could only find contest ground for 300 contestants, and as the mowing grass at Wyre would perhaps not be cut by July 10 it was decided to select another place, when, after a little discussion, it was decided to fish the contest in the river Severn at Tewkesbury, and that the Old Black Bear should be the headquarters during the contest. No fish under the association scale to be weighed-in, and that only coarse fish be weighed-in. Anyone taking trout must return them to the water with the least possible injury; anyone retaining them without a trout licence will run the risk of being prosecuted. The contest will be open to all members of the Birmingham and District Association. The entrance fee to members of the A.B.S. will be 6d., and to non-members, 1s.; the extra sixpence from non-members will go towards purchasing prizes. The competition for the challenge cup and silver medal will be again confined to members of the A.B.S. Any member of the Birmingham Association wishing to join the society, and compete as a benevolent member, must be enrolled on the society's books on or before June 30 next. A circular has been sent out asking for prizes, and the contest tickets have been sent out to the whole of the clubs. Handbills giving the train times will be issued in due course. Contest rules will be issued on the morning of the contest. The Victoria Society opened the season by fishing a contest in the canal at Alrewas on Monday. A good number of the members took part, but sport was of a very poor description, as only about six of the members succeeded in taking prizes, the successful six being in the order named: E. Wilcox, T. Squelch, J. Thompson, G. Scott, E. Scott, and L. Hunt. The secretary of this club informs me that up to the present only the pound above the junction has been emptied. The Manor Angling Society, which meets at the Manor Tavern, Clifford St., Aston, have again rented about one and a half miles of the Fazeley Canal, starting from the basin near the Navigation Inn to Salts Bridge. This water is splendidly adapted for contests, as it is near to Birmingham, and contains a good quantity of roach and perch. Any club wishing to fish a contest in this water can do so for a small sum, according to the number of members. All information can be obtained from the secretary, Mr. G. Jackson.

The St. Paul's Society held their general meeting on Tuesday evening last. About 100 members were present. The balance-sheet of the society was presented by the secretary. This went to show that the club, after paying all liabilities, had a balance of over £47 in hand. £5 of this sum was voted for a bye contest, and the sum of £6 was also added as the proceeds from the Christmas ball and concert. Other prizes were promised from one guinea downwards, and it was decided to fish the contest in the Avon, at Defford, on July 9 next. Mr. F. Hughes was appointed referee. Some hundreds of our members turned out on Saturday and Sunday last, but from all parts comes the report that the fish were dead off the feed, and that very little was done. On Sunday we had heavy rain, which, no doubt, will make things better. The roach in the Avon are anything but clean, and it will be some little time before they are fit to take.

FROM DERBYSHIRE.

The week's angling on Derbyshire streams has been good generally, taking into consideration that the fish have been pretty well glutted with their feast on the May Fly lately. Fortunately, after the long spell of warm, dry weather, plentiful and most welcome rain has fallen within the last few days, which has freshened the waters and wakened up the fish considerably. The streams are now in fine condition, and the trout are rising freely in places in the early and the late times of the day. Fly angling continues fairly satisfactory, and bottom fishing has greatly improved since rain fell, and both trout and coarse fish have been taken in considerable numbers. Anglers are numerous on most of the streams, and most of them appear to have enjoyed tolerably good sport, and some of them have made really excellent creels. The middle and lower lengths of the Dove have furnished nice lots of fish of various kinds to fly and bottom fishers. Some very fair baskets have been made on the Dovedale waters, and there, as on the higher lengths up to Beresford and Hartington, the angling, as a rule, has been fairly satisfactory. Sport on the neighbouring Manifold has improved since the rain fell, and several decent creels have been made in places, both on the open and the private waters. Anglers who have been out on the Fenny Bentley stream have taken a few nice lots of fish, chiefly by fishing under the trees and bushes. Fly fishing on the Wye has been on some days fairly good. On the Ashwood Dale, Wye Dale, and Miller's Dale lengths, and on the Cresbrook and Monsal Dale waters, decent creels of good-sized fish have been killed; and tolerably good sport has been had on several of the reaches between Ashford and Bakewell. Artificial fly fishing on the Bakewell and Rowsley lengths has been moderately good, and several fair-sized creels have been made by anglers there, of which on most days there has been the full number allowed. A few fishermen have had some pretty sport on the High Peak tributaries of the Derwent, in Edale, Hope, and Ashop Dale. Small creels only have been made, as a rule, but they required both patience and skill. On the upper reaches of the Derwent, between Derwent Hall and Yorkshire Bridge, several fairly good baskets have been made both by fly and bottom fishers, and some nice lots of fish have been killed on the Wood-lane and Bamford lengths. The Sicleholme, Hathersage, and Grindleford waters have had numerous visitors, some of whom have had tolerably good sport, and made fair baskets; and on the open and the private reaches between Stoke, Calver, and Baslow fly anglers have, on the whole, done pretty well. Most of the lengths of the Chatsworth waters have been well patronised, and the angling has been fairly good both on the Park lengths and on the lower lengths by Calton Woods, Beely, and Rowsley. With one or two exceptions—one of eight brace—no particularly good baskets have been made there by any of the anglers. Lower down, on the Darley and Matlock waters, most kinds of angling has been of a moderate description; a few fair baskets have been made, but not much, as a rule, has been done. Several decent lots of trout, roach, dace, and other coarse fish have been killed on the Holmesford, Watstanwell, Ambergate, and Belper reaches by fly and bottom anglers. Angling prospects continue good.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Coarse fishing opened last week on the Fen rivers and drains with every prospect of a successful season. The reports to hand show that dace, perch, and bream are very forward; but roach have spawned later than usual, and a few weeks must elapse before they are in condition. Most waters, however, are teeming with fish, and on some lengths of the Witham—which is the premier river in the Fens—the outlook is the best known for some years. On several of the minor drains the weeds will prevent a commencement of operations for the present; but when these have been cut there should be no hindrance to sport. The waters have suffered during the last week or two in consequence of the drought, but a change has now taken place in the shape of duller weather with congenial showers. There is an outcry amongst subscribers to the Forty-foot for better facilities for capturing eels, which are a veritable nuisance to roach fishermen at the beginning of the season. The present bye-laws of the Black Sluice Commissioners only permit these fish to be taken by rod and line, and the use of hives is now suggested.

FROM HULL AND DISTRICT.

The splendid weather since the advent of the season for coarse fish has caused our local anglers to be out in considerable force, and several streams have been visited, but the results have invariably been the same—a decided disappointment—for, although in most parts the conditions were favourable, yet the fish are too sickly to be allured by our ordinary baits, but very dainty in what they obtain, chiefly feeding upon insect life and the small shoots of weeds at the sides of the streams. It is full early on

our local river, the Hull, for successful operations amongst roach, although a few have already been taken in the top stretches with maggots and straw bait; and on the rivers Ancholme and Ludd with maggots. A nice catch of roach and dace is also reported from the Hull, at Aike Beck-end, with pearl barley, but the best fish were out of condition, being scabby. Some good perch have been taken at the hecks and eddies with the Maiden Dew, and in first-class condition, giving excellent sport; and several small pike have also been taken in the Wawne and Dunsell districts, and flounders and eels continue to be plentiful at the latter named places. The Duke of York Angling Society decided a match in the river at Wawneferry, but only had very moderate sport. The first three prize winners were Messrs. J. Collins, T. Tather, and G. Strond. The Horns Angling and Recreation Society also fished a match at Weelferry, Mr. Kirk Smith taking the first prize, and Messrs. W. Smith and G. Scott the next two. A few very nice trout have been met with in the top stretches above Hempholme Lock during the past week. Mr. G. Schofield, a member of the Central Hull A.S., showed a brace and a half, the heaviest scaling 1lb. 9½oz., and also another of close upon 1lb. Another good fish is reported from Minto Flatts, estimated to weigh about 2lb. A few splendid perch have also been taken whilst worm fishing at both Wawne and in the Dunsell district, scaling from ½lb. to about 1lb. each. Several matches will be decided by our local clubs to-day (Saturday) on various waters. The Albert A.S. and Stoneferry A.S. have selected the river, the former at Hull Bridge, and the latter at Weelferry. The fishing on the Market Weighton Canal from the river head down to the river Humber has, through the combined action of the Hull Amalgamated Anglers' Association and the Hull Preservation Society, been acquired for the Hull anglers, and a joint committee of the two organizations met on Thursday evening last to decide upon the terms of fishing, which I am informed is as follows, viz.: To members of the two organisations, and to residents within three miles of the canal, season tickets, 1s. each; and to all other anglers, season tickets, 2s. 6d.; daily tickets to be issued at 3d. each. The joint annual open match of the River Hull and Excelsior Angling Societies was held on the Ancholme, at Ferry Sluice, on Saturday afternoon last, when about 500 anglers availed themselves of the pleasurable steamboat trip down the river Humber.

FROM THE LAKE DISTRICT.

The lake district fishery conservators, at their recent meeting, had under consideration a petition for an alteration in the close time for trout and char. The memorial was largely signed by residents in Windermere and Ambleside, and asked that the season might begin on March 2, instead of April 1. A deputation was also in attendance to back up the appeal, their reasons being, briefly, that Easter fell in March during a great number of years; that the fish in Windermere were in the very best condition in that month—better almost than at any other time; and that at present there were often not more than ten weeks in the year when fly fishing could be enjoyed, April and May being practically the only two months there were. Other arguments were also adduced, and after considerable discussion the adoption of March 2 was carried, an amendment fixing March 15 as the opening day being lost. Since Sunday some showers have fallen locally. Vegetation has improved thereby; but rivers have not been affected, and are now, as a rule, low and decidedly dirty. Day fishing is almost out of the question, though a few good trout have been secured in the evenings, mostly from the lakes. On the Keswick waters Mr. T. Mayson has been successful in securing fish of 1½lb., 2½lb., and 3lb. apiece, and a couple of 4lb. pike. Other anglers, including Messrs. Spark, Hodgson, Elliott, Coulson, &c., have had trout up to 1½lb. each; and Messrs. J. and M. Stanley a few pounds each from St. John's Beck. On the Eden, the maggot used as an auxiliary to the fly has accounted for six or seven brace to the rods of Messrs. Armstrong, Howe, and others. On the Derwent, Messrs. Minnikin and others have enjoyed good sport, and some good perch are being obtained from the lakes, several fish of nearly 2lb. each having been caught. This weight, however, is much above the average of our lake district perch.

FROM LANCASHIRE.

The season was opened at Leigh with an open event, promoted by Mr. Dawson and his merry men, and partook of a sweep and added money. After a very keen contest the awards were as follows: First, W. Makin, Wigan; second, T. Hnrst, Wigan; third, A. Smith, Leigh; fourth, G. Wilson, Wigan; fifth, J. Makin, Wigan. The Urmston and Flixton Angling Society opened the season on the 17th with a match for Capt. Stott's cup, which was won by Mr. H. B. Spittle. The next contest is at Irlam, on July 1, six to eight. Just now the Flixton reservoirs are fishing remarkably well, and the fish are in good condition. The Lune and tributaries are not in order for good fishing, but, nevertheless, some good baskets are reported with the May Fly. In the Tobay and Sedburgh districts fishes of 5lb. to 8lb. are noted. Sea trout are running better, some getting into the nets. The Irlam and Cadishead waters are fishing fairly well, and some nice fish have been killed. The match fished there last week-end was not the success hoped for, but perhaps the water is not suitable for matches. The Ribble for some time has been so low and clear that good sport was out of the question. Migratory trout for some time have been in the tideway, waiting for a suitable opportunity to ascend. The open event promoted at Liverpool, and fished last week-end on June 18, was noted for two things, viz., that all the prizes go to the East End Association, and that the fish were very small. The first prize, seventeen fish, 8½oz., and the second prize, thirty-one fish, 8oz., amply confirm the latter remark. The

Merry Anglers are due at Althorpe on June 25 to fish their first match of the present season. The Wyre has been sadly neglected, very few rods being out and little sport obtained, the best, in all probability, being on the lower or tidal reaches. The water has been low and clear, but at St. Michael's some large fish are to be seen. From Warrington comes the old story of progress. The roll-call is steadily increasing, and promises to be bigger than ever. The opening of the season did not produce any great excitement, but probably the natives are reserving themselves for the annual holiday next week. The Kingfishers, Salford, are holding their annual piscatorial picnic in Cheshire on the 28th. The Horseshoe Angling Society, Pendleton, have altered the date of their second contest from July 8 to Aug. 19, so as not to clash with the match arranged by their neighbours at the church.

FROM MANCHESTER.

The Openshaw, Bradford, and Clayton Angling Society opened the season with a match, as usual, at Althorpe. The list of prizes was long and the articles themselves both valuable and useful. The amount of fish taken did not cause any undue excitement, being small, but the prizes were all awarded as follows: Messrs. G. Yates, R. Dyson, S. Maude, J. Wright, A. Sylvestre, J. Emmett, D. Renshaw, J. Renshaw, J. Fairclough, G. Shaw, T. Arnold, W. Renshaw, J. Warrender, A. Clark, T. Acton, and R. Duckworth. The event gave great pleasure to all taking part in any way. The Longsight Victoria A.S. fished their first match at Poynton last Saturday, when winners were found for the prizes as follows: First, F. Taylor; second, H. Abbott; third, V. Hothersall. Afterwards a smoker was much enjoyed by the members. Mr. Mayers, their chairman, made a few suitable remarks. The Duke of Cambridge A.S. are due at Althorpe on the 25th inst. to fish the opening match. The old Standard A.S. fished a match at Strines on the 18th inst., some unforeseen circumstances changing the venue from Chester. The following are the winners of prizes: First, Mr. J. Vignerot; second, Mr. Parker; third, Mr. Chadwick; fourth, Mr. Clark; fifth, Mrs. Chadwick. The match programme of this society will be rearranged. The next event is at Poynton, on July 16. The Moss Side Socials for their three days' fixture at Poynton—24th, 25th, 26th—will fish three hours each day; ground-baiting and blood worms not allowed. They are to have a special event at Coombs' reservoir in the near future. The Lancaster Angling Society, Longsight, open the season with a match at Poynton on July 2, for three good prizes; several other contests are arranged. This society is in a healthy condition, and expecting to see some excellent specimens adorning their club-room very shortly. The Bewick and District Angling Society have arranged to fish their first match on July 16, at Althorpe. The Stag Angling Society fish their first match on July 2, for a good list of prizes. The Clarendon Angling Society, now about forty strong, have fixed on Aug. 6 for their first match. The Derby Angling Society, Salford, fished their novice match last Saturday, the 17th, and had no difficulty in awarding all prizes as follows in order: Messrs. G. Hay, J. Bennett, T. Robinson, H. Hills, J. Peel, G. Beardsley, H. Redfern, and J. Walker. The contestants appear well satisfied with their maiden efforts. Mr. Roht. Yates, of Hulme, secured a nice pike at Northwich, in the flashes last week-end. Just now a visit to Poynton Pool will pay; several good catches are reported during the past few days, including large bream.

FROM NORFOLK.

Very little has yet been done on the Yare. A few boats have been out, but the catches have been very small. On the Bure and its tributary, the Ant, however, some nice baskets of roach and bream have been obtained. The fish have recovered from spawning more on the Bure than on the Yare, and in some places have fed very well. The May Fly season on the Wensum has been quite an average one, and some very nice trout up to 3½lb. have been taken. At Fakenham, on the Wensum Preservation Society's water, the limit catch has been obtained on two or three occasions, and the fish have been in excellent condition. All the waters of this district are in good condition, except, perhaps, that some rain would benefit the upper waters, but for the lower waters the roach and bream fishers do not want anything but a continuance of this fine warm weather.

FROM NOTTINGHAM.

Rain has fallen, and on Wednesday the Trent rose a few inches, though the rise was evidently destined not to last long. Anglers have, since my last, been out in force, and scores of chub have been creeled, chiefly with the fly, heaviest from Kelham and Sawley. Barbel were killed on Friday and Saturday at Wilford, with the caddis grub and worm, and admirers of the grub regret the scarcity of the supply. At Shardlow, on Tuesday, Mr. F. W. K. Wallis, Mr. S. Wallis, and Mr. T. Large caught a nice lot of dace with gentles, and the first named speaks highly of his recent angling holiday in Scotland. He bagged numbers of trout besides one salmon. Mr. H. Spray, Mr. E. S. Edgar, and Mr. T. O. Jones have used the fly with success at Shardlow, where, too, a friend of the president of the Wellington Society is reported to have (whipping) hooked and landed a handsome trout of 2lb. Chub are backward in condition, and barbel will show more sport later on. The rain has replenished the markets with lobworms, and these have done wonderful execution amongst eels. Several sweepstakes are in course of arrangement.

FROM SHEFFIELD.

The weather during the past week has been very favourable for angling generally, and with the occasional rainfalls the various waters have been kept in excellent condition for fly fishing. The Drake or May Fly season is to all intents and purposes at an end, and on several occasions anglers have had good sport with them. Amongst

the visitors to Derbyshire during the past week have been the Marquis of Granby, Col. Hardy, and Lord Rowley, who have been having first-class sport on the upper Lathkill. The upper reaches of the Derwent have been fishing in a first-class manner. The Chatsworth Club waters have furnished a lot of sport to the members, and the club waters of Darley Dale, Matlock Bridge, and the Bath have been well attended to with satisfactory results, a lot of nice fish having been killed, the most effective flies being Yellow Duns, Ash Duns, and Black Gnats. On Tuesday morning, Mr. G. James Eaton, of Matlock Bridge, had a very nice take on fishing at Matlock; the four I saw were splendid specimens of speckled beauties, the heaviest being 18in. or 20in. long, and just touching the scale at 3lb. A finer fish the most ardent angler could not hope to get. The other three ranged from ½lb. to 1lb., and are in excellent condition. Prospects for harbel fishing in the Derwent are said to be very rosy, for there have been a lot averaging from 5lb. to 7lb. each. Locally, trout anglers have had the best sport in the old Bradfield dam and in the Loxley river. The Damflash reservoir has been regularly visited, anglers going after the big fish it is known to contain. Lately some very good ones have been secured. The upper portion of the Sheaf has been yielding a fairly good amount of sport, the evening anglers accounting for two or three brace of fish generally weighing about ½lb. each. The coarse fishing season opened last week, and has been warmly welcomed by the thousands of Sheffield anglers, and the opening trips of the season last week-end were extensively patronised, numbers going to the well-known resorts in Lincolnshire and the neighbourhood of the Wash. In some places the season has not opened as nicely as could have been wished, and so far the best sport in the Witham has been obtained amongst the hream. Prospects for the Trent are of a first-class description, the spawning season having been a very successful one, and already roach, chub, harbel, and dace are in a very forward condition.

FROM WORCESTER AND DISTRICT.

On Friday numbers of coarse fish anglers lined the banks of some of the streams, Severn, Teme, and Avon being about equally patronised. The close season was over, and they were anxious to try their luck. On the 17th and 18th inst. there were several competitions. On Saturday afternoon the Crown Inn Club fished their first contest of the season at Kempsey, in the Severn. Nearly all the members turned up. The weather was exceedingly hot, the take of fish small, and not all the prizes won. A capital smoking concert finished up the evening. On the 18th inst. the Nag's Head Club fished their contest in the Avon at Twynning Fleet. A large number of the members competed. Fish quite off the feed, but the eels were biting freely, and nearly all returned home with weighty creels, some of the eels large. All the prizes were won. — Dolphin, first; A. Glover, second; C. Palfrey, third; H. Robinson, fourth; W. Palmer, fifth; A. Clark, sixth. The York House Club fished their contest in the Severn at Lenchford, whither they journeyed by steamer, the latter part of the contest being fished in pouring rain. Here, again, eels were well on the feed, and but few fish taken. Mr. W. Young was first, and with others weighed in a fine perch, 1lb. 4½oz.; Mr. Cotton second, with a nice lot. The Teme is very low and clear, but the weather up to Sunday last so hot and sunny that fishing between 9 a.m. and 6 p.m. was almost useless; in the evening fair sport was had all up the river with fly and maggot, and some very nice trout were captured, and one angler told me the grayling rose well at the Wickham. A few coarse fish, chiefly chub, were taken, but roach and dace seem quite off feed, not having yet recovered from their breeding duties. The Evesham Fish Preservation Society, which has done good work in that portion of the Avon, held their annual meeting in the Town Hall on Friday evening, the chair being taken by Mr. E. H. Wadams. E. Rudge, Esq., was elected president for the coming season; Messrs. Jas. Faulkner, J. Swift, and J. W. Hopkins, vice-presidents; Mr. A. H. Sharp, treasurer and hon. sec. Matters of interest to the association were discussed and complaints made of the way the boats were constantly occupied by strangers last season—persons who were friends of non-resident members—and it was proposed to exclude anglers from Birmingham and other places, and confine membership to the district. The matter was discussed at some length, and finally referred to the committee. The angling clubs of the town are both in a flourishing condition, and some important contests are being arranged for. Salmon fishing has been somewhat better. A large fish or two and some nice gillings have been taken by the nets between Worcester and Tewkesbury. The water in the Severn was very stale, but the heavy rain we have had since Saturday has freshened it up considerably, and we may expect better sport all round in the coming week.

FROM YORK AND DISTRICT.

The rivers had run low and clear, and the abundant rain-falls which have occurred these last few days have done good all round, and reports show that the rivers generally are now in excellent condition. At the week-end trout were rising to the fly in all directions on some waters, and good baskets were secured on Friday and Saturday by expert anglers. These remarks, however, apply only to a few favourite haunts, but the rains of Sunday and still more recently have improved the conditions all round, and encouraging accounts are to hand from the Harrogate Club waters, the Nidd, Wharfe, Ure, Derwent, and Esk, where something like remunerative sport is being enjoyed. Fresh run salmon and salmon trout have long been waiting to ascend the upper reaches of the Esk, and there seems promise of abundant sport. Fishermen out during the past week have made good catches. One great advantage of the rains has been to clear the weeds away from the

shallows. Morning and evening fishing is most successful at present, as the fish are then well on the feed. During the day it has been very warm. There is every prospect of good sport with coarse fish. There was a favourable spawning season, and chub, barbel, and dace are numerous and in fine condition. A number of York angling clubs have fished their first matches, and results are satisfactory.

ANSWERS TO CORRESPONDENTS.

W. GOLDSWORTHY.—The fish you sent us for identification is undoubtedly a dace.

Correspondence

A BLACK VOLE.

SIR,—Whilst fishing in the Onny at Plowden, Salop, a few days since, I saw a perfectly black water rat or vole. I had ample opportunities of watching it, and am quite sure as to its species.

It was the same size as the ordinary water rat, but absolutely distinct from the small black water shrew which I have occasionally seen. Is not this a rare occurrence?

On the same day I also saw a pair of birds, which, on reference to a book on birds, I found to be "Pied Flycatchers."

I have never seen these birds before, and I believe they are rare visitants to this country—anyhow, to Shropshire.

Thanking you in anticipation for inserting this letter.—Yours truly, JAMES M. ETCHES.

FISHING QUERIES ANSWERED.

DEAR SIR,—“Tyro” will find plenty of fishing at Keswick; in fact, it is the best location in Lakeland. Rivers Derwent, Greta, and St. John's. Derwentwater also fishes well, I believe. Of course, he does not need to be told that July is the poorest month for trout, unless he knows how to fish the clear water worm; then it's about the best.

“C. W. R.” could not do better than take his boys to this district, for the reasons stated. I should recommend him to advertise in the *Carlisle Journal* for farmhouse accommodation. The distance, travelling by Leeds, Carnforth, and Tebay, or per North-Eastern, through Bishop Auckland, will be just about the 150 miles limit from York.

Alfred H. Law's friends will not find any coarse fishing nearer Grauge than Windermere, where they will be able to get a stone or two of perch. For sea fishing they would be better fixed at Morecambe, soon reached via Hest Bank. I don't think, however, they will get much beyond plaice (tasty enough when quite fresh), as the mackerel, which are very lively at the time named, do not seem to patronise the bay in any great numbers. The Furness Railway are enterprising, and issue tickets on their system at single fares for double journey. I don't know that they concede more to fishing folks.—Yours, &c., H.

A YOUNG FRENCH FISH BREEDER WANTS A PLACE IN THE UNITED KINGDOM.

MONSIEUR,—Excusez moi de prendre la liberté de vous écrire. Je suis pisciculteur, cette partie étant très peu développée en France, je me trouve en ce moment sans occupation.

J'ai pensé que je ne pourrai mieux m'adresser qu'à vous, sachant que vous êtes en relations avec les pisciculteurs étrangers.

Je vous demanderai, Monsieur, si vous connaissez un pisciculteur ayant besoin d'un employé, ou quelqu'un désirant créer un établissement de pisciculture.

J'ai 18 ans, j'ai reçu une bonne instruction. J'ai suivi en 1897 les cours de Pisciculture de Monsieur Jousset de Bellesme, le directeur de l'Aquarium du Trocadéro. J'ai pris quelques leçons dans cet établissement.

Je sors d'un établissement que j'ai créé et dirigé avec la collaboration de Monsieur le Baron de Crépy, dans le département de l'Yonne.

J'y suis resté six mois. Je m'intéresse beaucoup à la pisciculture, je vous donne l'assurance Monsieur que je ferai tout mon possible pour bien faire et que mes efforts tendront à remplir convenablement l'emploi qui me sera confié.

Ayant étudié l'anglais au Lycée, je crois que je ne serai pas long à me familiariser avec la langue.

Ayez donc la bonté, Monsieur, si toute fois cela ne vous dérange pas de me répondre en m'indiquant où vous pensez que je pourrai m'adresser.

Recevez, Monsieur, mes remerciements, ainsi que l'assurance de mes sentiments dévoués. E. BEAUMÉ.

9, Rue Vauvilliers, Paris.
[We think it quite likely Mr. Beaumé's experience might be very useful.—Ed.]

TROUTING ON THE AMBLÈVE.

DEAR SIR,—Having a week to spare I thought I would pay a visit to an old haunt of mine in the Ardennes; so, bringing with me a friend, I paid a surprise visit to my old friend, M. Lagasse, of the Hotel de la Grotte, who is an enthusiastic angler and a first-rate host.

It was quite a pleasure to see again the hoary walls of the old Chateau of Monjardin rising on a pinnacle over the clear, sparkling waters of the Amblève, and anticipations of glorious struggles with the speckled monsters of that lovely river filled my breast.

To-day the May Fly was supposed to be up, but to me it seemed pretty well a failure. The trout rose in a half-

hearted sort of way, as if they really did not care whether they secured the fly or not. They seemed to have already gorged themselves to the utmost before my arrival on the scene, and although I secured a few nice fish I was not quite satisfied. Swarms of voracious dace seemed everywhere, running in size to about 2lb., and many of these fell victims to my trusty rod. The day has been a bright and oppressively hot one, and as the trout did not seem in a good humour I finally put up my rod, and my friend (who had been patiently reading on the bank during my angling operations) joined me in a glorious bathe in the clear, cool water, and we finally returned with an only partially filled creel, but with enormous appetites, to a really good dinner, to which we did ample justice.

I mean to be even with the trout before I leave. There were some huge ones, especially, resting contentedly beneath the shadow of a bridge which I mean to have out, even if I have to descend to the common or garden worm.

If any reader of yours wishes for a few weeks' quiet trouting in ten or twelve miles of stream, I can heartily recommend this place. It is a favourite resort in August, and is then crowded, but just now there is no one else here, and the river is at its best. M. Lagasse can put anyone up very cheaply (pension 5 francs, or 4s. 2d. per day), and the place can be reached from London for under £2; in fact, I only wonder that more anglers have not discovered it. Being in the heart of the Ardennes, with a wonderful grotto at the back of the hotel, with glorious hills to climb, and lovely drives all round, it is just the place for the angler who is also a family man to dump down his *ménage* and pursue his favourite avocation without any qualms. It is, besides, a paradise for the botanist and entomologist, and fireflies are actually to be seen now dancing through the myrtle boughs. It is, besides, very near to Spa (only about ten miles), and one can easily take the morning train to that gay place when paterfamilias finds it necessary to conciliate the other members of the family.

I am hoping that the weather will not be quite so bright to-morrow, and now beg to remain,—Yours faithfully, FRANK LEY, JUN.

RUBBER TUBE FOR SEA FISHING.

DEAR SIR,—Will you be kind enough to give me the names and addresses of the manufacturers of rubber tube for fishing bait? I have applied to several of the largest rubber manufacturers in the kingdom, and have failed to obtain what my customer requires, which is $\frac{1}{16}$ in. rubber tube, in light red, bright red, and blood-red colours, for sea fishing. I may say that I have also applied to Messrs. Allcock and Sons, of Redditch, without being able to obtain the article required.—Yours faithfully, GEO. G. BULLMORE.

A FISHERMAN'S PARADISE WANTED AND FOUND.

DEAR SIR,—In reply to “C. W. R.” in your last week's issue. I have been staying at a place which I consider a perfect spot for anyone fond of sea and coarse fresh water fishing; indeed, I do not know of any place in England which comes up to it. The lake, or ley, is about a mile and a quarter long, and the breadth varies considerably from about half a mile to a few hundred yards, and the depth from 1ft. to 10ft., the large reed beds forming splendid cover for the pike. The water is very clear just now, and one can often see immense eels swimming near the bottom; some I have seen must have weighed at least 3lb. to 6lb., and I am told there are some much larger. They are excellent eating, and afford good sport to those who like to fish for them. The shooting and fishing on the estate is let each winter, and no fishing is allowed after the end of October till the end of March, as the ley is famed as a duck preserve.

There is no other close time on this water, and fishing begins on April 1, and, strange to say, the pike are in very fair condition and fight very hard, the large fish often jumping right out of the water.

My best day I have had here was twenty-nine pike, hooked (with John Pepperell as boatman); greatest total weight, 49lb.; best fish during visit, 12 $\frac{1}{2}$ lb. I have taken several of 8lb. and 10lb., and a large number of about 5lb. and 6lb.—all spinning. No fish are retained under 3lb.

The largest fish are taken live baiting, and pike of 25lb. have been caught.

The largest fish taken spinning this year was by a lady, weight 17lb.

I consider it a very poor day if I do not get nine or ten pike.

The perch fishing is first-rate, and any number can be caught, either spinning with a minnow or fishing with worm.

The Rudd are very numerous, and are caught up to 2lb., with bait and fly, but are useless for eating, although the sea fishermen are glad of them for bait for their crab pots. The Rudd and perch give great sport for ladies and young people, and the pike and perch are excellent eating.

The fishing belongs to Mr. Cobley, of the Sands Park Hotel, near Kingsbridge, Devon, who provides most comfortable boats, and first-rate men, at 5s. a day. The fisherman is allowed some beer, but finds his own lunch. Most visitors, I believe, give them something extra, which is well earned. Fishing from the bank is 1s. a day, and I have taken fish up to 10lb. this way, but a boat is the best.

The Sands Park Hotel is the perfection of cleanliness, and Mr. and Mrs. Cobley do their very best to make their visitors comfortable. The cooking is excellent, and the charges are very moderate. Mr. Cobley was in the Yeomanry for over twenty-five years, and his father for thirty-five years before him. Mr. Cobley has a very nice pony and cart, which he lets, and will allow visitors to shoot rabbits on the ley shore, where they are very numerous.

A coach passes the hotel three times a day from Dartmouth and Kingsbridge, about seven miles either way, but the Kingsbridge road is less hilly and the roads are good for cycling.

The hotel is on the seashore, and a stone could be thrown into the sea on one side and into the ley on the other. It has been recently done up and the sanitary arrangements looked to.

I know of no place where one can get such good fresh water fishing close to the sea. There is always a breeze on the water, and it is indeed a delightful spot to spend a holiday at.

The sea fishing off the Start is often very good for bass, which are now very numerous, also pollack.

The mackerel and whiting are caught in great numbers, and there is nice boating and bathing. Good apartments are to be got at Torcross, the other end of the ley to the hotel, but people staying there have to take their chance of a boat on the ley, should there be one free, the visitors at the hotel, of course, having prior claim, or they can fish from the bank or in the sea.

I can thoroughly recommend Miss Beel, Bay View, Torcross, and Tom Hutchings as a sea fisherman. I enclose my card, and remain,—Yours truly, B. L.

TO TOUGHEN WASP GRUBS.

DEAR SIR,—I think “Joe” will find the following a simpler and better method of toughening wasp grubs:

Place the cakes as taken from the nest in any kind of inclosed box (tin preferred). Bake them in an oven (not too hot) from twenty to thirty minutes—in a baker's oven, after the bread has been withdrawn, gives the desired result. Should “Joe” bake the cakes himself (which I always do in a kitchen range oven), he should take out the cakes after baking about twenty minutes, open the skin covering of one or two of the grubs with a pin, and when they have cooled try them with a hook or otherwise. Return the cakes if not sufficiently tough.

When cooked the cakes should be placed separately on a slab or any convenient surface until they have done steaming.

Finally, they should be kept separated in a box in a cool dry place. They will keep for two or three weeks. “Joe” will find them most deadly when quite fresh.

The little pillars between the cakes should not be broken off for obvious reasons.—Yours truly, D. HANCOX.

CUMMINS'S BRASS OIL BOTTLE.

DEAR MR. EDITOR,—I send you a line to say that I used the above bottle during the few days I was out May Fly fishing. I carried it loose in a side pocket, and did not find any disagreeable leakage. Of course, it is necessary to screw it down carefully after using, but this operation is as simple as possible. I shall always use it when I go a-fishing, for I find it preferable to any glass bottle I have heretofore used. THE AMATEUR ANGLER.

[We gave “The Amateur Angler” one of the haudy little brass tube bottles for oiling dry flies brought out by Mr. W. J. Cummins, of Bishop Auckland, and are glad to publish his favourable report on it.—Ed. F.G.]

A QUIET PLACE FOR FISHING.

DEAR SIR,—If “J. H. D.” wants a quiet place, I think that this would suit him. Lostwithiel is on the river Fowey. He could have boating, fishing for trout and salmon, and, down the river, bass, pollack, &c. Fowey—i.e., the town—can be reached by boat when tides suit, by train in a few minutes; and I think that the shooting can be managed. If he would like to communicate with me direct, I shall be pleased to give him any information that I possibly can.—Yours truly, J. T. GEACH.

Fore-street, Lostwithiel.

FISHING AT TEIGNMOUTH.

DEAR SIR,—In reply to Mr. J. B. Reed, I see no reason why angling from the shore should not succeed at Teignmouth, and more so, in fact, than at many other places along the coast, owing to the large number of sand-eels which enter and leave the harbour. A special fishing for sand-eels has existed from time immemorial, and, my grandfather having owned a small house at Shaldon for years, mackerel and sand-eels (the latter known as “sprats”) have been from early childhood amongst my earliest recollections, and I have since those days made a sojourn of several years at Teignmouth. No less than six “sprat” seine nets were owned by Teignmouth master fishermen when I last resided there, these nets being about forty fathoms long (or 240ft.), 18ft. deep in the bunt or middle part, and tapering in depth towards the ends.

These nets require at least seven or eight men to work them, and if J. B. Reed is on the beach between the lighthouse and the Ferry Point one and a half hours before high water he will see the sprat seines at work, and if he has a jack bait kettle, can obtain a supply immediately the seine nets are hauled on shore.

These nets being landed near the Ferry Point, he should fish the last of the flood tide and the first part of the ebb with a large float on his line, able to carry a 3oz. or 4oz. lead, of the boat shape, cigar shape, or *Fishing Gazette* form, the lead 5ft. above the hook, the float about 8ft. above the hook. The bait kettle must be provided with a stout cord about 15ft. long, and be placed inside the point under water, the end secured on shore to a boat aground, or to half a brush handle or stont stick stuck into the sand.

Sand-eels are scraped from the “sprat sand” extending from Ferry Point seaward, and on the coarse gravel many mussels can be gathered, also on “salty” shoal. The pier nor the point fishing were neither of them developed

when I lived at Teignmouth, but I see no reason why they should not be by sea anglers. One very important matter is always to keep the bait kettle in the water, the cover, of course, carefully secured with a peg, or the action of the water may burst open the kettle. The ledger plan, with one hook only, may be used when the tide runs too hard for the float; weight of lead not less than $\frac{1}{2}$ lb., shape of a flattened pear, or fig, or tombstone, with one or two large nails driven through it. This combination converts the lead into a kind of anchor, good for a sandy bottom. Boat fishing is, of course, to be preferred to fishing from the land or pier. The Cox family were instructed by myself personally in the Channel Island method of pollack fishing many years since, charges reasonable, and as I applied the same method for the bass in Teignmouth Harbour, and hundredweights of bass have been taken, "J. B. D." can receive instruction from them in the use of the living bait, from boat or pier. The rod has been much used with success.—Yours truly, J. C. WILCOCKS.

HELP FOR OLD MERCHANT SEAMEN.

DEAR SIR,—As a consequence of the generous response which friends of the Royal Alfred Aged Merchant Seamen's Institution have made to the sympathetic and touching appeal of our patron, H.R.H. the Duke of York, at the late festival dinner of this charity, the committee to-day decided to signalise the occasion by increasing from thirty to 100 the number of aged seamen who, at the coming election before the end of this month, will be admitted to the Home at Belvedere, Kent, or to the benefits of an outdoor pension. This number has never before been reached, or even approached, in the annals of this truly national institution.

This will materially reduce the list, but will still leave out in the cold 138 approved and deserving cases of destitute seamen, between sixty-five and eighty-five years of age—applicants for this charity.

The committee, however, are encouraged to hope that, as a consequence of the lead taken by H.R.H. the Duke of York, a new era may have dawned upon our institution, when the liberal support of a generous public will enable it to deal effectually with the destitute and neglected condition of hundreds among our poor worn-out old British seamen.—I am, sir, very faithfully yours,

F. LEOPOLD MCCLINTOCK (Admiral),
Chairman of the Royal Alfred Aged Merchant Seamen's Institution, 58, Fenchurch-street, E.C.
8, Atherstone-terrace, Gloucester-road, S.W.,
June 14, 1899.

FORMALIN.

DEAR SIR,—In reply to "Salmo," formalin is not a good preservative for prawns.

I have experimented with this preparation very largely for all kinds of baits, and, though I have arrived at a mixture which preserves minnows, gudgeon, &c., retaining their natural appearance and colour, I find in every case that prawns lose their colour where formalin is used. "Salmo" cannot do better than wash the prawns in salt, drain thoroughly, and bottle in pure glycerine.—Yours faithfully, J. E. MILLER.

Northern Anglers' Depot, Leeds.

FISHING WANTED.

DEAR SIR,—In reply to "C. W. R.," there is no occasion for going 150 miles. Askern should answer his purpose well. There is good lake fishing to be had there; boats, beautiful scenery, and good accommodation to be had on reasonable terms. The Swan Hotel is all one can desire, and most of the inhabitants cater for visitors. I shall be pleased to give "C. W. R." any further information.—Yours faithfully, J. E. MILLER.

Northern Anglers' Depot, Leeds.

LOCH SHIN AND ITS SALMON.

DEAR SIR,—The "remarks" of "W. B." in your number of June 17, in which he criticises the article by "J. W. W.," seem to call for some comment.

The gist of "W. B.'s" argument appears to be, so far as one can make out, that it is not the case that the rivers Fiag, Terry, Carr (not "Curry"), &c., were originally destitute of salmon; that they were doubtless originally tenanted by them, but that they had been entirely destroyed by the operation of sheep washing, subsequent to the introduction of sheep farming in the Highlands early in the present century.

Passing over the obvious confusion in the mind of the writer between "sheep-smearing" and "dipping," and the peculiar idea that the latter had any effect in enabling sheep to withstand the rigours of winter, let me ask "W. B." whether he asserts that these rivers were absolutely destitute of all fish life. Apparently he does assert this: "Every living thing was killed outright." Then, according to "W. B.'s" theory, there was not a brown trout left in these streams below the washing places, which, as Euclid hath it, is absurd. He next assumes for the purpose of his argument that with the decadence of the sheep farming industry these operations ceased, and so the rivers regained their pristine purity; but surely he is aware that, with the exception of such lands as are now under deer—and this involves only a portion of the area in question—this industry, with its concomitant dipping, goes on to this day.

Again, why was this particular region of very limited extent the sole example of this extraordinary extinction of the *Salmonidae*? Surely "W. B." knows that the sheep farming industry extended, and extends, over the whole length and breadth of Scotland, and yet we do not find their wide-reaching and disastrous effects elsewhere. It is not the case that "that class of farming had therefore

to be to a very large extent abandoned." If "W. B." takes the trouble to ascertain the acreage still under sheep in Sutherland he will find it still a very large industry, and this, too, in the very district to which he refers.

In conclusion, let me once more emphasize the necessity of absolute exactness in scientific discussion. "W. B.," for example, mentions the Inver among the rivers which are "unique" (*sic*) "as regards their falls." I have fished every yard of the Inver for twenty years and more, and I have never seen these falls yet; and as far as the Inver is concerned it is not "the feeders of those great lakes which are the breeding grounds of the *Salmonidae*" (if by the latter he means *Salmo salar*), for by far the greatest number spawn on the well-known redds of the Inver itself, those passing through Loch Assynt to the Loanan being a very small proportion of the whole.—I am, &c., ALIT-GARREH.

[As elsewhere noted there were some errors in the printing of "W. B.'s" article last week, for which he was not responsible, as there was not time to send a proof.—Ed.]

FISHING AT NEWQUAY, CORNWALL.

DEAR SIR,—I am not aware that anyone has ever done much, if anything, with rod and line at Newquay from pier or rocks, acquaintances having always fished from a boat. There is no lack of fish, large pollack being taken with the Plymouth spinning-eels on the rocky ground, and the usual flat fish on the smooth ground. Bass might be caught occasionally, I doubt not, if anyone persevered after them; but for bass and pollack fishing to be combined with smooth ground fishing, Padstow, in Cornwall also, is a much better station, for, being situated on the embouchure of the Camel estuary, inhabited by myriads of sand-eels, bass fishing especially is worthy attention. The "Pocket Book" of general information, first compiled by our former secretary, Mr. H. Ball, and carried up to date by our present hon. secretary, Dr. C. Patterson, gives us the subjoined information: "Padstow, jetty and boat fishing; agent, Mr. R. Lobb, Commercial Hotel; pollack, cod, bream, gurnard, grey mullet, bass, skate, codfish, turbot, mackerel, smelts, sea bream. Boatman to the B.S.A.S., Tom Eddyvean, 10s. 6d. per day; seine net, boat, and two men, 12s. 6d. per day. Fish from July to September; mackerel in quantities; bass, mullet, smelts, plaice, sole, ray and turbot. Good sport off the rocks or in boat for pollack, bream, lobsters, crabs, crayfish, and salmon peel in large quantities."

I hope some portion of the above information may suit "Rod and Line." We have no special information from Newquay as to rock fishing, but I know something about it through a yachting friend. I have visited "Rock," opposite Padstow, but have not fished the locality. If "Rod and Line" or any friends would like to join our society, the hon. secretary's address is, Dr. C. S. Patterson, M.B., F.G.S., 11, Queen Victoria-street, London, E.C.—Yours, &c., J. C. WILCOCKS (V.-P. B.S.A.S.).

SALMON PRESERVATION.

DEAR SIR,—In these days of hatcheries for the artificial incubation of salmon and trout ova, it is perhaps high treason to suggest as a cure in time for some of our almost depopulated streams in Ireland that the fish be allowed to spawn naturally, and that they be properly protected while in the act.

Excessive netting during the spring and summer in the tidal and lower reaches of a river, particularly in dry seasons, have a great deal to do with the scarcity of salmon; but the winter slaughter of spawning fish is, in Ireland, something terrible, for in the upper tributaries of many a river well known to me not a single fish escapes.

One river in the north, celebrated now as being the best cared for stream in the island, used in my time to be very much poached, and at a fishery inquiry held by H.M. Inspectors it came out in evidence that the farmers whose land bounded the stream were in the habit of combining for the purpose of netting the water at the right moment, and brought forward a witness who swore he had been offered a ton of old fish for salting.

Another little stream, in Kerry this time, a most tempting notice of which appears weekly in another paper, once had 2000 gravid fish (salmon) taken from its lower pools in one winter by an old man and two boys.

Tim McCarthy is an "ould frind," and he knows the goings on of Killarney "purty well." I see he has turned fish hatcher in his old age. Is this an attempt on Tim's part to restore the balance of nature? To take a river in the south (the Laune), salmon drop back from the lower lake and spawn in it, and escape, thanks to the almost always prevailing high water. Others there are that never leave the river, and they spawn and escape, for they are now turned out of the nets at Killorglin when intercepted by them on the return journey to their hospital—the sea. The majority of the Killarney Lake salmon ascend the Flesk far beyond Headford, and will Tim McCarthy say that half or a quarter of the ascending thousands were ever allowed to return? I will answer for the little river Loe, which enters the Laune below Dunloe Castle. Not a fish that ever went up ever came back to say what the country was like. The attempts made to preserve and multiply the fish of the Killarney Lakes are too spasmodic ever to have any good effect (what has become of the launch given by the Baroness Burdett Coutts to enable the authorities to stop poaching at the mouth of the Laune in Cromarne Harbour?); whilst for anyone to attempt to manage a hatchery for salmon without the absolutely necessary years of experience, is equivalent to killing so many spawning fish.

So it is on every river in Ireland; the slaughter goes on when the days are cold and frosty, and the river, deserted by all honest men, and when those interested in the rod fishing are shooting and hunting in England; they know

nothing and never hear of the goings on, for when they return the river is flowing along bank-high once more, and the birch, mountain ash, and holly are as beautiful, and the bog myrtle and the heather as sweet as ever, and there is no trace to the unpractised eye of the murderous work enacted but a few weeks ago, but to me there are no signs of redds on the gravel reaches. Yes, here's one, but it's at the tail of a pool within a yard of deep black water, into which the fish could dart for safety at once, and such redds as these it is that keep the salmon from becoming extinct in some rivers of Ireland. It is a foolish policy when nature has confined the fish to safety to destroy that barrier to danger and allow them into miles of streams in which they cannot be protected.

Had I a river, from an impassable fall to the sea, I would sooner a thousand pair of fish spawned in the stream naturally than have the salmonidic contents of the two largest hatcheries in the world turned into its pools, and if the Flesk, and all the other tributary waters up which the Killarney salmon ascend to perpetuate their species, could be properly watched by trustworthy men stationed, not less than three together, in tents opposite the reaches most frequented by the fish, it would be found that the number of salmon killed by the nets below Killorglin would be doubled in a few years; there is no doubt of this, but it need not be expected of a hatchery for many reasons.—I am, &c., E. LATOUR.

A NOTE FROM YALDING.

DEAR SIR,—I am sorry to say that most anglers who, after waiting so long for a day's outing, and proceeded to the Yalding district for it on June 18, met with disappointment. After arriving there we were informed by inhabitants that the river had been emptied for a number of miles for the purpose of repairing the locks. Had this been known beforehand no angler would have thought of visiting Yalding for his first outing of the season. Is there not one of your numerous readers that could kindly furnish a small weekly report from the Medway, which would greatly benefit all anglers wishing to find sport in that direction?—Yours truly, W. A. R.

BASS AND POLLACK FISHING.

DEAR SIR,—I noticed in your issue of June 17 a short paragraph from a gentleman signing himself "J. H. D.," inquiring for a suitable place for bass, pollack, and conger fishing. I am myself a very old fisherman, and keep two boats and man with all requisites for long line, spiller, &c., and rough shooting along shore can be had.

I shall be pleased if you will bring this to the notice of the gent. making inquiries in your paper, by which you will greatly oblige me.—Yours very truly,

CECIL N. BEVAN.
Lyn Valley Hotel, Lynmouth, Devon.

HOW TO BREED BLUE BOTTLE FLIES.

DEAR SIR,—I shall be very glad if you or any of your readers could give me any information how to breed Blue Bottle flies, or the best method of catching them.—Yours truly, J. E. HUNTER, Durham.

TESTIMONIAL TO BEN ABRAHAM.

DEAR SIR,—We are pleased to acknowledge the following sums with thanks:

NEW PISCATORIAL PATENTS.

The following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

- 30,533. Fishing. Patentee: G. J. Kirby, of Kensington-park-road, London. Paternoster tackle. The projecting arm is made in one, with an 8-shaped loop, to one end of which the running line is attached, and to the other the lead. By this arrangement bending of the bar is prevented when a fish is hooked.
- 10,418. Augustus William Parker, Leadenhall-street, London. "Improvements in fishing tackle."
- 10,419. "Improvements in reels or winches for use on fishing rods."
- 15,004. Drying fishing lines. Patentee: C. C. Bethune, of Denne Park, Horsham, Sussex. The wet fishing line is wound, for the purpose of drying by exposure to the atmosphere, from the reel on to a winder which consists of a number of skeleton arms, some of which are hinged to or socketed in the hub, the spindle of which is provided with a detachable handle, and is mounted in the frame between the arms of which the hub is normally held centrally by springs. As the line is wound upon the large winding-surface, its coils are spread by applying a side pressure to the handle, and thereby imparting a transverse motion to the spindle. A cleat may be provided to hold the end of the line.

Devoted entirely to Angling. With which is incorporated ANGLING and CLUB GOSSIP. [Sea-Fishing, Fish Culture, &c.]

KEPT IN STOCK.

A THIN COCOA.
EPPS'S
The choicest roasted nibs of the natural Cocoa on being subjected to powerful hydraulic pressure, give forth their excess of oil, leaving for use a finely-flavoured powder—a product which, when prepared with boiling water, has the consistence of tea, of which it is now with many, beneficially taking the place. Its active principle being a gentle nerve stimulant, supplies the needed energy without unduly exciting the system. Sold only in labelled tins. If unable to obtain it of your tradesman, a tin will be sent post free for 9 stamps.—JAMES EPPS and Co., Ltd., Homoeopathic Chemists, London.

THE "CARTER" GUT CAST.
558 3 yards, Level, Tapered, or Dropper Attachment, in Extra Stout, Stout, Medium, Fine, X-Fine, XX-Fine, XXX-Fine, and XXXX-Fine.
6/- per dozen.
These casts are guaranteed perfect in every strand. Many contend that the best casts cannot be turned out at this figure, and this gave rise to several letters in the columns of the *Fishing Gazette* last year. We offered to send a range of samples to be tested against those of any house, irrespective of price; but no one thought fit to accept our offer. This, and the subsequent letters from correspondents on the subject, speaks for itself.
Send 3 1 for sample half dozen, assorted. Money immediately refunded if not approved of.

NORTH OF ENGLAND WORKS, BISHOP AUCKLAND.

FOSTER'S

CHALLENGE

FOR six years past there has been a wordy war as to which make of rod is the best. We invite rod makers to a test, on conditions that have been pronounced perfectly fair by the editors of several journals in whose columns our challenge has appeared. Still our challenge stands without an acceptance.

They Run! They Run

Trying to leave us behind.

"There's no getting away when duty's bidding is to stay."

RESULT OF THE GRAND FINAL.

FOSTER'S CHALLENGE THE WORLD BRAND ROD.

The "UP-TO-DATE" Greenheart, with Foster's "steel ribbing" (rustless) and with Foster's perfect lock joints, 25/6. If without "steel ribbing" and with bayonet lock joints, 21/-. The same Rod in built cane, viz., Foster's "PERFECT" (Challenge the World Brand), in either two or three joints, with all latest improvements, 60/-. We can put up-to-date reel fittings on any angler's rod, old or new (any make), also cork handle, like illustration, for 5/6, and lock joints, as on above rod, for 5/6.

GIVEN AWAY.

FOSTER'S "LITTLE GEM" MAY FLY.

The above is the best killing (winged) May Fly in the clear waters of the Dove, and has no rival on clear water anywhere else.

Price on eyed hooks, 3/- per dozen. On finest Gut, 2/6 per dozen.

FOSTER'S "FAVOURITE" FLOATER.

A straw-bodied floating pattern that has done wonders in the hands of many anglers. Price 4/- per dozen, natural green May Fly colour.

Every reader of the *Fishing Gazette* who purchases 5/- worth of May Flies or of our best DRY FLIES (or WET FLIES of best quality, as he may elect) at 2/- doz. as per list, or of both assorted, may have one of our latest EYED FLY BOXES (which are exactly the size of the illustration), metal, lined white enamel, and cork strips for flies. With each order of 2/6 worth of best Flies will be presented a box of same size lined with felt, to mount flies upon.

We have been the Pioneers of almost every important improvement in Tackle, including that of Steel-ribbed and Steel-centred Rods, Waterproofed and Metal-centred Lines, &c. Our '99 List Free to any Address.

FOSTER'S "HACKLE GREEN."

The above has killed more fish in Derbyshire than all other patterns put together for several years past. Price 3/- per dozen. If tied with either hair or straw body for floating, price 4/- per dozen.

FOSTER'S "WOOD DUCK" MAY.

Above floater is a favourite on chalk streams. Price 6/- per dozen, either tied with detached body or along hook.

Telephone No. 9.

ANGLERS' HOTELS, FISHING QUARTERS, &c.**MOY HOTEL, BALLINA,**
AND RUNAGRY HOUSE, LOUGH CONN.

PATRONISED by the Prince and Princess of Saxe-Weimar, Earl and Countess of Lucan, Nobility and Gentry. The Proprietor wishes to bring under the notice of Anglers that the privileges of fishing the tidal waters of the Moy are still conceded on application to the owners of the fishery; salmon caught therein have to be returned or paid for at trade prices. Above the tidal waters the Proprietor of the Moy Hotel has secured for guests the exclusive privilege—any advertisement to the contrary notwithstanding—of fishing from the east bank of the Moy free of charge. This half of the river embraces the best casts, including the Scorrof Pool, which can not be reached from the west bank. Anglers can retain their fish. Terms £2 10s. per week for board; boats and attendance £1 5s. per week. Runagry, a charmingly situated residence, picturesque gardens and grounds, close to best fishing grounds on Lough Conn; free salmon, trout, char, and pike fishing. Under same management.—For further particulars apply
E. MURTAGH, Proprietor.

GOOD FREE FISHING.
Co. ANTRIM, IRELAND

SALMON, Trout, Perch, and Pike on Loughs Neagh and Beg, Rivers Bann and Moyola. Every accommodation for anglers and tourists.

O'NEILL ARMS HOTEL,
TOOMEBRIDGE.

F. GEANT, Proprietor.

Thirty miles from Belfast on B.N.C.R.

SHANNON & LOUGH DERG,
KILLALOE, IRELAND.

MOST reliable information as to Salmon, Grilse, and Trout Fishing in free and preserved waters, river, and lake, at this station; also as to accommodation and board in private cottage close to river. THE ITCHEN RIVER TROUT BREEDING ESTABLISHMENT

Supplies all Varieties of TROUT for STOCKING
Rivers, Lakes, and Ponds.

EYED OVA, FRY, YEARLINGS, 1—2, and 3 YEAR OLDS.

N.B.—These fish are bred from ova taken from wild trout, and are raised in fenced off runs of this river, thus they are fully supplied with natural food brought down by the stream, and therefore, when turned out into new waters, are far better suited to find their own food than the general run of (hand fed) artificially raised trout.

Address—V. CORRIE, Esq., CHILLAND, WINCHESTER, HANTS.

HAGEMANN & CO.'S

"SUBERIT"

(PATENT IMPROVED COMPRESSED CORK)

ROD HANDLE

AN IDEAL GRIP. "Simply Perfection."

No First-class Fishing Rod is perfect without it.

These excellent, refined Cork Grips are turned out and bored entire from SOLID BLOCKS OF "SUBERIT," consisting of pure cork of the finest quality, which, after having been ground and all impurities carefully expelled, is mixed with a binding solution (subsequently invisible, and having the remarkable property of being unaffected by wet or heat) and then subjected to great hydraulic pressure, by which the whole is converted into large solid blocks of "Suberit."

THESE NEW SOLID (compressed) CORK HANDLES entirely dispense with the wood usually left for the grip of a Rod, or the wooden socket, upon which thin sheet cork (liable to become unglued, especially in hot and damp climates) is mounted. As the butt of a rod is about the same size under the "Suberit" as above it, the play is continued to the winch, and thus greater casting power obtained than from Rods mounted with the old-fashioned handles. A considerable saving in weight is also attained, and as the "Suberit" Grips are usually from ¾in. to 1in. thick, much elasticity is obtained, such as is quite impossible from thin sheet cork only ¼ to ½in. thick, mounted on a hard wood base.

N.B.—Provided they are properly mounted on the Rods, "Suberit" Grips are, for all practical purposes, unbreakable, and anybody stating otherwise does so for his own purpose. "SUBERIT" CYCLE HANDLES are recognised in the Cycle Trade as the finest Cork Grips in the market, and therefore enjoy a very large sale, having been adopted by the largest and best Cycle Manufacturers.

RODS MOUNTED WITH "SUBERIT" (PATENT) HANDLES can be had from all "up-to-date" Rod Makers, such as: ENRIGHT & SON, THE ARMY AND NAVY STORES, CARTER & CO., J. R. RICHARDSON, PEER & SON, P. D. MALLOCH, FOSTER BROS., DAVID SLATER, HAMBRIDGE, EATON & DELLER, HOLBROW & CO., W. T. HANCOCK & CO., J. BERNARD & SON, JAMES OGDEN (Cheltenham), J. GILLET, WILLIAMS & CO., H. WHITTY, MURTON & CO., &c., AND THE LEADING WHOLESALE HOUSES.

SOLE REPRESENTATIVE TO THE PATENTEES,

CHARLES A. GOULD, 77, NEW OXFORD STREET, LONDON, W.C. (WHOLESALE ONLY.)

C. FARLOW & Co., Ltd.

191, STRAND, LONDON, W.C.,

TEMPLE STATION (DISTRICT RAILWAY) WITHIN 2 MINUTES' WALK,

Manufacturers of First Class Rods and Tackle.

FARLOW'S "PERFECT" LIGHT SALMON OR GRILSE RODS

In Greenheart for Ladies or Gentlemen who cannot use heavy rods. Made in two lengths, 14ft. and 15ft., fitted with all the latest improvements, cork handle, snake rings, and straight ferrules. We are now able to produce these rods much lighter than formerly. In balance and action the rods are constructed on the most improved principles; they have been thoroughly tested, and found to be quite powerful enough for most salmon rivers.

The 14ft. Rod weighs about 24 ounces, price £2 15 0, with two Tops.

The 15ft. Rod weighs about 28 ounces, price £3 5 0, with two Tops.

FARLOW'S PATENT LEVER SALMON WINCHES,

Of Alloyed Aluminium, and can be regulated to any stiffness at will. The alloy used in these reels so hardens the aluminium that they will stand hard work quite as well as brass, and, as will be seen by the weights, they are very much lighter.

Sizes kept in stock - - - - 3½ 3¾ 4 4¼ 4½ inches.

Weight (about) - - - - 9 10½ 12 13 14½ ounces.

FARLOW'S "PERFECT"

CORK HANDLE GREENHEART TROUT ROD.

Made in three pieces, varying in lengths from 9ft. to 11ft.

The grips of these rods are made of solid cork, thereby dispensing with the wood which is usually left for the grip. The Cork Handle is bored to receive the butt, which is the same size under the cork as above the grip, consequently giving greater casting power than ordinary rods of the same length. The play of the rod being continued from under the hand is an immense advantage. They are made by our own Rodmakers, finished in the best manner possible, and have every improvement, Straight Metal Fittings, Snake Rings, and made of selected Greenheart.

Price £1 10s. each; superior finish, £2 5s. (2 Tops and Top Case to each Rod).

10ft. to 10ft. 6in. are the most useful for Dry-Fly Fishing.

ALL BOOKS on ANGLING KEPT in STOCK.

DO NOT REMOVE THIS COUPON FROM THE PAPER.
The Proprietors of the "FISHING GAZETTE" have insured every Purchaser
or Holder of it in
The General Accident Assurance Corporation, Limited,
115 to 117, Cannon Street, E.C. (Registered Office, Perth), to whom Notice of Claims under the
following conditions must be sent within fourteen days.

£100 "FISHING GAZETTE" £50
INSURANCE COUPON.
APPLICABLE TO PASSENGER TRAINS AND ALL WATERS IN GREAT BRITAIN AND IRELAND.

One Hundred Pounds will be paid by the above Insurance Company to the legal representa-
tives of any person killed by an accident to the train in which the deceased was an ordinary passenger,
or who shall have been fatally injured thereby, should death result within three months after such
accident. Should such injury not prove fatal, then the person injured shall be entitled to receive for
PERMANENT TOTAL DISABILITY (i.e., the loss of two limbs or the irrecoverable loss of sight in
both eyes) ONE HUNDRED POUNDS, or for PERMANENT PARTIAL DISABILITY (i.e., the loss of
one limb, or one eye) FIFTY POUNDS. Provided that at the time of such accident the person so killed
or injured was the owner of this INSURANCE COUPON for the Current Week, with his or her usual
signature written in ink underneath. If found on the person it need not have been signed. It is also
understood that the fatal amount under this Coupon shall extend to accidental death by drowning
whilst angling. Annual subscribers whose yearly subscription has been paid in advance, and who retain
and file this paper, will be held covered on its production, although the coupon is unsigned.

GOLD MEDAL CANE BUILT RODS. None Better.

TROUT.

The **PHELPS**.—Light and powerful, well suited for a lady. Double built butt and joint, fitted with spiral lock joints, snake rings, Universal winch fittings, and cork handle, in division case, 9ft. to 11ft., with two tops... £2 2 0

The **DIXON**.—One of the best rods it is possible to make. Double built, fitted as above, 9ft. to 12ft., two tops... £2 2 0

The **DUKE**.—Built especially for dry fly, a powerful rod with great casting power. Double built, with inlaid handle, 9ft. to 12ft., two tops... £2 5 0

Steel centre to any of above, £1 extra.

A. R. M., in Angler, re Fisheries Exhibition:

"The Duke and Dixon are really first class split cane rods, light, well balanced, and possessing a great deal of casting power."

"Menstone, Wharfedale.

"DEAR SIR,—With regard to the split cane rod you built for me some time ago, I have no better rod, never had a better, never wish for a better. The top two joints, together with the special handle you made to my instructions, make the loveliest little trout rod imaginable. Our North country anglers are in the habit of paying from 50 to 100 per cent. above your price for such a rod, and they ought to be told how to avoid so doing.—Yours,

"W. C. PLATTS."

"THE ROD OF THE FUTURE."

The New Patent TUBULAR STEEL CENTRE CANES BUILT RODS.

TROUT,
with two tops,
9ft. to 12ft.,
£4 4s. Od.

SALMON,
with two tops,
from
£6 6s. Od.

After several years' experimenting we are enabled to put on the market our Patent Tubular Steel Centre, the advantages of which are numerous.

By the introduction of a thin tube of finely tempered spring steel, instead of the solid steel wire formerly in use, we are enabled to produce a rod very much lighter, but with an enormous increase of power, and at prices which will compare favourably with other makers' charges for the old form of rod.

SEA TROUT, GRILSE, & SALMON.

The **DIXON**.—Treble built, fitted with spiral lock joints, snake rings, Universal winch fittings, double cork handle, and patent pneumatic button.

14ft.	15ft.	16ft.	17ft.	18ft.
£ s.	£ s.	£ s.	£ s.	£ s.
3 15	4 10	5 5	5 10	5 15

The **KENYON**.—Treble built, with two fly tops, and extra top for prawning or spinning. One of the best all-round rods procurable.

14ft.	15ft.	16ft.	17ft.	18ft.
£ s.	£ s.	£ s.	£ s.	£ s.
4 5	5	5 15	6	6 5

The **EMPRESS**.—Light salmon and grilse rod, as supplied to H.I.H. the Empress of Russia.

14ft., £3 15s.; with steel centre, £4 15s.
15ft., £4 10s.; with steel centre, £5 10s.

SPINNING RODS, &c.

The **HENLEY THAMES SPINNING ROD**.—Fitted with two tops, revolving butt ring and loops, snake rings, cork handle, Universal winch fittings, lock joints, and pneumatic button.

50/-, with steel centre, 70/-.

A. R. M. says: "Very nice action was associated with the new Thames rod, and we should say will become a great favourite. I have never handled a better Thames trout rod."

Send for our CATALOGUE; it will save you from 30 to 50 per cent.
